Summary

Snapshots of Data Logs in the Horde

Or

An abridged version of Season 2

Notes

See the end of the work for notes

Data log eighty-eight point one! Experimentation has begun! DNA extraction and study on the sample procured from Subject Wolverine (refer to data log eighty-seven!) has produced incredible results. The intricacies of the subject's cellular reproduction capabilities, their speed, the inherent ingenuity—eeeeeiiiiieeee!!

Further study is needed to verify the naturalization of these evolutionary traits. However one theory becomes abundantly clearer by the day: unless there are highly advanced gene specialization laboratories hidden on Etheria, the subject is heavily associated with First One make! Beyond their wondrous evolutionary traits the sample possesses the barest traces of nanoparticles associated with self-replicating tech! The secrets they must hold! Extraction will be a delicate process even before translation! A wonderful challenge!

Data log eighty-eight point four! Hordak has suggested animal trials! We started on worms, who already have an incredible regeneration system and have also included birds and mice—more is better, and we get a better range of data too! I can't wait!

Data log seventy-nine point thirty three! My experience in the Horde has been a blast. Nowhere else on Etheria has this level of technological knowledge or advancement! The possibilities are endless here!

Force Captain Scorpia and her squad have been assigned to me as science assistants! Also to prevent me from possible death and/or dismemberment during our field excursions! Say hello Scorpia!

"Oh! Uh, hello! Hello world!"

Then there's Lonnie—

"—'Sup.—"

—Rogelio—

—(*a garbled roar can be heard*)—

—and Kyle!

"Um. Ahem. He—"

Every good scientist needs a good team behind them. Oh and a blast shield. Which reminds me—everybody duck!

"Wait, wh—"

Boom!

Data log eighty-eight point eight. Organic trials have shown incredible progress! Continued gene splicing procedures has shown to be only thirty-seven percent effective but nonetheless has produced a near seventy percent efficiency rate across the board!

We tested the regeneration rate of each test subject upon a variety of body parts after two weeks of splicing. Firstly, dermal cells. Skin, fur and feathers. The area upon each set of creature, while not particularly harmful, was still considered significant visually. The affected areas regenerated with no significant sign of damage or scarring within one to three days.

From there we began to move to subdermal and upper muscle tests. The efficiency level for the avian subject dropped by thirty percent but both mammal and invertebrate phyla subjects only decreased by five and fourteen percent respectively!

On further research my hypothesis about Subject Wolverine's origins come closer to fact. I have been informed that they are very much not of this world! They may not even be of this time!

Oh, to imagine! That out there lies countless worlds! That on this planet there are not one, but *two* beings of extraterrestrial origin! What one would give! To take measurements, x-rays, blood samples, urine samples, MRIs!

"Uh, Entrapta? We can…hear you…"

Oh good! Your hearing is within optimal parameters! As I was saying, even with limited testing capabilities and sample integrity and size, what we've learned paints an amazing picture! Of a species developing in an environment so deadly and hostile that their bodies developed a regeneration system of such caliber that seemingly thousands of years and removal from their area of origins did not weaken it by much, if at all! I want to visit!

Note: Audio file was extracted from reprogrammed Force Captain communication device:

"Wildcat—"

"Will you stop calling me that? I'm not your Wildcat—"

"That's fine. That's cool. I mean I thought we had kind of established, you know, a connection that the—the nickname, uh, had signified, but uh…I get it! I get it! It's cool, it's—"

"Force Captain Scorpia."

"Huh? Oh! Right! I'm babbling again—thanks, Lonnie!—my bad. Ahem. The point is, we're rescuing you!"

"From…yourselves?"

"What? Pfft. No! From the Rebellion!"

"Scorpia, I'm not a prisoner. Well, now I am."

"Oh those are just a precaution! In case the Rebellion uses some magic on you again—"

"Again?"

"—because you might not realize it, but we figured it out! The reason you, you know…turned your back on us, heh!"

"I…Scorpia…"

The rather close sound of howling wolves.

"Wh—Kyle! You were supposed to keep watch!"

"Seriously Kyle?"

A reptilian voicing of disapproval, possibly Northern dialect.

"Looks like things haven't changed much since I've been gone."

"S-sorry!"

Data log eighty-eight point thirteen! Removal of minor and major limbs on test subjects has begun.

Numbing agents were carefully administered to various subjects. Avian and mammalian subjects in category one were removed on a singular toe or equivalent while category two resulted in the removal of the entire forearm or equivalent. The same process was, understandably, difficult to recreate on invertebrate phyla, so instead, we sorted them by category of the removal of a quarter or a third body mass, respectively.

The gene splicing appears to have almost a preference of sorts for subjects of the mammalian category. Subject regeneration has seen a fifteen percent deficiency in both effectiveness and speed, but nevertheless has shown remarkable progress. The avian subjects dropped to a an admittedly disheartening four-five percent effectiveness. Regardless, the information garnered is remarkable! While those of mammalian origin benefit the most, this does not discount the potential of the splicing technique imbuing a minor healing benefit to those of other physiology.

Data log seventy-nine point seventy-one! Engaged on a mission today with incredible results!

While attempting to study a First Ones signal in the Frozen Wastes my assistants engaged in battle with members of the Rebellion. Corporal Lonnie attempted to utilize a First One's disk in my posession to render Subject Wolverine/She-Ra inert.

Instead, what we saw was a brilliant reaction: Wolverine's transformation into She-Ra appeared to become corrupted, sending her into a sort of berserk rage. Unlike the Fright Zone Incident five months prior (refer to data log seventy-three for details) this animalistic fury, while again robbing her of her higher functions, appeared to override her sense of loyalty as well, causing her attack all beings around her, indiscriminate of her target or their alliances.

Interestingly enough, because her sentience is currently suspended, it seems as though Wolverine's endurance, while

intact physically, decreases mentally. Like an animal, upon significant force being weighed against her, in this case, Corporal Rogelio running her over with a digger, the "flight" element of her instincts, usually overridden, takes precedence. Luckily for us—and likely her as well!—her being pinned meant the sword simply disengaged. As of this moment, futher testing is needed to determine whether the sword itself is sentient and whether the transformation back to her normal form was triggered in the hopes that her smaller mass would allow her an easier escape.

But right now, she's unconscious. And I have been informed that the consent required for DNA extraction does not extend to enemies of the Horde. Oh, I wish I had brought more tubes! Sanitation issues limit me to mouth swabs and hair and skin samples. Blood tests will have to wait until our return to the Fright Zone.

Data log seventy-nine point seventy-two.

Have been informed that due to weather conditions, inducing bowel expulsion in an attempt to retrieve a urine sample from Subject Wolverine is ill-advised and quote, 'gross'.

Dats log eighty-eight point sixteen. Sentient trials have begun!

While I would have preferred more tests and more data, Hordak has pointed out that our testing pool is limited. Furthermore, we already have an eager volunteer: Force Captain Grizzlor!

He was heavily injured in the Battle of Brightmoon and has yet to truly recover. If this works we can provide some form of recuperation! While complete homeo-reset is doubtful, it may nevertheless prove my theories about Subject: Wolverine and her DNA's mammalian leanings.

Granted, if my hypothesis is correct, we may need to develop a prosthesis for Captain Grizzlor regardless. Luckily I have plans! Developing Hordak's exoskeleton has provided a ton of practice for biomechanics!

Audiovisual recording copied and extracted from the databanks of HAD (Horde Assault Droid) #2167, codenamed "Emily":

“Kyle?”

“...”

Scanning: Audio aquired: Force Captain #390. Designation: “Scorpia”.

Scanning: Visual aquired: Private #8768 Identified. Designation: "Kyle".

Scanning: Elevated stress levels identified.

"Kyle! Hey, where are…you…"

Scanning: Private Kyle–heartrate elevated.

"Kyle? Um…I think you were supposed to help Entrapta? She was looking for some footage…?"

Scanning: Private Kyle—breathing rate increased. Perspiration increased. Determination: Danger imminent.

"Kyle? Ky—! Oh. Kyle are you…? Oh. Oh, Kyle, buddy…

"...Kyle? Can I hug you?"

Scanning: Private Kyle—breathing rate decreasing. Heartrate decreasing. Perspiration rate decreasing.

"I'll…I'll find the data, okay buddy? Let's just sit here for a while, alright?"

Scanning…Scanning…Determination: Danger averted.

Data log eighty-eight point twenty-seven!

We've reached a breakthrough!

Gene splicing procedures on a sentient host have yielded a forty-eight percent increase in cellular reconstruction! The muscle mass of Captain Grizzlor has increased by sixteen percent! Micro-damage had been reduced by sixty-three percent!

It's almost better than I could have hoped! Simulation records have shown a fifty-six percent increase in Grizzlor's combat efficiency!

(Side note: develop more durable training bots.)

We will be continuing with the procedures. Hopefully it will provide an even greater data yield. We may even begin being able to do the same to more volunteers!

Note: Audio file was extracted from reprogrammed Force Captain communication device:

"Hey, A-dork-a!"

"...me?"

"Yeah, you! The Traitor! You're going to pay for kidnapping Catra!"

"...wait, that's why you've been going one vee one with me for the last six months?"

"Well, uh…no! Also the Fright Zone! And you killed Shadow Weaver! And scared Kyle!"

"I didn't mean to! Any of that! I wasn't—I wasn't myself. I *never* wanted to hurt *anyone* ."

"Oh yeah? Then how come instead of turning yourself in, you're cavorting with the enemy? And you mind controlled Catra!"

"Turn mys—wait. What was that part about Catra?"

"UGGH! I'm not a helpless little cadet, Scorpia, stop saying I'm mind controlled!"

"Wildcat!"

"I'm not your damn 'Wildcat'! We're. Not. Friends."

"...you don't mean that…"

"Hey!" *Snikt!* "The lady said back off."

"The lady didn't say shit, you DON'T speak for me, Adora!"

"Uh, excuse me for protecting me from your stalker!"

"I DON'T NEED PROTECTION!"

"I'm not a *stalker* !"

"She *kidnapped* you!"

" *You* kidnapped me, dumbass!"

"HA! I *KNEW* IT!"

"Yeah, I have like, a million better things to do than this, so…"

"Flippers dON'T YOU DARE—!"

The sound of rushing water, yelling and a distressed magicat ensues. The audio ends shortly after.

Data log seventy-nine point one oh six:

Assistant Scorpia appears quite distressed regarding former Captain Catra's continued refusal to rejoin the Horde ranks. Her work is quite efficient and her frame, while bulky, is well suited for the movement of materials whose mass outweighs my own.

Studies indicate that such behavior will lead to a decrease in efficiency. I have begun researching “kinship bonding” techniques to mitigate this risk. And…because I believe she is my friend.

Further data is needed before I change her status on the chart, but I think I am feeling…faith? Yes. Faith.

Data log eighty-eight point thirty-nine point one:

Many new successes!

I have successfully developed a reagent designed to increase the repair efficiency of any species that uses it. It is very weak compared to full on splicing and incredibly short term, but full immersion has shown an incredible increase in cellular reconstruction among the wounded.

Its creation demands are quite high, but doable to an extent. Until I have managed an easier way to develop a high yield without sacrificing it's potency, we are limited to the average soldier being provided a small amount of low grade substance. Higher grades have been reserved for grievous injuries among higher ranked officers, including Hordak himself.

In honor of its donor, I have dubbed this substance: Adorapaste!

Data log eighty-eight point thirty-nine point two!

Hordak's exoskeleton, while efficient, is merely a stopgap to the larger problem: cellular decay. His body is falling apart, and attempts to develop his own cure are extremely admirable! But! They're flawed! The base—himself—is already heavily damaged!

Hordak refuses the splicing treatments for several reasons, but most which seem to boil down to the process taking too long and, most importantly, a fear of “tainting”.

In time I hope to convince him otherwise on objection one, but in the long term I have begun testing how Subject: Wolverine's DNA impacts beings on a developmental level. We may not be able to save his body, but if we can save his mind, we can put it in a new body! One that's faster, stronger and more durable for nearly any terrain or environment!

Before utilizing his own structure, I have begun examining several samples of compatible DNA for the initial test subject. Wouldn't do to just begin ramming our heads into the wall without checking the growth baselines!

Note: Audio file was extracted from reprogrammed Force Captain communication device:

“Grizzlor? GRIZZLOR!”

The sound of pained moans and tearing flesh can be heard.

“What?”

“WHAT ARE YOU DOING!?!?”

“Killing Rebels of course.”

The sound of emesis can be heard.

“Those…those are civilians!”

“Oh? Is that for you to decide, Force Captain Scorpia?”

Pained sobbing can be heard.

“...stop…please stop…”

“Stop it, Grizzlor. You're—”

“That's Captain Grizzlor to you.”

The sound of Grizzlor grunting and a wet crunching noise can be heard.

“You'll excuse me. I've been rather hungry recently. So hungry…”

“Look away, Kyle…”

“Lonnie. Lonnie, he's just like—”

“Look *away*, Kyle! Rogelio, his ears!”

“Grizzlor, this isn't right! In fact, it's so so *so* very wrong, this isn't you, you're not—”

“I'm perfectly fine, Scorpia. I'm *better* than fine. I'm better than ever.”

“I won't let this stand!”

“Oh really? By all means, Force Captain. Feel free to intercede.”

“...”

“I thought so.”

“...where are you going?”

“Hunting.”

Data log eighty-eight point forty-six!

After several failed attempts, we've successfully sparked a spliced, functional growing embryo! Subject: Wolverine's DNA has incredible symmetry with magicat DNA, with a nearly complete fifty-fifty connection split!

Long term observation will be needed, but within a year we should be able to, with adequate sample oversight, begin laying the accelerated groundwork for the creation of X24!

In the meantime, here's to X23! They're going to change the world!

End Notes

As always, please review!
