Stargate Etheria

by Starfox5

Summary

Entering a gate leading to an unknown planet while dodging fire wasn't too uncommon for SG-1. Meeting strange new people wasn't unusual either for the Best Friends Squad. But figuring out how to deal with each other, the remnants of the Horde Clones and the Goa'uld threat without a D.H.D. for the Stargate on Etheria? That was new for both.

Notes

Disclaimer: I do not own She-Ra and the Princesses of Power or any of the characters in the series. I do not own Stargate: SG-1 or any of the characters in the series.
Author's Notes: This story is set in an Alternate Universe. While the canon events in She-Ra and SG-1 up to this point happened, there will be changes to either series' background to fit them into the same universe.

The Encounter

Trias, July 10th, 1998

“Take cover!” Jack O’Neill yelled as he jumped behind a large rock, two blasts from Jaffa staff weapons narrowly missing him and blowing up a tree behind him. Another exploration mission gone awry. Sometimes, he wondered if they were cursed with how often they ended up on a planet full of enemies.

He ignored the wooden splinters raining down on him and glanced around. The rest of his team had taken cover - he could see Daniel just crawling behind the remnants of a wall while Carter and Teal'c were already returning fire from behind two rocks further back.

Good. He speed-crawled along the rock, then peered around the other end. Another shot from a staff weapon hit the rock, showering the area with stone splinters while he pulled back.

No way to flank the enemy on this side - the staff weapons were notoriously unprecise, but with the blast radius from a hit… He took a deep breath, bent around the corner, leading with his M4A1 carbine and fired two bursts before pulling back again.

Three more blasts hit the rock, throwing up dirt at its edge. There had to be at least two dozen Jaffa out there, to focus on him with three while the others were still pinned down. He checked on the rest. Carter, as expected, was returning fire while changing positions with textbook perfection. Teal'c had shifted behind a larger rock and kept their left flank clear. And Daniel… was pointing his zat’nik’tel vaguely into the direction of the enemy and squeezing off shots.

“Daniel!” Jack yelled. “Fall back and dial us out! Carter, Teal'c - cover him!”

To his credit, Daniel didn’t argue and started crawling back towards the Stargate behind them. He was even using the rocks on the way as cover.

Jack took a deep breath, then stood, leaning against the rock as he fired a long burst into the treeline from which the Jaffa were

shooting at them. This time, the top of the rock disintegrated under the fire from half a dozen staff weapons an instant after he dropped to the ground.

“Must have hit someone,” he muttered, baring his teeth as he crawled away. Smoke from all the explosions was covering the area but that wouldn’t last forever. Just long enough.

Jack jumped up and sprinted back and to the right, sliding behind a smaller rock and into a firing position. The smoke was still clearing when he spotted two Jaffa charging their position - they were using the smoke to hide from Carter and Teal'c.

He dropped the first with two bursts from his carbine, but the second threw himself to the ground and rolled into a ditch before Jack could shoot him as well.

Those were skilled Jaffa. Not Apophis’s, according to Teal'c. Well, they could sort out who they had fought once they were back at Stargate Command. Jack glanced behind him. Daniel had almost reached the D.H.D. Good.

He popped up from cover to fire another burst at the Jaffa in the treeline and tried to keep an eye on the Jaffa in the ditch. If that guy made it into their position…

More blasts forced him to reposition again, behind an even smaller rock. “We’re running out of rocks!” he yelled. “Hurry, Daniel!”

“I am, Jack!” Daniel yelled back. He had almost reached the D.H.D.

Jack grinned and emptied his magazine into the treeline to keep the Jaffa’s heads down. Daniel would need a few seconds to…

Movement near his old position caught his attention as he pulled back to reload. The hiding Jaffa! He had a clear line of fire to Daniel! And Jack was out of ammo!

“Daniel! Watch out!” he screamed as he swapped magazines and jumped up again, lining up his shot, firing as he aimed, anything to make the bastard flinch and miss…

His bullets caught the Jaffa a moment too late - Jack saw the staff fire. Heard Daniel scream. “Daniel! Carter!” She was closest!

“I’m… I’m OK! But he hit the D.H.D.!” Daniel yelled back.

What? With it, they couldn’t dial the Stargate. Couldn’t return to Earth. Would be captured here - there had to be more Jaffa approaching. Gliders on the way. He fired into the treeline again. Perhaps he should save a bullet for himself...

“Sir! It’s dialling!” Carter yelled. “Outgoing!”

“What?”

“The Stargate is dialling!”

“But I didn’t enter the coordinates! And the D.H.D. is damaged!” Daniel complained.

Jack slid back into cover to swap magazines again. Three left. And about two dozen Jaffa. No choice. “Get through the gate!” he yelled. “Hurry!”

“But Jack!”

“Into the gate, Daniel!” Carter yelled, already sprinting towards the archaeologist and the gate - she knew what the alternative was. Better dead than snaked.

“Teal'c! I’ll cover you!”

The big guy didn’t argue either - just fell back, firing on the move, then stopped behind a rock to cover Jack just as Carter pushed Daniel through the gate.

Jack started to run, bent over to reduce his profile. Staff bursts went past him left and right, blowing up rock and dirt. Splinters tugged at his cap and pinged against his vest.

“Go on!” Teal'c snapped as Jack passed him.

“Like hell!” Jack muttered, crouching down next to the gate and aiming his carbine at the enemy. “Fall back!”

Teal'c obeyed, running faster than a man his size had any right to, and jumped through the gate.

Jack emptied his magazine as he moved backwards up the ramp, more blasts missing him, then one blast that was a little too close all but blew him through the gate.

He came out rolling over his shoulder, down a ramp, his carbine flying away. It was a steeper ramp than expected, he realised as the gate went out behind him. He came to a stop on his back - and found himself staring up in the face of a huge cat. A huge *alien* cat.

*****

Whispering Woods, Etheria, Same Day.

“I think there’s a passage here,” Adora said, leaning forward to study the wall in front of her. The light from her lamp wasn’t the best.

“You thought that before. And we spent half an hour digging through stone and rock to discover… more rock,” Catra said behind her.

Adora glanced over her shoulder. Her girlfriend - even after months, she still had to suppress a silly grin every time she thought that - was leaning against the wall, hands behind her head and rolling her eyes. She could see perfectly well here, of course. At her feet, Melog was acting as if it was cleaning its

mane. “I don’t remember you doing much digging,” Adora told Catra.

“Someone had to keep an eye out for dangers,” Catra replied. “This is a lost outpost of the First Ones, in the middle of the Whispering Woods. So, we have to expect both some monsters the First Ones created and forgot to dispose of and the general garden variety of monsters from those cursed woods who took up residence here. And I’ve got the best eyes and ears of us all, which makes me the natural choice for lookout.”

“And you don’t like digging,” Adora added.

“And I don’t like digging.” Catra flashed her a toothy grin that made Adora think of... other things.

“Or working,” Glimmer muttered as she walked up to them. “Entrapta finished examining the remains of the console in the main room. The memory crystals were smashed, she said.”

Adora knew Catra had heard the dig against her, but her girlfriend didn’t react other than looking away and clenching her teeth - Adora could see her jaw muscles move. She wanted to sigh. If Catra didn’t give as good as she got against Glimmer, it usually meant she was feeling down. Perhaps Adora shouldn’t have asked her to come with them on this expedition. No. They were a couple, and she wanted Catra and the others to not only get along but be comfortable with each other. And Glimmer didn’t mean to be mean. She was just a little cranky now.

“Yes, Entrapta’s trying to recover some data, but I don’t think she’ll find anything intact enough for a partial retrieval.” Bow joined them, ducking under a root that had managed to burrow through the ceiling. “Another dead end?”

“No!” Adora said. “I’m sure there’s a tunnel behind this wall. And yes, I’m really sure this time.” She pointed at the symbol on the wall. “This means ‘Gate’. And this is a wall, not bedrock. So, this is a gate.”

“Or some First One flunky made a mistake,” Catra pointed out. “Or this was planned to be a gate, but they never got around to dig it out.” She crossed her arms over her chest. “If you want to spend another half an hour digging through rock, be my guest, though.”

Glimmer bared her teeth in return. “I’ve got a better plan: We just dig a small hole, so we can check if there’s anything behind this wall.”

“We would need a drill for that,” Bow objected.

“No, we just need She-Ra!” Glimmer beamed at her, Adora realised.

“Me?”

“You can drive your sword through the wall. Wriggle a little to widen it, lather rinse repeat, and we have a hole!” Glimmer said.

“Or you could alter your sword and turn it into a drill,” Bow suggested.

That sounded… well, either way, Adora would be digging a hole.

Catra snickered. “Poor She-Ra. From Champion of Etheria to convenient excavation tool.”

Adora stuck her tongue out at her in return. She wasn’t mad - it was good to see Catra smile. Then she raised her hand and closed her eyes. “For the Honour of Grayskull!”

As always, power filled her as she changed. Grew. Became far more than she was. Power that made her feel as if she could do anything. She barely noticed her clothes and hairstyle change as she became She-Ra. Princess of Power.

“Nice light show. Now, get to it, slacker,” Catra commented. Adora frowned at her - she wasn’t pouting - and her girlfriend’s grin grew wider. “Should’ve done that the first time.”

Adora snorted and turned towards the wall. Perhaps she should've. Yet… They might be joking about this, but it did feel weird to use She-Ra's power for something you could do without it. Even without magic. Like cheating.

Not that she would say that, or Catra would lecture her about not being stupid. Her girlfriend had strict views on fair fights and working more than you had to. Mainly, that both was stupid.

And they had been down here for a few hours already. Adora raised her hand and summoned - or conjured, according to Castaspella - her sword, then changed it into a drill. She looked at it, cocking her head. It seemed to be functional.

Taking a deep breath, she pushed the tip against the wall and started to drill. The tip went into and through the wall like a hot knife went through butter, as Glimmer liked to say. Rock dust and a few splinters flew, but she didn't mind it - her clothes would be cleaned next time she transformed. She-Ra's magic was convenient that way.

Also in other ways - she stumbled slightly when she suddenly felt a lack of resistance, but caught herself instantly. "I'm through!" she announced.

"I knew it!" Glimmer gloated.

"I knew it," Adora corrected her.

"Yes, yes. You were right. For once." Catra rolled her eyes again. "So, open up the tunnel."

That took a little longer. Halfway to clearing the entire wall, Catra suddenly held up her hand. "Stop! I heard something!"

"What?" Adora asked, freezing in the middle of carving through another stone.

"A… whooshing sound, or something." Catra's ears were twitching, and her tail was swishing back and forth.

“A ‘wooshing sound’?” Glimmer snorted. “Is that a word?”

Catra narrowed her eyes. “It sounded like that. Something is behind that wall.”

“Well, we better…” Adora started to say when Melog suddenly jumped up and sped past her, into the tunnel.

“Melog! Wait!” Catra yelled.

But the cat had already disappeared down the tunnel.

And Catra was about to climb after it.

*****

Samantha Carter kept her M4 trained on the alien looming over the Colonel, silently cursing herself. It must have arrived while she had been distracted by waiting for the Colonel to arrive. Waiting and worrying… She buried the thought, clenching her teeth. She could lambast herself for her unprofessional mistakes later. Now she had to focus on dealing with the situation at hand.

They were facing an alien. It had roughly the shape of a big cat, but in purple, no markings or stripes, and a mane and tail that looked transparent - almost like holograms. Glowing eyes that matched the mane.

And it was growling fiercely.

“Carter!” the Colonel hissed through clenched teeth. He was staring straight up at the creature, and his carbine was about a foot away from his hand - if he grabbed it, he might provoke the creature. “Mind doing something about this? Like, making it go away?”

“I’m not sure if it’s corporeal,” she told him. If she shot it and the bullets went through its body… the ricochets would endanger everyone. Especially the Colonel.

“Well, yeah, but I’m sure it’s dangerous,” he snapped back as he started to slowly try and slide away from it.

“It might be intelligent,” Daniel interjected. “Have you ever seen one like it, Teal'c?”

A stupid question, Sam knew - if Teal'c had recognised the alien, he would have told them so already.

“No,” Teal'c replied anyway. His staff was pointed at the animal, but as close as it was to the Colonel… the plasma blast would injure him whether or not it hit the body of the alien. Perhaps Daniel’s zat’nik’tel… that would be safe. Unless there was some interaction between the creature’s aura and the blast. And Daniel wasn’t the best shot.

The alien growled again. At Teal'c, she realised. Had it recognised him? Had it met Jaffa before? Could it tell Jaffa from humans? The differences were hard to tell without exposing their midriffs, but who knew what senses this creature had…

Her eyes widened when she heard footsteps. She shifted her carbine, aiming at the tunnel behind the alien, trusting Teal'c to keep the cat covered.

“Someone’s coming!” Daniel announced.

“Melog!” A figure appeared in the tunnel, then froze when they spotted SG-1. “Who’re you?”

Sam stared for a moment. The figure was humanoid but had cat-like features. Fur, twitching, cat-like ears, a tail. And she was female - the tight clothes she was wearing didn’t hide that. And she was unarmed. Or not, Sam corrected herself when the woman unsheathed claws on her fingers and feet. She didn’t attack, though - she must have realised they had her covered.

“We’re Tau’ri,” Daniel spoke up. “We’re travellers who ended up here by mistake. Who are you?”

“Travellers?” The woman’s ears twitched as the alien growled again. Her eyes widened. “Goa’uld?”

“No! We aren’t Goa’uld,” Daniel blurted out.

Sam hoped that they weren’t talking to a loyal servant of the local Goa’uld.

“What are Goa’uld?” the woman asked.

Daniel blinked. “They’re a species that…” he started to explain, but the alien cat cut him off with another growl.

“Parasitic snakes?” the cat-woman hissed, eyes darting to the cat for a moment.

She could understand the alien cat, Sam realised. Who was obviously intelligent. And didn’t like the Goa’uld.

“Yes, exactly,” Daniel went on, blissfully ignorant of this. “We’ve…”

More footsteps. “Catra! Melog!”

And Sam stared again as a huge blonde woman - easily seven foot tall - arrived, brandishing a giant sword. She drew to a stop next to the cat-woman - Catra? - and pointed her sword at them. “Who are you?”

“We’re Tau’ri, from Earth,” Daniel repeated. “We come in peace.”

“They’re servants of parasitic snakes,” the cat-woman cut in.

“Parasitic snakes?”

Two more figures arrived. They looked like humans. A man with a… bow and arrows? And a woman with a staff. Sword, bow and staff - if they didn’t end up dead, the Colonel would make a D&D joke, Sam was sure. As sure as she was that she wouldn’t reveal that she understood the joke.

“No! We aren’t servants of the Goa’uld!” Daniel exclaimed.

Another growl.

“He is!” the cat-woman said, pointing at Teal'c.

“I do not serve them. Not any more,” Teal'c replied. He didn’t show any emotion, but Sam could see that he was tense. Ready to take them all down.

“Yes. We’ve been kinda fighting them for some time,” the Colonel chimed in.

“He carries a snake in his body!”

“A larva - the Goa’uld use his people as hosts,” Daniel explained. “We cannot extract it without endangering his life. Please - we do not mean you any harm.”

“And yet you’re pointing your weapons at us,” the blonde woman replied.

“So are you,” the Colonel shot back. The cat growled at him, and he winced.

“You started it! And Melog doesn’t like you!” the cat-woman retorted.

“It’s a misunderstanding.” Daniel took a step towards the four. Sam gritted her teeth and shifted her position so he wouldn’t block her line of fire. The Colonel was still too close to the alien cat to get his carbine. “We oppose the Goa’uld - we have killed one of their leaders. In fact, we ended up here fleeing from one of their planets.”

“You fled to Etheria?” the blonde asked. “Like the Star Siblings?”

Star siblings? Sam didn’t remember any term like that.

“We travelled between the stars, yes,” Daniel said.

"Where's your ship? And how did you get past the frigates in orbit?" the other woman asked.

"And what are you doing here?" the man added.

Frigates in orbit? Sam's eyes widened. Despite the primitive weapons, these people must be a spacefaring civilisation. Or at least on a level to achieve orbit.

She glanced at the Colonel. He had realised it as well, she knew.

"We didn't arrive by ship," Daniel went on. "We arrived through the Stargate." He pointed at the ring behind them, which had gone inert.

And which, Sam realised with a gasp, didn't have a D.H.D. anywhere near it.

*****

Catra hissed. They were facing a group of armed strangers - armed strangers with parasitic snakes in them. Well, at least in one, possibly two of them, according to Melog. And Adora and the others were talking with them! Even though the tactical situation favoured them. They outnumbered the others. Melog had one of them - the oldest - locked down. Adora was close enough to get the big guy with the staff before he could do anything, and she would bet on Bow against the woman with the gun. Especially since the blonde seemed to be distracted by the ring thing behind them. The Stargate, according to them.

Well, that would explain the 'Gate' sign Adora had mentioned.

Anyway, Catra could take the guy with the glasses - he didn't seem to be much of a fighter - and Glimmer could teleport behind whoever made trouble. There was no need to talk like this.

"There's no D.H.D.!" the glasses guy exclaimed.

What was a D.H.D.?

“What? Carter!” the old man turned his head away from Melog.

“I… I don’t see any, Sir.”

“How could you miss that?”

“We were distracted by being under fire and waiting for you,” the glasses guy said.

“And it wasn’t relevant,” the big guy added - without taking his eyes off Adora, Catra noted. Points for identifying the biggest threat to them. But it wouldn’t help him anyway. No one could beat She-Ra.

“What is a D.H.D.?” Adora asked.

“It’s what is used to control the Stargate,” the glasses guy explained. “Without it, you can’t use it.”

“So, you’re stuck here unless we find one?” Adora cocked her head.

Trapped, Melog growled.

Catra blinked. Did Melog hide it with an illusion? It must have used illusions to sneak up on them, so hiding this other thing would not be too much of a stretch. “You know this gate, don't you?”

No. Only know of.

Well, that was something. Catra hated missing intel. Or giving information to the enemy. “So, did you see one?” she asked Melog.

No.

He wasn’t hiding one, then.

“So, we’re trapped here,” the old man said. “And apparently, their cat is their gate expert.”

Cat? Catra narrowed her eyes. Ah. He was talking about Melog.

"You know the Stargate?" Glasses guy was looking at Melog. "Uh… can they understand us? Or do you need to translate?"

Catra snorted. "Melog can understand you just fine."

"Ah." The man nodded. "So…"

"We still don't know who you are and why we should trust you," Catra told him.

"We come in peace. And by accident," the man replied. "We do not mean you any harm."

"You could be lying," Catra shot back. "You're carrying snake parasites that Melog really doesn't like." And she trusted Melog. Almost as much as she trusted Adora.

"I am not controlled by the Goa'uld," the huge guy said. "And I will die before I let the larva mature and take over anyone."

Well, anyone could say that. But the guy did sound like he meant it. Not like Adora 'I can't lie to save myself' honest, but… determined.

He still could be lying.

"Look… let's lower the weapons," the glasses guy said, holstering his own tiny thing. "Let's deescalate. None of us wants to fight. I hope so, at least," he added, looking at Melog.

Melog growled again. *Don't trust snakes.*

"Can the snakes hurt us?" Catra asked. "Like… control us?"

Burrow into you.

She shuddered. "The snakes bury into you," she told the others.

"Ew!" Glimmer grimaced.

“That’s why they’re parasites!” Bow exclaimed. “And you have one inside you!”

“Not like that,” the glasses guy said. “The Goa’uld use Jaffa to, ah, grow their young, but they do not control them as they control the Tau’ri. But please, let’s lower our weapons. Guys?” He was talking to his friends. “We’re stranded here. We need help. And it’s clear that they won’t trust us easily.”

The woman looked at the old guy. That must be their leader. “Sir?”

“Well, I don’t have a gun to lower… but we’re in close quarters, and I’m pretty sure this cat can shred me before anyone can shoot it.” He sighed. “Let’s talk.”

The glasses guy smiled as the woman lowered her gun and the big guy put the staff up. “So… I’m Daniel Jackson. These are Colonel Jack O’Neill, Captain Samantha Carter and Teal'c.”

Catra narrowed her eyes. It was a gesture of trust… or it could be a trap. But either way, they had an even greater advantage. If these people tried anything…

Then Adora lowered her sword - and put it on her back. “Alright.”

And Bow lowered his bow. Catra clenched her teeth. So much for having an advantage!

Glimmer took a step forward. “I am Glimmer, Queen of Bright Moon. This is She-Ra, Princess of Power. Bow and Catra. And Melog.”

“Glimmer? Bow? Princess of Power?” The old guy - O’Neill - blinked.

“Sir!” the woman - Carter - hissed.

Even Jackson sent a glance at the old man before smiling again. “Thank you. We are honoured to meet you and apologise for

entering your realm without permission. Ah… how do we address you?"

*****

"Your Glowing Highness?" Jack O'Neill clenched his teeth a little too late to keep his comment from slipping out.

"Jack!" Daniel looked aghast.

"Colonel!" Carter too.

But he couldn't help it - he had been lying far too close to an alien cat creature for far too long. And those names… Even if they were a translation quirk, how could anyone resist?

And the cat-woman - named Catra? What the hell? - giggled. "'Your Glowing Highness'! That's almost as good as Sparkles!"

"Catra!" the big blonde hissed.

And the alien cat chuffed or something. It had changed colours too, for a moment, Jack noticed. Perhaps if it was distracted, he could reach his carbine… No. They were talking now. And this group seemed to loathe the Goa'uld, which made them OK in Jack's book. And they were all so young… barely twenty, by his guess. Unless that was old for a cat-woman.

"Just call me Glimmer," the supposed queen said. "We aren't at Court." She was frowning at Jack, though.

He smiled back - he had seen worse glares. Like the one Carter was sending at him. "Glimmer it is. Call me Jack."

She nodded. "You're the leader of your group."

Had it been obvious? Daniel had told them their ranks, but would they have understood that? Jack told himself not to underestimate the kids. "I'm the leader of SG-1, yes. Do you mind if I get up? Talking to you while I'm on my back feels a little weird." He

managed not to add the very off-colour joke about being on his back that came to mind. See, Carter, I can control myself!

"As long as you don't try to attack us," the blonde amazon said. Adora She-Ra, or something. Daniel was probably analysing the meanings of their names.

"Thank you." Jack kept the sarcasm down as he slowly backed off a little more from the cat - no quick movements - and got up. After a moment's hesitation, he picked up his carbine and slung it over his shoulder. He always felt better conducting negotiations when he was armed.

The kids seemed to relax, he noticed.

"So, Glimmer, once again, our apologies for entering your realm," Daniel repeated himself as he gave them his usual charming smile. One of those days, he'd send the wrong signals to people, Jack knew.

"It's not exactly my realm," Glimmer replied. "This is the Whispering Woods. Bright Moon and Plumeria share the responsibility for the area. Bright Moon is my kingdom."

"Ah." Daniel nodded.

So, they were in disputed territory. And there were more kingdoms. Jack grinned - good to know. And good to know that this kid wasn't the ruler of the planet.

"So, you arrived here by the Stargate," the boy - Bow - said. "And you are stuck here since you can't activate it from this side."

Right. Daniel needed the 'don't blurt out information' talk again, Jack reminded himself.

"Yes," Carter said. "We need a D.H.D. A…"

Jack grinned. "A Dial Home Device, as we call it. It's round, looks a little like a weird sundial, and has the symbols you see on the

Stargate. Found it lying around by chance?”

“No.” “Nope.” “Don’t think so.” “Didn’t pay attention.”

“It might be around,” the blonde said. “We’re still exploring these ruins.”

“Looks like we’re stuck until we find it,” Jack said. Carter might be able to create a replacement device, but it had taken Stargate Command fifteen years to build the supercomputer to run the Stargate, and it still didn’t work perfectly. Stranded on an alien planet, she’d need… He pushed the thought away. Focus on the task at hand, he reminded himself.

“Uh… you said you fled from enemies. Will they follow you through the gate?” Adora asked.

“That’s…” Daniel trailed off. “The D.H.D. was hit when I was dialling. It’s possible that it got stuck, but…”

“They would have reopened the gate and followed us if they could,” Carter said.

“Yes,” Jack agreed. “Jaffa don’t give up easily.” Not when their lives, and the lives of their families, might depend on it.

“If their orders were to capture us,” Teal'c added. “If their orders were to drive us off, they might not have followed us even if they could.

“The gate went out as soon as you came through, Sir,” Carter said. “And the D.H.D. was damaged. I doubt that it’s functional, but we cannot dismiss the danger, either.”

“Great.” The cat-woman sighed. “We’ve got a portal straight to another alien invasion force.”

“Well… It’s a small portal?” the blonde smiled weakly. “Can we brick it up?”

“The opening of the wormhole destroys almost anything in the way,” Carter told her. “You would need a special material or bury the entire gate to block it.”

“Or you just seal the chamber,” Jack suggested.

“That would still allow anyone to arrive. And they would be stuck here,” Glimmer said. “We’ll ask Entrapta if she can block the gate.”

“Entrapta?” Jack tilted his head. What was it with those names?

“Princess of Dryl,” Glimmer told him. “She and Bow are experts on First Ones technology.”

“She’s better,” the boy said with a smile.

“But you’re not a slouch either!” Adora added.

“So, where’s Entrapta?” Jack asked. They had to stay focused.

“Trying to fix the main console,” Adora told him.

“I’ll fetch her,” Bow said. “She’ll love this.”

Jack suddenly had a bad feeling about this.

*****

Adora kept an eye on the new arrivals while Bow went to fetch Entrapta. They didn’t look like they’d attack her or her friends, but better safe than sorry - they still hadn’t verified their story, after all. Not that she knew how to verify if they were stranded here. But she knew they were dangerous. Well, most of them - the guy with the glasses didn’t seem dangerous. Or he was a better actor than Double Trouble.

“Sir, if we don’t find the D.H.D….” the woman, Carter, told the older man in a low voice.

“We’ll cross that bridge if we get to it, Carter,” he replied. “For now, let’s be optimistic.”

"Optimistic? You, Jack?"

"Hey! I'm always optimistic, Daniel."

"You always assume the worst."

"Not always. And I'm just being realistic."

"So, you mean you're not always realistic since you claim you don't always assume the worst?"

"Daniel! Not in front of our new friends!"

Catra snickered. "Oh, do continue."

"See?"

"Honesty is a good policy, Jack."

So, Carter called the man 'sir', while Daniel called him Jack. Which must mean he wasn't a soldier. Adora nodded at her conclusion. But that left the tall black guy who hadn't said much so far. Was he a soldier?

But their visitors had fallen silent now.

"So, you're from Earth, you said?" Catra spoke up. She sounded casual, just making conversation while they waited, but Adora knew her too well to fall for it. Catra was being sneaky.

"Yes, we're from Earth," Daniel replied.

"And you travel through Stargates to fight evil parasitic snakes." Catra didn't try to hide the hint of scepticism in her tone.

"The Goa'uld, yes," the man confirmed. "Although most of our missions are simple exploration missions."

"We just keep stumbling into Goa'uld, and suddenly the mission gets all complicated," O'Neill added. "Or simpler, since it becomes

all about shooting the enemy before he shoots you." He grinned at them. "Or blowing them up."

Catra snorted in response. "Ah, that kind of simple."

Adora rolled her eyes. "And you accidentally ended up here, unable to go back."

"And we could have an invasion arrive at any moment." Glimmer shook her head. "Another one."

"Oh, yes, Your Glowiness," Catra told her. "But never fear, She-Ra's here."

Adora cleared her throat and pointedly looked at their visitors when Catra and Glimmer turned towards her. Glimmer blushed a little, but Catra scoffed.

"Ah… Forgive me if this is prying," Daniel said, "but you don't seem overly concerned with an invasion."

"She-Ra here can handle it," Catra replied before Adora or Glimmer could say anything. "And as you explained, we can replace her with a few tons of rock." She smirked at Adora.

Adora snorted - she knew what Catra was hinting at.

"Ah… you shouldn't underestimate the Goa'uld," Daniel said. "They are very old and experienced and often use quite brutal or underhanded means to pursue their goals."

Catra chuckled. "We've got experience with that."

"Mainly thanks to you," Glimmer retorted. "And we don't know anything about those Goa'uld."

Catra glared at her in return.

Adora sighed. She knew Catra was trying to impress their visitors to keep them honest, but… "I can handle it," she told them. "But

we do need to find a more permanent solution."

"Can the gate be moved?" Catra asked.

"Yes. Although it's not easy," Carter replied.

"She-Ra can carry it." Catra waved her hand. "Problem solved."

Adora snorted. She probably could - she could throw a tank, after all - but she wasn't some beast of burden.

"Except for the fact that we're still stuck here," O'Neill said. "Our… friends at home must be worrying."

"You mean your army," Catra told him. "Or they wrote you off. Your missions seem to be rather dangerous."

"We don't write our people off!" the older man protested. He seemed genuinely angry at the assumption, Adora realised.

"Neither do we," Glimmer took a step forward. "But some of our enemies considered everyone but themselves disposable."

Catra pressed her lips together and didn't say anything. Adora wanted to sigh again. Catra had changed. Her girlfriend just needed to accept that. For good. She smiled at her, but Catra didn't seem to notice.

"Will they send a team after you?" Glimmer asked.

The others looked at each other. "I don't think they know where we are," Daniel explained. "We arrived here by accident, travelling from another planet. Our… friends… wouldn't have any way to find out where we are."

"Well, theoretically, if the Stargate on Trias has remained stuck with this gate address, then a team could find us should they be able to secure the Stargate there," Carter explained. "However, the odds of that happening…" She winced.

“So, you’re stuck here until you find a way home,” Adora summed up.

“As they already said,” Catra commented.

“We just need a D.H.D.,” Daniel said. “If you just discovered this facility, then it could be in storage somewhere, and you just haven’t found it yet.”

Adora nodded. That sounded plausible.

Catra was about to say something, but she cocked her head instead, ears twitching in that cute manner that made Adora want to caress them. “Bow and Entrapta are coming,” her girlfriend said.

“A Stargate! A Portal! New Technology! Oh, I can’t wait to examine it!” Entrapta’s voice could be heard.

A few seconds later, she appeared in the door, walking on her hair tendrils while holding her recorder. “Hello, everyone! This is so exciting! Oh, there it is!”

Their visitors stared.

*****

A teenager? was Samantha Carter’s first thought. Then she saw the woman’s face. No, twenty to thirty - just short. Shorter than Queen Glimmer. And she was… walking with her hair. No, that couldn’t be hair. It was moving, carrying the woman. And yet it looked like hair. Some sort of nanostrands? Microstructures that allowed it to move like muscles?

“Hi!”

“Hello,” the Colonel nodded.

“Hello.” Daniel looked speechless for a change.

“I’m Entrapta! You’re the travellers from another planet? And you arrived through a portal! Fascinating? Do you mind if I scan you? Just to check if you have some weird radiation or anything else we could use to determine your home planet.”

Belatedly, Sam greeted the woman as well. “Hello.”

“Hi! You’re the scientist of your group?” Entrapta beamed at her, which looked a little creepy as she was still hanging down from her hair.

So, they had noticed that Sam was a scientist. That meant they knew what a scientist was - well, they already knew that, what with the remarks about frigates in orbit. Still, why would they use bows and swords? A cultural relic from a Goa’uld occupation?

Metallic steps drew her attention back to the tunnel, and she froze. A huge, round robot entered the chamber. It was the size of a small car and walking on articulated legs.

“What the…?”

“That’s Emily!” the woman announced. “She’s my assistant - and bodyguard, I guess.”

The robot beeped, and the woman nodded. “Exactly!”

She turned and pointed a device at them. “So, let’s scan you!”

“Whoa! Wait a minute!” the Colonel protested. “What exactly are you planning to do?”

“Gathering data about you, of course! You’re an alien species - at least one of you is an alien for sure, but the others could be as well.”

“It’s considered rude to scan people without their consent,” Daniel said.

“Why?” The woman cocked her head - somehow without unbalancing her hair. “It’s just gathering data.”

“It, ah, is a potential violation of our privacy,” Daniel replied. “Medical data is considered confidential in our home culture.”

“Really? Well, I need to scan you. What if you carry some alien viruses or bacteria? Or are suffering from an allergy to anything here?” The woman held up the device and started pushing buttons.

And the tall blonde - Adora - who had raised her hand, lowered it again.

“She’s right,” the cat-woman muttered.

“Yes, but…”

“No, you’re right,” Sam said. “This is a medical necessity.”

“Carter!” the Colonel protested.

“She is correct, Sir.” It was only sensible to check them for diseases.

“Yes, but you could’ve said it a little more diplomatically.” He was almost pouting. Not that Sam would ever tell him that.

“O-K! Now let’s analyse this!” The woman - Entrapta announced. Pushing a few more buttons. “And while we wait, let’s do science!” Her mask, which had rested on top of her head, slid down and covered her face as she approached the Stargate. “Oh, First Ones style!”

“First Ones?” Daniel asked at once.

“What we call the people who built this temple,” the young man told them. The group was predominantly made up of women, Sam suddenly realised. There was only one man, and he was clearly not a leader. She’d have to point this out to Daniel.

“Oh! This is a fascinating material!”

“It’s Naquadah,” Sam told her. “A rare, super-dense mineral.”

“Oh, yes. Yes. Really fascinating. I need to take a sample to analyse it.”

“Please don’t damage our only way home,” the Colonel said.

“Oh, right. Though a little sample won’t hurt - it’s already scratched.” One hair tendril separated and grabbed a tool.

“How are you doing this?” Sam blurted out, both to make the woman reconsider damaging the Stargate and to satisfy her curiosity.

“Doing what?”

“Your… hair. How do you move the strands?”

“Oh.” The woman turned around to face and smile at Sam. “It’s my magic talent. It’s more useful than you might think!”

“Magic talent?” Daniel asked.

“Yes. Inborn magic. Some princesses can control plants, some can control the sea, I can control my hair. And it’s very useful for doing fine work.”

Magic. Sam was tempted to lower her estimate of this planet’s technical level. On the other hand, there was a lot of technology that, if not quite understood, would appear to be magic. And some species had talents that matched some definitions of magic. She’d have to ask Daniel to look into this. The last thing they needed was some cultural misunderstanding. Or some blind spots due to preconceptions. Something, fortunately, Daniel lacked.

“Magic hair. Now I’ve seen everything,” the Colonel commented. “Can you pull a rabbit out of your hat as well?”

Unfortunately, the Colonel easily made up for that. Sam winced.

The woman, Entrapta, didn't seem to mind, though. "No, I can't. I don't have a hat or a rabbit."

But the rest of the group was glaring at the Colonel. Even the robot seemed, somehow, to show some annoyance.

"Sorry, Daniel said, smiling again. "We don't have magic on our planet, so we're not quite used to it."

"Oh, we know," the blonde woman said, smiling. "We've been working hard to return magic to all the worlds without it, but it's going slowly. But we'll get around to your home planet, don't worry!"

Sam blinked.

What?

*****

The Gate

Whispering Woods, Etheria, July 10th, 1998 (Earth Time)

"What?" The blonde woman was gaping as if Adora had been stuttering.

Catra frowned. "We're bringing magic back," she told her. "It's just going to take a while." No need to let them get high expectations.

"Magic?" The guy with glasses stared at them. "What exactly do you mean by magic?"

Catra sighed. Were those guys slow or what? "Magic. You know, the power that lets you teleport, control plants - or hair - and turn spaceships into plants?"

"What?" the blonde repeated herself.

"Magic." Entrapta beamed at them - Catra could tell even with her mask up. "It's a way of manipulating a form of energy that is commonly called 'magic' as well, which is, kinda confusing, I guess. But that's fine - you haven't had access to magic in this sector for a thousand years or more, so you can't be expected to understand everything at once.

"A form of energy?" The blonde would make a good recorder, Catra thought with a smirk, the way she kept repeating stuff.

"Yes." Entrapta nodded as if that explained everything.

The old guy who had been making fun of Entrapta shook his head. "There is no such a thing as magic."

"Really?" Glimmer narrowed her eyes at him.

Catra grinned. That should be good. Entrapta was their friend. And they wouldn't let someone mock her for her… quirks.

“Yes, really,” the old guy told her.

“Colonel!” the blonde hissed.

“Jack! This is obviously a cultural difference.”

“No, it’s just ignorance,” Glimmer spat - and teleported next to them.

All of them were shocked. Or at least surprised - even the tall, dark guy twitched.

“What do you call this?” Glimmer challenged them.

“We’ve seen transporters before,” the old guy replied - he was still looking wary, though.

“But nothing like this, Jack!” Glasses gushed. “This is like… teleportation! Instant transportation! And we didn’t see any rings!”

“Yes, this is Glimmer’s innate magical talent. She can teleport using magic,” Entrapta said, nodding at the others. “Just like I can control my hair.”

“Perhaps they have trace elements of Naquadah or something similar in their blood, and it allows them to wield devices like the Hara’Kesh,” the blonde mumbled.

“But Sam!” Glasses objected. “Why would they try to convince us that there is magic if it’s actually technology?”

“Oh, actually, magic is part of technology, at least according to some definitions.” Entrapta smiled. “If you have the talent, you can learn to cast spells, and they follow the laws of magic. It’s science!”

This was getting out of hand, Catra realised. They were discussing magic and technology with a bunch of intruders as if they were on Mystacore and not in the middle of an ancient installation of the First Ones they had barely begun to explore. “How about we

discuss that stuff once we've hashed out the more important bits? Like whether or not there's one of those 'D.H.D.s' around?" And once they had confirmed that this installation didn't have some homicidal bots waiting in secret rooms to go after all intruders. Catra didn't want a repat of that particular excursion.

Melog growled in agreement.

"Good idea." Adora smiled at her, and Catra smiled back with a warm feeling in her chest before she caught herself. They could flirt when they weren't standing in melee range of a group of still suspicious strangers.

"So, first: Are they safe, or are they controlled by alien parasitic snakes?" Catra asked. Melog certainly wasn't warming up to them.

"Well, my scan should… ah! It finished while we talked. Yes!" Entrapta slipped her mask up on her head and peered at her recorder. "Ah. None of you carries dangerous or unknown diseases as far as my scanner can tell - and it can tell a lot. And none of you has a parasitic or other organism connected to your central nervous system. So, you probably aren't controlled by those 'Goa'uld'."

"Probably?" Adora asked.

Catra looked at Melog. Her friend was still tense.

"Well, they could be controlled by other means, right?" Entrapta cocked her head sideways. "We shouldn't assume that there's only one way to achieve the same result; that's what leads to failed research!"

"Blackmail, hostages, bribes," Catra explained with a shrug. "Whatever works."

"I would rather die than obey the False Gods!" the huge guy growled. "And so would my family."

Catra narrowed her eyes. That sounded… well, she'd keep an eye on the guy. Anyone who'd sacrifice their family like that was dangerous. And probably not quite stable - she knew all about being fanatically devoted to one thing. And how dangerous that made you to everyone - including your friends. Knew it far too well.

"We are fighting the snakes. We don't obey them," the old guy said.

"But you had one inside you," Entrapta went on, pointing at the blonde with one hair tendril. "I can see where it accessed your spine - it's not quite healed yet. Fascinating! And your blood! It's full of this new metal. Relatively, of course - you're not in any danger of succumbing to heavy metal poisoning. I think - I'm not a Healer."

The blonde obviously didn't think that this was fascinating, nor was she particularly relieved that she wouldn't be dying to poison. "Yes," she spat through clenched teeth.

"It was a very recent and very traumatic experience," Glasses said.

"Oh? How so?" Entrapta blinked.

But before she could ask for more details, Adora took a step forward. "Yes, we understand. We know about traumatic experiences."

Catra, meanwhile, glanced at Entrapta and grimaced.

Her friend blinked, and then her eyes widened. "Oh! That kinda experience. Right! No asking for details!" She nodded firmly. "Anyway, they aren't currently controlled by parasites."

That didn't mean that they were trustworthy, of course. Catra knew that better than most as well. "What about the snake inside him?" she asked.

“As I said, the snake embryo in Teal’c’s stomach is only connected to his bloodstream so it can receive nourishment and oxygen, but has no connection to his brain or spine.”

Adora blinked. “Wait. It’s not just… you’re really pregnant with a snake?”

*****

“We’re calling him Junior,” Jack O’Neill said. Teal’c raised an eyebrow at him, but that was to be expected. A little humour should diffuse the situation.

“It’s not exactly a pregnancy,” Daniel tried to explain. “It’s more like… like an incubator.”

“That’s not much of a difference,” the Queen - who could barely be twenty - said.

“It’s not my child.” Teal’c was getting annoyed. Jack could tell. Fortunately, the others didn’t know Teal’c like Jack did. “And if I could, I would get rid of it.”

The other group exchanged some glances. Except for the princess with the magical hair - she was studying her scanner again. “It’s kind of a symbiont, actually - it provides him with an immune system. Otherwise, he would die.”

“The Jaffa were genetically engineered to lack an immune system without an implanted Goa’uld embryo,” Carter explained. “It’s a way to control them.”

That got a reaction - even the slightly off science princess looked shocked.

“They did what?” The amazon gasped. “That’s… that’s horrible!”

“They’re forced to serve or die…” Queenie suddenly looked a few years older. And angrier.

And the big cat growled.

The boy, though, frowned. “But… if you have an embryo per, ah, Jaffa, wouldn’t that mean that you have more Goa’uld than Jaffa?”

“Sounds more than a little top-heavy as a command structure,” the catwoman added.

“The Goa’uld don’t really care much for their offspring,” Daniel told them.

“They eat them,” Teal’c said.

Once more, the kids looked shocked. “They eat their own?” Blondie blurted out.

“Cannibalistic tendencies have been observed in many animal species, especially if they spawn a lot of offspring, but to see it in a sapient species is rare,” their scientist commented. She didn’t look shocked, Jack noticed.

“No wonder Melog hates them,” the catwoman mumbled.

“They’re evil,” Teal’c said.

“But… even the babies?” The amazon - Adora, Jack reminded himself - looked at Teal’c’s stomach.

“They have genetic memory - each of them knows what their progenitor knows,” Daniel explained.

“That’s handy for getting intel.”

“Catra!”

“What? I’m just saying - if all you need is one of the snakes to find out what they know, then that’s a huge weakness.”

“They’re still children!” Adora shook her head.

“Still better than being eaten,” Catra retorted.

The blonde stared at her, then closed her mouth. “That’s…”

“In order to interrogate a Goa’uld larva, you’d have to present it with a host,” Carter interrupted their spat. She pressed her lips together, no doubt remembering her own possession.

“And that would be morally unacceptable since the host would be effectively dead,” Daniel went on.

To their credit, most of the others nodded at that. Though the catwoman - named Catra, really! - struck Jack as a little too pragmatic to be fully convinced. She reminded him of a few spooks he had known in his youth.

“So, you’re saying they’re born evil?” Adora asked.

“Everyone can change,” Entrapta protested. “No matter the circumstances of your birth!”

Adora nodded, as did the others, though Catra looked away. Interesting.

But they really should focus on searching the area now. The kids seemed friendly, but that might change if more locals were brought in. If they found a D.H.D., then Jack’s team could be back at SGC before anyone back home started worrying, and then they could prepare a proper diplomatic mission to this planet. He cleared his throat. “So, how about we look for our missing device? We wouldn’t want to impose on you, after all.” He gave them his best smile.

“That sounds good.” Catra nodded.

“But we still need to guard the gate,” Adora pointed out.

“You can do that,” Catra told her. “We’ll look for their device. But let’s stick together for safety.”

“Never split the party,” Jack agreed. As expected, Daniel the nerd frowned at him, but Carter didn’t react to his joke. Neither did

Teal’c, but again, that was par for the course.

“So… Adora stays here,” Queenie said.

“But I’m the one who can read First Ones writing.”

“You’re also the best way to seal the gate here. If we find anything we need translated, we can call you.”

“But…”

“She’s right,” Catra agreed. “Someone has to watch the gate.”

“You’ve got the best eyes, as you claimed before!”

“And that’s why I’m going to look for their device. You can watch the gate - you don’t need my eyes to spot an invasion force trying to come through.” The catwoman smiled and briefly hugged the amazon. “We’ll be back soon.”

“Daniel, stay here as well,” Jack said.

“But, Jack!”

“You two can talk about translating.” And he could keep an eye on the blonde amazon while staying out of the way of any traps or ambushes. And if the group turned on them, Daniel wouldn’t be caught in the crossfire.

“Oh, right!”

Besides, if things went as they usually did, Daniel would be charming the socks off the woman. “Just don’t get married by accident.”

“Jack!” Daniel looked annoyed. And Carter frowned at him. Right. No joking about wives.

“Sorry,” Jack mumbled. “Now, let’s get this show on the road! We’ve got a D.H.D. to find!”

“If it’s made from the same material as the gate, then I can scan for it!”

“You can, Entrpata?” Adora asked.

“It’s simple data gathering.”

“Do it,” Queen Glimmer ordered.

Well, that should speed things up.

*****

And there went the others. Adora sighed as she watched the group leave, Emily bringing up the rear. She still didn’t like staying behind and guarding the portal. Of course, as She-Ra, she could repel an invasion through such an obvious choke point - even a young cadet would be able to plan such a battle, except for Kyle - but she was also the best choice to deal with lingering guard bots, traps or monsters that had ventured into the ruins. And she really didn’t like letting her friends face such dangers without her.

“So… you can read Ancient script?” The man who had stayed with her asked. Daniel.

“Ancient?” She cocked her head to the side.

“This one.” He pointed at a text on the wall. “It’s the language of the Ancients. That’s our name for the civilization which built the Stargates.”

“Oh.” So, the First Ones had built the gates? That figured. “We call them the First Ones,” she told him.

“Ah.” He nodded. “I’ve been studying their language for years.”

“Ah, yes. It takes a long time of studying and such to learn it, right?” Adora smiled at him. There was no way she was telling him that she was born with the ability to read First Ones script.

Not after all the talk about genetic memory. “I kind of studied history,” she went on.

“Oh? You did?” His face lit up. “That’s great! What do you know about the impact the Ancients - the First Ones - had on your world?”

They had tried to blow it up to defeat Horde Prime. And, if not for Mara and Adora, would have succeeded. But she couldn’t tell him that, either. “Well, they left those ruins,” she said instead. “And their technology. Though few can understand it. Other than that…” She shrugged. “Not many can understand their language.” Not even dedicated historians like Bow’s dads.

“A topic for academicians, then?”

“Historians, mostly,” she replied. Perhaps she should’ve played dumb.

“Like yourself.”

“Oh…” She grimaced. “I had to cut my studies short because of the war.” It was true. Kinda. A little. She had missed Force Captain orientation.

“The war?” He looked surprised.

“Against the Horde. Invaders,” she told him. “They tried to conquer Etheria for decades. We finally defeated them a year ago.”

His eyes widened. “That’s… very recent.”

“Etheria was hidden from them for a thousand years,” she explained.

“And then they found you?”

“Something like that, yes. It was a bit more complicated.” And not something she liked to talk about. “Anyway, you studied the

Ancients?”

“As much as I’ve managed,” he told her with a sigh. “There aren’t many artefacts left from their time. It’s a miracle that there’s anything left.” He looked at the gate. “I still am awed that this is over five million years old and is working as well as it was on the first day. Or so we assume.”

“Five million years old?” She stared at him. “But…” Adora wasn’t a historian, but she knew that the First Ones had arrived a thousand years ago. Not five million years ago. “Are you sure?”

“Over five million years ago, actually. That’s when the last Stargates were built,” he told her. “All our research confirmed it so far.”

“Then we need to have Entrapta date this gate. If this is five million years old…” Adora didn’t know what it meant, but it was important.

“How old did you think it was?”

Oh. She pressed her lips together for a moment. Should she lie? They might see through it. “The ruins are about a thousand years old,” she said. “That’s when the First Ones arrived.”

“Ancients, a thousand years ago? But… they all vanished from the galaxy five million years ago. Approximately.”

That was weird. “Are you sure?” The galaxy was big, after all.

“We were. If we have to rewrite history…” He beamed at her. “This could be a historic discovery! Perhaps a colony of the Ancients survived?” Then he frowned. “Or another species could have been using their language and script. Or just their script. Like the Goa’uld.”

“Ah.” Adora didn’t know what to say. She wasn’t a historian. She was just a First One… Oh. “How did the Ancients look?”

“Ah… as far as we know, like us.”

“Oh.”

“Yes. they could probably pass for humans.”

“Or Tau’ri, right?”

“We call ourselves humans, but others call us Tau’ri.”

Adora blinked. “I see. And you’re aliens.”

“Well… the Goa’uld took humans in the past, kidnapped them from our planet and spread them across the galaxy through the gate network. That’s why so many planets are populated by humans.”

“And you think we’re humans as well.” Well, Glimmer, Bow and the others. Adora was a First One. And Catra was… Catra.”

He looked a little embarrassed. “Well, yes… the odds of a species independently evolving to look like us… I assume a gene test should tell us if we’re the same species.”

She nodded. “Entrapta will probably do that anyway.”

“Ah. She seems very enthusiastic.”

So enthusiastic, she had eagerly worked for the Horde. But that was not her fault. Not entirely, at least. Entrapta had been manipulated by Catra as well. Adora nodded. “Yes.”

“Like Sam, I guess.” He smiled.

*****

The tunnel ahead looked empty, but Samantha Carter knew that looks couldn’t be trusted. Not in a facility such as this one. Exploring Ancient ruins was a dangerous task.

“I don’t like this,” Catra mumbled. “This is too easy. We should’ve encountered a monster or a bot at least by now.”

“Don’t be so pessimistic,” the man told her. “We’re bound to have some luck with ancient ruins, one of these days.”

“That’s both correct and incorrect,” Entrapta said. “While it’s improbable that every place we visit has traps and guardian creatures or bots, that doesn’t mean any particular installation, such as this one, is any more likely to be unguarded than the one before. The odds of a particular outcome are roughly the same each time you encounter it, after all. That’s simple maths.”

“Well,” Catra said, “this tunnel before us is likely to be a trap. It just smells like it.”

“Do we have a thief with us?”

And there was the Dungeons and Dragons joke. Sam suppressed a sigh. “Sir?” she asked.

“Just a joke,” the Colonel replied. “About a game I used to play,” he added, nodding to the others with them, “when I was much younger. Thieves could detect traps.”

“A game?” The man - Bow, and carrying a bow and arrows; Daniel would have a field day trying to puzzle but the cultural significance of the name - asked. “What kind of game?”

He didn’t expect them to discuss games in the middle of an Ancient installation, did he?

“It’s like a board game. You play adventurers and explorers in a sort of maze,” the Colonel replied.

Sam wasn’t even sure if this culture had board games.

“Oh! Do you use miniatures?” Apparently, they not only had board games, but Bow was a fan of them.

“Yes?” The Colonel obviously hadn’t expected that response.

“Great!”

“Bow! We’re not about to ‘wargame’ this.” And Queen Glimmer wasn’t a fan.

“You do wargames?” The Colonel cocked his head.

“Yes!”

“Once. We did that once,” the queen corrected Bow. “And it was awful.”

Sam cleared her throat. “Can your scanner detect anything in the tunnel?” She asked Entrapta.

“Hm? Oh, yes. No Naquadah in the tunnel,” the woman replied without looking up from her device. “That’s a fascinating metal. I can’t wait to experiment with it.”

Oh. Sam refrained from cursing. “You have to be very cautious with it. It can enhance the power of explosions to a level your research facility might not be able to handle.”

“Really?” Entrapta was beaming at her. “I *have* to test that!”

“Err…” Bow looked a little pale. “But under strict safety protocols, right?”

“And not near Bright Moon,” Queen Glimmer added.

“And do it by remote.” Catra was still looking down the tunnel. Her eyes were like a cat’s, but Sam didn’t know if the woman could actually see in the dark as well as that indicated. Or whether or not her heterochromia affected her senses in any way.

“Oh. Something is moving ahead of us!” Entrapta piped up. “I knew my motion detector would end up working!”

“Can you detect what kind of creature is moving?” Catra asked, just as the cat, Melog, started to growl. “Watch out! Monster incoming!”

Sam aimed her M4 down the tunnel and moved to the wall, crouching down. The Colonel did the same on the other side with his M4A1. “What’s coming?”

“It’s moving like a snake,” Entrapta announced.

“Snakes? Why did it have to be snakes?” the Colonel commented.

“Well, they’re native to the area…” Entrapta started to explain

“Not now!” Glimmer snapped. “It’s coming!”

And there it was. It was a snake - or a worm - and it was huge. The head was the size of a human torso, but it had multiple, brightly glowing eyes. And fangs the size of Sam’s lower arm. For a moment, she hesitated. Could they shoot the snake? Or would that be…

Next to her, Bow released his arrow. It struck the snake in the open mouth, and it reeled, knocking its head against the ceiling, hard enough to shake loose dirt from it.

The Colonel fired, Sam joining him a moment later. Short bursts into the thing’s wide-open mouth, where no scales could protect it.

The snake roared and charged them, mouth wide open. Sam fought the urge to turn and flee and kept firing. Twenty yards. Fifteen. This would get ugly.

Another arrow hit the ground in front of the snake, releasing a green mass - and the snake got stuck. And a laser bolt struck the side of the thing, leaving a long scorch mark.

“Aim for the mouth!” the Colonel snapped.

Teal’c shot as well, sending a blast down the creature’s maw. Sam kept firing until she had emptied her whole magazine - two left, she automatically reminded herself - into the creature.

Which finally collapsed, green blood oozing out of its mouth.

Sam sighed with relief.

And Catra cursed them, holding her ears. “Warn me next time!”

“Oh! You’re using a chemical propellant to fire metal bullets at the target! Fascinating! What advantages does it offer over energy-based weapons? I assume you don’t have to deal with losing focus at longer ranges, but the drop-off in kinetic energy would probably be a problem, right?”

“Wow. Carter, she sounds like you when you discover a new thing.”

Sam glared at the Colonel. She wasn’t like that. Not at all.

*****

Those weapons were more effective than Catra had expected. At least at this range. Much higher rate of fire than a bow, and they did take down the monster. If only they weren’t so damn loud - her ears were still ringing.

She knelt down next to the monster - a Creeping Worm, at least according to the simulations she had done as a cadet - and looked at the wounds in its maw. Small holes, from what she could see. And the bullets hadn’t gone through the skull of the worm. But it had been enough to kill it. And people weren’t as tough as such a worm. “How good are they at going through armour?” she asked.

“Depends on the armour,” the old guy said.

“We can’t really say, not without a sample of the armour in question,” the blonde woman added.

One non-answer and an attempt to gather more information about them. These people weren't bad at the game. But Catra hadn't really been asking them.

"I would assume, based upon the penetration of the worm's skull, and the lack of exit wounds, that they would go through standard Horde field uniforms," Entrapta said. "A Bright Moon Guard's breastplate might stop it, as long as it's not too close."

That wasn't too bad at all. Quite nasty, actually - for the size of these weapons. Bow whistled, obviously impressed as well. Glimmer didn't look like she was happy about hearing that her soldiers would be vulnerable to those weapons. Well, she shouldn't be.

"Slightly better than a Horde light laser rifle, then," Catra summed up. They had seen Prime's bots use those against them often enough to compare. Far too often.

Entrapta blinked, then nodded. "Somewhat. It depends on the circumstances. I could make armour that would repel those bullets, of course. And it's definitely weaker than Emily's main blaster, I think."

Much lighter than either, however. And the rate of fire… "But it needs ammunition, I guess," Catra asked. And a lot of it, from the way it looked. That would strain supply lines and make it harder to operate behind enemy lines for any length of time. And the loud noise would alert everyone in the vicinity.

She still would like one. If it wasn't so damn loud.

"Oh, yes! Do you have a way to make more ammo?" Entrapta asked the others. "If you don't but have the formula and schematics for the bullets, I could make some for you."

And she'd also find out how to make the weapons herself. Catra smiled.

"Ah…" The woman looked to the older man.

“We’re still good,” he said. “But if we’re stuck here, we might want to talk to you about that.”

“Great! It’s like a completely new technology! There have been forays into kinetic weapons like this, based upon crossbows and bows, but crystal-based lasers and blasters were deemed more effective.”

“Probably because of the lessened strain on supply lines,” Catra suggested. And the lower chance of some idiot cadet blowing themselves and everyone else up by mistake.

“Yeah, lugging around ammunition can be a bother,” the old guy said with a shrug. “But we manage.”

“Crystal based lasers?” the woman - Carter - asked.

“Oh, yes. You use focus crystals to shoot laser beams. Not quite as effective as blasters, but if you have a power source, you can fire forever - or until it overheats and breaks down,” Entrapta explained. “Old technology. Blasters are more interesting.”

“I bet.” The old man chuckled. “But with the monster dead, and no loot I can see, how about we look for our way home?”

“Oh, yes! I already scanned the area here,” Entrapta told him. “No Naquadah, sorry!”

“Then let’s move on to the next area,” Glimmer said.

“Shouldn’t be too much left,” Bow said. “Unless there’s another level that we didn’t find yet.”

“I could run a seismic scan,” Entrapta offered. “Now that the worm is gone, I doubt that the sonic vibrations would attract another - they’re territorial, after all.”

“Do it,” Glimmer said. She sounded impatient. She probably wanted to get their visitors back to their planet or out of this facility.

Catra could understand the feeling. The group acted friendly, but they were dangerous. Their weapons might not be enough to hurt She-Ra, but everyone else wasn't nearly as tough. And those were just the weapons they had shown - who knew what else they had? You always kept something in reserve if you were a good officer, and the old guy didn't strike her as a bad officer.

No, he was like a tough, old Force Captain. If they came to blows, she'd take him out first. A decapitation strike. Perhaps literally - her claws would go through his uniform and throat, she was sure of that.

"Alright," Bow said, seemingly oblivious. "The next area is behind this junction ahead."

They went on, with Emily bringing up the rear. Catra wasn't too comfortable with the bot being their backup, but at least Emily wouldn't be easy to disable in case of an ambush - or treachery.

Though she had a feeling that the old guy already had plans for that. Several, probably.

To be fair, she was planning how to take them out as well. Just in case things turned sour, of course. And she was sure that Glimmer was also ready for a fight. Just in case.

*****

They were underground in a maze-like area fighting monsters looking for the key to getting home. It really felt like a roleplaying session. At least an old school one - Jack O'Neill wasn't quite sure if the hobby had changed in the twenty years since he had last played. Probably got too commercialised, like everything from the seventies.

He shook his head - he had to focus on the task at hand. He couldn't let himself get distracted by the absurdity of the whole thing - he had seen weirder, after all, since he started at SG-1. Though, given the talk about magic and space ships, Jack had a

feeling that things might get even weirder if they couldn't get the gate working and return to Earth.

Which, according to the science princess with the weird hair and weird name - Entrapta? Who named their kid that? - was looking quite unlikely.

"So, no Naquadah here either. Sorry!"

She sounded as if she was pleased about it. Then again, she was not quite normal. A little off, at least - even compared to her friends. Which included the catwoman who felt like a spook. The way Catra talked about gathering intel, and the way she kept an eye on Jack's team, always staying in the back if she could manage… If they came to blows, Jack would take her out first. She wasn't carrying a weapon, not openly, but that only meant that she had one hidden or didn't need one. With those claws of hers, Jack was betting on the latter.

"And I think that was the last part of the ruins we hadn't checked yet," Bow said. Did they name every kid after something obvious? Or did they earn their names once they came of age? Daniel would probably know that by now. But the kid looked apologetic. "I'm sorry, but I think this device you need isn't here. It might have been carried off since the installation was built."

"We might be able to build another one, though," Entrapta offered.

And find out how to operate the Stargates. Clever, Jack thought.

"It's a very complicated venture," Carter told her. "The Stargates need enormous amounts of power to work, and we need advanced computers that can interface with the gate. Most importantly, though, we need the gate addresses and astronomical data so the gate can correct for astronomical drift and safely connect to other gates."

"Oh, a nonstandard operating system!" Entrapta beamed. "Fascinating! I wonder if it's similar to Horde Prime's computers -

those were hard to fool!”

“Horde Prime?” Jack asked.

“The leader of the Horde that tried to conquer Etheria,” Catra told him. “We defeated him a while ago.”

That was valuable intel. “Sounds like a tough customer. Is he still around?” Jack asked, trying to sound only politely interested. It also sounded like a Goa’uld.

“No,” Catra told him.

“He was dealt with,” Glimmer added. No details, Jack noted. “But if you can’t return through the gate, we need to secure it and then return to Bright Moon.”

Her country. Or her something. With, presumably, more guards. “We can camp out here. We don’t want to be a bother,” Jack said. If Daniel were here, he would protest, of course, something about refusing hospitality, but Jack needed to know where they stood with the locals before trusting them.

“It’s the Whispering Woods - it’s full of monsters,” Glimmer told him.

“Like the worm?” Jack asked.

“Worse. How much ammunition do you carry for your weapons?” Catra asked.

Jack shrugged with deliberate nonchalance. “Enough to handle trouble.”

“Sir, it might be safer to accept their offer.”

Jack knew that as well. But now he knew that the kids hadn’t tried to order them to come back to their home. They had tried to persuade them. They might still order them, of course, if they

kept refusing. “Alright, I guess sleeping in a real bed wouldn’t hurt,” he said.

Catra snorted, but the others smiled.

“But we need to secure the gate,” Glimmer said. “We can’t leave it open for an invasion.”

“If we can move the gate, we can lay it down on the ground, facing up - anyone trying to exit would fall back down into the gate. Which, unfortunately, is fatal. The gates are one-way only,” Carter suggested.

Rather ruthless, but the odds of anyone from Earth following them and finding this gate were zero.

The kids, though, looked taken aback. Except for Catra.

“Can’t we… seal it so it doesn’t activate?” Bow asked, wincing. “You said we could, didn’t you?”

“Yes. We would have to bury it for that,” Carter replied. “It would need to be completely buried to keep it from activating - otherwise, it would blast an opening in whatever is covering it, unless you use a special metal.”

“Then let’s do that!” Glimmer announced. “We don’t want to kill innocent travellers.”

“It’s going to be a very deep hole. Unless you have explosives, that will take some time,” Jack explained.

Everyone smiled. “We don’t need explosives. We have She-Ra!” Glimmer announced.

“Although I could whip up some digging charges, I think,” Entrapta offered. “Though limiting their blasts so they create a hole instead of a crater would require some planning.”

“Let’s file that as Plan B,” Bow said, “and just ask Adora first.”

“Alright!” Entrapta nodded, apparently not fazed in the slightest.

They seemed to trust She-Ra - or Adora; She-Ra seemed to be her title - to be able to handle this. Jack was curious to find out if the woman could deliver. It wasn’t exactly easy to move a gate - you couldn’t just pick it up and carry it with you.

*****

“Where do you want it?” Adora asked, teeth clenched, as she turned with the Stargate in her hands. It wasn’t actually that heavy, but it was unwieldy - she had to hug the ring to herself, and she had to watch it so she didn’t swing it around too much and brain some of her friends or visitors with it. Or broke it by accident. And knowing that, should it activate right now, she might lose her arms… No, she wasn’t going to think about that!

“Just drop it on the ground to the side for now,” Entrapta told her, “Uh… this side - the right side up. No, the other right side, the left from your point of view - up.”

Adora suppressed the urge to curse and forced herself to smile as she flipped the gate over. “Like this?”

“Perfect!” Entrapta beamed at her. “Now, if the gate activates, it will blast a hole in the earth. Right?” She turned to face the blonde woman, Carter.

“Ah, yes,” Carter replied. She seemed still surprised that Adora had been able to carry the gate around. They must not have Minotaurs on Earth. Or Scorpionfolk. Compared to throwing a tank, the gate wasn’t exactly heavy. Then again, a tank could be replaced, but if Adora broke the gate…

“You must be popular when your friends are moving.” The old man, O’Neill, chuckled.

Adora blinked. “Moving? We’ve got a skiff for that.” Two actually - one for them, one for Entrapta and the camping gear. And Emily still had to walk.

“It’s a custom in our culture that when you change homes, your friends help you carry your furniture and other belongings to your new home,” Daniel explained.

“Ah.” Adora nodded. That made more sense.

“You don’t have porters?” Glimmer asked, cocking her head.

“We do, actually.” Daniel smiled at her. “But not everyone can afford them. Or trusts strangers to handle their most valuable belongings.”

“Ah.”

“Not everyone’s a princess,” Catra commented. “Some of us have to work for a living.”

Gimmer rolled her eyes. “You don’t work.”

“I do work. I keep you from killing yourself by being stupid, and I keep an eye on Adora, so you don’t make her do everything for you,” Catra shot back, showing her fangs.

Adora smiled - Catra was looking out for her, in her own way at least. But… “I’m currently doing all the work,” she pointed out.

“That’s because there aren’t any alternatives. We don’t have a troop of Glimmer’s guards here to carry the gate around,” Catra replied. “So, it’s you or nothing.”

“I would have brought some porters if I had known we would have to move anything,” Glimmer said.

“You expected us to find nothing in the ruins worth keeping?” Catra faked surprise.

“That’s not what I meant!”

Adora cleared her throat. They weren’t in private - they had visitors. Who were watching them attentively. “So, now we dig a

hole? Or, I dig a hole?”

“Like in training,” Catra said. “Just faster and deeper.”

“Training?” Daniel asked. “For… excavations?”

“Digging holes and trenches,” Adora corrected him. “Basic infantry training.”

“Oh.”

“They mentioned a war, Daniel.”

“Yes, Jack, but many societies do not have boot camp style training. At least not for their leaders. And while earthworks are a staple of warfare in history, they might not wage war in the same style here since the technology is wildly different. For example, a war fought on the sea would not see any need for sailors being able to throw up earthen fortifications - at least not so they would be trained for it.”

Catra rolled her eyes, Adora saw, as Daniel talked to his friends. The man had a tendency to go on for some time - but he had a nice voice and a friendly smile. Which probably was another reason for Catra’s attitude, Adora realised.

Well, that could be helped. Smiling, she walked over to her girlfriend and hugged her. Catra squirmed in her arms but didn’t actually try to slip out. “Love you,” Adora whispered - and her girlfriend froze for a moment.

“Not in front of the strangers,” Catra whispered back. But she didn’t really mean it. Adora could tell.

“So… hole?” Jack asked, cutting off his friend’s explanation. “I don’t want to rush anyone, but you mentioned monsters around here.”

“Right!” Adora released Catra and drew her sword.

“Are you going to dig with…” Jack trailed off when Adora changed the Sword of Protection into an oversized - for She-Ra - spade. “Now that’s handy.”

“A morphing weapon? A multi-purpose tool?” Carter shook her head. “Molecular reconstruction? It has to be to change like that, but as fast as it was...”

“Magic,” Entrapta told her. “We don’t actually know how it works - Castaspella said it wasn’t a spell, and she doesn’t know what it is, either, and she should know. It’s probably an innate talent of She-Ra. Like my hair is mine.”

Adora didn’t know how exactly it worked, either. But she knew how to make it work, which was all that was needed. She rammed the spade into the ground and started digging.

For all of Jack’s comments, he was correct - they shouldn’t linger here.

About fifteen minutes later, the hole was deep enough, according to Carter. And Jack had stopped making comments about excavators.

Then it was just a matter of lowering the gate down without breaking it - Carter said it wouldn’t break if dropped, but Adora wasn’t risking that - and filling the hole up again.

And then hiding the fact that they had dug a hole so no one would find the gate until they returned.

And then they were off to Bright Moon. Their visitors would love it there, Adora was sure.

*****

The Palace

Whispering Woods, Etheria, July 10th, 1998 (Earth Time)

Trying to disassemble the 'skiff' would be very rude, Samantha Carter told herself as she stared at the floating vehicle. It looked… like a cross between a sailing yacht and a… actually, it looked like a floating sailing yacht.

"We'll have to check if George Lucas is an alien once we return to Earth," the Colonel joked. "This looks almost like Jabba's skiff."

"Indeed," Teal'c said. "Although the skiff there doesn't have the sail."

"You've got skiffs as well?" Entrapta jumped down from her robot - Emily - and let her hair tendrils catch her fall. "How do they work? You said you don't use magic, so you can't be using a levitation spell stabilised in a crystal matrix like the skiff here does. Do you use gravity generators? The Horde tanks and frigates use them, but they're a bit bulky and finicky. Lots of maintenance is needed to keep them going at peak efficiency. Darla got a more robust system, but it's not as optimised."

"Darla?" Daniel asked before Sam could ask about the gravity generators - which had to be the same technology the Goa'uld used for their space ships' artificial gravity.

"That's our spaceship's name. I named her!" The princess nodded. "She's old but reliable, and I've been updating her systems for months!"

"Ah."

"But if you have a better way to create artificial gravity, I might use that. What do you use?"

"We were talking about a fictional vehicle," Daniel said. "We don't use anti-gravity vehicles on Earth."

“Oh. Is flying taboo in your world? If it is, we have a long walk before us.” Bow looked concerned. Judging by the way he winced, walking through the forest wouldn’t be a good idea.

“This is Etheria, not Earth. They’re guests here, not the other way around,” Catra snapped. “I’m not going to walk through the forest because someone thinks flying is evil.”

“No, we don’t have a taboo against flying,” the Colonel spoke up. “In fact, both Captain Carter and I are pilots.”

“Oh! Neat!” Entrapta gushed. “But you don’t use gravity generators or magic…” Her eyes widened. “Do you use pure powered flight using aerodynamic principles, like birds?”

“More or less,” Sam replied. “We have different ways to achieve lift.”

“And we can talk about all that once we’re underway,” Catra cut in. “I don’t want to be in the forest at dusk when all the worst monsters come out to hunt.”

“We were planning to camp here for a few days,” Glimmer said.

The catwoman glared at her. “That doesn’t mean we have to, now that we’ve explored the ruins. And that was just the five of us - I can’t protect everyone else when they’re stumbling around in the darkness.”

“Let’s just board the skiffs,” Adora said. “It’ll be a little tight, I think, but we’ll manage.”

“Can the skiff carry all of us?” Glimmer asked.

“No. At least two will have to ride with our supplies,” Catra said.

“Perhaps we should have taken a Hauler,” Adora said.

“A Horde Hauler wouldn’t have made it through the swamp,” Glimmer retorted.

“Emily made it.” Adora nodded at the robot.

“You carried her.”

“I could carry a Hauler,” Adora said.

Sam wondered what a Hauler was. The way they talked, it sounded like a truck - an all-terrain truck. But the woman claimed to be able to carry it. Then again, they had anti-gravity technology. And magic.

“Let’s just board the skiffs and get going,” Catra said again.

“We’d like to stay together,” the Colonel said.

Sam nodded in agreement. It was best to keep an eye on both Daniel and the Colonel.

“So… one of us needs to pilot the skiff, with four of you on board, it should work. The other skiff can carry three people, including the pilot, with our supplies” Entrapta said with a slight frown. “That means we’re one short. I can ride Emily!”

“Please don’t inconvenience yourself on our behalf,” Daniel said.

“It’s not an inconvenience. Emily’s my friend!”

“So, that’s settled. Let’s go already!”

“Catra! Don’t be rude!”

“I’m not being rude! I didn’t even call anyone names.”

“But they’re our guests!”

“They are also in the middle of the Whispering Woods.”

“It’s actually not in the middle,” Entrapta said. “We’re more to the east.”

"It's a figure of speech." Catra jumped up on the empty skiff in an impressive display of agility and strength. "I'm going to pilot this skiff," she said. "Everyone aboard!"

They climbed up the short ladder hanging down from the vehicle. There were no seats, Sam noticed. It really was like the vehicle from Star Wars. Not the most ergonomic design, she couldn't help thinking. But it flew.

"How high can this skiff fly?" the Colonel asked.

"Not very high," Catra replied as she looked at the other skiff. "The spell's only good for a few yards. Otherwise, we'd just break through the canopy and hightail it out of here."

Which was obvious in hindsight. Then again, nothing was obvious on a foreign planet.

"So… you're a pilot as well?" Daniel asked. As expected.

"Anyone can drive a skiff," Catra replied.

"Well, I can't." Daniel flashed her a smile. "But I take it skiffs are common, then. In our world, most people - at least in our country - stick to cars - but in another country, private planes are a common way to travel."

He was stretching the truth a little, there, Sam knew - not even in the outback in Australia were planes as common as cars. But it probably wouldn't hurt to make Earth appear a little less… earth-bound. They were dealing with what seemed to be a space-faring civilisation, after all.

And as much as she would deny it, should the Colonel ask, Sam was very curious how their settlements would look, with access to gravity generators and space ships.

*****

“So, do you do most of your trade with skiffs? Or are they just used for exploration and scouting?”

Didn’t the guy - Daniel - ever get tired of asking questions? “Both,” Catra told him.

“Ah.” He nodded, not looking confused or frustrated in the slightest.

“We were slower when traversing the swamp. Was that deliberately, or is this a limitation of the skiff?”

“The spell lifting us doesn’t work well over water,” Catra told the nosy woman.

“Like a hoverboard.” The old guy chuckled.

“A hoverboard?” Catra asked. The others looked confused, she noticed. Except for the tall, dark guy, Teal’c, but he never showed any emotion anyway.

“From Back to the Future,” O’Neill explained.

“Ah!” Daniel nodded with a smile.

Carter sighed while taking notes, so it was probably a joke.

Daniel cleared his throat. “It’s a, ah, fictive story in our world. Quite famous, actually, as far as such things go, and there’s a scene where the main character tries to use a hoverboard - a floating skateboard - to fly over a pond, and it stops moving.”

“Ah.” Catra nodded. “That’s the same here - the spell stops working, and the skiff goes into the water.” And then you better prayed that the hull had no holes in it.

She steered the skiff around a patch of forest, checking that Adora’s skiff and Emily could keep pace. Perhaps she shouldn’t have told their guests that - they might use that information if they stole one of the skiffs. On the other hand, it wasn’t really a

secret. Unless they locked the group up, they could easily find out how things worked. As they would easily find out about the war against the Horde.

And Catra had a feeling that Glimmer wouldn't have their guests locked up. Not on mere suspicion, at least.

"So, you use ships as well?" Daniel asked. "I mean, ships for the ocean, not space ships."

"Yes." Just because they could find out things didn't mean Catra had to spell out everything for them, though.

"Like Earth. Bulk trade is still most efficiently handled by ships," Daniel told her. "Do you have canals as well?"

"Some." No matter how curt she was, the guy didn't stop.

"So, do you have both an ocean port and a spaceport, or do the spaceships land in the water as well?" O'Neill asked.

"They can land in the water, but it's a little bothersome." There! Try to make sense of that!

"Do the spaceships use spells as well?" Carter had finished taking notes.

"Some do. Some don't."

That got a reaction - Carter exchanged a glance with O'Neill. Of course, they had no experience with magic, so they probably would feel safer in a Horde frigate.

Or they would feel safer stealing a Horde frigate. Catra pressed her lips together. If the Stargate wasn't working, a ship was their best bet to return to their home - Earth. She'd have to talk to Glimmer to ensure that their guests couldn't talk to the remaining Horde clones in Bright Moon. Not privately, at least. Most of the clones were still trying to adjust to a life not spent in blind obedience to Horde Prime. They weren't the brightest, either -

Before they had vanished, Double Trouble had said trying to con them was so easy, it was beneath the spy. Which was a good thing, or they would have probably gathered a following of their own by now.

"Did you ever talk to someone about what you did in the war?"

Catra's eyes widened at O'Neill's question. Why would he suddenly ask her that? What was his game? "Sometimes, all we did was talk about the war," she replied with a forced chuckle. "We had plenty of time in space." Not quite a lie. Not that she wanted to remember that time, on Darla, after Glimmer's rescue. After Adora had come for her, despite everything Catra had done.

"Ah." The old guy didn't pry. But he was looking at her in that weird way.

Catra almost sighed with relief when she finally spotted Bright Moon in the distance. "Look ahead!" She called out. "Bright Moon!"

They had caught it at the perfect moment. The sun was setting, but several moons were up already, and the town was shining compared to the darkening sky. The royal palace looming over the town was glinting, the golden wings catching the last rays of the sun.

"Wow!"

"Is that… an artificial waterfall? From the top of the mountain?"

"That, or their plumber messed up."

Catra snorted. Sometimes, the old guy was actually funny. "Don't let Glimmer hear that. It's her kingdom's pride and joy."

"What is that floating… crystal?"

Ah, damn. "That's the Runestone, the symbol of her rule," Catra said. "That's also her pride and joy."

"So, Jack, don't joke about it. There might be religious aspects as well to consider."

"Daniel, you know me - I'm the perfect diplomat."

Catra snorted again. But she actually didn't doubt the claim. She was sure O'Neill was the sneakiest of the whole group. The kind of guy who would sneak some bombs into a diplomatic meeting just in case.

Like herself.

*****

Bright Moon, Etheria, July 10th, 1998 (Earth Time)

So, that was Bright Moon. Shiny was an understatement, Jack O'Neill had to admit. The town was built around and into a steep mountain, domed houses circling the mountain's base and wrapping around its flanks as they snaked up to a huge palace. Compared to the settlements SG-1 had seen so far, it looked impressive. Very impressive. The artificial waterfalls - because there was no way a spring happened to be on the very top of a mountain, magic or no magic - would be the envy of a number of landscapers and architects on Earth. Mostly in Vegas, he thought with a chuckle. And the palace itself… well, the Goa'uld would like the golden statue on top of it. And the floating crystal. Very 'divine right'.

On the other hand, no Goa'uld would be caught traipsing through the jungle without an entourage large enough to serve every whim of theirs and build a road first. Or would ride with the luggage so their unwanted guests could take their seats on their floating barge. Jack had to give the locals props for that.

Then again, while their pilot had been quite curt and cagey when answering Carter and Daniel's questions, she had let slip enough - also by evading certain questions - to paint a pretty grim picture.

The kid had been fighting in that war they had mentioned for years. And, catwoman or not, if Catra or the other kids, with the exception of the hair princess, were a hair over twenty, Jack would eat his cap. Someone had sent those kids into war. And it had left scars. The way Catra didn't mention anything personal about the war, the way she got evasive whenever Carter or Daniel asked for details about this or that part related to the war… She didn't want to talk about it. Didn't want to think about it. Jack knew the signs. Saw them often enough in the mirror. And he had seen the signs on other kids, after the Gulf War. During his own mandatory therapy. It wasn't as if the US Army only sent adults into battle. But for the grunts, the ground part of the Gulf War had only lasted a couple of days.

Those kids here? They had fought for years. And Jack bet that they hadn't had an easy time of it. Which contrasted a lot with the shiny town they were approaching.

"That's… the architecture doesn't match any historical style," Daniel commented. "It must have evolved on its own. Another hint that this isn't a forgotten Goa'uld slave colony started with kidnapped people from Earth."

The fact that their pilot had cat ears, a tail, claws and cat eyes as well as fangs was a bigger clue, in Jack's opinion.

"Better keep that slavery stuff to yourself," Catra said. "Some people might take offence."

Such as the kid, Jack knew. The way she tensed… Had she gone through something similar as Jack had when he had been captured by the Iraqis? Or was he projecting? He couldn't check with the others right now. Not that he wanted to in the first place. He was their leader. They depended on him keeping things together.

"Of course. We meant no offence," Daniel said with an easy smile. "It's just that this is so fascinating!"

Catra snorted. “It came through the war quite well. Unlike other kingdoms, the Horde never took it. Came close a few times, though,” she added with a toothy grin. “The shield almost fell.”

She talked as if she were glad of that - did she resent the people here for staying safe while she was on the frontlines?

“The shield?” Carter asked.

“The magic shield protecting the town,” Catra replied with a scowl.

Another slip, then, Jack noted. The locals had force shields. Shields large enough to cover an entire town - including a mountain. SGC would want one of those. Or more.

They reached what probably passed for the gates for the city. It was a simple checkpoint. Jack could see two guards in ornate armour snapping to attention, spears raised. He tilted his head, but they were travelling a little too fast for him to make out whether or not the spears hid some blaster cannons. They probably did, though - the archer kid had trick arrows straight out of comic books, the sword of She-Ra could change into a spade, and the princess had magic hair. They couldn’t assume that any weapon they saw was what it looked like at first glance.

Hell, he thought with a snort, we better be careful with the cutlery, so we don’t accidentally blow up dinner.

They drove up a winding road towards the palace. A number of the people - both humans and aliens - on the street waved to the queen, but it was a far cry from the cheering section a Goa'uld fake god would have demanded. And some even glared at them. Trouble in paradise? Or some oppressed minority?

Jack couldn’t tell. But he trusted Daniel to have noticed it as well. And his friend would probably know what was up with that.

Then they reached the gates - massively oversized gates - of the palace. More guards snapped to attention, all in shiny armour with

capes. And Glimmer took charge. “General Juliet! We require quarters for four guests. And an escort for them.”

“Well, it’s not off to the dungeons with us,” Jack joked as he climbed down to the ground.

Catra snickered in return.

Jack had a feeling that he had missed something.

*****

Royal Palace, Bright Moon, Etheria, July 10th, 1998 (Earth Time)

Adora shook her head. Catra was being rude. Well, ruder than she usually was. She could just be tired and cranky or there could be more to this. But this wasn’t the time to sort that out. “Don’t mind her,” she told their guests. “She just thinks it’s funny that the palace has no dungeons.”

“No dungeons?” Jack sounded almost disappointed.

“That’s not exactly abnormal,” Daniel said. “The White House doesn’t have any dungeons, either. There are prisons to hold, ah, prisoners. I suppose that things are the same here.” He looked at Catra, who snickered again.

“Not quite,” Adora’s lover said.

Glimmer sighed and rolled her eyes. “Bright Moon’s prisons aren’t rated for princesses and similar prisoners. So, when we had such prisoners, they were housed in specially reinforced rooms in the palace.” And where princesses were close to deal with any trouble, Adora knew.

“Which also were the guest quarters.” Catra grinned. “In other words, you’re going to the palace dungeons.”

“They’re not dungeons,” Glimmer spat.

“Could’ve fooled me.”

“You are welcome to find out the differences.”

Adora cleared her throat. “Anyway,” she said. “They’re really nice guest quarters.”

“Who can be turned into prison cells,” Jack said.

“Any room can be turned into a prison cell,” Entrapta pointed out. “A force field on the doors and windows is all you need. You can cover the walls as well if you think they could be breached.”

“And you did that with guest rooms for your prisoners?” Jack asked. “Not a storage room somewhere damp and cold?”

“We’re not the Horde!” Glimmer protested.

Catra scoffed. “Horde cells weren’t damp and cold.”

“But not as nice as our rooms.”

“Are you really arguing about who had the better dungeons?” Bow asked.

“No, they aren’t” Adora said, glaring at both of her friends. “So, let’s go?” She gestured at the open gates. “It’s getting a little late, and you probably want to freshen up before dinner.”

“Yes, thank you,” Daniel said with a smile. “That’s very generous.”

“It’s the least we can do,” Adora told him.

“Yes, yes, let’s go. I want to freshen up as well,” Catra said. “And you also need a shower.”

Adora frowned. She hadn’t really exerted herself, which was hard anyway as She-Ra, and she could simply change back and would be fine, but… Oh! “Yes, I do,” she said.

Glimmer rolled her eyes, but Bow elbowed her before she could say anything.

"Oh! You want to be intimate!" Entrapta beamed at them.

Adora forced herself to smile back while Catra snickered. "We want to rest a little."

"Ah!" Entrapta nodded and took out her recorder. "I see."

She would be recording another 'euphemism for sex'. But they got going. Juliet had a squad of guards show the others the guest quarters while Adora and her friends walked towards their own quarters.

As soon as they were out of earshot, Glimmer sighed. "Finally! What did you find out, Catra?"

"Not much," Catra replied. "They're good at hiding things. The old guy is the leader, but we knew that already."

Adora nodded. Their ranks had been obvious.

"But he's… laid back. Lets the others talk, Daniel and Carter," Catra went on. "They had a lot of questions," she added with a wry expression. "Anyway, he tries to play dumb but he's sharp."

"Well, he wouldn't be their leader if he were dumb," Adora said.

"Anyway," Catra said, "He's got training in interrogation, I think. The way he looked at me when he thought I wouldn't notice, and how he commented on some of the questions…" She hissed under her breath. "I think he's the most dangerous. Most experienced. He's not a scientist like Carter or Daniel is, but..." She shrugged. "Just a feeling I got off him, and Melog agrees."

Adora nodded. That fit her own impression. "What about Teal'c?"

"Didn't say more than a few words." Catra cocked her head. "Melog says he's intense. Whatever that means."

“And Carter is a great scientist!” Entrapta blurted out. “I’m looking forward to sharing data with her! The things we could research together!”

“Ah…” Adora licked her lips.

“Perhaps we should wait a bit before we share data?” Bow suggested. “We don’t know them yet.”

“The best way to get to know someone is data.”

“That doesn’t mean we need to give them data,” Catra said. “They’re already gathering intel.”

“Daniel had got a lot of questions,” Adora agreed.

“About what?” Glimmer asked.

“Everything,” Adora told her. “From clothes to families to religion.”

“Oh, yes. The guy never stops talking.” Catra sighed. “I was tempted to crash the skiff just to shut him up.”

Adora hoped she was joking.

Glimmer frowned. “Do you think they’re spies?”

“No,” Adora said.

“Yes,” Catra said.

“What?” She stared at her lover.

Catra shrugged. “I don’t know if they are here to spy on us. But they’re spies. Scouts. Whatever. So, don’t transform around them. Not until we know more about them, and whether we can trust them.”

“Great.” Glimmer slumped a little. “Another problem to deal with.”

“It’s not a problem - it’s an opportunity! A network of Stargates!” Entrapta gushed. “Imagine how many worlds we can visit!”

“Or how many worlds can be invaded,” Glimmer retorted, tilting her head. “You heard about those Goa’uld. And what they do.”

Adora suppressed a shudder. Snakes that wrapped around your spine and took over your body? They were worse than Horde Prime. She glanced at Catra. Her lover had her arms crossed, claws denting her own skin - she must be remembering being chipped.

Adora wrapped her in a hug, feeling her tense for a second before huffing and relaxing. And then she started squirming since they were still in public, sort of, and Adora let her go.

“We need a way to detect those snakes. Other than Melog,” Glimmer said while Catra huffed and ran a hand through her hair.

“I bet Carter and the others know one!” Entrapta was still smiling. “Another reason to share data.”

Glimmer didn’t look like she agreed. Adora wasn’t sure herself. Daniel was nice. And the others seemed, well, not bad either. And yet… They had to talk about this.

*****

The quarters they were shown were very much unlike cells. Samantha Carter didn’t remember ever staying in more luxurious surroundings - they might put the best hotels on Earth to shame.

“A waterfall inside the room? Those interior decorators would make a killing in Vegas,” the Colonel commented as he walked around. “Although their beds need some work,” he added, pressing a hand down on the mattress. “That’s more like an oversized pillow than a mattress. You could drown in this.”

Teal’c nodded. “Indeed. I will sleep on the floor.”

The Colonel looked at her. “Any bugs, Carter?”

She shook her head. “None that I can detect.” That didn’t mean much, of course. The locals could be using entirely different technology to do their surveillance. Or just have a person with their ear pressed to the wall. But they had to discuss their situation - they couldn’t wait much longer.

“Well, maybe there is a kernel of truth in the tale of the Princess and the Pea,” Daniel said, chuckling. “But I’m sure we can ask for harder mattresses. Our hosts seem very accommodating.”

“Yeah, ‘seem’,” the Colonel told him with a frown. “Don’t let the glitz and pastel fool you. Those people have been through a war. At least the ones in charge. A bloody war.”

Teal’c nodded in agreement. “They are veteran warriors, not untried children.”

Sam nodded as well. They were correct. The way the group reacted to threats… They were acting like soldiers, not archaeologists. Certainly not like young adults on an ‘adventure’. And the little details that Entrapta let slip about her technology… “Yes, sir. And they grew up during the war.”

“That will have shaped their lives and outlook, yes,” Daniel said. “But many aristocratic societies hold guest rights in high regard. I doubt that they plan to turn on us.”

The Colonel snorted. “It’s an alien society with magic princesses and animal people, Daniel. Who knows how they think?”

“They aren’t animal people!” Daniel protested. “They are humanoids with some animal traits.”

And clearly human or ancient ancestry in the mix. Sam wished she had a way to test the DNA.

The Colonel mumbled something that probably involved potatoes. Sam ignored it. “And they are technologically advanced. Entrapta

knows more about robotics than anyone on Earth, sir."

"So, you believe their claim that they have spaceships, Carter?"

"Yes, sir." She nodded firmly.

"Why would they make this up?" Daniel asked. "They didn't know us. Or about us."

"Or they want us to think that," the Colonel pointed out.

"I doubt that. I talked at length with Adora. And we talked with Catra. Their stories match up. And how could they have expected us? They would have had to improvise a deception that holds up under scrutiny without being able to coordinate their answers." Daniel shook his head.

"They could be talking in their minds," the Colonel retorted. "Or like the cat. The four-legged cat."

Sam couldn't discard that possibility, but she didn't think that was likely. "I believe they were genuine."

"Maybe they were, but that was out in the woods. Now we're in a palace. A royal Palace."

"We haven't met many democratic societies, Jack," Daniel said. "And with obvious magic talents present in some locals, apparently hereditary, an aristocracy is a logical result."

"An aristocracy that just finished a war involving spaceships. And with huge guns." The Colonel shook his head. "And ground soldiers that can carry Stargates around as if they were bags of groceries. We aren't in Kansas any more for sure."

Sam smiled at the reference. "And we don't have any red shoes."

The Colonel chuckled. "So… were guests of magic princesses. And we need to find a way to activate the Stargate to return to Earth. Ideas?"

"We need to find the D.H.D.," Sam replied at once. "It's the fastest way to restore the gate's functionality. Entrapta can scan for Naquadah, so if she's able to build a scanner with enough range, we should have good odds of finding the missing D.H.D."

"If it's still around, you mean."

Sam pressed her lips together. If the D.H.D. wasn't around any more… She nodded. "If we cannot find it, we might be able to build a computer and power source for the ring. Entrapta's work with robots and artificial intelligence clearly shows that this civilisation has the resources to build both supercomputers able to handle the load as well as the power sources to supply the gate." As long as Entrapta's claims were true. But the princess hadn't seemed to be lying. And Sam doubted that the others would have gone on an expedition with a delusional person - they had trusted Entrapta and treated her as an expert on technology.

"How long would that take?"

"That's hard to say, sir," Sam ventured. "But months at least. It depends on the architecture. I will have to program the software as well. And the navigational data."

The Colonel didn't like that, judging by his frown. But it couldn't be changed. "So we will have to live in Barbie's Disney Palace for a while."

Daniel nodded with a smile. "Their civilisation is fascinating. We've barely scratched the surface. Different species! Multiple sapient species! Spaceships and magic! And a society shaped by both, possibly founded by the Ancients!

Well, at least one of them was happy about their situation. Though if Sam was honest with herself, then she had to admit that she was looking forward to studying the local technology as well. Including the magic parts.

*****

“We should have made Entrapta build a device to eavesdrop on our guests without them knowing,” Catra said, looking at the ceiling above their bed.

“Hm?”

Catra felt Adora shift next to her. The arm she was resting her head on pulled a little to the side. She resisted the urge to grab it and let her claws prick the skin to keep it in place. This wasn’t the time for games. They’d already had their fun, anyway. “I’m sure they’re planning something. We should listen in.”

“That would be rude.”

“So?” Catra turned her head. Adora was frowning at her in that pouty way that made her so… She smiled against her will, and Adora smiled back.

But then she grew serious. “You don’t eavesdrop on your guests.”

How naive. Catra wanted to shake her head. “You eavesdrop on potential enemies.” That was the smart thing to do.

“They aren’t our enemies. And they’re just four people.”

“Four people can do a lot,” Catra pointed out. Like the ‘Best Friends Squad’, as Bow insisted on calling their group. Even though it now included her. And she was many things, but not a good friend, much less the best.

“They’re not princesses,” Adora retorted. “They don’t have any magic. Their weapons aren’t anything special, either.”

“Entrapta would disagree.” As would Catra. The rate of fire she had seen put laser rifles to shame.

“That’s because the weapons are different. But they aren’t really better than Horde small arms.” Adora shook her head. “I’d rather have a stun baton. It’s more versatile.”

Indeed. The ‘Tau’ri’ must not take many prisoners with their weapons. “The baton has a shitty range, though.” The stun setting only worked in close quarters, and the blast setting wasn’t much better. ‘Just far enough so the blast won’t hurt you’, they had called it in the Horde.

“Well, that’s what laser rifles are for. And those don’t need ammunition.”

“But they run out of power.” Catra smiled. Talking about weapons… that took her back to when both of them had been little, just starting weapons training as… cadets. She stopped smiling.

“Eventually.” Adora blinked, then bit her lower lip. She had noticed Catra’s mood. Somehow, she always seemed to notice. Or almost always. It was both annoying and, well… endearing. “It’s OK,” Adora said in a softer voice.

Catra rolled her eyes and huffed. They didn’t have to talk about that. “We shouldn’t underestimate them. Carter’s like their Entrapta.” And they both knew how dangerous Entrapta was if she put her mind to it. Or when she didn’t really think about what she was doing.

“Do you really think they are here to hurt us?” Adora shifted to her side. She let her arm keep serving as a headrest for Catra, though.

Catra scoffed. She didn’t really think that. But... “We can’t exclude the possibility. Even if they arrived here by accident, they are a potential threat. If their enemies follow them and think we’re allied with them...”

“Well, they are our guests. And those Goa’uld sound horrible. Almost as terrible as Horde Prime,” Adora pointed out.

“We only have their word for that,” Catra retorted. She wasn’t going to think about being brainwashed and controlled, a prisoner in her own body.

“And Melog doesn’t like the Goa’uld,” Adora said.

Melog confirmed that with a slight growl from their bed.

“That doesn’t mean our guests are nice, though.” She held up a hand to stop Adora’s response. “They seem nice - but Double Trouble also seemed nice.” Before they stabbed her in the back.

“Double Trouble is…” Adora trailed off before she could embarrass herself by calling the spy ‘nice’. “...special,” she finished with a frown.

Catra snorted. “Speaking of them, we really should track them down.”

“Why?”

“I don’t trust them.” Catra scowled. “And not just because of what they did to me. Do you trust them, with so many lost Horde Clones around with no idea what they should do now?”

“Do you really think they’ll try to take over a group of clones?” Adora shook her head. “They’d grow bored of it in a heartbeat.”

That was true, and Catra believed their claims about that. “I’m more concerned with them causing trouble.”

“We can deal with that if it happens.”

“When it happens,” Catra corrected her.

Adora smiled wryly. “When then.”

She should take this more seriously, in Catra’s opinion. Horde Prime’s flagship and many of its escorts around Etheria had been dealt with, but there were a lot of Horde ships left, both over Etheria and in the rest of the former Horde realm. “Well, when Double Trouble takes your appearance and starts another She-Ra cult amongst the clones, you can deal with it.” Catra showed her teeth at her lover.

Adora grimaced. “Ugh. The first was bad enough, and they started that on their own.” She blinked. “Unless… Do you think that was Double Trouble?”

“No.” The spy would have told them. Double Trouble was sly, but they craved attention. And they bragged all the time so people would know how ‘smart and creative’ they were.

Adora sighed. “Anyway, I don’t think our guests are a threat to us.”

“I’m still going to keep an eye on them,” Catra said.

“That’s OK. Trust but verify, right?”

Catra scoffed. “Someone has to keep the lot of you from falling for every scam. Might as well be me.”

“Yes.” Adora smiled at her, then leaned over and kissed her.

If they had a little more time… But dinner would start in half an hour. Just enough to get another shower and get ready.

Catra sighed as she returned the kiss.

*****

For a royal dinner with the Queen of the realm - and her father, the king - this was a rather casual, private affair, Jack O’Neill thought as he looked around. Less than a dozen people, all in all, sitting at a round table that would have had him make a King Arthur joke if anyone other than his own team would have understood it. Two guards at the door, and Jack hadn’t seen more than three different waiters so far.

He had been at working dinners at the Pentagon that had been more formal and more grand affairs. Of course, that probably said more about the Pentagon than about their hosts here. Still, he was positively surprised by the lack of pomp and circuses. And relieved - you could always count on Goa’uld to go all-out with the

boasting and posturing. Though the furniture and the cutlery were all of the finest quality, as far as he could tell - he was no expert.

“Do you like the meal, Colonel?”

That was the king. Though, as far as Jack had understood Daniel’s explanation, he was actually the former queen’s consort. Glimmer was the actual ruler of this realm. “It’s excellent,” he replied. “Your highness,” he added. It was actually very good. And not too exotic, either - a tasty steak, just as he liked it, with some vegetables that looked like broccoli but tasted not unlike carrots.

“I’ll tell the cook,” the king said, smiling. Really down to earth, Jack couldn’t help thinking. Much more polite than most brass he had met back home. Also a far cry from most politicians he had met.

“It’s excellent, your highness,” Daniel chimed in. “May I ask what it is called?”

“Uh, steak with greens,” the king replied. “Beef, in this case.”

Daniel actually looked surprised and a little disappointed. Jack smirked - his friend probably had hoped for some exotic dish steeped in myth and history.

“You can also use horse meat for it, but that has fallen out of favour since the war,” Entrapta said, looking up for a moment from where she was talking to Carter in a low but excited voice. Voices, actually - Jack had the feeling that he should be concerned about that.

“Oh?” Daniel turned towards her.

Jack tilted his head slightly. Had they had a shortage of beef during the war and had to turn to horses? Jack knew that many countries in Europe had to order rationing during the Great War and World War II and had to make do with alternatives for traditional dishes. Horse meat would have been an obvious choice to replace beef.

"Yes," Adora said. "Swift Wind put an end to butchering horses." She looked up for a moment, then down again, and Catra, sitting next to her, snickered while the blonde woman flushed.

They had animal activists here? That was a surprise. Daniel would probably say this was another sign of an advanced civilisation.

Glimmer cleared her throat with a slight frown. "He did. I trust the guest quarters are to your satisfaction, Colonel?"

"They are," Jack replied. "Although the beds are a little too soft."

"Jack!" Daniel hissed. "You can't just complain about…"

But both Adora and Catra laughed. "Oh, did you get the standard beds? Yes, far too soft," Catra said.

"I almost drowned in them the first time I slept in the palace," Adora added.

Queen Glimmer pressed her lips together for a moment. "I'll tell the staff to replace the beds with the Horde model," she said.

"It's not actually a Horde bed or cot," Bow said, leaning forward. "It's what we call the beds that visitors from the former Horde are more comfortable in."

That was interesting. So, they had visitors from their enemies? Former enemies?

"We'd never have guests sleep on horde cots or bunks," Adora said, shaking her head. "Unless they insisted, of course. But the Horde models are much more comfortable without being too soft."

And that was interesting as well. It almost sounded as if she was very familiar with the difference.

"You said former Horde," Daniel spoke up. "What happened to the Horde?"

“Scorpia changed the name after the war,” Adora said.

“She restored the Scorpion Kingdom,” Glimmer said.

‘Scorpia’ and ‘Scorpion Kingdom’? A former princess who managed to reconquer her country?

“Well, she’s working on that - most of the land is still wilderness thanks to Adora, but they are making progress in turning it into fields,” Entrapta said with a slight pout. “I offered to construct bots to clear the plants, but Perfuma said she could handle it.” Then she perked up. “But once they rebuild their industry, I’ll get to design the new factories so they won’t pollute the environment! I’ve got so many ideas, and Hordak knows what went wrong the first time, so this will be so much fun!”

Adora was looking down at her plate again. What had she done to the land? Jack wondered. Some weapon of mass destruction? Or a bombing campaign? It had to be something horrible for her to feel so bad about it. But Glimmer was scowling, he noted. As was the king. Jack was missing something here.

“Hordak?” Daniel asked.

“Hordak! My partner!” Entrapta beamed at him.

“Yes.” Glimmer definitely didn’t like that, Jack noted. “But enough of that,” she went on. “Could you tell us of your home, Colonel?”

They were constantly deferring to him, Jack noted, when addressing SG-1. And calling him by his rank. So, a certain formality persisted. Or were they just treating him like a royal? If Daniel made a ‘Princess Jack’ joke… He shrugged. “There’s not much to tell. We’re from Earth. It’s quite the normal planet - we work, we farm - I like to fish in my spare time. It’s very relaxing even if you don’t catch any. Of course, that’s because where I like to fish, we don’t have such monsters as we met in the Whispering Forest.” He smiled his best ‘harmless retiree’ smile at them.

“And you have a Stargate to travel to other worlds,” Glimmer went on. “Which you use extensively, despite the obvious dangers.”

Of course they wouldn’t just accept his deflection. He kept smiling. “We discovered the Stargate a while ago. When we opened it, we encountered the Goa’uld. They want to conquer us, but we’ve held them at bay ever since, but that means we have to be active.”

“If they need gates to attack, that shouldn’t be too hard,” Catra remarked. “Unless they have spaceships.”

Jack kept his polite smile on even though she had just named SGC’s worst fear - an invasion with a fleet of big honking spaceships. They had barely defeated an invasion by two Goa’uld motherships. “We keep them busy in their own realm. Saving slaves, striking at their armies, the works,” he said.

“And exploring new worlds,” Daniel added. “We’re always looking for allies against the Goa’uld.”

Jack suppressed a wince. Daniel was showing their hand far too soon. He was usually much more diplomatic.

“And you hope to have found some here,” Glimmer said in a very neutral voice.

“Well, your cat knows about them and how bad they are,” Jack pointed out, nodding at their big alien cat, which was lounging on the floor near Catra. Perhaps he could salvage this.

“Melog does, yes,” Catra said. “But they’re not eager to start another war. They’re the last of their species - they were all killed in the last war.”

Daniel winced. And Jack wanted to sigh - they had stepped into it there.

*****

The Dinner Conversation

Royal Palace, Bright Moon, Etheria, July 10th, 1998 (Earth Time)

"The last of their species?"

Their guests sounded horrified, Adora noticed. As they should be, she thought a moment later, feeling guilty at her grief surprise. Wiping out entire planets was one of the most horrible things you could imagine. Unless you were Horde Prime.

"Yes, Horde Prime razed their planet when they resisted his attack," Glimmer said.

Adora kept her expression neutral while she nodded. "And it wasn't the only planet that suffered that fate."

"Sounds like he took lessons from the Goa'uld," O'Neill commented. "They're big on making examples out of any resistance as well."

"Yes," Daniel agreed. "They would eradicate a planet's population, then resettle it with slaves if they deemed that necessary to crush a rebellion. Sometimes, they even rendered the planet barren, unable to sustain human life. They mark such planets with a totem to warn off Jaffa and others."

That sounded terrible as well. But then, they were fighting the Goa'uld, and it was obvious that they wanted help. Yet, fighting another war...

Melog growled.

Catra nodded. "Horde Prime did the same - he wiped out the planet."

"Yes. There actually wasn't much left that could sustain any life on Melog's home planet," Entrapta said. "The ecosystem was

completely destroyed. I don't think it could've been restored without magic - or technology on a scale we don't have access to."

"It's an example to discourage the others," O'Neill said. "Tyrants generally think nothing of sacrificing one world to control the rest."

"It wasn't the only world," Adora told them. "The Star Siblings were the only survivors of their people as well. Horde Prime did that to many, many worlds."

"Oh." Even O'Neill looked taken aback.

They still didn't understand. "He didn't want to rule the population. Just as long as they were useful. Ultimately, he wanted to replace them with his clones," she said. "Clones who were utterly loyal to him. His perfect empire."

"He had a collection of art and food from the various planets he had destroyed," Glimmer said. "He liked to show it off."

Adora glanced at Catra. Her friend was tense, sitting utterly still, but her tail was rapidly swishing back and forth. She placed her hand on Catra's thigh and gently squeezed.

"Well, I think no one will be missing the guy," O'Neill said.

"Except for his clones," Entrapta corrected him. "They're very lost without him. Left adrift. Some even died because they didn't bother eating."

Adora clenched her teeth. She hadn't had any choice - she had to destroy Horde Prime before he destroyed Etheria and everything else in the sector. But the clones, brainwashed to blindly obey, were suffering because of it. And there wasn't much she could do about it - they didn't even know where most of them were, what with Horde Prime's flagship gone. Turned into plants. All they could do was helping those on Etheria and nearby to rebuild their lives.

"Well, enough of that," Micah said. "You were telling us about your world, Colonel."

"Ah, right." O'Neill's smile was fake; even Adora could tell. But he nodded. "Well, as I said, it's a rather average world. We've got a lot of water - about two-thirds of the planet's covered in it. Lots of people, too, but there are still plenty of places where you can be by yourself and relax."

And they still called the world 'Earth' even though it was more water than earth? Well, different planet, different customs. "That sounds peaceful," Adora commented. Far more peaceful than she would expect of a world fighting such monsters as the Goa'uld.

"Well, I won't say we don't have any conflicts," O'Neill said. "But most people are just living their lives. And they won't have to face war if we've got anything to say about it."

"Until the Goa'uld reach your world with their spaceships, you mean," Catra said. "Pretty hard to live your life once the orbital bombardment starts and the infantry and tanks drop into your towns."

"They probably would get stuck in traffic," O'Neill said with a short snort.

"Sir," Carter hissed.

"Sorry, that was a bad joke about traffic jams in big cities." The man's smile looked a little rueful.

"Trying to move anything through a bottleneck is frustrating," Catra said. "One stuck transport and an entire column might be forced to divert - or wait for supplies."

"Yes. That can be averted with proper planning, though, and a smart traffic control system," Entrapta cut in. "Not that it's needed any more, what with the Horde dissolved. But it would have worked if I could've implemented it."

Adora liked Entrapta very much, but sometimes, she wished her friend would not sound quite so disappointed about all the missed opportunities to make the Horde even more dangerous.

"So, tell me about your leader," Glimmer said. "Who rules your world - or your country, if you aren't a united world. You don't seem to have monarchs, do you?"

Adora leaned forward. This was interesting.

"Ah, no, most countries elect their leaders," O'Neill said. "Everyone gets to vote for who calls the shots."

Adora blinked. That was… "How does that work?" she asked. "You just… gather and say who you want to lead you?" That might work for a village, but for a town like Bright Moon? "And how do you pick whoever you want? Do you see their test results?"

"Test results?" Now O'Neill looked confused.

"How else do you know if your pick for leader is a good leader?" Adora explained. "Do you look at how they fared in leadership training?" That was how Force Captains had been selected, at least as far as she knew.

"Most people chosen as leaders have some experience with leadership on a smaller scale," Daniel said.

"Ah. So, like promotions," Catra said. "You look at who's doing well leading a squad, then promote them to lead a platoon, and if they don't get everyone killed, they take over the company once a slot opens. Sensible." She nodded.

Daniel cleared his throat. "Ah, it's not quite like that."

"I sure hope it isn't," Glimmer muttered. "Just because you can lead troops doesn't mean you can rule a country."

"Well, you would know best," Catra told her with a smile.

Adora winced.

*****

Samantha Carter saw the queen glare at Catra for that flippant comment. And the smile looked quite toothy. Did that mean that the queen had started commanding troops and wasn't very adept at ruling the country? Well, she was very young, so she obviously couldn't have a lot of experience. Although her father would be helping her with advice and, possibly, handling some matters himself.

Daniel cleared his throat again. "There are no restrictions for running for, ah, leadership positions, although there is usually a minimum age requirement. In our country, for example, you have to be thirty-five years old to become president - which is the highest office, the leader of our country."

"Wow, Frosta would hate that!" Entrapta said next to Sam. The princess turned towards her. "She was always sensitive about her young age," she whispered.

Sam blinked. Young age? Glimmer, Queen Glimmer, looked as if she were barely in her twenties. "How young was she when she took her throne?" Sam whispered while Daniel went into a brief or not so brief explanation of various age requirements."

"I think she was eight years old when she took over the throne of the Kingdom of Snows."

"Eight years old?" Sam blurted out, a little too loudly, as it turned out since everyone looked at her.

"Talking about Frosta?" Catra asked.

"Yes." Entrapta nodded.

"You had an eight-year-old ruler?" The Colonel shook his head.

"I'm sure she had advisers," Daniel was quick to say.

"I think she had," Entrapta replied with a nod. "It's not as if you can run a kingdom, even one as small as Dryl, on your own. Although I probably could if I used my bots, though they are kind of like advisors. Or guards. Or servants. But I don't call them that, or my actual servants might feel hurt."

"Our monarchies - many of them, at least - had a regent when the heir to the throne wasn't of age yet. The regent ruled until the monarch reached adultness." Daniel smiled at their hosts.

"But you replaced them with your elections, didn't you?" Catra asked.

"Well, yes," Daniel admitted. "Though in some countries, the monarchs remained as heads of state, though with very limited power."

"So… you have countries with a queen or king and an elected leader," Glimmer summed up. "What if they don't agree on something?"

Sam winced. That was a tricky question, and…

...Daniel answered it honestly: "The elected government takes precedence."

Sam was very relieved that the Colonel didn't make a guillotine joke.

Catra snorted. "Well, that only works if your princes and princesses don't have any magic powers."

"I think that is the crucial difference between our two worlds, yes," Daniel agreed. "Without, ah, royalty defined by magic powers, a king or queen's right to rule was more easily questioned. In the past, they claimed divine right to rule, but there came a time when that, too, was questioned - as was religion itself. So, gradually or abruptly, most monarchies were replaced by democracies. Democracy means 'the rule of the people'."

“Government of the people, by the people, for the people,” the Colonel quoted Lincoln.

It was quite clear, at least to Sam, that their hosts didn’t like that. Well, except for Entrapta, who seemed intrigued. Then again, the princess seemed to be curious about everything from Earth.

“Fascinating!” she gushed. “So, you elect your leader, who then acts like a princess without magic.”

“And you hope you didn’t pick an idiot as your leader,” Catra added. “If you did, how do you get rid of them? Kill them off?” She actually sounded serious, Sam noticed.

“There are regular elections,” Daniel explained. “Usually every four to seven years. But in most democracies, there’s generally a non-violent way to remove a particularly inept leader. A peaceful change of power is the hallmark of a working democracy.”

“And if that doesn’t work?” Glimmer asked.

“Then you tend to have a violent change of power,” the Colonel said.

“But that’s rare in democracies,” Daniel quickly added. “The most stable countries in our world are democracies.”

“Fascinating!” Entrapta beamed. “So, you use a system of calculated instability - the change in government based on elections - to create long-term stability. A very creative concept with a number of promising applications.”

That was a rather creative view, but not wrong. Though Sam had a feeling that Entrapta was thinking about something not related to government.

“That’s about it,” Daniel said, nodding.

“And how can you make long-term plans if you will be replaced in a few years?” Glimmer asked.

"Well, in most countries, you can get reelected. Some countries have term limits, but they vary." Daniel nodded. "But there are some issues with short-sighted policies."

"I bet," Catra said. "That's like letting the troopers run the army."

"Oh, I've met some troopers who would be great at that," the Colonel said. "And some generals who were bad at running anything."

"Must be a bad system then," Catra retorted. "If you end up with bad leaders at the top."

"And you would know all about that, wouldn't you?" Glimmer asked with a toothy smile.

Sam frowned. She was missing something here.

*****

Catra glared at Glimmer then forced herself to smile. Good hit, Sparkles - though she had still copied Catra. And she wasn't entirely wrong. Catra had messed up. A lot. Of course, she had also won a lot. Conquered Plumeria and Salineas. Almost taken Bright Moon. All without some sparkly magic power or sparkly magic friends. All without Adora…

A hand - Adora's - squeezed her knee. "No system is perfect," her lover said, frowning at Glimmer.

"No one's perfect," Catra whispered under her breath. Adora sometimes still thought she had to be perfect.

"Yes!" Entrapta, with perfect timing, piped up. "It's how a system deals with the inevitable errors that crop up that determines if it's a good, working system or a problem. Also, blowing up is generally not a good result." She nodded.

Catra snorted, even though she was pretty sure that Entrapta was talking literally about blowing up. But it fit anyway. Or either way,

given what Glimmer and she had done in the past.

Adora nodded, but before she could say something, the old guy spoke up. “And those officers were removed, retired, or moved to a post where they couldn’t do much harm. Eventually.”

Oh, that was a pretty soft system then. Inept leaders would’ve been disposed of in the Horde. Or sent on a suicide mission to the Crimson Waste, she reminded herself. “So, your troopers got promoted to replace them?” she asked.

“Some,” O’Neill replied. “They would have to want to get promoted - and they would have to go to officer’s school.”

“Officer school? Is that like the cadet command course?” Adora asked. “Where you learn how to lead?”

“Pretty much, yes,” O’Neill told her. “Though you don’t really learn to lead - that you only learn in the field through experience.”

Which was true. And sometimes, you didn’t learn how to really lead, even if it seemed to be working. But that wasn’t the subject Catra wanted to hear about. “So, you either replaced your princesses, or you turned them into servants?”

“Ah, not servants. That wouldn’t be correct,” Daniel spoke up. “They serve the state, but as Head of state, performing ceremonial and representative duties. And while they generally don’t have any, ah, official power, they still have a lot of soft power - influence amongst the people and the politicians, that is, the elected officials in the government and parliament.”

Still sounded like a raw deal for any princess, in Catra’s opinion. Not that some of them didn’t deserve to be replaced or serve someone, at least for a while. Teach them how everyone else lived. As Adora showed, you didn’t need to rule a country to be a princess, anyway. Some would probably be happier if they didn’t have to deal with a country.

Glimmer, though, wouldn't. She was keeping up a polite front, but Catra could tell that she didn't like what she was hearing. "But how were your original monarchs chosen if you didn't have any magic?"

"Mostly by their ancestors killing everyone who disagreed with the opinion that they should lead," O'Neill replied.

"Jack!" Daniel glared at him. "That's an oversimplification. While probably true in some cases, not every leader was selected through force of arms. As experiments and records show, often, leaders were chosen for their qualities in handling a crisis."

"So… you first elected your leaders, then they stopped being elected, and now you're back to electing them?" Micah asked.

Daniel laughed. "You could put it that way, I suppose, though, as usual, the truth is more complicated."

It always was, Catra knew. Nothing was ever simple. If it looked simple, it was a trap. And their guests did look a little too simple for her taste. A team of soldiers, here by accident, fighting enemies that fought Melog's people in the past and were a threat to Etheria. Very simple, very convenient.

"So, who's your leader?" Glimmer asked.

"Ah, do you mean our country's leader or our commanding officer?" Daniel asked,

"Both."

Catra leaned forward. This would be interesting.

"Stargate Command is under the, ah, command of General Hammond," Daniel said. "He's an experienced officer who has seen us through a lot of situations. And he cares for the troops under his command."

“He’s a fine, honourable leader,” the tall, dark and silent guy, Teal’c, spoke up.

“Yes.” Daniel nodded.

So, basically, ‘good officer’. Not much to go on.

“And your country’s leader?”

“That would be the President. He’s in his second term,” Daniel said. “He’s done a lot for the economy; the country’s prospering.”

“Impressive,” Glimmer commented. “A country generally suffers in a war.”

“Unless you’re winning and conquering enemy territory and resources.” Catra looked at their guests. Fortunately, Glimmer didn’t take this as a dig but as the warning that it was meant to be.

“Ah, we don’t conquer territory. We’re looking for allies, actually,” Daniel said. “But since we mainly fight the war through the Stargates with limited means, we didn’t have to turn the economy into a war economy. Most people don’t even know about the war.”

Catra blinked. That sounded… “You’re fighting body-snatching snakes out to destroy your planet, and you haven’t geared up for war?” That couldn’t be true!

But from the way the others, especially O’Neill, frowned at Daniel, it probably was true.

What were those people thinking? That wasn’t how you won a war!

*****

Just great. Daniel kept spilling intel. And in the worst way possible. Jack O’Neill knew that being honest with potential allies was the best policy - keeping secrets tended to come back and

bite you at the worst possible moment - but there was a time and place to explain how SGC operated and the first dinner date with royalty wasn't it.

But it would have to be. He had to fix this before their hosts got the wrong impression. He shook his head. "We're doing what we can. Since we fight this war through the Stargates, we don't exactly need huge armies, and tanks and planes wouldn't fit through it." Theoretically, a tank would fit, but that would require ramps that could handle its weight - and you'd have to get the tank to the gate in the first place. Not to mention that Death Gliders would turn most tanks into scrap in short order.

"Planes?" Adora asked.

"Vehicles that rely on aerodynamics to generate lift to fly, not spells or gravity generators," Entrapta explained.

"Yeah, that," Jack said. "Anyway, vehicles are generally too big to send through the gate - at least military ones - and we aren't invading any planet anyway, so we're using small, mobile teams to explore, recon and strike."

"Like your team?" Catra asked.

"Yes." That should be obvious, in Jack's opinion.

"Great. You're fighting princess-style without princesses." Catra snorted. "And you're doing it using natural choke points."

"We're not walking through the gate without sending in a drone first," Carter said.

"Unless we have to leave in a hurry," Jack added. They were already aware of that, after all.

"It's still…" Catra shook her head. "How can you fight a war without even telling your people?"

Jack shrugged. “We manage.” It wasn’t the best idea, in his opinion, and he absolutely hated lying to the families of the soldiers killed in action about accidents instead of telling them the truth, but orders were orders, and those came from the President himself. And Jack had done enough black ops to know that the military refusing to obey the government was a bad idea. Generally, at least - sometimes, you had to do what you had to, orders or not orders. But he certainly wouldn’t bitch to strangers about that. “It also keeps us under the radar. If the Goa’uld saw us sending armies through the gate, they might stop fighting each other and unite against us.” And Earth would be conquered. Hell, just one System Lord with a single spaceship could crush all their defences unless SGC managed to pull off another miracle.

“But how can you prepare to repel an invasion without telling your people what’s happening?” Glimmer asked.

That was a question Jack had asked himself. “We’re doing what we can - recruiting the best and brightest, gathering information, looking for weaknesses…”

The others didn’t look as if they were buying that. Well, from what they had said and let slip, they had been through a more conventional war. As conventional a war could be when they were using magic, of course. And spaceships.

“That only works until the other side changes the rules,” Catra said. “If you rely on the gate protecting you, you might end up like Salineas.”

“Salineas?” Jack asked. He saw that Catra flinched a little, and the blonde, Adora, pat her hand.

“A kingdom in the sea, protected by the Sea Gate,” Adora explained. “The Horde found a way around it and attacked with massed forces. It fell quickly.”

“Ah.” The catwoman had probably fought there. He nodded at her. Losing a battle was always hard.

“But why are you looking for allies if you don’t even use your own people?” Glimmer asked. “That sounds as if you want others to fight your war.” She narrowed her eyes at them. “And why should we trust you if you don’t even trust your own people to tell them the truth?”

Damn. Well, time to do what Daniel would do. “To be honest,” Jack said, “Earth isn’t as advanced as the Goa’uld. We can match them on the ground - we’re a bit better, actually, since our weapons are more effective - but we don’t have spaceships or the technology to produce them.” He ignored Carter’s slight gasp. “Not yet. So, even if we went all war economy, we would only produce more targets on the ground which would be bombed from orbit. We stopped one such invasion, but if they launch another, we’re pretty much done for.” He pressed his lips together. He didn’t like admitting how weak Earth was, but they weren’t dealing with a planet full of slaves or former slaves, kept at a primitive tech level for millennia. These people had spaceships.

And they looked surprised. Jack could tell as they exchanged glances and looks.

“And if we told everyone, there would be a mass panic,” Daniel spoke up. “People would riot, wars might get started - we’re not ready for such a revelation. We would have to prepare for that very carefully, or we might destroy ourselves before the Goa’uld make another attempt to take Earth.” He smiled ruefully. “We only started using the Stargate a few years ago.”

“In other words, you’re desperate,” Catra said.

“We’ll help you!” Adora blurted out. “We won’t let another planet be destroyed.”

Jack blinked. He hadn’t expected that. Judging by the groans of Glimmer and Catra, they hadn’t expected that, either.

*****

Catra was giving her that look - the one where she thought Adora was being stupid - again. And Glimmer looked annoyed with her. If both of them agreed on something.. Well, they were still wrong this time! Adora sat straighter. “We’ve seen what happens when people like Horde Prime aren’t stopped. He destroyed a lot of planets just for not bowing to him. If the Goa’uld are the same, then we have to stop them.”

Melog growled. It sounded like they approved.

Catra sighed. “Melog agrees,” she confirmed.

Adora smiled at both of them.

Catra still glared at her. Same as Glimmer.

“Thank you!” Daniel beamed at her.

“Yes, thank you,” O’Neill added. “So what would that help entail, exactly?”

Oops. Adora had spoken as if she spoke for everyone. No wonder Glimmer was annoyed. “Well, I’m She-Ra. I’m good at destroying spaceships.” She smiled at the Tau’ri.

“Well, that’s straightforward.” O’Neill sounded as if he was sarcastic, though.

“Just point her at a spaceship you don’t like and let her at it,” Catra said. “But we’re not going to let her go off alone.”

“Of course not,” Glimmer said with a last glance-glare at Adora before looking at O’Neill. “But we’re not going to rush out without a plan, either.”

Adora hadn’t been planning to do that! She was about to point that out when Catra’s hand on her thigh - the claws pricking her skin - stopped her.

“If we are to become allies, we need a lot more information about your world,” Glimmer went on. “What kind of help you need, what kind of help you can provide.”

“Data!” Entrapta said, nodding. “The more data, the better. We can’t make plans without sufficient data. First, we need to determine where Earth is in relation to us. Then we can work out how long it’ll take for a fleet to arrive here.”

“A fleet?” O’Neill tilted his head a little.

“I think we’ll need a fleet. But without more data, I can’t say how big it has to be,” Entrapta said.

“We’ll also have to ensure that Etheria is safe from any attack by the Goa’uld,” Catra pointed out. “That means enough ships to stall an invasion force and a secure Stargate so we can return at once if Adora’s needed.”

Glimmer nodded after a glance at Catra. “You have the means to secure a Stargate and still allow easy access through it,” she told their guests. “We need that.”

“That requires quite the resources,” Carter said.

“Which we’ll gladly share,” O’Neill cut in. “No sweat.” He looked at Carter and mouthed something Adora didn’t catch.

“Yes!” Entrapta beamed. “We need metallurgy data and examples of the mechanism you use.”

“And we need to talk to your leaders,” Glimmer said. “So we can come to an agreement. We’re not going to jump into a war without a formal alliance.”

Right. Politics. Adora wasn’t good at those. She wasn’t a real princess, after all - she was the protector of Etheria, not a ruler. She nodded anyway.

“That can be arranged,” O’Neill said.

“With all your leaders, though. Not just your country’s,” Glimmer told him. “We aren’t going to create another Horde.”

“What do you mean?” Daniel asked.

“When Hordak arrived on Etheria,” Glimmer explained, “He was alone. He created the Horde by using his knowledge to take over the Scorpion Kingdom, which he then turned into the core of his army - an army dangerous enough to almost conquer Etheria.”

“Wait!” Daniel said, frowning, “You mentioned Hordak before.” He looked at Entrapta.

“Oh, yes. He’s my science buddy.” Entrapta smiled, then blinked. “Ah, yes, he doesn’t want to conquer Etheria any more, don’t worry!”

Adora didn’t need to hear Glimmer’s words to know that her friend was muttering ‘he better not’ or something like it under her breath.

But their guests looked surprised. “Hordak was the leader of the Horde?” Daniel asked.

“Until he turned against Horde Prime,” Entrapta confirmed. “And he only led the Horde he had built on Etheria, not Horde Prime’s Horde.”

“He turned against his cruel leader,” Teal’c spoke up with a slow nod. “An honourable action.”

“Yeah, yeah.” Glimmer’s mouth twisted into a slight grimace. “It was pretty much everyone against Horde Prime.”

“We have a saying on Earth: The enemy of my enemy is my friend,” Daniel said.

“Something like that,” Glimmer said.

Adora half-expected Bow to mention the Best Friends Squad, but he stayed quiet.

“Yes,” Entrapta nodded with a scowl. “Horde Prime wiped his memories - or tried to. Hordak was stronger than he thought, tough.”

“Not all of us are best friends,” Bow spoke up, “but we aren’t enemies any more.” There he was!

Adora nodded in agreement. “Yes. We all worked together to defeat Horde Prime. And we’ll have to work together to defeat those Goa’uld.”

“Well, we have sort of experience with that,” O’Neill said, looking at Teal’c. “Working against your former overlord and such.”

“Indeed. It’s our hope that many more Jaffa will turn against the false gods.”

Right. Teal’c had changed sides as well. Adora remembered his comments.

“So, with that settled, we have to determine where Earth is, so we can get there. We probably can find a world with a Stargate to travel there, but that won’t work for spaceships.” Entrapta nodded. “Do you have any astronomical data?” she asked, beaming at Carter.

*****

“So… that went…” The Colonel trailed off after closing the door to their quarters.

“I think it went well,” Daniel said with a smile. “We made new allies.”

Samantha Carter suppressed a wince. They might have made new allies, allies with advanced technology - very interesting

technology, as she had gathered from her talk with Entrapta - but...

"Care to tell me why you kept spilling information about Earth to people we just met?" the Colonel asked, narrowing his eyes.

Daniel, unlike what Sam had expected, wasn't flustered. "It was necessary to earn their trust, Jack," he replied, crossing his arms over his chest. "Lying to them would have caused trouble as soon as the truth came out."

"You didn't have to lie," the Colonel told him with a frown. "But you didn't have to tell them everything."

"Lying by omission is still lying," Daniel countered. He was frowning - digging in his heels, Sam realised. "We're dealing with an advanced civilisation here, Jack! Not with former slaves hiding from their 'gods'. They just finished a decades-long war, too. Do you think they wouldn't have noticed if I answered evasively? They did actually, but were too polite to point it out."

Some of their hosts had noticed when Daniel had been evasive, Sam agreed. But Entrapta probably had missed it. The woman was brilliant, but she seemed to have some issues with social interaction.

"They were so polite, they called us desperate and started to list conditions for their help."

"Aren't we desperate?" Daniel retorted. "We barely managed to defeat Apophis when he arrived with two motherships. If he returns with an actual fleet…"

The Colonel clenched his teeth. "I'm aware of our military situation, Daniel. But everything has its price. The more they know about us, the more they can demand."

Daniel shook his head. "They won't do that, Jack. They're good people."

The Colonel snorted. Sam was forced to agree with him - Daniel was naive. Their hosts might be good people - they certainly have that impression - but they were also rulers of a country. And that meant they had to act in the interest of their country.

Their friend looked at them and frowned. “I’ve talked to Adora while you were hunting monster worms. She’s not going to extort us. And she won’t let others extort us either.” He sounded convinced of that.

The Colonel scoffed. “She also wants to bring magic to Earth.”

“And she probably could,” Daniel retorted. “At least something she considers magic.”

“A form of energy you can manipulate, according to Entrapta,” Sam said, “if you have the talent for it. Probably a genetic condition or trigger.”

“That’s not the point.” The Colonel shook his head. “I didn’t get the impression that she would be asking nicely if she could turn Earth into a land of magic and rainbows.”

Sam was, once again, forced to agree with this assessment.

“She won’t. Just as she won’t let us get exploited.” Daniel shook his head as well. “Jack, this is the chance we’ve been hoping for! Allies who have the technology and means to fight the Goa’uld on even terms! And they have magic!”

“So they claim.”

Sam cleared her throat. “So far, their claims seem to be plausible, sir. I’ve talked with Entrapta, and she has demonstrated a quite extensive knowledge of Ancients technology.”

“Don’t let the spears and swords fool you,” Daniel added. “They have shown us their technology.”

“We didn’t see their ships,” the Colonel objected.

“Why would they lie about that? What would they gain?”

“Entrapta knows how to navigate in space,” Sam pointed out. The woman had asked for astronomical data, and Sam didn’t doubt that, if she had enough data, she could locate Earth.

“And she wants to know where Earth is.” The Colonel clenched his teeth. “We can block the gate. We can’t block space.”

“Do you expect them to invade us?”

“We’ve only met half a dozen people here,” the Colonel pointed out. “What about the rest of the world? And they’re working with their former enemies!”

“That fits with their society, Jack.” Daniel smiled. “In an aristocratic society, people often felt closer to fellow aristocrats than to their subjects, even if they had fought each other in the past. Especially if they hadn’t lost close family in the war. They might not have the concept of nationalism as we know it.”

“They fought a war against the Horde - and it was a total war; you saw their reaction when they found out that the USA doesn’t run a war economy.” The Colonel shook his head once more. “And they let the enemy leader off.”

“That wasn’t uncommon on Earth, either. Especially for aristocracies. And he switched sides according to them. You can’t judge them according to our values, Jack. And they aren’t like the Goa’uld.”

“We hope so.”

“We have seen their reaction to the Goa’uld practices and policies,” Sam said.

“They do not seem as if they would tolerate the false gods,” Teal’c commented.

“And it’s not as if the USA is only allied with perfect democracies,” Daniel pointed out - a little snidely, Sam thought. “At the very least, they do not seem to discriminate based on gender or sexual orientation.”

“There were a lot of women in charge and few men,” Jack objected.

Sam refrained from rolling her eyes. “They accepted you as our leader at once, sir,” she said. “If they were biased against men, they wouldn’t have done that. They would have kept looking to me instead. Trust me, sir, I would know.” She had experienced enough discrimination and sexism in her career to spot that kind of bullshit everywhere.

The Colonel looked a little abashed but wasn’t giving in. “So they aren’t a matriarchy,” he said. “But they aren’t a democracy, either. And we don’t know how they will react if and when they visit Earth.”

Sam had to agree again. They could only hope for the best now.

*****

Catra shook her head as she leaned against the planning table in Glimmer’s operation room - which wasn’t called that, of course, but something like ‘planning room’. Or ‘Royal Planning Room’, all capitals. “So… we’re going to help those guys just based on their word alone?”

“Melog confirmed their claims about the Goa’uld,” Bow pointed out.

“Yes, yes.” Catra waved her hand. “But just because their enemies are as bad as they say doesn’t mean our guests are as good as they say.”

“Do you think Daniel lied?” Adora asked. She wasn’t fidgeting, but she sounded a little insecure. Damn.

“I don’t think so,” Catra admitted. “But he wasn’t telling us everything.”

“And the others didn’t like him telling us as much as he did,” Glimmer added. “We did hear enough, though.”

“We did? We still don’t have astronomical data to locate their home planet. Or the location of another Stargate,” Entrapta said.

Glimmer narrowed her eyes for a moment. “We know enough to make a few deductions.”

“As Mermista would say,” Adora cut in with a grin.

“And me too! It’s science!”

Glimmer’s eyes narrowed further. Sparkles didn’t like it when she was interrupted, Catra knew that. “First, they are not representing their world, but a single kingdom.”

“But they don’t call it a kingdom,” Bow cut in.

“I was coming to that.” Glimmer glared at him. “Second, they don’t have kingdoms. They have no princesses in charge.”

“Some of their countries might be ruled by royalty,” Catra pointed out. Daniel had been a little evasive.

“But none that matter,” Glimmer said.

Bow cleared his throat. “Since they don’t have magic, it’s understandable that they don’t have royal lines.”

“Third,” Glimmer continued a little more loudly, “they don’t like our plan to return magic to their world.”

“Sam likes it, I think,” Entrapta said. “She was very interested in my data on magic.”

“O’Neill doesn’t like it.” Glimmer objected. “And he’s their commander.”

“Yeah,” Catra agreed. “But he doesn’t like many things, I think.” He reminded her of some older Force Captains she knew. Had known.

“That doesn’t change that we have to help them.” Adora took a step forward. “We can’t let their planet get destroyed. Or any planet.”

“Yes.” Glimmer smiled. “And we will help them. But we can’t just blindly stumble into this. We don’t want to cause another Horde situation.”

“Do you really think they’ll use our help to conquer their world?” Adora asked.

“They aren’t their kingdom’s leader - they answer to them,” Catra pointed out.

“But we wouldn’t let them use us to conquer anything.” Her lover shook her head. “We’re not the Horde.”

“If they learn magic here, then they will be ready when we return magic to their world. That would give them a huge advantage,” Glimmer said.

“If their world works like ours.” Bow looked at them. “We don’t know that.”

“Magic is an advantage,” Catra told him. “Without it, the Horde would have crushed you.”

“But as the Horde proved, you don’t need magic to win a war against a kingdom with magic,” Entrapta spoke up. “Although since the Horde ultimately lost, that might be incorrect.”

“In any case, we need to know more before we can commit to an alliance.” Glimmer put both hands on the table.

“I won’t let their planet get destroyed!” Adora insisted.

“And we won’t,” Glimmer agreed. “But that’s not the same as forming an alliance.”

“Right.” Catra nodded. “Since they need protection we can station a fleet in their system. That would give the clones here something to do.”

“Some people are nervous about the presence of the clones,” Bow said. “But should we send them out to fight a war on someone else’s behalf?”

Catra grinned. “If She-Ra is going, half of them are going anyway.”

Adora frowned at her in return. “I don’t want them to! I am no goddess!”

Catra shrugged. “You killed their god, you took his place.”

“Hordak killed Horde Prime!”

“Hordak wasn’t the one to turn Prime’s flagship into a plant. A space plant,” Catra shot back. “They pray to you, not to him.”

“Well, some do,” Entrapta said. “But not all. Some do want Hordak to lead them.”

“What?” Glimmer all but jumped.

“He refused - it’s tedious, he said. And he’s right. But just as we have a responsibility towards our kingdom - you taught me that, remember? - he has a responsibility for them.” Entrapta beamed at Glimmer.

Catra kept a smile on her face, but she was a little worried. Hordak working with Entrapta was one thing. Hordak working with clones? Clones with space ships only they and a handful of people on Etheria, most of them in this room, could fly? That was another thing.

“Why didn’t we hear of that?” Glimmer asked.

“Well, nothing happened. There was nothing to tell,” Entrapta said. “You don’t want to hear about our failed experiments, do you? If you do, I can fetch my log!”

Glimmer grimaced. “No, that’ll be OK.”

“I do,” Bow said.

“Oh, I’ll get it to you later. Look it over? You might spot things we missed.”

“Sure.”

“Thank you!”

“Can we get back to the whole new war thing?” Glimmer asked. “We need to decide what to do.”

“We need more data. About everything,” Entrapta said. “I think we need to finish upgrading Darla and then go looking for Earth or a planet with a Stargate. Although we need to fly to Earth anyway if we want to protect it.”

“And we need to find out what we are facing - how many ships the Goa’uld have. Where they are. And how we can beat them,” Catra added. “How many ships we need to protect Etheria. And how to use the Stargate network.”

“Oh! If we get access to the entire network, that will make it easy to return magic to everyone!” Entrapta smiled. “Just walk through the gate, do your magic, then go to the next planet!”

Adora perked up. “Right!”

Catra was both relieved and annoyed. It was nice to know there was a more efficient alternative to flying through space from planet to planet. But Adora was still set on returning magic to all

the planets without it - no matter how long it took. As if it was her fault what the First Ones had done.

Well, at least she wasn't planning to sacrifice her own life and happiness for it. That Catra wouldn't let her do. And as long as she was with Adora, it would be alright.

"So… we need to talk to them some more," she said. "Sound them out. And find out where Earth is."

Which was still a stupid name for a planet. Might as well call it 'dirt'.

*****

The Third Fleet

Royal Palace, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

He was getting old, Jack O'Neill thought as he got out of the still too soft bed. His back ached in a familiar way, just in different spots. A few stretches, though, and it was gone. "Rise and shine, sleepyheads!" he said.

Daniel grumbled something from where he was half-buried into his pillow, but Carter got out of bed. Jack carefully didn't watch her as she stretched in her tank top and shorts. She was his subordinate; nothing could come of anything he wasn't thinking of, anyway.

Teal'c rose from his meditation - his kelno'reem. Not that Jack saw any difference to normal meditation.

"You have the bathroom, Carter," he said. She wouldn't take as long as Daniel, and the three men could share. That it would also mean Carter wouldn't wait in her sleepwear was just a bonus.

She nodded and went into the way too luxurious bath. Whatever their hosts were, they were rich. Well, this was a royal palace. Jack had been in dirt-poor countries where most people lived in huts while their leaders lived in palaces with fleets of luxury limousines. At least the people in the streets hadn't looked like they were starving.

Daniel yawned and groped for his glasses with one hand. Jack was tempted to pull the glasses away before his friend found them, but such pranks were something you did at home base, not in the field.

"I wish I had such a bed back at Stargate Command," Daniel said as he put the glasses on his nose and got up.

“I believe similar beds are readily available for you,” Teal’c told him, “according to the advertising I saw.”

“I didn’t mean at my home, Teal’c. I meant at my lab.”

“Daniel, if we gave you a comfortable bed, you’d never leave the base,” Jack told him with a grin.

“Well…” Daniel grinned. “It would be worth it. It’s not as if I have much of a social life, anyway.” And there vanished the grin. He was thinking of his wife again. Sha’re. Who had been snaked.

Jack clenched his teeth, then forced himself to relax. No point in dwelling on that. They were still in the field. Stranded on an alien planet with potential allies. This wasn’t the time or place to deal with those issues. “Well, I’ll ask the general once we’re back. But a bed of this size will mean you won’t have much space left for your artefacts.”

Daniel actually took his joke seriously for a second - he frowned before he pouted. “Very funny, Jack.”

Jack chuckled. “Anyway, I’m not sure the United States Air Force will pay for a palace. We don’t have the budget for it.”

Daniel laughed at that and got up, rolling his shoulders. “Well, I’ll just have to enjoy our stay here, then.”

“Yeah, with our friendly royalty,” Jack muttered before he could help himself.

And Daniel frowned at him. Damn. “Jack. This planet has a completely different culture and history. We can’t judge them according to our own standards.”

“Sure we can. We do the same to the Goa’uld.”

“That’s different,” Daniel shook his head. “These people don’t keep slaves. And they’re willing to help us, even though they’ve just fought a war. You can’t compare them to the Goa’uld!”

"It is not a fair comparison," Teal'c added.

Damn. "I didn't mean that they are like the Goa'uld. But I've heard 'It's another culture' before, and it generally meant that we were meant to look away when our 'allies' did something that would get them jailed in the US."

"Just as they were told to tolerate things from you that would get them jailed in their country, right?"

That was normal - the US didn't let other countries judge their soldiers. "Don't tell me that you'd prefer living under an absolute monarch instead of in a democracy," Jack said.

"I don't!" Daniel protested. "But we can't expect democracy to evolve on a planet where magic is real, and royalty has magic powers. The social dynamics are completely different."

"Just because it's logical doesn't make it right," Jack countered. "Might doesn't make right." He pressed his lips together - he knew better than most that in many places, you had no rights without might or support from the mighty. But this was more fundamental. "We don't let just soldiers vote. Or the rich."

"Not any more. But we used to. In Athens and other Greek democracies, only men could vote."

"That still doesn't mean that it's right."

"It doesn't, but we can't expect them to follow our customs," Daniel said.

"And what if they expect us to follow theirs?" Their hosts were young, after all, and convinced they knew best. "They're planning to turn Earth into a magical realm."

"Even if they manage that, that doesn't mean they'll manage to change your society. We're too advanced to revert to feudalism."

Jack hoped that his friend was right. But before he could make another point, Carter stepped into the room again. In uniform, but…

"What did you do to your hair?" Daniel asked.

Jack nodded - it looked different. Still regulation-length, but… more like a style worn by a fashion model than a soldier. Not like Carter's usual style.

Carter frowned. "I just washed it with the shampoo that was in the bathroom. That was all. When I was done, it looked like this."

"Magic hair shampoo. Now I've seen everything." Jack shook his head. He wouldn't use the shampoo. "Tell me if your hair starts moving on its own, Carter."

"Sir!"

*****

Jack O'Neill hadn't seen everything. Not by far. Standing on the perfect green grass in the palace courtyard, he was forced to admit that.

"Did someone say Swift Wind?"

Swift Wind wasn't an animal activist. He was a horse. A talking, flying horse. With a horn on his head.

"Swift Wind, these are our guests: Jack O'Neill, Daniel Jackson - they're not related. Samantha Carter and Teal'c," Adora said. "Everyone, this is my friend Swift Wind!"

"Your friend and loyal steed, united by a bond no one else shares!" The horse raised one hoof into the air and looked at the sky.

A talking, boasting and posing horse. They really weren't in Kansas any more. Or Jack had gone crazy and no one had told

him.

“It’s like the Pegasus!” Daniel whispered. Ok, Jack hadn’t gone crazy.

“Actually, it’s an alicorn,” Carter corrected him.

“What?” Jack turned to her.

“It’s from a cartoon show I had to watch when I was babysitting as a teenager. A winged unicorn is an alicorn,” Carter explained, blushing slightly.

“You’ve seen horses like Swift Wind before?” Adora leaned in towards them.

The horse, too, perked up. “Oh, I thought I was the only one - created by She-Ra’s magic, but if there are others of my kind…”

Carter shook her head. “No, no, it was just… fiction. Tales of imaginary creatures.”

“Well, I’m anything but imaginary, I’ll have you know.” The horse threw his head back and flared his wings.

And he had been created by She-Ra’s magic? Jack shook his head. “If you can do this on Earth, you’ll be revered as a goddess by every teenage girl in the US.”

He saw Adora grimace at that.

*****

“I don’t want to be revered!” Adora blurted out. “I’m no goddess!” The clones turning to her were bad enough! She didn’t want more such people following her!

“We know,” Catra said. “You snore too much for that!”

Adora shot her a glare. “This isn’t the time to joke! I really don’t want any more followers!”

"Ah… I was joking," O'Neill said, looking puzzled. "You wouldn't really be revered as a goddess on Earth. Not literally, at least."

Adora smiled at him. That was such a relief!

Then Daniel cleared his throat. "Uh… I don't want to pry, but… did this happen before? You seemed to take this seriously."

Adora winced. "Well, the Horde clones - the clones of Horde Prime. Some of them consider me a goddess."

"'Some'." Catra snorted.

Adora glared at her again. Hadn't they agreed that they wouldn't spill more 'sensitive information' to their guests until they knew more about them and their goals? That was the reason she was always She-Ra when meeting them!

"Why would they revere you as a goddess?" Daniel asked. He tilted his head in apparent confusion.

"Well…" Adora smiled at him, though she knew it wouldn't look convincing. "They think that I killed Horde Prime, and he was the centre of their lives. So, they replaced him with me." And she couldn't tell them to get lost - who knew what they would do then?

Daniel still looked puzzled. "Well, it's not unheard of in mythology that someone took the place of a god by killing them, but… why wouldn't they take your word that you aren't a goddess?"

"Religious zealots wouldn't even listen to their god if he told them they were wrong," O'Neill said. "They'd tell him he was wrong. Or convince themselves that they heard wrong."

Daniel frowned at him. "Jack! This is obviously a serious problem! And since the Goa'uld are posing as gods, knowing more about this might give us some insight into how we can convince more of their slaves that they aren't gods."

“Indeed,” Teal’c agreed.

“Especially since you didn’t even kill Horde Prime. Who spread that narrative?” Daniel asked.

“Ah…” Adora bit her lower lip. How could she explain the whole situation without revealing more than she should? She had killed Horde Prime, kind of, after all. But not by herself.

“Oh, She-Ra broke his power and turned his flagship into a space plant!” Swift Wind said, throwing his head back. “And then she turned the stinky barren Fright Zone into a lush country covered with fields and forests! Perfect for grazing! It was glorious!”

Right. Adora winced again while Catra pressed a hand to her face, and Glimmer glared at Swift Wind. They hadn’t briefed her friend about the need for more discretion.

“You turned his flagship into a plant?” Carter sounded… well, as if she didn’t believe them. And slightly shocked.

“Well… I was channelling the magic of the Heart of Etheria, and, well, it had to go somewhere…” Adora spread her hands.

“A space plant,” O’Neill repeated in a flat voice.

He didn’t believe her, either, Adora realised. She frowned. It was embarrassing, but she was telling them the truth!

“Yeah,” Catra spoke up. “If you watch the sky, you can catch a glimpse - it’s still orbiting Etheria. And we call it a space plant since, apparently, it’s still looking healthy despite months in orbit.”

“But… the radiation, the vacuum, the temperature differences in space…” Carter shook her head. “That’s…”

“Yeah, that’s She-Ra for you,” Catra said. “She doesn’t do things by half.”

“The magic did it!” Adora protested. She’d only had vague intentions to render the ships harmless. She hadn’t planned to turn them into a giant plants!

“It does sound a little…” Daniel trailed off, grimacing.

“Well, we can show you,” Adora said before she could help herself. “Darla should be able to make orbit in no time. Entrapta probably would like to give it a test ride - she’s been tinkering with her.”

“That’s not necessary. We were merely surprised - plants don’t survive in space where we are from.” Daniel smiled at her.

“No, no, I insist,” Adora told him.

“And don’t worry, Darla hasn’t crashed since her original crash, even when she had all those problems with the systems,” Swift Wind added.

“Her original crash?” Carter asked.

“We recovered her wreck and restored it,” Catra told the woman. “She lasted a thousand years buried in sand, so she won’t break down on the next flight.”

Their guests nodded at that.

“I’ll call Entrapta,” Bow said. “We can go over to where Darla’s parked.”

“Turning barren land into fertile meadows and turning weapons into plants… that certainly would be grounds for deification in our myths,” Daniel said as they started walking towards the back of the palace, where Darla was parked in an enclosed courtyard.

“Swords to ploughshares, space edition.” O’Neill snorted.

He didn’t believe her. Even Adora could see that.

Well, he’d see.

They entered the courtyard. Darla was there, and Entrapta was working on the left engine - Adora saw her legs dangling out of the opening.

"That's certainly not a Goa'uld inspired craft," Daniel said. "And it's a thousand years old, you said?"

"At least," Adora told him. This had been Mara's spaceship.

"But it's holding up nicely - the First Ones technology is very durable," Entrapta cut in as she jumped down, her hair catching her fall. "And I've fixed the fluctuations in the engine thrust! She's all ready and eager for a trip to space!"

*****

Daniel was right, Samantha Carter knew. This ship wasn't a Goa'uld design. She couldn't see any parallels. Other than the ramp at the stern, but that was just good design. And the size of the engines… She craned her head to take a closer look at them.

"She's old but tough. And I've been upgrading her!" Entrapta said next to her. "She's now faster than a Horde frigate!"

Sam had no idea how fast a Horde frigate was. But she nodded anyway.

"And I strengthened her shields. They're not as strong as a frigate's, of course, but Darla's far smaller and more manoeuvrable, so she can avoid fire."

"Up to a point," Bow commented, looking at the engine as well. "Did you add the booster?"

"No. It, uh, kinda had some tiny problems at sustained use," Entrapta told him. "But we'll get around to fixing that as soon as the lab's fixed. Incidentally, did you know that boosters can explode like a bomb?"

Sam winced at that. As did Bow.

Entrapta went on: “I mean, it’s kinda obvious, if you think about it, since they enhance the energy output of a device…” She blinked. “Oh! We need to test that with Naquadah! Once we have some.”

“Uh…” Bow looked at her, Sam realised. “That metal amplifies explosions, right?”

“Yes.” Sam nodded.

“So it should amplify an engine as well - it’s just energy, after all!” Entrapta nodded.

“But if anything explodes with it nearby…” Bow trailed off.

Entrapta blinked again. “Oh, right. We have to be extra careful with that. Once we get more of it. Though I guess a few samples should be possible…”

“I don’t think you should try to take a sample from the Stargate,” Sam told her. “That could affect its function.” And, depending on the method used - it wasn’t easy to get a sample of Naquadah from a Stargate - could cause more trouble.

“Oh, right. Well, once I’ve finished building a global scanner for it, we can search for deposits from space!”

“Is this ship armed?” the Colonel asked.

“Yes,” Entrapta replied.

“Not really,” Catra said. “Just two blaster cannons.”

“Technically, that’s armed. We took them from tanks!”

“So, this is a civilian vessel?” Daniel asked.

“Uh…” Entrapta cocked her head. “She’s She-Ra’s vessel.”

“She’s not a warship,” Catra said. “But she’s fought in the war.”

That seemed to be good enough for Daniel.

“She belonged to my predecessor,” Adora told them. “Mara.”

“Did she crash her?” the Colonel asked.

Hadn’t the ship been buried for a thousand years in sand? Did that mean the last She-Ra had been a thousand years ago? Or… Sam almost bit her lip at the thought. How long did Adora or Mara live? The group here looked young and acted as you’d expect a bunch of people their apparent age would act after fighting a war - Sam was familiar with soldiers of their apparent age - but if they were actually far older… She would have to ask Daniel about that. He was their expert on alien cultures. Sam focused on technology.

And the ship was a marvel of technology, Sam had to admit as they entered. Very spacious - not at all like the ships she was familiar with.

“Darla’s not quite up to greeting us,” Entrapta explained. “I’m still working on a holographic display for her.”

“She’s intelligent?” Daniel asked.

“She’s smart,” Entrapta replied. “But she’s not… she’s different. Different smart. But she’s nice. Very nice. And she likes us.”

“Good to know.” Daniel smiled.

Sam felt a little uneasy. An artificial intelligence in charge of a ship? Or so it seemed. And one that seemed to be a little off, if she understood Entrapta correctly?

“Quite a cosy ship,” the Colonel commented with fake casualness. “And no golden hieroglyphs plastered all over the place. I approve.”

“‘Golden hieroglyphs’?” Bow asked.

“The Goa’uld are fond of covering walls with boasts and praises to themselves,” the Colonel said.

“A not uncommon practise of absolute rulers,” Daniel added. “At least in Earth’s past. Although there are still a few countries where the leaders foster a cult of personality.”

“Don’t give the clones ideas,” Catra commented with a grin.

Adora grimaced. Right, she didn’t like followers.

They reached the bridge.

“Oh, very spacious,” the Colonel said. “Lots of room for expansion. And a big Captain’s chair. Roddenberry would approve.”

As would several other science fiction authors, Sam knew. Not that she would mention that.

“You wouldn’t want to travel in cramped space for months, would you?” Glimmer asked. Anyway, we’re just going into orbit so Adora can show you the plant that’s left of Horde Prime’s flagship.”

“Right!” Adora sat down in the Captain’s seat.

Sam looked around. There was a row of other seats that looked as if they were intended for passengers. They also seemed to be new - and done in a different style.

“Just take a seat!” Entrapta said. “Or keep standing - this won’t take long.”

Before Sam could reply, the lights on the bridge flared, and holographic displays lit up. Engine data, navigational data, three-dimensional display of their surroundings… Sam tried to track everything. Ancient script, too.

“Darla, lift off!” Adora said.

And the displays shifted - as did the view through the windows.

“Smooth ride,” the Colonel said as they shot up through the atmosphere, allowing Sam to catch a glimpse of the continent below them.

“Yes. It was a little bumpy before I fixed the gravitational generators,” Entrapta said.

Which reminded Sam that they were flying in a ship restored after a crash. She couldn’t help being wary of that. All the structural stress this would have caused, metal fatigue, warping… This wasn’t an airplane, she reminded herself, nor was it built by humans. She couldn’t judge it by those standards. She…

The Colonel whistled. Sam just stared.

There was a plant floating in orbit. A huge plant. In space. This was…

Was this a decoy? A station made to look like a plant? But why would anyone do that?

She shook her head. A plant in space.

“The bioengineering possibilities...” she whispered. Could they grow spaceships? At least the hulls? But how had they done this?

*****

In Orbit above Etheria, July 11th, 1998 (Earth Time)

“How did you do this? Did you grow it in space?” Carter asked.

Catra smirked. The woman looked… well, not unlike Entrapta when she found a new piece of First Ones tech.

“Well, kind of - if you consider transforming as growing,” Entrapta replied. “As we said: This was Horde Prime’s flagship. Until Adora transformed it.”

Carter turned her head to stare at Adora. “You transformed a spaceship into… this?”

“Yes.” Her lover was slightly annoyed, Catra could tell. Well, no one liked being thought a liar. Except for Double Trouble. “I used the magic of Etheria to transform the ship onto a plant.”

“Why?” Daniel asked.

“We were fighting him. With the ship, he could’ve bombarded the planet at leisure,” Catra explained.

“No, no - I mean, why turn it into a plant?” Daniel cocked his head and adjusted his glasses.

“Oh.” Adora blinked. “It was… instinct, as I said. I had all this power and had to use it. And plants don’t drop bombs or shoot cannons at you.”

In other words, she hadn’t had any idea what she was doing. But that wasn’t something you told the guests you were trying to impress. So Catra nodded in agreement.

“Magic is tied to life, sort of. Castaspella is the expert - the leading expert - on magic - but the basics are that magic needs life to grow. There’s possibly also a reciprocating effect, but that hasn’t been verified yet, though some data indicates it,” Entrapta explained. Or tried to explain. “So, from a conceptual point of view, plant growth is a natural effect of magic. Or the base of magic.”

“It’s tied to life?” Carter asked.

“Barren planets don’t have magic,” Entrapta told her. “Well, they lack the potential to have magic would be more precise, seeing as most planets don’t have magic at the moment.”

“But we’re working on that!” Adora told the others with a smile.

“Are you saying that magic was taken from the galaxy?” Carter asked.

“We don’t exactly know,” Adora said. “But we know the First Ones, who were not native to Etheria, used magic - but that none of the planets we discovered once Etheria was returned to this sector had magic.”

‘Returned to the sector’? Something else Sam had to ask about, later.

“Yes! It could be a local effect - I was theorising that the First Ones siphoned all available magic in the sector - or their Empire - to fight Horde Prime,” Entrapta said, nodding excitedly, “but if your planet doesn’t have any magic, either, and isn’t in the local sector according to your astronomical data, then this might have been a wide-spread effect.”

“How would you remove magic from the galaxy?” O’Neill asked with a grimace. “It’s a rather big place.”

Entrapta ignored his sarcasm and beamed at him. “That’s exactly what I asked myself! It didn’t make any sense - and the time involved…” She nodded. “But now that we know that there’s a Stargate network linking so many planets… We need more data!”

“You mean they used the Stargates to… syphon off magic from all the worlds?” Carter didn’t sound as if she believed that.

Hell, Catra didn’t really believe it. She was no expert on magic, but she knew - roughly - how big the galaxy was. And if this network was as big as their guests claimed, then even if all those planets had only had a trickle of magic each, it should’ve been more than the Heart of Etheria could gather. The First Ones should have defeated Horde Prime with such power. Unless it was really inefficient or something. Or, she thought, it was used to construct the Heart of Etheria.

Well, Catra was neither a sorceress nor a princess. She could let others sort this out. “So, now that you’ve seen the remains of

Horde Prime's flagship, are you convinced?" she asked.

"Convinced of what?" O'Neill asked. He was back in control, or so it seemed.

"That I told you the truth," Adora said.

"Well… it's a big plant, yes. And a space plant."

"But to transform metal and plastic into plant matter…" Carter trailed off. "The amount of computing power you'd need for that, on this scale… Unless it's a self-propagating process, spreading from a point of origin, like nanomachines replicating and transforming as they grow..."

"It was transforming magic," Entrapta said. "Totally different process, same effect. But what you just mentioned sounds interesting! How do you make such nanomachines?"

"Ah… that was only theorised. Although I have a few ideas about that…"

"Ideas that we're not going to experiment with, Carter," O'Neill said. "We don't want a grey goo scenario, do we?"

"Grey goo?" Entrapta tilted her head to the side.

"I wasn't aware that you were familiar with the concept, sir," Carter said.

"I read more than just the briefings," O'Neill replied.

"You read the briefings? Daniel blinked in apparent surprise.

O'Neill glared at him but didn't comment.

"What is grey goo?" Catra repeated Entrapta's question.

"Ah, sorry!" Carter smiled at them. "It's a hypothetical doomsday scenario in which nanomachines self-replicate by converting everything - plants, animals, people and even solid matter in

some scenarios - into more nanomachines. Effectively turning a whole planet into a mass of nanomachines."

Catra shivered. That sounded…

"That's horrible!" Adora exclaimed, echoing Catra's thoughts.

"And you have ideas about that?" Bow shook his head.

"Theories. No practical work has been done - we don't have the capability to create nanomachines on that scale," Carter said.

That was a relief. But it was another clue that their guests were far more dangerous than they appeared. They couldn't underestimate them. No matter how surprised they were by magic.

Nor could they underestimate the Goa'uld.

*****

This spaceship was far too spacious, in Jack O'Neill's opinion. The bridge had enough room for an army. An army of giants. Yet the doors were normal-sized - well, sized so the seven-foot amazon could walk through it. What kind of people built spaceships like this? Not even the Goa'uld wasted space like that.

At least it looked like their hosts had started to use the space for something, what with the shiny looking seats they had installed. Still… you didn't carry your passengers on your bridge. That was just asking for trouble in a fight.

"So, you don't have nanomachines? But you've been thinking about them?" Entrapta asked. Far too eagerly, for Jack's peace of mind. He had almost died to those hellish things, after all.

"We've encountered the technology before, and we're working on exploring it, and considering several scenarios, to counter such threats," Carter replied. Good. No need to make them think that

Stargate Command was planning to turn planets into grey goo. Or make every one die from old age in a few days.

"And to use it yourself," Catra added.

Well, that was a logical deduction - you tended to use the weapons you had, after all. Especially when fighting an enemy that had you outnumbered and out-teched like the Goa'uld. But in this case, they were wrong.

"We wouldn't destroy a planet!" Daniel protested.

"Not even to win a war?" Catra tilted her head. "Not even to save your planet and everyone else?"

Something was off here. Everyone else was watching intently, Jack realised. This wasn't just an idle question.

And Daniel was faltering. "Well…"

"We wouldn't kill the entire population of a planet to defeat the Goa'uld," Jack said. "Our laws forbid attacking civilians." Of course, there were exceptions. If the Goa'uld used their slaves as human shields… But uncontrolled nanomachines? No.

But the others seemed to have accepted his statement. Catra nodded, and Adora looked relieved. Bow smiled.

Then Carter added: "Besides, the risk of unlimited nano-warfare is too great. Like biological warfare."

"Biological warfare?" Glimmer asked. She glanced at the space plant floating in front of the ship, Jack noticed. Were they thinking of that? Battling plants?

"Weaponised germs," Carter explained. "Diseases engineered to infect enemy soldiers and disable or kill them. We don't use them, but we had to research them and develop countermeasures since our enemies used them."

That seemed to shock everyone. “Diseases?” Adora blurted out. “The Goa’uld use diseases as weapons?”

“They have no qualms about using such dishonourable weapons,” Teal’c stated with a slow nod.

“Monsters!” Glimmer whispered.

Even Catra looked grim as she nodded in apparent agreement. “We have to consider how to defend against that, then.”

“I can heal a disease,” Adora said.

“An entire planet’s worth?” Catra asked, turning to look at the woman.

“There are protocols to isolate and stop such an attack from spreading,” Carter said.

“And there’s the threat of retaliation,” Jack said. “We found that that worked well with chemical weapons.” Not even Hitler had used poison gas on the battlefield.

“Chemical weapons? Poison?” Catra asked.

“Yes.”

Their hosts were looking at the catwoman.

“Poison that kills people or plants?” Adora asked.

“People,” Jack replied. He wasn’t about to go into Agent Orange. Filthy stuff - if he had run into it…

“Ah.” That seemed to relieve Catra. Had she proposed such an attack herself? Or used poison as a defoliant? A question for another day.

Jack cleared his throat. “So, this was your enemy’s flagship. What’s it doing now?” He nodded at the space plant outside.

“Uh…” Adora bit her lower lip.

“We don’t actually know,” Entrapta said. “Perfuma checked it and said it’s a harmless plant and that it should survive in space, but that’s about it. We don’t know what it does, other than that it absorbs sunlight.”

That was… On Earth, there would be half an army of scientists in orbit, studying the thing. And they had sent one expert and then let it be? That made no sense. Unless… Unless all their experts were busy on the ground, dealing with the damage of the war. Or if they didn’t have enough experts to handle this. “Perfuma?”Jack asked.

“The Princess of Plumeria,” Entrapta replied. “She can control plants - make them grow and move.”

Ah. So, another magical princess. Jack would have to check with Daniel about this planet’s society. Did they have many scientists? Entrapta was one, of course, but she also was a princess.

“Is she your leading expert on botany? Daniel asked.

“Pretty much, yes,” Catra said.

“She’s helping Scorpia with the agriculture of her kingdom,” Entrapta said. “They have a lot of former Horde soldiers settling there, so they need a lot of produce. And Adora’s magic turned the place fertile, but her plants aren’t really suitable for eating.”

“Sorry,” Adora mumbled.

“It wasn’t your fault, dummy!” Catra told her. “Besides, without you, nothing would grow there. You know how the Fright Zone was.”

“Yes.” Adora nodded.

An interesting interaction. Catra seemed familiar with the Fright Zone as well. Of course she would be if her troops had operated

there. Still… Jack knew he was missing pieces of the puzzle. "So… this is your personal ship?" he asked.

"Well, it was Mara's, and she was She-Ra before Adora," Entrapta said. "But they let me tinker with it!"

"As long as you don't blow it up," Catra added.

"I won't!"

Jack was about to ask a few more questions about the ship's capabilities when a noise - an alert - sounded on the bridge.

"Oh! A frigate is moving toward us!" Entrapta said.

So, this was one of the frigates they had mentioned. The ship that appeared on the screen looked far different from 'Darla'. Bright colours - white mainly - and less angular curves. A completely different style, Jack noted.

This should be interesting.

*****

"Which frigate?" Adora asked. She didn't add 'Please, not the Third Fleet. Please, not the Third Fleet' under her breath, mainly because Catra would hear her, but she was thinking it.

"Three-One," Bow replied from where he was looking at the screens.

First of the Third. The flagship of the Third Fleet. Adora hung her head.

"Incoming call," Bow added, looking over his shoulder at Adora.

She sighed. "Yes."

He pushed a button, and a smiling clone appeared on the large screen in front of them. A clone with a silver diadem of a very familiar design. 'Priest'. "Your Divine Highness!" he beamed at her,

then bowed deeply. So deeply, Adora only saw his back when he proclaimed: "Your slightest wish is our holy command! How may your fleet serve you?"

"Wow. I thought you weren't really formal, but that… That takes the cake," O'Neill commented, followed by a hissed 'Jack!' from Daniel.

"Ah. We're just showing our guests the space plant," Adora explained. "No need for an escort. Or an orbital strike. Or an invasion," she added hastily.

"Guests?" Priest straightened and cocked his head as if he hadn't noticed their visitors before. He probably hadn't, actually, since he added. "And good day, Holy Consort and Companions of the Divine She-Ra!", with a deep nod towards Catra and the others.

Adora suppressed a shudder. Priest sounded far too much like Horde Prime when he spoke like that.

"Holy Consort?" O'Neill cocked his head towards them.

Before Adora could explain, Priest spoke up: "Catra, the Holy Consort of the Divine She-Ra, first to be saved by her love, before we all saw the light."

Adora heard the groan from Catra at that, but Priest either didn't or ignored it. Not that he'd change, anyway.

"Ah, nice." O'Neill nodded. "I'm Colonel Jack O'Neill, from Earth. This is my team - Captain Carter, Daniel Jackson and Teal'c."

Priest nodded. "Well met, and be welcome…" his smile faltered as he looked at Teal'c. "Jaffa?" he spat with a growl.

Uh-oh! Adora winced.

"I do not serve the false gods," Teal'c declared before Adora could say anything. "I fight the Goa'uld."

And Priest beamed at the guy. “Another soul saved by the Divine She-Ra! Praised be her name, blessed be her followers!”

“Did he just bless himself?” O’Neill added in a low voice.

Adora cleared her throat. “They were stranded on Etheria, and we’re looking into helping them return to their home.”

Priest frowned again. “They aren’t from Etheria? I wasn’t aware that any ship slipped through our perimeter. When did this happen? Did the heretics fail their most basic duties?”

“Wrong Hordak did nothing wrong!” Entrapta protested. “They arrived through a Stargate.”

“A Stargate?”

“A device from the First Ones which allows instant travel from one gate to another, across the stars,” Entrapta explained. “Kinda like a transporter, but it needs another gate to lock on, although it can cover much, much greater distances. There’s an entire network spanning the galaxy!”

“Oh.” Priest blinked. “And such a gate is on Etheria? And there are others? A network? Your Divine Highness, we must guard this gate! Please allow us to deploy the Holy Legion to safeguard Etheria!”

Yeah, right. Glimmer would kill Adora if she told Priest to deploy a few thousand clones and even more bots on Etheria. “I have secured the gate personally,” Adora told the clone. “Rest assured that should we require your help, you will be called at once.”

And the clone was beaming at her again. “Of course! Blessed is the planet under your protection and guidance, Your Divine Highness!” Another deep bow.

“So, ah… just resume your duties,” Adora added. “We just wanted to show the remains of Horde Prime’s flagship to our guests.”

“Of course! Everyone should visit the place where the scourge of the galaxy was purged at least once in their lives to bask in the sight of the silent witness of your divine glory!”

“Oh, boy,” O’Neill muttered.

“Ah… right.” Adora forced herself to smile. That wasn’t why they had taken their guests up here. She raised her arm and waved. “So… return to your duties, Priest.”

“At your command, and with your blessings, Your Divine Highness!”

The screen blinked out, and Adora sighed.

“I’ve known a number of Goa’uld who’d be very jealous of such devotion,” O’Neill said.

“Indeed.”

“It’s not as if Adora wanted this,” Glimmer said, scowling. “They latched onto her and won’t take no for an answer.”

“I tried telling them that I’m not a goddess or their goddess,” Adora explained. “They aren’t listening.”

“Well, you did kill Horde Prime and turned his flagship into a space plant,” Catra said with a shrug. She, of course, found the clones’ devotion funny. Most of the time. “And it’s better that they follow you rather than anyone else.”

Oh, yes. Blindly fanatical clones with a fleet, following someone selfish, cruel or greedy...

“Are they all like that?” O’Neill asked.

“Only the Third Fleet,” Bow said. “Second Fleet is led by Wrong Hordak. They don’t think She-Ra is a goddess but are still grateful for being freed from Horde Prime’s control.”

“And those who do consider them heretics?” Daniel asked.

“Yes,” Adora admitted. “But I forbid any attempts to, ah, convert them.”

“Is there a First Fleet?” Carter asked.

“There was,” Catra said. “But their ships were mostly destroyed with the flagship. Not many are left - a dozen or so.”

“Hordak has been talking to the remnants,” Entrapta added. “They are kinda lost, what with having lost so many in the war.”

Lost at her hands, Adora knew. And the clones hadn’t known any better. They had just followed their creator’s orders, as they had been raised to. Like Shadow Weaver had tried to raise her.

She clenched her teeth. She wouldn’t think about Shadow Weaver and what the woman had done to her and Catra. Not now.

*****

Adora was still tense, Samantha Carter noticed. The whole situation must be stressing her. Which, as cynical as it sounded, was a good thing - if she embraced such worship… Sam knew that this was what the Goa’uld wanted. Utterly loyal followers who worshipped them as gods. Who could resist such power?

“It’s still fascinating,” Daniel said. “I didn’t expect this to be so… direct. Although in hindsight, it makes sense. Converts are often the most fanatical of any religion’s followers.”

Sam winced - Daniel had let his scientific curiosity get the better of his tact, again.

“Sorry,” Adora said, looking dejected. “I’m working on this, but… you’ve seen how they are.”

“It’s a work in progress.” The Colonel nodded. “Don’t worry. Deprogramming a cult takes time.”

“Indeed.” Teal’c nodded. “I know the trials it takes to make my people accept the truth.”

“Thanks.” Adora’s smile was weak but seemed honest.

“But at the least, the fanatics are fighting for you,” the Colonel went on. “Are there any other fleets left?” Fishing for more information, Sam realised. A little underhanded, but they needed to know more about this world.

“There should be,” Entrapta replied. “But we’re not quite sure how many. Horde Prime was conquering the sector, yet there were rebellions all over the place by the time Adora defeated him, so his Horde was split up.”

“So, there are more of those… clones… around? With fleets?” Daniel asked.

“Yes.” Adora nodded. “We are trying to track them down, but… We lost the way to contact them with Horde Prime’s flagship.”

“And reconstructing the deployment orders from the surviving data hasn’t worked out,” Entrapta explained. “Horde Prime controlled them personally, so all that knowledge died with him.”

“We’ve been sending out ships to explore the sector, but it’s going slow,” Bow added.

“And we don’t really want to send out the Third Fleet,” Queen Glimmer said.

“Imagine them meeting a fleet and considering them heretics!” Catra snorted. Sam didn’t think it was funny. Then again, the Colonel made similar jokes.

But… Religious fanatics on a crusade in space - and former soldiers of a megalomaniac dictator who razed planets for resisting him, at that? She could imagine the horrors such a conflict would unleash. Although… “You lack a complete overview

of Horde Prime's former empire?" Hadn't Horde Prime kept his data properly backed up?

"Yes. We think we have the gist of it," Entrapta told her, "but not the details. Though we're working on it. It just takes time."

"They recognised me," Teal'c pointed out.

"Yes." The Colonel nodded. "They must have met Jaffa before."

Sam nodded. That made sense. "And since they couldn't see your stomach or sense the larva inside you…"

"Junior!" the Colonel cut in.

Sam ignored him. "...they must have recognised the symbol on your head or the staff weapon," she finished.

"Or both," Daniel said. "Yes, they must have had contact with the Goa'uld." He smiled. "That means they might have navigational data about the Goa'uld holdings.

"Right!" Entrapta beamed at them. "Let's talk to Wrong Hordak!"

"Not Hordak?" Sam asked. Entrapta had mentioned that he was her partner, after all.

"Uh, no. He's been out of touch with Horde Prime for a few decades." Entrapta winced and shook her head, her hair staying still somehow. "And the First Fleet's remnants are still a little, uh, shaken up. Wrong Hordak, though, is leading the Second Fleet, which is mostly intact. They are bound to be our best source about the Goa'uld. Though if they know nothing, then odds are, it's just the Third Fleet who knew about Goa'uld. Which would, by itself, be useful data, of course!"

"Let's hope we don't have to talk to the Third Fleet," Adora muttered.

“Right,” The Colonel agreed. “My quota for bombastic religious sermons is already full. For this year.”

That sent a few of their hosts snickering. Not Adora, though, Sam noticed.

“Sorry,” Adora said. “I try to tell them to tone it down, but…” She shrugged.

Though, Sam couldn’t help thinking, given the fanaticism she had observed, it might be dangerous to tell those clones to stop following Adora at all. They might take offence and lash out. Or, possibly worse, they might listen.

“So, you have three distinct groups amongst the former Horde?” Daniel asked.

“Four if you count the former Horde on Etheria,” Bow corrected him. “Though they have split as well.”

“Most of them are staying in Scorpia’s kingdom. Some of them have turned into bandits and pirates,” Queen Glimmer explained. “At least the clones haven’t done that.”

“As far as we know,” Catra pointed out. “Some of them could be conquering planets out there.”

“So far, we haven’t heard anything about that,” Queen Glimmer replied with a frown.

Sam watched both. It felt like an argument they had had before. Two leaders, clashing over the best course of action? But Catra was, as far as they knew, not a princess. And all leaders so far seemed to be princesses. Or clones. Sam would have to ask Daniel about the possible ramifications of that.

“Well, isn’t that a wonderful thought,” the Colonel commented.

“It’s quite common for soldiers to turn into bandits or mercenaries after a war if the social structures that supported them before

broke down, which might be the case here," Daniel said. "We have numerous examples in Earth's history," he added.

"Oh?" Catra tilted her head.

"We've had many wars," Daniel told her, "and there are several civil wars currently being fought on Earth, or having been fought until a short time ago."

"*Several* civil wars?"

Their hosts seemed shocked again.

And the Colonel wasn't amused.

*****

The Moon of Enchantment

In Orbit above Etheria, July 11th, 1998 (Earth Time)

Those people had multiple civil wars? All currently going on on their planet? Catra couldn't help but stare at them. That was…

"That's like the Age of War," Glimmer said, shaking her head.

"The Age of War?" Adora asked, to the relief of Catra - so she wasn't the only one who didn't know what that was.

"A time of great upheaval in Etheria," Bow started lecturing, "when every kingdom was pitted against every other kingdom. This was about eight hundred years ago - the exact date is contested amongst historians. Some say it started when the precursor kingdom of Plumeria attacked Bright Moon's first settlement. Others claim the Age of War began when that conflict spread to involve the Kingdom of the Forest and the Serpent Empire."

Right, Bow was the son of two historians, Catra remembered. Or amateur historians - neither Bow nor Adora had been completely clear about that, and Glimmer had only chuckled at both when the topic had come up.

"I've never heard of those two kingdoms," Adora said. "And I've studied all kingdoms when we prepared for the Princess Prom."

Catra snorted. Adora hadn't changed at all - she still overprepared for everything.

"They didn't survive the Age of War," Bow said. "The Kingdom of the Forest occupied parts of the Whispering Woods. When they faced defeat at the hands of Bright Moon and their allies, they tried to use the Whispering Woods' monsters against them. But the monsters turned against them, and so the kingdom was abandoned and taken over by the woods. Parts of it were absorbed by Plumeria two centuries afterwards, following their

conflict with Salineas, but they never managed to recover the whole area."

"Yes, Mom told me about that time. Bright Moon was one of the most advanced kingdoms, and everyone wanted a piece of it - or wanted to destroy it," Glimmer explained. "But Mom had already bonded to the Runestone, so the enemy armies couldn't break through the shield."

Queen Angella had been around that time? Catra had known that the former Queen of Bright Moon had been around for a while, but to have lived for centuries?

"Ah… how long is a year on Etheria?" Daniel asked.

"Three hundred and sixty days, why?" Bow replied.

"How long is a year on Earth?" Entrapta asked, recorder out.

"Three hundred and sixty-five days," Daniel replied. "And a quarter day, more or less."

"How does that work?" Entrapta cocked her head. "Do you have quarter days or how?"

"Wait, wait - are you saying that your mother, the former queen, was alive *eight hundred years* ago?" O'Neill asked.

"Yes." Glimmer nodded, apparently confused about the question.

Catra wanted to sigh at her naivety. "She was an exception. No one else is that long-lived," she explained.

"You forgot Madame Razz!" Adora objected. "She was around when Mara arrived a thousand years ago."

Catra hadn't forgotten the witch - though she had *tried* to forget her. The old woman's ramblings made her skin crawl.

"Right. A thousand years old." O'Neill sounded sceptical.

“It’s not really unbelievable,” Daniel said. “We’re talking about an alien species.”

And someone who was trapped between dimensions because of Catra’s fuck-up. She cleared her throat. “And what about the Serpent Empire?”

“I know! They were located where the Crimson Waste is situated now,” Entrapta said.

“Yes,” Bow went on. “Back in the Age of War, the area was, well, not a waste. Still arid, but they could grow crops. But they were expansionist and pushed out against the neighbouring kingdoms. They had various alliances but tended to betray their allies whenever they felt they could gain an advantage. They did well in the Age of War, but the desertification of their lands doomed the kingdom. Some scholars claim that this was caused by their attempts to construct a runestone to control the earth. Others think that the Princess of Salineas used her runestone to drain most of the area’s water into the ocean.”

Catra blinked. “Mermista could do that?” she asked before she could control herself.

“Err… not to my knowledge,” Bow told her. “That’s why it’s not a popular theory. Its proponents claim that Mermista’s ancestor used dangerous rituals to enhance the power of the runestone.”

“Ah.” Not a safe topic, then.

“Anyway, the Age of War ended with the Treaty of Bright Moon, seven hundred and five years ago,” Bow said. “But during that time, there was not a year when no kingdom was at war.”

“And afterwards, peace reigned until the Horde arrived?” Daniel asked, cocking his head.

“Ah, no,” Bow replied. “But the wars were generally smaller and more limited. The treaty started the regular gatherings that would become the Princess Prom to settle conflicts diplomatically.”

"Generally, as long as the Elemental Princesses were in agreement, they could enforce their decision on anyone," Glimmer added. "So, most wars were either between smaller kingdoms or short-lived affairs between Elemental princesses, like the Orange War four hundred years ago. Few wanted to risk war after the horrors of the Age of War, so such conflicts were very rare."

"The Orange War?" Adora asked.

"A sailor from Salineas stole - allegedly stole according to Mermista - an orange from Plumeria. A prized orange the then-princess had cultivated herself. She demanded restitution, the Salinean princess offered the price of a normal orange, the Plumerians insulted them, and war broke out. A failed invasion at sea and a failed landing on the shores of Plumeria later, the war was over," Glimmer said.

So, the Plumerians weren't always such pushovers. Good to know.

"You went to war over some royal orange?" O'Neill sounded surprised.

"The USA and the United Kingdom had a war over a pig," Daniel said.

"Yes, yes," Catra cut in. No need to dwell on that. "But let's get back to the point: You have multiple civil wars going on in your world?"

Daniel grimaced. "Right. That's true."

*****

Jack O'Neill suppressed a grimace - he knew Daniel could be more subtle - and took a step forward. "Yes. We have several civil wars going on on our planet. However, the vast majority of our people is living in peace."

"How many wars are going on?" Adora asked.

"Ah…" O'Neill frowned. Angola, Sudan, Sri Lanka, Sierra Leone, Yugoslavia, Algeria… he was sure that he was forgetting a couple in Africa. Burundi, for one. But there were bound to be more. "I think about a dozen," he said.

"A dozen?" Adora gasped.

"How many kingdoms - countries do you have?" Bow asked.

"Almost two hundred," Jack replied. "We've got almost six billion people on Earth."

"Six billion people!"

"That's…"

"How do you feed so many?"

"Rations. Must be rations. They don't have magic to speed up growth."

Jack cleared his throat. "We've got very advanced agriculture." He glanced at Daniel, but, for one, his friend wasn't about to mention the environmental impact of industrialised agriculture. "We don't generally eat rations outside the military. And even in the military, rations are generally limited to the field."

"Hunger is a fact of life for many, though," Daniel piped up. "But there is enough food for everyone - or would be, if it were distributed evenly."

"No shit. Logistics must be hell with so many wars," Catra muttered.

"And why don't you intervene and stop those wars?" Glimmer asked.

Jack suppressed a sigh. "We do try that. But it tends to be bloody." He had operated in such countries - he knew the score.

“No one really likes foreign powers trying to control your country. If you invade, soon, many hate you more than their enemy. .”

“But if those are local wars, can’t you just smash their armies with superior forces?” Adora asked. “You have to outnumber them, right?”

Oh, damn. The kids thought those civil wars were fought like their wars apparently were fought. “Most civil wars aren’t fought with armies,” Jack told them. “They’re asymmetrical conflicts. Guerrilla wars. One side is generally outnumbered and hiding, striking at their enemies before fading away. They can fight for years with just small arms - they don’t need or have heavy weapons.”

Catra got it first. “Damn. And they hide amongst the civilians, right?” Jack nodded, and she winced.

“Oh.” Adora looked abashed.

“How can you tell the soldiers from the civilians in such a war?” Entrapta asked, looking puzzled.

“You can’t,” Catra told her.

“Oh.”

Jack nodded. “Yes. But as I said - the vast majority of Earth’s population lives in peace.”

“In ignorance,” Glimmer said. “You said they don’t even know they’re at war with the Goa’uld.”

Jack looked at her. They had gone over that already.

Adora cleared her throat. “So… now that you’ve seen the space plant, do you want to see anything else in orbit before we return to Bright Moon? There isn’t much to see, though. Just the First, Second and Third Fleet, basically.”

“And the moons!” Entrapta added. “Though they aren’t inhabited. But it’s neat to visit them - although you’d need spacesuits. I think I can adapt a few we have for you!”

To walk on a foreign moon? Jack was tempted. That had been his dream as a kid. How could anyone have seen Apollo 11 land on the moon and not wish to become an astronaut? But… “Don’t go to any trouble just for us,” he said.

“Oh, it wouldn’t be any trouble!” Entrapta beamed at them. “I’d like to explore the moons some more, too - there might be valuable materials on them that we lack on Etheria.”

So, they hadn’t yet explored the moons. That was interesting. They had spaceships, but old ones. And foreign ones. And no orbital infrastructure.

It didn’t look like Etheria had been to space for long. They might not even have the infrastructure to produce spaceships. Although the clones or whatever they were would have such facilities, they were likely not in this system. Or they had been on that huge space station and were now turning sunlight into plant mass.

“I think we have a lot of other things to do first, though,” Glimmer said.

“Like a potential war with parasitic snakes,” Catra added. “And a bunch of stranded soldiers we need to get home.”

Jack smiled, showing his teeth. “Right, exactly that!”

Catra frowned at him in return.

“So, no moon expedition?” Entrapta asked.

“Maybe later,” Bow told her. “Although… is your scanner ready?”

“Right! My scanner!” The princess perked up. “I just need to add some finishing touches, and we can scan for Naquadah on the entire planet from here!”

Jack smiled. That was good news! Once they found the DHD, they could dial home. And let the professional diplomats handle negotiations. The general would be mad enough about what they - mostly Daniel - had let slip already about Earth.

"Do you want to help me?" Entrapta asked.

Carter - of course - as well as Bow agreed, and all three left the bridge.

"So…" Daniel beamed at the others. "How many people live on Etheria?"

"Well… We've got about fifty million people," Glimmer said. "Kingdoms rarely take a census at the same time, so it's all just guesswork, and with the war, most numbers are out of date anyway."

That was… both more and less than Jack had expected. For a planet seeded by the Goa'uld, it was a lot. But for a native civilisation left in peace? That was very little.

"How long back go your records?" Daniel asked.

"Records? About a thousand years," Glimmer said. "The time of the First Ones. Anything before them isn't very well known."

"And you have almost six billion people?" Adora shook her head.

*****

Six billion people. That was… Adora couldn't even imagine so many people. Most planets they had visited - which, admittedly, hadn't been more than a handful in the months since Horde Prime's defeat - had populations more in the range of Etheria's. Or, rather, had had such populations before Horde Prime had conquered them.

But six billion people! That was like… over a hundred times Etheria's number! The population of a hundred planets, all living

on one planet? How did they fit everyone onto one world?

“You must have gigantic armies,” Catra said. Of course she would think of the military first.

“I wouldn’t say gigantic, but we do have a few million under arms,” O’Neill replied.

“Only a few million?” Catra sounded almost disappointed.

“They’re normal people, not an army with a planet,” Glimmer snapped.

Catra frowned at her. “They’re also fighting a war.”

“You heard them - it’s not that kind of war,” Glimmer retorted. “They can’t send an army through a Stargate.”

“But once we have a fleet there, they can move it with spaceships,” Catra said. “The Second or Third Fleet can transport a lot of people. They can’t supply as many, but the First Fleet’s fleet train should be intact, and they don’t need as many transport ships any more, so that should compensate.”

Daniel blinked. “Are you already planning to launch invasions from Earth?”

Adora frowned. Why did he sound surprised? Preparing for all eventualities was what a good commander did. And Catra was a good commander, even though she might not think so. She had almost beaten the Alliance, after all, when she had been leading the Horde.

“Of course!” Glimmer cut in. “If you have so many soldiers but no ships to transport them, and we can provide you with ships, then it only makes sense to use both our strengths.”

“Yeah,” O’Neill agreed. “Though preparing an actual invasion on a planetary scale will take a long time. You don’t just send an army off without sufficient training and exercises.”

“And the political implications…” Daniel shook his head. “Not to mention the problems with coordinating all the different militaries.”

Right. Adora nodded - she knew all about that. The scattered nature of the Alliance forces had almost driven her to despair a few times. She didn’t miss the Horde, of course, but she did miss their organisation, at times at least. And their discipline.

“Well, the heavy lifting will be done by the fleet. Orbital bombardment will deal with most defences. We can sort out the details when we reach Earth,” Catra said. “But your planet needs to be protected at all costs - it’ll be a prime target for the Goa’uld once it turns into a staging area.”

Adora nodded again. That meant a full fleet - Second or Third. Second was more, well, reasonable. They wouldn’t cause much trouble with the Tau’ri. The Third were fanatics. But if they left for Earth and the Third stayed guarding Etheria and the rest of the sector, would the clones behave without Adora being present? Would they even stay? She clenched her teeth. As much as she disliked it, they would have to take the Third with them to Earth.

“Yes, we are - the Goa’uld really don’t like us. And we have six billion civilians to protect,” O’Neill added. “Poor helpless civilians.”

Glimmer frowned at him. “Yes.”

O’Neill smiled, and it looked… Well, not quite like Catra’s smile when she thought she had pulled one over Adora and her friends, but she was sure it wasn’t an innocent smile. “We will protect your planet anyway,” she said. “Just as we will protect everyone else.”

Catra and Glimmer were frowning at her, but Adora ignored that. This was the right thing to do. As she had said before.

“Thank you!” Daniel beamed at her. “And we will do our best to help you.”

"Speaking for SG-1," O'Neill added. "We cannot speak for our country, much less the Earth."

Which was really inconvenient, Adora found. On the other hand, without princesses and magic, it made sense that the Tau'ri wouldn't send their leaders to the front. It probably made governing easier as well, especially with the frontlines being on another planet or in space.

"Yes, yes, we know that," Catra replied with a snort. "You're just good soldiers doing your duty." Why was she being so… sarcastic?

O'Neill smirked in return. "Well, we've been known to act independently in the field, as any good soldier would."

Ah. Adora sighed.

"But we really cannot speak for Earth," Daniel said.

"I am sure once the leaders of the Tau'ri are aware of the situation, they will do the right thing," Teal'c said. "Their history shows that they haven't shied away from going to war."

"Not forever, at least," O'Neill said.

"It's not a bad thing to hesitate to start a war," Daniel added.

"But you're already in a war," Catra objected. "I doubt that the Goa'uld will just stop if you don't want to go to war." She frowned. "Well, Plumeria did, but even they got the message after their kingdom almost fell."

Right. That hadn't been Adora's finest hour. Trying to figure out how to heal the forest… She felt embarrassed just remembering it. But that was in the past. They had a new war to fight now. A war on a scale that was even bigger than she had thought. And with much higher stakes.

She almost missed the time fighting the Horde on Etheria… No, Adora firmly thought as she glanced at Catra standing next to her,

reaching out to grab her hand, I don't miss that at all.

Catra looked surprised when Adora gently squeezed her hand but didn't pull away. Instead, she smiled at her with that happy expression Adora loved to see on her face.

*****

"Can you hand me the calibrated crystal, Bow?"

"Sure! Here it is."

"Thanks! What do the readings say?"

"Everything nominal."

"Good!"

Samantha Carter felt a little out of her depth, and she didn't like it. She was used to not understanding alien technology - at least at first - but she wasn't used to being the odd one out when working on said technology. Both Entrapta and Bow were familiar with this, but while Sam could easily identify parts of the scanner they were building - and help with assembling those - she was at a loss when it came to magic crystals. "How do you calibrate the crystals?"

"You tune them to the right frequency."

That sounded logical. And not very helpful. "And how do you do that?"

"I'll show you," Bow told her, stepping over to the table on the side of the workshop. "You have to align the crystals with each other and the master crystal, then run a pulse through them. Ah, a pulse from this crystal."

"Are you using magic?"

“Yes. Crystals generally use magic. You could use electricity, but it’s not nearly as efficient - the Horde did that for some of their gear,” Bow explained.

“And who creates the crystals?”

“Most are mined and then refined,” Bow replied. “Or tuned.” He shrugged. “It’s not exactly complicated, but it can take a while.”

“But that only gets you blanks. You have to program them with the right matrix to do anything, and that’s where the fun starts!” Entrapta cut in.

“Like… ROMs?” Samatha asked.

“ROMs?”

Sam explained the process.

“Oh! Yes, something like that! We generally use crystals for that. I have to try out your method!” Entrapta beamed at her, and Sam couldn’t help but smile back. The woman’s enthusiasm was contagious.

“I think the crystals are ready now,” Bow pointed out.

“They are? Good! Now let’s connect them to the power source and run some tests.”

That, too, made sense. Sam could easily track how those two components worked together. And the sensor itself was not much of a secret, either. She didn’t recognise a few components, but she had a rough idea about how to replace them with more familiar technology. Maybe a few bits from Goa’uld gear… She cocked her head. If you could substitute electricity for magic and she understood the program that the circuits used, she could duplicate this. Probably. It would certainly be fun to try - a planetary scale Naquadah detector would be very useful. Though… “How much less efficient is electricity compared to magic?”

“Oh, it depends. If you just want to shoot lasers or lightning, it’s decent. But if you want to use some of the more flexible parts of magic, like we are doing here, it’s generally a few orders of magnitudes less efficient. And you need a way to duplicate the principle of similarity.”

“The principle of similarity?” Sam asked.

“Yes. Like attracts like,” Entrapta said. “We will be using a sample of Naquadah as the primer to look for more. Magic is quite useful for such feats.”

That sounded as if the scanner wouldn’t just look for certain characteristics of Naquadah using data from prior scans, but that the presence of actual Naquadah affected and enhanced the process. That was… quite fascinating.

Sam smiled and looked at the scanner, then frowned. “And where is the sample?”

“Oh, we still need to get it. You’ve got it in your blood.”

Sam froze. “You want my blood?”

“Only a small sample - this is a scanner, after all,” Entrapta told her. “It’s powerful enough to only need traces of the element.”

“About this much,” Bow explained with a rueful smile, holding up a small transparent vial.

Well, she could spare that much blood. And the Colonel wasn’t here to object - or, worse, make fun of her. And she really wanted to see how this worked. So Sam nodded and rolled up her sleeve. “Alright.”

They extracted the blood using an old fashioned syringe. Not quite a bloodletting, but Janet had better instruments in the med bay back home.

“Done!” Entrapta smiled widely. “Now, let’s put it in the scanner and see what we get!”

“Yes!” Sam smiled back.

Entrapta put the trace - stored in a crystal vial, or so it seemed - into the scanner, then took a step back. “Ready!”

“You’re running it here?” Sam asked.

“Yes. Being inside Darla shouldn’t affect it. We might get more range if we placed it on the hull, but it already covers the planet.”

That was impressive. And a little worrying. “The scanner won’t affect us?”

“Oh, no - it’s perfectly harmless. Even for people with Naquadah in their blood.”

That was reassuring - and concerning. What if something else could affect her blood? Something to keep in mind.

“Booting up! Running diagnostics! Oh, it’s working beautifully! No tendency to explode at all!”

Sam hoped that the princess was joking. But Bow grimaced as well. Damn.

“Ok! Here we go!” Entrapta announced, her hair pushing several buttons at once.

And Sam heard a humming noise that quickly grew louder and louder. Just as she was about to plug her ears, the humming stopped.

And Entrpata frowned. “Oh. There’s no concentrated Naquadah on the planet other than the Stargate.”

Sam pressed her lips together. This wasn’t good. Not at all. They were now completely reliant on their hosts to get back to Earth.

And on technology that she didn't understand. Not yet.

*****

"We need to check the moons," Entrapta said. "There's no second Naquadah concentration on Etheria, which means there is no D.H.D. there, but they could've moved it to a moon for, ah, safety reasons."

"To keep people from using the Stargate?" Catra asked. As O'Neill and his group had shown, people could still arrive on the planet, but it would keep them from leaving. Not exactly a good way to stop an invasion.

"Or because they wanted to analyse the device without risking parts of Etheria," Entrapta replied, mimicking an explosion with her hands.

That was… Catra hissed at the idea.

"Naquadah isn't actually that dangerous," Carter cut in. "Unless you deliberately wanted to prepare a Naquadah-enhanced bomb, you won't get it to explode with sufficient force to be a threat to a planet."

That didn't sound as reassuring as the woman likely meant it to be, Catra knew.

"So… you just lose a building, not the kingdom?" Adora asked.

"Captain Carter hasn't lost any buildings due to Naquadah. So far," O'Neill said. "I can't speak for her labs, though."

"Sir!" The woman looked embarrassed, and O'Neill was laughing.

Catra snorted as well and ignored the looks from Glimmer and Bow. "Well, we can just quickly scan the moons for the thing."

"And tell Third Fleet to not come too close to avoid interfering with the scanning," Adora added.

“Actually, more ships shouldn’t affect the process at all,” Entrapta pointed out.

“But there’s no need to risk it, right?” Glimmer asked.

“Well… if there is interference, that would be valuable data, and we would need to test it anyway to see if we can deploy the scanner in a fleet - say, to detect other ships,” Entrapta explained.

That was a good point. Better find out now if that would work than in the middle of a battle. But if they had to listen to Priest again...

“Uh…” Daniel raised his hand.

“Yes?” Entrapta turned to him.

“There are no other concentrations of Naquadah on the planet?” Daniel asked.

“Not any which would be big enough to be the device you want,” she told him.

“But… didn’t the First Ones use this technology?” he asked.

“Apparently not.” Entrapta shrugged. “Most of them used magic as a base for their technology. It would’ve been nifty to find all their ruins, though.”

“Carter?”

“It seems that this culture didn’t rely on Naquadah, except for the Stargates, Sir,” Carter told O’Neill. “I’m sorry for not mentioning it sooner. They might have developed a new technology base.”

“A magical civilisation? Huh.” The man shook his head.

“Or they limited Naquadah to military uses,” Daniel said. “If there was a shortage of the metal, that would be a logical measure.”

And you didn’t risk civilians blowing you up by accident.

Carter nodded in agreement. “That is a possibility as well.”

“Or they moved it to a moon!” Entrapta blurted out. “We should explore them!”

“Right. Let’s go scan the moons,” Adora said. “If there are some First Ones bases on them, it’s better to find out now.”

“Before some doomsday device gets activated,” Catra added.

The way their guests nodded in agreement wasn’t very reassuring, in Catra’s opinion.

“Alright! Darla, fly us closer to... the closest moon!” Entrapta used her hair to carry their scanner and sat down in her favourite seat - the ‘science seat’, as she called it. “It’s time to discover what the moons are hiding from us!”

“She’s as eager as she was about space,” Glimmer muttered as Darla turned and started to fly towards the closest moon.

Catra shrugged in return. Entrapta was a little quirky, but there were not many other people Catra would trust with her life. And most were in this ship.

They quickly reached orbit around the moon, and Entrapta, Bow and Carter got busy with the scanner. Catra clenched her teeth as the infernal humming noise started up again. “First improvement will be to get rid of the noise,” she muttered. She wasn’t going to suffer every time they scanned something.

Adora didn’t say anything. Instead, she wrapped her arms around Catra and pulled close to place a quick kiss on the top of Catra’s head.

“Dummy,” Catra whispered. That didn’t help with the noise at all. But it helped with her mood. She ran her hands over Adora’s back. She could still feel, or thought so, where she had scratched her once. She tensed a little at the memory, but Adora held her firm - she knew Catra, after all.

Daniel cleared his throat next to them. “So, uh…”

Before Catra had to snap at the man, the scanner’s noise ended, and Entrapta spoke up: “There’s a large amount of Naquadah on the moon!”

“Carter?” O’Neill asked as Catra pulled away from Adora.

“Several concentrations, Sir. A few are large enough to possibly be a D.H.D. All in close proximity to each other.”

O’Neill smiled at that. “Great. Let’s go take a look.”

Catra bit her lower lip - this was a logical suggestion, not an attempt to order them around. At least it should be.

“Yes!” Entrapta cheered. “Let’s suit up.! Oh, I didn’t make you customised spacesuits yet! You’ll have to make do with standardised ones, sorry!”

“That’s OK,” O’Neill said. “We’re not picky.”

“Alright! Follow me, then!”! Entrapta led them to the locker room. Catra trailed behind them - she wasn’t needed on the bridge to land Darla, and someone had to keep an eye on Entrapta with those people.

Catra knew better than most how trusting her friend was.

*****

The First Moon of Enchantment, July 11th, 1998 (Earth Time)

“So, you come here often?” Jack O’Neill asked as they entered what looked like a locker room. A space locker room. “To the moon, I mean,” he added after a moment and a glare from Carter and Daniel.

“Oh, not really,” Entrapta replied. “There was so much to do, we haven’t had time to explore any of the moons. We just checked if there were clones stranded here or crashed ships. Or any ruins - but we didn’t do any deep scans or exploration. Which is why we must have missed this base; it’s underground.”

They hadn’t even explored the moons? Another clue that these people hadn’t had spaceships for long. And now they had entire fleets at their beck and call. Fleets manned by the brainwashed former soldiers of a genocidal conqueror. Great.

“And, of course, there’s the fact that, from a certain point of view, the moons belong to Glimmer,” Entrapta went on.

“They belong to her?” Daniel asked.

“Well, she’s the Queen of Bright Moon - and the Moonstone, her runestone, is connected to the moons,” Entrapta explained. “If they are in alignment, certain magic processes are strengthened or rendered more efficient.”

Jack clenched his teeth and suppressed the urge to sigh. Magic influenced by moons? Astrologians would have a field day back on Earth if they heard this. And some idiot congressman would likely want horoscopes to be used by the government.

“How does that work?” Carter asked. “Is it tied to radiation?”

“Kinda,” Entrapta replied. “They influence the magic field, of sorts.”

“Yes. Attacking Bright Moon when all three Moons of Enchantment were in the sky would’ve been suicide for the Horde,” Catra added.

“In myth, our moon was often said to have magical properties as well, such as influencing werewolves,” Daniel pointed out. “And many people believe that it influences humans - Tau’Ri.”

Superstitious folks did. The only thing the moon influenced was visibility at night and the tides. But that was without magic. If their hosts 'brought back' magic to Earth, would that change? Would they have trouble with actual werewolves?

"So… Here are our spare suits!" Entrapta pushed a button, and a panel slid back, revealing a rack of suits in various sizes. None of them looked as bulky as the suits Jack had seen at NASA. "They're not customised, as I told you before, but I can easily adapt them to your body type. Though yours might still be a little large," she added with a smile to Teal'c. "You're too big for a standard size and too small for a Scorpia size."

Teal'c nodded back. "I shall manage."

"Good!" Entrapta pulled the suits out and handed them over. "Now… just put them on as you would put on normal clothes. They'll seal automatically!"

That sounded very advanced. Jack wasn't an astronaut, but he knew that suiting up was a complicated process. But the suit he was holding did look pretty simple.

Carter looked impressed, too, as she studied her suit. "Do they use magic?"

"What? No. I didn't want them to have to rely on magic."

"You made them?" Carter asked.

"Yes! I used the pattern stored in Darla but adapted it to my own technology!" Entrapta beamed at them. "Do you like them?"

"They're very advanced," Carter told her. "I wish we had such suits at NASA."

"I can get you the pattern," Entrapta said. "It's really easy to construct."

Jack had his doubts, but he was sure the scientists at Stargate Command could construct such suits. Good work, Carter, he silently praised her.

The ship suddenly shook a little - they must have landed.

“Oh, you’ve missed the landing! I’m sorry - I got carried away a little,” Entrapta said.

“No worry,” Jack told her with a smile. “Once you’ve seen one landing, you’ve seen them all,” he lied.

“Well, they’re actually very different - but now, let’s get you suited up!”

Suiting up was actually as easy as the princess had claimed.

“We do need such suits,” Carter exclaimed. “If they can handle the environment on the moon’s surface...”

“Why wouldn’t they?” Entrapta replied. “That’s what they are made for - that and space!”

“They work,” Catra told them - her suit had a tail and cat ears on the helmet, Jack noted. They took their customisation seriously here. “We’ve tested them on various planets.”

That was reassuring. Jack wasn’t an expert, but he knew that constructing suits that could handle Earth’s moon had been a challenge. He closed up his own suit and moved around a little. The suit barely hindered his movements.

“Are you ready? Oh!” Glimmer entered, followed by the others. Not Adora, though, Jack noted. Was she staying back?

“I got carried away with explaining things,” Entratpa said. “Sorry!”

“No worry,” Bow told her. “We’ve got time.”

They grabbed their own suits - which were quite distinctly customised, down to different boots and patterns. Entrapta's suit had openings for her hair in her helmet - god only knew how that was sealed. Probably magic. Even though she'd said that she didn't use magic in the suits, the hair was supposedly magical. And Bow's suit had a… not a boob window, an abs window? Jack stared.

"Excuse me… Is there a reason for this?" Daniel asked. "Is showing your stomach of cultural significance?"

"What?" Bow blinked and put his helmet down again. "No. I just like it."

Catra snorted. "You should have seen his suit for the Princess Prom."

"And Catra's!" Entrapta added. Catra smirked in return. Was that related to being Adora's consort, as the clone leader had called her?

A question for another time - now they were about to explore a moon base. On a magical moon. Jack wasn't looking forward to writing a report about this.

*****

Adora had second thoughts about keeping her transformation a secret from their guests. Sure, not revealing to them right away that She-Ra wasn't her normal form was just being cautious. Until they knew if they could trust the Tau'ri, it was better not to let them know that they could attack Adora instead of She-Ra if they planned an ambush. But their guests didn't seem to be evil people. They hadn't shown any sign of planning to betray or attack them. O'Neill was snarky and grumpy, but in a kind of nice way. And he reminded her of Catra, in some way. Carter was fascinated by technology like Entrapta. And Daniel… Well, he gave the impression of an older Bow. Earnest, well-meaning and a little naive. She couldn't imagine him planning to betray her. Nor Teal'c,

though she couldn't say much about the tall Jaffa - he didn't say much, after all.

And, she added in her mind as she approached the airlock at the back of Darla, if keeping her secret was still necessary, as Glimmer had argued, then what about the fact that She-Ra could survive in the emptiness of space without a suit? Hiding your capabilities from potential enemies was smart, wasn't it? Unless you wanted to scare them into leaving you alone, but judging by their guests' reactions, not a lot scared them if they were ready to fight the Goa'uld.

She sighed, and Melog turned their head towards her, growling a question.

"Just thinking," she told them. She wasn't as good as Catra at understanding their friend, but she could guess some meanings.

"How do you seal the hair?"

That was Carter's voice.

"The helmet has adjustable seals," Entrapta replied.

"But how do they work? The pressure difference would be so significant..."

"It's a sort of semi-permeable force shield," Entrapta replied. "Only keyed to hair."

"Keyed to hair?"

"Yes? It's for my hair, after all."

They turned the corner and found the others already inside the airlock.

"You're not coming with us?" O'Neill asked.

"Yes, I am," Adora told him, stepping inside the lock as well.

“But where’s your… Let me guess, magic?” O’Neill shook his head with a snort.

“Magic,” Catra told him as she moved to Adora’s side. “Same for Melog.”

“Well, Melog being a half-energy life form means they can survive in the vacuum of space even without magic,” Entrapta explained as the door closed. Adora’s using magic to form a sort of magic space suit around her body.

As the air started to be sucked out of the lock, Adora took a deep breath - she knew she didn’t have to, but she couldn’t help it. Then she started to glow as her magic reacted.

“That’s going to be hard for a stealth mission,” O’Neill commented.

“She-Ra and stealth don’t mix well,” Catra said with a snort.

Adora pouted at her lover. She could be sneaky! She had proven that in the war. A few times, at least.

But before she could remind Catra of that - and of the fact that they had foiled a lot of her plans - the outer door opened, and they were facing the moon’s surface.

“Whee!” Entrapta was the first out of the door, jumping off the ramp as it extended and throwing up a small cloud of dust as she landed on both feet.

“Don’t get your hair all dusty!” Glimmer told her. “I’m not going to clean out the shower again!”

“You clean the shower?” Daniel asked.

“Not this time!” Glimmer replied. “Not when it’s all her fault.”

“Well, that’s going to shock the Queen of England,” O’Neill commented. “Royalty, cleaning up after herself…”

“Actually, Queen Elizabeth served in the British Army - the Women’s Auxiliary Territory Service - as a mechanic during World War II,” Daniel said. “She did menial tasks as far as we know.”

“Don’t destroy my hard-earned American preconceptions, Daniel,” O’Neill replied.

“Jack! Those would be prejudices!”

“Really?”

“Yes, as I pointed out…” Daniel trailed off to glare at his friend, and Adora heard O’Neill laugh as they walked down the ramp. She smiled as well - that sounded familiar to them.

“So, Queen Elizabeth is one of your princesses?” Glimmer asked.

“And she’s a mechanic?” Entrapta added, looking up from her recorder.

“She’s the Queen of England, a nation allied with ours,” Daniel replied. “But I do not think she has worked as a mechanic since she took the throne. And since she was crowned as queen, she isn’t a princess any more - at least not by our definition.”

That sounded weird to Adora. Glimmer was a queen as well, but still a princess.

“Well, your definition is weird,” Catra echoed Adora’s thoughts. “Though without magic, your princesses probably don’t have any powers.”

“Exactly,” Daniel replied. “It’s a title, nothing more.”

Adora looked around while Daniel explained about nobility on Earth. She couldn’t see any threat around them, but it never hurt to be cautious.

Catra snorted next to her. “Nothing on the surface. The fun starts once we enter the base.”

Right. Entering a First Ones base was always dangerous; Adora's ancestors hadn't been very careful with their weapons and other tools. They probably hadn't cared about a world they were sacrificing anyway, she thought.

She shook her head. This wasn't the time to dwell on that. Unless this base was related to the Heart of Etheria. The Moons of Enchantment did influence magic, after all.

"OK! The base is this way! Darla's seismic sensors indicate that there's a hollow space close to the surface right in this crater!" Entrapta announced.

"Let's go!" O'Neill said. "Before something goes wrong with the magic and you try to breathe vacuum."

"Sir!"

"Jack!"

"It's perfectly safe," Entrapta said.

Adora nodded. She-Ra had faced worse than the vacuum of space. Much worse.

"Yes, yes. Just let's go!"

"OK!" And Entrapta was off.

*****

The Moon Base

The First Moon of Enchantment, July 11th, 1998 (Earth Time)

"The entrance should be here. Somewhere here, at least," Entrapta said as she turned in place, pointing her multipurpose tool around. Something else that Samantha Carter would love to get her hands on to copy it. The device served as a computer and communication device with integrated holographic projection capability, but Sam was primarily interested in its capacity as a scanner. The tool was smaller than a walkie-talkie yet must be covering multiple frequencies. And - presumably - without magic.

So Sam was pretty confident she could duplicate it, given enough resources and time to study it. Of course, standing on the surface of one of the planet's bigger moons, she couldn't exactly spare the time for that. But maybe later…

"But my scanner isn't showing any entrance," Entrapta went on.

"Probably buried under all the dust," Catra remarked. "It's been a thousand years since the base was last used."

"That shouldn't have been long enough to actually bury any entrance. Not without wind to move the dust. Perhaps a meteor struck nearby, or tectonic activity…" Entrapta speculated.

"Or this is a dead-end, and the entrance is somewhere else," Glimmer said.

"Can you map out the base?" Bow asked.

"It's more difficult than I anticipated. The material used to construct the base is blocking most of my scans, and the results of those that aren't completely blocked are… not delivering as much data as they should."

“That would suit a base using the technology left by the Ancients,” Sam pointed out. It was petty, but she was almost glad that the others were not able to easily scan the base. The Ancients had been incredibly advanced, much more than any other race that Stargate Command had encountered so far. If the people of Etheria - Etherians? She had to ask Daniel if they used that name for themselves - were able to match the technology of the species that had built the Stargates, then that would likely make them the most advanced species known to either Earth or the Goa’uld.

Entrapta pouted, and her hair waved around for a moment. “But I didn’t have such troubles with First Ones technology so far.”

“If we don’t see an obvious entrance, we can dig a tunnel and just break through a wall,” Adora suggested.

“You mean, *you* can dig a tunnel,” Catra added.

“I already buried the Stargate!”

“Perfect! That means you’ve got experience!”

The Colonel chuckled at that, and Sam had to hide a smile - the exchange could’ve come straight from the Airforce Academy; it was the kind of comment the instructors were fond of. Another sign that their hosts had had formal training as soldiers. Though Daniel would likely caution against drawing parallels to Earth based on such flimsy evidence. In any case, they were here to explore a base, not to study cultural differences. She cleared her throat. “Can you scan for the most likely area that might have been buried following a meteor strike or tectonic activity? Without an atmosphere, any traces such an event has left should be still easily detectable.”

“Oh, good idea!” Entrapta raised her tool and started looking at it - or through it. “I was focusing on artificial structures, but… There! The crater there has some fresh - relatively fresh - traces of a landslide. Or dust slide, I’d say.” Her hair formed a cartoonish-looking hand and pointed to a ridge a few miles away.

“Well, then let’s see if we can find an entrance buried there,” the Colonel said. “You have your magical shovel ready to be conjured, right?”

“Yes,” Adora replied.

“Handy.”

It was. If Earth had that technology - or magic - then that would allow them to carry many more tools of all kinds with them. Or much larger tents.

They started walking. Once more, Sam felt a little envious - the spacesuits were far more comfortable and much lighter than those she had worn when she had been working for NASA. It was still noticeably heavier than her uniform, but the lower gravity more than made up for it, and she could move almost as well as without it. If her fellow astronauts could see her now, walking on an alien moon… Well, Entrapta had said she’d give them the pattern.

Of course, Adora didn’t have to wear a spacesuit at all, but she seemed to be a special case even for their hosts.

“So, why don’t you have a spacesuit?” Daniel asked. “Would it hinder your magic, or do you just like wearing your usual clothes?”

“Ah… You could say that,” Adora replied. “Like, ah, Bow, I prefer this.”

Sam exchanged a glance with the Colonel. That was a bad lie, in her impression. Of course, it was so bad, it could be an attempt to deceive them - but Adora hadn’t struck her as that devious or adept at lying.

Unlike, say, Catra.

“Ah.” Daniel nodded. “I see. So…”

“Oh, there it is!” Entrapta exclaimed, interrupting Daniel’s next question. “The entrance is buried here, about…” She cocked her head to the side as she moved her tool sideways. “...five yards down!”

“Great. Get digging, Adora!” Catra said, sitting down on a rock nearby.

Adora huffed but did produce her magic shovel. Her first load of moon dust did manage to barely miss Catra.

“Hey!”

“Sorry!”

“No, you’re not!”

Well, they were in good spirits, Sam thought. And with Adora digging, they would reach the base entrance in no time.

*****

Catra felt a little bad at having Adora do all the digging. Just a little, though - Adora was the strongest of their group. By far. Even if Catra helped, it wouldn’t do much compared to She-Ra using that oversized magic shovel of hers. Cartloads of dust and moon-ground - she’d have to ask Entrapta what it was called - pretty much flew out of the growing hole in no time. And it wasn’t as if anyone else had volunteered to help, anyway.

She studied the others - SG-1 - as Adora unearthed what would hopefully be the entrance to the First Ones base. Carter was huddled with Entrapta over the princess’s scanner. Teal’c and O’Neill were standing guard - O’Neill was trying to fake being bored, juggling a single moon rock, but Catra caught his eyes scanning their surroundings. And Daniel… was talking to Bow about Etheria’s history. Catra cocked her head and listened to their talk.

"...so, you have a detailed documented history of the last thousand years, but barely anything before that?"

"Yes," Bow said. "There just aren't many records or artefacts left from the time before the First Ones."

"That is weird." Daniel made a humming noise. "Few civilisations went from no records to detailed histories. It's generally a much more gradual process."

"Well, some scholars think that the First Ones introduced writing to Etheria. But my Dads disagree - that would have meant that all of Etheria would be using a script derived from their script. And that's not the case. In fact, few can read First Ones script or understand their language," Bow explained. "So, we think the proto-civilisations before their arrival had developed their own script already."

"But why wouldn't there be any records left, then?" Daniel asked. "Did the First Ones destroy them?"

That was an interesting question. Catra certainly wouldn't have put it past the First Ones to wipe out another civilisation - they had planned to sacrifice Etheria to defeat Horde Prime, after all. But why would they wipe out writing? That didn't gain them anything. It would be a waste of effort. Unless they wanted to hide something…

"They might have attempted to colonise the planet," Bow said. "And they might have wanted to, ah, spread their own culture over Etheria. Their influence is certainly visible in almost every kingdom, although after a thousand years, the divergences have become so pronounced, in many cases, it's hard to spot whether something is based on the First Ones or was originally developed by natives."

"Well, such policies certainly have historical precedents on Earth," Daniel admitted. "But to be able to shape an entire planet to that level…"

“They were far more advanced, both with regards to technology and magic, than the native cultures,” Bow said. “And they probably had significant numbers as well.”

“So… what happened to them? Why did they vanish?” Daniel asked. “Do the records cover that?”

“No. We only know that most of them ‘left’. But after the revelations of the last war, the consensus amongst scholars is that the First Ones were called back to their home planet to fight Horde Prime - or evacuated in anticipation of the destruction of Etheria.” Bow shrugged. “The remainders were probably absorbed by the emerging kingdoms.”

Catra nodded. That made sense. Though she didn’t think it mattered much. It had been a thousand years ago, after all. A metallic noise interrupted her thoughts.

“I’m through!” Adora yelled.

“Yay!” Entrapta was at the edge of the hole in no time. “Is it an entrance?”

“Wait a moment!” more dust flew out of the hole. “There’s a button labelled ‘open’.”

“It is an entrance!” Entrapta jumped down the hole, and Catra heard Adora make a surprised sound. “Hey!”

She peered over the edge. Yes, Adora had caught Entrapta. “We should install a ladder before we all get stuck down there,” she said.

“I’ll get one,” Glimmer said - and disappeared in a shower of sparkles. So, her magic worked this close to Etheria. Good to know.

“Now that’s handy,” O’Neill commented. “If she ever gets tired of being Queen, she has a great future as a delivery service.”

Catra snorted at the joke - Glimmer as a courier? - and even Bow smiled.

Then Glimmer returned with a rope ladder, and a minute later, Bow had set it up.

“Don’t come down yet!” Adora said. “I’m opening the door first! Entrapta, head back up. Just in case we have a monster hiding here.”

“It’s quite unlikely that a monster would have survived so long,” Entrapta replied. “Unless there’s a closed biohabitat here, which I think should have shown up on my scans. Although automated defence bots could be active. Or perhaps cryostasis pods, though they would likely need some time to thaw any specimen stored inside.”

“Come up, then,” Catra told her.

Entrapta quickly pulled herself up with her hair. “Clear!”

“Alright. Opening it now…” Adora announced. Catra heard her mumble ‘If this doesn’t work, it’ll be embarrassing,” under her breath as she reached out to touch the button.

For a moment, nothing happened. Then the door slid open, revealing a dark corridor leading downwards.

Catra jumped down the hole, landing in a crouch next to Adora. “Good work.”

“Careful!” Adora said as the rest climbed down. “We don’t know what’s in here.”

“That’s why we’re here!” Entrapta announced. “To explore!”

“Yes, well… let me go first,” Adora said. She entered before anyone could object.

And nothing happened - other than the hallway getting lit up by glowing crystals.

Catra followed her love. It was a short hallway - no, it was a large airlock.

“Let’s all go in so we can open the door without venting the air from the base!” Entrapta said. “That would be bad.”

Catra suppressed a sarcastic comment. To her slight surprise, so did O’Neill.

As soon as everyone was inside, the door behind them closed, and air started to fill the room with a hissing sound.

Then the other door opened, revealing a figure standing in the entrance. Catra gasped, then saw that it wasn’t a figure - it was a hologram. Like Light Hope.

“Greetings, visitors,” the projection said in that creepy voice of theirs. “Please identify yourself.”

“I am Adora - She-Ra,” Adora spoke up.

“Catra,” Catra snapped.

“Queen Glimmer of Bright Moon.”

“Bow.”

“Entrapta! Hi!”

“Colonel O’Neill.”

“Captain Carter.”

“Daniel Jackson.”

“Teal’c.”

“Greetings, Adora, Colonel O’Neill. Research Station Alpha is at your disposal. Please keep your test subjects from entering restricted areas.”

Catra blinked. Test subjects? And why was the bot talking to Adora and *O’Neill*?

*****

Research Station Alpha, The First Moon of Enchantment, July 11th, 1998 (Earth Time)

What? Jack O’Neill stared at the computer hologram or whatever it was. Why was it singling out him and Adora? Hell, why was it treating him as if he were a seven-foot-tall amazon with magic powers?

“Test subjects?” Adora asked.

“The other life forms present have been identified as test subjects.”

“I’m not a test subject!” Catra spat.

“Sir,” Carter whispered next to him. “Why is it treating you as a... First One?”

“I don’t know, Carter!” he hissed back. He was a human, not some… alien. He couldn’t glow and step into vacuum as if it was a spring day in Colorado.

“What is the purpose of this station?” Daniel asked, taking a step forward. “What is it that you research here?”

“That information is restricted,” the computer - as far as Jack knew - replied.

“What do you research here?” Adora asked. “And who are you?”

“Research Station Alpha is the main research station for the experiments in genetic engineering conducted on Etheria. I am the primary computer system of the station, designation: Alpha.”

“She sounds like Light Hope,” Catra muttered. “Creepy.”

“It must be a common pattern for First Ones computer interfaces,” Entrapta said.

“They conducted genetic engineering experiments on Etheria?” Bow asked.

“What are those? And where did they do it?” Glimmer shook her head.

“Genetic engineering is the direct manipulation of an organism’s genes,” Entrapta explained. “Say, when you cross two plants so you can get an edible flower. Plumeria’s famous plum roses are said to be the result of early genetic engineering by their princesses.”

“Ah.”

“They talked about us being test subjects,” Catra said. “They weren’t experimenting with plants - they were experimenting with us!”

“They probably were experimenting with plants as well,” Etrapta pointed out. “Although, yes, I think you are… Oh.” She blinked with her mouth open.

“Yeah,” Catra said. “It looks like they used Etheria for more than just magic superweapon construction.”

Magic superweapons? Jack really didn’t like the sound of that. Though he didn’t like aliens experimenting with humans even less. In truth, he loathed it.

“Sir! If the Ancients - or the First Ones - experimented with human genetics, then that would explain the hybrid life forms we

saw in Bright Moon," Carter said. "If they were advanced enough to combine human and animal genes, that would entirely be possible!"

Jack suppressed a wince. Carter was a genius, but sometimes, she forgot about the social niceties.

"You think the First Ones… made us?" Glimmer glanced at Catra, then at SG-1. And she didn't sound amused.

"It's a hypothesis," Daniel replied with his diplomatic expression. "We don't know if it's true."

"But it fits what we know," Entrapta said, cocking her head. "And we can ask the system here. Well, Adora and Colonel O'Neill can ask her!"

Everyone was looking at Jack and Adora, he realised. Expecting them to ask? Or to spare them the knowledge? Well, Entrapta was beaming at them, so she would want to know.

And Jack wanted to know why he was treated as an alien. But how to ask without possibly telling the computer that it made a mistake? If it was a mistake in the first place…

"Alpha, show us an overview of the experiments performed on Etheria by people on this station," Adora said.

"It would be best to show that information in the main control room," the computer replied.

"Show us the way. Also, everyone here is authorised to enter the control room."

"Acknowledged."

Glowing arrows appeared on the ground and in the ceiling, showing them the way. Not that there were many junctions, anyway - after two minutes, they entered a big, round room

where half the walls were covered with screens and the centre taken up by a huge hologram.

"Genetic engineering research started soon after the discovery of Etheria since the planet's uncommonly high magic level facilitated research with advanced organisms, greatly reducing the rate of unviable results. Splicing various organisms with lesser First Ones stock resulted in various hybrid lines, many of which proved to be stable enough to reproduce without further manipulation necessary," the computer droned on while the scenes and the main hologram showed various humanoid species. Jack saw a Minotaur, lizard people, bug people - and cat people, amongst others.

"They made us. They made our people," Glimmer mumbled. Bow put a hand on her shoulder.

Jack clenched his teeth. This must be a shock for them. They would have origin myths, and to find out they were the result of experiments…

"Fascinating!" Entrapta beamed. "This answers so many questions! No wonder we can interbreed if we were engineered to be compatible and from a common ancestor!"

Apparently, not everyone was shocked.

"Entrapta!" Glimmer snapped.

"What? Did you never wonder why different species can have fertile offspring?"

"I thought that was done by magic," Bow said.

"Well, yes, usually, but it should be much harder than it is," Entrapta replied. "This explains so much!"

It probably did. But there were a few questions left. Crucial questions. Jack cleared his throat. "Alpha. What is my genetic status?" There, safe wording.

“Scans show your genes are free from mutations. There should be no problems with reproduction, should you so desire.”

“I meant my ancestry,” Jack clarified, clenching his teeth.

“We lack the data to identify your exact ancestry, but you are a descendant from a First Ones colonial family.”

What? That couldn’t be true. He was a human. Not an alien. He was born on Earth. Not on an alien colony.

Jack shook his head, Then he noticed that everyone was looking at him, even Adora.

“You’re a First One? Like me?” Adora asked.

*****

Adora… didn’t know what to feel. She had finally found someone of her, not quite family, but people. She wasn’t the only one left after Horde Prime had destroyed the First Ones. And yet...

“I’m not a First One, Ancient, or whatever!” O’Neill retorted with a glare. “I get checked out by our Napoleonic doctor and her big needles every week - I’m human.”

“Jack…” Daniel trailed off when O’Neill glared at him.

“Sir!” Carter stood straight. “Nothing indicates that the First Ones weren’t human.” She nodded at Adora.

“Do you see me walking around in space without a spacesuit, Carter?”

“That’s my magic,” Adora blurted out. “That’s not normal for me, either.” She couldn’t walk in space without being She-Ra, after all. And she had a spacesuit for when she was Adora.

“I can’t do magic, either,” O’Neill snapped.

“You have an aptitude for magic, Colonel O’Neill,” Alpha spoke up. “Like every First One. Although the power displayed by Adora indicates the first successful bonding with a Runestone for a First One. Did our experiments with the local test subjects finally bear fruit?”

“What?” What did Alpha mean? Adora looked around. The others seemed as confused as she was.

“Mom…” Glimmer mumbled. “What do you know about Mom?”

“Queen Angella?” Adora turned back to Alpha.

“No person or test subject of that name is in my data banks.”

“She wasn’t a test subject! She was the Queen of Bright Moon for centuries!” Glimmer yelled.

“Bonded to the Moonstone,” Entrapta added. “If that helps.”

“An extended lifetime?” Alpha tilted her head. “There were a few experiments to prolong the life of the test subjects. Although none of them was merged with those who were to bond with a Runestone.”

A number of people appeared as holograms. Adora stared. A mermaid, a huge figure that looked like Scorpia, just with more armour, a lizardwoman, and…

“Mom!”

Yes, there was Angella. “Who’s she?” Adora asked, pointing at the figure.

“Test Subject A-Gamma. Most successful bond to a Runestone to date. Hybrid with DNA material from an avian species from another magic-heavy planet.”

“Mom!” Glimmer shook her head. “No!”

Bow put his hand on her arm, but she shrugged him off. “Mom wasn’t a test subject! She was the Queen!”

“She probably became Queen after Mara sealed Etheria in Despondos,” Entrapta speculated. “And it looks like all the royal lines were based on experiments. I wonder what my ancestors looked like! Oh, we can find out about our families!”

Their families! That was right - Adora could finally find out where she was from. Where her family lived. And might still live. “Alpha! Where am I from?”

“You’re from a colonial line as well.”

“Which planet?” Where was her family?

“I would need more data for such an analysis.”

So, no luck here either. Adora still didn’t know where she was from - and if her family still lived.

“What, you don’t know where the planet of the seven-foot-tall amazons is located?” O’Neill snapped.

“There is no such planet in my databanks. And her family line is not exclusive to any one planet in the Empire.”

“And mine?” O’Neill glared at Alpha.

“Your line wasn’t exclusive to any one planet, either.”

“Great. Useless robot.” O’Neill scoffed.

“Enough!” Glimmer shook her head. “This… this… This is huge. We need to get a grip on this.”

Adora nodded.

“The origin of our species!” Entrapta beamed. “This is the biggest discovery on Etheria since magic!”

“Entrapta!” Glimmer shook her head. “People will be shocked that we are descendants of ‘test subjects’ of the First Ones.”

“And of the First Ones themselves,” Bow pointed out.

Right, Adora’s people had experimented with themselves - ‘lesser stock’, Alpha had called it. Adora pressed her lips together. That sounded… Well, what did she expect from people who were willing to destroy Etheria to win a war? They probably saw the entire planet as some experiment.

She stifled a gasp. What if they were right?

Catra’s loud scoff interrupted her thoughts. “So we’re descendants of some people used for experiments? So what? That doesn’t change anything about us. It’s ancient history!”

“‘So what’?” Glimmer turned to frown at her. “The First Ones made Mom!”

“So?” Catra met Glimmer’s eyes. “What’s the big deal?”

“The big deal is that we were made as an experiment!” Glimmer all but yelled at Adora’s lover.

“We aren’t an experiment any more. We haven’t been one for a thousand years!” Catra retorted. “We’re free!” She grinned, flashing her fangs. “And I bet we were never just an experiment. She-Ra was around before the First Ones arrived, remember?”

That was right! The First Ones hadn’t created She-Ra! That meant… “Alpha. Was there a native population before the First Ones arrived?”

“Yes. Distantly related to the First Ones. A small population.” More figures appeared on the display. They looked like Adora, walking through a village.

“Daniel? Can you identify their culture?” O’Neill asked.

"It's hard to say. The garments would fit a number of cultures in the Mediterranean. Possibly Minoans or Mycenaeans - the style could've developed from either culture." Daniel pushes his glasses up with one finger. "Although we'd need a linguist to examine their language for more clues. Or genetic samples."

"I'd prefer not to muck around with genes right now," O'Neill said.

Adora nodded - she wasn't too keen on more such revelations herself.

*****

The revelations about the origin of their species had shocked their hosts. Almost as much, it seemed, as the revelation that he was descended from the 'First Ones' had shocked the Colonel. Samantha Carter could tell. The Colonel was better at hiding his reaction than their hosts, who were openly discussing the ramifications of their descent from 'test subjects' of an alien race, but Sam knew him too well to be fooled by his attitude.

And SG-1 couldn't afford their leader having a breakdown. Not in the middle of this mission.

So she took a few steps towards him, ending up at his side, and whispered: "All of the data we have gathered so far points at the First Ones being human. Probably people taken from Earth to another planet and developing their own culture."

He turned to look at her with narrowed eyes. He wasn't fooled, either, she realised. But she stood her ground, raising her chin.

He snorted. "You heard the computer. The First Ones considered humans 'lesser stock'," he said in a low voice.

"That doesn't mean that they were genetically different enough to be considered an alien species," she pointed out. "Sir." Lots of humans considered other humans to be their lessers.

“It’s enough to make the computer single me out. And apparently, I can do magic.” He shook his head. “Magic!”

“That might merely be a talent that many humans have, which hasn’t expressed itself so far since Earth lacks magic.” If the talent was genetic - and royal families inheriting the same talent supported this hypothesis - then it was likely that humans from Earth had such talents - provided that Earth once had had magic.

“My alien heritage,” the Colonel replied in a flat voice.

“Sir, according to what we know, those people must have arrived on Earth so long ago, the majority of humanity could be related to them,” Sam said. Though that didn’t mean all of them had the same genes that apparently qualified them as First Ones. She and Daniel didn’t, after all.

“So, why didn’t you or Daniel register?” the Colonel asked. Of course, he wouldn’t have missed that.

“The human genome has a large variance. And yet we are all humans,” she said, staring at him.

He snorted again but slowly nodded. “Maybe you’re right. But I’ll still tell the doc that she missed an alien in SG-1 once we’re back on Earth.” He flashed her a grin.

She smiled in return. It wasn’t a particularly good joke, but if the Colonel was joking about it, things were improving. They would get through this.

“So!” he spoke up, raising his voice, “how does this magic work? Do I wave my hand and think electric thoughts, and lightning strikes whatever I point at?”

The others turned to look at him, interrupting their talk about how best to tell the rest of their alliance about this discovery. “It doesn’t work like that,” Glimmer told him. “You need training. Lots of training. My dad and my aunt studied magic for years before they could cast spells.”

“Unless you have a magical talent like a princess. That’s different from spellcasting and generally expresses itself as a single magical ability,” Entrapta added. “You’ll have to train to use it most effectively, but figuring out how to use it should be easy. At least it was for me.”

“Yes,” Glimmer said with a nod. “If you are a princess, you’ll figure out things easily enough.”

“Great. I might be a pretty princess.” The Colonel shook his head.

“A prince, in your case,” Glimmer told him.

“We’re just calling them princesses because the majority are female,” Catra said.

“Great. That makes it all better.” The Colonel snorted again.

“Men are included in the female term,” Daniel said. “Is this only the case for princesses or a general rule? Or do you pick the term according to what gender is the majority in any particular group?”

The others looked confused.

“On Earth, we generally use the male term for a mixed group, no matter whether or not the majority are female,” Sam explained.

“Ah.” Glimmer nodded. “It varies, but we generally go with the majority.”

“That should make a few feminists back home happy,” the Colonel said.

Sam didn’t comment.

“Well, a society with predominantly female leaders will be of quite the interest for a lot of people back home,” Daniel said earnestly. “Many models and theories can be validated.”

And a lot of people would have some issues with female leaders; Sam knew that better than most.

"Feminists?" Adora asked.

Sam saw the Colonel wince when he realised that Daniel wasn't the only one who could make a gaffe. "Feminists are people on Earth, mostly women, who work to remove gender-based inequalities," she explained. "Some of them have more extreme goals." Not nearly as many as some of the chauvinists Sam had encountered during her career claimed, though.

"Wait…" Bow frowned. "Do you mean you treat people differently based on their gender? I mean, why else would you have people trying to change that?"

"What?"

"Really?"

Sam suppressed a sigh. "Women and men are considered equals in most countries, but there are lingering prejudices and biases, which affect their actual treatment." Boy, were there lingering biases. Especially in the Armed Forces.

"We're working on it," Daniel chimed in, "but it's, ah, a work in progress."

"That makes no sense," Glimmer protested. "You don't even have magic!"

Right. Since princesses were predominantly female, they would assume magic might make them biased towards women.

"Without magic, society was dominated by men for a long stretch of our history," Daniel replied. "But things have changed. And are still changing. For the better."

Their hosts didn't look like they were happy with the explanation. Sam couldn't really blame them - she wasn't happy with it, either.

Yes, things were changing for the better, but they had a long way to go.

*****

This Earth didn't sound like a nice place, Catra thought. She knew about prejudice from the top from her time as a Horde cadet. Knew it all too well. She wasn't going to let anyone look down on her for being a woman. There were enough reasons to look down on her, anyway.

She gritted her teeth and pushed the thought away. She was changing for the better. Like Earth? She snorted at her own foolishness. This wasn't the time to dwell on that. Not when Adora looked like she was blaming herself for the First Ones crimes. Again.

Catra stepped closer to her lover. Close enough so no one could hear her whisper: "It's not your fault. Not at all. You're not responsible for your ancestors."

"But…" Adora started to object.

Catra reached up and placed her finger on Adora's lips. "No buts. This happened a thousand years ago. Long before you were born."

"We don't know that," Adora retorted, holding her hand so Catra couldn't shut her up. "The portal that brought me to Etheria might have reached back in time."

Catra rolled her eyes. Entrapta's idle speculation really wasn't helping sometimes. "Even then, you were a baby. Innocent." And then Shadow Weaver had gotten her claws into her. Into them all. The woman had a lot to answer for, but what she had done to Adora was the worst of her crimes.

"Yes, but… I can't help feeling responsible for this." Adora said, a little more loudly.

“For what?” Catra shook her head. “What’s the big deal?”

“But…”

“We - the Etherians - are the result of genetic experiments by the First Ones,” Glimmer cut in. “That’s a big deal.” Catra opened her mouth to tell her it wasn’t, but she lifted a finger and went on: “And yes, it’s been a thousand years, and we aren’t defined by our origins anyway, but… it still matters. People care about their families. Their origins.”

Catra clenched her jaws. She knew that Adora cared a lot about the fact that she didn’t know her real family - that she was taken from them by a portal thanks to Light Hope.

“My Dads will be… I don’t actually know how they’ll react,” Bow said. “They’ve studied the First Ones for so long, and now to find out about those experiments?”

“They didn’t experiment on your ancestors,” Catra told him. He didn’t look like the people they had seen in the hologram, after all.

“We don’t know that. And if we were not experimented on, we still were involved,” Bow replied.

“As a control group, probably. You can’t run such experiments properly without a control group.” Entrapta nodded.

Well, at least she didn’t have any issues with this revelation.

“We need to decide how we tell the others about this,” Glimmer said, shaking her head. “And I thought telling them about a new war would be bad.”

“Why would it be bad?” Entrapta asked. “I still don’t get it.”

“People might not like being descendants of, ah, ‘test subjects’,” O’Neill said.

Catra snorted. What did it matter? Besides, what did he know? He had trouble with the fact that he wasn't the descendant of test subjects,but of a First One! "They'll get over it," she said. "Most of them, at least."

"It's not that," Glimmer said, biting her lower lip. "But this revelation could shake the kingdoms. If our magic powers as princesses are just the result of experimentation, what does that mean for us?"

Oh. That. Catra suppressed another snort. "So? You still have the magic powers."

"Power alone isn't… enough," Glimmer retorted.

"You worry about your legitimacy," Daniel spoke up, nodding.

"No more divine right," O'Neill muttered under his breath in such a low tone, Catra was sure she was the only one of her friends to overhear him. "What a pity."

"Sir!" Carter hissed.

He was right, though. This would shake up some kingdoms. At least the weaker ones. And those ruled by stupid princesses. Probably.

"But… Etheria had magic before the First Ones arrived. She-Ra predates them, for one," Entrapta pointed out. "It would only be logical that other people had magic powers as well."

"Great. So we usurped the first princesses?" Glimmer shook her head again.

"Well…" Bow shifted a little. "That was quite common in the Age of War. At least amongst the kingdoms without a Runestone. It took time to establish a dynasty, according to my Dads."

Catra rolled her eyes. "So, you have to admit that your ancestors took power thanks to their magic? So what? You're not

responsible for them." And it was kind of funny that for all the Alliance opposing and condemning the Horde, their kingdoms had been founded in a similar way.

"Mom was already alive at the time," Glimmer pointed out. "And she never told me anything..."

Oh. That expression… Catra was familiar with that feeling as well. "She probably had a reason for that. Or she forgot."

"Mom never forgot anything! She could recite everything I did wrong," Glimmer shot back.

"Parent of the year," O'Neill mumbled.

"But things a thousand years ago? Things she might have wanted to forget?" Daniel asked.

Glimmer hesitated. "I have to ask Dad about this. And we need to tell the others of the Alliance."

"But we need to find out more about this, first!" Entrapta chimed in. "We need more data - what kind of experiments, which test subjects, what happened to them… We need to know the truth before we can tell it!" She turned to Adora and O'Neill. "And we need you for that!"

Neither Adora nor O'Neill looked happy at that.

*****

"So… now we have a baseline to analyse. Too bad we couldn't get the raw data, but the records in the main databanks should suffice for now," Entrapta said. "Why would anyone not share their research data with other scientists?"

The princess sounded as if she genuinely didn't understand, Jack O'Neill thought.

“You didn’t exactly share your research with us when you were in the Horde, did you?” Glimmer asked her.

“You didn’t ask for it to be shared,” Entrapta replied. “And it was supposed to be a secret. But this is basic research, and this is a research station, and we have two First Ones here. Why would they keep their data from others in the same project?”

Jack’s eyes widened. Wait - she had been in the Horde? Entrapta was amongst the most open and easy-going princesses they had met so far, and she was a former Hode scientist?

“You were in the Horde?” Daniel asked.

“With Hordak, yes,” Entrapta replied. “Well, I was in the Alliance, first, but then I was accidentally left behind during a mission and thought they had abandoned me, and Catra was offering me a laboratory and all those First Ones technology to study, so I joined them. That’s how I met Hordak!” She beamed at them. “And then, later, I left the Horde - well, I was kinda banished to Beast Island, where I met Micah and the others, so…” She shrugged. “It all worked out and now we’re all friends!”

Jack blinked. Catra had offered her a lab? In the Horde? That meant she had been in the Horde as well - and apparently in a rather high position. He glanced at the others. Carter was surprised as well. And Teal’c… wasn’t showing any emotion.

“Ah.” Daniel, though, didn’t seem to be fazed at all. “So, you switched allegiances several times during the war. Was that common?”

“Kinda,” Entrapta said. “At the end, it was everyone against Horde Prime. Scorpia, too.”

“Yes,” Glimmer said. “And we beat him.”

Catra was silent, Jack noticed. And Adora was holding her shoulders. Things were more complicated than he had thought.

“I, too, left the services of a false god once I had the opportunity,” Teal’c spoke up. He nodded at their hosts. “I understand.”

Catra snorted in response, but it sounded more… well, she didn’t really smile. Entrapta, however, beamed again. “Yes! Maybe we can get some Goa’uld to change sides as well!”

“Ah…” Jack grimaced. Trying to turn the snakes? He’d rather juggle hand grenades.

“There are Goa’uld who oppose the system lords. The Tok’Ra,” Daniel said. “We met one of them, but he died before we could contact them.”

Jack glanced at Carter. She was standing still, ramrod straight, lips pressed together. No doubt remembering her recent possession by Jolinar. He suppressed the urge to put his hand on her shoulder and glared at Daniel; that wasn’t how you talked about things like that.

“Oh? So they can change!” Entrapta nodded. And her friends smiled.

Great. Now they had the completely wrong impression. “We have met one individual who claimed to be a Goa’uld rebel,” Jack corrected them. “We don’t really know if he was telling the truth.”

“Oh. But the possibility remains,” Adora said, nodding firmly. “If one can turn against them, others can do so as well.”

“In theory,” Jack said.

“I trusted Jolinar,” Carter said in a clipped, tight voice. “But he didn’t tell me how to contact the others - we don’t really know anything about them. They have to operate in strict secrecy, which makes it very hard to reach them.”

“Oh. Well, once we’re starting offensive operations, they’ll probably make contact with us,” Adora said.

“Even if only so they aren’t mistaken for our enemies,” Catra added. She, too, was still tense.

“Anyway, we have data to analyse. With these records, we can track the lineage of many princesses,” Entrapta said. “And we might discover more of our past! I wonder what kind of creature had prehensile hair.” She tugged at her own hair. “Perhaps it’s a creature from another planet? Wouldn’t that be neat?”

Judging by their expressions, the others didn’t really share Entrapta’s opinion. Jack couldn’t blame them. He wasn’t happy about being part alien himself. He was an officer in the Air Force. A human. Not some… alien. Part-alien. And what would the brass think about him? Hell, some would want him removed from SG-1 for security’s sake.

And he couldn’t blame them - he’d probably ask for the same if someone else were revealed to be part alien. Especially if they arrived with other, related aliens as potential allies. Aliens with very firm views of what was acceptable amongst allies and what was not. On the other hand, if they had taken in former Horde personnel as it seemed...

Things had become really complicated. But that didn’t change the fact they had to find a way home. “So!” He clapped his hands. “Now that we’ve got the genetic data for you to analyse, how about we look for a DHD to get us home to Earth?” He noted that most others looked slightly guilty at being reminded of their original reason for entering this station in the first place.

“Right!” Entrapta said. “The concentrations of Naquadah!” She held her multitool or whatever it was up and pushed a few buttons. “It’s this way!”

“Alpha, can you show us a map of the station?” O’Neill asked.

“Yes, Colonel O’Neill.” A moment later, a 3D map of the place appeared floating above the holoprojector.

“Oh! Neat!” Entrapta cocked her head and peered at it, then at her recorder. “The concentrations are all here!” She pointed at a large room in the eastern part of the station.

The largest room in the station, actually. Jack had a feeling what they would find there.

Five minutes later, he found out he was right. The room was a hangar. And none of the concentrations of Naquadah was a Stargate. They were transport planes. Or shuttles, actually, since it was certain they could travel through space. Unfortunately, they were also all in various states of disrepair.

Not that that would deter Carter and Entrapta. Quite the contrary - both were all over the things the moment they had laid eyes on them.

“We’ll never get them away from this place in time for dinner,” he commented.

They’d be here for a while. Well, at least they wouldn’t get shot at. And they might find out a little more about Etheria’s past - both ancient and recent. Though Jack would have to keep an eye on Daniel - his friend was a little too enthusiastic about new cultures. They really didn’t need any more slips and leaks. Their reputation amongst the Etherians was probably already not the best.

Then again, as they had just found out, the Etherians had some skeletons in the closet as well. Though whether that was a good or bad thing remained to be seen.

*****

The Meetings

Research base Alpha, First Moon of Enchantment, July 11th, 1998 (Earth Time)

Adora sighed. The ships - or shuttles, as Entrapta called them - looked a little like Darla. Just a little. Same grey colour, all angled as well - but where Darla had two pods on her sides, this shuttle had none. And it was much smaller, of course; its bridge had only room for five people or so, and Adora would probably hit her head if she wasn't careful as She-Ra.

And they were all broken. At least they looked broken to Adora. One was basically just a frame, two more had their hind parts - their aft sections - dismantled, one looked like it had been shot at by a tank platoon, and the last one, the one Entrapta and Carter were checking out, looked as if it had been patched together; the colour of some parts was off a little.

"We'll never get Entrapta out of here," Catra mumbled next to her.

"Yeah," O'Neill agreed. Well, he had just said the same.

"To be fair," Daniel added, "more spaceships is a good thing, right?"

"Those are shuttles," O'Neill told him. "No hyperdrive."

"Oh."

"Do they have weapons?" Catra asked.

"Looks like they have smaller versions of Darla's guns," Bow told them as he passed them on his way to Entrapta and Carter, carrying a piece of crystal from one of the other shuttles with Glimmer. "Hidden in the bow section."

"Pointless then," Catra said. "Those won't be able to scratch a frigate's hull."

“Really?” Daniel sounded surprised.

“Those are a thousand years old. At least a thousand years old,” Catra explained.

“You could upgrade them,” Daniel said. “You did upgrade Darla, didn’t you?”

“Yes,” Catra said. “But that was mostly Entrapta’s project.”

And Hordak’s, Adora knew.

“Well, it seems this might be her new project,” O’Neill said.

Catra scoffed. “Waste of time. We don’t need shuttles. We’ve got frigates for space and orbital bombardment, and we have flyers on the ground. And tanks.”

“I wouldn’t dismiss a fast transport as useless,” O’Neill objected. “There are situations where you might need one.”

To Adora’s surprise, Catra nodded. “Right. But most of them we can probably handle with Darla.”

“Darla can’t be in two locations at once, though.”

Adora frowned. O’Neill was right again, but… that would mean letting others risk their lives in the sort of commando operation that was perfect for her and her friends. At least she couldn’t imagine any other use for shuttles that a frigate with their transporters could do as well. Of course, she could handle a war by herself, but… She-Ra was Etheria’s protector. If anyone had to go on such missions, it was her. On the other hand, if they had such shuttles, she could go on a mission without dragging Darla and her friends with her. “Good point,” she said with a faint smile. Which she lost immediately when she saw that Catra was frowning at her. “What?”

“You’re thinking stupid thoughts.”

“I’m not!” Adora protested.

“Yes, you are.” Catra took a step closer and stood in front of her, staring at her eyes. “You’re thinking of taking such a shuttle for a stupid mission, aren’t you?”

Adora blinked. How did Catra know? And how could she deny that without making it obvious that she had been thinking that?

“I know you.” Catra shook her head, then stood on the tip of her toes and grabbed Adora’s face. “And I won’t let you risk your life without me. Never again. You hear me?” She tilted her head to the side, just a little bit.

Adora opened her mouth to protest, and Catra pushed up, kissing her before she could say anything.

Oh. Adora closed her eyes and hugged her lover.

When they broke the kiss and Adora let Catra down on the floor again - she had taken her up sometime during the kiss - both of them were smiling. “But I’m She-Ra,” Adora said. “I’m supposed to protect everyone.”

“And I’m supposed to protect you from yourself, dummy.” Catra smiled, but kept staring into Adora’s eyes. She was just so… so...

O’Neill cleared his throat.

Adora jerked, but Catra just turned her head and looked at the man. “What?”

“Nothing.”

“So,” Daniel spoke up. “You were called She-Ra’s consort. Is that a formal position?”

Catra snorted. “No, that’s just Third Fleet being stupid.”

Adora nodded. “But we’re planning to marry soon.” Once things stopped coming up that they had to deal with. Such as unexpected visitors from a faraway planet with six billion people.

“We could’ve married already if you stopped listening to Glimmer,” Catra pointed out with a smirk.

Adora pouted. She wanted to get married, but she was She-Ra, Princess of Power. Glimmer had told her several times that marrying without a big ceremony and dinner would be a snub to every princess and prince who wasn’t invited.

“Listening to Glimmer?” Daniel asked.

“She wants a big wedding for us,” Catra said. “It’s political. Probably gonna be as big as the Princess Prom.”

“Ah! A state affair.” Daniel nodded. “Are there many different wedding customs on Etheria?”

Adora smiled - she had researched that ever since Catra had accepted her proposal. “Oh, yes! Every kingdom has a different way to officiate a marriage. For example, in Bright Moon, it’s an official act - you need a representative of the Queen.” Or the Queen herself, in their case. “In Plumeria, you just marry and inform others afterwards. It’s a very private ceremony. And in Salineas, you have to have a ship’s captain marry you. On the ship. And in the Kingdom of Snow, you construct a temple out of ice, before you...”

*****

“This is fascinating. It’s using a miniature version of Darla’s original engines! Like a tiny Darla!”

Samantha Carter resisted the urge to shake her head. Entrapta was very enthusiastic about their discovery. Sam could understand the feeling, of course, but Entrapta was… well, in a class of her own.

“Why is that fascinating? Both are First Ones designs,” Glimmer asked. The queen was leaning against the wall in the shuttle’s engine room, watching them work. Or watching Bow, as far as Sam could tell.

“Because you usually construct different engines for different ships,” Bow explained. “Just scaling down an engine generally isn’t optimal.”

“Yes!” Entrapta, held up by her hair, turned. “You lose effectiveness if you simply scale engines up and down. And sometimes, you have an explosion because the material needs a certain thickness to withstand the temperatures an engine generates. So, we can conclude that the First Ones either were bad engineers - and we know they weren’t - or they had other reasons to do this. It can’t be logistics; the parts are not interchangeable, after all. So, why did they do this?”

“Perhaps they didn’t want to spend the money for a new design,” Sam speculated. She had been stymied by short-sighted cuts to her budget before, although not often any more since she joined Stargate Command.

“Oh.” Entrapta frowned, then nodded. “Right. But that would mean that they didn’t value science very much.”

“What?” Bow asked.

“In the Horde, we didn’t have to worry about money for science,” she explained. “If I wanted something, I just asked Hordak, and I got it. Unless it was First Ones tech; those were sometimes scarce.”

Oh. Sam had wondered what had made Entrapta join the Horde. An effectively unlimited research budget might have been the reason - it would tempt anyone for a moment at least. And Entrapta did seem to be a little… off when it came to morals. At least that was Sam’s impression.

“Ah. Well, it’s not the same in the Alliance,” Bow said. “We’ve got a tight budget.”

“I know! Hordak complains about it all the time,” Entrapta said.

“Well, he’s not the Horde leader any more. He doesn’t get to rob everyone else for his projects,” Glimmer said.

“Technically, those were spoils of war,” Entrapta replied. “Or Horde production. I think. We didn’t really need much of what the Alliance produced, and First Ones tech was finder’s keeper.” She perked up. “Though if the First Fleet agrees to supply us, we’ll have a much higher budget again!”

“The First Fleet?” Glimmer looked concerned. “Supplying you?”

“Yes! They’ve got their full supply train, but they don’t have many frigates left to be supplied. So, Hordak asked if they would mind sending supplies to us. It would really speed up our research if we had better access to Horde Prime’s technology. But they are still debating.” Entrapta frowned. “They really need a leader to speed up decisions.”

“I think it’s fine if they debate and make their own decisions,” Bow said.

Sam agreed with that. She didn’t know what exactly happened on Etheria, but a former conqueror gaining more followers? Followers with a space fleet? Who were used to blindly obey their leader?

Judging by Glimmer’s expression, she wasn’t in favour of this either. “And when were you planning to tell us about this?” the queen asked.

Entrapta looked puzzled. “Should I have?”

“Yes.”

“Oh.” Entrapta shrugged. “It’s just for science. You know we’re doing research now that we don’t have to worry about the war

anymore. Although I guess that might have changed now, with the Goa'uld. Do you think we should focus on weapon technology again? I've got a few ideas, and Hordak has had a number of projects that he never had the parts to pursue until now."

"Ah…" Bow looked at Glimmer.

"I think we should discuss that with the Alliance," Glimmer said.

"Right." Entrapta nodded. "Back to tiny engines! I think I could upgrade them like I upgraded Darla's. That would make them faster."

"We'll need a lot of spare parts, though," Sam pointed out. The First Ones had been cannibalising four shuttles to repair the fifth - their supply situation must have been terrible for that to happen.

"Yes. But we can make do with Horde parts. I'm sure that Third Fleet would part with some of theirs if Adora asks them."

"That might be a good idea," Glimmer said. Bow looked confused for a moment, then nodded as well. Sam agreed as well - depriving those apparent fanatics of supplies was likely a good thing.

"Good! We might even be able to install a hyperspace engine on a shuttle if we sacrifice some space and manage to miniaturise them. Not a modern one, but Darla's old one wouldn't be too hard to shrink. We could make a tiny starship!"

"I think we should focus on our discovery here, first," Bow said. "And then on getting our new friends home."

"Right." Entrapta nodded, apparently unfazed. "That means finishing Darla's upgrades. And plot a course to Earth."

"Or to a planet with a Stargate," Sam reminded the princess.

"Yes. But we don't know where those planets are. Perhaps we'll meet some on the way. Although that might also delay us."

Entrapta pouted. “We’ll have to decide if we should just go full-speed to Earth or look for another Stargate.”

And before SG-1’s gate validation codes expired. They could contact Stargate Command through the gate using their radios, but the longer they took to open a gate, the more suspicious Stargate Command would be that they had been compromised.

*****

Planning Room, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

“I hope you have a good reason to call for an emergency meeting of the Alliance,” Mermista complained as she entered the planning room. “I had to sacrifice my first day off after a week filled with budget meetings with the Admiralty.”

Catra suppressed a snort. For a ruling princess, Mermista was complaining a lot. Perhaps she should learn to delegate. And to scare her underlings into not annoying her. No one had bothered Catra when she had been in command. Well, Scorpia had, but that was different.

“I’m sure they had a good reason, my love!” Sea Hawk told the princess. “And we got to enjoy a trip together on the Dragon’s Daughter VIII!”

“That’s another reason they better have a good explanation,” Mermista replied - but she was smiling as she said it. So, she wasn’t really mad. Or not too mad - the princess was always grumpy. And she carried grudges. Conquer her kingdom and take her runestone one time… Catra clenched her teeth. That hadn’t been her finest hour. Even if it had been a finely planned and executed offensive.

“And good evening to you, Mermista, Sea Hawk.” Glimmer was smiling, but her tone was full of sarcasm.

“Hello!” Adora said with an honest smile. Catra nodded, as did Bow.

“Yeah, yeah, good evening. What’s this about?” Mermista took her usual seat.

“Hello, everyone!”

“Hi!”

Perfuma and Scorpia had arrived. Catra nodded at them.

“Wildcat!” Scorpia made a beeline towards her.

Catra grimaced. “Wait…”

But the other woman picked her up and swung her around. “Haven’t seen you in a while! You never visit!”

Yes, because she wasn’t keen on revisiting the Fright Zone. Too many bad memories. Catra pushed against Scorpia’s shoulders, but the princess’s grip was too strong. Without actually fighting, she couldn’t escape.

Fortunately, the woman started hugging everyone else before she broke Catra’s ribs. “She-Ra! Bow!”

“Ack!”

“Good evening.” Netossa and Spinnerella just took their seats. They looked serious - well, they were the most experienced members of the Alliance; they would expect an actual emergency.

And there was Frosta, glaring at Catra as expected. Catra smiled at the kid. Sure, she had wrecked Princess Prom, but that had mostly hurt the little princess’s ego. It wasn’t as if she had conquered her realm or something. She didn’t need to feel too bad about that - most princesses could do with some humble pie.

As everyone sat down, Catra leaned against the wall behind Adora, ignoring her lover's frown. She wasn't a princess. She was just with Adora. Sea Hawk and Bow might sit down with the princesses and King Micah, but Catra was fine standing.

"Where's Entrapta?" Netossa asked.

Glimmer sighed. "She's coming. We made a recent discovery that has her… fascinated. A discovery that has repercussions for everyone on Etheria. Actually, two discoveries."

Catra noticed that Netossa relaxed a little upon hearing that. Had she expected that Entrapta would be the reason for the emergency meeting?

"I'm not going to like either, am I?" Mermista asked.

"Probably not," Glimmer admitted. "Alright. First, remember the First Ones ruins we discovered in the Whispering Woods?"

"Yes!" Perfuma nodded. "You told me about them since it bordered my kingdom. You went and explored them?"

"Don't tell me you found another superweapon!" Mermista blurted out.

"Not quite. We found a Stargate," Glimmer told her. "A gate that connects to other gates on other planets."

"What?"

"Like the portal Hordak was building?" Scorpia asked.

"No." Glimmer looked at Bow.

"It's part of a network spanning the galaxy," he explained. "Built millions of years ago. You can connect from one gate to any other gate in the network if you know the gate address, and then you can travel to the other planet in an instant."

“Millions of years ago?” Frosta asked.

“Yes.”

“And I guess while Etheria was in Despondos, it wasn’t working,” Netossa said. “But now whoever is on the other side of such a gate has realised we’re back?”

Well, she had always been the sharpest amongst the princesses. Catra nodded.

“Yes,” Glimmer said. “And there is a war being fought out there.”

Mermista groaned. “Another war?”

“How do you know that?” Frosta asked.

“We met a group of soldiers who were travelling through the gate,” Adora told her. “They arrived here by accident.”

“And they told you about the war?” Mermista scoffed.

“Melog confirmed part of their story,” Catra said. “They’ve been fighting the Goa’uld.”

Mermista scoffed again. Catra narrowed her eyes. Melog hadn’t done anything to her.

“Anyway,” Glimmer spoke up again. “The Goa’uld are an Empire of body-snatching snakes. Small parasites that burrow into your body and take control of it. They have enslaved lots of people and rule many planets.”

“An empire of body-snatchers?” Mermista stared at them.

“Do you have proof for that?” Netossa asked. She had wrapped an arm around her wife.

Right. Spinerella would remember being controlled by Horde Prime. Catra pressed her lips together and pushed her own memories away. It was in the past. Horde Prime was dead.

"Melog confirmed that," Adora replied. "And, well… we saw one of the snakes. Well, a larva of a snake."

"We've secured the gate, so no travel is possible, so we aren't in immediate danger," Glimmer explained. "But the Goa'uld also have ships. And they want to conquer the galaxy."

"Like Horde Prime," Bow added.

"And like Horde Prime, they destroy planets that resist them," Adora said. "We can't let that happen! We have to fight them!"

Catra agreed. The Goa'uld would find Etheria sooner or later if Melog was right, and Catra would prefer to fight them on their own turf.

"We just finished a war that lasted for years!" Mermista protested. "It almost destroyed Etheria!"

"Technically, by defeating Horde Prime, Adora finished a war that had lasted a thousand years," Bow said, then cringed when everyone stared at him.

"That's not the point. The point is that…"

The door opening interrupted Mermista, and Entrapta entered. "Hi, everyone! Sorry for being late! I was showing Hordak the tech we recovered, and we kinda lost track of the time!"

Hordak? Catra tensed.

Behind Entrapta, Hordak entered the room, nodding at the princesses.

"What is *he* doing here?" Mermista blurted out.

"Providing advice, of course," Entrapta replied as she took her own seat, her hair pulling out a chair for Hordak. "So, where were we?"

*****

Guest Quarters, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

"So, team!" Jack O'Neill clapped his hands as he stepped into the centre of their room. "What did we learn today?" Carter hadn't found any listening devices, and they really needed to discuss things.

"That Etheria was once a test site for genetic experiments?" Daniel asked, looking up from his notes.

"That magic likely has a genetic component that can be manipulated by genetic engineering?" Carter added.

"That our hosts are more like us than we thought." Teal'c nodded.

Right. Joining the good guys after working for the bad guys would resonate with Teal'c. Jack shook his head. "Close but no cigar!"

"Then what did *you* learn?" Daniel asked, a little peeved.

"*We* learned that our hosts have a big fleet of spaceships but limited production capabilities," Jack said. "And a limited pool of personnel."

"Yes?" Daniel looked irritated.

"It means that Earth has something to offer," Jack explained. "We might not have magic, we might not have shiny spaceships, but we have people and industry." They wouldn't have to be the sidekick in an alliance.

"We don't know about the supply capabilities of the former Horde fleets, Sir," Carter pointed out.

"Yep, we don't," Jack admitted. "But we also know that the princesses don't really trust them. And we know that they don't know everything Horde Prime knew."

“Entrapta mentioned bots - robots,” Daniel said. “If they can mass-produce them…”

Jack waved his hand. “Yes, yes. But robots aren’t people; they can’t adapt or innovate.” At least he had never met some who did. “And we have six billion people on Earth.”

“That number really shocked them,” Daniel said. “They have had contact with other planets but were still surprised.”

“So, we have something to offer beyond our knowledge of the Stargates.” And that was important.

“And the Ancient technology,” Carter said. “First Ones technology is advanced but not as advanced as Ancient technology.”

That was a temporary advantage at most, though. Once you shared technology, it was lost. Entrapta would quickly catch up, in Jack’s opinion. But it was something to offer as well. “So, that’s the good news. Earth isn’t as far behind as we thought - except for magic. We don’t have flying, talking unicorns.” Who probably pissed rainbows.

“Or a floating magical city,” Daniel added.

“Town. Or village,” Carter corrected him. “It sounded like a university with an adjacent settlement.”

Either way, the important part was the ‘floating’. People back home wouldn’t believe this. “So, now the bad news we learned today,” Jack went on.

“Bad news?” Daniel asked. “Oh. The cultural differences between Etheria and Earth are more significant than we assumed.”

“Yes.” Jack nodded. “And that’s saying something since Etheria is ruled by magic princesses.”

“I do not think the differences are too significant,” Teal’c said. “Both Earth and Etheria are determined to fight the Goa’uld. Both

have shown honour and welcomed former enemies into their ranks. I do not see any significant problems for forming an alliance."

Jack suppressed a grimace. "Well, that's true. But there are a few things that kinda complicate matters. Like politics."

"Like the leading figures of Etheria being young women," Carter added.

Jack glanced at her. That was actually the least of their problems, in his opinion. The US had dealt with Thatcher just fine. Granted, the Iron lady hadn't been young by any means, but he didn't think the gender of She-Ra or Glimmer would be an issue once the state department got talking to them.

"They were appalled by the concept of sexism, yes," Daniel said. "But that's not the only thing." He pushed his glasses up his nose. "She-Ra and Catra are a couple. And no one acted as if this was unusual - the clones called Catra her consort. And Bow mentioned having 'Dads'. Same-sex relationships might not carry any stigma here."

Jack nodded. Unlike back home.

"I doubt that our hosts would take kindly to our practice of releasing known homosexuals from service," Daniel went on.

"Yes. That'll be a tricky thing," Jack said.

"To say the least," Carter said.

"Why would it be a problem?" Teal'c asked. "A warrior's gender or taste in mates does not affect their effectiveness in battle."

"Yeah…" Jack sighed. "That's not exactly how some of the people back home think." Certain conservative politicians would be frothing at the mouth when they heard about the 'customs' on Etheria.

"Then they are fools and should be ignored," Teal'c stated.

"If only it were so easy," Jack commented. He didn't have anything against gays, as long as no one expected him to be gay or something. Though the idea that someone might be ogling him in the locker rooms… Well, he could handle it. Still…

"And there's the reaction to magic," Daniel went on.

Right. Another hot topic. The fire and brimstone types would go ballistic. "At least there won't be any witch hunts," Jack joked.

"Actually," Daniel said, "witch hunts are still a concern in some countries. And some states have the death penalty for magic. I think the Saudi Arabians executed someone for sorcery a few years ago, though I am not sure."

Great. That was a worse problem than Jack had thought. It was the gulf war all over again - just this time, he wasn't sure if he was part of the prickly natives with archaic laws and customs or the modern allies.

*****

Planning Room, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

"Another war, where we have to rely on your clones to fight! Clones that tried once already to conquer us." Mermista leaned back and crossed her arms. "Ugh."

"Well, it will mean the clones will have something to do, other than guard Etheria," Bow pointed out.

Adora nodded. She knew that Mermista wasn't happy about having a fleet in orbit that could level her kingdom.

"Fine!" Mermista shook her head. "It's better to fight those Goa'uld far away from here, I guess."

Adora half-expected Sea Hawk to yell about an adventure amongst the stars or something, but he instead leaned closer to Mermista and whispered something into her ear that made her half-smile.

"The Kingdom of Snows cannot and will not provide many soldiers for this, though," Frosta announced. "Our soldiers aren't trained for this kind of war."

"That goes for all of us," Mermista said. "My soldiers are used to fighting on the sea, not in space."

"Not quite," Hordak spoke up. "The training the former Horde soldiers in the Fright Zone received should allow them to easily adapt to this conflict."

That was because he had formed them after Horde Prime's Horde, Adora knew. Deliver a planet and an army to his god.

"But they aren't soldiers any more," Perfuma objected. "You can't just assume that they'll go off to fight another war!"

"We can ask them, though," Entrapta said. "That doesn't hurt."

"Why would they want to go fight a war?" Perfuma shook her head.

Scorpia grimaced. "Well, some of the former Horde soldiers aren't too happy," she said, rubbing the back of her head. "They don't like working the fields or building homes."

Perfuma stared at her with her mouth half-open. "What?"

"I've heard some complaints," Scorpia said. "Nothing serious, but…" She sighed. "I think a number of them will probably join the war."

"The older ones," Catra said, nodding. "They're used to it."

And the ones who liked fighting, Adora mentally added. And those who liked hurting others.

"You should've told me!" Perfuma said.

"I, uh, was about to. But I didn't find the right moment."

"I thought everything was going well! We made such progress with the fields and orchards! And the villages! And they aren't happy?" Perfuma shook her head.

"Most are happy. Very happy!" Scorpia said. "It's just a few who grumble. And soldiers always grumble."

"They aren't supposed to be soldiers any more!"

Glimmer cleared her throat. "Anyway, we can recruit volunteers for our forces. But we'll rely on the fleets, clones and bots for the bulk of our fighting. And probably Earth forces, once we reach them and can form an alliance."

"Sounds good," Netosssa said, nodding. "But who amongst us will go fight the war? It's easy for us two" - she gestured at Spinnerella and herself - "since we don't have kingdoms to rule, but what about you?"

"I'll go!" Entrapta said. "Dryl pretty much rules itself, anyway. And the trip to Earth will be fascinating! So much new technology!" She beamed at Hordak. "You'll love it!"

He nodded at her. "I am looking forward to the challenge."

Adora winced at that. "And speaking of Earth… We need to decide who gets to travel there and negotiate an alliance."

"Glimmer has to go," Netossa said. "She is the commander of our Alliance and Queen of Bright Moon. And you have to go as well - She-Ra is the symbol of Etheria."

Both true.

“She-Ra also is the protector of Etheria,” Mermista objected. “We can’t send her away if we’re at war.”

“But She-Ra has the authority to speak for the rest of Etheria, not just the Alliance,” Bow pointed out.

“But can I speak for them? I can’t really drag them into a war,” Adora said.

“We’re already in a war according to what you found out,” Netossa retorted. “And you have a following. Not just amongst the clones.”

That didn’t mean she could or should rule them. But she could and should represent their interest. Adora slowly nodded.

Behind her, Catra sighed. But she would come with her, Adora knew. Just as Bow would not let Glimmer travel alone.

“So, the Best Friends squad for diplomacy,” Bow said.

“And us!” Entrapta said. “I need to study their technology! And Hordak is my science buddy!”

Adora could see the others exchange glances.

“Bet they’re wondering if they feel safer with Hordak and Entrapta staying here or going far away,” Catra whispered into her ear.

It wasn’t really funny, but Adora snorted anyway.

“Fine,” Mermista said. “So, Netossa will be in command of the forces here?”

“With Wrong Hordak, I suppose,” Netossa agreed.

“Yes. We’ll take Third Fleet with us,” Glimmer said.

That made everyone perk up, Adora noticed.

“Good. Anything else?”

Glimmer sighed. “Yes. We visited the First Moon of Enchantment, looking for a First Ones base. And we discovered something that might have unsettling consequences.”

“Ugh.” Mermista groaned again. “Another enemy? Another superweapon threatening to destroy the planet?”

“No.” Glimmer sighed. “It’s about the origin of us - our families.”

She had everyone’s attention now.

“We found out that the base was a research base. And their research was done on Etheria…”

*****

Guest Quarters, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

“...and while witch hunts were often aimed at outsiders, or used as a tool to hurt rivals or enemies, many people sincerely believed that witches were real,” Daniel explained. “Tales of magic are found in almost every culture’s myths on Earth. And if our hosts are correct, then magic - powers that could achieve the deeds mentioned in the legends and myths - was once real on Earth, and not too long ago - only a few millennia, at most. We thought those tales were, if not completely fabricated, related to advanced technology used by the Goa’uld or other aliens, but this might not be the case.”

Samantha Carter, sitting on the bed next to him, nodded. “They could be related to the sort of magic powers the Etherians use.” Powers that had a genetic component, if the information they had gained today was correct.

“Yeah,” the Colonel said, “and that’s the problem. Most people don’t have issues with technology.”

“Actually,” Daniel spoke up, “there’s a not insignificant number of people who do have issues with technology, and it’s not just

minorities like the Amish. Many people feel that technology advances too quickly, leaving them unable to keep up, and..."

"Yes, yes," the Colonel interrupted him. "Computer bad, parchment good. Television bad, books good. But those people aren't going to demand that engineers are burnt at the stake. They won't be a problem when we arrive on Earth with magical princesses in tow." He paced in front of them.

When, not if. The Colonel didn't voice any doubt that they would return to Earth. Of course, that didn't mean that he actually was that certain. Sam suspected he had concerns. But as their leader, he couldn't show them. Even though everyone here knew that nothing was certain when travelling through Stargates. As their accidental arrival on Etheria proved.

"But magic - actual, honest to God, 'turn you into a newt' magic? That's going to ruffle more than a few feathers." He shook his head. "If the Etherians ever watch a televangelist, we will be fortunate if they only leave and don't decide to level his home from orbit."

Daniel laughed at that, but Sam didn't. It might not be hyperbole. "They are our best chance to win this war," she said. "We cannot afford to insult or attack them."

"Indeed," Teal'c added from where he was leaning against the wall. "It would be foolish to let superstition alienate such allies."

"That never stopped a televangelist," the Colonel said. He sighed. "And it's not even the worst thing."

Daniel looked puzzled. "What do you mean, Jack?"

"The Etherians have indicated that they do not intend to keep their presence and existence secret," Sam explained. "And if Earth is to mobilise for war, we have to reveal the Stargates." And everything that entailed.

“Yep.” The Colonel nodded. “And while many will love the fact that the Egyptian gods were aliens out to enslave us, how many will now wonder if their own gods were the same?”

“A crisis of faith,” Daniel said. “The Biblical wonders certainly would be easily duplicated with Goa’uld technology. Now that we know actual magic exists…”

“And we know there’s a magical princess who can turn a giant spaceship into a space plant,” the Colonel added. “Who is worshipped as a goddess by a bunch of fanatical clones bred for war.”

“She-Ra clearly stated that she is no goddess,” Teal’c said.

“But she displayed powers - at least to our current knowledge - that would be considered divine in many religious scriptures,” Daniel retorted.

“If all that is revealed at once, the backlash will be terrible,” the Colonel said, standing up and pacing again. “Religious nutcases will be screaming their heads off, people will be calling each other’s god a Goa’uld, half the world will be either starting a witch hunt or trying to recruit witches, there’ll be panic about being bombed from orbit by alien invaders, and people will claim their neighbours are snakes.”

“And everyone will be blaming the US for it,” Sam added.

The Colonel pressed his lips together and nodded.

“Yet the consequences of this revelation that you describe do prove the need to keep it a secret,” Teal’c said.

“Yep. But no one will care,” the Colonel told him. “They’ll all claim the US should’ve told everyone from the start about the Stargate.”

Sam pressed her lips together. That would have avoided a lot of the problems that they were now facing. It might have led to a

disaster, of course - people were not always acting rationally - but only having to deal with Etherians and magic would be far easier.

"Come on, team! We need a strategy to handle this before we arrive on Earth!"

"Jack! We're not in charge of Earth," Daniel protested. "We can't implement any policy."

"But we can make suggestions," the Colonel pointed out. "And we'll be the best experts on the Etherians. The general will listen to us."

But would the president listen to him?

"Honesty seems the best policy," Teal'c said. "The longer a secret is being kept, the more dangerous it becomes to reveal it."

"Unless you can keep it a secret for so long, everyone involved is dead from old age by the time it gets revealed," the Colonel said. "But yes - we cannot count on the Ethrians agreeing to keep this a secret. And we cannot mobilise Earth without revealing that we're in a war with aliens."

And they would have to mobilise Earth if they wanted to win this war. And be prepared for the next - Horde Prime had been stopped by the Etherians, but who knew what other conquerors were active in the galaxy?

They needed a way to handle this. And Sam couldn't think of one right now.

*****

Planning Room, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

"We're test subjects?" Perfuma blurted out.

“Descendants of test subjects,” Bow corrected her. “Well, most of the people present.”

Most of them glanced at Hordak, of course, Catra noticed.

“Yes!” Entrapta nodded with a smile. “As far as we can tell based on the data we gathered, pretty much every current royal line was the result of First Ones experiments. Originally. There’s bound to be some genetic drift over the centuries, perhaps a few new mutations, and some of the original princesses will have intermarried with the new lines, but we can track every princess in this room to an experiment!”

As Catra had expected, not everyone shared Entrapta’s enthusiasm about this discovery. She shook her head as Frosta jumped up. “That can’t be true! My family was chosen by magic to rule the kingdom!”

“That’s probably a myth that was formed - or created - to add legitimacy,” Entrapta told the kid.

“No!” Frosta glared at Entrapta. “That’s a lie!”

Catra rolled her eyes. If the princess threw a tantrum...

“Frosta,” Micah spoke up, “Entrapta isn’t lying - she’s just telling us what they found on the moon. This isn’t her fault.”

“Data doesn’t lie,” Entrapta said with a frown.

Frosta stared at Micah with wide eyes. The king smiled at her, and she sat down with a deep scowl, crossing her arms over her chest.

“I fail to see why you are getting so worked up about this,” Hordak spoke up. “Your power has not been changed in any way because of this. If anyone challenges your rule, you can easily deal with them.”

Catra winced as half the table glared at Hordak. In a way, Hordak and Entrapta were perfect for each other - both obsessed with science and research. But neither was good at reading a room or understanding others.

"Not everyone rules by force!" Mermista spat. "We're not going to fight our own people!"

Hordak frowned at that. "Why would they attack you? You are the princesses; you are bonded to the Runestones."

"It's not about power," Glimmer spoke up. "It's about legitimacy. If we are the descendants of test subjects and only became princesses thanks to the powers we received in the experiments, then some people might contest our right to rule."

"But unless they can bond to a Runestone, they'll fail," Hordak pointed out.

"Not everyone is bonded to a Runestone," Netossa told him. "Most princesses aren't. Like Spinny and I."

"You aren't ruling a kingdom anyway," Frosta snapped. "You don't have to deal with such challenges."

Right. The kid had probably advisors telling her what to do. Must have had them for years. No wonder she was so worked up about this.

"This could shake the entire society of Etheria," Glimmer said. "Unlike She-Ra, we weren't chosen by Magic - or Etheria."

"I was chosen by a sword manipulated by the First Ones," Adora pointed out with a weak smile.

Catra scoffed. "You were chosen by Etheria or magic, whatever it was, when the sword broke and you could still transform into She-Ra." Adora, of all the princesses, had nothing to worry about her legitimacy.

“But…”

“No buts.” Catra shook her head and stepped over to the round table, placing her hands on it. “This changes nothing about what kind of people you are,” she told the others. “Your ancestors don’t define you. Did you follow your father’s example?” she asked Mermista. Without giving the princess time to reply, she nodded at Perfuma. “Do you judge people for their parents’ actions?”

Perfuma shook her head. “Of course not! But can we keep ruling a kingdom that was founded on or by naked power?

“Yes?” Hordak looked more confused than ever. “You’ve been doing this for centuries, haven’t you?”

Literally, in the case of Queen Angella.

“Well,” Bow spoke up with a sheepish expression. “The ruling lines do go back centuries - to the Age of War - for most kingdoms. One could argue that the sheer time that has passed is legitimacy enough to continue your rule.”

“And our Ancestors also ended the Age of War,” Glimmer added. “They didn’t just keep fighting wars.”

“Still…” Perfuma looked torn.

“Ugh! No one will bother you!” Mermista snapped. “Your people love you!”

“As do your people, my love,” Sea Hawk was quick to say.

“My father abandoned the realm in the middle of a war!”

“As did most of your people,” he reminded her. “Yet you stayed. And triumphed.” He smiled. “No one will challenge you. And if they do, I shall smite them down for their presumption and cowardice!”

That seemed to mollify the princess. So much for not fighting her own people.

"Well, I'm mostly ruling the Fright Zone since I'm a former Force Captain and a princess," Scorpia said. "I don't think there'll be trouble - those who disagreed left already - but we're kinda an exception."

And those former Horde soldiers who left could return, Catra knew. That was a potential problem.

"Say, Glimmer," Netossa spoke up. "Did Queen Angella ever say anything about this? She was already around back when it happened, wasn't she?"

Glimmer shook her head. "She never mentioned that. She rarely spoke of her past at all. I thought she was sad about all the people she had seen die, but…" She shrugged.

"Angella rarely talked about her past," Micah said. "But that was because she didn't remember too much. Yes, she lived for centuries, but she didn't have a perfect memory." He smiled at Glimmer. "Your personal impression notwithstanding. She once told me that she had forgotten most about the past centuries and had to rely on notes and archives - just like most of us."

"The archives!" Glimmer spoke up. "Her personal notes!"

Bow and Entrapta perked up at that, Catra noted with a wry smile.

"Yes. We can search them," Micah said. "Now, I think we should talk to our guests."

"Yes." Adora nodded. "You need to meet them." She coughed, "And there are a few things you need to know about them…"

*****

The Princess Alliance

Guest Quarters, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

"...so Teal'c is opting for full disclosure," Jack O'Neill summed up his friend's opinion.

"Honesty is the honourable option when treating with friends." Teal'c inclined his head.

"Yeah. But there's also need to know, classified, and white lies," Jack pointed out.

"Hiding that the majority of Earth has issues with magic and same-sex relationships isn't a white lie, Jack," Daniel objected.

"I didn't say it was," Jack retorted. "But we can think of a way to present the truth in a more… manageable fashion."

"'As long as you hide your sexuality, you're fine'?"

Jack narrowed his eyes. Daniel's sarcasm wasn't very helpful. "I thought more about pointing out the progress we've made in that area."

"'In a few decades, gay people will be as accepted as women with regards to equal rights'?" Daniel looked at him over the rims of his glasses.

Jack glanced at Carter. She was carefully staring at the wall and not showing any expression. Which meant she was trying not to laugh; he knew her. He sighed. "I know it's not perfect, but we cannot alienate the nice aliens here. And just telling them everything that's… not perfect on Earth might do it."

"Earth might not be perfect, but it has many good sides," Teal'c said. "I am certain that our new allies will see that."

"Right until some religious nutcase calls for burning them at the stake for witchcraft," Daniel cut in.

"I'm sure that they have their share of nutcases as well," Jack said. "They should understand that we're not all perfect angels. We stress that we're making progress, that we've made a lot of progress…"

"Cut down on trying to turn them into democracies?" Daniel asked.

Jack glared at him. "The United States are quite pragmatic when it comes to allies." No one had tried to change Saudi Arabia, Kuwait or any of the other Gulf States into democracies, after all.

"We could tell them how we toppled democracies and replaced elected presidents with dictators," Daniel suggested.

"Daniel." Carter shook her head.

"What's wrong with you?" Jack asked with a frown. This wasn't normal.

Daniel met his stare for a moment, then sighed. "It's just… I don't want to lie to them. They are nice people. Good people. They have offered their help freely and as soon as they met us." He shook his head. "They just… they're all so idealistic."

Jack knew that. And their hosts were all so damned young. Not quite as young as Charlie would be now, but far too young for what they had gone through. And yet… "Yeah, but two of them served in the Evil Horde."

"And switched sides," Daniel retorted.

As did, apparently, the leader of the first Evil Horde. "I'm just saying that they aren't perfect, either," Jack said.

"Then they should understand that we are not perfect," Teal'c said.

Jack sighed. This was above his paygrade. He was an officer, not a politician. But Teal'c was right. Lying wouldn't help them. "So…"

A knock at the door interrupted him. "Yes?"

The door opened, and Catra entered. "Hey." She nodded at them. "The Alliance wants to talk to you. Unless you're busy," she added with a grin.

Too busy to meet what was probably this planet's Security Council? Or NATO command? While being their guests and depending on their goodwill to get home? Jack suppressed a snort. "Let's not make them wait, then."

"So, we're meeting the leaders of the Alliance?" Daniel asked as they left the room.

"Yeah," Catra replied. "All the princesses of the Alliance are present."

"Oh. Is the Alliance limited to princesses, or does it encompass others as well?"

Catra shrugged. "The majority are princesses, but there are others."

"Can they vote?"

Catra snorted. "It's not really a 'democracy'," she said. Then she frowned. "Well, I guess they do kinda vote, but it's… not formal. More like you debate and say what you think, and then there's a decision. And if you really don't like it, you can leave the Alliance, I guess."

Great. Jack frowned. That sounded like a mess just waiting to happen.

"That sounds… How did that work in a war?"

Catra chuckled. “It didn’t work very well. Not until She-Ra showed up.”

“What did she do?” Daniel asked.

But they had reached a big door, guarded by two soldiers in armour, and Catra grinned again as she opened the door. “Won the war,” she said as they stepped inside.

“Welcome, Colonel O’Neill. Captain Carter. Daniel. Teal’c.” Glimmer nodded at them. “Please have a seat.” She gestured to four seats at the round table. Which did look like a conference table that could’ve been found in any bigger organisation on Earth.

“Thank you,” Jack said. As they walked over to sit down, Glimmer introduced the new faces at the table.

“Princess Mermista, ruler of Salineas. And Sea Hawk.”

The woman - in her twenties, a little older than the rest, Jack guessed - nodded at them with a frown.

“Well met, brave soldiers!” The man stood and raised his fist to his chest. He flashed them a wide smile. For a moment, it looked as if his teeth gleamed. Mermista groaned. “Sit down, Sea Hawk,” she snapped.

“Of course, my love!”

Jack blinked for a moment.

“Different customs,” Daniel whispered.

“And these are Princess Scorpia, of the Scorpion Kingdom, and Princess Perfuma, of Plumeria.”

“Hello!”

“Be welcome!”

Whoa. That woman looked like she could wrestle Grizzlies and win. Without breaking a sweat. Or just stab them to death with her stinger. And the other looked like a hippie. There were flowers in her hair. Both were sitting closer to each other than the others. Both looked to be in their twenties.

"Princess Netossa and Spinerella."

"Hi there."

"Hello.

Another pair of adults. Neither of them was close to thirty, though, in Jack's estimation.

"Princess Frosta of the Kingdom of Snows."

Another silent nod. And she was a damn kid. If the girl was fifteen yet, Jack would eat his service cap. And she didn't have anyone sitting with her. Did they really let teenagers make decisions about war and alliances?

"And this is Hordak."

So, that was the former leader of the Evil Horde. Jack looked him over as he sat down. The alien looked like the clones they had seen before. Although he was wearing full armour. Nasty looking armour, too. Not decorative, like the Goa'uld. And he was sitting close to Entrapta.

"We have called you to discuss the situation with Earth and the Goa'uld," Glimmer said. "Our members have a few questions."

Great. Jack smiled. "We'll be happy to answer them," he lied.

*****

Planning Room, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

"...so you have six billion people?" Netossa didn't sound as if she believed it, Adora thought.

O'Neill, though, nodded with the same polite expression he had worn for the last fifteen minutes. "Yes. Though Earth isn't united - the population is split amongst about two hundred countries."

"Unevenly split," Daniel added. "The majority of the population is found in a handful of countries."

"That should facilitate negotiations." Netossa nodded.

"And you represent the most powerful kingdom on Earth?" Mermista leaned forward, her elbows on the table and her hands folded beneath her chin.

"Arguably, yes," O'Neill replied. "The United States of America are the most technologically advanced, richest and have the most powerful military."

"And you've kept the Stargate a secret." Mermista nodded.

"We've already covered that," Glimmer said.

"It's the crucial point," Mermista retorted, "How can we trust them to be open and honest with us if they don't even trust the other kingdoms on their planet? If they don't even trust their own people with the truth?"

"We didn't tell everyone everything either during the war," Adora told her.

"But our people knew at least that we were at war." Mermista didn't quite sneer, but it came close.

"Yes," Frosta spoke up. "And you don't have princesses. Not as rulers. How can we trust that you'll keep an agreement if your leader might get replaced at any time?"

“While our leaders may be replaced after an election, our countries do keep treaties regardless,” O’Neill replied. “If you can’t trust a country to keep a treaty, no one would deal with them.”

“That’s exactly the problem!” Frosta blurted out.

O’Neill smiled, but it looked a little forced. “We have a history of treaties being kept.”

Daniel coughed a few times, earning himself a glare from O’Neill and Carter. That was unfair. “Do you need a cup of herbal tea? Or a glass of water?” Adora asked. “Or are you sick? I can heal you!” she offered.

“No, no, I’m fine.”

Catra snorted, shaking her head.

“The Tau’ri have acted towards me with honour. I trust their word,” Teal’c said.

“Yeah, but you were working for the Goa’uld,” Mermista replied. “That makes your testimony a little suspect.”

Catra winced for a moment, and Adora glared at Mermista. That was uncalled for!

“Why?” Hordak asked. “Your people deserted you once as well. Do you distrust them?”

“That’s not the same!” Mermista snapped at him.

“Well…” Entrapta drawled. “It’s actually quite similar. From a logical point of view.”

“Whatever,” Glimmer spoke up. “We are in agreement that we’ll fight the Goa’uld and that we’ll protect Earth.”

“Yes!” Perfuma nodded emphatically. “We cannot let so many people be attacked and conquered - or worse!”

"Yes, but we haven't agreed on *how* we protect Earth," Mermista protested.

"We can't fight a war by ignoring potential allies," Adora said. "And while we have a fleet, we don't have nearly as many people as Earth has."

"If that's true," Frosta cut in with a frown. "No planet we know of has so many people. They claim to have over a hundred times more people than Etheria!"

"Why would they be lying? We would find out the truth as soon as we reach Earth," Bow pointed out.

"Exactly," Adora told him with a smile.

"I still have reservations. We can't form an alliance unless we know that we can trust them." Mermista looked a little mulish.

"We'll know that once we talk to their leaders," Glimmer said. "That's why we're sending a delegation."

"And because SG-1 can't agree to an alliance anyway," Catra added.

"We won't make an alliance until we're sure that we can trust the Tau'ri. You can trust *us* on that," Adora said, looking at everyone.

"Really, why are you being so difficult?" Perfuma asked, looking at Mermista and Frosta. "These people need our help!"

"Because if they betray us, they'll outnumber us a hundred to one," Netossa said. "That's kind of a worry."

"They don't have a fleet, though," Scorpia said.

"So they claim," Frosta repeated herself.

"We don't have a fleet. Believe me, we wish we had one," O'Neill said. "We don't like being so vulnerable."

“But you have advanced technology,” Hordak pointed out. “If you mobilise your entire population, you should be able to rapidly produce ships and train crews. In fact, since you haven’t done this despite it being obvious, did you check if your leaders have been compromised?”

Adora blinked - that was a good question. She looked at their guests.

O’Neill winced. “Revealing that we are at war with aliens was deemed to be too dangerous. The people would riot, panic, countries would distrust us…” He shrugged. “So far, we’ve done well enough by ourselves.”

“And do you share this view?” Catra asked. “You said you were looking for allies.”

“In our country, the military is under the command of the civilian leadership,” O’Neill replied, rather stiffly in Adora’s opinion. “It is not my place to question their decisions.

Catra smirked. “So you do think it’s stupid!”

O’Neill didn’t answer. But Carter didn’t show any expression, and Daniel hid a grin behind his hand, Catra was probably correct. Adora at least thought so.

“Great. We’re gonna have to deal with stupid rulers,” Mermista groaned.

“But at least they can be easily replaced by better leaders?” Perfuma smiled hopefully.

Judging by the way the entire SG-1 - with the obvious exception of Teal’c - winced at that. Adora was sure that this wasn’t going to work as Perfuma thought it would work.

At least it seemed Mermista had stopped being difficult.

*****

Samantha Carter pressed her lips together and forced herself to return to a carefully neutral expression. “That is not as easy as you think,” she said. “We have regular elections and set terms for our rulers. They cannot be removed easily.” Not democratically, at least, but she didn’t think that the princess was talking about coups and assassinations.

“I thought that you could easily replace a bad leader was part of why you have such a system,” Glimmer said.

“Some democracies can quickly change their leadership if a majority of the members of parliament agree,” Daniel said. “Not in our country, though.”

“Would be a bloody mess if that worked,” the Colonel added.

“It works for the United Kingdom,” Daniel retorted. “And for Germany, to name two examples.”

“But not for your most powerful kingdom - country,” Adora said, shaking her head. “Well, at least some bad rulers might be replaced then. That should help.” She sounded as if she was trying to convince herself, in Sam’s opinion.

“But forming an alliance is only logical,” Entrapta spoke up. “Why would anyone be against that? Especially with most of your planet defenceless against the Goa’uld?”

Sam grimaced. As did the Colonel.

“If they don’t trust us, for example,” Mermista said. “They might think we’re as bad or worse than the Goa’uld. Or that the Goa’uld don’t exist, and it’s a ploy to force them into a treaty.”

“If the Third Fleet is in orbit above your homeworld, then the lack of orbital bombardment should be proof that they do not intend to conquer you,” the former Horde leader said. “With such an overwhelming advantage, what would be gained by deceit?”

“Yeah… No. Things aren’t that simple,” the Colonel replied. “Overwhelming force isn’t always the best way to achieve your goals. And I am saying that as an Air Force colonel, mind you.”

Sam chuckled at the joke, Daniel sighed, but the others either looked confused or didn’t react at all in Teal’c’s case.

“You make it sound as if half your planet is crazy,” Frosta blurted out. That the Etherians let a child - she was barely fifteen, in Sam’s estimation - sit at the table and treated her as a sovereign ruler equal to the others said a lot about the planet’s culture. They were all so young. Sam could imagine how that would look to most politicians on Earth. Young people, especially young women… She knew how they were seen and treated.

“Well, we can sometimes give that impression,” the Colonel joked. “But no, it’s just… Very few people actually believe that aliens are real. Or magic. They will have a hard time accepting that we’re at war with snakes and allied with magical princesses.”

“That shouldn’t be a problem,” Adora said with a firm expression. “We can demonstrate that both are real.”

“And surely your word will help as well?” Perfuma asked. “Your country’s ruler is aware of the truth, isn’t he?”

“Yes.”

“And as the ruler of Earth’s most powerful country, people will listen to him, right?”

“Some will, yes,” the Colonel replied.

But they wouldn’t be happy about having been kept in the dark about the Stargate program. Especially the United Kingdom, since the Stargate was found in Egypt at the time when it was under British control.

“That’s a start.” Perfuma smiled. “We just have to convince the rest, then.”

Sam suppressed a wince. The princess sounded so earnest - and so naive, for someone who lived through and, presumably, fought in a war for years. Not naive, she corrected herself - ignorant. They didn't know anything about Earth. They lacked the experience and cultural awareness to understand the problems their arrival on Earth would cause.

They had to rectify this, or this would end in a disaster. She glanced at the Colonel; he was in command. "Sir!" she spoke up.

"Yes, Carter?" He cocked his head.

"I think we should brief our hosts extensively about the political and cultural situation on Earth."

"Yes, Jack!" Daniel chimed in, as she had known he would.

The Colonel narrowed his eyes at them both, and Sam had to suppress another wince. Telling him in public… that wasn't done. But they were in an extraordinary situation. So she met his eyes, and, after a moment, he sighed. "Well, we probably should at least explain in detail how the United States' political system works."

Daniel perked up. "I can do that, Jack!"

"An objective, neutral briefing, Daniel," the Colonel stressed.

Sam knew what he meant: A positive portrayal.

Daniel looked mulish. "I am objective."

"Remember that our hosts aren't familiar with democracy," Sam reminded him. "They don't know that it works."

"Right." Daniel sighed. "I almost forgot about the cultural preconceptions."

They were talking in low voices, but Catra was grinning at them - she probably could hear them, Sam knew. Well, this might serve

to build some trust - in a convoluted way.

“So.” Daniel stood. “Democracy. It’s a very old concept on Earth, over two thousand five hundred years old, but its form has changed a lot over the years. In Ancient Greece, it meant that every citizen of a town or country had one vote to determine the course of the polity, so...”

Sam refrained from sighing. Of course Daniel would start at the very beginning!

*****

“...and that’s roughly how checks and balances work.”

Catra rolled her eyes with a loud sigh. Daniel really didn’t know how to stop talking. She wasn’t sure if he was worse when he was asking questions or when he was lecturing.

“Catra!” Adora hissed under her breath.

“What?” Catra whispered back. “This is worse than cadet instructions.”

“Which were very useful!” Adora objected. Ever the model cadet. Even when she was very little, she had been so damn serious.

Catra grinned at the memory of Adora as a young cadet, then sighed. “Yes, yes. Eventually.”

“Eventually? This is an in-depth briefing of the government of Earth’s most powerful kingdom!”

“It’s also very long,” Catra retorted.

“Uh… do you have any questions?” Daniel asked, looking at them with an almost shy smile. “Was something not clear? I might have rambled a little, I think.”

A little? But Catra shook her head. “So, your government is based upon different factions struggling for power while keeping each other in check.”

“Ah, well, you could say that, yes.” Daniel nodded. “Although it’s really not…”

“Like the Horde then, but the leader can’t just have those who make too much trouble executed,” Catra went on. She pressed her lips together for a moment, remembering her banishing Entrapta. Not her finest hour.

“Catra!” Adora blurted out.

“What? It’s like putting the Force Captains against each other so they won’t unite and topple the leader,” Catra explained. “Only, there’s no overall commander who is above everyone else.”

“That wasn’t covered in Force Captain Orientation!” Scorpia protested. “I’ve never heard of that!”

Everyone looked at her. Catra sighed and put the palm of her hand on her face. Sometimes, she wondered how Scorpia had survived to make Force Captain in the Horde before Catra had taken over.

“Uh… It was called the Evil Horde for a reason, dear,” Perfuma said.

“We never called us that!”

“Everyone else did,” Glimmer cut in while Hordak and Entrapta were whispering about ‘official policy’. “Anyway, you have to balance different factions, one of which gets replaced every four or eight years, the other two lasting until death or retirement?”

“It’s not quite like that but, essentially, yes.”

“It’s really better than it sounds,” O’Neill added. “It has worked for hundreds of years for us.”

“A bit more than two hundred years at most, Jack.”

“That’s what I said.”

“But…”

“Two hundred years isn’t very impressive,” Frosta said. “My family has ruled the Kingdom of Snows for four times longer.”

And Queen Angella had ruled for almost a thousand years. But Catra wouldn’t mention that.

“Few monarchies on Earth were as stable,” Carter said. “And most of those are actually democracies.”

“Yes. With a figurehead.” Frosta pouted at her.

“Anyway,” Catra spoke up, “you have rules and traditions against anyone simply taking over, so that’s not an option.”

“Not for the United States,” Daniel said. “A number of other countries have suffered changes of power by force. Often repeatedly.”

“It didn’t serve them well,” Jack added. “So, that’s the United States of America. Warts and all. It’s not perfect, but it works well enough, and we’re always trying to become better.”

“I still fail to see why supporting your president to take control of the other factions and uniting the country is not an option,” Hordak said. “That’s how I started the Horde.”

“Which we beat,” Mermista snapped.

“Horde Prime arrived,” Hordak shot back.

Catra bit her lower lip. The Horde hadn’t really been beaten, despite her own… problems. They had actually been doing quite well.

"If they say it's not an option, then we have to respect that," Perfuma said. "We cannot force our own views on others."

"Right." O'Neill nodded. "No couping and no forcing regime changes. Good." He looked… not as happy as Catra would have expected. Had he planned on taking over his own country with the help of Etheria? She frowned, then shook her head. No, that didn't seem like him. It had to be something else.

"But can we actually deal with such a kingdom?" Spinnerella asked. "We would have to deal with every faction."

"Actually, foreign policies fall under the President's power. Though treaties need to be ratified by Congress," Daniel explained.

"So, we deal with the President, and then the rest of your government checks if the deal is good enough?" Mermista asked.

"Pretty much, yes."

"Great. How many countries does your planet have again?"

"Almost two hundred," Daniel told her.

"But most of them are too small to be very important," O'Neill pointed out.

"And there's the United Nations," Daniel went on. "Almost every country is a member of that organisation."

"You have a united government for your planet?" Adora asked. "Why didn't you mention that before?"

"It's not quite a government," O'Neill said.

"It was supposed to be a sort of global not-quite-government," Daniel explained. "But the way it was formed, well… It has its share of problems."

"More checks and balances?" Glimmer asked with a sigh.

"And bureaucracies," O'Neill added.

"Great." Glimmer shook her head.

"Are you really sure that having your leader take over isn't an option?" Entrapta asked. "One single leader would clearly make things more efficient."

Every one of their guests except Teal'c winced at that, Catra noted. They really had some deep issues with princesses. Or Horde leaders.

*****

Guest Quarters, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

"Well, this is a nice mess!" Jack O'Neill sighed as he sat down on the still too soft bed in their quarters. "Did you have to give our monarchist hosts ideas about couping and conquering Earth?" He looked at Daniel.

"I'm sure that Entrapta didn't mean it. The conquering Earth part," his friend replied.

"They were quite clear earlier that they didn't want to support a hypothetical conquest of Earth by your army, O'Neill," Teal'c said.

"The others were. I'm not sure Miss Mad Scientist got the message," Jack retorted. "She's buddy-buddy with the Evil Leader who tried to conquer Etheria. And she was part of his Horde." And he was sure that Hordak hadn't learned his lesson, whatever it was supposed to be.

"Adora is in a relationship with a former Horde leader as well. And another former Horde leader is a member of the Alliance," Daniel pointed out.

"And all of them wished that the president weren't held in check by Congress and the Supreme Court," Jack told him.

“To be fair, I think every American has wished the same at least once in their lives,” Daniel said. “But more importantly, I am sure she didn’t intend a coup. She thought about democratic changes in our government structures. Probably.”

“Probably.” Jack snorted. At least Daniel was honest. Sometimes too honest. On the other hand, their hosts seemed to trust him a lot, so that evened out. He glanced at Carter. She was uncharacteristically silent. Well, her little ‘suggestion’ had been a surprise. It had worked out somewhat, but Jack didn’t like how she had done it. And she knew he didn’t like it. “Carter. Your assessment.” It had been her plan, so she had to at least comment on it.

“Sir.” She briefly winced, then nodded. “I think we’ve built trust with our hosts. They are aware of the problems their arrival will cause and of the difficulties we are facing when building an alliance. If we hadn’t informed them of this in advance, it would have damaged our prospects in the long run.”

“No one trusts a liar,” Daniel added. “And they need to be warned of... well, of how Earth is.”

“You don’t need to try and scare them off Earth, though,” Jack told him.

“I didn’t. I was fair and balanced in presenting our good and bad sides. And I didn’t even mention the bigotry and racism yet,” Daniel said with a frown.

Right. The other elephant in the room. Invisible elephant for now.

“Something else we can’t put off until we reach Earth, Sir,” Carter said.

“And something that is anathema to Etheria, as far as I can tell,” Daniel added. “In my talks with them, it never came up. They might not even have a concept of hating someone just for being different.”

Jack snorted. “That’s human nature. You’ve seen how hostile some of them were. The kid and the Sea Princess are carrying grudges.”

“But those are related to the war. I never heard of any view that would be the equal to racism on Earth.”

“You didn’t notice how they view former Horde soldiers?” Jack asked. “They don’t trust either the clones or the other former Horde members.”

“But that’s not the same as hating someone just because they’re gay. Or black,” Daniel said.

“Or looking down on women.” Carter didn’t frown, but she would have if they were civilians. Jack was sure of that.

He sighed. “I know. But we can’t just tell them all the bad stuff about us. That would give the wrong impression.”

“I am sure that they will understand that Tau’ri society is not perfect but striving to improve,” Teal’c said. “They do value redemption.”

Of course Teal’c would catch that.

“They want to save the Goa’uld. Or change them,” Daniel pointed out. “That’s…”

“...terribly naive,” Jack said.

Daniel frowned at him. “I would call it idealistic, Jack.”

“Idealists are the worst,” Jack muttered.

“They seem to be genuine,” Teal’c said. “And their ideals are honourable.”

Had they gotten to Teal’c already? He hadn’t been raised in a democracy. He might not realise how dangerous and prone to

corruption monarchies were no matter who started them. “Yeah, yeah. And how will they react when they find out how not-idealistic politics are on Earth?”

“That’s why we briefed them, Sir. So they can mentally prepare.”

Which would also prepare them better for the negotiations. The State Department wouldn’t be happy if they ever realised that. “Well, they still want to take us home. And they still want to protect Earth and form an alliance,” he said. “So, it worked out. For now.”

Daniel smiled. And Teal’c nodded slowly. At least Carter didn’t smile.

Jack narrowed his eyes and stared at Daniel and Carter. “But no more such stunts. We’ll carefully plan how to tell them about the other problems they’ll face on Earth. Understood?” He wouldn’t tolerate more such surprises.

“Yes, Sir.”

“Yes, Jack.”

Teal’c nodded silently.

“Then let’s get ready for the banquet.” Jack nodded. “Carter, you have the bathroom first.”

“Sir.”

“And no sneaking off to raid the royal archives, Daniel. Behave.”

“Jack!”

“Don’t tell me that you haven’t thought about it.” Jack grinned.

“I would never break their trust like that!”

Unless Daniel thought it was necessary. Jack’s friend was an academic and a civilian, but he could be very pragmatic. Like

everyone on Jack's team.

*****

Royal Hall, Bright Moon, Etheria, July 11th, 1998 (Earth Time)

Compared to other feasts, this one was not much to write home about. The food was great - Adora took another serving from the roast beef - but everyone was acting subdued or annoyed.

"...and then we compensated for the stellar drift, and the remaining star systems in the data banks we copied from Alpha were quickly sorted out thanks to a spectral analysis of your sun. As we expected, Earth was amongst them! Isn't that fascinating? That our planets were linked so long ago, we don't have records of it? But now we do!"

Well, almost everyone was acting subdued. Entrapta was enthusiastically explaining to the others how they had found Earth's coordinates, with Carter and Bow nodding along.

"Indeed." Hordak sounded… not bored, but not as enthusiastic either. "How long will it take Third Fleet to reach the planet?"

"About a month at cruise speed," Entrapta replied. "We could do it faster at flank speed, but that would put a lot of strain on the engines, and while Darla could handle it - with some additional maintenance - the Horde frigates would need yard time afterwards. If they even make it that far."

Adora winced. 'Some additional maintenance' probably meant Entrapta and Bow working frantically to fix the ship and keep it from falling apart. Just like when they had set out to save Glimmer from Horde Prime. And Catra.

"Well, it would be faster if we just headed to a planet with a Stargate and took the quick route back," O'Neill said.

“If we find a Stargate that’s not guarded,” Catra retorted. “If the Goa’uld find out about us, that will cost us the strategic surprise.”

Adora nodded. “The longer they don’t know about us, the better.”

“You cannot count on the Goa’uld being ignorant of your existence,” Teal’c spoke up. “They knew about the Horde, or at least about the threat it formed - this sector was prohibited for the System Lords under Ra for a reason.”

“Because they feared Horde Prime,” Glimmer agreed.

“Or they merely didn’t want to risk a prolonged war against a peer-level opponent,” Daniel suggested.

“The snakes don’t do live and let live,” O’Neill retorted. “That’s not their style. They want to rule the galaxy.”

“Or at least the Tau’ri,” Teal’c added.

“Yeah.”

“Well, we won’t let them,” Adora told them. Letting such monsters who enslaved entire planets be? Not if she had something to say about it! And she did.

“Still, giving Earth some advance warning would be a good idea,” O’Neill went on. “So they can prepare for the fleet’s arrival. If we take one of the shuttles with us, we could head down to a planet and use the Stargate without alerting the Goa’uld.”

“Unless they spot you,” Catra told him. “The shuttles are a thousand years old. They aren’t exactly stealthy.”

“The Goa’uld technology is mostly stolen from other species and hasn’t progressed very much in the last millennia,” Carter pointed out.

“It’s still a risk,” Glimmer said.

“We could use the frigate’s transporters!” Entrapta suggested. “If we can make orbit without being detected. Which might be kinda hard if the Goa’uld have a decent patrol system.”

“Many System Lords will be expecting attacks by their rivals,” Teal’c agreed, “and be prepared accordingly.”

“We’ve beaten worse odds,” O’Neill said.

“And you’ve ended up stranded here,” Catra countered.

“The odds of that happening again aren’t very high,” O’Neill said. “It would be worth the risk.”

“We can check a few planets on the way,” Glimmer said. “But only after careful planning. We have to remain undetected.”

“Fair enough.” O’Neill shrugged.

“And if you find an unguarded Stargate, who would travel to Earth?” Mermista asked. “All of you? Anyone from us?”

Adora opened her mouth to say that she would be heading through, but Catra grabbed her thigh and pricked her skin with her claws. “Ow!” she complained, glaring at her lover.

“Third Fleet,” Catra hissed.

Oh. Right. Priest and the others wouldn’t take kindly to that. They probably would insist on sending a guard with them. Half an army.

“Whoever you want to send along,” O’Neill said. “That’s your decision.”

“Or none,” Glimmer shook her head. “We wouldn’t want to split our party.”

For some reason, O’Neill seemed amused at that.

“And it reduces the temptation for some of Earth’s leaders to take our people hostage,” Netossa added. “If they hear about a fleet

coming, some might panic."

"We wouldn't let that happen," Daniel protested. "And it would go against every treaty regarding diplomatic immunity."

"Still, it would be best to arrive as a unified party," Glimmer said.

"Or not find a Stargate at all," Catra whispered under her breath low enough so only Adora could hear her.

Well, that was out of their hands, wasn't it? Oh. Catra meant lying about not finding a Stargate. "I doubt we can fool them," Adora whispered.

"Well, not if you try to lie to them." Catra snickered.

Adora pouted at her lover. But, speaking of lies. She cleared her throat. "Also, in the interest of fostering trust, I have to reveal something we've been keeping from you until now." She stood.

The whole group immediately stared at her. And O'Neill tensed up - she could see him stop slouching in his seat. Glimmer was frowning at her, but this had to be done.

"This is my form when I am She-Ra," she went on. Taking a deep breath, she changed back. "And this is what I really look like."

SG-1 seemed shocked for a moment.

"A magical transformation!" O'Neill shook his head. "Now, you just need a theme song."

What?

*****

Samantha Carter stared. Such a transformation! Adora had lost more than a foot in height and much more in mass. And her long mane of golden hair had been changed to a more normal dirty blonde ponytail. How was that possible? Magic, of course. With

the power Adora had demonstrated, changing the body wouldn't be too much of a feat. Still…

"Theme song?" Adora blinked. "What do you mean?"

Oh! Carter narrowed her eyes at the Colonel. He had to go there.

"Oh, just a thing that's popular in some TV shows. A theme song," he said with a grin.

"That's a popular media on Earth. Moving pictures that tell a story," Daniel cut in. "Some of them portray magical princesses who transform to fight monsters. Not unlike yourself."

Right. Sailor Moon. Cassie loved those cartoons. Sam had had to watch them often enough when visiting the girl. Apparently, so had the Colonel.

"Although they usually do not grow in size as much as you do," Teal'c added. "Though the transformation of their clothes seems similar."

And obviously, so had Teal'c. Sam suppressed a giggle - the thought of the Colonel and Teal'c having to watch a show aimed at young girls…

"Your magical companion seems to be larger than the norm as well," Teal'c went on, nodding at Melog.

The Etherians still looked confused. Sam looked at Daniel. This was his task. If Sam had to explain Sailor Moon to aliens, the Colonel would never let her forget it.

"So, there are cartoons - animated pictures. Drawings," Daniel began. "They are quite popular with children. And some adults," he added with a glance at the Colonel.

"Hey! The Simpsons are quality entertainment for adults!"

"The Simpsons?" Catra asked with a grin.

"Jack's favourite cartoon," Daniel told her. "Anyway, amongst those cartoons, there's a genre that has magical princesses, and they are usually depicted…"

*****

"...which is why you reminded us of that show," Daniel finished his second lecture in a day.

"Fascinating! You use holograms for entertainment!"

"Ah… no," he said.

"It's a different technology," Samantha Carter told Entrapta. "It's not a hologram, but it uses a screen."

"Ah. Still a great idea!" Entrapta nodded eagerly.

"Oh!" Princess Mermista's consort, Seahawk, beamed at them. "Imagine a show depicting my many adventures!"

Judging by the expressions on everyone's faces, even Mermista's, they didn't like imagining that.

"Yeah, no," Glimmer said.

"We can check out those 'TV shows' on Earth!" Entrapta smiled. "And we can work out how to adapt them to our planet!"

"There are also movies. Cinema," the Colonel said with a smile. "You'll love them."

"You need to watch Star Wars," Teal'c said. "I have watched it thirteen times, and it remains as impressive and moving as it was the first time."

"Star Wars?" Adora asked, at the same time that Daniel blurted out: "*Thirteen* times?"

Which started another round of explanations.

*****

“So, this Darth Vader was the right hand of the evil Emperor. And he was hurt, so he had to wear a suit of armour that kept him alive. And in the end, he threw the Emperor down a reactor shaft.” Entrapta nodded as she summed up Teal’c’s explanation. “He’s like Hordak!”

What? Samantha Carter stared at the clone.

“I am no longer dependent on my armour for survival,” Hordak objected.

“But you were! And you threw Horde Prime down a shaft!”

“And you led an evil Horde,” Mermista remarked, shaking her head.

“We must watch Star Wars when we reach Earth! And in a theatre, so we can have the proper experience, as you explained!” the princess declared.

The Colonel had the grace to blush when Sam looked at him. This was all his fault. At least hiring a movie theatre for a screening of the trilogy would be an easy feat for the State Department. Sam hoped she would be able to watch when the Colonel had to explain the request.

But that was a thing for the future. They had more important things to worry about. She cleared her head. “So, we know the route to Earth.”

“Yeah,” the Colonel cut in, as she had known she would. “So, when are you planning to leave?”

“In a few days, once we have the fleet provisioned and ready to move,” Glimmer replied. “That will leave us enough time to look through our archives as well.”

"And enough time to modify the First Ones shuttles!" Entrapta added.

A few more days on Etheria. And then a month in space to reach Earth. Probably.

Sam really hoped they would find a Stargate on the way. Stargate Command needed advance warning of their arrival, or things would turn a little problematic. The General wouldn't be pleased in any case. Well, he certainly would be happy to know they survived, but dropping a fleet led by magical princesses in his lap?

His reaction to that wouldn't be pretty. Sam felt a little guilty that she was glad the Colonel would have to shoulder most of the blame for that. Just a little, though.

And the reaction of the government… She had half a mind to ask Entrapta if she needed another 'science buddy'. On the other hand, part of her couldn't wait to see how all the sexist politicians and generals she had met would react to the Etherians.

*****

The Farm

Royal Gardens, Bright Moon, Etheria, July 12th, 1998 (Earth Time)

Perched on a ledge on the palace wall, Catra spotted her prey almost at once. He was working out - stretching right now. But even from this spot, she could see that he had been running - his top was drenched with sweat. She looked around some more but couldn't see anyone else. There shouldn't be - Teal'c was in the guest quarters, 'meditating', Carter was with Entrapta and Hordak doing tech-stuff, and Daniel was with Glimmer in the Royal Archives. Or the private family archives. Whatever.

Perfect. She grinned as she stood, then jumped off, landing on a windowsill a bit to the side and below her. Another jump took her to a small ledge for a lantern, and then it was a safe drop to the ground.

She landed on all fours on the grass below. As she rose, O'Neill turned to face her from then yards away. "I thought the garden was off-limits to others," he said, raising his eyebrows.

She shrugged. He was correct, actually - Glimmer had ordered that to give their guests some privacy - but it wasn't as if Catra cared. Instead of answering, she looked him over. His rifle was next to him, leaning against the tree he had been using for his stretches. Close enough to grab it quickly. "Never cared much for every little rule."

He snorted at that. "Just for the important ones?"

"I focused on results." Overly so, but that was neither here nor there.

He cocked his head to the side. "In the Horde?"

"Yes."

“What I heard of the Horde didn’t make me think it was a very flexible organisation,” he said as he started some squats.

She flashed him her fangs. “It was very flexible when I was in charge.”

“Ah.” He stopped and faced her again. “You were in charge of the Horde?”

“Effectively, yes. Highest ranking Force Captain.” And she had earned it. “Directly below Hordak. And he was too busy with his research to meddle with command.”

“Must have been a cushy job. Why did you quit?”

Because everything had been rotten from the start. She forced herself to shrug and grin. “I had a disagreement with Horde Prime about general policies.”

His eyebrows rose for a moment, and she was sure he didn’t really believe her. But he nodded. “That tends to happen with megalomaniacal dictators. Sooner or later, they go off the rails.”

Oh, she knew that from first-hand experience.

“So, why did you come here? I suppose you have a gym of your own to work out.”

She shrugged. She could use the training hall for the guards. But she only did that when Adora trained. “I wanted to check on you. You’ve gone through a lot in two days.”

This time, he did snort. “You’re worried for us or about us?”

She grinned. No need to mince words or with him. “About you. You look like you can take care of yourself well enough.”

“About us? We’re just four soldiers who got lost.” He picked up one of the fluffy towels the Bright Mooners loved so much and wiped some sweat from his face and neck.

“You’ve blown up a palace before, according to your friend.” She leaned against the tree, crossing her arms. “But I’m more worried about the rest of you.”

“Little old Earth? We don’t even have a single spaceship. You’ve got three fleets.”

So they claimed. Catra wasn’t quite sure if that was true. They would have been able to recover technology. And they knew about First Ones technology - Carter certainly did. “You’ve got six billion people. And you’re afraid of their reaction to us.” And that worried her.

“Yep. It would really make things easier if you wouldn’t reveal yourself to the whole planet.” He sounded flippant, but he was serious, or so Catra thought.

“Easier for you,” she replied. “But only in the short run. The longer you lie to someone, the worse it’ll get.” Especially if you were lying to yourself.

“The longer it lasts, the more time you have to prepare for dealing with it.”

“You mean the higher the chance that someone else will have to deal with it.”

“Hey! Delegation and procrastination are the base of good leadership.”

She snorted at that. “I was never any good at either.” She tilted her head as he jumped up and grabbed a low-hanging branch to do some pull-ups.

“So, what are you worried about specifically?” he asked between pull-ups. “You hold all the cards.”

“Until you start building your own spaceships.”

“Well, by then, we’ll have kicked some Goa’uld butt together and will be friends. No need to worry.”

Catra snorted again. “Six billion people. And no princess to lead them. That’s like the biggest army ever, without a commander in chief.”

“We do have leaders.”

“Leaders elected by the people. How good would an army be if they elected their officers?” She knew the answer to that - soldiers would vote for the worst officers who let them be lazy. Or run wild. “You don’t elect your officers, do you?” She certainly hoped they weren’t that crazy.

“People aren’t an army.” He dropped down, grabbed the towel again and turned to face her. “But we had long discussions about that. So why are you here by yourself?”

That was a good question. Because Adora was busy and Catra was bored wouldn’t be a good answer. And not true either. “I’m not a princess. And I wasn’t raised with princesses, either. I was a Horde cadet since I can remember.”

He frowned for a moment, then shrugged. “And?”

“So, I’m not like my friends.” Not like Adora. She flashed her fangs at him again. “I overheard your discussion. I know that there’s more to your story and your planet.”

“Ah. And you want the truth.”

She scoffed. “Not particularly. I just want you to know that if Adora gets hurt because of you or your people, I’ll take it out on you.” She nodded at him, then jumped up, landing on the next higher branch. A few more jumps and she was on the palace wall again.

Mission accomplished.

*****

Royal Archives, Bright Moon, Etheria, July 12th, 1998 (Earth Time)

"...and then just down the hallway until you reach the entrance to the archives."

"Thank you." Jack O'Neill nodded at the helpful guard - a woman, like about half the guards in the palace, part of him registered - and started walking down the corridor. Seeing guards in chainmail and carrying spears on a world with spaceships in orbit still threw him off a little - it was too much like a Goa'uld palace. At least the spaceships weren't pyramids, and the hallways in the palace, while wide enough to fit two cars next to each other, weren't covered in gold and murals praising a snake. In fact, there was a distinct lack of decorations - no statues or pictures, actually.

He'd been to palaces on Earth - well, one, during a stay in England that he couldn't talk about until everyone involved had died from old age - and they tended to be a little cluttered with such stuff. Another cultural difference, as Daniel would say. Plenty of those going around.

Passing a window, he glanced outside. Two people were unloading a horse cart next to a skiff. This must have been how the country had felt back when people were still using horses to get around while planes were already carrying passengers and the mail. It would be interesting to find out how the people outside the palace lived. Perhaps he could arrange a little excursion before they left for Earth?

Two more guards, a woman and a man, stood in front of the door. "Howdy!" he greeted them with a wide smile and his best fake Texan accent.

Unfortunately, they didn't react at all. "Are you here for the archives or are you looking for someone?" the woman asked.

"Both!" He grinned at her, but she didn't react this time either.

“Your friend is inside.”

The other guard opened the door for him.

As he entered, Jack was tempted to ask them if they didn’t have to tell him not to touch anything and be on his best behaviour. He didn’t, though. Those people were just too nice and trusting for that. Or appeared to be.

Inside, he had to whistle - shelves upon shelves formed rows in a huge room, and each of them was full of scrolls, stacks of sheets, and… “Crystals?”

He cocked his head and walked forward, looking at a line of purple crystals sitting on the shelf.

“It’s a form of data storage. Obsolete, though, since a century, or so I’ve been told.”

“Hi, Daniel.” Jack nodded at him. “They told you that?”

“I asked.” Daniel smiled. “This is incredible - the records go back to the founding of the kingdom! To the day the First Ones arrived - officially arrived, I mean.”

“Well, enjoy it while you can,” Jack told him. “We’re still set to leave in a few days.”

Daniel’s face fell. For a moment, Jack worried that his friend might choose to stay. But he wouldn’t. He had never before, after all. Then Daniel smiled again. “Yes, I know. I hope we’ll be done with our search by then.”

“Good.” They needed Daniel for this. The people back home were good - the government wouldn’t have campaign donors represent them in the negotiations with Etheria - but Daniel was the one who had the best insight into their future allies. And, speaking of insight… “By the way, isn’t this anachronistic?” He nodded at the crystals. “Magical data storage, but horse-drawn carts? And spears?”

“Not at all!” Daniel beamed. “You can’t expect technology to advance just as it did on Earth. Certain technologies depend on others, but not everything is interconnected in that way. And magic, as well as different species, will completely change how a civilisation develops. Etheria had electronic - well, magical, but with similar results - communication a hundred years ago!”

“And how widespread is that?” Jack asked.

“Ah…” Daniel blushed. “I haven’t actually asked. I should.”

“Do that.” Knowing how the average commoner lived in Etheria would be very valuable to know. You couldn’t judge a country according to the palace of its king, after all. Some of the poorest countries had leaders who lived in luxury while their people starved. Jack didn’t think this was the case here, but neither did he think everyone lived in such a palace.

“Oh, by the way,” he went on. “I got a shovel talk at my age. Should I be flattered or afraid?”

“A shovel talk?” Daniel gasped.

“Yes,” Jack went on, hiding his grin. “That’s when you are threatened with death should you hurt your date.”

“I know what a shovel talk is, Jack!” Daniel bristled. “But why did you get one? What did you do?”

Jack snorted. “Nothing like that. Catra just warned me that if Adora gets hurt because of something on Earth, she’ll take it out on me.”

“What?” Daniel stared at him.

“What? What did she do?”

Oh damn… Queen Glimmer had been on the other side of the shelves. Time for damage control. “She was joking,” Jack quickly said.

“Was she? Even if she were, that’s not how you treat a guest!” Glimmer scoffed through clenched teeth. “I’ll talk to her. And I’m sorry about this!”

“It’s nothing. She’s just looking out for her girlfriend,” Jack said.

“It isn’t nothing!” Glimmer insisted. “And she should’ve known better.” She sighed. “I’ll handle this.”

Oh, damn. Jack felt like a tattletale. “Really, it’s nothing,” he repeated himself. “I understand where she’s coming from.”

And now Glimmer was looking at him with narrowed eyes. “You do?”

“Don’t you feel protective of your friends?”

“Of course I do!” she replied. “But that doesn’t mean I threaten guests without any reason!”

Well, whether or not Catra had a reason was debatable. Jack clenched his teeth for a moment. How to handle this? Hadn’t Catra talked to Glimmer about what she heard? “It’s not all sunshine and rainbows on Earth,” he said. “She’s got a reason to be concerned - we have a lot of differences, after all.” More than they knew.

“We know that,” Glimmer said.

“But also many things that we share,” Daniel cut in.

Jack refrained from asking what exactly, other than a desire to kick snake butt and help their victims.

“Well, of course we do,” Glimmer said. “Even if you have a weird system for governing your kingdoms - your countries. And you don’t have stage plays, but those ‘movies’.”

“We do have stage plays,” Daniel said. “And concerts. Both are quite popular.”

“You do?” Glimmer smiled. “That’s a relief. We thought that all that you did for entertainment was staring at a screen.”

“Don’t knock it until you’ve tried it!” Jack protested - but with a grin. Situation defused? “Anyway, we’ve got six billion people, which means our fair share of idiots is much bigger than yours.”

“In total numbers,” Daniel explained.

Jack frowned at him. Judging by the way Glimmer pursed her lips, she didn’t like being talked down to, even by accident. Well, few people did. And she was royalty. “Anyway, don’t, ah, scold her, OK? It’s really no big deal. I probably would do the same thing in her place if I was worried for my team.”

Glimmer snorted. “There’s always a reason to scold her.” But she was smiling. “So, what brings you here?”

“Oh, I wanted to check up on Daniel. Maybe drag him out to see the sun for an hour or two. Take a trip through the countryside before we get stuck in a spaceship for a month?”

“Oh!” Glimmer blinked. “That’s right - we’ve been here for hours!”

“That’s not a problem!” Daniel reassured her. “I love this!”

“Yes, you do,” Jack agreed. “But it’s not healthy to stay inside all day.”

Daniel stared at him, then frowned. Jack kept smiling at his friend. Yes, I need you outside, he thought. Come on, pick up the hint!

“I guess a break wouldn’t go amiss,” Daniel said with obvious reluctance. “And you might be needed for, well, ruling?” he asked the queen.

Glimmer rolled her eyes. “Dad should be able to handle it. He will have to when we leave for Earth. But I guess a break sounds fine.” She looked at the crystal in her hand and shook her head.

Possibly troublesome information? Jack wondered. Not that he'd ask the queen right now.

Glimmer sighed, then smiled. "I'll ask Adora to be your guide. She must be all worked up about planning and logistics by now."

"Thank you," Jack said. He would have preferred to walk around without a 'guide', but he couldn't fault their hosts for being cautious. And, he added to himself, with all the magical creatures around, maybe there were monsters to be wary of outside the city.

Getting ripped apart by an alien Killer Rabbit of Caerbannog because Jack didn't recognise the threat until it was too late would be an embarrassing way to die.

*****

Outside the Palace, Bright Moon, Etheria, July 12th, 1998 (Earth Time)

"So, where do you want to go?" Adora asked with the best smile she could manage as they stepped through the gate. She didn't need to take a break no matter what Glimmer had said. Not when they still had so much to plan for their expedition. They would be gone for months, and that required extensive planning to cover all eventualities! She had barely gone through everything that was needed in case they all lost their engines at the same time.

Catra, walking and stretching at the same time, snorted.

Adora frowned at her. Her lover, of course, had agreed with Glimmer - but only so she could take a break as well.

"Well, I was always fond of the countryside," O'Neill told them. "You know, farmlands and such. Makes me feel nostalgic."

"You want to compare farms," Catra said with another snort.

“Well… I’m curious, yes,” he admitted. “We don’t have magic at home, so I wonder how that changes things.”

Daniel nodded after a moment. That was a little weird - he was usually much quicker.

But Adora could show them farmland easily. “Most farms are near Bright Moon,” she explained as they walked over to a skiff. “The Whispering Woods aren’t good for farming - too many monsters venture out of them - though Plumeria manages well enough in their part.”

“That’s because Perfuma controls the plants,” Catra said.

Adora sent her another frown. She had been about to explain that! “Anyway, the farms surround Bright Moon.” She had already said that, damn. “Most produce, uh, vegetables. And they have cows.”

“Ah. Where do you get your grain?” Daniel asked.

“Mostly through trade, I think,” Adora said.

“Trade from the plains before they turn into the Crimson Waste,” Catra added. At Adora’s surprised glance, she grinned. “I was planning to cut you off from that supply once. Decided against it since Perfuma could have made up the difference easily.”

Adora blinked, then frowned at her lover. Did she have to bring her Horde past up?

“Ah. That would facilitate logistics,” O’Neill said.

“But if they could replace your grain source, why don’t they do it?” Daniel asked. “They could make a profit, right?”

They could, but… “Perfuma’s busy helping Scorpia,” Adora explained. “And she wouldn’t want to hurt the farmers in the plains.”

“Ah.”

“That’s good to know,” O’Neill said. “So, where is the next farm?”

“Get on, I’ll drive us there,” Adora told him, pointing at the skiff. She knew a few farms - well, she had seen them while travelling to and from Bright Moon. It wouldn’t be hard to find one.

“Do you know the farmer?” O’Neill asked as they climbed into the skiff. Well, Catra showed off and entered with two jumps. At least she hadn’t scratched the hull this time.

“No,” Adora told him as she took her position at the controls. Catra joined her, as expected.

“We don’t have to visit the closest farm if there’s a farmer you know a bit further away,” O’Neill said. He was standing near the bow.

“Ah, sorry, I don’t know any farmer,” Adora replied. She might have met some at one of the festivals, but she wouldn’t be able to tell if they were farmers, of course. Bow had a brother who was a farmer, but Adora had never met him, and his farm wasn’t near Bright Moon anyway. At least as far as she knew. “But it shouldn’t be a problem; everyone I met was very friendly. They won’t mind showing you their farm.” At least they shouldn’t.

“Ah.” O’Neill looked at Daniel, who seemed to be frowning.

“Is something wrong?” Adora asked while she guided the skiff next to the road - you didn’t drive on the road with a skiff, after all.

“Nothing.” O’Neill smiled. “Daniel’s grumpy because he wanted to spend more time in the dark cellars of the palace, staring at mouldy books.”

“It is a bright, well-illuminated archive, and there’s no speck of mould in sight!” Daniel protested.

“Ah.” Adora smiled. The two were friends and joking around with each other. Just like Catra and Adora had, back when they had been cadets.

But Catra was narrowing her eyes at the two, Adora noticed. So, something was wrong.

“We’re not exactly involved with farming,” Catra said, leaning against the railing. “We were raised as cadets in the Horde.”

“So I gathered,” O’Neill replied.

“Do you know any farmers back on Earth?” Catra asked.

“Neighbours of my parents,” he told them.

“Ah.” Catra grinned again. O’Neill smiled back, showing his teeth.

“As I said, I don’t think they’ll mind showing you around,” Adora repeated herself. “Whether we know them or not.”

“Unless you wear a Horde uniform,” Catra added.

“Well, we don’t,” O’Neill said.

“Is the symbol still in use?” Daniel asked.

“Not officially, but a lot of people are wearing their old uniforms. Even Adora does it,” Catra said.

Adora frowned at her for a moment before paying attention to the road again. She had removed the Horde symbol, but the uniform was just too comfortable. And practical. Bright Moon’s clothes felt a little off. “It’s a very good uniform,” she defended herself. “And you’re wearing your old one too!”

“I’m wearing it since it annoys Glimmer,” Catra replied with a grin.

“You two don’t get along?” Daniel asked.

“They do,” Adora said at once. “They just like annoying each other.”

Catra snorted again. “We have an understanding.”

“Ah.”

“There’s the farm!” Adora pointed out. She could see the fields on both sides of the road and the farmhouse a bit away.

“It looks new,” Daniel said.

It did. “The old one was probably damaged or destroyed during the war,” Adora said.

“Probably. I think I sent a tank platoon through this area,” Catra added.

Adora frowned. Did she have to remind everyone of her past in the Horde every day? And act as if she were proud of it at times? Adora remembered that battle. And not too fondly, even though the Alliance had come together as one here.

“That would have torn up the fields,” O’Neill said, looking down.

“Hovertanks,” Catra told him. “They don’t touch the ground.”

“Ah.” O’Neill nodded. “That’s easier on the countryside.”

“But they might have flattened the house anyway,” Catra went on. Adora pressed her lips together. There she went again.

“Bad drivers or standing orders?”

“Both. Anyone could hide with a grenade in the house.”

“Well, either way, it was rebuilt,” Adora said as they came to a stop near the main house. “Hello!” she yelled as she jumped down from the skiff.

A young man came out of the house, wiping his hands on an apron. "Who is… She-Ra!" He gaped at her.

She smiled at him in return. "Hi! Our guests here said they were interested in seeing a farm, so I wanted to ask if they could take a look at yours."

"We're not planning to take up farming," O'Neill added. "We're just curious how it compares to our own country."

"Of course!" the man blurted out. "Jesa is working in the fields, but I can give you a tour here. What do you want to see? Ah, I'm Ketro."

"Just show us around," O'Neill said. "No need to make a production out of it."

"Ah. Well, here's the barn, and there's the stable. It's empty right now since Jesa is using the plough and the cows are on the field. And there is our well. Over there…"

Adora smiled. This was going well. And Ketro didn't seem to mind Catra, either, which had been a worry for her.

*****

Laboratory No 2, Royal Palace, Bright Moon, Etheria, July 12th, 1998 (Earth Time)

"...and if we replace this part here with a smaller, more efficient one, we gain the space to add a second booster unit here! Do you see?" Entrapta asked with a smile.

Hordak nodded. "Yes, I see. Very good. But we need to compensate for the reduced redundancy in case there is a power fluctuation."

"Oh, yes. But we can handle that with a better power supply that can store the excess power as well. We just need a dual-way

regulator here.” Entrapta’s hair strand twisted and pointed at the main crystal array.

Or at least what had been the main crystal array - Sam Carter wasn’t sure any more whether the secondary array hadn’t eclipsed the main array’s capacity after all the modifications they had done. And speaking of modifications… “But can it handle fluctuations quickly enough?” she asked.

Hordak frowned at her, but Entrapta nodded. “Good question! We have to reinforce all power lines to compensate for the possible delay.”

“Unless we use the improved regulator,” Hordak said.

“But that model isn’t ready…” Entrapta’s eyes widened. “Did you finish it?”

Hordak’s pale, alien face twisted into a smile. “I did.”

“How did you manage to solve the synchronisation issues?” Entrapta cocked her head sideways.

“I replaced the control crystal with a more advanced one that could anticipate more requests So…”

“...it’s always ready to reverse the flow even as it feeds the engine! That’s perfect, Hordak!” Entrapta’s hair lifted her up, letting her hug Hordak.

The alien’s smile grew a little more… a little softer? Sam couldn’t really tell. “I would say adequate. Perfection is… overrated,” he said.

Entrapta’s smile grew softer as well as she nodded. “Yes.”

Sam was sure she was missing something. But asking for an explanation right now? Interrupting the two felt rude. The Colonel would do it anyway, of course, but Sam wasn’t him.

She still cleared her throat after a short while. "So, with those changes to the engine, do we need to adjust the controls as well?"

Entrapta blinked and released Hordak before turning to look at Sam. "Oh, yes! We need to update the controls, or the automated security programs will not allow the shuttle to use the improved engines. Silly limiters!"

Limiters generally had a reason, in Sam's experience. If the shuttles had been meant for civilian use, it made sense to regulate the engine's output so it wouldn't go past safe levels. For a combat craft, though? A military pilot was expected to handle such a challenge easily - and would be needing the full power at one point at least, no matter the risk or strain.

"And we need to make a note in the manual," Hordak went on.

"Right! Someone other than us will be flying this shuttle!" Entrapta nodded. "So, let's do it! Come on, lab buddy!" She dragged Hordak along with her hair.

Or, Sam amended her thought, Hordak let himself be dragged along. He was strong enough, according to Sam's estimates based on seeing him work on the shuttle, to resist Entrapta.

But he wouldn't. Sam was sure - the former Horde leader hadn't quite ignored Sam, but his attention had always been on Entrapta. Was that how Entrapta had been convinced to join the Horde? She had said it had been Catra who had offered her a lab, Sam remembered. And neither Hordak nor Entrapta struck her as the type to seduce an enemy into joining them. Still…

She shook her head. She was here to work on the First Ones shuttle, not to speculate about a workplace romance between a magical princess and an alien warlord. And she certainly wasn't here to wonder whether or not this had happened while Entrapta had been Hordak's subordinate and scientist. She wouldn't touch that thought in a hazmat suit!

No, she would do what she did best: Focus on the technology and learn as much as she could while she had the opportunity. Personal relationships could wait. A long time.

*****

Guest Quarters, Royal Palace, Bright Moon, Etheria, July 12th, 1998 (Earth Time)

"...and the farmers, even though they are living right next to the capital, use animals to pull the plough and other large farming tools," Daniel said. "Obviously, they haven't mechanised agriculture so far. Though with magic, they probably don't need to."

"The fields are too big to be handled by a single draft animal," the Colonel added. Samantha Carter raised her eyebrows at him, and he grinned. "I grew up with farmers as neighbours."

She filed that bit of information away as she nodded.

"Yes, Jack. But they manage to tend to those fields. So that means either their draft animals are much more efficient than Earth's, or they use magic to compensate. Somehow." Daniel shook his head. "Though I don't see how that would work."

The Colonel grinned. "See? Isn't that more interesting than mouldy old records?"

"They aren't mouldy!" Daniel snapped. Then he sighed. "But yes, we did find out more about Etheria's society - well, Bright Moon's. They don't have mass media as we do. Ketro and Jesa have a communication tablet, but it's mostly used as a telephone with video. The palace apparently can use the network to give out warnings and other information, but they don't use it for entertainment."

"So, the state controls the news - what passes for news here," the Colonel said.

"For now," Daniel replied. "Glimmer is interested in our media, so this might change. She was talking about adapting our entertainment media."

"Then let's hope that daytime TV won't kill Etherian agriculture," the Colonel joked. He grew serious quickly, though. "Other than the video phone thing, the farm wasn't very advanced. Could've been taken straight out of the 1930s on Earth."

Sam nodded. "Such technological discrepancies aren't uncommon on Earth either," she pointed out.

"They aren't, no. But not in developed countries," Daniel said. "If Bright Moon is their most advanced country, then contact with Earth will be more disruptive than we thought."

The Colonel nodded. Sam agreed as well.

This could be a problem.

*****

Planning Room, Royal Palace, Bright Moon, Etheria, July 12th, 1998 (Earth Time)

"...and logistics look good. Third Fleet should have stocked up on provisions by tomorrow," Bow said. "They are eager to escort us."

Catra snorted as she saw Adora wince at the comment. Her lover had left talking to Priest and his clones to Bow and the others and felt guilty about it. Typical! As if her friends didn't know how uncomfortable talking to those clones made her feel!

"Sorry…" Adora said. "I was busy."

Bow smiled at her. "We know - you showed our guests around."

"Kept an eye on them as they scouted your farms," Catra corrected him.

“Catra! They were just curious!” Adora said with a pout.

“Very curious,” Catra agreed with a snort.

“Besides, what is to scout there? It’s not as if we’re hiding the fields. Even if we wanted to, we couldn’t. Nor the barns.

“Actually, between Perfuma and Entrapta, I’m pretty sure we could create underground farms,” Catra told her. “But that wasn’t what I was thinking about. They were curious about the farmers.” At least O’Neill had been.

“So? That’s a good thing, meeting more people,” Adora said.

“They are a little odd about princesses,” Glimmer added with a nod.

“Odd? How so? I didn’t notice anything odd,” Entrapta said with a frown. “Sam is a great scientist!”

Hordak tilted his head slightly. “She’s skilled. But she doesn't have much experience with our technology.”

Are you jealous? Catra wondered privately. Or just concerned? As if he had to worry about Entrapta falling for someone else; Catra’s friend was head over heels for Hordak. But that was a topic for another day. “You know how they are about their ‘democracy’; they wanted to find out how you treat farmers,” she explained. “Whether we treat them like the Horde or not.”

“Oh!”

Glimmer scowled. “Who do they think we are?”

“They have certain preconceptions about princesses,” Bow said. “Based on their own planet and the Goa’uld.”

“Well, they better lose them if this Alliance is going to work out,” Glimmer retorted. “So, did their visit go well?”

“Yes,” Adora said, nodding firmly. “Ketro and Jesa liked them, too.”

“Good. They’re good people, too. Anyway, we’re ready to leave as soon as Darla is ready,” Glimmer said. “Dad’ll handle Bright Moon in my absence.”

King Micah nodded. “We’ve informed the staff.”

“We still need some time to get the shuttles modified - well, one of them,” Entrapta said. “We might need her if we want to visit a Goa’uld planet. I am thinking of calling her Delia. Hordak told me that ‘Tiny Darla’ would be misleading.”

Right. Catra pressed her lips together. She wouldn’t mind skipping all those planets and not giving Earth a lot of time to prepare for their arrival. Less chance of them hiding something important. On the other hand, if their people really would be shocked by the existence of other planets, maybe a little warning would be good. Enough to avoid the worst, but not enough to fool Adora and the rest.

“Can you do it in a day?” Glimmer asked.

“Uh… It wouldn’t be as good as it could be,” Entrapta said. “We’ve got some ideas about a stealth system upgrade.”

“You can tinker with it on the trip to Earth, can’t you?” Glimmer looked at her.

“Well, yes. Though we would have to take more parts with us.”

“Please do it.” Glimmer nodded. “I want to leave tomorrow.”

And if Entrapta was busy working on the shuttle, she was less likely to modify Darla literally on the fly.

“Why the rush?” Bow asked. “Is this about the archives?”

Glimmer pressed her lips together in return. So, it was about Queen Angella’s diaries. Catra suppressed the guilt she felt - the

former Queen was lost because of Catra's plan to win the war. A rather foolish plan, all things told, that had almost doomed them all and had led to Entrapta almost dying on Beast Island…

A hand on her thigh interrupted her thoughts. Adora. Catra snorted softly and nodded at her lover. She was fine.

Adora frowned slightly but nodded back.

"I've read through several entries," Glimmer said, "and Mom didn't mention any experiments. She also didn't mention any war to take over Bright Moon's land."

"She founded Bright Moon," King Micah said. "That is known."

"Yes. But was it a wilderness? Or another, earlier kingdom?" Glimmer shook her head. "I can't tell either way. Mom didn't say anything about it."

"There might be other entries," Bow suggested. "You only looked for half a day."

"Which was O'Neill's fault," Glimmer grumbled. "But going through the entire archive will take weeks. Weeks we don't have to spare. Not with a war looming."

"The Goa'uld don't know that we're about to fight them," Adora said.

"We can't count on that," Catra pointed out. "Not only might they strike at Earth at any moment, but they might regularly probe our sector or have spies planted on some planets." She certainly wouldn't have ignored a threat like Horde Prime - she would have had her troops keep an eye on him.

"Could they have spies on Etheria?" Entrapta asked.

"No. We were in Despondos for a thousand years," Glimmer said. "Any spies would be long dead."

“They could’ve hidden amongst us and survived so long by taking over other people,” Bow said.

“For a thousand years? Never trying to take over a kingdom?” Glimmer shook her head.

“Maybe they have, and we never noticed,” Entrapta speculated.

“Great. More things we need to search in the archives!” Glimmer cursed under her breath. Angella’s records must be something disturbing, then.

“Well, even if they had spies on Etheria in Mara’s time, they might not be loyal to the Goa’uld any more,” Catra said. “They might have gone native - or deserted.” Like Double Trouble. Oh. “We should probably keep an eye on Double Trouble, though,” she said.

“Double Trouble? Do you really think they could be a spy for the Goa’uld?” Bow asked.

Sometimes he was just too naive.

“They would betray us in a heartbeat, as long as they think it would be fun,” Glimmer said. “Remember how they vanished the first time?”

Catra nodded. She was biased, but she knew that you couldn’t trust that spy.

“But finding them will be hard,” Glimmer went on.

“We will do our best,” King Micah cut on. “Don’t worry about it.”

Catra was sure Glimmer would worry, of course. The princess had some issues with delegation.

Not that it mattered - since they were leaving for Earth in a day, she would have to leave that to others.

*****

Courtyard, Royal Palace, Bright Moon, Etheria, July 13th, 1998 (Earth Time)

The Etherians were no slouches, Jack O'Neill had to admit. When he had seen the amount of supplies they had readied for Darla, he had worried they'd be loading for days - they didn't have containers, or so it seemed, and he hadn't seen any cranes - but the big hulking half-scorpion-woman, Scorpia, and Adora in her magical amazon form, were making short work of that. The sun was still up, and the ship was, supposedly, almost ready to lift off.

He looked at his team. Teal'c was standing straight and not showing any emotion. Jack hadn't expected anything else. Carter was helping with last-minute adjustments of the shuttle, off to the side. And Daniel was… sulking. Jack snorted. "Cheer up, Daniel! You'll get more chances to visit!"

"But when? I doubt we'll be sent back to Etheria to search their archives, what with the war and all."

"The information will keep. Patience, young grasshopper," Jack told him. "Or: Priorities!" he added with a grin.

Daniel's glare deepened. "This information could give us crucial insight and information about the First Ones and their technology!"

"Then you can bet that General Hammond will send you back as soon as possible."

"Indeed. The General is very pragmatic."

"'As soon as possible'!" Daniel spat. "I've heard that before."

Right. He had heard something similar about saving his wife. Jack suppressed a grimace. "Come on, cheer up!" he repeated himself. "Wouldn't want our guests to worry that they might have accidentally offended you."

“I think they’ll understand my frustration,” Daniel retorted.

They probably would, Jack agreed. The princesses did seem to place a lot of importance on friendship. Which was a recipe for nepotism, of course, but it meant Daniel would have an easier time earning their trust. He shrugged. “And they want to win this war as well, so they’ll prioritise accordingly.” At least Jack hoped they would - he wasn’t quite sure about some of them. And Hordak… Jack carefully didn’t clench his teeth as he watched the alien walk up the ramp of the spaceship.

Cheers from the shuttle to the side drew his attention. Was that Carter in the cockpit? It was!

The shuttle slowly started to float, about a yard above the ground, then turned towards the loading ramp of Darla. Jack held his breath for a moment - he trusted his team with his life. And with his car, if they needed it. But piloting a ship that size up a ramp and into a spaceship? Carter was a pilot, but she had never piloted this kind of ship! But she was Carter. A genius.

So he watched as the shuttle vanished into the spaceship without the tell-tale sounds of metal hitting metal. She was the smartest woman he had ever met. One of the most beautiful ones, too. And the bravest by far.

And she was his subordinate, and he wouldn’t even think of anything beyond that. They were both professionals. And they knew the rules. So, nothing could happen. And nothing would happen.

He sighed.

“Don’t tell me that you suddenly want to stay!” Daniel blurted out. A little hopefully, too.

Jack snorted. “Just feeling a little nostalgic,” he lied. “Let’s go over to the others.”

Now that the ramp was clear again, Adora was just lifting up another crate of supplies while Scorpia had already one on her shoulders.

"I guess if the shuttle hadn't been able to fly, you could've just carried it up the ramp, huh?" Jack joked as he approached the princesses.

Adora wrinkled her nose. "I actually don't know how much the shuttle weighs."

"More than a tank?" Scorpia asked. "I guess so. We'd probably have to carry it together then!"

Adora nodded. Probably yes.

Jack blinked. "Are you serious?" They couldn't be serious, could they? They had been carrying heavy crates without effort, but a shuttle? Or a tank?

"Well, when I was mind-controlled by Horde Prime, I threw a tank at Adora," Scorpia said.

"Yeah." Adora frowned. "And I wasn't allowed to throw one back."

Both laughed. But Jack had the distinct feeling that they weren't joking. He glanced at his friends. Daniel was staring as well, his mouth slightly open. Teal'c was unflappable, of course. "Well, you could try to lift the shuttle in the hangar inside," Jack said with a grin. "Wouldn't want to find out in the field that you can't carry it."

"Good idea!" Adora smiled. "Let's check it!" She lifted her crate on her shoulder and hurried up the ramp, followed by Scorpia.

"You were joking, Jack, weren't you?" Daniel asked.

"Let's just go and watch what happens," Jack told him, stepping on the ramp.

"Jack."

“Daniel.”

“We have not seen the tanks they threw around,” Teal’c pointed out as they entered the ship. “There is a significant difference between a light tank and a main battle tank.”

“Yeah,” Jack said. But even throwing a bloody M-3 Stuart around would be a huge feat.

Then he saw Adora lifting one side of the shuttle. She was grunting and straining, but she was lifting it.

Damn. “DC will sue for copyright infringement,” he muttered. “Supergirl is trademarked.”

“Jack!” Daniel hissed.

“What?” Jack stared at him. “It has to be Supergirl. Power Girl got short hair.” And a bigger bust.

“That’s not the point!”

Of course it wasn’t. But Jack didn’t want to think about what he had just seen here.

At least Carter seemed to be shocked as well.

Jack had never thought that their trip home would be boring. But he wouldn’t mind a few surprises less. Not at all.

*****

The Departure

Courtyard, Royal Palace, Bright Moon, Etheria, July 13th, 1998 (Earth Time)

The shuttle was heavy - too heavy to easily lift. And Adora didn't have the leverage to lift it, anyway. But she should be able to drag it, in a pinch, if they could rig some sledge or something. And it was good to know that.

She smiled at O'Neill. Then she noticed that he was staring at her. Had he expected her to lift the shuttle? Well, she couldn't beat physics! "Alright, now let's secure it!" she said. "We want to lift off on schedule!"

"Alright-y!" Entrapta's hair started to push buttons, and the shuttle seemed to freeze to the floor. "Magnetic clamps!"

Ah. Adora nodded. "Let's get the rest of the supplies."

"OK!" Scorpia followed her out of the ship. The four crates left took them two trips - you had to be careful with the parts Entrapta and Hordak were bringing.

"Alright! Everyone, to the bridge!" Entrapta said. Then she blinked. "Or to the ramp to say goodbye, I guess."

Glimmer's dad was waiting there, with the rest of the Alliance. Even Frosta was there, though she was scowling. Which made her look adorable, not that Adora would ever tell her that.

"Dad." Glimmer hugged Micah, closing her eyes.

"Be safe, Glimmer."

"Be brave!" Sea Hawk raised his fist to the sky. "You're going on the greatest adventure ye..oh!"

“Don’t scream,” Mermista told him after elbowing his gut. “And you! Don’t get killed!”

“We won’t, “Adora said. She would make sure of that.

“Not if we can help it,” Catra added with a snort.

Perfuma, one arm wrapped around Scorpia’s waist - as far as she could manage, at least - smiled at them as well. “And tell me about new plants and animals you meet.”

Right. That was a good idea. Earth would have many exotic plants and animals. “We’ll bring you back some seeds!” Adora told her.

“Ah…” Bow scratched his head. “That might not be a good idea…”

“I can keep them safe,” Perfuma told him.

“Good.” He nodded.

“Safe?” Adora wondered.

“Foreign plants - or animals - unbalance nature,” Perfuma explained. “It happened before, on a smaller scale, on Etheria, when new plants were introduced to an area.”

“Oh.” Adora hadn’t thought about that.

“They didn’t cover that in Force Captain Orientation,” Scorpia said.

“That’s because we tended to log the trees and crush the rest,” Catra said.

“Which we don’t do any more.” Perfuma smiled. “Anyway, safe travels.”

“Thank you.” Adora hugged all her friends. “Be safe.”

“Right. And Come’ere, Wildcat!” Scorpia grabbed Catra, pulling her into a hug despite the latter’s protests. Adora grinned at the sight.

“We’ll keep things going,” Netossa told them. “You forge the alliance with Earth.”

“Bye!” Entrapta waved at everyone as she walked up the ramp, where Hordak and SG-1 were waiting. Adora and the others followed her.

“That was a touching sendoff,” O’Neill told them at the top of the ramp. “I expected more speeches.”

“Speeches?” Adora blinked.

“You know, state affair, big speeches about the importance of this trip, a cheering crowd…” The man shrugged.

“It’s just a trip,” Catra remarked.

“It’s also a diplomatic expedition,” Daniel said.

“And the Alliance was here to see us off,” Catra pointed out.

“Right.” O’Neill nodded. “Everyone important, at least.”

They had reached the bridge, and Adora took her seat in the centre.

“Everyone, strap in!” Entrapta announced. “We’re ready for lift-off!”

As the holographic projections appeared, showing the state of the ship, the others sat down.

“All’s green!”

“System’s are good.”

Adora nodded. “Darla, take us up!”

The ship shook a little, then they rose, quickly clearing the palace walls. Then the view changed as Darla tilted, pointing her bow at the sky.

And then they were shooting towards space. Towards Earth.

“Your Divine Highness!”

And towards Third Fleet, which had been assembled in a close formation in orbit. Adora suppressed a sigh and smiled at the display showing their leader.

“Your Faithful stand ready to escort you on your holy mission!”

“Thank you, Priest,” she replied. “We’re happy to have you all with us. This is a very important mission.”

“We are ready to lay down our lives for you, Your Divine Highness!”

She winced. “Let’s hope it won’t come to that. We’re on a diplomatic mission.”

“Yes, Your Divine Highness!”

Catra snickered softly behind Adora. And O’Neill was mumbling something that Adora didn’t catch but which had both Daniel and Carter whisper to him. Or at him.

“Thank you,” she repeated herself. “Let’s proceed then.”

“Standard formation! Vanguard, cruise speed ahead!” Priest exclaimed. “Main force, form up around the Holy Vessel!”

Apparently, Darla had been upgraded in status. Adora really wanted to sigh. This was so embarrassing. And Catra found it incredibly amusing.

But they were moving now and would soon engage the hyperdrive.

“Now, let’s see if our calculations are correct!” Entrapta said. “We should be noticeably faster than before!”

“‘Should’?” O’Neill asked. “Haven’t you tested this?”

“Not on such a long trip, not yet,” Entrapta told him with a wide smile. “This will produce very useful data!”

It was clear that he didn’t share her enthusiasm, Adora noticed.

“Don’t worry,” she told him. “We are good at repairs in space.”

“Great.”

*****

Etheria System, July 13th, 1998 (Earth Time)

Samantha Carter watched the screens on the oversized bridge of Darla. According to the sensors, they were surrounded by Horde frigates. And since she could see some of the sleek ships just by looking out the windows on the bridge, she was inclined to believe the sensors.

“If the Navy ever sees the size of our escort, they’ll go green with envy,” the Colonel commented.

“The Navy?” Catra asked.

Sam hadn’t noticed her walking over to them. The woman could be very quiet, apparently. The claws on her feet must be retractable, so any sound they had made before on the floor had been by choice. Perhaps to make people underestimate her.

“You don’t have warships on Etheria?” The Colonel raised his eyebrows.

Catra snorted in return. “Of course we do - and you know it; you’ve met Mermista. So, there’s some rivalry between you and the Navy?”

“We’re Air Force,” the Colonel told her. “The Navy doesn’t like us.”

“I think it’s not quite so one-sided, Jack,” Daniel cut in. “At least according to, oh, everyone I met at the base. Except for the

Marines."

The Colonel grinned. "But the Navy started it. Anyway, they would be green with envy because you've got more ships as an escort than they have in total."

Catra, unexpectedly, frowned. "That'll make recruiting trained crew harder."

"They're trained on ships, not spaceships."

"But the principles are similar," Catra retorted.

"That is correct - in as much as Horde sailors are concerned. I set the training so they would require minimal training to crew spaceships as soon as we made contact with Horde Prime," Hordak said.

"Really?" The Colonel frowned in return. "That sounds a bit inefficient."

"The only major sea power amongst the Alliance is Salineas, and they became isolationist after the first Alliance fell apart. I considered the additional training worth the effort."

"And you lost the war," the Colonel said.

"Not because of my Navy."

"Well, we're Air Force. We're used to flying and crewing airplanes, so you'll find us more suited for crewing spaceships," the Colonel said.

"And Air Force pilots were the first astronauts," Sam pointed out.

"That, too. I guess we can recruit from NASA as well. That's our space agency."

"You've got space forces?" Catra asked.

“Not officially, no,” the Colonel admitted. “Nasa is a civilian agency.”

“And they don’t know about the Goa’uld, right?” Catra shook her head.

“That seems rather inefficient,” Hordak commented. Sam glanced at the alien - he wasn’t showing any expression. But Sam was used to Teal’c and was sure he enjoyed turning the Colonel’s words back at him.

The Colonels shrugged. “It worked well so far. We haven’t had much trouble with other services, no mass panic, not too many senators and other bigwigs meddling with operations, no international pressure…”

“And all built on a lie,” Catra replied.

“Technically, it’s an omission. A secret. You know, need to know and all that stuff.” The Colonel smiled, though it was a little forced. Sam could tell.

She cleared her throat. “So, I checked the route. We’ll be taking quite short trips through hyperspace.” According to what she had seen, Darla should be able to make much longer trips.

“Oh, that’s because we haven’t fully mapped out the route - our data isn’t as precise as it could be,” Entrapta said. “So we’ll be making frequent stops to check our data. Later, we’ll be able to shorten travel times. Also, this way, we can check that everyone kept up. If a frigate suffers a malfunction and drops out of hyperspace, she’ll be easier to find if we don’t have to backtrack all the way to Etheria.”

“Yeah.” The Colonel nodded. “Losing a spaceship is much more embarrassing than losing a plane.”

“Exactly!” Entrapta beamed at him. She turned to Hordak. “See?”

“Certain frigates wouldn’t be a loss at all,” Hordak said.

Catra scowled at him for that but didn't comment, Sam noticed.

"Everyone, strap in! We're engaging the hyperdrive in a minute," Adora announced.

"It's just for the very, very unlikely case that we've made a mistake modifying the hyperdrive," Entrapta said. "The data checks out, and, as I said, we've done shorter trips without issues, but sometimes, longer trips reveal a mistake in the setup."

Right. They were on a shakedown cruise. Sam pressed her lips together. It wasn't as if she'd never done anything like that. But, usually, it had been under pressure, with no time to carefully test anything. This wasn't the case here. Well, they were effectively at war, and the longer they waited, the higher the chance that Stargate Command would write them off, but…

"Three. Two. One. Hyperspace Window formed! Entering!"

And they were in hyperspace.

"Bubble's holding stable."

"No anomalies detected from the escorts."

Adora sighed audibly. "So, we're in hyperspace." She got up and stretched.

"And my scanners don't detect any signs of imminent system failures," Entrapta added.

Sam sighed herself. With relief. And a little apprehension.

They were on the way to Earth.

"Alea iacta est," Daniel mumbled, mirroring her thoughts. For good or ill, they were now committed. But then, they probably had been committed ever since they had met Adora and the others.

*****

Hyperspace Near Etheria, July 13th, 1998 (Earth Time)

So, they were on their way to Earth. Catra sighed. It would take them about a month if Entrapta was correct - and the princess knew her business. About a month on the same ship as O'Neill and the others.

She looked around the bridge. It had changed since her first trip with it. For the better, in Catra's opinion. Originally, it had been She-Ra's ship. One single seat for her, no consideration for anyone else. Just She-Ra and the ship. That wasn't a good way to travel, in her opinion.

"Something wrong?" Adora asked in a low voice.

Catra snorted. "Just wondering about our passengers," she lied.

"Ah." Adora nodded with a slight frown. "You still don't trust them."

Well, duh, of course not. She shrugged.

"You threatened O'Neill."

"I warned him," Catra corrected her. "That's not the same."

"They're our guests," Adora said.

Catra shrugged again. If they hurt Adora, they could be their sworn allies for all she cared; she would make them pay.

"So far, everything looks good!" Entrapta announced.

"The ship's performing within expected parameters," Hordak added.

"And are those parameters good?" O'Neill asked. "Just checking!" he added with a grin.

"Why would we alter the ship's systems to decrease performance?" Hordak asked.

“That would only make sense if you’re trying to sabotage a ship,” Entrapta added. “And Darla is our ship.”

Adora’s actually, though Darla might have second thoughts about it, if she could talk, in Catra’s opinion - Entrapta had spent far longer with the ship.

“The ship’s speed exceeds the speed of known Goa’uld ships, Sir,” Carter said.

O’Neill nodded. “That’s good then. If you’re faster, you control the engagement.”

“Unless you’re on the defensive,” Catra pointed out. You couldn’t run if you had to hold the line. Or fortress.

“Yeah, yeah. But we’re in a spaceship. Even if we have to hold a planet, speed will help a lot. Right?” He looked at Teal’c.

“That is correct,” the big man replied. “Although by using the mass of your ships against important targets, you can force even faster enemies to engage you at a point and time of your choosing.”

This was starting to sound like a tactical course for cadets. Catra snorted and stretched, groaning softly as she bent and straightened her spine. “So, we’re in hyperspace and won’t drop out for a few hours at least.”

“Twelve, to be exact,” Etrapta cut in.

Catra nodded. “Twelve hours. So, what’s for dinner?”

“Rations,” Glimmer said.

Catra scoffed. “Yeah, right.” As if anyone would choose to eat rations, least of all a princess.

Glimmer chuckled. “I had the palace kitchen pack us a meal. We just need to reheat it.”

Catra perked up. That was better than what she had expected. "Don't tell Priest, or he'll try to have his cooks do the same for us."

Glimmer and Adora shuddered.

"I take it that clones aren't known for their cooking skills?" Daniel asked.

"In the Horde, efficiency was more important than frivolous comforts," Hordak said. "Rations provided everyone with what they needed."

O'Neill grimaced. "That doesn't sound like taste was a priority."

"It wasn't."

"Horde Prime had some great cooks," Catra said. She suppressed a shudder at the memories of her time with Horde Prime. Glimmer tensed, too, Catra noticed. "But they didn't survive the war." She frowned. Or had that been Horde Prime himself, taking over their bodies to cook his own meals? It seemed absurd, but Catra also could imagine Horde Prime declaring that only his cooking was good enough for him.

"Let's go then! I'm a little hungry after loading all our supplies," Adora announced, changing back into her normal form.

"Did they make tiny food, too?" Entrapta asked as they walked to the door. Or bulwark, since they were on a ship.

"I think they prepared tiny desserts," Glimmer said.

"Oh, good!"

"Ah… who's standing watch on the bridge?" O'Neill asked.

"Darla," Entrapta replied.

"The ship herself?" Daniel cocked his head and looked around.

“She knows best,” Entrapta told him. “And she can call us if we’re needed.”

O’Neill nodded, though he looked a little uncomfortable, Catra noted. Was that another Earth thing? Did he mistrust Darla? Or was he concerned about the fact that Darla had cameras all over the ship?

She kept an eye on the soldiers as they walked towards the mess, her ears twitching as she listened to their conversation. Ah. Something about Artificial Intelligences and computers. O’Neill didn’t trust bots.

Not a stupid attitude, of course - bots, no matter what Entrapta might say, weren’t people. Not even Light Hope. But Darla could be trusted - she hadn’t been messed with by the First Ones.

And not having to stand watch, at least not in hyperspace, made travelling easier. Catra wasn’t really looking forward to spending a night on the bridge instead of with Adora. Unless, of course, they could spend the night together on the bridge. Use the oversized She-Ra seat for something fun, for once.

But Adora wouldn’t want to risk anyone walking in on them, even though that only made it more fun. So, this would probably remain a fantasy.

Well, you couldn’t have everything you wanted. Catra had learned that the hard way.

*****

Hyperspace, July 14th, 1998 (Earth Time)

“All systems running as expected!”

Entrapta sounded so happy and excited, Jack O’Neill refrained from making a sarcastic comment. They were heading home to Earth. On a spaceship. With a fleet.

And waiting to finish the first leg of their trip - a 'standard navigational stop', as Entrapta put it. And yet...

"I didn't think that we'd travel to Earth on Love Boat," he muttered.

"Jack!" Daniel gasped next to him.

"What?" Jack nodded towards the others. Everyone was on the bridge, though Jack was sure that any Navy officer would have a fit if he saw them. Catra had placed herself in Adora's lap with one of the smuggest expressions Jack had seen lately. Glimmer and Bow were standing next to each other, talking in low voices, and looking at their expressions, Jack was sure that they weren't discussing politics or space travel. Unless they were literally in love with either. At least Hordak was checking the screens more than Entrapta. "Just look at them," he whispered.

"But…" Daniel shook his head. "That's obviously normal for them."

"Public displays of affection?" Jack grinned at his friend. "On duty?"

"Well, are they technically on duty?" Daniel asked.

"We finished breakfast twenty minutes ago," Jack pointed out.

"Yes, but…"

"We're ready to drop out of hyperspace," Entrapta announced.

Glimmer turned and walked towards Adora while Bow went to check the scenes on his side of the bridge.

And Catra slid out of Adora's lap.

"Now they're on duty," Daniel said. "See?"

Yeah, even General Hammond, for all that he was a rather laid-back Texan, would raise his eyebrows at that. Which would be

amusing, at least. Still, working alongside three couples? For a month? That was a little much. Jack very much didn't look at Carter.

"Dropping out in three...two...one!"

And they were back in 'normal space'.

Entrapta's hair tendrils flew over the consoles next to her. "Everything and everyone is where they should be. Deviations are within safety margins and tolerances."

The big screen lit up, and the clone commander appeared. "Your Divine Highness, we have arrived. All ships are accounted for! Command us!"

"Thank you, Priest." Adora nodded. "Start preparing for the next leg. As soon as we've finished our system check, we'll depart again."

Priest hit his chest and bowed. "As you command, Your Divine Highness. We shall prepare at once!"

The screen went blank again. Jack snorted. "I can see how that would grow old quickly."

Adora pouted at him.

He grinned. "You could tell him to use a title that's less of a mouthful."

"I tried," she said.

"Priest's 'unfailing devotion' fails when it clashes with his ideas on how to talk to a goddess," Catra said.

Which was rather worrying, though not unexpected, if Jack was honest. "So, he claims that he knows his dogma better than his goddess does? Wouldn't that qualify as heresy?"

“I’m not a goddess!” Adora snapped.

“I don’t think it would be considered heresy since Priest is the de facto head of their church,” Daniel said. “Although it’s hard to say since we don’t have gods that actually talk back when prayed to and might comment.”

“Except for the Goa’uld,” Jack said.

“False gods,” Teal’c stated.

“Well, in the past, something that went against established doctrine and custom of a religion often was called heresy, though since this faith is rather new, there probably is no established consensus about this yet.” Daniel pushed his glasses up. “Or Priest is defining it as we speak.”

“Don’t give him ideas!” Glimmer said.

“Even without writing scripture, his ideas will likely form the dogma of the faith,” Daniel pointed out. “As long as he is the uncontested leader of his, ah, flock.”

And if there was a schism, they would have to deal with two competing sects of religious fanatics with their own spaceships. A recipe for disaster if Jack had ever seen one. “Yeah, let’s hope that they don’t start splintering,” he said.

Adora sighed. “I just wish they’d stop treating me as a goddess.”

Catra snickered. “Just them, though, right?”

Adora blushed - Jack wasn’t going there - and Glimmer rolled her eyes.

“All systems check out!” Entrapta interrupted them. “Calculating the next course! Well, recalculating and adjusting for minor stellar drift. So far, we’re doing better than expected! The star charts we have are matching up well.”

"They should. We're talking stars. They shouldn't move erratically," Bow said.

"Well, Etheria was in another dimension for a thousand years," Entrapta retorted. "Its absence should have affected the other stars nearby. Not to any great extent, but enough to affect navigation."

Another dimension. Jack didn't want to even think about that. Scientists back home would have fits one that came out.

"Easily compensated for," Hordak commented.

"But we still need to verify the data through actual observation," Entrapta told him.

"Which we just did."

"Yes. And which we will keep doing!" Entrapta smiled. "This is exciting! We're making history - of sorts. It's not our first trip, after all, but we're much better prepared now."

"And we're not about to charge at Horde Prime's fleet," Catra said. "That's already an improvement."

Jack nodded. A nice, peaceful trip back to Earth would be perfect. No, it would be perfect if they found a Stargate on the way, so they could warn Earth.

*****

Hyperspace, July 14th, 1998 (Earth Time)

The second trip through hyperspace went as well as the first. At least as far as Adora could tell. Entrapta and Hordak were tinkering with Darla or the shuttle or doing something else together that involved First Ones technology. Adora didn't know what exactly they were doing, and she wasn't sure she wanted to know. They were a lot closer than she had expected. Not that she

would admit that to Catra - her lover would be insufferably smug for having pointed it out before.

Her lover… Adora sighed as she twisted so she was lying on her side and looked at Catra. She had been curled up against Adora and now was groping for her body in her sleep. "You just want my body heat," Adora whispered with a smile as she wrapped her arms around her.

"I just want your body," Catra mumbled without opening her eyes as she snuggled into Adora's embrace.

"You're awake."

"Of course I am. You think I wouldn't notice you leaving just because I was asleep?" Catra whispered into Adora's chest.

Adora chuckled - Catra's breath was tickling her skin. And her tail wrapped itself around her leg. "Of course not."

"Good. 'Cause I'm not gonna let you leave."

"You will have to - well soon arrive at the next stop," Adora pointed out.

"We can sleep through it." Catra wrapped her arms around Adora and held on more tightly. "The others can watch Entrapta do her thing and then enter hyperspace again."

"And talk to Priest?"

"Bah! They can tell them you're doing your Divine Duty with me."

Adora snorted. "My Divine Duty?"

"Getting much-needed rest. R&R is crucial for a soldier, remember?"

"Ah. We haven't done too much resting today," Adora pointed out.

“That’s the recreation part,” Catra replied. “The best part of R&R.”

“Right.” The instructor in cadet school had told them so with a rare grin. Not that the Horde had been big on R&R in practice, though. Adora suppressed the urge to sigh. That was the past. They weren’t cadets any more. They weren’t Horde any more. Even if they might still be wearing their old uniforms. Or not wearing them right now. “But I can’t stay in bed. We’ve spent the whole trip in bed.” Well, much of it.

“I bet you we can.”

“I need to be on the bridge.” She had to. What if something happened? She was She-Ra. It was her duty.

Catra sighed this time. And not the happy, contented sigh she used after, well, recreation. “You’re a dummy.”

“But I’m your dummy,” Adora replied.

“And don’t you forget it.” Catra’s arms tightened around Adora, squeezing her for a moment before releasing her. “Let’s go be useless on the bridge then.” She rolled to the side, staring at the ceiling. “After dinner.”

“Right.” And after a shower.

*****

O’Neill looked a little grumpy, Adora noticed as they entered the mess. “Is something wrong with the food?” Adora asked. This meal hadn’t been prepared by the palace staff, after all, but by Bow.

“What? No, no. It’s peachy.”

“Peachy?” Adora asked.

“It’s fine. The food is good.” O’Neill speared a piece of meat with his fork and put it into his mouth.

“It’s excellent,” Daniel added with a smile.

“Much better than rations,” Catra commented as she filled her plate from the big pots.

“Indeed.”

“Where’s Sam?” Adora asked.

“In the engine room with Entrapta and Hordak,” O’Neill replied. “She took a sandwich.” He was frowning again.

Ah. Adora nodded. That was it. “Don’t worry. We’ll make them eat proper meals in the future.” Entrapta had been doing better until now. Hordak must be a bad influence on her. Or she was too excited about their trip, Adora added with a slightly guilty feeling. Hordak hadn’t done anything so far to make them suspect him. At least in her opinion.

And the food was good. She smiled at Bow. “It’s great!”

“Thank you!” He beamed at her.

Glimmer snorted. “I bet you would even find rations good, as famished as you must be.”

“Jealous?” Catra grinned between bites.

“Hardly!” Glimmer sniffed, then grinned. “It’s like a vacation, isn’t it? No court to bother us. All the free time we want while we travel. All the privacy we want” She smiled at Bow, who blushed a little.

Adora nodded. Her friend was right - this was nice. Nice so far. Darla wasn’t the palace, but they had their own rooms. And there were no guards or staff following them around and asking questions.

“Enjoy it while it lasts,” O’Neill said. He looked even grumpier now. “We’re still at war.”

“We know,” Catra told him. “It’s still nice. Nicer than our last war.”

Adora nodded. Definitely. She wasn’t fighting Catra this time. Etheria wasn’t about to be destroyed by some ancient superweapon. Her friends weren’t mind-controlled. It was much nicer than their last war.

So far.

“It’s a little new for us,” Daniel said. “We aren’t used to so much, ah, free time on a mission.”

“Right. You travel through gates,” Glimmer nodded. “No travel times.”

“Yes. We’re generally home for dinner,” O’Neill said.

Oh. Adora was so stupid - they were missing their home! “We’ll get you home soon,” she told him with a smile. “Promise!”

That didn’t seem to cheer him up as much as she had hoped. Not very much at all, actually.

*****

“And the hyperspace bubble is perfectly stable even with the changes to the generators here,” Entrapta explained.

Samantha Carter could see that. But she could also see something else. “It could be more efficient, though, if you tweaked the converter there.”

“That would remove redundancy,” Hordak objected. “Not something you want to do when it concerns hyperspace travel.”

“It wouldn’t remove redundancy - both this and the other converter there rely on the same systems,” Samantha pointed out. “The lessened strain would strengthen the whole system.”

“Oh, I see!” Entrapta piped up. “Yes, that would work. Probably. We need to test it.”

“Yes.” Hordak nodded in one of the most grudging ways that Sam had ever seen. She was sure that if Entrapta hadn’t agreed, he wouldn’t have agreed either. “We’ll have to make adjustments at the next stop.”

“Which is in… oh, five minutes! Time flies when you’re having fun!” Entrapta announced. “Let’s go to the bridge!” She turned and started for the door.

Sam followed her after a last glance at the machines in the room. Whatever else this trip might result in, she had learned a lot about advanced hyperspace drives. She might not yet be able to craft one herself, but she was close. And she should be able to duplicate a standard Goa’uld drive with the right parts.

But that could wait. First, they had to find a way back to Earth. Which meant a series of navigational stops to update their charts - because they had been out of touch and out of sync with the rest of the universe for a thousand years.

Sam still had trouble with the idea that an entire star system had been shifted to another dimension - a pocket dimension, even - for a thousand years. But the way everyone talked about it as something that had happened, the way people mentioned seeing stars for the first time in the sky… It had to be true. Something else to give nightmares to the people back on Earth who would be worried about magic.

Though Sam was also sure that more than a few people would be speculating about using something similar to save Earth in extremis. She hoped they wouldn’t find support - what she had heard about the Heart of Etheria from Entrapta gave her nightmares.

They reached the bridge, and Sam felt a brief pang of guilt and embarrassment when she noticed that everyone else was already

present. Arriving last was never a good thing for a subordinate.

“The drives are running fine!” Entrapta announced. “No trouble at all!”

“Good.” Adora nodded at them.

“Carter! Did you enjoy your sandwich?” The Colonel raised his eyebrows at her.

Sam suppressed the urge to frown - she knew what he really meant. “Yes, Sir,” she replied. “We tweaked the drives a bit.” She carefully didn’t smile at his slight twitch upon hearing that.

“Well, next time, take the time to eat with us like civilised people,” he told her. “Unless it’s an emergency, of course.”

“Yes,” Glimmer agreed, looking at Entrapta. “You need decent meals, not just snacks. Or tiny snacks.”

“We had rations,” Hordak said. “They covered our nutritional needs perfectly.”

Catra made a gagging noise, and everyone else from Etheria winced as well.

“They weren’t bad,” Sam said. “No as good as MREs, but edible.” She had tried some, after all.

“‘Not as good as MREs’? That’s practically poison, Carter!” the Colonel blurted out, shaking his head.

“Jack! People have different tastes and culinary traditions! You can’t just insult their meals like this!” Daniel protested.

“Of course he can - Horde rations are horrible,” Catra said. “I’ve eaten enough of them to know.”

Adora nodded. “Yes. There’s no comparison to actual food. And…”

"Exiting Hyperspace in one minute," the voice of the ship's computer interrupted her.

"Oh!" Entrapta turned to the screens and consoles. "Good girl, Darla!"

Sam watched the screens showing the power fluctuations in the hyperdrives. That was a critical phase of the trip - entering and leaving hyperspace. The phase that was most prone to failure, Hordak had claimed, which made sense.

But they made the transition without apparent trouble. All readings were within expected parameters.

"And the fleet made it out as well… getting a count… still complete!" Bow announced.

"The frigates were kept in top condition - anything that might fail was replaced," Hordak said. "And anyone," he added with a deep frown.

Priest appeared on screen a moment later, telling them what they already knew - Third Fleet had arrived safely - but taking longer with all the "Divine Highnesses" thrown in. He would be trouble; Sam was sure of that as well, even though she understood the reason they had taken him and his fleet along. Another reason that they needed to find a Stargate. If Priest got into a debate about religion with some of the more… fanatical faithful on Earth, the consequences could be catastrophic.

"Scanners running! Navigational update… We're at the projected coordinates, with a slight but expected deviation," Entrapta announced. "So, let's take the time to tweak the engines before we start the next leg of our trip!"

Sam nodded. "Yes."

"Tweaking our hyperdrives, Carter?" the Colonel asked.

"Minor adjustments to improve efficiency," she told him.

"Not so minor!" Entratpa beamed. "If this works, it'll make Darla even faster!"

"Ah. That's a good thing."

"Yes, Sir, it is," Sam replied before she could help it. She knew what she was doing.

"Scanning finished… Oh," Bow interrupted the Colonel's reply. "There's Naquadah on the planet in the nearby system. Processed Naquadah. According to our data, the system should be uninhabited."

Everyone looked at the screen. Naquadah on a planet? That usually meant advanced technology. And a Stargate.

*****

Outside System PK-327, July 14th, 1998 (Earth Time)

"Anything in the system? Ships?"

"No," Catra replied. She didn't see any hostile contacts on the screen.

"We're outside their scanning range, right?" Adora asked.

"We're outside the range of the Goa'uld sensors that we know of," Bow told her.

That wasn't as reassuring as Catra liked. SG-1 might have claimed that the Goa'uld didn't advance their technology, but that was the sort of assumption that got your plans foiled at the worst moment, in Catra's experience. Granted, she had been fighting Adora and the princesses, not some age-old megalomaniac parasites, and SG-1 had a lot of experience with them, but still… She couldn't help worrying.

"And we didn't pick up any active scans," Entrapta said.

“Could they have picked up our scans?”

“They shouldn’t have. But…” Entrapta bit her lower lip. Not a good sign. “Third Fleet is big enough to show up on optical sensors - if they have some.”

Optical sensors? Oh, telescopes. The frigates’ colour scheme wouldn’t help, either.

“They would have to be looking at this exact location,” Hordak replied. “And we’re too far out for our arrival to be easily detected with hyperspace sensors, either.”

“That means travelling to the planet in the shuttle will take some time as well, though,” Catra said. And ‘not easily detected’ didn’t mean ‘undetectable’, either.

“If we want to travel to the planet in the first place,” Glimmer said.

Catra snorted at that. As if they wouldn’t check out the planet. O’Neill would probably walk there if he had to. And they had to know if there was a Goa’uld base so close to Etheria.

Glimmer smiled wryly. “It had to be said.” But she had that glint in her eyes - she was craving some action. The queen was rather bloodthirsty for a princess.

But that raised another question. “So, who’s going?” Catra asked.

“Me!”

“Us!”

“I want to see the new technology!”

“You need me on the ground - I can teleport us.”

“I can carry a Stargate if we need to.”

“We need to go and see if there’s a Stargate.”

“We’ve got the most experience with Goa’uld.”

“So, basically everyone wants to go,” Catra summed it up. But someone had to stay back and watch the ship. And Third Fleet.

Everyone looked at each other. Catra sighed. This would be ugly.

*****

“...and we’ll stay in contact. If there’s any trouble, you can come and relieve us,” Adora said.

Glimmer rolled her eyes. “We - and the entire Third Fleet.”

“Don’t pout, Sparkles,” Catra told her. “Someone has to stay back, and you’re the Queen. You’re in command.”

“Yet no one is listening to me!” Glimmer looked like she was about to stomp her foot.

“Glimmer.” Bow put his hand on her shoulder.

She gripped it, sighing. “I know.”

Catra stretched. It sucked to be Queen. Not that she cared as long as she was with Adora.

“I still fail to see why I need to stay back,” Hordak complained.

“So in the case that we get discovered, people will not connect us to the Horde,” Entrapta replied. “Though we could disguise you, I guess…”

“We don’t have the time for that,” Catra lied.

“Be careful,” Glimmer said.

“Of course!” Adora nodded with a serious expression.

Catra suppressed a snicker. Adora and cautious? Yeah, right. Catra would have her hands full trying to keep her lover from risking her

life. “So, stay safe and don’t get bored,” she said.

“Right! Let’s go!” Entrapta hugged Hordak, then entered the shuttle. “Let’s see if our stealth system works!”

“Uh… it does work, right?” Daniel asked. “We’re about to fly towards a Goa’uld-controlled planet.”

“We’ve tested the system, and it should work,” Carter told him. “But this is the first time it’s used on an actual mission.”

“Nothing like field testing new gear on a recon mission,” O’Neill said with a snort.

“It’s very efficient!” Entrapta said, sticking her head out of the shuttle.

“As long as it works…” O’Neill muttered.

“It should, Sir. The calculations work out.”

“Sometimes, math doesn’t work in the field, Carter.”

“That’s not how it works, Jack,” Daniel said.

“You know what I mean.”

“Well, yes, but…”

“Let’s go!” Adora said. “The sooner we go, the sooner we’re back. For the Honour of Grayskull!”

Watching her lover grow into a huge princess never got old, in Catra’s opinion. But it was over quickly, and then Adora stepped into the shuttle. Catra waved at Glimmer, Bow and Hordak before following her. O’Neill might be worried, but Catra wasn’t. If Entrapta, Carter and Hordak were sure that the stealth system would work, then that was good enough for her. Entrapta might be a little too confident, and Carter was hard to read, but Hordak wouldn’t let Entrapta go if he didn’t trust their technology. And if it

didn’t work, well… They had She-Ra with them. And the shuttle was fast.

They were ready for whatever awaited them on the planet.

*****

The Ship

System PK-327, July 14th, 1998 (Earth Time)

Jack O'Neill looked at the screen showing their destination. A round globe floating in space. Not as blue as Earth, but not a desert or jungle world. Just another nameless planet to explore. But this time, they weren't going through a Stargate - they were approaching it from space. In a stealth shuttle - at least if the stealth system, whatever it was, worked as planned. Carter at least seemed to think it would work, which was why Jack wasn't making much of a fuss about this. Entrapta was a bit too enthusiastic about taking untested equipment on dangerous missions, and Hordak… Jack refrained from scoffing. As if he'd trust a 'former' warlord. He had met enough warlords on Earth to know better.

Some of them he had met after flying into Indian country in a small craft and hoping that the enemy wouldn't spot you, far from any backup. Just like now. He snorted.

"Sir?"

"Just some memories, Carter," he said. "This is a much nicer ride than a Blackhawk."

"Ah." She nodded - she knew what he was talking about, of course. Not from personal experience. Well, not inside the Blackhawk. But she might have been ready to provide air support when called in.

"Blackhawk?" Daniel looked confused. "Ah!"

"Blackhawk?" Catra looked intrigued.

"A helicopter - an aircraft held aloft by a large propeller instead of wings or anti-gravity generators," Carter explained. "Or magic."

"Ah." The catwoman nodded. "Military transport?"

“Yes,” Jack said.

“And this reminds you of it? How big are they?” She gestured around the bridge.

“Not nearly as big,” Jack replied. “It’s just the feeling of trying to sneak into a place where you aren’t supposed to be and hoping no one spots you and starts shooting.”

“Ah!” She grinned. “Yes, that’s exciting.”

“And terrifying,” Daniel added.

“We’ve got She-Ra with us,” Catra said.

“That won’t help if the Goa’uld send a couple Death Gliders or Al’Kesh after us,” Jack retorted.

“A couple? She can handle those by herself - she once killed three frigates.” Catra glanced at Adora, who frowned at her.

“That probably was an attempt to gauge my power, not a serious attack,” Adora told her.

Catra rolled her eyes. “They tried to shoot us down.”

“But he only sent three frigates after us. He had many more of them, and the Horde never husbanded their forces like that. At least Hordak didn’t do that,” Adora retorted.

Right. Hordak was the kind of warlord who probably sent tank regiments to scout for the enemy. Then again, the US Army had done the same - or would have, if the Cold War had gone hot. But they were the Army. “That’s very interesting, but I’m more concerned about our situation, not what happened in the past,” Jack said. “So, is the stealth system working?” They were now inside the system.

“We haven’t been scanned - not with any scanner I would detect, at least,” Entrapta said. “Of course, passive detection remains a

possibility, but we've got camouflage against optical sensors, and our power systems and engines are shielded. And we haven't been shot at - not yet - so I think it's safe to say our systems are working." She blinked. "Or they aren't working, but no one's looking for us. Which is also good. I think. Though we wouldn't know if the system's working, in that case."

"Or we're flying into a trap," Jack pointed out.

"Then we turn the trap on the enemy," Catra said. "They won't expect us. If they are waiting for us, they'll expect First Ones."

"Who had better technology than we have," Jack said.

"Not quite!" Entrapta shook her head, her animated hair not moving from the console. It looked very weird, as if someone had glued the tips of her hair to the keys and switches. "We've upgraded the systems to be on par or better than Horde technology - Horde Prime's tech, I mean. And his technology is at least as good as the First Ones was."

Right. "I'd still prefer not to enter a trap," Jack said. Overconfidence killed.

"If things go wrong, we just have to hold out long enough for Third Fleet to arrive," Catra said. "We should be able to manage that."

Adora nodded.

"Magic should give us an advantage," Carter added.

Magic. "I know," Jack said. He wasn't happy about it, though. He didn't know what exactly magic could do. That made planning, and, more importantly, adapting plans under fire, difficult. "Let's hope the people on the planet are friendly."

"The presence of Naquadah usually indicates Goa'uld," Teal'c said. "They do not leave their slaves with such technology."

"I know," Jack said. "Unless it's a Stargate." He hoped it was a Stargate.

"We'll know soon enough!" Entrapta's hair moved over the consoles as she typed. "A little bit longer, and we're in range for a deep scan." She tilted her head. "We'll be using magic, so they shouldn't detect that."

Magic again. But there was no helping it. "Good," Jack said.

A few minutes later, Entrapta announced: "OK, stop! We're close enough! Scanning now!"

That meant they were sitting still in space. Jack clenched his teeth. He hated being unable to affect the situation. At least on the ground, he could do something if they were attacked.

"Oh! I found the concentration of Naquadah. It's all in one place!" Entrapta announced. "It's… on the screen!"

Jack stared. He knew that thing.

"An Al'Kesh," Teal'c said.

"It looks like it crashed," Carter added.

"Right." Jack nodded. Not a Stargate, then. But not a Goa'uld base, either. "Any signs of life around it?"

"Yes, but… it's kinda hard to sort out animals and people," Entrapta said.

"Structures?" Daniel asked.

"Some, but they seem kinda damaged."

The screen changed, showing ruins.

"Goa'uld style," Daniel stated the obvious.

*****

“Goa’uld style?” Adora asked.

“Well Egyptian style, to be precise,” Daniel went on. “But outside Earth, only the Goa’uld beholden to Ra used this style.

So, that was how the enemy houses looked. It wasn’t very impressive. Drab stone houses, flat roofs, single floor…

“Looks pathetic,” Catra said out loud what Adora wasn’t quite thinking.

“Well, those are obviously quarters for their slaves,” Daniel explained. “No Goa’uld would be living in such, ah, squalor.”

“They would be so shamed, they could never show their face at the courts of their betters again, should anyone know of this,” Teal’c added.

“Yeah. But if given a choice between death and this?” O’Neill shook his head. “They’ll live like this. And they’ll jump you when you least expect it.”

“Well, we’ve got Melog. They’ll sniff them out,” Catra said, patting their friend on the flank. “No surprises there.”

“And I think if there were Goa’uld on the planet, they would have had their slaves construct a palace,” Daniel added.

“They might not have had the means,” Entrapta said.

“If there’s enough stone and clay to construct slave quarters, there’s enough stone and clay to construct a palace,” O’Neill said. “That’s how they think. They would sacrifice hundreds of slaves to get a palace.”

“But… That makes no sense!” Entrapta protested, shaking her head. “That’s… they would hurt themselves like that! Everyone suffers if you do that! Palaces don’t get you anything you can use to improve your position!”

“That’s the Goa’uld for you,” O’Neill told her. “Long-term planning isn’t their strength.”

“That’s not true,” Daniel protested. “They do make long-term plans - and the loss of slaves is often a welcome side-effect for them. If their slaves would grow too experienced, too skilled or too numerous, they might become a threat.”

“Even in the case of being shipwrecked?” Catra pointed at the screen.

“Yes,” Teal’c said. “Without a way off the planet, they would be unable to retreat or call reinforcements. Keeping their slaves cowed and from becoming a threat would be their priority.”

They sounded horrible but also short-sighted to Adora. “And why did the ship crash?”

Entrapta pushed a few buttons, and the screen’s image zoomed in on the shipwreck. “The scan’s results are not completely clear, but this here…” One of the strands of her hair pointed at a scorch mark on the hull. “...looks like weapon damage.”

“Unrepaired weapon damage,” Sam added.

“Well, the whole ship’s kind of unrepaired,” O’Neill commented.

“It means that the damage was likely taken shortly before the ship crashed or was the cause of the crash,” she explained. “Otherwise, they might have repaired part of the damage at least.”

“I knew that,” O’Neill claimed. “So, any active power plants or anything down there?”

“Just the Naquadah in the ship,” Entrapta replied. “Nothing active. They could have shielded their installations, of course - the planet’s crust contains several heavy elements that are hard to scan through.”

“If they are lying in ambush, they probably are waiting until we get to the ship,” O’Neill pointed out.

“That’s obvious,” Catra replied. “But how long would they have waited to ambush a ship?”

That was a good point. Too much caution was as bad as too little, as Shadow Weaver used to… Adora clenched her teeth. She wasn’t going there. “Let’s go down,” she said.

“Alright! Shields are up, and scanners are running!” Entrapta announced. “Stealth system is still running. We’re on final approach to the planet now!”

Adora took a deep breath. For better or worse, they were now committed. If there was an ambush ahead, it would be her fault. No one else’s. And she would…

An elbow in her rib interrupted her thoughts. “Don’t brood,” Catra hissed.

“I’m not brooding!” Adora whispered back.

“You were,” her lover insisted. “I know you.”

Being aware of your responsibilities wasn’t brooding!

“We’re approaching the orbit of the planet’s moon,” Entrapta said. “Still no sign of any active scan.”

That was good. “Plot a course so we are descending on the opposite side of the planet,” Adora told her friend. “We can fly to the shipwreck through the atmosphere.” That should keep them at least a little safer.

“Good idea,” Catra agreed.

O’Neill nodded as well.

Adora took a deep breath as the planet grew larger on their screens - now she could see it through the bridge's windows. It didn't seem really different from Etheria. A little less water on the surface, according to Entrapta's data. "Any sign of villages?" she asked. "Fields?"

"Nothing," Entrapta replied. "If they have gone into hiding, they have done a very thorough job."

Which would mean that any ambush would be very dangerous. Adora bit her lower lip and ignored Catra's sigh. She couldn't help worrying. Not when her friends were in danger. Possible danger.

But they reached the planet's orbit without getting attacked and quickly entered the planet's atmosphere. Adora stared at the sight of air glowing brightly outside, on the shuttle's shield.

"That's not going to be hidden easily," O'Neill commented.

"We're still working on that," Entrapta said.

"A shielding system that compensates for this is complicated," Sam said.

"I'm not criticising you, Carter," O'Neill told her.

"We've put the planet between us and the ship, but if they have sensors spread over the surface, they might notice us," Entrapta explained. "Though they might mistake us for a meteor."

"If we're lucky," O'Neill said.

"Yes."

But they were now flying over forests and meadows or what you called the places with grass and bushes without trees.

Towards the wrecked Goa'uld ship.

"If there's an ambush, they need to spring it now," Catra said. "Or they want to catch us on the ground." Adora glared at her, and she grinned in return. "Just saying."

*****

PK-327, July 14th, 1998 (Earth Time)

An ambush on the ground was a possibility - the shuttle and the group would be most vulnerable while disembarking. Samantha Carter knew that. On the other hand, Catra was correct: The odds of that happening were low. People didn't go into hiding and waited for years, possibly decades or centuries - the ruins looked old - for someone to arrive.

Unless there was another reason why they wanted to hide. If they were hiding from an enemy… "They might have gone into hiding to avoid catching Horde Prime's attention," Sam said.

Catra and Adora turned to stare at her. "Right," Adora said. "That would be a reason to hide every sign of inhabitation."

"But if they are hiding from the Horde," Catra objected, "then they won't attack us and risk discovery."

"We don't look like the Horde," the Colonel said.

"We've got a Horde fleet waiting outside the system," Catra retorted.

"Which is hidden from their scanners." The Colonel shook his head. "But we're here already. Leaving would be suspicious. Might as well find out what happened here," he added with a grin.

Catra frowned at him but nodded. "Let's go."

"Put us down… behind that hill there. It should shield us in case they got the weapons of the ship working," Adora said.

“Even if the staff cannons were working,” Sam pointed out, “they are mounted in ventral turrets - they couldn’t fire at us from that angle.”

“They can’t fire up?” Catra asked, blinking.

“They are bombers,” Teal’c said. “Death Gliders are supposed to cover them during attack runs.”

“‘Supposed to’.” Catra shook her head. “Didn’t seem to have worked for this one.”

“It doesn’t seem to be a very effective design,” Entrapta commented.

“Oh, they’re effective enough at bombing planets,” the Colonel told them.

“But still!” Entrapta protested. “A more versatile design shouldn’t be too hard.”

“It’s also a matter of cost,” Sam told her. “An Al’Kesh has one purpose: delivering bombs and fire support for attacks against ground targets - or against capital ships. They aren’t built to dogfight.”

“But…”

“We can discuss spaceship designs and tactics later. Let’s go and take a look at the wreck. And find out if anyone is waiting to ambush us,” Catra said.

“Don’t forget the ruins,” Daniel said. “We can learn a lot from the remains of such settlements!”

“Ship first, then ruins,” the Colonel told him. “Stone huts generally aren’t as dangerous as spaceships.”

“But Jack…”

“Ship first. It’s the obvious trap. The metal and Naquadah would help hide an ambusher.”

“Right.” Daniel looked mulish but nodded.

Good.

“Let’s land then,” Adora said.

“Alright!” Entrapta smiled, and the ship started descending, quickly setting down behind the hill.

Adora was already moving to the rear, followed by Catra - who stopped to grab a short club-like device from the shuttle’s weapons locker. A shock-rod - Sam had examined them before. “In case we want to take prisoners,” Catra said.

“Catra!” Adora snapped.

“What? If we get attacked, we need prisoners to find out who they are. If you knock everyone out, we have to wait until they wake up.” Catra grinned.

Adora frowned at her. “Fine!”

Sam exchanged a glance with the Colonel. He shared her expression - their allies did seem to be more than a little overconfident.

Then again, they had seen how strong Adora was. Perhaps the Etherians had every reason to be so confident.

The air outside was fresh and mild. Temperate climate - warm but not hot.

“No signs of agriculture,” Entrapta commented. “No fields.”

“They could be hunter-gatherers,” Daniel said. “Although this would’ve been a regression even for slaves of a Goa’uld lord. They

couldn’t maintain a higher population density with such methods. You need organised agriculture for that.”

“Come on,” Catra said, already halfway up the hill.

“Catra!”

“I’m just going to take a look!”

Sam followed them up the slope. At the crest, she found Catra and Adora both prone in the grass, looking at the ship and the ruins below them through binoculars.

“Is that a Horde design?” she asked.

“The binocs? Yes. I like them better than the telescopes that Bright Moon and Salineas use,” Catra said. “More compact.”

“I’m used to them,” Adora added.

“Ah.” Sam pulled out her own binoculars and took a look at the ship. Definitely an Al’Kesh. And it didn’t look modified. Standard engine housing. The cockpit looked destroyed - that would have caused the crash.

“No markings,” the Colonel commented.

“Whoever piloted it did not want to be recognised,” Teal’c said.

“That would fit a recon mission in potentially hostile territory,” the Colonel agreed. “If they were afraid of pissing off Horde Prime…”

“Or the First Ones,” Catra added. “The ship looks old - it’s half-buried in the ground. Could be old enough so the First Ones were still around when it crashed. Can you detect anyone, Entrapta?”

“No life signs inside the ship. Or in the ruins. Well, no human-sized ones. Plenty of smaller ones.”

“Goa’uld larvae?” Adora asked.

"Not in the ruins - no Naquadah there. I can't exclude the possibility of them being in the ship, though."

"If you see a weird pot, don't smash it," the Colonel said. "It could contain a Goa'uld."

"Melog?" Adora looked down at the alien.

Melog growled something.

Catra nodded. "Melog doesn't sense any Goa'uld, either. But there could be some in the ship."

"Let's find out," the Colonel said. "But carefully."

*****

Crashed Al-Kesh, PK-327, July 14th, 1998 (Earth Time)

As she approached the crashed ship, Catra couldn't see any trap or people waiting in ambush - and she had experience with both; the Alliance usually had had to resort to ambushes and traps to face the Horde troops. She didn't have experience with Goa'uld, though. None of them except for SG-1 had any experience. And Melog. Even Horde Prime's data - what they had managed to recover - barely covered the essentials about the parasites. Some data about their ships. Some basic tactics. Nothing more.

But they knew Goa'uld didn't have magic, and that severely limited their options.

"I'll go in first," Adora said as they reached the hole in the back of the ship.

"I've got the better eyes and ears," Catra retorted. Melog growled in agreement.

"But I'm tougher." Adora took a step forward.

“Did anyone forget to tell me that this is a competition?” O’Neill commented from behind them.

Catra frowned at the man. This wasn’t about him. This was about Adora trying to protect everyone at the cost of her own life.

Melog growled again. *Enter.*

“Melog says to enter,” Catra told the others.

“And who put the cat in command?” O’Neill asked.

Catra bared her fangs at him in a wide grin.

“The other cat.”

But Adora used the distraction to step forward and climb into the ship. Catra cursed and rushed after her, jumping through the hole in the hull.

She landed on all fours behind Adora in a dark corridor. Keeping her balance on the tilted floor was easy for her - her claws could dig into the metal floor. She tested her claws on the walls as well - it was always good to know if you could cut your way through the wall or ceiling. Which she could. “I expected more gold,” she whispered.

“That would have given an enemy clues about the ship’s origin.” Teal’c was climbing in behind them. And Melog pushed past him, landing on the floor and sniffing.

“Which way to the bridge?” Adora asked.

“This way.” Teal’c pointed with his staff.

The interior didn’t look like someone had been using it for a long time - there was a lot of dirt and debris on the floor near the hole, and Catra could see - and smell - signs of animals having used the ship as a lair. Ew. “Looks abandoned,” she whispered as they walked past a room full of broken crystals.

“Oh! That must have been a power station!” Entrapta exclaimed. “Look at the fittings here!”

“Later!” Catra told her as she grabbed Entrapta’s collar before the princess could climb into the room. “We need to check the bridge. No wandering off.”

“But!”

“Don’t make me have Adora carry you.”

Entrapta pouted but didn’t try to check out the next broken console they passed.

“There are no bodies,” Adora commented.

“They would have been taken out and buried by the survivors,” Teal’c said.

“We didn’t see any graves in the ruins,” O’Neill retorted.

“They might have buried the dead at a different place,” Daniel explained. “Many cultures separate the dead from the living.”

“Like a city of the dead?” O’Neill asked.

“Yes.”

“Well, that - or the animals in here ate them,” Catra said.

“We’d still find bones and inedible remains,” Carter replied. “And the ruins outside indicate that people explored the ship after crashing.”

“Unless the ruins predate the ship’s crash,” Daniel said. “I mean, if the village was in ruins before the ship arrived here.”

“The doors to the bridge are closed,” Teal’c reported. “Sealed.”

“Let me at it!” Adora summoned her sword and pushed it through the door with a soft grunt under her breath. Then she twisted the

sword and leveraged the door open.

Catra half-expected to find bodies behind the door, but the bridge was empty as well. And damaged. She pushed past Adora and moved to the chair closest to the door. It had a big hole inside the backrest. And the chair was discoloured slightly.

She bent over and sniffed.

“Can you smell blood after all this time?” Adora asked.

“No,” Catra told her with a grin. Her friend really should know her better than that. “But if it’s not so old, I would have.”

“Ah.”

“They suffered damage before crashing,” Teal’c said. “And someone removed the corpses and then sealed the door.”

“Communications are shot,” Carter added.

“What about the computers?” O’Neill asked.

“I’m trying to access them,” she replied. “If we can restore power and get the log or at least the navigational data…”

“It’s an intriguing system!” Entrapta added, beaming at them.

“Keep at it,” O’Neill said before looking around. “So, I’d say never split the party, but we should search the whole ship as well.”

“Oh, if you do, check out the Naquadah concentration on the other side,” Entrapta said.

“The Naquadah concentration?” O’Neill asked.

“The one we detected with my scanner,” Enptrata told him. “It should be…” She scrunched her nose. “About... this way!” her hair pointed at the back of the ship.

“The cargo hold,” Teal’c said after cocking his head to the side.

That sounded interesting. Catra grinned. “Let’s go, then!”

“Carefully,” O’Neill said.

Catra rolled her eyes. She hadn’t heard anything in the ship except for their own footsteps. And Melog hadn’t sensed anything either.

Teal’c took the lead again, and they made their way to the cargo hold - through a section that had been torn up by weapon fire: the hull breach was small, but both the corridor and the crew quarters behind it had been torn up, so they had to climb through the wreckage.

But they reached the cargo hold, Adora got to show off She-Ra’s strength again, forcing the doors open, and they found…

“A Stargate?”

*****

“A Stargate!” Jack O’Neill grinned. That was the best find they could’ve hoped for - they could go back to Earth now.

“The ship must have been moving a Stargate,” Teal’c stated the obvious.

“And where’s the dialer?” Catra asked.

“Good question.” Jack looked around. They wouldn’t ship just the ring. Not the Goa’uld. So… He stared at the broken crates in the corner. Next to another hull breach. “No.”

“D.H.D.s are quite tough,” Daniel said. “It shouldn’t easily break…”

That was true. Those things were built to last millennia. In order to break one, you practically had to shoot… He blinked as he approached the crates. The crates looked as if they had absorbed whatever blast had broken through the hull. “Damn!”

Jack quickly climbed the last few yards over broken ground and torn plates to the crates.

Not as quickly as Catra, though, who easily passed him with a few leaps, leaving gouges in the metal where she held on with her claws. Jack really didn't want to know what those claws would do to a human body - they would go straight through the heaviest body armour Stargate Command had. Hell, they would probably go through an APC's armour!

Catra reached the top of the crates and leaned over like a gymnast, peering inside upside-down, her tail twitching above her. "Oh."

"What?" Jack snapped as he pulled up next to her, carefully looking for footholds.

"You're not gonna like it."

"What?" he repeated himself as he peered over the edge and into the crate himself. Oh. "For crying out loud!"

The D.H.D. had absorbed the brunt of the blast - all that was left was the pedestal. The rest was a twisted mess of molten and blasted metal and crystal.

"They broke it!"

*****

"...and so, according to the partial data we recovered from the computer systems - quite interesting encryption, actually, very interesting ideas but they were implemented a little haphazardly, I think, since we were able to bypass half the protections by directly accessing the memory crystals - the ship was part of an effort to remove Stargates from planets in the sector. No data about who gave the orders, though."

Jack O'Neill forced himself not to scowl. It wasn't Entrapta's fault that the Goa'uld and whoever had been fighting them had

managed to wreck SG-1's ticket home. They had a Stargate, after all, which was a prize itself. Once they could get a computer hooked up to it and a powerplant. A Stargate that wasn't central to a planet's survival and could be taken home without dooming people.

Provided Earth could get it - Etheria might want it as well. But they could sort this out later.

"They were removing Stargates from the sector?" Adora asked.

"Presumably to deny them to others," Carter replied. "The dates line up with what we know as the height of the war between the First Ones and Horde Prime."

"Ah."

"They didn't want Horde Prime to get access to the Stargate," Catra said. "I bet the First Ones evacuated or destroyed Stargates as well."

"Probably, but we lack any data to tell for sure," Entrapta said.

"Scorched earth," Jack said. That would fit a force willing to sacrifice an entire planet to win a war.

"They attacked Earth?" Entrapta asked with wide eyes.

"No, scorched earth is a tactic used in wars on Earth. It consisted of removing or destroying everything the enemy could use while withdrawing in front of their advance. The goal was to deprive the enemy of resources and strain or collapse their supply system. It was quite effective against enemies who had been planning to live off the land," Daniel explained.

"Ah." Catra nodded. "That wouldn't have worked well on Etheria. We - the Horde - never used much of the resources of the Alliance lands for the troops themselves, not officially at least. And the Horde lands were pretty safe for most of the war."

“Whatever,” Jack said. “So, the snakes were taking Stargates and moving them… where, exactly?” If they could find the planet they had been moving the Stargates to, they could find a D.H.D.

Carter winced, and Jack knew he wouldn’t like her answer before she opened her mouth. “We only have coordinates in space - they were apparently meant to deliver the Stargates to a mothership.”

Probably a Ha’tak. Of course the snakes wouldn’t make it easy for them.

“They must have done this to avoid being identified, should they be caught,” Teal’c said. “No markings, no navigational data betraying their origins - that is not standard procedure for Goa’uld forces.”

“And probably carried suicide pills,” Jack muttered. “So, it could have been on the orders of anyone, even Ra since he was still alive back then.”

“It was probably not Ra,” Teal’c said. “As the ruler of the System Lords, he would likely have been held accountable for their actions anyway.”

“Unless he wanted to be able to blame someone else as a sacrifice,” Catra pointed out.

“He could have done so anyway,” Teal’c retorted.

“But Horde Prime - or the First Ones - might not have cared anyway,” Adora pointed out.

“Or it might have been the Tok’ra,” Daniel added. “We don’t know how they operate.”

“Right. I still think it’s more likely that this was done by a System Lord trying something underhanded,” Jack said. And the snake who had done this was probably still alive. And had a few spare Stargates. You could do a lot with that. And they didn’t know how

many the Goa'uld behind this had collected. "Let's hope we find more information in the ruins."

"And the graveyard that should be around," Daniel added.

"Yes, Daniel. We will be looking for tombs as well. I'll even get you a whip," Jack told him.

"A whip?" Catra asked, raising her eyebrows.

"He's referring to a movie trilogy from Earth, Indiana Jones," Daniel explained with a pout. "The main character is an archaeologist who occasionally uses a whip to fight his enemies."

Jack grinned. "And he crawls around in tombs." And dealt with magic shit. Perhaps the comparison is a little too on the nose, he thought.

*****

Ruins near crashed Al-Kesh, PK-327, July 14th, 1998 (Earth Time)

The buildings really weren't much to look at, Adora had to agree with Catra. They were basically stone huts - or had been stone huts before turning into, well, ruins. Small ones, with flat roofs, many of them collapsed, and few windows next to gaping doors. About half a dozen, in total.

"Even for a village, that's not much," she said.

"Mhh." Catra made an agreeing noise as she looked around. "Kinda creepy, though."

"Yes." Like that ghost village of the First Ones Adora had found on Etheria. Well, they hadn't been real ghosts, but it still had been creepy.

"Daniel?" O'Neill asked.

Adora turned to look at Daniel, who was kneeling in the doorway of one hut.

“No remains of the curtain that served as a door, except for the holes holding it in place,” Daniel replied. “This village has been deserted for a long time.”

“What’s a long time in years?”

“Without a carbon analysis, I can’t be more precise,” Daniel replied with a slight pout. “I don’t know the local climate to even try to date anything according to the erosion and build-up of sand. Or what kind of animals or microorganisms might attack the fabric.”

“Well, wood survived,” O’Neill commented. “And there are two beds in here - or their remains. Wouldn’t want to try and sleep on this.”

Catra snorted and peered inside. “I’ve slept on worse during training.”

“Well, me too, but that doesn’t mean I want to sleep on that.”

“Better than no sleep at all or on the bare ground,” Catra replied.

“True.” O’Neill nodded. “And it even got a roof. Half of one.”

“Better than nothing.” Catra snorted. “Could house a platoon in this village easily. No place to hide transports, though. Much less tanks.”

Adora frowned. As much as she liked Catra warming up to their guests and allies, she didn’t like it when Catra talked about her time in the Horde like that. She wasn’t in the Horde any more. The Horde wasn’t any more. They were no longer enemies.

She saw Daniel use a knife to scratch the wall next to the door and walked over to him. “What did you find?”

The man cocked his head, taking a closer look. “It’s a really primitive construction. Basically, mud bricks. Not fired, just dried.” He rose. “I think this was built by survivors of the crash. If a System Lord had ordered a village built here, it would have used better materials.”

“They could’ve been runaways,” O’Neill pointed out.

“Runaways from what? There’s no other settlement on the planet,” Daniel retorted. “No, I think this was built by survivors from the crash.”

Teal’c stepped inside the hut and picked up what looked like the remains of a chair. He blew at it, revealing a pattern on the wood. “A traditional Jaffa carving,” he explained.

“Jaffa? That would fit the crew of the Al’Kesh,” O’Neill said, nodding. “And the whole spartan interior. Humans would probably have looted the ship for better furniture.”

“Why wouldn’t Jaffa have done that?” Adora asked.

“If they had removed parts of the ship’s furniture, it would have meant that repairs would have taken longer, should relief forces have arrived,” Teal’c said. “That would have gone against the standing orders of most System Lords. Few Jaffa would have disobeyed such an order. Certainly not those trusted with what seems to have been a secret mission. ”

Adora blinked. “You mean they lived…” She looked around. “They could’ve lived more comfortably if they had disobeyed orders? Taking chairs back would have cost, what, half an hour?”

Teal’c nodded.

“Now that reminds me of the Horde,” Catra said. “Just that we did disobey such stupid orders whenever we could get away with it.” She looked at the shipwreck. “We probably would’ve stripped the thing bare and blamed the Alliance if anyone asked.”

“Personal comfort is not a priority for a Jaffa,” Teal’c said.

“And, apparently, neither is thinking for yourself,” Catra mumbled.

Adora winced as she nodded in agreement.

“Well, let’s check the other buildings,” Catra said. “Let’s see what we find.”

The next houses contained mostly the same - broken wood, sand and dust. “Where are the tools?” Adora asked. “How did they eat?”

“Their personal mess kits, probably,” Teal’c replied.

“And where are those?” Adora asked.

“And the weapons,” O’Neill added. “There are bound to be some staff weapons and zat’nik’tels around. There were none inside the ship.”

So, the Jaffa took their weapons outside. Well, that made sense.

“They might’ve built an armoury,” Catra speculated.

“Unlikely,” Teal’c said. “A Jaffa is expected to carry and care for their weapons on such missions.”

“Well, they certainly aren’t expected to get drunk, then,” Catra mumbled.

Adora was about to laugh as she ducked inside the next hut. But the sight of a corpse - well, a skeleton - stopped her short. “I found one of the crew,” she said.

Catra was at the window in a second. “Oh… died in bed?” She cocked her head.

“It looks like they died…” Adora trailed off as she took a few steps closer and examined the ribcage. Which had several ribs missing. “Violently.”

Catra slid through the window and joined her. She placed her hand at the ribcage's remains, then unsheathed her claws and moved the hand alongside the broken, missing ribs, matching the likely path that had cut deep into the man's side. "Whatever it was, it was bigger than my hand."

"And he was armed," Adora added, pointing at a small 'zat gun' which had fallen through the bed frame. There was what looked like a plate and a fork in a coner, too.

"Right."

*****

"So, what happened?" the Colonel asked. "Chestbuster accident?"

Samantha Carter rolled her eyes before standing up and turning to face him. She knew he wasn't serious, but sometimes, his jokes were… not really appropriate. Or funny. "No, Sir," she replied, standing straighter - that was a good way to rebuke him without words, she had found - "the wounds were, as far as I can tell, and Catra agrees, caused by either a multi-bladed weapon or a set of claws."

"He was attacked in bed?" The Colonel raised his eyebrows.

"The wound wouldn't have been immediately fatal," Teal'c said. "A Jaffa wouldn't have lain there and died without taking their attacker with them. So, I concur that he was attacked somewhere else, killed whoever attacked him, and then returned to base before dying from his wounds."

"Or her," Adora pointed out.

"Most Jaffa on such missions are male," Teal'c replied, "but there is a possibility that this warrior was female, yes." He inclined his head.

"So…" The Colonel shook his head. "What are the odds that whatever or whoever took out a heavily armed Jaffa is still

around?" The way he said it made it clear that he thought the question was rhetorical.

"Uh…" Adora frowned. "I guess that depends on how long ago this happened. And how old whoever did this can grow."

Well, the Etherians hadn't known the Colonel as long as Sam had.

"Could it have been another survivor?" Catra asked.

"Jaffa generally live for up to a hundred and fifty years - until we cannot take another symbiote and die," Teal'c said. "Since the survivor of the Al'Kesh's crew had no means to receive another symbiote, they could not have lived for longer than a few years."

Adora gasped, and Catra winced. "They… they knew they would die like this?" Adora asked.

"Yes." Teal'c nodded again.

"So… no Jaffa would have lived so long," Catra said.

"And we don't know any other species who would have lived for close to a thousand years," Daniel added. "With the exception of the Goa'uld, and they are a special case."

"We don't know how long the Nox live," Sam reminded the others.

The Colonel scoffed. "I doubt they would have attacked a Jaffa." He pressed his lips together. "But we know that every Jaffa had a symbiote. So, there were at least a dozen baby Goa'uld on this planet at one time."

Sam drew a short breath as she clenched her teeth. "And Goa'uld can take animals as hosts."

"And we detected life signs in the area when we scanned it from orbit," Entrapta piped up with a smile.

“Right. We could be surrounded by tigers possessed by snakes,” the Colonel commented. “Don’t let Hollywood hear about this.”

“Hollywood?” Adora asked.

“The people who make their movies,” Catra told her.

“Ah.”

Daniel opened his mouth, no doubt about to correct them, but the Colonel clapped his hands together. “Right, people! We might be facing possessed animals with claws that make a Kodiak jealous. Stay sharp! No one is going off alone anywhere.”

Sam nodded. If those were just animals, she wouldn’t be very worried. But Goa’uld-possessed animals? They wouldn’t kill the group - they would want hosts. She closed her eyes for a moment, shuddering at the sudden memories of her brief period of being a host. She’d rather be eaten alive by a bear than suffer that again.

“Does that mean that we won’t look for their graveyard?” Daniel asked.

“No. We need to know what happened here,” the Colonel said. Adora nodded in agreement.

Both Adora and Catra didn’t look too concerned, Sam noticed. Entrapta didn’t look concerned at all, but, well… the princess had different views of what was concerning.

“So… where could the city of the dead be?” the Colonel asked, standing at the window of the hut and peering outside.

Teal’c was already covering the door.

“Well, traditionally, it would be at quite a distance. But since they were stranded here and had limited resources, I don’t think it would be too far away. If they were concerned about grave robbers, perhaps the people who shot them down, they would

have been looking for sites that hid the graves," Daniel explained. "Although Jaffa burial rites might be different from Egyptian ones."

"For Jaffa following the Goa'uld, they usually follow the dictates of their false gods," Teal'c said.

"Then they would likely follow Egyptian traditions. Which, of course, varied over time."

"We didn't detect other weapons," Entrapta said. "So, they were either completely depleted or placed in locations where they would be shielded from scans. Or both." She pushed a button on her tool. "So… the closest such location would be the hill to the north. Well, the direction set as north here - we picked the pole kind of arbitrarily. But as long as everyone agrees that it's north, it's OK, I think."

"Yeah. How far is that?"

"About five of your miles!"

Not a short trip, but not a long hike, either. But walking, with potentially a dozen intelligent predators in the area? Through unknown terrain? And carrying whatever they might find back? "Sir, I suggest that we take the shuttle there," Sam said.

"Right. We're Air Force, not Army," the Colonel said. "We can…" he trailed off, and Sam saw him tense. "Did you see it as well, Teal'c?"

"Yes."

"What did you see?" Adora asked.

"A large creature hiding behind a hut," the Colonel replied.

"More than one," Entrapta said. "My scanner detects about a dozen surrounding us." She looked up. "And they are all about as large as Adora."

Melog growled.

*****

The Ruins

Ruins near crashed Al-Kesh, PK-327, July 14th, 1998 (Earth Time)

A dozen creatures? As large as Adora? In her She-Ra form? Catra refrained from scoffing. She couldn't be overconfident. That way lay defeat. And death. But, still… "Creatures?" she asked.

"Looked like… some bear," O'Neill replied. "Just sleeker."

"Like a big cat, though without a tail," Teal'c added.

Had O'Neill hesitated to call it a cat because of her and Melog? Catra snorted. As if she'd take offence to that. "So, they've got us surrounded," she said. "Smart of them."

"That's typical pack predator behaviour," Daniel pointed out. "It's mostly instinct."

Melog growled. *Goa'uld*. *One*.

Catra tensed. "Melog's sensing a Goa'uld," she hissed.

"A Goa'uld? But we haven't…" Daniel trailed off. "So they did take an animal as host!" he blurted out.

That was obvious, of course.

"And they are the leader of a pack of man-sized predators. Amazon-sized, actually," O'Neill said, nodding at Adora.

Catra snorted at the mention of those mythical warrior-women from Earth. So much to tease Adora about.

Adora frowned. "What are they doing?"

"They're coming closer - they're using the ruins as cover," Entrapta said.

"Tell us before they get on the roof," O'Neill said. "They might attempt to draw our attention to the front, where we can see them, and sneak up on us from behind."

That would be a good tactic - there were no windows at the back. Catra looked up at the roof. It had several holes in it.

"Don't!" Adora hissed.

Catra rolled her eyes at her lover. "I can handle a creature or two." Especially with her shock-rod.

"Leave them to me. You go after the Goa'uld with Melog."

Catra blinked. That was actually a better plan than ambushing some creatures on the roof. But… "You're going to play distraction, right?"

Adora grinned at her. "Of course."

Catra gritted her teeth. It made sense, but she loathed it. Adora was risking herself again - or sacrificing herself.

"No one's rushing out without a plan!" O'Neill snapped.

"Just hurry up with the plan," Entrapta said. "They're almost here." Her hair pointed at the wall in the back.

"Oh for…" O'Neill clenched his teeth. "Adora, take them on the roof. We'll keep the front clear."

"And we're going to sneak out in the confusion and grab the leader," Catra said, patting Melog on the head.

Yes, they growled.

"Let's do it!" Adora jumped before she finished talking, straight through a hole in the roof, her shoulders knocking dirt and stone fragments loose as they pushed against the edges of the hole.

A moment later, a dozen creatures roared, and Entrapta yelled: "They're coming!"

Catra heard a dull noise followed by a screech - Adora had swatted or kicked one creature off the roof. Shaking her head, she looked at the hole herself, then jumped.

She had no problem fitting through the hole and easily landed on all fours on the roof, drawing her shock-rod at once. But Adora had the situation in hand - and one of the creatures, holding it at the neck while it tried to twist enough to reach her with its claws. Another jumped on the roof, claws the size of Catra's fingers digging into the stone as it turned to attack her.

Catra dashed forward, her own claws keeping her from slipping, and hit it with the shock-rod. The creature howled, froze for a moment, then collapsed.

"Catra!" Adora snapped, kicking another creature off the roof.

"I had to check if it worked," Catra defended herself.

Hunt.

Melog jumped off the roof.

Catra sighed and followed them. Behind her, shots rang out and the sounds of staff-weapon fire. And more howling. Well, she had a task to do. A snake to hunt down.

Melog was ahead, turning around the corner of the next hut, and Catra ran faster to catch up. Cover worked both ways, but Melog could sense the Goa'uld.

They weaved through the village, the sounds of fighting not lessening. The howling didn't stop either. That was how the Goa'uld led the others, Catra realised. That meant they were watching the fight.

She spotted the creature on the roof of the building at the edge of the village when they were about twenty yards away still. If they were fixated on the fighting, they could take them from behind by surprise.

Danger! Melog hissed.

Catra whirled. One of the creatures was pouncing on her, already in the air, claws out. Catra threw herself to the side, lashing out with her shock-rod but missing the creature as it flew past, crashing into the ground a yard away.

It quickly turned around, howling, but Catra was already moving towards it. Its claws dug into the earth, muscles twitching - Catra dropped to the ground, sliding the last yard as the creature jumped overhead. She rammed the rod straight up. This time, she didn't miss, and the creature collapsed in a heap behind her.

But the Goa'uld had watched - and was turning away. Trying to run. Melog was already racing toward it.

Catra cursed and gave chase.

*****

Jack O'Neill fired a burst at the creature charging at the hut, catching it in mid-leap. The cat-thing roared and hit the dirt, rolling around with flailing limbs. Teal'c put a shot with his staff into it, and it fell silent. That was the third they had taken down so far.

The rest of the creatures withdrew back behind the huts around them. Smart. Too smart for Jack's taste. "Are we sure that those aren't Goa'uld?" he asked as he switched his magazine.

"I do not sense anything, Sir," Carter replied from the other side of the room.

That would have to do with the cat-detector away. "OK, we're currently holding the hut, but not doing any better…" he started to

say.

“They’re leaving!” Entrapta blurted out.

“What?” Jack turned to look down the street. He caught a shadow moving behind the huts. “Running north?”

“Yes!”

Damn. “They’re after Catra!” Jack snapped. “We need to…”

Once more, he was interrupted.

“Catra!” Adora yelled. Then the hut shook a little, and dirt fell down from the roof - the amazon must have jumped off.

A moment later, he saw Adora land in the middle of the ‘street’ and running towards Catra’s last known position.

Great.

“Should we move after them?” Teal’c asked.

“This might be a trap,” Jack pointed out. “If we get caught in the open by those monsters…”

Daniel winced as Carter nodded in agreement.

“On the other hand, we just lost our roof cover,” Jack went on. “If the creatures return, we can’t keep them out.” He looked at Teal’c. “You take point. Daniel, Entrapta, Carter - after him. I will bring up the rear.”

Teal’c was already out and moving, not nearly as fast as he could run. Jack shooed Daniel and Entrata out, then nodded at Carter.

The dust thrown up by Adora was just settling when Jack left the hut, scanning left and right with his M4 at the ready. “The creatures are still headed north,” Entrapta said.

“Good. Move it!”

Teal’c sped up a little, and they quickly passed the next huts. Jack caught a glimpse of Adora at the last hut - she was…

…throwing one of the creatures away. High enough so Jack didn’t think the monster would survive the experience. “I bet she could out-mortar a mortar,” he commented as they closed in on the last hut. He wasn’t sure if he was joking.

“Catra!” Adora yelled again. Two creatures were on the ground next to her, Jack saw.

“We need to catch the Goa’uld!” That was Catra. But he couldn’t see her from this spot.

Jack clenched his teeth.

Adora jumped over the hut, presumably after Catra, and more howling and growling followed.

Teal’c cleared the corner and raised his staff, firing before Jack reached him. A howling noise told him that Teal’c had hit one of the creatures.

“Carter, keep them safe!” Jack snapped before he turned the corner, keeping low.

Something moved in the bush to his right, and Jack almost put a burst into it. But he didn’t know where the two cats on his side were.

The creature crashing through the bush was neither Catra nor Melog, and Jack fired another burst at it as he dived to the side.

The monster overshot, sliding a few yards from sheer momentum, and as it whirled, Carter put several rounds into it. It collapsed in a growing pool of blood.

Another ran out from the back of the hut, claws digging into the soil, but Jack stopped it with a burst to the head before it could

close with them. A third tried to run, but Teal'c got it before it reached the next bush.

Jack stood as Teal'c passed him. "How many of them are left?"

"Uh… three! Not including the one Catra and Adora are chasing!" Entrapta replied.

Three? They could take three.

"One on the roof!" Entrapta yelled.

Jack whirled, raising his gun, as the monster jumped off the roof, straight at him. Jack's rounds went wide as he dived into a combat roll forward, barely avoiding the claws of the thing.

He came up with his M4 swinging around, but the monster was too fast. Instead of shooting it, Jack slammed the muzzle of his gun into the side of its head.

And that didn't stop it from crashing into him.

Jack tried to roll with the punch and pulled his legs in, kicking out as he hit the ground, and the creature flew past him - directly in the blast of Teal'c's staff.

That was… Jack hissed in pain, checking his chest. The claws had sliced through his vest and webbing and into his shoulder. It bled, but it wasn't very deep - it only hurt a little...

"Colonel!"

"Jack!"

"There are two left!" Jack snapped.

"One," Entrapta corrected him. "And it's running north."

Then Carter was opening his vest and pushing it away, revealing his wound. She winced.

“It’s not bad,” Jack told her. It didn’t really hurt much.

Carter shook her head.

“Jack!” Daniel hissed. “I can see the bone!”

“What?” That made no sense. That would hurt a lot more.

Jack blinked. It didn’t hurt at all, now. “Oh. My side’s going numb.”

“The claws must have some poison!” Carter spat through clenched teeth.

“Antidote!” Daniel snapped, patting his webbing down.

“I doubt it’s a nerve gas,” Jack told him. And if it wasn’t, then the antidote would only make things worse.

“Adora!” Entrapta yelled. “Jack’s hurt badly!”

A moment later, her voice, much, much louder, repeated her words.

Jack blinked again, then grinned. “That’s a real handy thing…” He snorted, then coughed. Breathing got kind of harder…

*****

“Adora! Jack’s hurt badly!”

Adora clenched her teeth as she heard Entrapta’s shout. The fleeing Goa’uld and his last creature were barely ahead of her - she could see them. She had almost caught up. But Entrapta wouldn’t yell like this if Jack didn’t need help right now.

“Go! We can handle them!” Catra passed her, Melog at her side.

Adora cursed under her breath. They were right. She loathed it - Catra was risking herself fighting two of those creatures, one of them a Goa’uld - but they were right.

“Don’t get killed!” she yelled and turned around, running all-out back to the ruins.

The area was littered with the corpses of the creatures, many of them smoking - SG-1 had taken out a lot of them. But… there! Jack was on the ground, Carter kneeling with him and… kissing him? No, breathing into his mouth.

“He’s been poisoned,” Entrapta told her. “The claws of the creatures are coated with venom.”

They were? Adora hadn’t noticed. Then again, she hadn’t let them scratch her. Her eyes widened, and she looked back over her shoulder. Catra didn’t know about that!

“His body is shutting down,” Carter gasped before breathing into Jack’s mouth again.

“We’ve got an antidote, but we don’t know if it’ll help or make it worse,” Daniel said.

“My scans are inconclusive - I’ve never encountered this kind of venom before,” Entrapta added, biting her lower lip. “So…”

Adora nodded and pointed her sword at Jack. Then she closed her eyes and focused on her magic. Her power. Jack needed to be healed.

She opened her eyes again, and a wave of magic shot out from the tip of her sword and into Jack.

He tensed, gasping and choking, his eyes shooting open, while her magic worked on him. After a few seconds, she lowered her sword.

Jack gulped down air, panting and coughing. “That… that was…”

“Sir! Don’t move!” Carter snapped. “You’re hurt and poisoned.”

“I don’t feel hurt any more,” Jack replied, blinking. He glanced at the bandage on his chest. “And I don’t feel numb any more either.”

“Sir!”

“Jack!”

But Jack pulled the bandage away, revealing smooth skin underneath it. “So that’s magical healing. Wow.”

Adora nodded. “I can heal people.” And plants. And animals, probably.

“Thanks. I thought I was a goner.” He smiled, then looked at Carter. “Kept me alive, huh?”

“I rendered first aid, but…” Carter tilted her head. “We were about to hit you with an antidote.”

“Ah.” Jack nodded.

Adora looked at Entrapta. “Any trace of the poison left?”

“Uh… not that I can tell. But I didn’t notice the venom on their claws before.”

Adra nodded. “I’ll be back.” She dashed away. Catra was still out there, alone with just Melog, fighting creatures with poisoned claws. If anything happened to her…

She ran through scraggly bushes, up a dune - there were tracks in the sand! Pawprints and Catra’s footprints. From the crest of the dune, she could see a forest in the distance - and Catra fighting a creature. Damn!

Adora ran as fast as she could, down the slope, cursing at the sand slowing her down. Catra needed her help!

She panted as she reached the bottom of the dune, briefly losing sight of Catra, then sped up, sand getting thrown up with every step she took. She reached the next crest, and there was Catra, facing a creature trying to circle around her. Her shock-rod crackled, but the creature jumped back.

Adora snarled and charged with her sword. The creature saw her coming and whirled, trying to flee, but Adora threw her sword. The blade caught it in mid-jump, spearing its side, and the creature collapsed in the sand.

"Melog's gone after the Goa'uld!" Catra snapped.

Careful! They have poison on their claws!" Adora told her as she summoned her sword again.

"Really?" Catra scoffed. "This way."

"Jack almost died," Adora told her as they raced up the next dune, following Melog's tracks.

"I heard Entrapta yelling."

That wasn't the point! "Let me fight it!" Adora snapped.

"I've got the shock-rod! We need the Goa'uld alive!"

"I can take them alive!" Adora could!

"And what if you get poisoned? Who's going to heal you?" Catra snarled.

"I won't get poisoned."

"Neither will I!" Catra shot back.

They reached the crest of the next dune and stopped. The Goa'uld wasn't moving any more - it was standing in the sand, looking at… nothing?

"Oh!" Catra whispered. "Melog got it caught in an illusion."

Right. Melog could do that.

Catra grinned. “See? Easy!” She sauntered - sauntered! - down the slope, walking casually up to the Goa’uld, twirling her shock-rod.

Adora followed her, scowling. This was too easy.

Catra smirked at her. Then she stuck the creature in the side. Crackling electricity warped over the creature, and it howled.

But it didn’t go down - it whirled, lashing out with its claws.

Catra jumped back, snarling, and dodged the swipe. “Want another one? Here!” She lunged, giving the creature another shock. “Tough bastard!”

This time, the creature went down, twitching and groaning. They had… It opened its mouth, and a small thing flew out of it - and at Catra.

Before Adora could react, Catra swatted at it with her free hand - and sliced it in half with her claws. “Damn,” she spat, grimacing at the sight of a bisected snake in the sand.

“So much for catching them alive,” Adora said.

“It was a reflex!” Catra defended herself. “I didn’t expect the idiot to charge me like that!”

“Right!”

*****

The Colonel was safe. Healed. Samantha Carter couldn’t help staring at his chest. Instead of a gaping wound that exposed the bones beneath, there was only smooth skin covering muscles. She raised her hand, then lowered it. She wouldn’t poke the skin like some… whatever.

“Amazing,” Daniel whispered. “I mean, they told us about magical healing, but to see it like this…”

“We’ve seen Goa’uld healing devices before,” the Colonel said. He was poking his chest, of course, and Sam couldn’t help thinking that he looked a little shaken. “Remember Kendra?”

“But she required a Goa’uld Healing Device,” Daniel replied. “This was just magic. Unless the sword is a healing device.”

“You know of devices that can heal?” Entrapta stepped in front of Daniel and the Colonel, eyes shining. “Without magic?”

“Yessss?” The Colonel looked like he was facing down another dangerous creature.

“Fascinating! Where can we get them? It would revolutionise healthcare if we didn’t need sorceresses any more for healing!”

“Well, from the Goa’uld, but I believe they are quite rare,” Daniel told her. “And you need a high concentration of Naquadah in your blood to use them, or so we believe.”

That was the common theory, Sam knew. If it was true, then she might be able to use such a device herself, after her possession. She wasn’t quite sure if that was a good or bad thing - she was a scientist, not a doctor.

“Really?”

“The only one we saw using one was a former Goa’uld host,” the Colonel said as he tried to close his shirt. Which Sam had cut off in her haste to save him.

“Oh. I wonder how that works. In any case, that shouldn’t be a problem - we can insert Naquadah into people’s bodies, can’t we? In safe doses.” Entrapta leaned forward with a smile.

“Well…” The Colonel grimaced and looked at Sam.

“We don’t know if that is possible without a Goa’uld being present in the body, nor do we know what would be a safe dose,” she explained.

“Then we’ll have to find out!” Entrapta beamed at her. “This will be great!”

“We would have to find a Goa’uld with such a device, first,” the Colonel said. “I doubt that anyone on this planet has such a device.”

“Indeed.” Teal’c nodded. “Absent a Goa’uld, such a mission would not have included such a device.”

“Yeah, right. So, has anyone seen our resident magical girl?” The Colonel looked around as he pulled on his webbing. Or tried to. Sam had cut through that as well.

“Oh, let me fix that!” Entrapta’s hair reached out and pulled the damaged webbing to her - and with it the Colonel.

“Hey!”

“It won’t take long!” And the princess was wielding pliers and… was that a welding kit?

Sam took a step closer and watched while she reattached the torn webbing.

“There!”

“Uh, thanks.” The Colonel looked bemused. “But honestly, where are Adora and Catra?”

“Oh!” Entrapta pulled out her main tool - Sam really had to copy that - and fiddled with it. “They’re… coming back to us.”

And there they were. Adora and Catra, and Melog. They looked unhurt, but Catra looked angry, and Adora looked… amused?

“Did the snake get away?” the Colonel asked.

“Not exactly,” Adora replied, glancing at Catra.

Catra rolled her eyes. “They surprised me, and…” She held up her hand. A Goa’uld dangled from it. No, two halves of a Goa’uld dangled from her fingers.

“Ah.” The Colonel nodded. “Better safe than sorry, trust me - you don’t want a snake burrowing into you.

Sam shuddered at the memories that brought up.

“Would’ve still been great to capture one for interrogation,” Catra said.

“They would’ve needed a host to communicate,” Sam pointed out.

“We could’ve stuck them in an animal and made them write out answers,” Catra replied. “Well, there should be other snakes on the planet, right? One per dead Jaffa?”

“Unless they fought amongst each other,” Daniel told her. With a grimace, he added: “This one might have consumed the others.”

“Ew.” Catra and Adora made faces. Catra frowned at the corpse.

“Well, we can still find out information from a corpse!” Entrapta said.

Sam hoped she meant an autopsy. But with magic - and with Entrapta - it was hard to tell.

“Go wild,” Catra said, handing the two parts over.

“Yes!” Entrapta’s head bopped as she nodded.

“But maybe do that after we searched the tombs?” Daniel asked. “Searched for them, I mean.”

“The dead won’t move,” Catra told him.

“But if there are more Goa’uld survivors on the planet, then they will now know of our presence here,” Daniel retorted. “We should find the graveyard quickly. Before more of those creatures arrive.”

That was a good argument.

“I’ll have to preserve the corpse, though,” Entrapta said. “Let’s go back to the shuttle and put it in the freezer!”

“The freezer?” The Colonel asked with a grin. “Not some fancy magical stasis field?”

“Oh, no. Those require a sorcerer or sorceress to set up,” Entrapta replied. “That’s kinda bothersome if you don’t have one with you.”

“Ah, of course.” The Colonel forced a smile on his face.

Sam couldn’t help but grin at this - he should know better than to assume anything about the Etherians by now.

*****

Crashed Al-Kesh, PK-327, July 14th, 1998 (Earth Time)

Standing on the ramp of the shuttle, Catra fiddled with the sanitiser. Blood on her claws was the worst. If she forgot about it and retracted her claws, it would get all icky. And if she didn’t, it dried, and she had to scrape it off her claws. Which was a pain with both claws out.

“Let me help.” Adora reached out to her.

Catra turned away with a scowl. “I can clean myself up, thank you very much.” She didn’t need any help - this should be natural. She’d done it before, even once when she had hurt Adora, and… Not going there.

“Please!”

Perhaps she should start licking the claws clean. That would show Adora that she wasn't helpless.

"Let me do this for you." Adora grabbed her shoulder and gently turned her around.

Catra found herself staring at Adora's smiling face. So close to her own, and so… so… "Fine!" she spat, feeling herself blush a little as she thrust both claws and bottle into her lover's face.

Adora beamed at her and quickly started cleaning her claws.

Catra tried not to fidget too much. This reminded her of the time she had gotten her hand hurt in training, and Adora had sneaked a bottle of disinfectant to treat it.

She wasn't quite sure how to feel about that.

"There!"

Catra flexed her claws, cocking her head to inspect them, then retracted them and unsheathed them several times in a row. "Looks fine." She bared her fangs. "I can slice the next snake now."

"Catra!"

"I'm joking!" she said and nodded at the interior of the shuttle. "Did they store the corpse?"

"I think so." Adora frowned. "Didn't you hear them?"

She had been distracted. Catra shrugged. "I was focusing on watching you."

"Oh."

Now Adora was blushing as well.

"Alright! Now that the snake's on ice, let's go check the graveyard, so Daniel stops fidgeting."

“Jack!”

“What? You were fidgeting.”

“We only have an approximative location,” Catra heard Daniel complain as the others approached them. “We don’t know if the tombs are there - or if there are tombs. Some cultures leave their dead for the carrion eaters.”

Ew. That sounded gross.

“What’s wrong, Catra?”

Catra turned to look at Adora. “Daniel just explained that some people leave their dead for the carrion eaters to dispose of.”

“Ew!”

“It’s actually a fascinating religious practice,” Daniel explained as he stepped on the ramp. “And not any grosser than, say, mummification.”

“Mummification?” Adora asked.

Daniel explained.

Ew. Those Earth people were weird.

“Anyway, we’re going to fly to the location,” Daniel said. “So…”

“Yeah, let’s go,” Catra said.

The flight didn’t take long - a minute including take-off and landing - and soon they were looking at a hill.

“Well, there are empty spaces inside the hill, according to my scanner. So, either natural caves or tombs,” Entrapta said.

“And they hid the entrance?” Adora asked.

“Probably to deter grave robbers, although that seems not quite effective if scanners still show the graves. And, of course, if the graves were meant to be found by their system lord, hiding the entrance without some hint or clue might be counter-productive,” Daniel explained. “The closeness to the wreck would make it easy to find.”

“Yeah, yeah. The question is: Can we find the entrance?” O’Neill asked.

“It should be here,” Entrapta said, pointing ahead. “There’s a tunnel behind the rock there.”

Catra turned to Adora. “Well, get moving and lifting.”

Adora pouted at her but started walking towards the rock. Catra followed her, together with the others.

The rock was double the size of her and didn’t seem to have any convenient handholds - probably rolled in place with the help of a lever. Adora didn’t bother with either - she reached around it, grabbed it somehow, and heaved.

She turned, took a step and dropped the rock on the ground, where it rolled a little to the side.

Catra was already looking at the tunnel opening she had revealed. It was rough - almost like a natural cave. But the walls and the ceiling were…

“They must have burned their way in. This wasn’t drilled or built,” Daniel said.

“Yeah. I didn’t expect stonework after the mud huts,” O’Neill commented. “But this must have cost a lot of power.”

“Several staff weapons’ worth,” Teal’c confirmed.

“So…” O’Neill looked at them. “It was important.”

"Yes." Daniel nodded.

"Not important enough to make nice walls with big hieroglyphs praising their lord, though," O'Neill went on.

Daniel blinked. "That might just be the entrance, trying to look natural."

"With a big rock in front of it. And people would still explore a natural cave. It's what we do." O'Neill shook his head.

Catra agreed with him. Who wouldn't explore a cave like this, natural or not? "So, it's trapped."

O'Neill grinned. "I think so. And I doubt it's a big round rock that Daniel can outrun."

"Jack!"

"You'd need a hat and a whip, anyway."

"Jack!"

Ah. Again a reference to the 'movie' they mentioned. "So… do we spring the trap, or do we try to find it and dismantle it?" Catra asked.

"I would suggest we do it the way that won't get us hurt," O'Neill replied with a toothy smile.

Of course, Adora just had to speak up. "Oh, I think I can take it."

*****

Tombs, PK-327, July 14th, 1998 (Earth Time)

Playing Indiana Jones. It wasn't the first time, it probably wouldn't be the last, but it wasn't funny and would never be. Jack O'Neill knew that. The snakes - the Jaffa, in this case - would have left some nasty surprises to deal with anyone entering whatever they

had been hiding here who wasn't their master. And now Adora was talking tough.

"You might be wrong," Jack told her. "The Jaffa probably rigged this to defend against the Goa'uld you killed."

"Yes?" Adora looked as if she didn't get what that meant.

"It means that whatever measures they took, they planned to defend against a supernaturally tough creature that could keep coming at them as long as they survived to possess a new body," Carter explained.

"Resetting traps?" Daniel, of course, looked surprised. "How would they manage that? Without us detecting that, I mean."

Which was a good question. Jack looked at Carter.

"They could have found a way to shield the traps' power supplies. Or they might have used an Ancient Device. That is less likely, of course. And I doubt they would have anticipated magical sensors. But the most obvious solution is that they would have rigged a charge to destroy the entire facility in case of an unauthorised breach," Carter said.

That, at last, gave Adora pause. And made Catra scowl. "See?" the catwoman said. "Don't blindly charge in."

"I wasn't planning to!" Adora retorted. "But if anything goes wrong, I'm the one most likely to survive it."

"You're also the one most likely to heal people if something goes wrong," Catra shot back.

"Right. So how about we don't risk people at all?" Jack asked, looking at Entrapta.

"Oh! I can rig up a remote-controlled bot! That way, we don't risk anyone getting hurt!" The Princess beamed. "Though my scanners don't show any bomb big in the hill. No Naquadah. No reactor."

“Did you check for chemical charges?” Jack asked.

“Oh…” Entrapta pulled out her scanner thingie again. “Oh! There’s some large space filled with a compound that would combust very easily.”

“They’ve rigged the tomb to blow,” Jack said.

“But what are they hiding in there if it doesn’t have Naquadah?” Daniel shook his head. “Ancient Tech is based on that metal, isn’t it?”

“Normally, yes,” Carter told him. “But there’s no indication that they had to use it for everything. Although if they didn’t, the odds of anything surviving so long are… not very high.”

“You can say ‘zero’, Carter,” Jack said.

“There’s always a chance, Sir.”

He didn’t sigh, but he smiled. “Yes. And we’ve found that out the hard way before. So… we need to find a way to defuse that bomb. Preferably without standing in front of the tunnel opening, which will channel the blast.” He turned to Entrapta. “Show me the data, please.”

To her credit, she didn’t argue and showed him the setup with a portable holographic display. The geeks at Stargate Command would faint if offered such a device. Focus, Jack, he reminded himself. He wasn’t a scientist, and he had no clue about Ancient Tech, but he knew a lot about explosives. And if Entrapta’s magic scanner didn’t pick up Naquadah or anything nuclear, then the Jaffa must have used chemical explosives to trap the tomb. Maybe even homebrewed from stuff available in the ship.

And Jack was quite familiar with those kinds of explosives. Had brewed up some of his own on some missions. He studied the plans, walking around the display. There was a thin wall between the explosives and the rest of the installation. The explosion would completely wreck the area. Might crack the hill too - Jack

had seen what happened to underground armouries if something blew up. “We need to get a lot further away to be safe,” he said. “Unless we want to risk getting crushed by flying debris the size of tanks.”

“I can protect us against that,” Adora said.

Catra elbowed her. “You don’t have to because we’ll be safe in the shuttle.”

“And how do you disarm it?” Entrapta asked. “It looks like the trigger here is… oh… connected to the trigger there, and…”

“Interconnected triggers,” Jack said. “Rigged to blow if anyone single one gets tampered with. But they’re old. Might not work as planned any more.”

“And the chemicals might have degraded,” Carter added.

“Becoming inert - or unstable,” Jack said. They would have to be very, very careful there. “You don’t have a way to magically turn explosives into plants or so?”

“Uh…” Adora bit her lower lip. “I don’t think so.”

Pity. That would’ve been great.

“Then we need to take out all triggers simultaneously,” Jack said.

“Oh! Multiple remote-controlled bots!” Entrapta beamed. “That should be a challenge. Although I suppose if I program them correctly, they can all execute a predetermined sequence of actions at the same time. Each would need their own code, of course, and the signal lag…”

“Since signal lag will be a factor, but the orders won’t be time-critical,” Carter cut in, “what about having synchronised clocks in each bot, so they can execute orders at the same time?”

“Obviously, yes! Though we might have to repurpose some scanners to synchronise the clocks. Perhaps if we use a crystal as the…”

Jack purposely tuned the technobabble out. It wasn’t as if he would be able to follow it once the two women started discussing the nuts and bolts of the task. “Alright, folks - let’s move to the shuttle for safety’s sake,” he said, clapping his hands.

As safe as you could be, at least, when Carter and Entrapta started building experimental tech.

*****

“They’re still at it.”

Sitting on the shuttle’s ramp, looking at the hill, Adora turned her head and looked at Catra as her lover joined her, handing over a cup of tea. “Thanks.”

She took the cup in both hands and sipped. Almost too hot. Adora blew on the liquid.

Catra snorted and swallowed half her own cup.

“Cats are supposed to be more sensitive to heat.”

Catra snorted as Daniel joined them, another cup of tea in his hand. “Cat’s aren’t supposed to do what they are supposed to do,” she said.

“Touché,” Daniel replied.

“‘Touché’?” Adora tilted her head at him.

“It’s an expression from fencing; it means you scored a point - touched your opponent,” Daniel explained. “Fencing as, ah, a competitive sport, not the actual fighting.”

Ah. Adora nodded. That made more sense than what she had thought the first time.

"So, what do you think the Jaffa hid in the tomb? If it's even a tomb."

"Well, there's no Naquadah - unless they found a way to shield it," Daniel said. "So, I doubt that there's a stasis pod containing another Goa'uld."

"And no Naquadah-based technology," Adora said.

"We shouldn't assume that they couldn't shield Naquadah," Catra said.

"The Goa'uld don't know about magic," Daniel objected. "How can you shield something against something that you don't even know exists, much less how it works?"

"By accident," Catra said. "Drove the instructors crazy if you did something that wrecked their plans while trying something else."

Adora snorted. "You mean: 'while *appearing* to try something else'," she corrected her lover.

Catra flashed her a toothy grin.

"Ah." Daniel nodded. "I had the impression that Horde training methods were rather rigid."

"The Horde's whole damn doctrine was rigid," Catra muttered. "We did a lot better when I started to mix things up."

"Yes." Adora pressed her lips together. She didn't want to talk about the Horde. "But if it's not Naquadah, what could it be? They were sent to recover Stargates, weren't they?"

"According to what we know, yes," Daniel said.

“They were recovering Stargates so that Horde Prime or the First Ones couldn’t get them,” Catra said. “Did anyone analyse what weapons shot the ship?”

“Sam - Captain Carter - said that the spectral analysis didn’t match any known weapon systems,” Daniel said.

“So they weren’t shot at by other Goa’uld since we know their weapons thanks to you. And you guys got the data on Horde Prime weapons and Darla’s weapons, meaning First Ones,” Catra said. “That leaves…?”

“...unknown weapons,” Adora replied.

“Or First Ones that we don’t know yet,” Catra added. “But yes, probably unknown weapons.”

“A new species or culture, perhaps?” Daniel beamed.

Adora sighed and looked at Catra, who was not quite snarling.

“Did I miss something?” Daniel asked.

“You know what Horde Prime did to planets whose population resisted?” Catra asked.

And likely to planets that didn’t resist.

Daniel blinked. “Oh. And since they were shooting at a Goa’uld ship, they would likely have resisted Horde Prime as well.”

“Yes.” Adora nodded. “If they took anything with the Stargate, it might be the last remnants of a destroyed planet. And they obviously didn’t think that the Stargate was more important since they didn’t hide it.”

“They might not have been able to hide it. If they could hide a Stargate, then they can hide Naquadah from sensors, and all bets are off,” Catra pointed out.

“Right.” Adora nodded. “We’ll find out once the others have the bots ready.”

“It’s actually more of a drone since they cannot make any decisions autonomously,” Daniel said.

Adora snorted and shook her head. As if that difference mattered.

*****

“Alright! We’ve got the bots all ready. Well, they are technically not bots since their programming isn’t complex enough, so it’s more like…”

“They are remote-controlled drones,” Sam said.

Entrapta pouted for a moment, then nodded. “And we’re going to send them inside to find and disable all bombs and other traps in the tomb!”

“Carefully,” Jack said. “Very carefully.”

“Yes,” Daniel agreed. “We don’t want to destroy whatever is hidden in this hill.”

“We won’t! We’ve found the traps already, thanks to our scanner!” Entrapta said. “Jack just has to defuse them all!”

“No pressure,” Jack mumbled as he sat down at the screen that Sam and Entrapta had rigged up to control the bots. “The worst that can happen is that everything blows up.”

“Including the planet,” Teal’c commented, which earned him a nasty glare from Jack.

Adora didn’t think it was funny either. You didn’t joke about blowing up planets.

She blinked. Teal’c didn’t joke as a rule, did he?

*****

The Hill

Tombs, PK-327, July 14th, 1998 (Earth Time)

"Was that a joke about blowing a planet?" Samantha Carter heard Adora ask.

She shook her head. "With enough Naquadah to enhance an explosion, it's possible. Not likely since there are much easier and cheaper ways to scorch a planet, but possible." Sam had done the calculations herself, once. Just in case. Earth didn't have enough Naquadah to blow up a planet, but it wouldn't take a second Manhattan Project to achieve the necessary amount. Just a focus on gathering the metal.

"Ra had a planet blown up at least once, to make an example out of a rebellious subordinate," Teal'c added.

"We'll have to take that into account when we plan Earth's protection," Adora said. "And Etheria's."

"Depending on how big such a bomb is, we'll need a way to intercept bombers such as this Al'Kesh," Catra added.

"You need interceptors," the Colonel said with a grin. "I've been saying that for a long time. Those Death Gliders just don't cut it."

"They serve the System Lords well enough," Teal'c said.

"And they are proven design," Sam added.

"Yeah, but they are ugly, and they don't exactly fit our doctrine," the Colonel retorted. "I'm sure you can come up with a better design. Multi-role aircraft. Aerospace craft."

"Spacecraft design isn't amongst my primary duties or experience," Sam told him and straightened.

“Oh! But it sounds like fun! I’m sure we can come up with some nice designs!” Entrapta piped up. “Multi-role, you said? It would probably be hard to design one that could replace a frigate, but it should be able to replace the Al’Kesh and Death Glider. Bomber and interceptor? Oh, I’ve got some ideas…”

“Make sure it looks good,” the Colonel said, and the princess nodded eagerly. “Like an F-15.”

Sam couldn’t tell if he was joking.

“I hate to interrupt this design committee, but could we get on with defusing the massive bomb in the hill across of us?” Daniel said.

“Right, right.” The Colonel took a deep breath and sat down in front of the screen that showed the drones’ camera feeds. “Let’s do it.” He briefly flexed his fingers and took control of the first drone.

He hadn’t piloted such a drone before, but there was no sense of uncertainty or hesitation that Sam could spot - the drone flew straight towards the open cave, smoothly entered it and then slowed down as it travelled further inside. “Alright,” he said. “Now, how do those manipulators work?”

“Oh, let me show you.” Entrapta almost climbed into his lap as she took the controls and demonstrated.

Sam pressed her lips together and shook her head; the Colonel even blushed. But he quickly started using the manipulator arms - Sam had taken notes of the design; the vehicles at Stargate Command could use those as well - and started approaching what seemed to be the first trap.

“Alright. I need some x-ray vision here.”

“There!” A strand of hair darted forward, and the stone wall on the screen turned transparent. As impressive as it looked, Sam had a few ideas about how she could make that more efficient

once she had access to her lab in Cheyenne Mountain. The Etherians were a little behind Earth in displaying sensor readings. Though they had HUDs, in as much as Entrapta's visor could copy the functionality, they were not widespread.

The Colonel studied the screen, then pointed at one line. "Can you check where this one leads?"

Sam leaned forward. The line led straight back to the main chemical storage and to what looked like a detonator. Although it was also connected to other lines. "I think that's the line to cut, Sir," she said.

"I think so as well - one of them, at least. Alright, let's drill. Carefully."

Sam glanced at Daniel while the Colonel used the laser drill Sam and Entrapta had rigged up. Her friend was biting his lower lip so hard, she expected him to hurt himself any moment.

"Daniel, relax, we're safe here," Adora told him with a smile and in a low voice that the Colonel wouldn't hear. "Even if the entire hill blows up, the shields will protect us."

Sam hid a smile of her own at Daniel's surprised reaction and denials. "I'm not worried about our safety."

Catra loudly snorted.

Daniel pouted. "I am worried about what we may lose should the hill be destroyed."

Catra shrugged. "If it gets destroyed, we'll never know what it was, so why worry?"

Daniel gaped at her. He took a deep breath, no doubt to lecture her, when the Colonel snapped: "Could you keep it down a little? Defusing bombs is a delicate business."

Daniel's mouth snapped shut so quickly, Sam had to hide another grin.

The Colonel wasn't even paying attention any more - he was already piloting the next drone to the next trigger. "I could really get used to this," he commented. "Flying drones and see-through-walls sensors? Intel would kill for this."

"They don't have to," Entrapta said. "We can show them how to build them! It's easy!"

For Entrapta. Although Sam was sure she could duplicate the drones as well, except for the magical sensor. That she would have to procure from Entrapta.

Unless the Colonel could be convinced to learn how to build them. She almost snickered at the thought of his reaction if she made such a proposal. And then she imagined what would happen if the brass did this, and her amusement vanished. Depending on how rare such a talent was amongst humans on Earth, this could very well happen.

*****

Catra narrowed her eyes as she watched O'Neill work. It was impressive to see him pilot the bots like that, but it was also quite informative. He was a good fighter on the ground and a good pilot. Which was a good thing since a single mistake would end up with the hill blowing up. Of course they didn't know what the Jaffa had hidden inside the complex, so she shouldn't really be bothered or care overly much about it. But still…

She glanced at Adora, who was biting her lower lip as she watched. "Relax," she whispered, repeating Adora's own words. "We're safe here."

That made Adora glare at her - but she wasn't trying to pierce her lips any more. "I'm aware of that."

"Good."

Catra smiled and patted Adora's back before returning to watch O'Neill - just in time to see him lean back and sigh.

"Alright, I think that's it. Now, all we have to do is to cut all the lines at the same time."

"Yes!" Entrapta grinned widely - and slightly derangedly. "Now, we can find out if my program works!"

"'Now'?" O'Neill asked.

"We've tested it. Sir," Carter told him.

"Ah."

"But this is the first live test!" Entrapta's hair twitched. "Ready?"

"Go ahead."

"Yes!" She reached out and pushed a button. The screen split into half a dozen cameras, one of them showing the outside of the hill. Then she pushed another button, and lasers hit five lines.

Catra held her breath, but the hill didn't blow up. She released it silently.

Daniel's relieved sigh was much louder, of course.

"OK, they worked!" Entrapta nodded. "So… let's go inside!"

"Let's keep the drones working," O'Neill corrected her. "There's still enough explosives in that hill to vaporise it - to use a scientific term."

"I do not think the explosives are powerful enough to turn the stone and rock into vapour," Teal'c told him.

"It's a figure of speech, Teal'c."

"I see."

Catra narrowed her eyes a little - was the big guy joking? It was very hard to tell. But O'Neill had the right idea - better to risk a bot than a person. Although he might've just wanted to keep piloting the bots.

The screen changed again, only showing one perspective now - the one of the bot O'Neill piloted. He manoeuvred it down the tunnel until it met a door.

"It's a wooden door," Entrapta said. "I don't see any traps on it."

"Not a lock, either, though - they just put a metal block in and welded it closed," O'Neill said.

"Probably with a staff weapon," Carter said.

"But was it to keep people out - or to keep whatever is inside from getting out? Let's find out." O'Neill moved the manipulator arm up, and a laser hit the hinges. "If you want to keep someone out, you put the hinges on the other side…"

"Jaffa are generally not the best architects - at least the ones trusted with such missions," Teal'c said.

Catra didn't comment. As the hinges were cut, the door fell to the ground.

"And… another tunnel!" O'Neill said. "I knew that we should've picked door number tree!"

"There was only one door," Entrapta said. "And another coming up."

"Sorry, Jack's making references to another TV show," Daniel said.

"Oh."

"Just trying to lighten the mood before Indiana Daniel grinds his teeth down with worry," O'Neill claimed. "And… another door!"

“I just told you that,” Entrapta said.

“Yes, you did. Same setup as before?”

“Yes.”

More hinges were cut. But this time, they had to cut the welded parts of the ‘lock’ as well.

The tunnel behind it opened into a large room. A room with walls filled with holes. And in the holes…

“That’s the graveyard. There must be… two dozen graves,” Daniel whispered.

“And full of Jaffa,” O’Neill said. “But one is different.” He moved the bot forward to an empty hole.

“That must have been meant for the Jaffa whose body we found in the ruins,” Daniel said. “But… where’s the staff weapon they used to seal this grave?”

“And what’s in the third grave from the right?” Entrapta asked. “It’s denser than a corpse.”

“Looks like a corpse,” O’Neill said.

“It’s behind the body.”

Catra didn’t wince when O’Neill dragged the dead Jaffa out of the niche and dumped the body on the floor. The sight of a skeleton covered with leathery skin falling apart as it hit the stone was rather gruesome, but it was just a thousand-year-old corpse - she’d seen far worse in the war.

“It looks like… A cube,” O’Neill said. “A fancy one.”

Catra narrowed her eyes. The cube looked familiar - half the size of a head. “Where have I seen this before?” She muttered. Then she remembered. “I saw one in Horde Prime’s flagship.”

“Oh.” Carter leaned forward. “It doesn’t look like the other examples of his technology that we’ve seen.”

Catra shook her head. “It wasn’t. It was a trophy.”

It looked like Adora’s theory that this belonged to an unknown species destroyed by Horde Prime was correct.

Yeah, losing that could have been bad.

*****

“So… what are we looking at?” Jack O’Neill asked as Carter and Entrapta bent over the cube now resting on a table. They had barely waited for the drone he piloted to put it down in the shuttle before grabbing it.

“We don’t know yet, Sir,” Carter replied. “But it’s not a battery.”

“It has connectors for power lines - not a standard format, though - but no power source or storage inside,” Entrapta added, staring at her scanner. “And the crystal formations inside do look somewhat familiar.”

“Our current theory is that it is a data storage device,” Carter said.

Data was good. “Great.” Jack smiled. “So, what’s on it?”

Both of the women looked at him with frowns on their faces.

“We don’t know yet, sir.” Carter didn’t roll her eyes, but he could tell she wanted to. “This is an alien device, with a different computer technology, architecture and programming language. We haven’t encountered this technology before. Just building an adapter so we can power it up will take a while. Then we have to find a way to read the data and may have to decrypt it.”

“So… tomorrow at the latest?” Jack joked with a grin.

Carter gave him that 'You know better than that, Sir' look of hers, but Entrapta seemed to take him seriously.

"We can't say yet. It depends on how different the technology is. The basic principles for crystal-based data storage are the same, or should be, but the data format and encryption…" The princess shrugged. "It's hard to say how long this will take. If the encryption is sufficiently advanced, we might not be able to crack it at all!" she added with a smile. "Wouldn't that be interesting?"

"Can't you check with the fleet for information?" Daniel asked. He was staring at the cube like… Well, like an archaeologist at a new site. This was a data cube from a - probably - lost civilisation. Pretty much a holy grail for him.

"We can and did, but they have no data about this. Horde Prime didn't share whatever he knew about this cube," Entrapta said.

"If he even knew anything about it, except for which species had built it," Catra said with a scowl. "He wanted trophies, not data."

"That would've been a waste!" Entrapta protested.

Jack refrained from pointing out that a warlord who rendered entire species extinct wouldn't care about waste. Instead, he nodded at the two women and joined the others in the back. Clapping his hands, he asked: "So, while Carter and Entrapta are busy, who's up for another excursion?"

"Oh?" Adora perked up.

"There are potentially two dozen Goa'uld on this planet," Jack said. None of the corpses in the tomb had the remains of larvae in them. "We need to scan the perimeter so we can be sure that they aren't trying to sneak on board of the wreck - or on the shuttle."

Melog the cat growled, and Catra shook her head. "There's no Goa'uld nearby."

“So the cat said,” Jack replied, nodding. “But that still leaves a whole planet where they could be hiding.”

“We can scan the Goa’uld corpse,” Entrapta cut in - when had she joined them? - “and check the concentration of Naquadah in its blood. If it’s higher than it should be, the Goa’uld probably ate his kin.”

Adora grimaced.

Jack didn’t. That was how the Goa’uld were. And it was a clever way to find out if there should be more of them. “Let’s do that.”

“Good! I need new scans of Teal’c’s larva first, to check if the concentration decays over time,” Entrapta said.

“It should not,” Teal’c said.

“We’ll see!” Entrapta was already waving her scanner at him. “Then we need to find out how efficient the digestive system of a Goa’uld is when it comes to absorbing Naquadah from ingested larvae - oh, I need to scan the animal they had taken over, too! Too bad they don’t show up on global scans since the concentration needed for that would probably be toxic, but short-range, we should be able to detect them with the right calibration - once we know the parameters we need.”

Right. Jack nodded with a firm expression. This seemed to become a little more involved than he had thought. But as long as it worked… It would delay decrypting the data cube, but the thing wasn’t time-critical; it had been buried under a hill for a thousand years, after all.

While Entrapta and Carer did their scanning thing, Jack stretched. “So, who wants to grab something to eat? Just don’t eat the dead snake; we still need to scan it.”

Adora and Daniel frowned at him for the joke, but Catra snorted. Teal’c, of course, didn’t react at all. In other words: just as expected.

They went to the kitchen of the shuttle, and Jack grabbed a few pre-packed meals. "Roasted probably beef OK?" The Etherians had cows, but Jack didn't know if they had used beef for this meal.

"Of course," Adora said.

Jack looked at the others. Adora would eat rations without complaints.

"Yeah," Catra said. Teal'c nodded. Daniel blinked. "Uh… what else is available?"

Jack handed him the meals. Then, while Daniel looked them over, he sat down at the table.

"Thank you again for saving my life," he told Adora.

She fidgeted. "Oh, it was… I mean, I can heal, so I did. I would have done it for anyone."

"Just say 'you're welcome', dummy!" Catra shook her head.

Adora pouted at her.

Jack suppressed a sigh. While it was refreshing to meet someone as powerful as Adora - a real magical princess - without any arrogance, she was overdoing the humble bit. And Jack had the feeling that she wasn't faking it at all.

Which wasn't a good thing. Not at all.

*****

Adora frowned at her girlfriend. She hadn't saved Jack's life to be thanked - she had saved him because that's what you did when a friend was in danger. Or anyone else was in danger. She was She-Ra; she had a duty to help people.

Catra stuck out her tongue at Adora in return before starting on her meal - which was a grilled fish, of course. Her lover really loved fish in all forms. As did Melog. It was probably a cat thing.

"So, what do we do about the Goa'uld?" Adora asked to get things back on more familiar tracks. "Once we know if there are more around, that is."

Jack shrugged. "Try to capture them if possible. Kill them if not."

That sounded… "We don't know if they are hostile," Adora said. "We know the one Catra killed was because he attacked us. But no one else attacked us."

"So far," Catra said as she refilled her glass.

"They're snakes," Jack said.

"But they can't hurt anyone on this planet," Adora pointed out.

"Except for the animals," Daniel said.

Adora frowned at him. "That's not a reason to hunt them down."

"PETA would disagree," Jack said, chuckling.

"PETA?" Adora cocked her head.

"An animal rights activist organisation," Daniel explained. "They are considered to be a little extremist."

"Animal rights?" Catra asked.

"In many countries on Earth, it's illegal to treat animals cruelly," Daniel replied. "And such organisations lobby for stricter laws when it comes to keeping animals."

Adora hated to parrot Daniel, but… "Stricter laws?"

"Ah." He smiled at her and pushed his glasses up his nose. "There are laws regulating how you have to treat your animals - a

minimal standard, both for pets and livestock, although with different rules. Such as minimal care, space in the pen, and so on."

"Ah." That made sense.

"Such organisations also take care of stray animals and work to protect the wildlife." Daniel nodded. "They organise boycotts of firms who destroy the habits of wildlife or treat their livestock cruelly."

Adora nodded. That sounded nice. Although…

"You need such laws and activism?" Catra asked. "How do you treat animals?"

The way Daniel winced wasn't a good sign, Adora thought.

*****

"So, many of the animals you eat are kept in stables and never let outside." Adora slowly nodded as she grabbed her empty plate and put it into the dishwasher or whatever Entrapta had built. It cleaned dishes. Or destroyed them and made new ones - Adora wasn't quite sure.

"Many, yes. Not all." Daniel followed her example as she sat down again.

"So?" Catra shook her head. "If you're going to eat them anyway…" She shrugged and pushed her own plate away.

Adora sighed and grabbed it as well, handing it over to Daniel.

"Animal rights activists think that animals should live as happily as possible and as close to nature as possible," he said as he grabbed Jack's plate.

"Nature's brutal," Jack said. "And most farm animals couldn't survive in the wild."

“But they could survive outside a stable,” Daniel replied, sitting down again. “As we’ve also seen on Etheria.”

Adora didn’t want to be dragged into that discussion. She didn’t know enough about animals to have a definite opinion. “And you spoil your pets!” she said to change the subject.

“Oh, yes.” Jack chuckled. “Many pets are treated better than humans.”

“Well, that’s not really impressive,” Catra commented.

Adora nodded. “You already told us that in some places, humans are treated really badly.”

“Ah.” Jack looked at a loss for words for a moment.

Daniel pushed his glasses up his nose with one finger. “Technically correct. But Jack was thinking about pets that are treated better than humans in the same place - roughly speaking.”

Now that was… how could you treat an animal better than a person? Outside of war, of course, where you had to fight the person and not the animal. Or when it came to criminals. But Adora was sure that Daniel wasn’t talking about those cases.

“Whatever,” Catra spoke up after finishing her drink. “Animals are animals. Some of them are monsters. I don’t really care for any animal that tries to attack me. The question is: Can we spend the time hunting down Goa’uld stuck on this planet? And can we afford to let them on the planet?”

“Well, they have had a thousand years and didn’t develop the resources to get off the planet, much less be a threat to a space-based civilisation,” Daniel replied. “If they are still alive, that is. So, I don’t really think we need to hunt them down.”

“Yes,” Adora agreed.

“Unless we find them nearby. A bunch of prisoners would be useful,” Catra added as she leaned back on her seat until she was all but slipping off it.

Adora rolled her eyes and reached over to poke her belly.

Catra eeped and snapped back into a sitting position. “Hey!”

“You were being rude,” Adora told her.

“I wasn’t!”

“Sure you were. Next thing, you’re napping in their bed.”

“I wouldn’t do that! I only nap in our bed. Or on the couch. Or the bench in the garden.”

“And the planning table,” Adora reminded her.

“That was such a boring briefing that even Glimmer nodded off!”

Adora chuckled at the memory. “Yes, she did.”

Catra suddenly grinned, then slid off her seat and into Adora’s lap before she could react, snuggling up to her. “I’m going to take a nap right here,” she whispered into Adora’s ear.

“Ah…” Adora trailed off. How should she react to that? She wanted to kiss - or tickle - her, but that would be rude as well, wouldn’t it?

Fortunately, Entrapta picked that moment to return from the hold. “We’ve analysed the remains!”

Adora straightened, prompting a noise of protest from Catra. “Yes?”

“Come to the hold; we’ll show you!”

*****

“Here!”

Samantha Carter looked up as Entrapta led the others into their makeshift laboratory. The princess was smiling as she pointed at the tank where the dissected Goa'uld was floating.

"If we had had such a tank back in school," the Colonel commented at once, "biology would have been much more interesting."

Sam chuckled at the joke. Once. "We've finished the autopsy and analysis," she told him. "The concentration of Naquadah in the corpse was high enough to indicate that the Goa'uld had consumed at least a dozen larvae. That is under the assumption that their base levels were the same for regular Goa'uld larvae at the start."

"Yes!" Entrapta nodded. "So, we're missing about a dozen Goa'uld."

"Or one Goa'uld who consumed them," Catra said. "Or they died in the wilderness and were eaten by animals."

Entrapta nodded again. "Exactly! Or another combination, like one who consumed half a dozen or so and the others were eaten by predators."

"Great." The Colonel didn't like it. "And none of them are near."

"Many Goa'uld would, faced with a potentially lethal battle, spread out to avoid conflict," Teal'c said.

"And they have an entire planet and all its animals to do so." The Colonel shook his head.

"Searching an entire planet with, well, short-range sensors and…" Daniel looked embarrassed. "...and people who can sense them sounds a little…" He trailed off.

"Yes," the Colonel agreed. "I think that would take a lot of time."

“Well, covering the entire surface of the planet - and assuming no Goa’uld took a marine animal or cave dwellers as a host - would take us…” Entrapta started pushing buttons on her main tool. “We’d be here for weeks with an optimal search grid and breaks and some redundancy. That depends on how sensitive you are to their presence at higher travel speeds. We might have to adjust that, should we have to fly more slowly.”

And they didn’t have weeks.

“So, let’s call in the fleet to pack up the Al’Kesh and leave.” The Colonel looked around. “Unless you disagree?”

Catra looked like she wanted to disagree out of principle, but Adora nodded. “Yes, I think that’s a good idea.”

“Let’s do it then. And Carter and Entrapta can go back to cracking the data cube.”

“Oh, no!!” Entrapta replied. “We’re saving that as a last resort. We’re trying less destructive methods first.”

“Ah, good.” The Colonel nodded, but Sam saw him wince for a moment - he still hadn’t adjusted to Entrapta’s… to Entrapta. Well, unlike Sam, he hadn’t had much interaction with some of the more eccentric scientists in her field. Or Daniel’s.

Catra was smirking again. “So… we’re done then. I’m going to take a nap.” She stretched her arms over her head and yawned.

“Catra!”

“What? I’m no good at cracking encryption.”

“Still! We’re on a mission.”

“We’re on a part of the mission where we have to wait and do nothing until the fleet arrives. Might as well rest. Or what else do you suggest we should do?”

Adora opened her mouth, then closed it again, blushing slightly, before she shook her head. “We need to be ready if anything happens.”

“Oh, I’ll be ready for anything,” Catra said as she sauntered out of the hold.

“Really!” Adora smiled at them - Sam could tell it was forced - and followed her girlfriend.

“Oh for…” The Colonel shook his head.

“Jack?” Daniel looked confused. “Is something wrong?”

“Nothing,” the Colonel replied. He was still looking at the door, though, not at Daniel - or Sam. And when he turned back to face them, Sam looked away.

“So, let’s continue not-cracking the cube!” Entrapta said.

As Sam turned back to the cube - they still had to build an interface that would connect to the alien port - the others filed out of the hold as well.

*****

Samantha Carter rubbed her neck and temples when she left the hold. They had managed to connect the data cube to a computer, but that had been all they had managed to achieve - the data contained inside it remained inaccessible. They were still trying to find a way to actually access the memory crystals - they couldn’t even tell if the data was encrypted or if the alien file transfer protocols and system architecture were just incompatible.

Entrapta hadn’t lost any of her enthusiasm, though - she seemed to thrive when faced with such a challenge. Well, Sam had to admit that she wasn’t really getting frustrated either. It just felt bad to let the others down. The Colonel had been joking about them being finished in a day, but she knew he had expected more results from her.

On the way to the bridge, she grabbed a sandwich from the fridge - she was getting a little bit hungry, and it would prevent more remarks about taking care of herself. She could do that perfectly fine, after all, and sometimes, you had to skip meals to push on.

"Ah, Carter!" The Colonel turned to face her. "You're just in time to watch our zealous fleet pick up an Al'Kesh."

Sam turned her head towards the windows on the right of the ship. Indeed, there was a frigate hovering above the Goa'uld bomber.

"They emptied their hangar of fighters and cut out the decks inside," the Colonel explained as the bomber slowly was drawn into the frigate by a tractor beam.

"Adora just had to ask," Catra commented, sitting in one of the seats.

Adora sighed. "I didn't see a better way to salvage the ship. There's enough space in other frigates for the fighters. And we can repair the hangar once we can dump the al-Kesh somewhere."

Like Earth. Having an Al'Kesh to study and possibly copy would be great. Not as impressive as a mothership with big honking space guns, as the Colonel would say, but with a working faster-than-light craft, Stargate Command would gain a lot more options for missions.

On the other hand, compared to the fleet of frigates she was currently observing, it didn't look very impressive.

"How standards shift," she whispered to herself.

*****

In Orbit above PK-327, July 14th, 1998 (Earth Time)

"No, we're not going to bombard the planet to kill off any hypothetical Goa'uld hiding amongst the local animals!"

Catra fought the urge to laugh as she listened to Adora talk to Priest - or at Priest - on Darla's bridge. The situation was funny, but she knew not many would agree with her.

"But Your Divine Highness! We cannot leave an enemy behind!" Priest protested. "And you stated that we cannot take the time to search the entire planet since we don't have enough scanners to detect Naquadah. So, the obvious solution is a thorough orbital bombardment of the entire planetary surface. Without potential hosts, the Goa'uld will die."

"So will the planet," Adora said.

"Yes, Your Divine Highness." Priest nodded. He looked confused.

Adora's forehead sported a twitching vein now. "We don't destroy planets any more," Adora said through clenched teeth.

"But I thought we wouldn't destroy inhabited planets any more. There is no intelligent life on this planet except for your enemies, Your Divine Highness."

"It's a planet!" Adora blurted out. "We're not going to destroy a planet just to kill a few Goa'uld stuck on it without any way to get off!"

"We don't know for certain that they don't have the means. Should an enemy ship arrive, they could easily be rescued, Your Divine Highness," Priest retorted.

"They've been marooned on the planet for a thousand years!" Adora told him.

"But that is no assurance that the current state of affairs will continue, Your Divine Highness," Priest said. "In fact, if we create a supply route through this sector and engage in warfare against the System Lords, they are bound to send in ships to scout and raid our lines, which means that this system could end up becoming a staging ground. Imagine the threat that such spies would pose to us then!"

“Their intel is a thousand years out of date,” Adora replied. “We’re not going to destroy a planet like this, and that is final!”

“As you command, Your Divine Highness.” Priest bowed, and the transmission ended.

Adora sagged and closed her eyes. Catra stepped up and rubbed her back.

“I’m just… What’s wrong with them? Destroying a planet to kill a few Goa’uld? Who might not even be alive?” Adora shook her head.

“They’re not used to caring about… well, anyone except…” Catra trailed off. She knew the feeling. Knew it too well.

“Anyone except me. Their replacement Prime,” Adora said.

Catra hissed in response, then slugged Adora’s upper arm. “Don’t talk like that! This is completely different! You are completely different!”

“But they see me as their new leader!” Adora protested.

“So?” Catra forced herself to shrug. “So does most of Etheria. They see you as the new Angella.” She bit her lower lip at the guilt that filled her, remembering why the Queen had been lost. All her fault…

“I’m not a queen!”

“No, and neither are you a new Horde Prime. You’re She-Ra. And a dummy.” Catra told her. Her smile was a little lopsided and toothy.

But Adora didn’t seem to notice or mind. She started to smile as well, then sighed. “I guess. But it’s… tiring. Dealing with Priest and… I’m not a goddess!”

“No, you aren’t.” How often had she told that Adora so far? Well, Catra would keep telling it until Adora stopped being bothered by Priest.

“But… Priest and his followers need to learn that… that they can’t just act as if I were Horde Prime. We won’t destroy entire planets!” Adora raised her chin slightly.

Catra nodded, though she was not as convinced. Some targets might be worth destroying a planet for. Not that she would say that out loud. Not after the Heart of Etheria almost broke Adora. “You’ve got a few more weeks to teach that to Priest,” she said. “Before we reach Earth.”

Adora sagged again and sighed. “Don’t remind me. What will the Earth people think of us once they meet Priest? What will they think of me, being worshipped as a goddess when they are fighting the Goa’uld who do the same?”

Oh for…! Catra growled. “They’ll do the same as SG-1 does: Nothing. They know the difference. They know you don’t want to be worshipped.” With a grin, Catra added: “Well, not like Priest does.”

Adora blushed heavily. “Catra!”

Catra grinned in response and leaned forward to lick Adora’s cheek. “Hm?” She ran a hand over Adora’s hair - which really would look much better without the poof - and down her back.

Adora took a deep breath but didn’t protest or pull away. “Catra…”

“Hm?” Catra lightly bit her ear.

“We’re on the bridge,” Adora hissed.

“And we’re alone.” Everyone else was on the frigate in front of them, checking out the Al-Kesh and showing the clones what not to touch. Even Melog had gone, in case they had a stowaway snake.

"But… anyone can look through the windows!" Adora said, pointing at the frigate.

"So? I'm just doing my duty as your consort," Catra replied, then licked Adora's cheek again.

Further protests from her dummy lover she stifled with a kiss.

It was high time that they finally used the captain's chair for something more entertaining than piloting the ship.

*****

In Orbit above PK-327, July 14th, 1998 (Earth Time)

Jack O'Neill wasn't jealous. Or envious. Not at all. He didn't have a crush on either Adora or Catra. Adora was a very attractive woman, but she was half his age, tops. And a magical girl. And Catra was a catwoman, and not the leather catsuit kind, but the kind with real fur. And also half his age.

Nor was he planning to have sex in his free time during this mission. Or any mission. He wouldn't want a repeat of his close brush with dying of old age due to Goa'uld experiments, and he had no partner in mind anyway. Not any who would be available.

So, his annoyance at the fact that Adora and Catra had done the naughty on their ship's bridge while everyone else was checking out the Al'Kesh had nothing to do with either jealousy or envy. It was merely his sense of professionalism that was hurt. That, and that he hadn't gotten to sit in the captain's chair before it was used as a loveseat.

"So," Catra asked, brushing a stray lock of wet hair out of her face - both had showered, at least - "What's the final verdict on the bomber?"

Jack looked at his SIC. "Carter?"

“We haven’t completed our assessment yet,” Carter replied at once. “But, so far, we have found no damage that wouldn’t be able to be fixed with sufficient effort at Stargate Command.”

“Or in one of Third Fleet’s mobile shipyards,” Catra said, “in the fleet train.”

“Yes.” Carter nodded. She hid her reaction well, but Jack knew her - she would prefer to go over the ship herself. If the clones repaired it, Stargate Command wouldn’t get any experience in maintaining and repairing spaceships. And they needed that if they ever wanted to stop depending on their allies for ships.

“Yeah,” he said, “let’s see what we can do with it, first, before we hand it over to the fleet. It’s not as if we have a pressing need for an additional ship.” They had an entire fleet with them, after all.

“It would be faster, though,” Adora said - her hair was also wet, but her poof was, somehow, unaffected. “Wouldn’t you want a fully functional ship?”

Was that a veiled hint that Stargate Command would get the Al’Kesh? No, Adora wasn’t the type to be so subtle. It probably meant that she had never planned to lay claim to the ship herself.

“If we repair it, we can also add electronics and communication gear that will allow us to operate it in close cooperation with other forces of Earth,” Carter said.

“Ah.” Adora nodded. “That makes sense.”

“You can tinker with the wreck to your heart’s content, then,” Catra added with a smirk.

“We will,” Jack replied. The geeks back home would be overjoyed. Hell, Carter would love it. And if they weren’t about to arrive with a fleet in tow, the brass would be ecstatic about the opportunity to get a spaceship. As things were, the whole fleet of zealots thing would overshadow everything else.

"And I'll help!" Entrapta said. "This is so interesting - it's a completely different design philosophy compared to either the Horde or the First Ones!"

A pretty useless design philosophy, in Jack's opinion. When they started restoring the Al'Kesh, he'd make some suggestions. Some quite strong suggestions. Gun turrets that covered all sides, at the very least - Stargate Command didn't have fighters to escort the Al'Kesh. Which would need a name of her own, too. He snorted at the realisation that the geeks would push for 'Enterprise'. Although it was pretty much the best name for Earth's first spaceship, even if it was the name of a Navy ship.

"I am looking forward to helping as well," Bow added with a smile. "I've got some experience with repairing a thousand-year-old ship."

"Yes!" Entrapta nodded. "This will be fun!"

"Yes," Glimmer said, and she sounded like one of Jack's old superior officers when faced with one of his more colourful reports. "So, we're ready to continue our trip. But we need to decide what we do about the potential Goa'uld holdouts."

"Blow up the ruins and tombs from orbit," Catra said at once.

"Catra!" Adora protested.

"What? It's just a small area. Leave a crater, and people won't be stumbling around in ruins and getting caught by Goa'uld." Catra grinned. "Or, better write a warning into the crater with the cannons!"

Jack blinked. That would… He chuckled. "That would actually work."

"It would also reveal our presence," Carter pointed out. "Anyone who examines the remains will be able to tie them to Horde weapons."

“But there are a lot of Horde ships around,” Catra retorted. “Or we can build a bomb ourselves and use the Al’Kesh’s weapons to write the warning.”

That would be very ironic. Jack nodded in approval. “Let’s do that!”

“Yes! Let’s build a bomb!”

Entrapta’s enthusiastic agreement made Jack have second thoughts about this idea.

But it was too late - everyone else was agreeing as well.

Damn.

Well, at least they’d get to see a big explosion and foil whatever plans the Goa’uld on the ground, if there were any, might have. And that was a victory in Jack’s book.

*****

The Inconvenient Truth

Hyperspace, On the Way to Earth, July 16th, 1998 (Earth Time)

4th: No orbital bombardments without clearance by the commander in chief.

Sitting at the table in the mess, Adora nodded at the screen of her pad. That was a very important rule. Perhaps she should place it at a more prominent spot? But 'protect innocent sentient life forms' was also very important. As was 'collateral damage should be avoided whenever possible'. Hm…

"That should be 'without clearance by Adora or whoever she promoted to commander in chief'," someone whispered into her ear - her breath tickled Adora's skin.

Adora gasped. "Catra!" She hadn't noticed her lover sneaking up on her.

"Hm?" Catra chuckled as she withdrew. "I'm just helping. I did write a lot of orders, you know."

"Yes. But this is a special case," Adora said. "I need a list of rules that will keep Third Fleet from blowing up planets to kill a single Goa'uld."

"Then you want the orders to be very clear," Catra said.

"No Auftragstaktik," Jack added as he entered and grabbed a bottle of water from the fridge.

"Auftragstaktik?" Adora frowned. What did that mean?

"That's where you tell your men what you need to be done, but not how they should do it," he explained.

"Oh."

Catra nodded. “Yes, you really don’t want to do that with Priest.”

Adora frowned at her. She knew that very well, thank you very much.

“Oh, yes. If you asked him to get some milk from the supermarket, he probably would conquer the country in the name of you,” Jack added with a grin.

Adora frowned at him as well. “I am aware of that. That’s why I am going to give him precise orders.”

Catra shrugged. “Just be ready to add more orders - you’ll never cover everything that can go wrong.”

“Yes.” Daniel peered inside the mess, then stepped inside. Had Adora missed a meeting notice or something? “Like the list of things Jack isn’t allowed to do any more.”

“There’s no such list, and if there were any, it would cover the entire team,” Jack protested.

“Your team, your responsibility,” Daniel shot back. “Oh, pudding!”

“Oh? Tell us more!” Catra leaned across the table and beamed at Daniel.

“That’s classified,” Jack said.

“You playing on your Game Boy during briefings is classified?” Daniel grinned.

“I never got caught! and I only did it during the boring parts!”

“What’s a ‘Game Boy’?” Catra asked.

“Oh. That’s a portable gaming console,” Daniel explained. Which didn’t explain anything.

“You play video games on it,” Jack added. Adora looked at him, and he went on: “Video games are… games you play on a

computer."

Daniel shook his head. "Allow me. Video games are electronic games that you play…"

*****

"...and that's why they are called video games. They come in a very wide range of genres and are very popular amongst children, teenagers and some adults," Daniel finished.

"Ah." Adora looked at Catra. She wasn't entirely sure, but while Catra nodded as if the explanation had actually explained everything, Adora thought her lover was just faking.

"Video games are quite popular amongst adults as well," Jack said with a slight pout.

"You would say that, Jack."

"Daniel…"

Ador cleared her throat. "Anyway, I was working on my list." It would be rude to send them out, but she needed some peace and quiet to work on that. And her and Catra's cabin definitely wouldn't be suitable, what with Catra in a playful mood.

"Right, your list!" Jack nodded.

"Yes," Daniel nodded as well. "Your commandments. I am looking forward to seeing how Priest and his church will interpret them. It should be a fascinating study of how holy scripture came to be."

"What?" Adora stared at him.

"Daniel wants to see how your orders will be turned in holy commandments," Jack said. "Word of God - or, in this case, word of the Goddess."

Adora closed her mouth. That wasn't what she wanted! Not at all! "But…"

"I bet Priest will have the orders burned into a golden plate and fixed on the bridge of every ship," Catra interrupted her. "Do you think we can make them rhyme so they can sing the lines?"

Her lover was joking - she had to be! - but Adora could see Priest doing that. She shook her head until her ponytail hit her face. Her orders, enshrined like that? Her friends would never let her forget it. "Anything but that!"

"The alternative would be no lasting restrictions," Daniel pointed out. "Religious commandments were often a restraining influence in Earth's past."

"The point is, Daniel, that Adora doesn't want to found a religion," Jack told him.

"I think it's clear that the religion already exists, Jack. So, the best solution would be to use the opportunity, rather than struggling futilely to turn back time," Daniel retorted.

Adora was about to tell them not to talk about her as if she wasn't present when Catra spoke up in that fake innocent tone of hers: "Well, it'll be amusing to see Priest trying to convert Earth to the worship of Adora."

The wide-eyed glance Jack and Daniel exchanged in return wasn't helping Adora's mood in the slightest.

*****

Warhead separation complete. Five seconds to impact. Four. Three. Two. One.

On the screen, the ruins and the hill vanished in a fireball each. Samantha Carter watched as the multiple angles blanked out in rapid succession until only the orbital view remained, showing two converging mushroom clouds.

“It’s a beautiful sight, isn’t it?” Entrapta commented. “The bombs performed as calculated!”

Sam slowly nodded. She wasn’t quite as enthusiastic about the bombs they had built as Entrapta was, but a part of her was proud that they had managed to rig a warhead that struck both sites at the same time with Naqadah-enhanced bombs in such a short time. But that was just the technical aspect. With this as proof of concept, the genie was out of the bottle - now such bombs would be on the table for other situations as well. Situations where the targets weren’t just ruins devoid of intelligent life.

On the screen, the cloud started to dissipate - faster than in real life; Entrapta had sped up the recording - and revealed two huge craters.

“Now comes my favourite part!” Entrapta said as a Horde frigate descended above the craters. “Yes!” she all but squealed when two lances of red light appeared under the frigate, stabbing down into the crater. The screen split again, showing the lasers burning into the glassed surface below. Writing.

Potential Goa’uld on the planet. Beware.

In Goa’uld - as much as Daniel hated it, it was the lingua franca of a big part of the galaxy. Most people in the sector would be able to read it. It would also tell Goa’uld that someone hostile had destroyed the ruins, but that couldn’t be avoided. And the paranoid System Lords might well suspect one of their own trying to throw off suspicion - that was why they had used Goa’uld weapons, after all.

Not that the odds that it would matter were great anyway - sooner or later, Sam’s money was on sooner, the Alliance would engage in open warfare with the Goa’uld. With help from Earth, unless something went very wrong when they reached home.

In any case, at that point, the Goa'uld would know who they were facing, and any intel potential Goa'uld left on the planet might provide would be even more outdated than it already was.

"You must really love this," Entrapta said. "You've been watching it five times so far."

Sam blinked and realised that the recording had ended. "I was looking for more data," she lied. Well, it wasn't a complete lie - there was a chance that she had missed something the four other times she had watched the recording.

"Oh! Did you discover something?"

"No." Sam shook her head. She hadn't found anything new. And, maybe, it was time to stop watching what she had wrought and get back to working on the alien data cube. They had still a few weeks until they reached Earth, and if they encountered a Stargate on the way, Sam wouldn't be able to work on the cube until the fleet reached Earth. Not even then, she knew - she would likely be too busy with other work, mainly the Al'kesh repairs. And briefing various generals and politicians.

She wasn't looking forward to that. She wouldn't go as far as to call it a waste of time, as the Colonel did, but she could do much more important work than telling people who were as likely to ignore her as to heed her words things they could read up in her reports. Which she had to update with the latest data, actually.

But that could wait until the evening. "Let's tackle the data cube again," she said. "I think we haven't tried base-13 yet, did we?" They hadn't; Sam had checked.

"Oh, yes. I mean, no, we haven't!" Entrapta skipped over to the table where the cube was waiting for them. "Let's try this out!"

"Yes." Sam smiled - it was great to work with an enthusiastic partner.

"I'll call Hordak, too! He's had a few interesting ideas as well!"

Sam kept smiling with a bit of effort. She wasn't nearly as fond of Hordak as she was of Entrapta. The man - the alien - was a genius, no doubt about it. But he was also a former warlord with alien morals, and Sam wasn't entirely sure that he had changed enough not to slide back into old habits, should he deem it necessary. And while she had been told that Entrapta's influence had changed him, she knew that Hordak's influence would have changed Entrapta as well. And would continue to do so.

Well, Sam could exert some influence as well. If Hordak wanted to get a pet scientist to unleash monstrous weapons on defenceless civilians, he wouldn't get his way if Sam had anything to say about it.

"You've finished the documentation, then."

"Yes!" Entrapta said, nodding as she went to Hordak, who stood in the door. "And we're ready to continue with the data cube!"

Had he been listening until this moment? Or was this just coincidence? Sam nodded at him. Politely. "Yes."

"Enhancing explosives with Naquadah will facilitate further offensive operations," Hordak said. "Defending assets against attacks with such bombs will be more difficult, though."

That was obvious, of course. On Earth, it had led to a somewhat stable peace between nuclear powers thanks to the threat of mutually assured destruction. She doubted that they could or should achieve the same with the Goa'uld.

But the way the former warlord talked about assets and operations… Sam didn't like that.

*****

Hyperspace, On the Way to Earth, July 18th, 1998 (Earth Time)

Catra yawned as she leaned back in her seat on the bridge of Darla. Standing watch was as boring as ever. As expected - she had spent time in space before, after all, and unless you were trying to fool Horde Prime, running for your life, or exploring some ancient ruins, it was generally very dull. Especially without Adora or anyone else to talk to because it was the night shift. Night watch.

Everyone else was asleep. Unless Entrapta or Carter had sneaked into the hold to tinker with the cube again. She checked the display on her right - no, the hold was empty of life signatures. Unless someone had fiddled with the ship's internal sensors, of course. Which… wasn't too implausible, actually.

Well, she hadn't anything better to do, so she might as well check personally. And grab a drink from the kitchen. Or kitchenette, as O'Neill called it.

She got up and walked out of the bridge, then frowned - the light was on in the kitchen area. And - her ears twitched - someone was heating tea. If Entrapta had actually sneaked out… "Hey!"

It wasn't Entrapta. She saw Daniel, gasping, standing next to the pot of boiling water. "What are you doing here?" she asked.

"Making tea?" He pointed at the kettle.

She rolled her eyes. "I meant, why aren't you sleeping?"

To his credit, he didn't make a stupid joke about her having to ask what she meant in the first place but shrugged. "I got caught translating some of the books."

They had a library on board? That was news to her. Not that she'd admit it. "What book are you reading?"

"It's actually one of Bow's history books," he told her.

Ah. So, he was talking about Bow's books. Well, history books were pretty harmless. If it had been Entrapta's diary or notes of

bot construction… She shrugged. “Sounds pretty boring.”

“It’s actually fascinating how Etheria’s culture evolved over a thousand years,” he said. “The way magic powers shaped history on your planet…”

“Yeah, yeah, magic princesses rule,” she cut him off and grabbed a cup of her own.

“That’s a very simplified view,” he said with a slight pout.

“But a correct one. In the Horde, we were taught that the princesses were evil, you know?” she said as she dropped some leaves in a streamer. “That they were fighting us because we didn’t have princesses.”

“Well, on Earth, when France overthrew their monarchy, the other monarchies banded together to fight the new government. They didn’t declare war merely because of the revolution, there were many other reasons, but it was a contributing factor,” Daniel told her. “Executing the king and queen did help escalate the situation as well, of course.”

“They didn’t fight us because we had overthrown our princess,” Catra retorted. Well, in as much as Scorpia was their princess. “They fought us because we invaded them and tried to conquer them.” They had actually conquered quite a bit of Etheria under her leadership.

“Of course.” He nodded. “I’m just pointing out possible parallels to the history of Earth.”

“And potential trouble,” she added.

He winced, then took a sip from his steaming cup and winced even more. “Yes, that too.”

Catra jumped slightly to sit on the counter, blowing on her cup. “So, how bad will it be?” Daniel was the most honest of SG-1, she

knew that. And without his friends around, he should be likely to let slip something.

He looked puzzled for a moment. “When we arrive on Earth?”

“Yes. Magic, princesses, fanatical clones with a space fleet…” She took a sip from her own cup. A little too hot, but tolerable.

“Well…” He grimaced. “It will be a shock to find out that aliens are real.”

“That’s obvious.” They had gone over that already. “But afterwards, when the shock’s faded, and we’re talking alliance.”

“Ah.” He pursed his lips. “It’s hard to say. Historically, people tend to be pragmatic when they are faced with a common enemy. Even ideological enemies.”

That sounded good. “So, you’re going to play one happy, united front and ignore all the differences?”

“That would be best for the war, wouldn’t it?” He blew on his cup again, then took a swallow, sighing with his eyes closed. The man liked the tea, even though he claimed that he preferred coffee - but they had run out of the bitter brew.

“Probably.” She shrugged again. “In my experience, ignoring differences isn’t a good idea. It can lead to losing a war.” She knew that from personal experience.

“Oh.” He took another swallow.

“So, what’s the worst problem we’ll face? Magic? Or Monarchies? Our gender?”

“That’s hard to say. Earth isn’t very homogenous, and even in our country, there are distinct groups with very different views and interests.” He smiled rather weakly.

“So, all of the above?” she asked with a wry grin.

He nodded, making a noncommittal noise, and hid his mouth behind his cup again.

"I see." She nodded as well.

Great. She would have to talk with the rest about this. Once they were awake, of course.

*****

Hyperspace, On the Way to Earth, July 20th, 1998 (Earth Time)

"Another day, another empty system," Jack O'Neill commented as he stepped on the bridge of the Darla.

"We don't know if the system is actually empty, Sir," Carter told him, as he had expected.

Good to know that she hadn't been entirely lost to the alien data cube. Perhaps Jack shouldn't have joked about expecting her to crack the thing in one day - she seemed to have taken it as a challenge. Though, to be fair, there wasn't much else to do on the ship during this trip. Except for checking the Al'kesh, but since that was transported on a Horde frigate, she would have to leave the Darla for that - and Jack wasn't about to split up his team.

"Well, we'll soon know!" Entrapta piped up. "Dropping out of hyperspace in five… four… three… two… one!"

"Nothing in close range," Bow reported. "Long-range scanners… Contacts!"

Jack didn't jerk, but he leaned forward on his seat. "Have they seen us?"

"Not unless they have improved sensors," Bow replied.

Jack glanced at the side screen. The holographic display zoomed in on the system, past the outer planets, and came to a stop at

the second planet - a habitable world, it seemed. He counted a dozen ships in orbit, and they were… firing onto each other.

"It's a war zone," Daniel stated the obvious as one of the ships - blew up.

"Three Ha'taks, eight Al'kesh. Multiple Death Gliders," Bow reported.

"It's an invasion," Jack said. The three Ha'taks were working together, flying in formation with the Al'keshs. But the Death Gliders were dogfighting - and some were attacking the Al'kesh.

"And unless the defenders have reinforcements waiting for them, they have lost the battle," Teal'c stated.

"Yeah. A bunch of Death Gliders reenacting the Battle of Britain won't beat three Ha'taks," Jack said.

"Are they buying time for the ground forces to evacuate or disperse for guerilla campaign?" Catra asked.

"I can't tell from here," Entrapta said. "We need to get closer to find out."

"It depends on the System Lord who rules the planet," Teal'c said. "Some expect their Jaffa to fight to the death even when retreating would be advisable."

"What?" Adora frowned. "Why would they throw away their people?

"To keep the news of defeat from spreading amongst their troops," Daniel explained. "That might damage their claims of divinity."

"That's…" Adora shook her head.

"Monstrous," Glimmer spat. "And stupid. It means their enemy can undermine the trust of their people by spreading the news

themselves. That'll do more damage to the defender's reputation in the long run."

The princess was the commander of the Alliance, Jack reminded himself.

"And the soldiers will stop trusting any information from their superiors," Catra added.

"That's the Goa'uld for you - they're not very big on rational plans," Jack said.

"We can't underestimate them, Sir," Carter objected.

"I'm not saying their fools, just that they might not have the same view of what is rational and effective as we do," Jack replied.

"Hey, crazy plans can work very well - just ask Glimmer," Catra said with a smirk.

"What do you mean?" Glimmer asked with narrowed eyes just as Adora hissed: "Catra!"

"You know what I mean," Catra replied.

"My plan worked." Glimmer clenched her teeth. "It defeated the Horde."

"You were lucky. Very lucky." Catra bared her teeth.

"And it was all for nought since Horde Prime arrived in the moment of your triumph," Hordak added.

"Catra! Glimmer!" Adora snapped. "This is not the time!" She turned her head to glare at Hordak, who remained impassive.

Catra ducked her head with a pout, but Glimmer grew serious and nodded. "Yes. Sorry."

"Anyway!" Entrapta spoke up. "There's a significant amount of Naquadah on the planet, but I can't tell from here if there's a

Stargate."

"There could be mining operations," Carter speculated. "Although those should have better protection."

"Unless the main defenders were lured away - or they trusted secrecy," Jack said.

"So, who's invading whom here?" Adora asked.

"All those Goa'uld ships look the same," Jack said with a grin.

"They have an IFF transponder system," Carter added, "but they might not use distinctive codes for every mission."

"Well, if they are true to form, we just have to wait until the invaders win and broadcast the new rulers of the planet. It's a thing for them," Jack said. "Unless this is a black op, and they're only here to lay waste to the planet. Or a false flag operation."

"So, do we take our stealth ship in close? Try to find a gate while they are still busy shooting each other?" Daniel asked.

It was tempting. There would be chaos on the ground. A ship might slip through, and they might make their way to a stargate. Yet, they didn't know if there was a gate on the planet.

"We could blow all the Goa'uld ships up," Catra said. "The Third Fleet wouldn't have any trouble with them."

"Can they do that and prevent someone from sending out word about the attack?" Jack asked. He didn't want to lose operational surprise before they had a formal alliance with Etheria.

"Doubtful. We haven't found a way to reliably prevent FTL communications," Carter replied.

"Then we better not try to meddle," Jack said. If the Goa'uld killed each other, so much the better. "Unless they plan to massacre civilians." On the screen, another Al'kesh blew up, but then the

rest of them started to enter the atmosphere, and the Ha'taks spread out as well.

"There's a message broadcast in the clear," Bow said. A moment later, a Goa'uld voice filled the room.

"Your Death Gliders have been destroyed. Surrender to the divine Raiden!"

*****

"Raiden?" Adora asked. She hadn't heard about any Goa'uld with that name yet. Not that she'd remember, anyway.

"Raiden, also known as Raijin, is a Shinto god of lightning, thunder and storms," Daniel said. "And, obviously, a Goa'uld who has claimed the name. Or who has started the religion - since we lack records for most of the civilisations dating back to the time of the Goa'uld, it is often hard to determine whether the Goa'uld coopted existing mythological figures or created them." After a moment, he added: "Shinto is a religion centred on the Japanese Islands."

"Ah." That didn't actually tell Adora much, but it would be rude not to acknowledge Daniel's efforts.

"Raiden is a false god with a minor domain, in perpetual conflict with the vastly more powerful Yu," Teal'c said. "According to the star charts, however, we should not be in either of their territories."

"Well, for a vastly more powerful Goa'uld, those were pitiful defences," Catra commented with a frown. "Not really a big invasion fleet, either."

Adora agreed with her lover. The Third Fleet could wipe out all those ships easily. Of course, the Third Fleet wasn't stretched out protecting multiple worlds yet.

“Yu might be involved in another conflict with a stronger force and could have withdrawn his ships from this planet to protect more important systems,” Jack repeated his earlier speculation. “Or this world didn’t belong to Yu, but to another, weaker Goa’uld.”

Either possibility could be true. “What are they doing?” Adora asked.

“There’s been no answer from the people on the ground,” Bow said.

“That means bombing will start soon,” Jack said. “Goa’uld are testy about being ignored or refused.”

As he had predicted, the screen flared, and Bow reported the Al’kesh making bombing runs.

Catra stepped closer to the screen. “How precise are they? Can we tell from here?”

Bow grimaced. “I can’t tell what they’re aiming at - the scanner doesn’t show the planetary surface in detail.”

Adora made a mental note that they needed either better scanners or a way to get closer to a planet without being detected. It wouldn’t do to attack a planet without good intel or lose surprise by a recon mission being detected. The stealth system Entrapta and Sam had built for the shuttle might be the answer, but it hadn’t been tested against actual Goa’uld ships yet.

“The bombs they use have a rather high yield,” Entrapta said, frowning at the console next to her. “They do not seem to be very precise.”

Adora gripped the armrests of her chair. “Are they targeting civilians?” If they were…

“We can’t tell. We have to fly closer for that,” Bow said.

“If they detect us, operational surprise is lost,” Jack cautioned.

“But we might secure a working Stargate,” Sam pointed out.

“Let’s take the shuttle and fly closer. If they detect the shuttle, we’ll move the fleet in,” Adora said. “We can’t let them bomb civilians.”

“Alright,” Glimmer said. “But you’re staying here.” Adora was about to protest, but her friend went on: “Third Fleet won’t take well to you flying close to an enemy fleet in a simple shuttle.”

“They accepted our trip to the planet with the crashed Al-Kesh,” Adora said.

“PK-327,” Entrapta cut in.

“Yes, that.” Adora nodded.

“The system didn’t have a fleet in it,” Catra said.

Adora sighed. “Alright. But you’re staying here as well, Glimmer.”

Glimmer pouted at her, but Adora shrugged it off. If it was too dangerous for her, it was too dangerous for the Queen of Bright Moon.

“Let’s go, Bow,” Catra said - but she was looking at Adora.

After a moment, Adora nodded. Catra smiled and headed to the back, followed by Bow, Entrapta and SG-1.

And Adora closed her eyes and sighed. She hated staying back while her friends braved danger.

Glimmer didn’t say anything as she went and took over Bow position at the console.

“I hate this,” Adora muttered as she watched the shuttle leave on the side screen.

“Welcome to my life,” Glimmer replied. “The burden of command, Mom called it.”

Adora bit her lower lip for a moment. Even now, Queen Angella was a sore subject. “We’re princesses,” she said. “We’re supposed to lead from the front.”

“Technically, I’m a queen.”

The queen, actually, as far as Etheria was concerned. Adora kept her eyes on the screen. The shuttle was quickly reducing the distance to the planet. And to the enemy fleet. No reaction by the Goa’uld so far. But they could be trying to lure them closer, to spring an ambush - send the Death Gliders at them before they could reverse course and flee. “Yes. But I’m no queen,” she said.

“Priest would disagree.”

Adora scoffed. Who cared what Priest thought? His fleet, she answered her own question. She sighed instead of replying.

On the screen, the shuttle suddenly turned around and started flying back. Still no reaction from the Goa’uld fleet. Or flotilla - three Ha’tak and a few more Al’kesh weren’t much of a fleet, not compared to Third Fleet.

“The bombings stopped,” Glimmer commented. “So, no civilians are in danger any more.”

Adora pressed her lips together. They weren’t in any danger any more because they were either safe - or dead.

Then Catra’s smiling face appeared on the screen. “Hey, Adora!”

Adora smiled against her will. That comment brought up so many memories…

“The bombings targetted Jaffa ground forces. They left the mines down there alone, where all the civilians are,” Catra went on. “No sign of a Stargate, though.”

Adora sighed with relief. They could return at a later date, once they had hashed out their alliance with Earth, and save the slaves.

*****

Hyperspace, On the Way to Earth, July 31st, 1998 (Earth Time)

"And… nothing! No connection - the signal remains incompatible."

Even Entrapta sounded a little dejected at the result of their latest attempt to crack the alien data cube, Samantha Carter noted. Unlike their work on the Al'kesh, which had been very satisfactory, they hadn't had much success with the cube so far - it had defied every single one of their attempts to access its core.

"Wellllll…. That means we can try the next theory!"

Not for long, of course - the princess still seemed to have limitless enthusiasm. Sam nodded, though her heart wasn't in it. "Yes, let's attempt to reverse the polarity on the connectors there and see if we get a reading then," she said.

"Exactly!" Entratpa nodded, her hair twitching, then looked at Hordak. "What do you say, Science Buddy?"

"The methodical approach is sound," the former warlord said - he hadn't shown any frustration at their lack of results at all. "Absent other examples of this technology, or individuals of the species that created it whom we could interrogate, we can only work through the various possibilities."

Sam pressed her lips together. She wasn't sure what kind of interrogation Hordak meant. Even after two weeks working with him, Sam couldn't claim she knew him. Sometimes, he acted like the sort of scientist, usually men, who were a little too focused on their work. She was familiar with them, though that also meant she had to be wary of letting her expectations frame her impressions. Other times, the former warlord came to the fore, sometimes just by uttering a suggestion that was unethical, sometimes by mentioning details of his past that drove home the fact that he had waged a war of conquest in the name of an interstellar dictator. The former usually took Entrapta a bit more

time to catch and correct than the latter, which was worrying Sam a little.

But the alien was a very good scientist, Sam had to admit. And as much as it made her question her own morals, she was starting to understand how NASA scientists had been able to work with former Nazis like Werner von Braun. Earth needed to adapt its technology to the level of the various space-faring species, and that meant she and her colleagues needed to understand the alien technology they had access to. And if they had to work with an ex-warlord who might not have reformed as completely as some claimed, then… well, it was better than working with a Goa'uld.

At least Hordak was trying to do better, from what Sam could tell. And, another point in his favour, he didn't show any sort of sexism. He treated both Entrapta and Sam as his equals.

"Alright! Let's prepare the next test!" Entrapta announced and went over to the table where the crystals she had 'attuned' were held.

Hordak nodded and went to the console to adjust the parameters.

And Sam wondered while she changed the adapters on the data cube how she could break it to the Etherians that Earth was a rather sexist society. They were more than halfway to Earth now, and it wouldn't do at all to let their allies - and friends - discover after reaching it that humanity, by and large, wasn't quite as progressive when it came to equal rights for women. Or for people who had non-heterosexual orientations.

The Colonel should have brought it up, but, so far, he hadn't even touched the issue. Daniel had, for a change, apparently avoided the topic in his long talks with the Etherians about their culture. Teal'c… was Teal'c.

Which left her, the only woman in the team, to bring it up. Even if that was against the Colonel's wishes. Not that he had given an

actual order about that. But this wasn't the kind of thing you kept secret.

She sighed.

"Don't worry! Sooner or later, we'll crack the cube!" Entrapta told her with a smile. "Sometimes, science takes a while to get results!"

Sam knew that, of course. "Oh, it's not about that," she said. "I was thinking about home."

"Oh. Don't worry, we should reach Earth in about ten days!"

"Unless we meet another situation that requires intervention or exploration," Hordak added.

Meaning: found a planet with a Stargate on it. They hadn't so far. Which was a good thing, seeing as the route between Etheria and Earth seemed to be outside the Goa'uld sphere of influence, but also meant that SG-1 hadn't been able to inform Stargate Command about their upcoming arrival with an allied fleet. And magical princesses. Not an ideal state.

"Alright! Attempt to connect to the data cube Number three hundred and twenty-six!" Entrapta announced.

Sam nodded and focused on her work.

*****

"Any luck cracking the data cube?" the Colonel asked when they sat down for dinner.

Samantha Carter looked at him with narrowed eyes. He should, by now, know the answer to that without having to ask.

The Colonel flinched a little, which was a small victory. A petty one as well, she had to admit - but the long time spent in a small ship, with limited company, and the mounting pressure on her was

taking its toll. Perfectly reasonable. At least, that was what she told herself.

"We're making progress - we've eliminated several possible architectures today!" Entrapta said between eating her tiny meat pies.

"Well, at least we've cracked the Al'kesh," the Colonel went on. "We'll probably be able to build a copy from scratch at home."

"If we get several key pieces of technology or manage to manufacture them," Sam corrected him. "The crystal-based controls will have to be built from scratch."

"That's what I said," the Colonel said with a grin.

She shook her head and filled her plate.

Catra joined them at the table, stretching her arms over her head, then leaning over to kiss Adora on the cheek. "Hey, Adora!"

"Hey!" Adora smiled at the catwoman, and Sam clenched her teeth. No, this couldn't go on.

She cleared her throat after swallowing a piece of her own, larger meat pie. "There's something we need to talk about…"

*****

"...and while the general attitude has been changing for the better, people who do not conform to the majority view of what is an acceptable sexuality, meaning heterosexuality, are still facing discrimination - legal discrimination, at that."

Catra narrowed her eyes, her tail swishing back and forth behind her, as she alternated between staring at Carter and glancing at Adora. "You mean… your people hate…" she blinked. What was the term she had used? "You mean your people hate people like Adora and me? Or Scorpia and Perfuma? Or Netossa and Spinnerella?"

“Or my dads?” Bow asked. He sounded shocked.

Well, everyone looked shocked. They had known that Earth had some stupid issues with men being considered more powerful than women, which kind of was understandable since Earth didn’t have magical princesses, or scorpion people, or minotaurs, who could toss others around regardless of magic or gender. Understandable, but stupid, of course. But hating people based upon their choice of partners?

“We don’t hate you!” Carter protested. She even sounded as if she meant it. “Nor does everyone on Earth hate you. There’s a significant part of the population that distrusts or dislikes people who do not conform to the heterosexual norm, but few actually hate you.”

That was mincing words, in Catra’s opinion. She didn’t say so, but whether you disliked someone or hated someone didn’t really matter that much, in her opinion.

“And people are changing - society is changing. We’re working on that,” Daniel said. He looked ashamed, at least. “But while we made a lot of progress, we haven’t left all the bigotry behind us. Not yet. But it’s much better than it was in the past. At least in countries like the USA.”

Catra stared at him. Daniel was, as far as she could tell, not one to lie to them.

“That means it was worse? Like with your gender discrimination?” Bow shook his head. “But…why? Why do you hate my family?”

“Why do you hate people like us?” Adora asked in a low voice.

Catra glanced at her and winced - her lover was looking down at the table, and her fingers were digging into her thighs. She reached out to grab one of Adora’s hands, but Adora suddenly looked up, glaring at SG-1.

“Why do you hate us? Why do you want to keep us from… from loving each other?” Adora spat. “Why do you hate love?”

Uh-oh. Catra grabbed her hand and squeezed, hard. When Adora, gasping softly, looked at her, she smiled, leaned over and rested her head on Adora’s shoulder. “I’m here,” she whispered.

“We don’t hate you,” Carter repeated herself. Daniel nodded, as did - although a moment later, Catra noted, O’Neill. “As I said, it’s not a small minority, but neither is it an overwhelming majority.”

“So, what is it? Who on Earth hates us?” Adora asked.

“Ah…” Daniel cleared his throat. “It’s a complicated issue, rooted in our - our country’s - past - and our religion. For a long time, homosexuality, both by women and men, was seen as morally wrong. Usually, religious reasons were given for that, even though the actual scripture of the predominant religion in our country did not condemn homosexuality, as far as most modern scholars agree. It was actually a rather selective interpretation of older passages in scripture, often distorted by translations from the original source, that was seen as a condemnation of the practice.”

Catra blinked. “What?”

“Bullshit,” Glimmer spat. “You want to claim that your god hates us?”

“No, no!” Daniel shook his head. “Sorry, I was… I digressed. No, what I am trying to explain is that while religious passages were cited to justify such a hatred of homosexuality, it was actually based on the culture dominating our country, and much of the world, which, in turn, shaped the religion of our culture.”

Catra blinked again. “You mean… you made your god’s words into what you wanted them to be?” Wasn’t that… going against your god?

“Well, it’s a rather succinct way to word it, but… essentially yes.” Daniel nodded with a short-lived smile. “Even leaving aside the

question of whether or not the god that most of us - most of the USA - revere is actually real, most scholars agree that the scripture was written, and, more importantly, edited and translated later, by people. People who usually had quite specific and sometimes quite personal interests that were reflected in the scripture that resulted from their efforts. Further, they often used expressions that we, lacking the context of their culture and time, cannot interpret with any certainty."

"Get to the point," Glimmer told him, tapping her fingers on the table.

Entrapta was watching with a weird expression, both fascinated and shocked, it seemed, or so Catra thought. And Hordak looked bored. SG-1, on the other hand, mostly looked ashamed. And also angry, in O'Neill's case. Except for Teal'c, who looked like he usually did.

"Sorry. Anyway, according to several scholars - I didn't actually research the matter, unfortunately, since it had no bearing on my work, but I did read a few papers on it - hatred against homosexuals is rooted in a patriarchic culture that values certain traits that are seen as masculine - usually, power, pride, logic and aggressiveness - and considers other traits which are seen as feminine, like nurturing and empathy, as less valuable."

Catra couldn't help but scoff at that. What fool would think those were exclusively male or female traits? These people were so stupid, it hurt.

Daniel cleared his throat again. "This shapes the common view of what is an acceptable way to express your sexuality as well. Men are seen as the active part in a relationship. They are expected to seek out sexual relationships - with women, sometimes multiple women - while women are expected to be the passive partner, serving their lone male partner's desires. Women who express an active interest in sexual relationships are generally disdained by society, while men are generally praised for it. Homosexuals of both genders challenge this view simply by existing, and many

men and women who conform to their society's expectations see them as a threat that undermines society as a whole."

Catra could barely follow the man's rambling thoughts. Even what she understood just didn't make any sense. This was just so… so fucked up! She wanted to rip the guts out of… of someone! She looked at the others, trying to see if they got what their… guests were saying.

Glimmer was frowning worse than she had when they had met during the war. "So, what you are saying is that your society is built on the idea that if you aren't like everyone else, you are a threat, and so you persecute people who don't fit and make up reasons for it?"

Daniel nodded. "Yes. It's a bit more complicated, but essentially, that's correct. Was correct - as I said, we are changing."

"Yes, we are changing," Carter spoke up. "It's taking a while, but we are changing our society for the better. Many people already do not share these views and treat everyone equally. Many speak out against discrimination, and we are working to make others see how bad it is. But making society as a whole change and adapt is a huge undertaking - I faced a lot of sexism as a woman in traditionally male fields, such as the military and the sciences, so I know how hard it is to make people change. A significant part of our people can't just instantly shed centuries of… of tradition."

Daniel nodded. "Change, even unequivocally for the better, frightens many conservative people. New ideas often get dismissed out of hand by them no matter how valid they are. But, over time, change for the better happens."

Glimmer scoffed. "Well, you better be ready to change some more since we won't tolerate anyone trying to tell us whom we can love!"

"Yes," Adora hissed, and, for a moment, Catra thought her eyes were blazing.

*****

The Headstart

Hyperspace, On the Way to Earth, July 31st, 1998 (Earth Time)

Leaning against the wall in his cabin, where he had called an urgent team meeting, Jack O'Neill felt… well, torn. He wasn't happy with his team - except for Teal'c. Not at all. He wasn't happy with the whole situation that Carter's talk, and then Daniel's lecture, had caused either.

On the other hand, if the Etherians had found out about Earth's attitude towards gays after arriving on Earth… He suppressed the urge to wince. That would've been a diplomatic disaster of an unprecedented scale. And he had been aware of that ever since he had first noticed that Adora and Catra weren't just very good friends. And - and that was why he was also feeling guilty - he had known that they had to talk about this before they reached Earth, yet hadn't done so for two weeks. He clenched his teeth. All that didn't change his duties as SG-1's commanding officer.

He cleared his throat and looked at his team. Carter met his eyes without flinching. Daniel looked away. Teal'c didn't show any emotion. "So, what did we learn today?" he asked.

"That the Etherians' reaction to bigotry on Earth was even worse than we feared, and that we should have addressed this long ago?"

Jack wanted to sigh. Daniel was being confrontative. And protective - he knew as well as Jack did that as a civilian consultant, he had a lot more leeway than Carter. But the worst was that Daniel was correct - they should have addressed this before. Still, certain forms had to be followed. "I don't remember anyone asking me if we should bring it up today. I know I'm getting old, but I think I would remember if I had been removed from command of this team." And he did remember telling his team that he didn't want any more such surprises.

"No, Sir." Carter was looking at the wall next to him. "It was a spontaneous decision, Sir."

"Really. And you couldn't clear it with me beforehand?" He raised his eyebrows.

"Sir, I felt my chosen course of action would cause less disruption to the chain of command, Sir."

A lot of 'Sirs' in this statement. "Are you claiming that you wanted to protect me, Carter?" That wasn't how things worked. The officer in command was always responsible for the actions of his subordinates.

"No, Sir."

This time, Jack sighed.

"Would you have let us address this if we had asked?" Daniel raised his chin. "You have been ignoring this for weeks."

So, now it was 'we'. Well, Daniel knew what he was doing. "I was waiting for the right moment to address it," Jack said. It wasn't quite a lie. It wasn't quite the truth, either. And both Carter and Daniel knew it. Carter wouldn't say anything. Daniel…

"And when would that 'right moment' have been? Five minutes before we reach Earth?"

"Presumably after a valiant battle which strengthened our ties to each other," Teal'c said. He ignored Daniel's pout, of course.

"Yeah, something like that." Jack sighed again. "But yes, I might have been a little too optimistic here."

Daniel snorted.

Jack ignored it. "As we found out, explaining how Earth sees same-sex relationships isn't easy."

“Explaining how Earth sees homosexuals is easy,” Daniel retorted. “Excusing it is the problem.” He shook his head. “Jack, these people literally couldn’t imagine why the people on Earth would hate them for their choice of sexual partners! It’s something out of their imagination. Was something out of their imagination, I should say.”

“Yeah. They are aliens, Daniel. Something we shouldn’t forget,” Jack pointed out. Even though he wanted to forget the bit about his own ancestry. “Jaffa have different views and values as well.”

“We do share the same core values, though, especially when it comes to matters of honour and honesty,” Teal’c said.

Jack suppressed a grimace. “Yes, honour and honesty…” He shook his head. “Telling them that half the country thinks they’re horrible sinners might have been honest, but not exactly diplomatic.”

“Honesty is, in my expert opinion, the best course of action with the Etherians,” Daniel said. “Attempts to hide Earth’s… faults… from them would only cause more problems.”

“Yeah, yeah, But there’s a time and place for this, and a way to present the not so nice facts about Earth. Blurting them out over dinner generally isn’t either,” Jack retorted.

“Jack.”

“Daniel.”

“Do you really think that this was a mistake? Or are you angry that the truth came out, and that they look at us as if we were worse than the Goa’uld?” Daniel asked.

That was… Jack clenched his teeth together,

“I do not believe that they consider us worse than the Goa’uld. They were shocked by the foolish superstitions about sexualities common on Earth, but I believe that this was such a heavy blow

because they held us in high esteem." Teal'c nodded slowly at them.

"Yeah, something like that," Jack said. The kids had looked like they had caught SG-1 kicking puppies - or kitties. "But they need to know that we aren't fanatics who want to burn them at the stake for being gay."

"Most of us aren't," Daniel said with a scoff. "I can think of a few people who would happily bring back autos-da-fé."

"Yes, but these people are a tiny, tiny minority," Jack replied. "Most people don't hate gay people - they're just… uncomfortable."

"Like they were uncomfortable with black people settling in the neighbourhood?" Daniel said with narrowed eyes. He really was involved in this.

"Yeah, something like that," Jack said. Before he could think too much about that comparison, he forced himself to go on: "But things changed and are changing."

"And we told them that." Daniel tilted his head and pushed his glasses up his nose.

"Yes, you did."

"You didn't say much, though," Daniel went on.

"You had things in hand," Jack told him.

Daniel stared at him for a moment, then pressed his lips together and looked away.

Jack sighed again. What could he have said? The same that Daniel and Carter had said. But coming from him…

*****

Hyperspace, On the Way to Earth, August 1st, 1998 (Earth Time)

Adora sighed as she stared at the ceiling of their cabin. It was… she still had trouble understanding it. "I don't get it," she whispered.

A soft growl sounded next to her. Then she felt Catra's head on her chest move, lift. A moment later, a hand appeared in front of her face, and a finger flicked her nose.

"Hey!" she protested.

"You've been sighing for hours!" Catra complained.

"That's not true!"

"Almost hours," Catra retorted. Then she sighed herself, and Adora felt her shift some more - until she was lying on top of Adora's chest, her arms crossed over Adora's chest, and looking at her. "What's your problem?"

"That Earth hates us!" Adora blurted out. Why wasn't Catra bothered by this?

Catra rolled her eyes in return. "Earth doesn't hate us. Some Tau'ri hate us."

"A lot of them hate us," Adora retorted. SG-1 had been clear about that.

"So? A lot of people hate me, too." Catra shrugged.

Adora pressed her lips together. Catra shouldn't talk like this. Even if it was true. Catra had changed for the better. She wasn't like… like she had been before. But even so… She clenched her teeth. Pointing out that hating Catra for what she had done when leading the Horde, and hating them for loving each other, was very different would be...

Catra flicked her nose again. “Hey! I know it’s not the same.”

And Catra could read her like a book. Adora sighed again.

“Look, SG-1 might not have been completely honest with us - I understand something about that - but they aren’t bad people,” Catra said, twirling one finger around a strand of Adora’s hair - she could feel the tugging.

“Yes, but… How can we work with the others, knowing that they hate us?” Adora started to shake her head, pulling Catra’s fingers back and forth.

Catra rolled her eyes again. “We don’t have to work with all of them. There are six billion people on Earth. We can pick and choose.”

“After interrogating them to find out if they hate us?” Adora asked. Then she blinked - Catra seemed to seriously consider this. “I was joking,” she quickly added.

Catra tilted her head. “I’m sure we can think of something to weed out the bad people.” She flashed her fangs in a wide grin.

Adora sighed again. She knew she wouldn’t like this. Then she sighed another time. “It’s not even that, actually.” She shook her head. “It’s… It makes no sense. Why would anyone hate us for loving each other? If they were jealous, it would make some sense…” She trailed off, biting her lower lip.

Catra snorted. “I know that. But…” She shrugged again. “You heard Daniel - they were taught that we - people like us - are bad people. Like we were taught that princesses were evil.”

“I know,” Adora replied. “But we were taught that princesses were bad, so we’d fight them. Why would you want to fight people like… like Bow’s dads? And don’t tell me that George was a soldier once!”

Catra snorted. “I won’t.” Then she grew serious. “Well, teaching people that someone’s bad and you should fight them also makes them, well… close ranks and follow orders.”

“Oh.” Adora blinked. “Daniel said something about that.”

“Yes. Like unit cohesion.”

“Unit cohesion? For families? And villages? Kingdoms?” Adora shook her head. She remembered those lessons from officer training, but… “It’s still evil. It’s even more evil.” They weren’t at war. They were targeting their own people.

“Yeah. But you heard them - they’re getting better.”

“So what?” Adora scoffed. “We treat them like the Horde after the war?”

Catra nodded. “That’s a good idea. As long as you don’t seduce one of them.” She grinned again. Teasing her.

Adora scoffed. “I didn’t seduce you - you seduced me!”

“You seduced me without noticing,” Catra shot back. Then she pushed herself up on her arms, moved her head forward and kissed Adora. “Now, sleep.”

“Now, get off my chest.”

“Naw.”

Adora sighed again. But she did feel better. Maybe they could handle this without a fight or something. It wasn’t as if they could just leave and let the Goa’uld destroy the planet, anyway. Six billion people. Hundreds of millions of children.

*****

Hyperspace, On the Way to Earth, August 2nd, 1998 (Earth Time)

“You want to fly ahead with the shuttle?” Glimmer frowned. As did Catra. Adora as well, Samantha Carter noticed.

“Yes,” the Colonel said. “I hoped we’d find a Stargate, but… We really need to give Earth at least a few days of advance warning. If the fleet just shows up, there’ll be worldwide panic. Even if no one starts a war by accident, people will die anyway in the chaos. Many people.”

Sam nodded in agreement. “If you drop out of hyperspace outside the Sol system, we can take the shuttle and reach Stargate Command without being noticed.” The stealth system was good enough - Sam knew that.

Yet, the Etherians were still frowning. Catra narrowed her eyes. “That would also allow you to put your own spin on the news.”

Of course it would, but the alternative was mass panic and disruption. Sam pressed her lips together - this had to be handled carefully.

“But why?” Entrapta asked. “We’re not your enemies.”

“But Earth doesn’t know aliens are real,” Daniel pointed out. “And people fear the unknown. Also… a whole fleet instead of a single ship? That will be seen as an invasion, not a peaceful contact.”

That made Glimmer and Adora nod, at least.

“Yes. People on Earth aren’t used to whole fleets showing up to help them out of the goodness of their hearts,” the Colonel added. “They’ll suspect the worst.”

“That’s no surprise,” Catra commented, baring her teeth.

“No, it isn’t,” the Colonel replied with a mild expression.

Catra snorted in return.

“Please.” Daniel leaned forward a little in his seat. “Many people will die if there’s a panic.”

And that convinced them. Sam could tell as the Etherians started to look at each other and grimace.

“How long do you need?” Adora asked.

*****

“So, we’re getting a headstart of a few days,” the Colonel said, once again pacing in his room with the entire SG-1 present. Samantha Carter was sitting on his bunk, actually, next to Daniel. “Congratulations! It looks like we’ve avoided an Independence Day scenario.”

Of course he would make a movie reference.

“I think there’ll be parties on rooftops anyway.” And, equally expected, Daniel would take it and run with it.

“There’ll be parties on rooftops in Los Angeles no matter what,” the Colonel said. “But we’ll have to convince our government to treat this seriously. We can’t waste this chance.”

Would the government actually dismiss their warning? Sam didn’t think so. Stargate Command had built up enough of a reputation over the last year, namely by repelling Apophis’s invasion. On the other hand, SG-1 also had built up a certain reputation…

“So, while it’d be nice to have General Hammond call the president and set everything up just fine, we’ll have to plan for the worst,” the Colonel went on.

Sam leaned forward, her eyes narrowing. What exactly did he mean?

“So, in case Hammond or we get stalled for any reason - for example, to check our credentials, or because something happened to Stargate Command in our absence that led to a

change of command - we need alternatives," the Colonel explained.

Ah. Sam nodded. The alternatives the Colonel meant - bypassing the chain of command - would likely end her career, but this was too important. Too many people would die even in the best case, should the Third Fleet arrive in orbit without warning.

Daniel blinked. "What kind of alternatives do you mean?" he asked.

"Contacting the president directly. Calling your contacts to circumvent any roadblocks. Hacking the emergency broadcast system?" The Colonel shrugged. "Probably not the latter, since that would just cause what we want to avoid."

Sam suppressed a snort. It wasn't funny. Too many people would die if they failed. She could call her father, of course - they were estranged, but this was too important. But would he believe her?

"I don't exactly know anyone I could tell about this," Daniel said, frowning. "Nobody outside Stargate Command who would believe me. Everyone knows me as the guy who was laughed out of his last presentation for mentioning aliens."

Sam winced. Daniel hadn't actually claimed that the pyramids had been built by aliens - he had merely mentioned an unknown, advanced civilisation as a theory to explain discrepancies that had crept up when dating the pyramids - but when someone had mentioned the aliens, he hadn't dismissed the idea either. And the media, as well as his colleagues, had run with it and discredited him in his field. He was known as the kooky alien conspiracy theorist now.

"Well, they'll sing a different tune once the Etherians arrive," the Colonel said. "Provided we can keep World War III from breaking out in the meantime."

Which was a real possibility, if, fortunately, not the most likely. Still… "If our credentials were to be questioned," Sam said, "then

we will be unlikely to have access to communications."

"Exactly." The Colonel grinned. "I'd ask Queen Glimmer to come with us so she can teleport us around if I thought they would let her go on the shuttle with us."

Sam winced again at that. Taking Glimmer with them - well, technically, the shuttle belonged to the Etherians, so it was more the other way around - would be a headache. Some idiot would, 'just to explore all options', ask about taking her hostage, and if the NID got wind of it, or some of the brass got paranoid… It was very unlikely that there would be such a blunder, but not impossible.

"Glimmer or Adora can't go with us," Daniel said. "They don't trust us enough for that."

Sam nodded. Not after their revelations.

"And I don't think they'll let Entrapta come," the Colonel said. "Which - no offence, Carter - is a good thing, or you two would probably build a doomsday device to pass the time while we wait."

Sam dutifully snorted at the weak joke. But she couldn't see the Etherians sending Entrapta with them, either. Not without someone to keep her from being taken advantage of. The thought of some of the more… ambitious officers trying to influence Entrapta made her clench her teeth. Hordak was bad enough.

"So, no help on that front. We'll probably have Bow with us," the Colonel said. "Of course, that means advanced communications. But we'll have to arrange a way to prove that there's a fleet about to arrive without letting everyone else discover them."

"We lack FTL sensors at Stargate Command, Sir," Sam reminded him. There had been work into it, but it had been far from completion - Sam doubted that her colleagues had managed a breakthrough in the time she'd been away.

"I know." The Colonel leaned against the wall. "So, I need more ideas to save Earth if we're locked up."

"We'll have to prepare measures in advance, Sir," Sam said. "And we need to decide where we can land the shuttle without revealing it to the world at large." Cheyenne Mountain wasn't the best choice, being the most important base for the defence of North America. Not many officers serving in NORAD were read in on what actually happened down in Stargate Command.

The Colonel grinned. "Oh, that's easy. There's really only one site where we can land an alien shuttle without everyone freaking out."

Sam blinked. Then she groaned.

Daniel looked confused. "What do you mean, Jack?"

"Why, Area-51, of course." The Colonel flashed his teeth. "It's nicely isolated, and anyone who hears about it will think it's a hoax."

Sam sighed.

"I believe that is called hiding in plain sight," Teal'c added.

Sam still couldn't tell if he was serious or not.

*****

Outside the Solar System, August 12th, 1998 (Earth Time)

SG-1 were nervous, Catra could tell. Not from looking at Teal'c, of course; the big man was both built like a rock and could hide his emotions like one. But while O'Neill acted as if he didn't have a care, his jokes weren't quite on point, and he was talking a little too much. Especially compared to the last two weeks, when he had been somewhat restrained. And Carter was fidgeting with her gear as if it might have been broken in the five minutes since she had last checked it. Daniel, at least, wasn't even trying to hide his

nervousness as he sat down, then stood and then sat down again on the ramp of the shuttle.

"So… we're about six hours out from Earth in the shuttle. We could fly closer, of course, since you said you don't have FTL sensors." Entrapta cocked her head.

"We were working on them before we left for our mission," Carter said. "But while it's unlikely that my colleagues managed to complete the project in my absence, it's not impossible."

"Oh, come on, Carter!" O'Neill butted in. "The nerds wouldn't be able to turn on their computers without you!"

"It's not like that, Sir." Yeah, Carter's pained half-smile was a generous reaction to that comment. "We have the most qualified research staff at Stargate Command."

"We have you. And your assistants."

"There's also the potential of being observed by telescopes," Carter went on. "It's a very faint possibility, but not one to be neglected. We're talking about an entire fleet, after all."

Catra snorted. "And you want us to be as far out of your system as possible." She saw Glimmer tense up, and Bow shot her a glare. But she wasn't sorry - someone had to point this out.

"A little delay can often avoid hasty responses," Teal'c commented.

"Yeah. And the further you're out, the less chance that someone spots you and Earth panics," O'Neill added.

"I just said that, Sir."

Yeah, definitely nervous. Catra wasn't actually sure if that was a good or bad thing. SG-1 were, by and large, decent people. They couldn't hold a candle to Adora, of course, and Catra honestly doubted whether any of them would have accepted her in their ranks after all she had done - she was quite sure that they

wouldn’t have given her a second chance if she had spent a few years fighting them like she had the Alliance.

But SG-1 also were competent and experienced. They hadn’t looked nearly as nervous when they had been facing potential Goa’uld traps and ambushes. So, was the situation on Earth really so bad? She glanced at Bow, who hugged Glimmer and whispered something about everything being fine. Well, it better would be fine. If something happened to Bow, things would get ugly. Glimmer would blow up. Maybe literally.

On the other hand, SG-1 would have said something if their idea was putting Bow at risk. They weren’t stupid, after all. So, they were probably nervous about how *they* would be received back on their home planet. Well, that was their problem. Catra didn’t really give much of a damn about that.

Adora, of course, would care, so even in the worst case, SG-1 should be fine.

“So… I’ll contact you in a few days, when Earth’s ready,” Bow said with a half-smile, rubbing the back of his head.

Glimmer nodded, then hugged him again. “Be safe.”

“And don’t wait too long,” Catra said. Advance warning was fine to avoid a disaster, but they wanted to talk to Earth’s leaders. Not to the USA alone. And the longer they waited, the more time the USA had to influence the rest of the world. Well, that was Glimmer’s problem.

O’Neill didn’t quite clear his throat when Glimmer and Bow started kissing, but Catra could see he wanted to. She hadn’t quite figured out what his problem was with kissing or sex, but maybe once they could study Earth’s society, that mystery would be solved as well.

Glimmer and Bow finally separated, and Bow entered the shuttle to prep it for takeoff, followed by Carter and the rest of the SG-1.

Glimmer joined Adora, Catra and Entrapta at the door to the hangar. "If anything happens to Bow…" she whispered through clenched teeth. "I should be going with him."

Catra rolled her eyes. They had gone over this before. Glimmer was Queen and the Commander of the Alliance (as long as Adora didn't contest that, of course). She couldn't go. Adora couldn't go either for similar reasons. And because no one wanted Priest to be left alone at this point in time. If something happened to the shuttle's comm, the clone would probably think it was an attack. Catra would have gone with Bow, but then Adora would worry far too much as well.

So she held her tongue - Glimmer was probably just venting - and watched as the doors closed, and the hangar was depressurised. Then shuttle lifted off and slowly flew out of the ship before speeding up and quickly vanishing in the distance.

"They're on the way. We'll know soon how it goes," Entrapta said. "It's so exciting! A whole new planet! With six billion people!"

Well, at least someone was looking forward to this.

*****

Solar System, Approaching Orbit Above Earth, August 12th, 1998 (Earth Time)

This was it. Jack O'Neill did his best to appear nonchalant when Earth grew visible through the cockpit windows. "Well, I guess we better call in, so they know to prepare the red carpet."

"Yes," Bow agreed.

Good. Not that Jack had expected the kid to disagree - Bow was one of the nicest people he'd met in this business. A little like Daniel, just with a bow and no glasses. And a bare midriff.

"The radio is tuned to the gate frequency, and I have checked the encryption, Sir," Carter reported from where she had been fiddling

with the communication suite Entrapta and she had cooked up.

“Thank you.” The codes would be outdated, but it would prevent any radio enthusiast on Earth from picking up the transmission. Or a foreign country. Well, they would pick u the transmission but would, hopefully, think it came from a military satellite. He cleared his throat. “Open a channel.”

“Yes, Sir.”

“SG-1 to Stargate Command, please come in! SG-1 to Stargate Command, please come in!”

He didn’t expect an answer right away. Not a month late and using old codes, and from Earth’s orbit. But they would be scrambling down below. Checking the radar, trying to locate their position. Hammond would be barking orders.

“SG-1 to Stargate Command, please come in!” Jack repeated himself. “General Hammond? I know we’re late, but we kind of got lost. But we found some nice people who hate snakes and gave us a ride home, so I hope you won’t be too mad with us.”

“Sir!” Carter hissed.

He grinned at her - she really should know him better than this by now.

Daniel sighed as if he had anything to complain about.

Bow remained unfazed, but then, Etherian radio discipline was very… flexible, from what Jack had observed.

“Stargate Command to SG-1. State your position.” That was Hammond!

“Hi, General!” Jack said, as upbeat as he could. “We’re currently in orbit, about…” He glanced at Carter. “Carter?”

Carter immediately relayed their position.

"We're in a stealth shuttle to avoid causing worldwide panic and all that stuff," Jack added. "Quite considerate from our new friends."

Then came the expected questions and exchange of signs and counter-signs to prove their identity. Fortunately, Jack was an old hand at that. Hearing Hammond sigh told him he had convinced his commanding officer that they were the genuine article.

Of course, the fact that they were in a stealth shuttle helped with that - Hammond would be aware that they could easily bomb any place on Earth if they wanted without anyone able to stop them. They wouldn't need subterfuge to take Earth.

"Good to have you back, Colonel," Hammond said. "Now, what's this about new friends."

"Well…" Jack trailed off for a moment. Hammon would tense up right now, he knew. "That's a story best told on the ground. Can you call Area-51 and tell them we have a stealth shuttle to land, no questions asked? And get us an inconspicuous flight to Peterson Air Force Base?"

Hammond chuckled, but Jack could tell his commander wasn't really amused. "Are you sure?"

"Yes, Sir," he replied. After a deep breath, he added. "We didn't fly all the way here in this shuttle. Our new friends took us here - one is flying this shuttle. And we've got a fleet of them waiting outside the system."

"Could you repeat that, Colonel?"

Jack winced at the tone. "A fleet of spaceships, sir. Big spaceships with big guns - and they outnumber our Navy. Fortunately, they are friendlies looking for an alliance against the snakes."

"I sense a 'but' there, Colonel."

Well, Hammond knew Jack. “Yes, Sir. They want to talk to Earth, not to the USA. And they won’t wait forever. We’ve got a few days to prepare for First Contact, Sir.”

Another moment passed. “I see. I’ll call Area-51. And the president. This better not be a joke, Colonel.”

“Dead serious, Sir.”

“Stargate Command out.”

Jack sighed as he leaned back in his seat. “That went about as I expected.”

“That’s a good thing, right?” Bow asked with a smile.

Jack shot him a tired glance. The kid was just too naive.

*****

Area 51, United States of America, Earth, August 12th, 1998 (Earth Time)

“Well, someone has a sense of humour,” Jack commented as they glided in towards the designated landing field - it was marked with a big Roswell-Alien-style logo. “Or someone is about to get canned.” Bow looked puzzled, so Jack had to explain the joke. “There’s an urban legend about aliens looking like that. Supposedly they landed on Earth forty years ago and are kept here.”

“Ah.” Bow nodded. “So, anyone watching us will think this is a joke.”

“There shouldn’t be anyone watching us, but if they are, yes.” Jack nodded.

Then they touched the ground, and he saw a platoon of soldiers rush out to surround the shuttle. “Alright, let’s face the music, team! Be all nice and friendly - Hammond must have lit a fire

under the base commander to get us landing clearance so quickly, but they'll be suspicious. Bow, just… stay on board, OK?"

"OK!" Bow nodded. "And if anyone tries to enter, I'll just lift off."

"Yes." Hopefully, nobody would be as stupid as that, but you never knew.

"The shuttle should withstand most attempts to enter," Carter remarked.

"Unless they start with trying to blow the doors open," Jack replied. "So, let's go, team! See you soon, Bow."

"Bye!" The kid waved at Jack.

Jack shook his head as the ramp was lowered.

*****

Outside the Solar System, August 12th, 1998 (Earth Time)

"Incoming call."

Adora turned, pulling her hair out of Catra's hands, as she heard the announcement. "Accept it!"

"Hello, everyone!" Bow appeared on the screen on Darla's bridge.

"Bow!" Glimmer beamed at him. It was the first time she had smiled in hours, and Adora felt a little guilty about it - Catra hadn't gone with SG-1, after all.

And Bow smiled back. "Glimmer! How are you holding up?"

"Oh, it's fine. A little bored but fine."

Catra coughed behind Adora's back, but Adora ignored it and Glimmer's lie. "How are you doing?"

“We’ve safely put the shuttle down on Earth,” Bow told them. “Some sort of secret base - but it’s in the desert, in the open. They had to put some tent over the shuttle.”

“What?” Catra frowned. “A tent?”

“A mobile tent of sorts, yes.” Bow shrugged.

“Big enough to cover the shuttle?”

“Oh, yes. Jack said it’s to cover prototypes.”

“How does that work when flying?” Entrapta asked.

“It’s not meant for flying, apparently.”

Adora shook her head. That didn’t make much sense.

“Anyway, SG-1 left - they took off with an aeroplane and should arrive at their base in an hour or two,” Bow said. “No one bothered me here, no one tried to get into the shuttle - Jack ordered them to leave me alone.” He frowned. “I’m not sure if they even know that I’m on board.”

“Used to keeping secrets,” Catra commented.

“Of course they are!” Glimmer blurted out. “They kept the Stargate secret. And their war with the Goa’uld.”

“Well, as long as you can blast through the tent if you need to…” Catra grinned.

“That shouldn’t be a problem,” Bow replied.

“So,” Entrapta cut in with a wide smile, “did you test my receiver already?”

“Ah.” Bow smiled. “I’ve tested it, yes - it can receive the transmissions from Earth.”

“And the television broadcasts too?” Entrapta leaned forward. “Does my adapter work? The autotuning?”

Bow nodded. “I had to adjust a few settings, but yes - it’s basically the same principle as SG-1s radios.”

“So…?” Entrapta fidgeted. “Can we watch Earth entertainment now?”

Bow nodded. “Yes, we can, but…” He grimaced.

“What’s wrong?” Adora asked.

“It’s a little… Well, you have to see it to believe it,” Bow said. “I’m relaying the signal now.”

Adora watched as another screen lit up on the bridge. Then she frowned. “What’s a ‘Jerry Springer Show’?”

*****

Stargate Command, Colorado, August 12th, 1998 (Earth Time)

“...and then we landed at Area-51,” the Colonel finished. “From there, we returned to base.”

Samantha Carter sat straight in her chair and looked at a point to the left of General Hammond’s shoulder without showing any expression on her face. Even though she wanted to wince a little - the Colonel had summed up their experiences in a slightly flippant manner. Well, they had been thoroughly examined in the infirmary, and the Colonel always was a little annoyed after that.

“I see,” the General said with a frown. “You’ve made contact with an advanced civilisation willing to help us against the Goa’uld.”

“And they followed us home,” the Colonel joked. “And we can’t get rid of them.”

“And we really need to call the government,” Daniel spoke up. “General. If the Etherians lose patience, then they’ll cause a mass panic on Earth.” He leaned forward, as Sam saw with a glance. “We don’t have much time to prepare Earth for their arrival.”

“And there is no chance that these ‘Etherians’ can be persuaded to abandon their plans of revealing their presence to the entire world?” the General asked.

This time, Sam winced.

“No, Sir,” the Colonel replied, shaking his head. “They’ve left absolutely no doubt that they want to contact Earth and not just the United States. They do not recognise us as representatives for Earth.”

“The president will not be happy about this,” the General said, leaning back. He was still frowning. “An alien space fleet about to make contact with Earth. The Stargate program revealed. The Goa’uld threat exposed.” he shook his head. “This goes against every standing order.”

“It’s not as if we had any choice in the matter, Sir,” the Colonel told him. “The only way to avoid this would have been to refuse their offer to fly us back to Earth. And while some members of our government would be very happy if we had decided on that, I think making an alliance with a power strong enough to give the Goa’uld pause is more important than secrecy.”

Secrecy that was very unlikely to survive the next attack by the Goa’uld - it was a miracle that Apophis’s attack hadn’t exposed the Stargate program.

“The Etherians have proven their mettle,” Teal’c said. “They will be mighty allies of the Tau’ri.”

“Unless the government screws this up,” Daniel added. “They aren’t happy with several of the country’s policies.”

The General turned to look at Sam. “What’s your opinion, Captain?”

“Sir, we need this alliance,” Sam replied at once. “The Etherians’ technology is more advanced than the Goa’uld’s. They have hundreds of ships, their military has experience fighting a war in space, and they are willing to protect Earth.”

“They’ll protect us whether we like it or not,” the Colonel cut in. “They’re kind of like that. And they have the power to get their way.”

“The President won’t like that either,” the General said.

“That won’t change the facts.” Daniel shook his head. “We need to inform the world about this so people can prepare for their arrival.”

The General slowly nodded with a deep sigh. “I think so as well - but many will disagree. And some will doubt your report.”

Sam knew what and who the General meant.

“We can call Bow and ask him to tell the fleet to shoot their guns. Telescopes will pick the flares up,” the Colonel said.

“Let’s hope it won’t come to that.” The General got up. “I’ll call the president.”

Sam sighed - silently - with relief. But she hadn’t expected General Hammond to doubt them in the first place. The real problem would be persuading the government that they were telling the truth about the Etherians.

*****

Stargate Command, Colorado, August 13th, 1998 (Earth Time)

"...and did you see those ships with your own eyes, Captain?" Senator Wooley, his broad face and bald head visible on the screen in the room, asked. How this man had gotten on the Senate Foreign Relations Committee, Samantha Carter couldn't understand.

She had to make an effort not to glare at him - they had covered that question already. "It's a space fleet, sir," she replied. "The distances involved are too big to be able to see the whole fleet with your naked eye. But I saw and rebuilt the sensors used to detect them, and I saw enough of the ships close by to be confident that the numbers we cited are true. The electronic data is also supporting this."

The man frowned at her from the screen across the table. "So, you could have been deceived about their actual power."

Not for the first time, Sam wished that the President wouldn't have decided to treat the whole event as a bipartisan affair and involve the Senate at this point. It could cause critical delays. "I consider that very unlikely, Sir," she replied with all the composure she could muster.

"Well, you wouldn't know if you were deceived, would you?" Wooley sniffed.

Sam clenched her teeth. Wooley hadn't made any openly disparaging remarks, but she was familiar with his attitude towards women in the military from his interviews, and it grated on her nerves that a man who had never served himself was looking down on her. But he was a Senator. "Leaving aside the facts that I just told you, Sir, there's also the question of what the Etherians could gain by such a deception."

Another sniff. "You told us about their agenda."

"Their stated objectives focus on an alliance with Earth against the Goa'uld, Sir. If they were weaker than they claimed, we would find out quickly in the field."

“But then they would have already achieved their objective.”

“Which objective do you mean, Sir?” Sam didn’t raise her eyebrows.

He didn’t take the bait. “That remains to be found out, Captain. That’s obviously not part of your expertise but ours.”

She couldn’t help herself - she frowned in return.

Fortunately, Senator Smith, the chairman of the committee, stepped in at this point and appeared on the screen, replacing Wooley. “Captain Carter comes highly recommended, James. Her service record speaks for itself.”

“This is a matter of policy, though, Jim. And that’s our purview.”

The President’s actually, but Sam wouldn’t point that out.

“And we’re here to gather the information we need to make a decision,” Smith said. “Captain Carter, you stated in your report - well, Colonel O’Neill did, but you signed it as well - that you don’t think that the Etherians will be reasonable and limit their contact with Earth.”

“Yes, Sir. They’ve made that absolutely clear.” Sam nodded sharply.

Wooley cut in again. “We haven’t talked to them - all we have is the testimony of Captain Carter, Colonel O’Neill, an archaeologist and, apparently, an alien infected by the same kind of parasite we’re supposed to be at war with.”

“You’ve read the files, James,” Smith replied, a little more sharply.

“I’ve tried to - this was all sprung on us a few hours ago. There wasn’t enough time to actually study everything in detail. It’s already a scandal that we are at war with an alien power, and Congress wasn’t informed!”

Which, technically, was true, though there were good reasons for that.

"That's another matter which will have to be discussed at a later date. We have more pressing problems to settle," Smith commented. "But selected members of Congress were informed."

"Which will also be discussed, mark my words!"

Sam didn't sigh.

Smith cleared his throat. "Back to the business at hand. Captain, I think you've detailed the military situation quite clearly. But you've also observed and interacted with the leaders of this 'Princess Alliance' for close to a month. This committee would like to hear your impressions, especially of their political views."

"Yes, Sir." Sam took a deep breath. "The Princesses Alliance is made up of the most powerful kingdoms of Etheria. It was formed in a war against the Horde - a war that was only recently concluded. They're mostly absolute monarchies led by a hereditary ruler."

"With magic powers. Magic princesses," Wooley didn't appear on the screen, but Sam knew he was sneering.

"The rulers of Etheria have powers that would be best described as 'magical'," she went on. "Those powers have been observed by my team and myself. Dr Jackson is of the opinion that those powers were crucial for the development of Etheria's current political structure, and I agree."

"Yes, we've read that." Smith slowly nodded. "Leaving the exact nature of their powers aside, do you think they plan to colonise Earth?"

Sam had expected that question. "No, Sir."

"And what do you base this opinion on?"

“My personal impression of the leaders of Etheria,” she replied. “They are, in my opinion, honourable and decent people, not conquerors.”

“Nothing else?”

“No, Sir.”

“That’s not much.”

She didn’t reply to that.

“And what if you’re wrong?” Wooley butted in again. “They are the absolute rulers of monarchies. What if they want to conquer us? What do we do in that case?”

“If they want to conquer us, Sir, then asymmetrical warfare would be our best and only means to resist. The technological gap is just too big for organised warfare.”

“Even with the technology you’ve recovered and studied?” Smith asked.

“Yes, Sir. We haven’t mass-produced any of the weapons we found.” They hadn’t produced any advanced weapons, period, but that was a detail. And they had gone over this before.

“I see. So, back to the Etherians’ capacity for warfare…”

Sam suppressed a sigh. They were wasting time here. Time they couldn’t afford to lose. The Etherians wouldn’t wait forever - who knew what they were doing right now?

*****

The Reveal

Outside the Solar System, August 13th, 1998 (Earth Time)

"OK… Earth entertainment isn't all bad."

Catra, still giggling, frowned at her lover. "What? That had been hilarious!" she protested. The way those people kept stumbling into traps… Not at all like the Jerry Springer Show. Why would anyone want to watch friends - family - tear into each other? The whole show had reminded Catra of a time she really didn't want to remember.

"It was OK," Adora said, shrugging. "Pretty entertaining."

"Bah!" Catra scoffed. "Let's watch another cartoon! But not the one where the cat always loses!" That one was biased and bad.

Adora snorted at that - of course she would! Catra frowned at her, but she smiled even more. "That one was funny, though."

"It was… OK," Catra replied in a flat tone and narrowed her eyes at her lover.

Then Adora laughed in that carefree way of hers that reminded Catra of their time as cadets before things got bad, and Catra couldn't help joining in.

"I'm still not sure that the Jerry Springer Show was actually entertainment," Glimmer commented after a moment. She was frowning - probably jealous that Bow was stuck on Earth.

"It was called a show. Shows are entertainment," Entrapta replied. "The news and documentaries are educational." She smiled. "We've recorded a number of those while we watched other shows."

"Yes!" Adora nodded. "We need to learn more about Earth!"

Catra groaned. Not everything should serve the mission.

"What about this? It's a documentary about Earth food?" Entrapta pointed at an item on the screen.

"Like the cooking show that we watched earlier?" Catra leaned forward. That had been entertaining and interesting. So much food and so many new swear words.

Adora nodded. "Yes, let's watch that."

"It's mostly about meat, I think," Entrapta said.

"Meat is good," Catra commented with a smirk. Adora missed her meaning, though.

Then the documentary started. And Catra started to wonder if that had been a good idea. "People eat that on Earth?" All the birds looked like they were sick!

"I'm not going to eat any meat on Earth," Adora mumbled.

"I'm not going to eat anything on Earth," Glimmer added.

"It's a very efficient way to produce meat without cloning tanks," Hordak commented. "I might have to adjust my opinion of Earth's culture."

Entrapta whapped him on the head with one of her hair strands without taking her eyes off the screen.

And Catra swallowed what she had been about to say. In hindsight, trying to make a joke about dead animals wasn't nice.

*****

Washington D.C., United States of America, August 13th, 1998 (Earth Time)

Jack O'Neill knew jetlag would get him sooner or later. But he'd manage a few more days. He had to - everyone was going crazy

about the arrival of the Etherians. It helped that he had been able to sleep during the flight to Washington and that the day/night cycle in Third Fleet had been off compared to Earth. Still, he was running on coffee and jello. And a sandwich some poor aide must have grabbed from the mess hall.

He resisted the urge to shake his head - he had to be professional. The perfect soldier. These people had to believe him, or things would turn into a catastrophe.

"I'm still not convinced that we should let these aliens dictate how they contact Earth," Senator Brown-something - the civilians lacked name tags - said with a scoff. "This is our planet, and we need to draw a line in the sand from the start. History proves that."

Jack wondered what history the man meant. Columbus? Or Perry?

"Eugene, while the exact number of space ships on their way to Earth might have to be readjusted once we can independently verify it, I can tell you that even a handful of space ships represents a force that our forces cannot resist," Kinsey said. For once, the man was actually helping.

"Robert! You knew all about this!" Brown-Something glared at his supposed colleague. "Of course you'd say that!"

Jack had to struggle to keep from sniggering. Yes, as the chairman of the Senate Appropriations Committee, which controlled the Stargate Program's budget, Kinsey belonged to the small group of politicians who had been read in about Stargate Command and the Goa'uld. If it came out that his decisions had almost led to Earth being conquered by Apophis, Kinsey would be done for.

Unfortunately, revealing that would probably also bring the government down - things had been very dicey, after all. So, Jack couldn't hint at a few of the angry Senators who had just a day

before heard that aliens were real and Earth was at war that they should look into that particular incident.

"I'm saying that because I know it's true. The United States cannot stand against even a small fleet," Kinsey insisted. "And the President shares my view on this."

More snorting from the politicians at the table. But even some of the brass seemed sceptical, Jack noticed.

"We've been updating our capability to intercept space-born threats," General Naird said. "But it's a slow process, and we've been handicapped by the need to keep our advanced technology secret."

"Alien technology," Kinsey corrected him.

Jack almost nodded in agreement. As head of the Air Force Space Command, Naird had been read in about Stargate Command as well. The general should know better than to act as if he wasn't involved in the whole coverup.

"Yes, yes." Naird shook his head. "But even if we don't need to keep the technology secret any more, we would still look at several years to upgrade our space defences to what we would consider operational."

"And we only have a few more days before the black ships arrive and force our airports open," Brown-Whatever commented with a glare at Jack. "Because you failed to impress upon those aliens how things are done on Earth. Princesses! Absolute Monarchies! And those people are about to dictate terms to us!"

"They won't," Jack said with more confidence than he felt. "They fought a war against an invading Horde for decades; they won't invade another planet in turn. We know them."

"So you say, Colonel O'Neill." The politician sneered at him.

“Eugene, if the aliens want to invade, why would they announce their arrival in advance? That doesn’t make any sense. If they were planning to conquer Earth, they would have struck without warning.” Kinsey shook his head. “They certainly wouldn’t have sent SG-1 ahead to inform us about them.”

Jack refrained from nodding in agreement. It was still Kinsey.

“They could be planning to divide us!” Brown - Brown-Smalls, Jack finally remembered the name - spat. “They force us to inform the rest of the world to undermine our leadership of the free world!”

“They said that they want to talk to the whole planet, not just to the USA,” Senator Willsbury, an older woman, pointed out. “They’re not exactly being subtle there.”

“They wanted to arrive without warning, but we managed to persuade them that we needed some time to prepare the world,” Jack added.

“And you couldn’t persuade them to negotiate with the United States instead?”

“I’m sure the Colonel and his team did their best,” Kinsey, smiling, cut in before Jack could answer.

“Well, their best obviously wasn’t good enough!” Brown-Smalls scoffed.

This time, Jack glared at him. “I can assure you, Senator, that if you had been in our place, they wouldn’t even dream of talking to the United States at all.”

“That’s enough, Colonel,” General Naird spoke up. “We’re here to determine what realistic military options we have should this First Contact turn hostile.”

“We already did that, sir,” Jack reminded him. “We do not have any realistic option to withstand the Etherian fleet with either conventional or nuclear means. We could resort to asymmetrical

warfare as long as the Princess Alliance remains in command since they do not want to hurt civilians. Unlike the Goa'uld."

Naird frowned as if it was Jack's fault that he didn't have a few brave space fighters to attack a mother ship. Which the Etherians didn't have anyway. Because Adora had turned it into a giant space plant. With magic.

But if Jack mentioned that, everyone present would think that he had gone crazy.

*****

Washington D.C., United States of America, August 13th, 1998 (Earth Time)

"Ah, Colonel O'Neill. Captain Carter." The President looked as if he had aged years since Jack O'Neill had seen him last. "Glad you could join us."

"Mr President." Jack and Carter saluted. Daniel almost followed suit but nodded instead.

"Sit down somewhere. There should be food in a bit - we've ordered dinner." The man gestured at the long table in the situation room. "Ladies and Gentlemen - the Pentagon finally released SG-1 to us."

SG-1 without Teal'c. Jack was still grumpy about that. 'Security considerations' his ass - Teal'c had proven his loyalty many times over! Apparently, the Goa'uld larva in his stomach pouch suddenly represented a risk for the President and his cabinet.

The assembled men and women nodded at them.

"We've already reviewed our military options," the President went on. "And since those boil down to 'surrender or become guerillas', we're here to discuss our political options."

"They should have been doing that from the start," Daniel whispered.

"I'm sure they have," Carter whispered back.

Jack cleared his throat.

"Your input will be invaluable for this - you know the alien leaders and how they think."

"Thank you, Mr President," Jack said.

The rest of the Cabinet nodded as well, but Jack could see some sceptical expressions amongst them.

"So, we'll tell the world tomorrow. Our allies will be informed beforehand, of course - they'll be mad enough about this secret being kept from them. Especially the Brits." The President laughed, and so did everyone else. "But we haven't yet decided how to handle the aliens themselves. That means we have this night to come up with a plan of action. I need ideas, people!"

"Well…" the Secretary of Defense spoke up, "we've read the briefs about the Etherians. They want allies for their war with the Goa'uld. The United States are the most advanced nation on Earth - technologically, militarily and industrially. We've been fighting the Goa'uld for years, so we're the natural allies of the Etherians. They need our manpower and industrial capacity."

Many at the table were nodding in agreement, Jack saw.

"If not for some of our policies," the President said, tilting his head. "Such as 'Don't Ask Don't Tell' and our general problem with bigotry and racism."

"Racism wasn't in the brief," the Secretary of Commerce protested.

"Did you miss that the queen's consort is black?" the Secretary of Education told him. "Not that it matters - the intel we received

was clear: Our current stance towards gay rights is the biggest obstacle to forming an alliance with the Etherians."

"If we can be allied to Saudi Arabia despite their policies on pretty much everything except for Iran and making money, I doubt that a few internal matters will be a problem for the Etherians. They're fighting the same enemy as we are fighting - an Empire of body-snatching snakes," the Secretary of Defense retorted. "Winning the war takes precedence. Etheria only has fifty million people and is not nearly as industrialised as we are, according to our information. They need us as much as we need them. Who else would they ally with? The Russians? China? India?" He scoffed.

"Etheria isn't a democracy," the Secretary of State pointed out. "And they are aliens - they have a different view of what is a good system for government."

"But everyone's track record with regards to gay rights is worse than ours. Do you really think that aliens concerned about bigotry will ally with countries that violate human rights every day?"

"Several states in Europe have a better track record, to use your words." The Secretary of State shook his head. "France will jump at the chance to get out of our shadow - and they won't have much of a problem with adjusting their internal policies. Germany too," he added.

"They'll certainly have far less trouble changing anything than we'll have," the Secretary of Education said. "The conservatives will fight this tooth and nail."

"We can use Executive Orders," the Secretary of Defense retorted. "If we actually have to do a thing. I'm still not convinced that the leaders of an alien planet would be overly concerned about gay marriage on Earth."

"Would you care to answer that, Dr Jackson?" The President turned to face them.

Daniel took a deep breath. “Yes, Mr President. The first thing you need to understand is that Etheria’s kingdoms are ruled by monarchs,” he said. “Monarchs with special powers who govern as mostly absolute rulers.”

“I thought they were absolute rulers?” the Secretary of Defense asked.

“Even absolute rulers depend on a bureaucracy, advisors and regional sub-rulers,” Daniel explained. “And depending on the situation of the realm, they have to consider all those people when making decisions.”

“Ah.”

“Although in this case, the current rulers of the dominant kingdoms of Etheria seem to be rather secure in their power - they have recently defeated an invasion by an alien power, the Horde. One could actually make a case for there having been two invasions…” Daniel coughed. “Anyway, the important point is that the personal prestige of the princesses in the Alliance is currently at its peak. Combine that with unparalleled personal power and it is very likely that their people are firmly behind every decision they make.”

Jack could see some grim expressions there.

“To illustrate that, as our report stated, an entire fleet of clones worship Adora, also known under her title of She-Ra, Princess of Power, as a goddess,” Daniel went on.

“Your report also states that this She-Ra doesn’t like it yet cannot stop them. This seems to be a limit of her power,” the Secretary of Education said.

“This is correct in that she can’t stop the worship or hasn’t managed so far. But they will obey her other commands almost blindly,” Daniel replied.

That caused more grim expressions.

"So, the princesses are used to getting their way," the Secretary of Agriculture spoke up.

"Mostly, yes. They are also close personal friends." Daniel smiled. "And this leads us to the crucial point: Etheria takes what we could call matters of state very personally. Princesses are expected to lead from the front, so to speak. Alliances are as much or more a matter of personal relationships and character as of necessity or state - their alliance is called the *Princess Alliance*, after all. And, well… they have voiced concerns that they might form an alliance with a country on Earth, and a few years later, the leader of a country on Earth might be replaced, and the alliance might be broken - that's because they are used to forming alliances with rulers, not nations."

"Christ! It's like we're in the medieval age!" the Secretary of Commerce blurted out. "Do we need to arrange dynastic marriages to get anything done?"

Jack thought the man was joking, but his laughter rang more than a bit hollow.

"The Brits would like that, I bet," the Secretary of Defense commented. "They've got two princes in the right age range."

Daniel, of course, took the question seriously. "It would be a mistake to consider Etheria as a technologically advanced copy of our own medieval age. They developed the way they have due to the specific circumstances of their planet and their population. Dynastic marriages are, actually, not the norm on Etheria - the rulers tend to pick their partners for love and without concern for someone's social standing. One of the most powerful princesses is, according to her friends, expected to formalise her relationship with a smuggler any day now, for example."

That had most of the Cabinet blinking with surprise, in Jack's impression.

“Do we need to call in George Lucas as an advisor?” The President chuckled.

Jack laughed at the joke, and even Daniel got it. Carter, of course, merely smiled.

But Jack’s friend grew serious at once. “And this is the crux of the matter: The Etherians were shocked by our stance towards minorities. When we informed them of the state of our society with regards to gay rights, they had trouble understanding the mere concept of discrimination based on sexuality, gender or - presumably - race. I have to stress this: They were shocked by the fact that this was happening on Earth.”

“Ultra-progressive princesses. Now I’ve seen everything,” the Secretary of Defense mumbled.

“Their political views might cause some consternation amongst the pundits,” the Secretary of Education commented.

“More importantly,” the President spoke up, “their views are a problem for us. We look like a bunch of bigots to them - and they take that personally. Dr Jackson, how do you think they’ll react when some of our more prominent pundits voice disagreement with the lifestyles of Etheria?”

Daniel frowned. “I think they would be hurt if a televangelist called them Whores of Babylon. They aren’t used to such… diverse opinions. Or mass media. For them, politics is a deeply personal affair.”

“Do they expect us to abolish Freedom of Speech?” the Secretary of State asked.

“No, I don’t think so.” Daniel shook his head. “We have covered that aspect of democracy in our talks. But I think they’ll still emotionally struggle with such attacks. They are, after all, all very young compared to the average political leader on Earth.”

"Idealistic college students turned absolute monarchs. I can see the next Disney movie," the Secretary of Agriculture mumbled.

No one laughed this time.

"Yes, that sums it up, folks." The President nodded. "So, how do we ensure that they realise that we aren't the antichrist? We need this alliance. Not just to protect Earth, but also to preserve the United States as a world leader."

"Ah." Daniel was smiling apologetically, Jack noticed.

The President nodded at him. "Yes, Dr Jackson?"

Daniel cleared his throat. "Religion is actually another crucial issue. The Etherians plan to restore magic to Earth, after all."

"What?"

Jack had the impression that most of the Cabinet had overlooked that part of their report. Or had failed to take it seriously.

"And people keep telling me to write better reports," he mumbled.

Carter shot him a glare, of course.

*****

Outside the Solar System, August 14th, 1998 (Earth Time)

"They've announced a press conference at the White House for the afternoon!"

Adora blinked at Entrapta's exclamation. "A what?" Then she blinked again. What was Entrapta doing in her bedroom?

"It's a thing where they tell people news!" Entrapta, balancing on the foot end of Adora and Catra's bed, beamed at them. "At least that's the logical deduction from the reactions I saw on the television broadcasts!"

Catra groaned and rolled off Adora. “And you woke us up for that?”

Entrapta nodded. “Yes! It’s so exciting! We’ll be able to watch Earth’s reaction to the information about our impending arrival as it happens! Just imagine all the data we’ll gather!”

Adora blinked once more. “Uh, Entrapta… how much did you sleep last, uh, night?”

“Err… I didn’t? But I’m totally fine - I got enough tiny concentrated tea inside me to be fine!”

Adora made a mental note to have a talk with Hordak about Entrapta’s eating habits. “So… when will this news conference happen?”

“In the afternoon!”

“Our afternoon?” Catra asked. Her lover had finally opened her eyes, Adora noticed.

“Yes!”

“And it’s…” Catra turned her head to look at the clock on the sideboard.

Adora quickly wrapped an arm around Catra and smiled at Entrapta. “Why don’t you go tell Glimmer now? We’ll be up in a bit!” Fortunately, she managed to clamp a hand over Catra’s mouth before her lover started hissing and trying to wriggle out of her grasp to claw Entrapta or something.

“Oh… are you engaging in foreplay?” Entrapta tilted her head. “That’s usually done in private, though, as far as I know.”

What the…? This was… Adora’s face felt like it was burning. She gaped at Entrapta.

"Oh, right, sorry!" Entrapta hurried out of the door before Adora could correct her.

As soon as their friend had left, Adora relaxed with a sigh and released Catra.

"See what you've done?" Catra hissed and smacked her on the head.

"She means well," Adora said.

"I know." Catra groaned and rolled on her back. "But it's seven in the morning. And we watched that stupid show until three."

And hadn't gone right to sleep, either. But that was neither here nor there. "It wasn't a stupid show, or we wouldn't have watched it for so long."

"I was just keeping you company!"

"Your eyes were glued to the screen!"

Catra sniffed. "I didn't want to make you feel bad." Then she yawned. "Now, let's get some more sleep before Entrapta notices."

That was a good idea. Adora pulled Catra in close and pressed a kiss on her head. They could watch television later.

*****

Washington D.C., United States of America, August 14th, 1998 (Earth Time)

When she saw the Colonel enter the Situation Room, he looked… well, Samantha Carter couldn't say rumpled since his uniform was perfectly pressed. But she knew the signs of fatigue on him.

"How much did you sleep, Carter?"

As he knew the signs on her, apparently. "We were dismissed to get some rest at the same time, Sir," she replied.

“That’s not an answer to my actual question, Carter.”

She felt herself wince. “I had to amend our reports, Sir.” There had been no choice, though - she had to amend the parts about magic since those had obviously not been given enough weight by the Cabinet.

“Carter! We need you at your best! This is a crucial moment for the entire world, and you can’t give your best hopped up on coffee.”

“Yes, Sir.” She carefully nodded and stared at him.

He didn’t blush, but he frowned. “I had to give a personal report to the president.”

Sam suppressed the sudden spike of resentment. The president asking the commanding officer was just a logical move. Even though she should’ve been there as well. And Daniel, of course.

“It wasn’t much - just my personal take on the princesses,” the Colonel went on.

“Yes, Sir.”

A loud yawn announced Daniel’s arrival. “Sorry… I slept a bit too long. They had this old book in the guest room…” He smiled at them. “So, how are things?”

“News Conference at two in the afternoon,” the Colonel replied. “NATO partners have been informed already.”

“What about the Russians and the Chinese? India?” Daniel asked.

The Colonel didn’t shrug. “They were, as far as I’ve heard through the grapevine, informed that this wasn’t a joke and not aimed at them, but that there might be some social unrest.” He chuckled. “The Russians probably know about this by now due to some KGB mole left in Brussels.”

Daniel blinked. “Seriously?”

The Colonel snorted. “I’m joking. At least I hope I’m joking. The Russians were good, though, back in the Cold War.”

“Ah.” Daniel looked around and then headed for the pot of coffee.

“So, the police are going to be mobilised?” Sam asked.

“And the National Guard. And the Army. And the fire brigades, of course, and all the other emergency services.” The Colonel sighed. “This is such a goddamn mess.”

“Well, this would have happened sooner or later,” Sam pointed out.

“I just wish it had been later rather than sooner,” he replied. “Preferably after my retirement.”

She didn’t snort at that - the Colonel wouldn’t retire for twenty years. But he would retire from active frontline duty sooner than that. And maybe she wouldn’t be in his chain of command any… She clamped down on that thought. She really was a bit too tired.

“Well, let’s prepare for the end of the world as we know it,” he said.

*****

“So, where do we stand with Congress?” the President asked when he entered the room half an hour later. He looked a little tired as well, Samantha Carter noticed, but not nearly as tired as she had expected.

“They’re not happy with us,” the Vice President told him.

“Not happy with me, you mean.” The President chuckled. “What are the chances you’ll be in my seat a month from now?”

"Low. They're angry at being left out of the loop about a war in space, but we should still have a majority behind us. But you might have to make some sacrifices."

Of course, Kinsey cleared his throat at that. "If I may, Mr President."

"Yes?" That was more than a hint of a frown, Sam noticed.

"We do have a majority right now, but that could change should news of the attack by Apophis leak." Kinsey sounded just the tiniest bit of smug, though his expression didn't betray any of that.

Next to Sam, the Colonel cursed under his breath. Sam was tempted to join in. Both of them knew where this was going.

Kinsey sighed. "If they decide to raise a stink about the fact that Earth was a few hours from orbital bombardment without any measures taken to warn people and get them into shelters…" His grimace was as fake as his concern, Sam thought. But he was correct. People wouldn't take well to hearing that. And she strongly suspected that the news would leak in the wake of today's revelations. Certainty if Kinsey was about to get canned for his own part in it.

"Everyone involved would have to resign," the President said with a grim expression.

"We'll be lucky if they don't shoot us in the streets," the Secretary of Defense mumbled.

"We can handle the people," Kinsey said. "They won't know how fast spaceships are. Saturn might as well be on Alpha Centauri for all they know. We tell them we stopped the invasion far out, and they'll be happy enough. But that won't work on Congress."

The President narrowed his eyes. "And you can handle Congress."

Kinsey smiled almost apologetically. “I can talk to a few people, make them understand that the last thing we need right now is an Impeachment. America more than ever needs strong leadership in this crisis. We’re in a war after all.”

The President stared at him for a moment. “Do it.”

Kinsey’s smile turned more genuine as he nodded. “I’ll get on it, Mr President.” He left the room.

The President sighed. “Well, let’s hope he can deliver. Now, about our allies… How unhappy are they?”

“Very, Mr President. Very unhappy.”

“I hate to say it,” the Colonel mumbled to Sam as the Secretary of State started to detail the responses from the other NATO members, “but I’m hoping that Kinsey got more dirt about his colleagues than we thought.”

Sam had to nod in agreement. The senator was correct - the last thing the USA needed right now was a change of government. That wouldn’t build a lot of trust with the Etherians. Not at all.

*****

Outside the Solar System, August 14th, 1998 (Earth Time)

Entrapta didn’t look like she had slept at all, Catra noticed when she entered Darla’s bridge. Her friend was still acting as if she had just drunk another can of concentrated tea - which she might very well have, actually. Well, they would have to force her to rest after this.

“Ten minutes to the start of the press conference!” Entrapta announced. “Look, they’re already broadcasting!”

On the screen, Catra could see a large room filled with people, an empty pedestal and small desk, and several people in uniforms.

Not the same as SG-1 had worn - those must be the 'dress uniforms' Daniel had mentioned.

"...and speculation is running wild as to the content of this surprising press conference. We've received reports that the police not only in Washington D.C. but across the entire country has been preparing to handle rioting. Chuck?"

The image shifted.

"Yes, Betty, indeed, I am standing in front of the headquarters of the LAPD, and the mood is tense. You can see various officers checking the transports and preparing riot control gear. But no one seems to know what this is all about."

"Thank you, Chuck. We've also received news that NATO states are doing the same thing - and have also announced press conferences. Whatever it is, this is big, folks! Very big!"

"Not only that, Betty, but we've received news that Russia and China are moving army formations into cities. Some people worry that this might start a new Cold War - or, even worse, an actual hot war!" another man said.

"Well, if Russia wanted to start a war, I doubt they would move their army into their cities," Betty replied. *"But speculation is indeed rampant. Alan?"*

The screen shifted to show a man standing in front of a fence. *"Yes. Rumours after rumours are spreading. Even the most absurd speculation is repeated across Washington."* He laughed. *"The most outrageous is tied to reports that Dr Daniel Jackson has been seen in the White House for the last few days. For those who don't know, Dr Jackson was an archaeologist who became briefly famous for his theory that the pyramids were built by aliens."*

As apparently the entire news crew laughed, Catra shook her head. "Someone's going to be sorry for that in about… five minutes."

Entrapta nodded.

“Daniel will be happy to be proven right at last,” Catra said. “I wonder if he’ll talk to the press as well.”

“You mean give an interview?” Adora asked.

“Everyone is giving interviews.” Glimmer snorted. “SG-1 are the ones who met us, so they’ll be asked all sorts of questions.”

“Like in the show that we saw,” Adora nodded.

“He better make us look good,” Catra muttered.

“Catra!” Adora frowned at her.

“What?” Catra smiled at her lover. “I’m just saying… they wanted a headstart to prepare Earth for our arrival, they should use that to make us look good, so they won’t be afraid of us.” All the preparations that were mentioned on the screen were a little concerning. Would the people on Earth really freak out just because they heard about the Alliance?

Adora snorted, and Glimmer rolled her eyes.

“They need to know that the fleet is able to protect them. That way, they’ll feel safe,” Hordak added.

Glimmer cleared her throat. “I don’t think that’s how it works. They don’t know us, so they don’t trust us.”

“Once we’re in orbit, they’ll see that they can trust us when we don’t conquer them even though we could do so easily,” Hordak retorted.

“I don’t think we could conquer Earth easily. Or at all,” Catra said. “They’ve got millions of soldiers and all those weapons. Even if we transported all of Etheria and all the clones and bots down there, we couldn’t garrison them.” And as SG-1 had told them, Earth

people were used to fighting even after being conquered. And she wasn't going to say what Horde Prime would have done to Earth.

Neither did Hordak or anyone else - but they all knew it.

"Oh, it's starting!" Entrapta piped up in the sudden silence.

And, indeed, an old man was stepping up to the desk, smiling widely. That must be the President.

"My fellow Americans! Today is a historic day. An age-old question of humanity will finally be answered: Are we alone in the universe? And the answer is: No, we are not alone in the universe. The United States has made contact with extraterrestrial intelligent life. Peaceful contact."

The room exploded in noise. A red banner appeared on the bottom of the screen with the words 'Existence of aliens confirmed' and started scrolling from right to left.

"Please, please…" The President raised his hand. It took a while for the room to quiet down. *"I'll answer questions after my statement."* He nodded.

"Now, in addition to SETI, for several years, the United States has been running a top-secret program to search the galaxy for intelligent life. We have been doing this by means of an alien artefact that was found on Earth and painstakingly restored and returned to service. An artefact that allows travel to distant planets through a gate network that covers a lot of the galaxy. Brave teams of explorers went through those gates to explore the stars. This is our Stargate Program."

Catra frowned. That didn't…. Well, it *did* fit the story SG-1 had told them about the Stargate Program, but only if you creatively shuffled things around.

Once more, whispers started, and the banner changed to 'Aliens exist - U.S. teams travel the galaxy.'

"The reason this was kept top secret is that not all aliens are peaceful and friendly," the President went on. *"In fact, some of them are hostile, and we've…"*

*****

Catra shook her head at the reaction of the people on the screen. The President - or was that the Mr President? - barely could continue his speech over all the cries and shouting. He tried anyway, but it seemed to make things worse.

"They are panicking," Hordak said. "He just told them that they defeated the Goa'uld twice, and that new allies are about to reach Earth, and they are still panicking. I question the need of making an alliance with such people. They will run at the slightest danger."

"Those are civilians, not soldiers," Adora retorted. But Catra could tell that she was taken aback as well.

"They did expect riots," Catra said. "That's why they were all so tense."

Hordak huffed.

"I don't have any news of riots," Entrapta announced.

Catra glanced at her and gasped. She had cables stuck to her visor and… "How many channels are you watching at the same time?"

"Six. No, seven. But all of them are focusing on the press conference," Entrapta replied. "Even though they're just shouting at the moment."

"Their military does not seem to be very competent either if they cannot restore order in the room," Hordak said. "Their leader is not supposed to have any magic powers with which he could defend himself, is he?"

“No, he isn’t,” Catra told him.

“Then he is at risk. This might be a coup.”

“No, it isn’t. But they’re not going to send their military against their own people,” Glimmer said. She looked rather angry, Catra noticed. “And it’s no surprise that the people there are panicking - they have just been told that their leader hid a huge secret from them for years and that their country is at war. Why wouldn’t they be upset?”

“Why would they trust him?” Adora asked. “They must feel betrayed.”

Ah. Catra clenched her teeth when she understood. Adora was feeling for those people - this must remind her of her experiences with the Horde propaganda.

After minutes of pointless shouting and yelling, the President was able to continue his speech.

Although people kept trying to interrupt him. And their reactions…

Adora grimaced. “They really didn’t like hearing that SG-1 has been fighting the Goa’uld for several years.”

Catra nodded. Well, she could understand that. Though if you told the troops everything, operational security would be dead, and morale would drop at the slightest reversal. Hell, Mermista’s people had deserted her at the mere rumour of a damaged Runestone and a Horde Fleet sailing towards them. The Earth people were doing pretty well so far. And now the President was talking about Etheria. And he was making them look good!

And then came the questions. And Catra started frowning. Some questions made no sense at all. Why were they asking if the Etherians had grey skin and big eyes?

*****

Washington D.C., United States of America, August 14th, 1998 (Earth Time)

"Well, this went… as badly as expected," Jack O'Neill said as he sat down in one of the chairs at the wall in the Situation Room.

"They haven't set fire to the Capitol. Or the capital," Daniel objected. "And the rest of the world hasn't declared war on the United States. Both of which were deemed possible if not very likely scenarios, if I recall correctly."

"Give'em time. Both can still happen," Jack mumbled, craning his neck until the back of his head touched the wall. "People need some time to get to a riot."

"It's started in Los Angeles, Sir," Carter reported, looking at her laptop. "And there are traffic jams in the greater Washington area as some people flee the city and others flock to Washington after several groups have called to protest this 'flagrant violation of the constitution and the trust in our government', to quote one."

Jack sighed. "Any good news?"

"The police seem to have the riots in hand so far, Sir," Carter replied. "Although if this spreads too far…"

Members of the Cabinet started filtering in as well. A few looked shell-shocked like green soldiers after their first fight.

"We're receiving sharply worded diplomatic notes from all over the world," the Secretary of State said. "Apparently, the British have figured out where the Stargate came from. They're all but calling us thieves."

Jack scoffed. "It was found in Egypt, not England. And Egypt was an independent country at the time. At least formally." He noticed Daniel looking surprised and rolled his eyes. "I once did a report on the country at the Academy."

"Sorry." Daniel looked embarrassed at his earlier surprise.

The Secretary of State chuckled. “That will be our answer. Of course, the Egyptians also protested - they must have put two and two together after CNN revealed your presence, Dr Jackson.”

“Oh.” Daniel blinked.

Jack shook his “That was fast.”

And that, of course, made Daniel frown at him - as Jack had known it would. “Don’t underestimate other countries, Jack. Humans aren’t stupid as a rule no matter their culture.”

Jack pointed at the big screen, which was now showing burning cars in Los Angeles and a breathless reporter talking into the camera. “Looks pretty stupid to me.”

“People are scared, Jack, and scared people lash out.”

“The French are facing similar riots. The United States embassy required additional protection,” someone said.

More and more reports were brought in by a swarm of young aides and interns.

“Russia’s president is making a speech.”

“China’s gone silent - they’ve cut the internet and cited a national emergency to stop foreign correspondents from reporting. Last we heard, tanks were moving to Beijing.”

“People are calling for a gathering at Area 51.”

“Germany’s voicing concern about the possibility of a war being conducted from our bases there without their knowledge.”

“The French are calling for a ‘reevaluation’ of NATO structures.”

“Los Angeles reports the first death in the riots.”

“Several people suffered heart attacks during the press conference. We’re still getting a count.”

“The National Guard has moved to secure the Capitol and the White House.”

“Canada is demanding a full accounting of the Stargate Program’s use of shared resources in Cheyenne Mountain.”

Someone must have leaked the location of the Stargate. No, they probably recognised Daniel, Carter or Jack himself and realised the truth. “I hope that the Etherians are feeling sorry for inflicting this on the world,” Jack muttered. They probably would, unless he had completely misjudged their characters. Well, Hordak probably wouldn’t feel sorry at all.

“I think so, Sir,” Carter said.

“To be fair, Jack,” Daniel said. “I honestly doubt that more time would have changed anything. You can’t really ease the world into the fact that we’re at war with aliens.” He frowned. “Of course, it could’ve been much worse if the Etherians had showed up without warning, but this was probably the best we could’ve hoped for.”

Jack sighed again. Daniel was right. And the more the people knew about it, the bigger the risk of a leak. Still… “This could’ve gone better.”

“Bill’s calling for a bipartisan congressional inquiry into the Stargate Program!” someone yelled.

“Bastard!”

“He’s just playing to the crowd!”

“Can we counter that?”

“What the hell’s Kinsey doing? He should’ve prevented that!”

“If it’s a bipartisan effort, then we can sink this.”

“That’s what they want!”

"It's just showboating for the crowds. Besides, there's already congressional oversight. He's just angry that he's not on that committee."

"It's just a waste of time. We can give them that to placate them."

"Right. But where's the President?"

"Still on the line with Russia."

"I thought the Russian president is at a Press Conference?"

"It's been delayed."

"They just want to be seen to be doing something."

"They seem more concerned about this investigation than the riots and the reactions of the rest of the world," Daniel said.

"Welcome to politics," Jack muttered.

Someone next to him laughed. He looked over, and it was the Secretary of Defense. Damn, Jack should've noticed the man sitting down. He must be more tired than he had thought.

"It's not like that - or just a bit," the man told them. "But we've been anticipating the reaction of the rest of the world, and of the people. They're more or less following the script. But Congress shenanigans? That's not as predictable as foreign policy."

Jack nodded, even though he didn't completely agree. The man was his nominal superior, after all.

But they were now, to borrow a term from the Navy, in uncharted waters. And Jack wasn't looking forward to discovering that they were headed for an underwater reef.

*****

The Repercussions

Outside the Solar System, August 14th, 1998 (Earth Time)

"...and the riots are spreading as a growing crowd is gathering at the foot of the Washington Monument and demands answers from our government…"

"...Bundeskanzler hat erneut versichert, dass die Bundesregierung über das Stargate-Programm nicht informiert war, und…"

"...Her Majesty's Government can neither confirm nor deny this at this point, though…"

"...rumours of the armed forces shooting at protesters with lethal ammunition…"

"...dozens of buildings are burning, and the police struggle to clear the lanes for emergency vehicles as the crowd refuses to budge, and…"

"...Paris est sûre, la France est sûre, mais…"

"...the death count from the Alien Revelation is rising. Dozens of deaths have been confirmed already in the United States alone, and…"

Adora shook her head at the rapidly changing sights of burning buildings and masses of people throwing rocks at soldiers. Rocks and burning bottles and… "Why are they doing this? This makes no sense!" she exclaimed. This was insane!

"They're angry and scared," Glimmer said. "And they feel betrayed."

"But this doesn't help anyone!" Adora protested. "How does attacking a… a market help you or anyone else feel safer? Or solve anything?" It wasn't even a government building!

“This never happened in the Horde,” Hordak commented.

“Because anyone doing it would have been shot,” Catra pointed out.

“Yes. Such a lack of discipline cannot be tolerated.”

“They’re not soldiers,” Glimmer told him through clenched teeth.

“Then they should be treated as bandits or marauders.” Hordak shook his head. “This is a disgraceful display.”

“People are dying!” Adora snapped. “And they are dying because they are afraid of us!” This was their fault. Her fault!

“Or because others are afraid of us.” Entrapta pulled her mask off. “People also died in accidents trying to flee the cities.” She looked… disturbed.

“Yes.” Either way, they had caused this. “We shouldn’t have insisted on revealing the Stargates and us,” Adora said. “SG-1 told us that this would happen. We should have listened to them. This is our fault. My fault.”

“No, it isn’t!” Catra snarled. Adora looked at her with a gasp - her friend was showing her teeth. “You didn’t lie to them and kept an entire war a secret! They did that, even though they knew what would happen once the secret was revealed!” She stepped up to Adora, glaring at her. “Don’t you dare let anyone blame you for this! You didn’t do this! They did this to themselves!”

“Yes. They lied to their own people.” Glimmer nodded, but Adora couldn’t help feeling that her friend sounded as if she was trying to convince herself.

So she shook her head. “But we could’ve kept this secret.”

“No, we couldn’t,” Catra retorted. “We need Earth in the war. Earth, not some tiny group of soldiers, no matter how good they are.”

“Yes,” Hordak agreed. “The more resources and troops we can muster, the better the war will go. And that won’t be possible as long as Earth as a whole remains unaware of the war against the Goa’uld. Although given their reaction to the revelation, I do think we should reevaluate their suitability as allies.”

Adora took a deep breath. Catra was probably right. Yes, Adora hadn’t been the one who hid such a secret from Earth. And Hordak wasn’t completely wrong - they did need Earth to fight this war. Yet… “I can’t help feeling guilty,” she whispered.

And felt arms embrace her as Catra pressed herself against her. Adora took another deep breath, suppressing a shudder she was sure Catra would feel anyway, and hugged her back.

“It’s not your fault,” Catra whispered. “Don’t blame yourself for this.”

“I know,” Adora whispered back. But knowing wasn’t feeling.

“Uh…”

“Yes?” Gimmer turned to Entrapta.

“I think Bow might be in trouble.” Entrapta pushed a button, and the screen changed again, showing a reporter looking in the camera with a crowd behind him… in the desert?

Adora gasped as she released Catra.

“...crowd outside famous Area-51 is chanting while facing soldiers securing the road to the famous base. And the crowd is growing as people keep arriving. The mood so far is not violent, but this might change at any moment!”

“Show us the aliens! Show us the truth! Show us the aliens! Show us the truth!”

“That’s where Bow is!” Glimmer blurted out. “Bow! Darla, put Bow on the screen!”

A moment later, Bow appeared on the screen. He was smiling in that forced way he did when he was feeling guilty, Adora noticed. But this wasn't his fault!

"Bow! There's a crowd outside your ship, and you didn't tell us?" Glimmer glared at him.

"Uh… they're outside the base. Way outside. The soldiers keep them back," Bow replied.

"You still should have told us!" Glimmer shook her head. "This is too dangerous! You should return at once!"

"But we'd lose access to the television broadcasts!" Entrapta protested, then cringed at Glimmer's glare. "Can he stay in orbit at least?" she added with a weak smile.

"If I lift off, they'll notice - and that would cause even more trouble," Bow said. "They might storm the area."

And that would cause even more deaths, Adora realised. "We should've called you back right away," she said.

"Yes, come back, Bow!" Glimmer said.

But Bow shook his head. "No. Even if they break through and reach the base, they cant break into the shuttle. And I can always lift off then." He smiled. "We need to trust the people here."

"Bow!" Glimmer shook her head.

"Please."

Both of them looked at each other so… Adora looked away and hugged Catra again. This was such a mess!

And no matter what her friends told her, no matter what she told herself, she couldn't help feeling bad about it.

*****

Washington D.C., United States of America, August 14th, 1998 (Earth Time)

"...and seven hours after the riots started, Los Angeles is deadly quiet, with a curfew enforced by the National Guard after the Alien Riots, as they have been christened, have been finally brought under control. The final death toll remains unclear but is reported to be in the dozens."

Samantha Carter tried to ignore the television running in the corner of the Situation Room and focus on her work. She had a report to write, after all. At least an aide had brought a chair with a small desk built-in - probably taken from the press room - so she didn't have to type with the computer resting on her knees.

"Can someone switch the channel?" the Secretary of Defense asked. "They've been repeating themselves for the last half an hour."

"Sure we can," the Secretary of Education replied. "Do you want to listen to 'alien experts' or to military analysts being stupid for a lot of money?"

The Colonel, sitting next to Sam, snorted while the two secretaries glared at each other. "It's like winning the lottery for the crazies," he said in a low voice.

"They called me crazy as well," Daniel said. "And we do know that there was contact with aliens in the past."

"And we also looked at their theories. If any of them had known anything important, we'd have recruited them. Hell, it was you who debunked most of their theories."

Daniel frowned, Sam saw, in that pouty way of his. "Yes, but they're not exactly crazy. The Goa'uld did influence ancient cultures, just not in the way most of them thought."

Sam still couldn't really believe that the likes of Erich von Däniken and Giorgio A. Tsoukalos had been hired by the Swiss government

as advisors.

"Yep." The Colonel nodded. "'Aliens posed as gods and enslaved humans' wasn't a very popular theory back then." he shook his head. "And that little tidbit got the people riled up the most."

"Well, I would say that the fact that the Goa'uld still want to enslave us was the important part," Daniel retorted. "And that they tried it twice in the last few years."

Sam nodded in agreement.

"And we beat them both times," the Colonel said. He held up a hand before Sam or Daniel could object. "I know, I know - we were very lucky. But they don't know that."

"Not yet," Daniel said. "It'll get out sooner or later."

"And we can deny that we were just lucky," the Colonel said. "Also, as soon as the Etherians land and make official contact, people will forget about the snakes for a while."

Sam would agree with him, but she really had to finish this report - the Cabinet needed to know what kind of advanced technology the United States could hope to develop without alien help, and in what time frame, if they wanted to make an informed decision about how to approach the upcoming negotiations with the Etherians. And Daniel needed to finish his addendums to his report about the Etherian culture.

"Alright, folks!"

She looked up again - the President had just entered. And he was smiling rather tiredly.

"I've just finished talking to our NATO allies. The good news is that while officially, they're all very annoyed with us for not telling them about our war with the Goa'uld, unofficially, they were more accommodating. Not even the French are talking about leaving NATO, though everyone wants to discuss how this will affect the

treaty." He sighed. "The bad news is that they're talking about strengthening NATO structures and leadership to address this unprecedented development."

"Why is that bad news?" Daniel whispered.

"That's Diplomatic for 'we don't want you to call the shots any more'," the Colonel replied. "Not that it will succeed - we're just too big and too powerful. Or were."

And indeed, most Cabinet members sighed, and the Secretary of Defense hung his head.

Then the President turned to SG-1. "So… what's your take on this? Will the Etherians build an Alliance with NATO?"

Sam drew a sharp breath and pressed her lips together. This wasn't her speciality. This was Daniel's. And the Colonel's.

"Daniel?" The Colonel looked at their friend. "What do you think, based upon their culture, the Etherians will do?"

"If we approach them honestly, I think so," Daniel replied without hesitation - he must have anticipated this. "NATO would likely remind them of their own Alliance on Etheria."

"And will they associate the Russians with the Horde?" the Secretary of State asked.

"I think that depends on the Russians, Mr President," Daniel replied. "But as long as we're honest with the Etherians, I believe they'll be honest with us."

"We aren't about to lie to aliens who can glass a continent from outer space," the Secretary of Defense cut in.

"They wouldn't do that anyway," Daniel said. "But they will ask for assurances that whatever treaty they make with us won't be dissolved by your successor, Mr President."

"That means I can't just use Executive Orders to push through gay marriage." The President sighed and sat down. "I should never have signed the Defense of Marriage Act. This will be ugly. If we can't do this, the rest of NATO might just make their own deals. And we would need a bipartisan majority for this."

"That won't happen. If the conservatives agree to this, they'll lose the evangelicals," the Secretary of Education said. "And they'll get primaried."

"But we might get enough of them to let it pass. We just need enough to pass the bill; they can oppose it as long as we get enough votes," the Secretary of State said. "Kinsey might get enough of them to play ball."

The President shook his head. "Let's see first if Kinsey had success before we plan on him doing more. And there's the Supreme Court to be considered."

Before anyone else could voice their opinion, an aide entered the room. "Mr President! The crowd in front of Area-51 tried to force their way into the area. Security repulsed them, but… they weren't gentle about it."

"What?"

The aide started to repeat their news, but the President waved him off. "No, I got that. How many are dead?"

"Uh… we don't know yet if there were any deaths, but…"

In the background, someone had switched the channels.

"...and it's carnage as the army beats down people left and right! Bleeding protesters are arrested as dozens of people cry out for help!"

"Air Force," Sam heard the Colonel mutter under his breath. "It's an Air Force base."

Sam wasn't quite certain that the Air Force would want to be associated in the perception of the public with this particular incident.

"Well, that doesn't look so bad," the Secretary of State said - right before a young woman bleeding from the head and carrying a young child in her arms, both crying from tear gas, staggered through the scene behind the reporter.

"Who takes a child to such a protest?" Daniel wondered, shaking his head.

The reporter, meanwhile, kept talking. *"Behind me, parts of the crowd keep chanting despite the tear gas deployed. They want to 'free the aliens', as they say."*

"Christ!" the President cursed.

"Can we evacuate the alien? He looks human, so we could stuff him in a uniform and just walk him out," someone - the Secretary of Labour - asked.

"We should have brought him to Washington right away," the Secretary of Transportation added.

"I doubt that the Etherians would have let us," the Colonel spoke up. "Bow didn't come as a diplomat - he came with us to make sure we wouldn't do anything with the shuttle."

"And we can't order him around," Daniel reminded the others. "If you want to talk to him, you have to ask him."

"If he's just a guard and pilot, why didn't he leave as soon as you were dropped there?" the Secretary of Transportation asked.

"Because the Etherians probably used the opportunity to spy on us," the Colonel replied.

"What?" several voices exclaimed at once.

“They can’t do that!”

“How dare they!”

“Shut up! We’d do the same!” the Secretary of Defense snapped. “They’re doing SigInt most likely.”

He was looking at SG-1, Sam realised. At her. “Yes, Sir.” She nodded.

“They’re probably watching TV,” Daniel added. “They were very interested in Earth entertainment since they don’t have such mass media on Etheria.”

“Jesus Christ,” the Secretary of Education muttered. “We will be lucky if they want to talk to us at all after this.”

“We warned them what the consequences of this revelation would be,” the Secretary of State pointed out.

“I don’t mean that,” the woman replied. “I meant after they watched our Daytime TV.”

“Oh dear,” someone else muttered.

“People, focus!” The President raised his voice. “We’ve got the boyfriend of the alien queen sitting in a shuttle in an airbase under attack by a mob. If anything happens to him, we’ll get the blame from everyone.”

“We need to ask him to go into protective custody - if the crowd manages to storm the base, we can’t protect the spaceship,” the Secretary of the Interior said. “And if the crowd keeps growing, we won’t be able to protect the base. Not unless we start shooting people,” he added before the Secretary of Defense could protest.

“And we don’t want to shoot people,” the President said. “Alright, call the base. Tell them to contact Bow. No, tell them to get us a line to Bow.” He turned to SG-1. “You talk to him. Make him understand how critical this is.”

"I doubt that he will leave the shuttle, Mr President," the Colonel replied. "I doubt that the mob can force their way into the shuttle there, either. Or even reach the actual base. They have to cross miles of desert."

"Yes," Sam added. "They would need specialised gear or explosives to breach the doors of the craft." She blinked. But…

"But we don't know who is hiding inside that mob," the Colonel said. "If there are operatives of other groups present… We'll need to tell him to evacuate with the shuttle if the situation grows worse. With the crowd drawing attention, a small group of operatives could slip through the perimeter."

"What?"

"Fly away on TV? Everyone will think that we have been hiding aliens!" the Secretary of State protested. "They will think that we've already made contact on US soil!"

"It's better than letting a mob charge the shuttle on live TV," the President retorted. "Or have some foreign spies get access to the aliens. Do it! Get that shuttle away. We can always claim it had an automated pilot or was remote controlled or something."

"Yes, Sir."

"Get me the commander of Area-51 on the line!"

"I need to talk to the NATO General Secretary!"

"Mr President! The United Nations Secretary-General wants to talk to you!"

*****

Outside the Solar System, August 14th, 1998 (Earth Time)

"They want to attack you?" Glimmer was… well, not hysterical, in Catra's impression. More like ready to blow up a few Earth people.

"Bow!"

"Well, they are screaming about 'freeing the aliens', so they probably don't want to attack me…" Bow, smiling weakly on the big screen, told them. Then he glanced over his shoulder. "The soldiers are fighting them, but… there are so many."

"They seem to have limited weapons," Hordak commented. "SG-1 used firearms to great effect, but those soldiers are using clubs and rather ineffective gas."

"I think they are trying to avoid killing the people there," Entrapta said.

"But they are losing the battle."

"Ah…" Bow coughed. "It's more a protest than a battle. I think so, at least."

"It looks like an attack on a military base to me," Hordak said.

"These people aren't soldiers!" Glimmer protested.

"Why would that matter?"

Hordak didn't seem to understand. Well, Catra didn't quite get it either. If you didn't want to be a soldier, you didn't attack soldiers, period.

"Oh… another call's coming in. Earth frequency. SG-1's," Bow said.

A moment later, O'Neill's voice was heard. *"Bow?"*

"Yes?"

"I'm with the President here. Things are getting a little dicey out there, which you might have noticed."

"Yes, I noticed." Bow laughed more than a little forcedly.

"Good. Can you fly without being seen on TV?"

"The stealth system is aimed at sensors, mostly. We didn't quite get the optical camouflage working past prototypes. Yet," Entrapta cut in.

"Ah. You're on the line as well. Anyway - unless you want to take shelter in a bunker on the base, it would be better if you lifted off."

"Yes!" Adora spoke up. "If they see that the shuttle left, they might stop trying to storm the base!"

"Or they think that their prey's getting away," Catra commented. She knew the thrill of a chase, after all. And the frustration when you failed.

Adora pouted at her. "But that makes no sense!"

"This whole thing doesn't make any sense," Catra retorted.

"Yes," Hordak agreed. "It's a bandit attack on a base, and the soldiers aren't defending the base."

"It's not a bandit attack," O'Neill protested. *"Those people aren't bandits. They think they are doing the right thing - well, most of them."*

"The Horde soldiers thought the same," Adora retorted.

Catra bit her lower lip. She had known that the Horde was evil, after all.

"Anyway, the base security forces aren't going to massacre a bunch of rioters or protesters. That's not how we do things. So, if those people break through the perimeter and might get to you, lift off. Would be nice if you could wait until it's too dark to see the shuttle lift off, but… there might be other elements out there as well."

Catra nodded. Yes, she didn't think that would work out - it was a few hours until it was dark enough for that, after all.

“We’re not going to risk Bow!” Glimmer protested at once.

“We won’t,” Adora said.

“Of course not,” Bow added. “But I’ll hold out as long as I can.”

Glimmer stared at him, her lips moving without a sound, and Catra sighed and looked away. This was getting a bit too… too much. Then she felt Adora’s hand on her shoulder. “It’ll be OK! They said things are calming down,” her lover said in a soft voice.

“So…” O’Neill’s voice sounded through the speakers again. *“Have you decided what will be your next step? So we can avoid another set of riots?”*

Catra scoffed, then gritted her teeth when she saw Adora flinch. It wasn’t her fault. “You should have thought about that before keeping the whole affair a secret,” Catra spat. “Don’t blame us for that!”

“Well, keeping it a secret was a sort of thing, back in the day,” O’Neill replied. *“But we need to deal with how things are now.”*

“We will approach and address Earth in a day or two,” Glimmer said. “Waiting any longer would only cause more rumours and hysteria.”

“We will?” Adora mouthed.

“Ah. And have you decided on where you’ll land?”

Catra frowned. O’Neill was too… accommodating. She’d expected him to suggest some landing sites.

“Yes,” Glimmer replied. “We’ll ask to land at Geneva to address the United Nations.”

“The Swiss will need some time to prepare for that,” O’Neill replied. *“As will the rest of the world. So… best wait a day after asking for permission to land there.”*

“Then we will approach Earth tomorrow,” Glimmer told him. “We don’t want to delay this any further. Your people need to see that we come in peace and as friends.”

“That’s what we’ve been telling them. But not everyone is listening to us.”

Well, that was no surprise, in Catra’s opinion - not after they had been lied to for years. She clenched her teeth when she remembered what Shadow Weaver had done to her and Adora.

“They’ll listen to us,” Glimmer told him.

“We’ll see. Some might find that a bit intimidating.”

“What?” Adora shook her head. “We’re not intimidating! We’re honest. We’re here to help you!”

Catra sighed. She loved Adora, but sometimes… Well, Catra wasn’t entirely sure that Glimmer hadnt meant to sound so threatening just now. Not with Bow in sort of danger.

After a bit of more back and forth talk, O’Neill ended the call.

“Uh oh!”

“Bow?” Glimmer gasped. “What’s going on?”

“The crowd’s breaking through!” Entrapta announced. The screen switched, and they saw a mass of people surging past and over a thin line of soldiers.

“Bow! Lift off!”

“They’re still miles away, and they have to walk through the desert to reach us,” Bow said.

“Lift off!”

*****

Washington D.C., United States of America, August 14th, 1998 (Earth Time)

On the screen in the Situation Room, the scene changed once more to show a huge tent lifting into the air, picking up speed, before being ripped away and apart by the air resistance, revealing the back of the Etherian shuttle as it climbed into the sky. As before, the scene froze right at the moment where one could see most of the craft.

Then came another set of 'experts' to point at vague features of the shuttle and try to make sense of them. If the situation wasn't so serious, Jack O'Neill would have laughed at some of their ideas.

"How did they break into the base?" the Secretary of Agriculture asked, shaking his head. "The base is supposed to be guarded!"

"They didn't," the Secretary of State told him. "They breached the perimeter of the restricted area. They're still miles away from anything important, like the actual base and runways. Miles of desert."

"Yes," Jack spoke up - perhaps out of turn, but this was about the Air Force getting maligned. "This isn't like a helicopter lifting off the roof from the embassy in Saigon."

"And a lot of our best troops are busy protecting the cities from riots," someone else added.

"But they went through the soldiers!"

"Should the soldiers have shot them? In front of the press? In front of the Etherians? While they were in the middle of the desert, miles from reaching anything actually important? They still are in the middle of the desert, by the way," the Secretary of Defense said.

"So, the Etherians overreacted?" Secretary of Agriculture asked.

“Everyone overreacted,” the Vice President grumbled. “Half the Senate thinks the aliens were almost caught by a mob. No thanks to the press coverage.”

“The Etherians probably didn’t want to take any risks,” Daniel suggested. “I think they’re pretty spooked by what’s been going on all around the world. And there was the risk of foreign spies approaching the shuttle.”

“Well, that’s their own damned fault,” the Secretary of Defense muttered. “We told them what would happen, and they didn’t listen.”

“That’s not quite true, Sir,” Daniel objected at once. “They insisted on contacting Earth, yes - but they didn’t force us to keep the existence of aliens and the Stargate a secret in the first place and for so long.”

“We could’ve handled this if we had been given more time,” the man insisted.

Jack disagreed with that. Not out loud, of course.

Daniel, of course, did so out loud. “Perhaps the consequences could have been mitigated to some degree,” he said. “But the information that we’re at war with aliens who want to destroy and enslave us and that the United States government has kept this a secret from everyone would have caused riots anyway.” He weathered the glare from the Secretary of Defense without flinching.

Jack cleared his throat. “What’s done is done. We need to focus on what has to be done next.”

After a moment, the Secretary of State spoke up. “We know that the Etherians overreacted to this. Do you think that they panicked? Or do you think they had the wrong information to make their decision?”

Jack tilted his head. “Probably a bit of both. Bow probably wouldn’t have lifted off so early. But Glimmer’s back outside the Solar system, and she struck me as quite protective of him.” It wouldn’t hurt to emphasise this before someone got a stupid idea about leverage.

“Are you sure?”

“No, Sir. But this is my best bet. I doubt that Bow would have panicked,” Jack said.

“Unless he panicked about what Glimmer would do if she thought he was in immediate danger,” Daniel added.

Right. Some of the stories they had heard during their trip made that a rather likely assumption.

“It’s a theory, Sir,” Carter said. “We don’t know what the Etherians are thinking right now.”

“They’re probably thinking the worst of us after everything that’s happened,” Daniel said.

Which, honestly, wasn’t a bad stance for them, Jack had to admit, if only to herself. And not an entirely bad thing for Earth either. If someone managed to take advantage of Adora’s… idealism, for example, the consequences when the others, especially Catra and Glimmer, found out wouldn’t be pretty. Still, they had lost a lot of trust today, Jack was sure of that.

The President entered again, looking exhausted. “So… NATO thinks we’ve been holding out on them again.” He sank into his chair. “I’ve explained that this was just the shuttle that brought your team back, but now they want to talk to you.”

“The General Secretary wants to talk to us?” Jack asked.

“He does. But our allies want a Defence Minister meeting to assess the situation.”

"Did you tell them that the aliens want to land at Geneva to talk to the United Nations?" the Secretary of State asked.

"I did. That's what prompted this 'request'. And, as the French put it, since SG-1 will have to be present in Geneva anyway, you can stop in Brussels on the way over."

"Great." Jack sighed. "At least we can sleep on the plane."

"Yes. While I'll deal with the Russians and the Chinese. Again."

Somehow, Jack couldn't muster a lot of sympathy for the President right now. Not when his team and himself had to face a bunch of angry Defense Ministers, and everyone was looking for a scapegoat.

At least he would finally be able to sleep for more than an hour or two.

*****

Outside the Solar System, August 14th, 1998 (Earth Time)

"Bow should return to us at once," Glimmer said, folding her arms over her chest.

"No!" Entrapta objected. "He needs to stay in Earth orbit so we can monitor the broadcasting of Earth! He's perfectly safe there!"

"Bow shouldn't be talked about as if he were not present," Bow commented with a slight frown on the screen.

Adora chuckled at that - her friend was right. And Glimmer was just worried too much about him. Although, Adora added to herself, her smile fading, the things they had seen happening on Earth were terrible. How could people do this? Most of it made absolutely no sense. And she still felt guilty about it.

At least, they could do something about it now. Something to comfort people and show them that they didn't need to be afraid

any more. She nodded. Yes, they would make things better.

"You've got that expression again," Catra muttered. "I bet you just had a stupid idea."

"No!" Adora defended herself. "It's not a stupid idea," she added with a frown. Now everyone was looking at her. She raised her chin. "I just think we should help Earth recover from this - make up for all the chaos."

"That wasn't our fault!" Glimmer and Catra said in unison, then stared at each other.

"It wasn't," Adora said, even though she wasn't sure. "But we still can and should help."

"Oh, yes!" Entrapta beamed. "I've got some ideas about rebuilding!"

Adora suddenly had second thoughts about her idea.

*****

Earth Orbit, Solar System, August 15th, 1998 (Earth Time)

"Bow!"

"Hey!"

Adora watched with a smile as Glimmer tackled Bow before he could clear the ramp of the shuttle.

Next to her, Catra snorted. "He wasn't really in danger," she muttered.

Adora sighed. She agreed with Catra's, but Glimmer had a different opinion. And Adora could understand that - to see the violence and panic their presence had caused… She looked through the window at the blue planet below them. And now the people on Earth were panicking again, even though they hadn't

brought the whole Third Fleet, just an escort of half a dozen frigates - the minimum number that Priest had accepted.

Bow and Glimmer finished their kiss and pulled apart again. He coughed. “Don’t you have to address Earth? To ask for permission to land in Geneva?”

Glimmer pouted at him. “I needed to make sure that you were safe first.”

Catra snorted under her breath - Adora was sure she was the only one to hear it.

“And we can offer our help rebuilding what was destroyed because of our arrival,” Entrapta chimed in.

“That wasn’t our fault,” Hordak said at the same moment Glimmer blurted out: “That’s not our fault!”

Both looked at each other for a moment while Adora suppressed a smile at the sight.

“Anyway,” Glimmer went on, “Let’s address Earth.”

“Right.”

Two minutes later, Glimmer sat in the Captain’s Chair, with Adora and the others standing at her side. It was quite a nice sight if Adora said so herself. Formal, but not too formal. It wasn’t a throne, after all.

“So…” Entrapta stood from where she had been fiddling with the console. “We should be able to connect to the Earth communication networks. We tested the protocols for the television broadcasts.”

“Uh… we aren’t taking over their television, are we?” Adora asked. That would cause more trouble, she was sure.

“No, no - we’re using the radio frequencies. But we’re also using one of the emergency channels to broadcast the video feed from Darla. So, since they’re not using that channel, we’re kinda taking it over and still not taking over television.” Entrapta shrugged. “It should be fine. Anyway, we’re ready to go!” She beamed and walked over to stand in front of Hordak, her hair twitching a little.

Glimmer cleared her throat. “Alright, start broadcasting.”

Adora smiled as widely as she could. They had to make a good impression. They couldn’t cause more panic.

“We’re on!”

“People of Earth! We are representatives of the Princess Alliance of the planet Etheria. I am Glimmer, Queen of Bright Moon.” She nodded to the side.

That was Adora’s Cue. She straightened and raised her chin. “I am Adora. I’m also known as She-Ra, Princess of Power.”

“And I’m Entrapta, Princess of Dryl!” Entrapta beamed at the Camera.

“Hordak.” He didn’t bother smiling, Adora noticed.

“My science buddy!”

That, apparently, made Hordak smile. It wasn’t a good smile.

“Catra.” Catra’s smile was more of a smirk.

“And I am Bow.” Bow, though, smiled widely. “Techmaster.”

Melog opened its mouth, and Catra translated: “And this is Melog.”

Glimmer spoke up again. “We’ve met a team of your soldiers when they were stranded on Etheria and brought them back to Earth. And we wish to speak to your United Nations to discuss an alliance against the Goa’uld. They are an enemy of every

civilisation and will not rest until they have crushed everyone else. They hold entire planets in bondage, with countless people, mostly humans from Earth, having been enslaved.

"We will fight them as we fought Horde Prime, to save everyone, but we need your help to do this - everyone's help. So, we ask the rulers of Switzerland for permission to land in Geneva to address the United Nations there." After a moment, she added: "Please let us know on this frequency if we can land there tomorrow."

"And.. cut!" Entrapta smiled. "That went well!" She tilted her head. "I think so, at least."

Bow stepped forward and pushed a few buttons, splitting the big screen to display various television channels.

"...no comment yet from the Swiss government. They seem surprised at this declaration and request…"

"...the Secretary-General of the United Nations released a statement that he would be honoured to welcome the delegation from Etheria at the Palais des Nations in Geneva…"

"...French President stated that he would attend the meeting in Geneva…"

"...Bundeskanzler erklärte, der erste Kontakt mit einer ausserirdischen Zivilisation sei Sache der Vereinten Nationen, und daher…"

"...Russia voiced concerns about the fact that soldiers made contact with Etheria, not diplomats, and once more condemned the secrecy of the United States about their Stargate Program, which has been…"

"...protests are gathering in front of the United Nations Office in New York…"

"...the government of Geneva has formally asked for help from the Federal government and the other cantons to guarantee the

security of the upcoming First Contact…"

"...and as dozens, hundreds of cars leave Geneva, even more try to enter, clogging the streets…"

Glimmer frowned. "Did we get permission to land there yet?"

"No," Bow said. "But it seems that everyone assumes that's merely a formality."

Adora stared at the pictures of vehicles filling the streets.

Catra snorted. "Looks like yesterday."

Adora winced. It did look like yesterday's panic. But… "More people want to see us than are afraid of us?"

Catra snorted again. "That's progress of sorts. Like Kyle only losing half the food he's fetching."

Adora had to laugh at the memories that brought up. But she sobered up almost instantly. "We need to convince them that we don't mean any harm to them."

"Good luck with that," Catra said.

*****

NATO Headquarters, Brussels, Belgium, August 15th, 1998 (Earth Time)

"...and how much advanced technology is being fielded by Stargate Command at this point?" the Ministre de la Défense asked in his slight French accent.

Samantha Carter heard the Colonel mutter something about letting the French sit at the table even though they weren't a full member of NATO but she ignored that and smiled politely. "We regularly field several advanced small arms which have been recovered from the Goa'uld."

"And irregularly?"

"In times of emergency, we will use whatever is at hand, but alien technology isn't standard issue for Stargate Command," the Colonel cut in.

"And what is in development?" the German minister asked. "Surely you're working hard on developing advanced weapons for domestic production."

Of course they were. Sam tilted her head. "As far as I know, no project has reached the point of field testing, much less mass production."

The man leaned forward. "And what sorts of projects do you know of? And how fast could they enter mass production?"

Now that was a tricky question. SG-1 had been ordered to be as open as possible without 'endangering national security'. That was a very flexible term. "I am not part of those research groups," Sam replied. "I am a member of a field unit and a specialist for gate technology, not a weapon developer." Fortunately, the Colonel didn't make any comment about sandbagging. "I couldn't say how far such projects are."

"Really?" The British Secretary of State for Defence frowned. "You are the foremost expert for advanced technology - you were involved in the recovery of most samples of alien weapons the United States currently research, weren't you?"

Sam managed not to wince. Someone must have talked to the Brits. That wasn't the kind of recognition she wanted. "Yes, Sir, but I am working at the front, so to speak, and mainly with the Stargate, not with applied weapon research. I'm a physicist."

"I see that the United States still keep their secrets," the French minister commented with a slight sneer at the Secretary of Defense, who returned it with interest.

"As do we all," the Secretary General interjected. "But we requested SG-1, not their research teams, because we wanted them to share their information about the Etherians. Questions about the state of the American weapons programs seem to be slightly beyond the purpose of this meeting."

Daniel nodded earnestly at that. Most ministers present didn't seem to share that view, though the Minister from Norway seemed to agree as well. "Indeed. Unless the United States are about to deploy spaceships in Earth's defence, knowing as much as possible about the aliens is of much more importance. So, Dr Jackson, you are Stargate's expert for alien cultures.

"Yes, Sir," Daniel replied as if the assembled ministers weren't already aware of that.

"And according to what we were told, you think that the Etherians are honest in their claims. They want an alliance, not subjugation."

"Yes, Minister." Daniel nodded again. "They are an alliance of multiple kingdoms, so they are used to working together against a common enemy without requiring closer ties or control."

"And yet," the French minister spoke up again, "you also said they were shocked about certain discriminatory policies common on Earth. You even called those policies the biggest hurdle for an alliance."

"Yes," Daniel replied without hesitation. "It's all in my report. Since on Etheria, politics is a highly personal affair, their rulers are much more concerned about such discrimination than we're used to on Earth."

"Do you think that they will be willing to ignore certain peculiarities in order to focus on our common enemy?"

Daniel's wince told them enough. And if that hadn't been a big clue, the Secretary of Defense's glare would have clinched it. "I

am not certain, of course - they can be pragmatic - but I doubt that."

"I see." The French minister leaned back with a slight smirk.

"What about 'magic'? the British Secretary of State for Defence asked. "You mentioned that they are planning to 'restore magic to Earth'. Could you elaborate on this?"

Sam fought the urge to wince again. Another landmine that Daniel wouldn't hesitate to step on. Some generals would want SG-1 posted in Alaska after this.

*****

Earth Orbit, Solar System, August 16th, 1998 (Earth Time)

"So… we're clear to land in Geneva. The Swiss government apologised for the delay in responding," Bow told them as Adora and Catra stepped on Darla's bridge. "Apparently, the airport was swamped with planes from all over the world, and it took a while to clear the airspace."

"I don't know why they would do that. Darla is perfectly capable of hovering until we can land. There was no need to reroute or delay any planes," Entrapta said.

"I think there were also security concerns," Hordak said.

"Darla's got shields," Entrapta retorted.

"Yes. We should be more concerned about an attack on the ground," Catra commented as she leaned against Adora's chair. She didn't quite trust everyone on Earth. For a supposedly neutral, peaceful country, the Swiss had a lot of soldiers.

"Yes," Glimmer agreed with a frown. "Entrapta, you need to keep an eye out for any threats."

“Will do!” Entrapta nodded. “I’ve adapted the Scanner to cover most weapons on Earth.”

“‘Most’?” Glimmer asked.

“I had to exclude swords and knives - there were too many in every plane, for example.”

“I didn’t think that they were using swords on Earth,” Adora said. “They were surprised by mine.”

“It was mostly knives. I could fine-tune the Scanners to ignore smaller blades, but according to that show we saw, even small blades can be deadly.”

“I think we can handle an attacker using knives,” Bow said. “Should the Swiss guards not be able to handle them.”

“Yes! So, now let’s land and show the people of Earth that we come to help them and that they don’t have to fear us,” Adora said with a smile.

“As long as they don’t mean us any harm,” Catra commented as she flexed her claws. At Adora’s frown, she added: “I’m just saying I’m not going to let anyone hurt us.” Especially not Adora.

Glimmer nodded in agreement as Darla started to descend into Earth’s atmosphere.

*****

The United Nations

Geneva Airport, Switzerland, August 16th, 1998 (Earth Time)

"Alright… they want us to land there!"

Catra looked at the spot Adora indicated. It was right in front of what seemed to be the main building. And lots of people were lined up nearby, held back by flimsy-looking barriers.

But they were already descending. She looked at Entrapta. "Any threats?"

"Uh… the soldiers are armed, but they should be armed. Although the ones standing in a line there aren't armed - their weapons aren't loaded. But the ones on the roofs and around us are armed. But there's nothing that would threaten Darla."

"And us?" Catra asked. She wasn't really worried about Darla.

"Hm… we could take a portable shield generator just in case?"

"Yes," Catra agreed before anyone else could say anything. "And we've got Melog."

Yes. Safe.

"They say it's safe."

"Good. Now let's land. Preferably without crushing the welcome committee," Glimmer said. She was wearing a fancier version of her normal clothes - her 'coronation outfit', Adora and Bow, who were both wearing their Princess Prom outfits, had called it.

Well, Catra's suit hadn't survived the war, but her regular clothes would do. It wasn't as if Entrapta was dressing up at all.

Adora chuckled, but she sounded a little nervous - the space was a little tight, Catra noticed.

But the ship touched down just fine between the large building and the small round buildings that seemed to connect to the planes.

Adora stood and took a deep breath. “Alright. Let’s be on our best behaviour!” She looked at Catra.

Catra smirked back at her. “I’m always on my best behaviour.”

“Just don’t…” Adora sighed. “Don’t scare them.”

Catra put her hand on her chest. “Me? What about Glimmer.”

“I’m not going to scare them!” Glimmer protested at once, as Catra had expected.

“Let’s just go and don’t scare anyone,” Bow said. He smoothed his top and brushed some imaginary speck of dust from his belt, Catra noticed - he wasn’t as calm as he tried to act.

They let the ramp down and stepped out. The white-haired man in the middle of the group waiting for them took a step forward and smiled. Behind him, the soldiers tensed and straightened. Just like in the Horde, Catra thought and suppressed a snarl.

Adora tensed as well, she knew, and she ran the tip of her tail over the back of Adora’s thigh. A soft giggle told her that it had worked.

Then they reached the bottom of the ramp, Glimmer in the lead, and the white-haired man - apparently the leader of the Swiss, their ‘Bundespräsident’ - offered a handshake. “Your Royal Highness, we’re honoured to welcome you to Switzerland for this historic occasion! I’m the President of the Swiss Confederation. ”

Glimmer slowly inclined her head and returned the greeting. “We’re honoured to be here.”

Then the music started.

“As you told us that you don’t have a national anthem, we’ve picked the Hymn to the United Nations,” the man explained. He had a different accent than O’Neill’s team, Catra noticed.

“It’s alright,” Adora said with a smile.

“Is that like The Internationale?” Entrapta asked.

“Ah…” the president’s smile froze for a moment. “Not quite.” And he was back to smiling widely.

Then they reached the end of the formation of soldiers - who didn’t look very impressive compared to SG-1, to Catra at least - and the president introduced the rest of the Swiss government, who had all shown up to greet them. Apparently, that was quite unusual. Not that Catra cared about that - they weren’t here for the Swiss, but for the United Nations.

But everyone was here for them. She saw countless cameras and other sensors aimed at them. And banners and flowers. The crowd was getting a little unruly, in her opinion. And a lot of attention seemed to be aimed at her - and at Melog and Hordak.

Right, she reminded herself. Those people were only used to humans like Adora. She grinned at the thought that, for once, she was drawing more attention than Glimmer or Adora. Though, to be fair, Adora wasn’t in her She-Ra form.

Then came the speeches. The Swiss president gave a short speech that basically repeated what he had told them. Switzerland was happy and honoured to have them here. Glimmer told them that they were happy and honoured to be here.

Catra wasn’t. It was pretty hot, and the crowd was very loud. And she felt exposed - so many people, and she had no idea how many of them hated her.

Fortunately, after Glimmer's speech, they moved inside for a quick 'apéro', which apparently was a Swiss custom that involved drinking wine and eating tiny food while chatting. Or, in her case, watching how Entrapta confused the older Swiss who was talking to her by delivering detailed explanations about Darla's engines as soon as he mentioned the ship. Or somehow seemed to disturb the people from Earth by using her hair to grab the tiny food and stuff it into her mouth with obvious enthusiasm.

"Catra," Adora hissed next to her, picking another tiny bread with sausage from a plate. "Be more polite."

"I am being polite," she replied in a low voice. "I haven't insulted anyone." Or clawed anyone.

"I mean, mingle a bit with them! You scared away the one man who tried to talk to you."

"I didn't! He was allergic to my fur."

"What?"

"That's what he said."

"But…" Adora sighed.

Catra grinned. The man had gotten off lightly, anyway - he had asked if her 'ancestors' had ever visited Earth before because, apparently, some ancient people on Earth had worn cat pelts or something.

At least the fish sandwiches were great - she had to get more of that 'salmon' stuff. Perhaps if she acted offended, they'd offer her a load as an apology?

*****

Palais des Nations, Geneva, Switzerland, August 16th, 1998 (Earth Time)

“The Etherians are moving,” an aide reported to the President. “Their car has already left the airport.”

“Finally,” Jack O’Neill muttered under his breath as the President turned to the Secretary of State for some more last-minute talk. The Swiss had kept the Etherians for almost an hour. “What took them so long? Everyone’s waiting!

“Well, as the host country, they probably felt it wouldn’t be dignified if they just, ah, waved them through,” Daniel suggested, looking up from his notebook. “But they probably also thought this was a great opportunity to network or something.”

“Probably tried to get them to deposit their money in Swiss banks.” Jack scoffed. “They aren’t even in the United Nations!”

“They claim that their neutrality forbids it.” Daniel shrugged. “But there are proposals being discussed for Switzerland to join the United Nations, I believe.” Then he frowned. “However, you raise a good point. If an alliance is made, probably even without a formal alliance, we’ll have to regulate trade, which will involve money.”

“Great. Let’s hope that we get to watch when the Swiss get nuked from orbit for trying to help Etherians evade taxation.” Jack snorted.

“I believe trade contact will be limited to princesses, at least at first, so tax evasion shouldn’t be a concern since the princesses basically tax themselves,” Daniel replied. “Although private enterprises might also enter this on the Etherian side, I’m not actually sure how much of the Etherian economy would be compatible with such a system. Most of the enterprises rely on royal charters, as far as I know.”

Jack was about to tell Daniel that he had been joking, but they had attracted the attention of the Secretary of Defense. “We will need an analysis of the impact of trade agreements with Etheria

on their and our economy. If we can leverage our economic strength…"

Daniel actually winced. "Ah… I don't know enough about economics to do that."

"We have experts for that. We need your knowledge about their planet and society."

"I can do that, I think," Daniel said. "But I have to reiterate that the Etherians aren't primitive. They may lack industrialisation, but they have advanced technology and an extensive trade network that can handle magic powers which, for example, allow near-unlimited agricultural produce."

That, Jack saw, gave the Secretary of Defense pause. "You mean that if they get unlimited access to our markets, our farmers will crucify us."

Daniel inclined his head. "I can't speak for them, of course, but I would advise being cautious when approaching trade agreements."

"Yes. Let's focus on the military question."

"The Etherians are here!" another aide announced.

"And did they receive our request for a short meeting so we can apologise for the lapse in security at Area-51?" the President asked.

"Yes, Mr President."

"Good."

"Didn't we do that already?" Daniel asked in a low voice.

"It's just an excuse to meet with the gang before the big speeches," Jack explained.

"Oh."

And then the Etherians entered the room. Glimmer and Bow in front, followed by Adora and Catra, and then Entrapta and Hordak. Jack pressed his lips together - he really didn't like seeing the former warlord here. All dressed… Well, Adora, Bow and Glimmer had dressed up, but the others wore their usual clothes. Daniel would probably know what that said about them.

"Ah, Your Royal Highness," the President smiled at her, displaying the same charm that had won him the election.

"Queen Glimmer, Mr President," Glimmer replied," if you want to be formal."

"Right. Different planets." The President nodded. "So, I would like once more to apologise for the incident at Area 51. We were surprised by the events."

"Thank you," Glimmer said, nodding.

"Nothing happened," Bow added with a smile. "And it wasn't your fault."

That, Jack noticed, drew some frowns from Glimmer and Hordak, but neither of them spoke up.

And the President smoothly went on: "Fortunately, nothing happened. None of the protesters got close to the actual base - we actually had to save a few who managed to get lost in the desert."

"Ah. As long as no one was killed or seriously hurt," Adora said with a smile that looked a little forced to Jack. So, she was feeling guilty.

"I trust that your security procedures will be improved in the future," Hordak spoke up. "A group of mostly unarmed and unorganised assailants shouldn't be able to come near a crucial testing facility."

“Well, they actually didn’t - they merely breached the outermost perimeter,” the President replied. “But we are indeed reviewing security, I can assure you.”

“Thank you,” Glimmer said with a glance at the alien warlord.

“So, did you enjoy the reception by the Swiss?”

“The apéro? Yes,” Glimmer said.

“Except for the weird man who wanted to talk about cat people,” Catra interjected.

“A member of the Swiss government?” the President asked.

“An advisor,” Adora explained. “And they apologised for it. With salmon,” she added with a glance at Catra, who flashed her teeth with a wide grin.

Everyone chuckled at that. Even Jack - it seemed that the Swiss had made a gaffe.

“So, it seems that, once more, no harm was done,” the President spoke up again. “So, it’s time for us, I think to take our seats in the assembly. We’ll leave SG-1 to keep you company while you wait for your grand entrance.”

And Jack was once more reminded why he didn’t like politicians.

*****

The Assembly Hall looked very impressive but not quite as large - or tall - as the Great Hall in Bright Moon. Or the hall Frosta had had prepared for the Princess Prom. Still, it was much bigger than the room used for the President’s Press Conference, Adora noted as they entered. It was also full - every seat was occupied. And everyone was staring at her and her friends.

Well, she had faced worse. Probably - armies counted, didn’t they? In any case, they were here to make a good impression,

and that was what they would do. She straightened, raising her chin, and kept smiling.

She wouldn't have to give a speech, anyway - that was Glimmer's job. She followed her friend on the stage, where the Secretary-General of the United Nations was waiting. He looked very dignified and friendly, like he could be Bow's grandfather. And… Well, she didn't want to think ill of their friends, but the Secretary-General looked more honest than the President. His smile certainly seemed more genuine as he shook their hands.

"Queen Glimmer, Princess Adora, Princess Entrapta, Mister Bow, Miss Catra, Mister Hordak, welcome to Earth. The United Nations are honoured to meet you."

No dig against the USA, Adora noted, as the Secretary-General held a little speech about the United Nations representing Earth and the shared desire for peace. Well, maybe there was - it could be a cultural thing she was missing. As Bow said, different cultures had different ways to be subtle.

Lots of applause followed the end of the man's speech. Then it was Glimmer's turn. Adora's friend didn't look nervous at all as she stepped up to the small pedestal, staff field firmly in hand. She looked determined. As if this was a battle to be won.

Adora suppressed a wince. Sometimes, Glimmer overdid it.

"People of Earth!" Glimmer began, "I bring greetings from the planet Etheria. As you may know already, I am Queen Glimmer, and I represent the Princess Alliance of Etheria. We come in peace and offer our friendship and aid. We are saddened that news of our arrival caused so much panic and destruction on Earth and offer our sincere regrets - and our hope that we shall overcome this and won't let those tragic events stand in the way of a close friendship between our worlds."

Adora nodded. They should have handled that better, even though she didn't know how they could've done that. Not without

delaying the entire war effort and lying - at least by omission - to Earth.

"However, as Etheria found out, to our chagrin, in the recent past, not everyone in the galaxy desires peace and friendship. As you were told, the Goa'uld desire to rule the entire galaxy and have enslaved countless people - many of them from Earth. They have attacked other planets in the past and twice tried to conquer Earth in recent years. Etheria, too, has faced such attacks. Less than one year ago, our planet was attacked by a brutal enemy, Horde Prime. He had enslaved and even destroyed many planets, but the Princess Alliance defeated him and liberated his enslaved soldiers."

Adora nodded again, her smile gone as she remembered that struggle. She had almost lost Catra. It hurt just to think of that moment when she had seen her friend, her love, speak with that horrible fake voice, smile in that…

A hand slipped into hers, squeezing gently, and Adora smiled again. They had beaten Horde Prime. She had defeated him and saved everyone. Including Catra. She smiled at her.

Glimmer, meanwhile, went on: "And our experience fighting for our freedom against ruthless tyrants is what compels us to offer our help to Earth. We will not let another planet suffer the fate Etheria barely avoided."

Once more, Adora nodded with a firm expression. The Goa'uld wouldn't conquer or destroy Earth. They wouldn't let them.

"But the Goa'uld already occupy and oppress many planets whose people deserve better. We have to help them as well, and for that, we need help - from Earth. Therefore, we ask for an alliance with those on Earth who are willing to reach out and help others even if it means war. Millions of enslaved people need us - need you - to step up and face the Goa'uld. We won't have peace until those enemies are defeated and their slaves freed. And we've come to

Earth to lay the foundation for that. Together, we can save the galaxy!”

Glimmer nodded and took a step back from the pedestal as the people applauded. Some were enthusiastic, some not so - at least it looked like that to Adora - but that was to be expected. It was actually better if the United Nations weren’t too eager to wage war, in her opinion.

The Secretary-General smiled again at Glimmer and then opened the floor, as he called it, for questions from the audience.

And they did have questions. Lots of questions. Adora blinked at the number of questions. Some were quite reasonable. Some were not so reasonable. And some were… weird.

*****

“No, we aren’t planning to intervene in any local conflicts,” Glimmer said. “We want an alliance against the Goa’uld, our common enemy, not an alliance against people on Earth.”

The representative - from a country currently waging a civil war - didn’t look satisfied. Well, we’ve expected that, Samantha Carter thought from her seat at the side of the stage as the Assembly questioned the Etherians. Everyone needed to know as much as possible to make informed decisions, after all.

“What is your marital status?” That question came from a country ruled by a monarch - one with multiple wives. Sam wondered if Glimmer was aware of that.

Glimmer looked surprised - as did her friends. “What would that matter? I’m in a happy relationship.”

“And so am I!” Entrapta announced. “If you wanted to know!”

Sam saw Catra grab Adora’s arm and lean her head against her shoulder.

“Will you demand that your soldiers are exempt from local laws?”

The Colonel grumbled about that obvious reference to US policy.

“No,” Glimmer said. “Although we will not ally with any country where we would need such protection from the laws.”

Daniel nodded. “That’s nicely worded.”

Sam had expected someone to ask for clarifications, but the next question changed the subject.

“Will you share your technology with your allies?”

“Yes,” Glimmer said, “we are looking for a real alliance - including the exchange of technology. It would be stupid to wage war without sharing technology when we are facing a common enemy. However, we also know about the risks of helping people in need, only for them to turn on us.”

Sam didn’t miss the glance Glimmer sent at Hordak when she said that.

Another representative was called to ask a question. “We have heard similar promises in the past. What assurances can you give us that you aren’t going to colonise us?”

Glimmer blinked and looked at the Secretary-General. A quick whispering exchange followed before the woman nodded, though she still looked confused. “Why would we want to conquer you? We just fought a war to defeat Horde Prime, who tried to conquer us.”

“You could be trying to deceive us. You said you need us to fight this war for you, ostensibly to protect us. We’ve heard that before.”

“Well, it’s the truth. We have plenty of ships, but you can’t really take a planet with just ships, not without wrecking the ecosphere in the process, and you can’t hold a planet,” Glimmer explained.

“Troops from Earth would be ideal to occupy Goa’uld planets and deliver help to the population. You have so many of them.”

Sam winced even before several representatives started badgering Glimmer with more pointed questions.

“Yeah, that struck a nerve with many former colonies,” the Colonel commented in a low voice. “Betcha that there’ll be cartoons depicting Glimmer as a new Queen Victoria trying to rule the world.”

He had a point, in Sam’s opinion.

“We probably gave the Etherians a not entirely correct impression of Earth’s stance towards war,” Daniel said.

That, too, sounded plausible.

“Hey!” Glimmer said, raising her hands as the Secretary-General finally managed to calm the Assembly down again. “I’m telling the truth. I’m not trying to deceive anyone. We need each other if we want to save all those people.”

“Will you share your technology even if we don’t want to fight for you?”

Glimmer, once again, looked surprised, then frowned. “You wouldn’t be fighting for us, but for Earth and everyone else in the galaxy. Also, if you aren’t willing to help others, why do you expect help from others?”

Adora took a step forward. “We will help you if you need help,” she said, her voice carrying through the Assembly. “But we will not just hand out technology that you can use to oppress others. We’ve seen how that works.”

“What about technology to improve the standards of living?”

“What about technology to combat famines?”

“Will you share advanced medicine?”

The Etherians seemed surprised and looked at each other. And then Entrapta spoke up, her hair lifting her up to the better look over the desk: “Well, according to the data we gathered, you have all the technology and infrastructure to feed and treat everyone, but you don’t for some reason. We would first need to know why you don’t do that in order to see how we can help there.” She nodded. “If it’s a lack of magic, that should be remedied as soon as Adora unlocks Earth’s magic.”

Sam winced at the storm of questions and yelling that unleashed. It took several minutes for the Secretary-General to calm the Assembly down again this time.

“That’ll kill the relations with a lot of countries,” the Colonel commented.

“Yes, magic,” Entrapta explained. “Much of Etherian’s native technology is based on magic - especially for medicine. Though,” she perked up, “we have made strides in cybernetics as well, you prefer to replace rather than heal damaged limbs, for example!” Bow whispered something to her, and she frowned. “Anyway, Earth’s magic, like the magic for most of the galaxy, is currently blocked, but Adora can unblock it. Once she does, you’ll be able to use magic.”

Several representatives loudly opposed this plan, and the Assembly descended into chaos yet again.

The Etherians looked confused and even shocked for a moment. But as the chaos continued, Adora suddenly frowned, then took a step forward. She raised her arm, and her sword appeared in it, pointed towards the ceiling.

“Oh, no!” the Colonel spat.

“For the Honour of Grayskull!”

Sam looked away as blinding light enveloped Adora for a moment, and she transformed.

Then She-Ra was standing there on the stage, still frowning at the suddenly quiet Assembly. “I am She-Ra, Princess of Power. I’m not here to conquer anyone. I’m here to help you. Magic was taken from Earth long ago. I’m here to restore it to your world - if you want me to.” She lowered her sword. “Magic is not evil. It can do a lot of good. It can heal. It can restore destroyed lands and improve and save your lives. And it’s your birthright.”

“That struck a nerve as well,” Daniel commented as the assembled diplomats erupted in yelling again.

*****

“Hrrngh!”

Glimmer looked tenser than after a battle, Catra noticed when they’d finally left the Assembly Hall and ‘retired’ to a private room with a big table and comfortable chairs. She wasn’t quite gnashing her teeth, but you could almost feel the frustration radiating from her. And the desire to do some violence.

“What’s wrong with them?” Glimmer spat as she sank into a chair at the head of the table. “We told them everything they wanted to know, and they still don’t trust us!”

“They think we could be lying,” Bow said, moving to the small fridge in the corner.

“But that makes no sense.” Entrapta frowned. “Even with just the ships in orbit, we’re strong enough to conquer Earth.”

“Telling them that made things worse.” Adora sighed and laid down her head on the table for a moment. Then she suddenly seemed to remember that they weren’t at home and sat up straight.

Catra chuckled at the sight and moved to stand behind her, rubbing her shoulders.

"They are very irrational," Hordak commented. "Although they might think we are trying to deceive them and do not have the force to conquer them. Maybe a demonstration would correct that misconception."

Catra shook her head as Glimmer and Adora glared at Hordak. Her former leader still didn't fully understand people. Just like Entrapta.

"We are not going to 'demonstrate' an orbital bombardment," Glimmer spat. "We're here to form an alliance, not to conquer a planet. Or colonise them. We're not imperialists!"

"Someone's learned a few new words today!" Catra said, snorting.

Glimmer glared at her, and Adora frowned, but that was to be expected.

"Oh, lighten up," Catra said, sliding into Adora's lap. "They're bound to distrust us. How would we react if a fleet arrived out of nowhere and wanted to help us fight another Horde Prime?"

Adora stopped shifting around under Catra and said: "We offered our help when SG-1 arrived on Etheria."

"They were four people and needed help. They weren't a fleet," Bow pointed out as he placed several bottles of drinks on the table.

"Oh! Soda!" Entrapta grabbed two of them with her hair and handed a third to Hordak. "That's from that show we saw!"

"That was advertising," Glimmer told her. "And yes, I completely understand that they might be cautious." Catra cleared her throat, about to mention Glimmer's earlier words, but the princess went on: "But they think the worst of us! And their questions were very rude!"

“Were they?” Entrapta asked, blinking, between sipping from two different sodas.

“Yes,” Glimmer said.

“You generally don’t ask after someone’s relationships in such a meeting,” Bow explained. “That’s a private matter.”

“Even when it’s two princesses?” Entrapta asked.

“Well… we’re not,” Glimmer replied. “But that’s not what I meant. The way some of them asked after our technology…” She shook her head.

“And magic,” Bow said.

Glimmer groaned. “Don’t remind me. You’d think we threatened them with extinction when we offered to restore magic.”

“Not all of them reacted like that,” Adora said, one arm tightening around Catra’s waist. “A few were very positive. Well, they were interested,” she added.

“Because they probably think that as soon as you unlock the magic of Earth, they’ll have princesses and sorcerers,” Catra said, leaning her head back against Adora’s shoulder.

“Why would they think that?” Entrapta shook her head. “It’s obvious that they will need to study magic and learn how to wield it before they can achieve anything. And we don’t even know if they have dormant princesses.”

“It’s not obvious,” Bow told her. “They probably think it’s easy to use.”

“Their TV shows certainly gave that impression,” Glimmer said, slumping a little. “Snip your fingers and do magic.” She scoffed.

“Well, we have to correct that misunderstanding,” Adora said. “We need to talk to them again. The more they know, the more they’ll

trust us."

"More shouting at each other?" Catra snorted.

"I mean private meetings, of course," Adora retorted. "Before the actual negotiations."

"Then we'll get accused of hiding secrets." Catra shrugged. "Not that that can be helped, I guess."

Adora was about to say something - probably another optimistic thing - but a knock at the door interrupted her before she could start.

"Yes?" Glimmer spoke up.

The door opened, and the Secretary-General entered. "I'm sorry, I was held up by some insistent delegates." He smiled. "They had some concerns about today's revelations."

"We're not going to conquer Earth," Glimmer said.

"Though we have the capability," Hordak added.

"Actually," the man told them, "most of the concerns were related to magic."

"Really?" Adora blinked.

Catra frowned. Those people were actually more concerned about magic than about the war with the Goa'uld?

The old man nodded. "Magic is a controversial topic for many religions."

"Daniel mentioned something like that," Adora said with a deep frown. "But we're not going to force anyone to use magic if they don't want to."

The smile on the Secretary-General's face slipped a little. "They are concerned about others being able to use magic."

“Why would that concern them?” Glimmer asked. “Are they afraid that a princess will conquer their country?”

“Without runestones to boost magic powers, that is very, very unlikely given your level of technology,” Entrapta said. “I would say impossible, but there’s always the theoretical possibility of an incredible outlier.”

“As I said, it’s based on religion,” the Secretary-General told them.

“You mean it’s irrational,” Hordak said.

“In a way, yes,” the man replied. “Although since, apparently, magic is real and was common on Earth in the past, many such preconceptions might have to be reevaluated.” He sighed. “The revelation that malevolent aliens posed as gods in the past hasn’t helped, of course. Many religious people are very… concerned about the ramifications of this.”

“So, they need more data to process this?” Entrapta asked. “We can help with that!” She beamed at the man.

Looking at the man’s polite smile, Catra somehow had the impression that things wouldn’t be as easy as Entrapta thought.

*****

Hotel Intercontinental, Geneva, Switzerland, August 16th, 1998 (Earth Time)

“Quite nice digs,” Jack O’Neill commented when he stepped into SG-1’s - minus Teal’c, who was still stuck at Stargate Command - temporary quarters. A room in a luxury hotel surely beat the usual bachelor’s quarters on a base. Hell, it beat his home. Well, as long as they had room service that served beer.

“We’re on the same floor as the President,” Daniel said, looking at the two beds. “Which one do you want?”

“Pick one,” Jack told him as he looked for the remote. He knocked on the door to the next room. “Carter?”

The door opened, and Carter appeared. “Sir?”

“Everything alright, Carter?” Jack asked. There! He grabbed the remote from the sideboard and switched the TV on.

“Yes, Sir.”

“Now, let’s see how the world’s reacting to the arrival of our new friends,” Jack said.

“...Queen Glimmer, representing the Princess Alliance of Etheria, gave a speech in the Assembly Hall of the United Nations building in Geneva where she promised help against the Goa’uld threat and offered to share the advanced technology if Earth joined the war. Our analysts predict…”

“...Wallstreet is in an uproar. The stock market is oscillating - investors cannot seem to make up their minds whether or not the news about aliens are good news. Even shares in military corporations, which have jumped in price since the shocking reveal by the US government, have suffered losses today as analysts profess doubts that all of them will benefit equally from shared alien technology…”

“...als Vertreter von Rheinmetall führte aus, dass nun dringender Handlungsbedarf bestehe. Die Gesetze, die die Ausfuhr von Rüstungsgütern kontrollieren, würden die Sicherheit Deutschlands und der Welt gefährden, und er forderte…”

“...protests against the war with the Goa’uld have been announced all across the world, with varying attendance so far. In some cases, violent confrontations with protesters who call for immediate action to free humans enslaved by aliens have claimed several victims…”

“... so we ask: Who is this ‘Queen Glimmer’, and why should we care what she wants? So far, we haven’t seen any proof that Earth

is in danger - we have only the word of the United States Government, which has admitted to having lied to the world for years, and the word of aliens who openly want mercenaries for their war for this. I call for…"

"...the Swiss police is out in force to keep protesters from reaching the Palais des Nations. Several clashes have resulted in entire streets being cordoned off and the arrests of hundreds of people."

"...in a blatant powerplay, the aliens offer technology for soldiers for their war…"

"...China has refused to comment on the situation and continues to exert the strictest control over all media in the country since 1989…"

"...has voiced concerns about another attempt at colonisation…"

"...released a statement that calls for immediate action against the Goa'uld and stronger powers for the United Nations. As she was quoted, 'if there ever was a time for Earth to unite, then this is the time. Faced with a war in space and alien allies, we have to speak with one voice for the betterment of humanity as a whole."

"...asked about the stance of the Catholic Church on magic, the Vatican declined to comment, announcing that such a question required careful consideration, and…"

"...renowned scholar at the Al-Azhar Mosque in Cairo, stated that the Qoran doesn't condemn magic as a whole but only certain practises of it. Yet several imams have already denounced the Etherians as enemies of the Faith and called upon…"

"...was quoted as saying that 'the Bible clearly condemns both witchcraft and homosexuality' and called upon the immediate cessation of diplomatic contacts with the aliens in order to 'save the American people from eternal damnation'."

"Russia's president announced a national state of heightened alert and stated that the government was looking at emergency

measures to prepare the country for a possible war. He didn't specify which war, nor did he react to questions about rumours of Russia defaulting on…"

"...Japan's Prime Minister is about to meet with several Shinto priests to discuss the subject of magic…"

"...Her Majesty, Queen Elizabeth II of England, denied that there were any plans to propose a dynastic marriage between one of her grandchildren and a princess of Etheria."

Jack took a deep breath. He really should have expected that. "So… that happened."

"It could've been worse?" Daniel offered.

Before Jack could ask Carter, who was uncharacteristically silent, their phone rang. Daniel picked up the receiver. "Doctor Jackson." He blinked. "Yes, we're on the way." He looked at Jack and put the receiver down. "We're to attend a briefing in the President's suite."

Great. Jack sighed. "Alright, folks. Let's go."

The suite was just down the hall - past half a dozen suits from the Secret Service. There were more, Jack knew - they had to rent the entire floor on short notice, and no one was happy with the current security. But it was still safer than staying in Airforce One on the tarmac. At least according to the Secret Service.

The President's suite wasn't packed as Jack had expected - the President was there, currently on the phone, as were the Secretary of State and the Secretary of Defense and their aides. And more Secret Service personnel.

The President nodded at them while he paced. "Yes, dear… Yes, that's a good idea… Talk to him again… yes…"

"So!" The Secretary of State smiled, although he looked tired. "That went well."

"Sir?" Jack cocked his head.

"The reaction from the rest of the world," the man clarified. "That should increase our chances to form an alliance between NATO and the Etherians." He shook his head. "That they fixated on magic…"

"Have you seen the reactions from several prominent televangelists?" Daniel asked.

The man waved the argument away. "That's just a bunch of extremists. We can handle them. But the Etherians have now seen that we're amongst the most progressive countries in the world." He smiled again. "This is the opportunity we need."

*****

Palais des Nations, Geneva, Switzerland, August 16th, 1998 (Earth Time)

"...Russia's president further demanded joint talks between the aliens, NATO, Russia and China, claiming that, in light of the fact that the USA hid the existence of aliens for years, bilateral talks wouldn't be conducive to building the necessary trust for…"

"...China has still not commented on the recent revelations about aliens except to assure its population that the government has the situation in hand. Independent information about the events in China are hard to come by given their total information blackout, but reports claim that several spontaneous protests, even pro-government, have been harshly subdued and…"

"...speculation about the aliens continues to run rampant. An analysis of their body language during the speech in the Assembly Hall of the United Nations indicates romantic entanglements between…"

"...pundits were torn regarding the question of whether or not the aliens favoured same-sex relationships and what that would mean for Earth…"

"...several members of the clergy have already condemned those potential relationships while the church officially is still debating whether or not aliens are part of God's creation…"

"...question of magic, thousands of concerned citizens have been calling their representatives, demanding…"

"...physicist Stephen Hawking released a statement that he was looking forward to observing magic and adjusting his theories accordingly…"

"..in contrast, several 'covens' have filed preemptive complaints that any action by the government aimed at preventing the, I quote 'release of magic' would be a violation of their religious freedom. The government hasn't yet…"

Adora shook her at the rapidly changing screen that Entrapta had rigged up in their room - a conference room - in the Palais des Nations. "Are they really focusing on magic and our relationships?" she asked. "Instead of, like, the war against the Goa'uld?"

"I am not surprised by this irrational behaviour. Not in the slightest," Hordak said.

Catra, Adora saw, rolled her eyes. "Daniel warned us about that, remember?"

"I didn't think it would be that bad," Adora admitted. Why were they so concerned about who other people loved? Or about magic? "They're calling me a witch." She pressed her teeth together. She wasn't a witch! She wasn't like Shadow Weaver! Not in the slightest!

"They're idiots," Catra said. "They know nothing about witches."

"Or princesses," Glimmer added. Adora's friend was angry. "First those questions in the Assembly Hall, and now this! Aren't those people aware that we're fighting a war?"

“They’re questioning that,” Entrapta commented - she was again wearing her mask, hooked up to the TV receiver in the room. “Some people claim it’s all a hoax invented to make people comply with our demands.”

“What demands?”

“Legalise gay marriage, apparently,” Entrapta said. “And corrupt their children. And ‘imperil their immortal souls’ - whatever that means - with ‘fell sorcery’.”

“That’s ridiculous!” Adora spat.

“Actually, we’re indirectly pushing for that,” Bow interjected. “Not for the corruption and endangering, I mean, but we did say we wouldn’t ally with countries where our families would be illegal.”

“That’s not the same!” Adora insisted.

“It kind of is,” Catra retorted. “The technology we can share means that any country that gets it will be much more powerful than those who don’t get it. And people don’t like being powerless,” she added with a tight impression that made Adora want to hug her.

She didn’t do that, though - Catra would be more embarrassed than reassured and probably push her away. And… “Great. So we are pushing our morals on others,” Adora said

“No!” Glimmer objected. “We’re looking for friends who are like us. That’s not the same. And it’s perfectly legitimate.”

“But we need Earth.” Entrapta pushed her mask up. “What do we do if there are no people like us who like us?” She looked worried.

Hordak scoffed. “Based on my analysis of Earth so far, we do not have to worry about that. There will be many countries whose leaders are willing to adapt to become our allies.” He nodded. “As we have seen, many resent the current balance of power on Earth.”

“And we’re upsetting that balance.” Adora sighed again. “What do we do if war breaks out over this?”

“We would crush any enemy. Earth does not have the technology to threaten us,” Hordak said at once.

“I meant between different countries on Earth,” Adora explained.

“There are multiple wars currently being fought on Earth, though they seem to be civil wars - wars between people of the same country,” Entrapta said. “What would one additional war change?”

“A war between powerful countries isn’t the same as the wars here,” Glimmer objected. “They can lay waste to entire countries - even the world - according to Daniel and Sam.”

Adora pressed her lips together. They would have to make sure that this wouldn’t happen. No matter how.

“Oh!” Entrapta sounded surprised. “Some people are calling us magical girls. And speculating whether or not we all have ‘the power to transform’. And they wonder if Catra can change into Melog.”

“What?” “What?”

Adora looked at the screen. It was showing two old men talking at a younger woman about magic and the economy. “Where did you find that?”

“It’s on another part of the communication network,” Entrapta said. “Let me put it on the screen… there!”

The moving pictures were replaced by text. And drawings. Drawings of…

“Cat people?” Catra blurted out. “Why would they have pictures of cat people?”

“Those are called cartoons,” Entrapta explained. “I haven’t found the ones they refer to yet. They seem to be obscure.”

The pictures shown were drawings of cat people. But they didn’t look like Catra. Some didn’t even have a tail!

“Whatever,” Catra spat. “Let’s focus on Earth politics. We can watch cartoons once we’ve dealt with that.”

“Are you sure? This could grant us important insights into how Earth people behave!” Entrapta objected.

Catra glanced at Adora. Well, glared would be more correct.

Adora sighed. “Yes, let’s focus on politics for now.”

They needed to talk to so many people…

*****

The Negotiations

Hotel Intercontinental, Geneva, Switzerland, August 17th, 1998 (Earth Time)

Samantha Carter checked one last time that the encryption on the satellite phone was working, then established the connection. After a moment, the symbol of Stargate Command appeared on her laptop's screen, followed by General Hammond - and Teal'c - in the General's office.

"Good morning, General," the Colonel said at once. "Well, it's morning here in Switzerland."

Sam's body, though, still felt as if it should be night. Jet lag had finally caught up with them.

"Good morning, Colonel. Captain. Doctor Jackson."

Teal'c inclined his head, and that was it.

Hammond narrowed his eyes slightly. "Do you require more data for a report?"

"Ah… we're just touching base, so to speak," the Colonel said. "What with all the hubbub about the aliens, we wanted to check how things are back home."

The General chuckled. "We aren't suffering from civilians trying to storm the base," he said. "And the Stargate has been sealed for the time being."

"Oh?" The Colonel frowned.

"In the current situation, continued operation of the Stargate was deemed unwise. Our best team is off-base, and we're under a lot of scrutiny." Hammon pressed his lips together. "As far as I am aware, the revelations about the truth behind our project ruffled some feathers amongst the staff in NORAD."

Sam frowned. NORAD's commanders had been informed when the project started.

"You mean some staffers aren't happy that they weren't important enough to need to know about Stargate Command?" The Colonel snorted. "I bet Wilkinson is amongst them."

"Wilkinson?" Teal'c asked, tilting his head.

"A particularly arrogant colonel who thought deep-space telemetry was a dead-end for wash-outs," the Colonel explained, baring his teeth. "He was quite open with his opinion."

And would now be lamenting his judgment, Sam thought.

"And how are things on the diplomatic front?"

"Ah, just peachy." The Colonel's smile grew more forced - Sam could tell. "The Etherians discovered the Internet."

"Ah." Hammond closed his eyes for a moment. "And just at the moment that the Internet discovered aliens are real."

"Yes." The Colonel chuckled. "Although, if you're shopping for a Christmas gift for magical princesses, we've heard that the complete collection of Thundercats would be received well by them."

"Thundercats?" Hammond looked lost.

"A cartoon series featuring anthropomorphic cats," Sam explained. "Humanoid cats," she added.

"Ah." Hammond nodded. "I'll see what we can do."

"They were also interested in a few Japanese series," Sam added. "Outlaw Star and All Purpose Cultural Cat Girl Nuku Nuku. And Sailor Moon."

Hammond stared at her.

Sam suppressed the urge to wince. It wasn't her fault that the Etherians had stumbled upon a Usenet group of anime fans. "However, only one of those series, the Original Video Animation of All Purpose Cultural Cat Girl Nuku Nuku" - she managed to keep as straight face repeating the title - "is available in a collected edition. The others just ended their run on Japanese TV."

"Entrapta mentioned that there were fansubs - bootlegs - available, but we explained that this might be against the law here," Daniel added.

"Ah." Hammond looked like Sam felt explaining this request. "I will see what I can do."

"Just ask your granddaughters, Sir," the Colonel added with a smirk. "They'll probably know where to get the series."

"And they'll ask for a copy for themselves, I bet." Hammond shook his head. "They and their friends apparently love the alien princesses."

"Halloween should look different this year," Daniel said.

"Well, it's good that the kids like them," the Colonel commented. "The rest of the world has some issues with our new allies. They've got something for everyone to hate. Magic! Gay marriage! Alien technology!"

"That's simplifying it a bit," Daniel spoke up. "The cultural issues go much beyond gay marriage. Their monarchism alone is a potentially huge issue for some people. And the technology transfer will cause cultural changes as well. And economic upheaval."

Sam nodded. "Entire industries might be rendered obsolete. If we can duplicate the Etherian power generation methods, we can phase out our own power plants." Clean and limitless energy. Better than fusion power.

Hammond groaned. "The lobbyists will storm Washington."

"It won't happen overnight," Sam pointed out. "It'll take years to reach a point where we can replace our power plants. And cars will continue to burn fuel for years after that, maybe decades."

"Aw. I was so looking forward to a flying pickup," the Colonel joked. Or maybe he was serious. Then he looked at Teal'c. "So, how are things with you, Teal'c?"

"I have helped the analysts with their projections of the impact of the Etherians on the Goa'uld."

"Good, good. No jealousy that you didn't get to be on TV yet? You wouldn't look as good in a dress as the Princesses, I think." The Colonel grinned.

Teal'c smiled in return. "I am content to avoid such exposure."

And he was honest about it, too, Sam knew. So different compared to many of her 'colleagues', who would already be spreading rumours about her just for having been at the United Nations.

"Well, if you feel bored, give us a call. I'm sure the Etherians would like to talk to you again as well. They have been asking about you," the Colonel said.

That would, hopefully, keep some of the agencies back home from trying anything against Teal'c in the current chaos. Not that Hammond would let anything happen to their friend, anyway.

But better safe than sorry. Everything was in flux right now. She wished she was back in the field. Or in her lab.

*****

Geneva Airport, Switzerland, August 17th, 1998 (Earth Time)

"So… we're getting a multilateral meeting with the Americans, the Russians, and the Chinese?" Adora asked.

Catra briefly looked up from buttering her surprisingly tasty ‘croissant’ - it wasn’t salmon, but with honey, the thing melted in your mouth. “We do?” she asked, trying to sound as confused as possible.

“Didn’t you hear it?” Glimmer blurted out.

Adora rolled her eyes. “Glimmer, Catra does know exactly whom we are supposed to meet. She read the notes in bed.”

Catra grinned while Glimmer glared at her. Did they really think she could’ve led the entire Horde if she had actually been as lazy as she acted? “Yeah, I read the proposal. But what about the Indians? They want in on the meeting as well, according to the news we heard.”

“Aren’t they also Americans?” Adora asked.

“Not those,” Catra corrected her. “The ones from India.”

“There are two sorts of Indians?” Adora looked confused, And she wasn’t acting, Catra could tell.

“Probably,” Catra replied.

“Actually, as far as I understand - and I’ve read up on this a little - the American group was mistakenly called Indians because the Europeans thought they were in India,” Bow said. “And they’re called Native Americans now.”

“Ah.” Adora nodded. “But India is a large country. Almost as large as China and larger than the United States and Russia put together. At least if we look at the population. They should be represented, shouldn’t they?”

“But they’re not as powerful as the other three,” Hordak cut in. He looked stupid with a tiny cup held between his fingers, Catra found, but she wasn’t about to tell him that. It might hurt Entrapta, who loved those tiny things. “Their value as an ally is not as high as the others.”

“If they have many people, they can recruit a lot of troops,” Catra pointed out. India also had proportionally more young people, and that meant they would be able to easily train up infantry. Like the Horde, a low voice whispered in the back of her mind, and she clenched her teeth. “And from what SG-1 told us, even regular infantry would be good enough to fight the Goa’uld on the ground.”

“And what about their stance towards people like us?” Adora asked.

Bow grimaced, which was enough of an answer before he said: “Same-sex relationships are illegal in India.”

“Oh.” Adora frowned. “Then I don’t think we should be talking to them. If we can’t even visit the country without breaking the law, an alliance makes no sense. What about China and Russia?”

“We wouldn’t be arrested there. At least not according to the law,” Catra said.

“That’s good.” Adora nodded.

“But meeting with the three big countries is problematic,” Glimmer said. “It sets a precedent that we treat countries differently according to their power.”

“Why wouldn’t we do that?” Hordak asked. “Treating a tiny country like Switzerland the same as the most powerful country on Earth doesn’t make any sense.”

“It’s not just about power,” Glimmer told him.

“That makes even less sense.”

Catra suppressed a grin when she saw Glimmer clench her teeth.

“We want to deal with Earth - with countries that share our values. And if we single out the powerful countries, that undermines our credibility,” Glimmer explained.

Catra had to agree with the princess. “We want the people of Earth to trust us.”

“They don’t trust us,” Adora added. “Have you seen what they say about us? They called us unnatural!”

“That’s a tiny minority, as Daniel warned us,” Bow retorted.

“It was all over the news,” Adora told him.

“Daniel also warned us about that. The news has a tendency to exaggerate things to draw more attention,” he explained.

“But that’s stupid!” Adora protested. “Daniel told us that in a democracy, the majority rules, not the minority! If they’re a tiny minority, they shouldn’t be listened to by everyone! It makes people think that they aren’t a minority!”

“People like you?” Catra briefly grinned at the pout that caused. “More seriously, do we want to play their games?”

“If the three most powerful countries want to face us with a united voice, shouldn’t we accept that as their decision?” Bow asked. “Do we really want to force them to accept others in a meeting? Or to break up?”

Glimmer nodded. “If that’s their decision, then they can ask for a meeting. But we need to make it clear that we’ll be dealing with any country willing to talk to us.”

“There are almost two hundred countries, though. We’ll be here for months if we talk to every single one of them,” Adora replied.

“We can dismiss every country where our relationships would be illegal,” Catra pointed out.

“There won’t be too many countries left after that,” Glimmer said. “And how do we count countries where it’s illegal in one part and not in the other?”

“How would that work?” Catra asked. That sounded weird.

“Something about a country made up of smaller countries,” Bow explained. “A federation.”

“A country made up of other countries?” Catra was tempted to quote Hordak’s ‘that makes even less sense’.

“Forming a country.”

“Earth is a weird planet,” Adora said.

“It’s not as if we have visited many other planets,” Glimmer objected, “so we can’t make comparisons.”

“They’ll probably think that we’re the weird ones,” Bow said.

“They don’t think that. They think we’re unnatural and evil,” Adora told him.

“And sexy,” Catra added with a grin. The picture of Adora transforming into She-Ra was all over the world. And many people loved it. And her.

Adora blushed a little, then cleared her throat. “That’s not important right now. Let’s focus on politics!”

*****

Hotel Intercontinental, Geneva, Switzerland, August 17th, 1998 (Earth Time)

“I’m sorry, General, I do not know this.” Jack O’Neill said for what felt like the umpteenth time this day - and ‘umpteenth’ was a perfectly precise term, thank you very much, Daniel, he mentally added. Who had had the bright idea to have a military meeting in a luxury hotel, anyway? If the Marines ever heard of this, the Chair Force jokes would never end.

“And what would be your best estimate? You have spent weeks with the aliens, according to what we have been told. You must have built up some rapport with them,” the Russian general asked. “Do I have to remind you again that this meeting is supposed to build trust? Trust which cannot be built if you keep holding back crucial information.”

“We talked about the Goa’uld. Food. Entertainment. Physics. History. Military build-up.” Information that had been - mostly - shared with the Russians, which went against Jack’s gut feeling. “But they did not say anything concrete about magic on Earth.” Jack bared his teeth. The Russian might be a general - he certainly had the arrogance for it - but he wasn’t a soldier. Jack was sure the man was a spy.

“One of the most shocking developments, and you didn’t think to ask about the potential consequences?” The man sneered. “I doubt this, Colonel.”

“I’ve told you before that the Etherians said that they didn’t know what kind of magic Earth would have,” Jack repeated himself. At least they had told Daniel that.

“But they did know that Earth once had magic. That means that they knew about it, doesn’t it?” The Chinese general - the same rank as the Russians and the American general in the room, as usual for such meetings - smiled.

“They assume that magic was once common to all planets in the galaxy which can sustain life,” Daniel - finally! - cut in. “They base this on their own history and knowledge of the laws of magic. But as they said, and we have no reason to doubt their claims, they do not know how magic expressed itself on various planets. The current theory in Mystacore - that is their leading centre for magical research - is that magic is shaped by the environment, which includes the people on a planet.”

“You talked about the ‘laws of magic’. Laws imply a certain predictability,” the Chinese officer remarked.

"Yes. But in order to predict anything, more data is needed," Daniel said - and Jack could hear Entrapta's voice in his mind. "Data they - and we - lacked back then."

Both the Russian and the Chinese general turned their attention to Carter after hearing that. Jack saw her straighten in return. The generals had focused on Jack and Daniel so far; Jack was pretty sure that was because Carter was a woman.

"Captain Carter. You've been working closely with the aliens' expert on magic. Someone who is, again according to what we know, quite free with information. What did she say about magic on Earth?" The Chinese officer wasn't sneering - his smile didn't change - but Jack thought he caught a certain condescension in the man's tone. One he had heard from American officers when talking to or about Carter.

"Entrapta mentioned several times that she was looking forward to studying Earth's magic once it was restored," Carter replied. "It was clear that she had no expectations with regards to what kind of form this would take."

"How convenient!" the Russian exclaimed. "Of course they would claim this!"

Unspoken but clearly implied was the 'of course *you* would claim that' aimed at Jack's team.

General Naird cleared his throat. "So… I think we have covered the subject of magic extensively, right?" He smiled like a schoolboy asking the homeroom teacher if they could go play.

Jack still didn't know how the man had been chosen to represent the United States in this meeting; he wasn't part of Stargate Command's chain of command and while he had been read in on the program, he had no actual experience with Stargates or aliens. Perhaps this was an attempt to mislead the Russians and the Chinese? Jack had no doubt that both were aware that Air Force Space Command was only tangentially related to Stargate

Command, but the Russians at least might suspect that this was a ruse; they certainly were fond of pulling that stuff themselves. Or had been fond of it during the Cold War.

The two generals exchanged a glance, then the Russian nodded. "We will file a formal complaint about this."

"Of course." Naird kept smiling. "So… can we talk about space ships now? And interstellar landing operations? The topic of this meeting is the military, after all."

"We would prefer to talk a bit more about the cultural aspects of a potential alliance," the Chinese general said. "Technical details aren't as important as our ability to effectively work together in the field with aliens."

Daniel perked up, Jack saw. As he had known and as the two generals had known he would. He suppressed a sigh.

"Dr Jackson, you stressed that the Etherians consider politics a personal business. How does this translate to their armies?"

"Ah, as I said, their princesses are expected to personally lead their forces, often fighting on the front. That is not limited to those who have powers applicable to such operations - though most powers seem to have military uses - but also to princesses like Entrapta, who is one of their foremost scientists."

"They risk themselves and their researchers on the frontlines." The Russian scoffed.

"We know that," the Chinese smiled. "But how… prickly are they?"

Daniel frowned. "Do you mean how will they react to bigots and sexists working with them?"

"That seems a harsh term, but, essentially, yes."

"Well, we haven't had any such working with them, so I cannot say for sure, but…" Daniel tilted his head and pushed his glasses

up. "...I think they would take such insults personally. Any personnel assigned to work with Etherians should be chosen accordingly."

The Russian scoffed again, but the Chinese nodded. "Do you have any specific examples of issues we should be aware of?"

"Well, you shouldn't expect their monarchies to work like monarchies on Earth…" Daniel started lecturing.

Jack suppressed another sigh. He had heard this particular lecture far too often by now.

*****

Palais des Nations, Geneva, Switzerland, August 17th, 1998 (Earth Time)

The Secretary-General was all smiles again as he greeted them and this time, he had his wife with him. As far as Adora knew - Entrapta had researched this, but Earth's customs were confusing - that meant the meeting was meant to be less formal. Or less focused on politics. Although Entrapta had also said that this was just for appearance's sake, and a lot of politicking was done in such meetings.

Well, Adora wasn't planning to act any differently anyway - honesty and truth would win the day.

So, when Glimmer introduced them, she shook the man's hand, then his wife's and kept smiling. It was only a short meeting, anyway - they had most of the morning booked full of meetings already. Especially one with the Americans, Russians and Chinese, though technically, that was, according to Glimmer, a meeting with the Russians who would bring along the other two or something.

"So," the Secretary-General said as they had all taken sears around a low table and were sipping drinks, "I hope you kept enjoying our hospitality."

“It’s nice,” Adora said.

“Except for the protesters accusing us of wanting to corrupt Earth,” Glimmer added.

“Nutcases,” Catra muttered - loud enough to be heard around the table.

“Well, your announcement that you are considering restoring magic to Earth has caused many people to worry about the consequences,” the Secretay-General said. “As I mentioned before, it’s a controversial issue for many religions.”

“We won’t force anyone to use magic,” Adora explained, trying to keep from frowning. This whole thing didn’t make any sense.

“They are afraid of others using magic,” his wife added.

“You’ve got enough weapons to kill the whole planet several times, according to what we’ve heard, you have Goa’uld trying to conquer Earth, and you’re afraid of magic?” Catra scoffed. “I’ve fought princesses for years without magic. It’s no big deal.”

The couple seemed surprised, and Adora shook her head at her friend. Catra was trying to help, but that might not be the best way to do this. And Adora didn’t like to be reminded of the years they had fought each other.

“Indeed,” Hordak said. “My troops could hold their own against princesses most of the time with weapons that were comparable to yours. To a prepared force, magic is not a major threat by itself.”

“Well, there are exceptions, of course,” Entrapta spoke up before anyone else could say anything. “The power of a princess attuned to a runestone is far greater than that of a regular princess, and the talent and skill of sorcerers vary greatly, but absent special circumstances, magical powers won’t destroy a planet. Even destroying a city is usually out of the reach of even a princess, though I guess Perfuma and Mermista could do so thanks to their

control over plants and water. Frosta might be able to do so as well, but her power is more situational."

"A princess could destroy a city with magic? Or a planet?" The Secretary-General looked concerned now.

"In certain circumstances, but those were pretty unique to Etheria. Are unique to Etheria. As far as we know," Entrapta said. She tilted her head as her hair tendrils grabbed another drink. "Compared to what we heard of Goa'uld technology, especially bombs and biological warfare, it's not an urgent threat."

"Some might disagree with that assessment," the man said.

"Someone's always disagreeing with something," Glimmer said. "But magic hasn't hurt anyone on Earth while twice you were almost killed by the Goa'uld, so I think the real danger should be clear."

Adora nodded. "And magic can be used for so much good - you can heal people. Restore nature."

"Turn an enemy spaceship into a plant," Catra said with a grin.

"You can do that?" the Secretary-General's wife asked.

"Those were special circumstances," Adora said.

"And She-Ra is the most powerful princess in Etheria's history," Bow added. "Really, magic is… just another thing?" He shrugged with a half-smile.

"Not for many religious people," the Secretary-General's wife retorted.

"We've seen the news," Glimmer said. "But we've also seen the people who want magic returned."

Adora nodded. "They want their birthright restored." It had been nice to watch the interview with those 'Wicca', even if they had

seemed a little weird. But they liked Adora and her friends.

“But what if a country doesn’t allow magic?” the Secretary-General asked. “You can’t really limit magic to specific areas, can you?”

Adora shook her head. “No. Once I restore magic, it’ll be everywhere on the planet.”

“That’s the natural state of magic on a planet full of life,” Entrapta added.

“That’s a difficult decision, then.”

Adora frowned. “Why would it be difficult? Some people want magic restored so they can practice magic as their ancestors did. Why should anyone be allowed to forbid that? No one is forced to use magic.”

“Yes,” Catra chimed in. “It’s the same stupidity that makes idiots want to keep people like us from loving each other.” She leaned over and hugged Adora while she flashed her fangs. “Why do they think they have the right to tell others how to live? We’re not hurting anyone.”

“I see,” the Secretary-General said. “But that won’t be popular in many countries.”

“Too bad for them.” Glimmer scoffed. “We already said we won’t ally or share our technology with countries where our way of living is illegal. We’re not going to help people who hate us just for being us.”

The man smiled in response. “Well, it’ll be interesting to see how the world will react to that.”

*****

“Say…”

Samantha Carter looked up from her laptop. “Yes?”

Entrapta cocked her head at her while her hair grabbed another soda bottle from the minifridge in the small waiting room. “Why are you here and not in the meeting? I mean, you’re Earth’s foremost expert for First One’s and Goa’uld technology. At least you told us so. As did Daniel and Jack.”

“Yes,” Sam replied. This wasn’t the time for false modesty - certainly not when Entrapta might think she had been lied to. “I am the foremost expert for Stargates and advanced technology. However, there are several other scientists working in this field who might surpass me if they achieve a breakthrough in their research.” Although she couldn’t help thinking that it wasn’t very likely.

“Oh. And is your Secretary of State or your Secretary of Defense amongst them?” Entrapta flicked the soda open and took a sip from it - without using her hands.

“No,” Sam replied.

“So, why aren’t you in there?” Entrapta cocked her head to the other side.

“I’m ready to advise my superiors should it be required.”

“And that’s why you are waiting here?”

“Yes.”

“And Jack is in there. With Daniel.”

“Yes. Their expertise might be in more immediate need,” Sam explained. And they were men, which the Russians and Chinese might take more seriously. Well, good luck trying that attitude on the Etherians!

Entrapta frowned. “That sounds not very logical. Technology is the key to winning this war, isn’t it?”

“Many would think so.”

“Then you should be in there!” Entrapta firmly nodded.

“And what about you?” So far, Entrapta had been with the other Etherians in every meeting.

“Oh…” Entrapta grinned. A little sheepishly. “I got bored with all the politics.” She sighed. “No one was talking about technology in detail. I’d rather do some science, but my friends said I can’t do any experiments here. And my science buddy is talking politics as well. And strategy.” She craned her head to look at Sam’s laptop screen. “What are you doing?”

“Refining my report,” Sam told her.

“Oh?”

“Adding more detail and responding to some questions.” Sam checked that her current page didn’t contain anything that shouldn’t be revealed to Entrapta. Good.

“Ah.” Entrapta sighed again. “Say… is that urgent?”

“It’s important.”

“But is it urgent-important? Like, there’s nothing more important than that?” Entrapta leaned forward and tilted her head to smile at Sam.

Ah. Sam saved her work and closed the laptop. “What do you have in mind?”

“Wellll…” Entrapta grinned. “What do you think about using our scanner? We haven’t given Earth a full scan yet - still had to calibrate it, and we were busy with all the meetings and speeches, and there was so much data to collect from your media, but… Aren’t you curious about possible Naquadah deposits on Earth?”

Sam was actually curious. Very curious. But… She glanced at the door to the meeting room. She was supposed to be ready to advise the delegation.

"If they need your advice, they can call you with the radio or phone, right?" Entrapta asked with a hopeful expression.

"Yes." Sam nodded. And a scan of Earth was more important than waiting for her superiors. Officers were meant to show initiative. "They can. But I should inform the Colonel anyway." But she shouldn't interrupt him. So Sam suppressed a smile when she texted the Colonel.

Assisting Entrapta with a scan of Earth on request. Reachable over phone.

Her phone vibrated before she had stashed her laptop.

Lucky you. Don't blow up a country.

Sam smiled. "Let's go."

"Yes! It's time for science!" Entrapta pointed to the ceiling.

A car - armoured, Sam knew - took them to the airport, past several crowds of protesters separated by Swiss police officers and soldiers. The cardboard signs they were rising supported and denounced the war against the Goa'uld, LBGT rights and magic. The Swiss authorities had trouble keeping the protestors from fighting each other.

"I don't get it," Entrapta said as they passed a particularly unruly crowd. "Why are they so… why do they care so much about what other people do? We haven't done anything to them and we're not going to do anything to them."

Sam suppressed a wince. She wouldn't touch magic or gay marriage, and why some people were so adamantly against either being accepted on Earth. "Some think that by fighting the Goa'uld, we're endangering them. They think we could peacefully coexist

with them." It was foolish, but then, they didn't know the Goa'uld like Sam did.

"Ah." Entrapta nodded. "That makes more sense than what I thought."

"What did you think?"

"Well, Hordak speculated that they might be agents for the Goa'uld, hoping to be rewarded when the Goa'uld conquer Earth."

Sam sighed. "A fifth column?"

"A what?"

"That an Earth term for such… traitors." Sam sighed. "But, no, I doubt that they are motivated by this. They just… have a different opinion on what the Goa'uld are like."

"But they don't know the Goa'uld. They don't have any data to base their opinions on." Entrapta shook her head. "You've told them what the Goa'uld are like. Glimmer did it too. They should know better."

Sam sighed. "They don't trust us or you."

"Oh." Entrapta looked at the floor of the car. "Then we need to gain their trust."

"Easier said than done," Sam said.

"Oh, I'm sure the others have a few ideas!" Entrapta perked up.

Sam managed not to wince.

*****

"Look, we have to be pragmatic there. We're faced with an evil empire of body-snatching parasites bent on enslaving everyone in the galaxy. Fighting them has to take priority. We can sort out

cultural differences after we have ensured that we won't be destroyed."

Catra narrowed her eyes at the Secretary of Defense's words. The Russian and Chinese delegates nodded in agreement, she noted, though Daniel winced and O'Neill's face seemed frozen. Well, O'Neill had worn the same expression for pretty much the whole meeting so far. Which said a lot about his views since he generally was quite frank with them.

"Yes," the Russian diplomat said. "Our three countries have faced such a threat before, and if we had let ideological differences divide us, we wouldn't have won against an enemy as dangerous as those Goa'uld."

He was probably talking about the Nazis. Catra hadn't studied those in detail, but what she had heard about the biggest war in Earth's history, mainly from Daniel and from television, had been horrible. Horde Prime had destroyed planets, but he hadn't been so… She lacked the words to describe it.

"We know about your world war," Glimmer replied. "But we also know, from personal experience, that giving help to the wrong kind of person can lead to disaster." She glanced at Hordak.

Hordak actually stopped looking at the door through which Entrapta had vanished to 'do science with Sam' and turned to face the delegations. "Yes. Earning the trust of someone and their help, and then turning against them is a valid strategy."

Catra had to suppress a snicker when Glimmer scowled at him. Fortunately, Bow spoke up before the princess could blow up. "Yes," he said. "We don't want to hand over our technology to a country which might use it against us as soon as the Goa'uld are defeated. Or use to conquer Earth."

"And we can't fight together with people who think people like us are criminals," Adora added, wrapping an arm around Catra's

shoulder. “How can we trust anyone in battle like that?” She shook her head.

Catra smiled, enjoying the contact - and the expressions on the people’s faces - for a moment before she spoke up: “And I think we should turn the question around: If the war against the Goa’uld takes priority, why can’t you change your laws?”

“And we mean your laws,” Glimmer added with a glance at Daniel. “Not some order from your leader which can be taken back as soon as he or his successor wants to.”

The expression on the American’s face almost made Catra snicker out loud. The Secretary of State pressed his lips together before answering: “Changing our laws is a lengthy process. We’re a democracy; we can’t just skip the proper procedure.”

“Not even when we’re about to fight a war?” Adora frowned. “Isn’t your ‘parliament’ able to prioritise such things?”

“There are political considerations that hinder quick changes to laws.”

Both the Russians and the Chinese looked at the Americans, and the Russian diplomat said: “Homosexuality is legal in Russia.”

“By the letter of the law,” the American retorted. “It’s still considered a mental disorder, isn’t it?”

“That is an artefact which can be corrected immediately.”

The Chinese people nodded as well. “It will be adjusted in our country.”

“And that means people like us would enjoy the full rights like everyone else?” Adora asked.

“There is the matter of gay marriage,” the American said. “No country on Earth has legalised that yet. The hurdles for that are quite substantial.”

Catra glanced at Daniel, who was frowning and looked like he wanted to speak up but controlled himself. That told her enough. "You mean you don't want to do it."

"Russia can do it."

"As can China."

The American frowned openly. "And can you guarantee that your countries won't just reverse that at the earliest opportunity?"

"Can you guarantee the same?" The Russian shot back.

And O'Neill muttered something under his breath that sounded like a curse to Catra's twitching ears.

"Colonel?" Glimmer looked at him.

O'Neill tilted his head. "I'm here for military advice. Politics isn't my field of experience."

Daniel mouthed something to the Colonel.

"I'm just thinking that if we can't trust each other to play ball, this will be a rather short war," O'Neill said.

"But that's the question." Glimmer nodded. "Can we trust you? Can we trust you not to use our technology to conquer other countries?"

The Secretary of Defense shook his head. "Historically, all our countries have conquered foreign territory. But the United States, unlike others, hasn't done so in a hundred years."

"Russia has let the conquered countries go," the Russian claimed. "We didn't conquer any territory since the USSR was dissolved."

"China has not taken any foreign territory; we merely took back formerly Chinese territory."

"That's a matter of debate," the American said.

Catra had a pretty good idea of what that meant.

"But who can say that you won't try to colonise us? Your insistence on forcing your own customs on us is not a sign of trust," the Russian said, looking at Adora.

"We're not forcing anything on you," Adora replied. "We're just telling you the conditions under which we'll form an alliance and transfer technology. Whether or not you will accept that is up to you."

"We don't owe you anything," Glimmer added. "We want to work with you, but not at any price."

"And I am sure that there are other countries which will have an easier time with our demands," Hordak added.

That made everyone at the table opposite them frown. Well, good for them - Catra wouldn't let them play such games.

*****

"So… that happened." Jack O'Neill shook his head as he followed the Secretay of Defence and the Secretary of State out of the room.

"What happened?" Daniel asked in a low voice.

"The Etherians made it clear that they know how to play one side off against the other," Jack explained.

Daniel frowned. "But… that was clear from the beginning! I mentioned it in my report - we're dealing with sovereign rulers of their countries who have fought a lengthy war as part of an alliance. Of course they would have experience in diplomacy!"

Jack sighed. "Yes. but they're also a bunch of kids." And that made underestimating them easy. And Entrapta, who was far closer to thirty than to twenty, acted like a kid most of the time.

“I mentioned that in my report as well. They might be considered kids in the United States - actually not since all of them are over twenty years old - but they’ve been fighting for years in their war and held leadership positions for about as long. We can’t judge them according to our views.” Daniel shook his head. “I explained that!”

“Yes, you did.” The Secretary of State obviously had overheard them. “But you also mentioned that they were not familiar with our customs and policies.”

“Yes, I did.” Daniel looked confused.

Jack snorted again. “Which meant some people thought they could manipulate them.”

“Oh.”

“I would describe it as a slight miscalculation,” the Secretary of Defense cut in, slightly pouting. “Although I think the Russians and the Chinese were more surprised.”

“But they correctly calculated that the Etherians do not care as much about democracy as we do,” Daniel interjected. “That part didn’t even come up.”

Jack’s nominal superior frowned even more. “This was supposed to be a meeting about military cooperation.”

“And now we know that without gay marriage, we won’t get cooperation,” Daniel said.

“That was their opening offer,” the Secretary of State objected. “We’ve barely started negotiations.”

“Ah…” Daniel smiled in that apologising way of his that he usually used when trying to pass on bad news. “I don’t think they’ll budge on this point.”

“It’s more like a red line,” Jack agreed.

"Yes." Daniel nodded twice. "They do take politics personally, after all, and they don't see such discrimination as negotiable."

"But they have to be aware that the Russians and the Chinese will promise anything to get advanced technology, and then turn around and do whatever they want to their gay population!" The Secretary of State shook his head. "You just said that they weren't that naive!"

"They aren't naive. But they…" Daniel sighed and pushed his glasses up again. "They lack a democratic tradition. They are used to dealing with monarchs. Absolute rulers. They'll focus on them."

"Ah. So… they'll want to meet the Russian President and the Supreme Leader of the Chinese before formalising anything. Good." The Secretary of Defense stared at Jack and Daniel. "You'll need to tell them why they can't trust the Russian and the Chinese."

"But I thought we're negotiating with them to present a unified front," Daniel replied.

"We are. But that won't happen if the Russians or the Chinese can get an alliance on their own."

"Do you want us to… influence the Etherians?" Daniel sounded as if someone had told him to seduce a princess for the benefit of the country.

"Just tell them the truth about Russia and China. The Holodomor. The Great Leap Forward."

"Ah. But… that's in the past. The Etherians are big on giving second chances and people changing," Daniel retorted. "They spent years fighting a war against Hordak and Catra. Entrapta changed sides twice during the war. And yet, they're now friends." He shook his head. "Telling them about past atrocities won't do much, in my opinion."

The Secretary of Defense scoffed through clenched teeth. "Just do what you have to to stop them from blindly trusting the Russians and the Chinese. We can't let them get advanced technology first."

Unfortunately, the man was right about that - if the Chinese and the Russians got their hands on advanced technology and the United States didn't, then that would have dire consequences for the world. Even if the Etherians stepped in and stopped any attempts to force concessions from the rest of the world, that would still destroy any semblance of a balance of power, "We'll see what we can do," Jack said. "But we won't lie to them."

"Yes. Honesty is the key to reaching an agreement with them," Daniel added. "We need to trust each other, and we can't if we start with lies."

"Don't lie. But be as honest about Russia and China as you were about the United States." The Secretary nodded at them, then turned and walked away.

Daniel looked at Jack.

"Well, he got you there," Jack told him with a grin he didn't quite feel.

"Jack!"

"Sorry. But you did explain our faults at lengths, didn't you?"

"I wanted to avoid any misunderstandings!"

"Well, you tried." Jack shook his head. "Anyway, we've got our…" His phone vibrated, and he held up his hand as he pulled it out. "It's Carter."

We did a scan of Earth. Please meet us at the ship. Entrapta is calling the others.

“She wants us to come to the ship,” Jack said. That wouldn’t reassure their allies that the United States wasn’t hiding something. But Carter was aware of that. “Well, if the Etherians invite us, it would be rude to decline the invitation.”

But he had a bad feeling about this.

*****

The Naquadah Crisis Part 1

Geneva Airport, Switzerland, August 17th, 1998 (Earth Time)

"What did you find?" Adora asked as soon as she entered the converted hold where Sam and Entrapta were usually working. Had been working, she corrected herself - now that they were back on Earth, Sam would probably not be working here any more.

"Let's wait for the others," Sam said.

The others? Ah, yes. Jack and Daniel were coming too. "Sorry," Adora said. They probably were as tired of politics as she was.

"As long as they hurry," Catra added, stretching her arms over her head.

"Catra!" Glimmer snapped.

"What?" Catra frowned. "Wait, you're right. The longer they take, the longer we have before we have to talk to those idiots from Russia, China nad the USA again."

"They aren't idiots," Adora corrected her.

"Could've fooled me. They were practically backstabbing each other at the table," Catra retorted.

"Well…" Adora trailed off. They had acted like that, hadn't they?

"That's normal. Remember the first Alliance meetings we attended?" Glimmer smiled at Bow, who nodded with a wry smile.

Well, it wasn't normal for Adora. She shook her head. "We really need to…"

But before she could finish, a beep announced that Jack and Daniel had arrived. Well, it could be anyone, actually, but the codes checked out. And she could see them on the cameras.

A minute later - because they wouldn't open the airlock remotely without personally checking - they were back in the hold.

"So, Captain, what did you find?" Jack asked right away. Was he mad about the meeting? He had seemed annoyed, but had that been aimed at Adora and her friends - or at the others?

Sam looked at Entrapta, who had been twitching a little - and her hair had been twitching a lot - since Adora had arrived. "I think Entrapta could fill you in best, Sir."

"Yes!" Entapta blurted out with a wide - very wide - smile. "We ran the magic scanner, calibrated for Naquadah, over all of Earth! We had to tweak the detector algorithm a little to compensate for the presence of the escorts and the planetary mantle in the way - it would've been easier if we could've done this from orbit, even geostationary orbit, but Sam said taking off might cause some trouble, and asking for permission felt rather weird if we could easily tweak the scanner instead of bothering the Swiss, so, anyway: We ran the scanner, and we found Naquadah!"

"You found a Naqadah deposit?" Jack asked.

"Ah… no." Entrapta shook her head, her hair flailing. "It looks too dense - too concentrated for that. And there's not enough for a deposit unless it was almost completely mined out."

"We think we found artefacts of advanced technology on Earth, Colonel," Sam said.

"Yes! And we marked their positions!" Entrapta's hair tendrils pushed a few buttons, and a hologram appeared in the middle of the room, showing earth. Blinking lights were visible in a few spots.

“That’s… Washington, near Seattle,” Daniel said. “And the coast before New Jersey.”

“And Siberia,” Jack added. “And Honduras.”

“And Egypt!” Daniel tilted his head. “Well, that was to be expected, actually, since the Stargate was originally there. There must be many lost devices or trash containing Naquadah.”

“Well, the biggest and most diverse amount of Naquadah is in… Washington, you said?” Entrapta cocked her head and had her hair point at the location. “The other locations don’t have a lot, although the one in Egypt is a little fuzzy.”

“Fuzzy?” Jack raised his eyebrows.

“The Scanner detected some interference. It might be the result of micro-contamination with Naquadah,” Sam told him. “That would hinder detection.”

“Like chaff?”

“Not exactly,” Sam said.

“But close enough?” Jack grinned.

Sam looked a little pained. “Yes, Sir.”

“So… we have a cache of Naquadah devices on US soil,” Jack said. “And another load in US territorial waters.”

“Actually, no, Sir - it’s outside US territorial waters,” Sam said. “I checked.”

“Great. More international trouble.” Jack sighed.

“How sad.” Catra flashed her fangs when Jack glared at her, and Adora sighed. Her love sometimes - OK, a lot of times - was a little too… antagonistic.

Adora cleared her throat. “Given the potential threat those things represent, I think they need to be recovered quickly.”

“Yesssss.” Jack nodded, drawing out the word. “It’s the manner of how they should be recovered that’s going to pose some problems.”

“You mean the United States can’t just grab most of it,” Glimmer said.

“That’s about it, yes.” Jack grinned at Adora’s friend.

“We need to tell the Egyptians. They need to know that they might have dangerous relics in their country,” Daniel said.

“And what if they become a danger once they recover them?” Jack looked at his friend.

“A greater danger than the United States?” Catra asked.

“The United States are more trustworthy than Egypt,” Jack argued. “We’ve been the most powerful country for decades, and even with advanced technology, we didn’t go after other countries. Not without good reasons,” he added when Daniel opened his mouth.

Adora frowned. That sounded… loaded.

“Sure you would say that,” Catra grinned again.

“Are you accusing me of lying?” Jack retorted.

“Is it lying if you leave out information that might make your country look bad?” Catra’s grin turned very toothy.

“We didn’t,” Daniel cut in. “Not deliberately, at least. We - that is, I - actually covered the United States more than the rest of the world. But maybe we should explain a few things about the other countries.”

Adora nodded. They wouldn't want to make a mistake if they could avoid it. And she trusted Daniel not to lie to them. "Yes, please. We need to deal with those… whatever they are, and we need information for that."

"Data!" Entrapta chimed in.

Catra sighed, but Glimmer and Bow nodded, and Daniel pushed his glasses up.

"Alright. Let's start with Russia! The country's an old one, but it went through a lot of changes this century. First…"

*****

"...and the Chinese state has been cracking down on the movement ever since."

Samantha Carter nodded as Daniel trailed off. It had been quite a decent summary of the history of Russia and China. Not as succinct as may have been possible, but not as meandering as she had feared either.

But it had clearly disturbed the Etherians. Adora was shaking her head. "To think people could do such things!"

"Horde Prime did worse," Glimmer pointed out with a frown.

"He was… well, we already knew after we learned about the Goa'uld that he wasn't as unique as we thought," Bow told her.

"And he was more efficient," Hordak commented.

"'Efficient'?" The Colonel narrowed his eyes, Sam noticed - and he sounded slightly tense.

"Yes." Hordak nodded. "He dealt much more swiftly with, ah, dissenters. Resistance. He wouldn't have let things be dragged out like this."

“Wow. What a great guy.” The Colonel scoffed.

The alien frowned for a moment, looking puzzled as far as Sam could tell, before nodding in agreement. “He was great, yes. Terrible and cruel, but no one can deny that he was great.”

“Too bad we can’t get an autograph from him any more,” the Colonel added, baring his teeth.

“Jack!” Daniel gasped.

“Colonel!” Sam said in a lower voice as the Etherians stared at either Hordak or the Colonel or both.

“Horde Prime was a monster,” Glimmer hissed.

“A great monster,” Entrapta agreed, patting Hordak’s arm.

“And he’s dead,” Catra said, rolling her eyes. Her tail was twitching, though. “So, can we focus on the Naquadah stuff we need to recover? Instead of on ancient history?”

“Well… it’s not exactly ancient history,” Daniel said. “Those events happened a few years ago or are happening now.”

“And you told us that, so we’ll stop negotiating with the Russians and the Chinese,” Catra said with a sneer.

Daniel blushed a little. “That’s what some people hope will happen. But I told you this so you can make an informed decision. Or, at least, so you will not blindly trust any claims made to you.”

“They will claim anything so they can get your technology,” the Colonel added.

“They’re not the only ones,” Glimmer replied.

“No. But we’ve been pretty honest with you.” The Colonel smiled, then sighed. “I know my country isn’t perfect - no country is - but

we don’t claim that we can simply change a law, and everything is fine.”

Catra snorted. “No. You claim you can’t even change a law.”

“Ah, there are good reasons to make changing a law - or the constitution - not too easy,” Daniel cut in. He adjusted his glasses. “You don’t want to change either on a whim. And you generally want to have broad support for such a change, not a minimal majority. In a democracy, I mean. But even in a kingdom, you wouldn’t want to live where the rules and laws change too easily. People need stability in their lives.”

“Yes. But people don’t need discrimination,” Glimmer retorted. “How can we trust your country when the majority of your people won’t end discrimination?”

Daniel winced. “It’s a bit more complicated than that. It’s not the majority of the people, but the majority of the representatives and the senators - the qualified majority, for amendments to the constitution.”

“But they are supposed to represent the people.” Glimmer frowned.

“Yes, but that doesn’t mean that they are supposed to just do whatever the population wants.”

“I thought that was the point of democracy,” Adora said. She looked honestly confused.

“The founders of the United States didn’t want what they deemed ‘mob rule’, so they created a system where power was divided between several institutions. And the people get to choose who represents them in those institutions. But they don’t get to directly make decisions,” Daniel explained.

“So… basically, you pick your council of princesses and hope for the best,” Catra said. “And then you wonder why nothing good comes of such a council.”

“Catra!”

“What?” Catra turned to pout at Adora. “I know how the Alliance leadership worked. Or didn’t work. Glimmer complained about it often enough when she had some drinks.”

Hordak nodded. “Glimmer’s talent for leading the alliance was most impressive given the circumstances.”

Glimmer looked, in Sam’s opinion, as if she didn’t know whether she should be angry or flattered upon hearing that.

She picked angry and spat: “Everyone did their best.” Then she turned to glare at the Colonel and Daniel. “And I don’t understand why you think it’s difficult to stop discriminating people like us. We don’t hurt you at all. It should be a no-brainer to adjust your laws and form an alliance. You have nothing to lose and everything to gain!”

“Well, it’s complicated,” Daniel said. “Many people honestly believe that relationships like yours are wrong. And they don’t want to let others do what they consider a mistake or a sin.”

“Those people are idiots,” Catra spat with a hiss. “And you’re idiots if you listen to them.”

“Many people think all politicians are idiots,” the Colonel said with a grin.

“You’re not exactly convincing us of the values of democracy,” Glimmer commented.

*****

Catra shook her head. This discussion again! Couldn’t they just admit that it wasn’t working as well as they claimed?

“The advantage of democracy is the ability to change governments peacefully and in an organised fashion which

ensures continuity and stability along with the capability to adapt to changing circumstances," Daniel said.

"I'm not seeing much of that vaunted ability to adapt right now." Catra snorted. "And leadership doesn't mean simply going along with what your troops want. It means making them do what they need to do no matter what they want." Troops rarely had the big picture. Of course, she had sometimes missed the big picture herself - in quite spectacular fashion…

"But we're not talking about military leadership," Daniel protested.

"We're talking about an alliance for the war against the Goa'uld," Catra told him. "That's a military question."

"But gay marriage is not a military question," O'Neill retorted.

"Your policy of dismissing gay soldiers is a military matter, though," Adora pointed out.

"And that can be changed by the president." O'Neill held up his hands. "We want to do the right thing, but it's not as easy. But once we do something, it sticks."

"And if you do the wrong thing?" Adora asked.

"Well, Churchill once said that the USA will try every wrong solution before they use the right one," Daniel commented, then winced when O'Neill glared at him. "But unlike other countries, change supported by the population is generally far more effective. Just changing a law means nothing if the population ignores the changes and opposes its enforcement."

"But if the reason you can't change the law is that the population doesn't support it, then that's even worse." Glimmer shook her head. "Like with slavery and those civil rights."

"That was mostly in the south," O'Neill said. "Things were different in the other parts of the country."

“And that was a result of the federal nature of the country,” Daniel said. “As with many things, federalism had good and bad consequences. If a ruler has absolute power, that can lead to many good things - if the ruler is good and wise. But if they aren’t, if they are foolish or evil, then the same system can lead to horrible results.”

Catra rolled her eyes. “Yeah, yeah. But that still doesn’t change that your country wouldn’t accept our relationship.”

Daniel produced a weak smile. “Well, the relationship isn’t illegal. Just gay marriage isn’t recognised.”

“Even though it’s recognised on Etheria?” Glimmer shook her head. “If you won’t recognise our institutions, an alliance won’t work.”

“Whether the United States legalises gay marriage or not doesn’t really change your relationship,” O’Neill cut in. “What about polygamy? Multiple marriages,” he added. “What if there’s one man married to multiple women?”

Catra frowned. “What about it?” Lonnie, Kyle and Rogelio hadn’t married yet, but it was on the table as far as Catra knew.

O’Neill stared at her, then mumbled: “Figures…”

Daniel cleared his head. “In any case, I think the most important aspect is whether or not a change is both enforced and lasting. And history is full of examples where a change imposed on a population took years or decades to become accepted.”

Catra snorted. “If you can’t enforce your orders, you’re not a leader.”

Glimmer glanced at her, then looked at SG-1. “But that’s the thing, right? Your population doesn’t want this change.”

“Well, that’s not certain,” Daniel said. “So far, the question of gay marriage has never been coupled with something like an alliance

or technological advances. Although, while this should influence acceptance positively even amongst religious people - to paraphrase Berthold Brecht, people prioritise wealth over morals - some might resent that, feeling forced."

"Oh, those poor people, being forced to stop discriminating people like us!" Glimmer scoffed. "How do you expect an alliance to work if you can't even treat us like everyone else?"

"Well, it worked with Saudi Arabia and Kuwait in the Gulf War," O'Neill said. "Tolerance goes up on both sides if you need each other."

"Within limits," Carter added. "Female soldiers were tolerated, but not accepted." She seemed about to add something but stopped herself.

"Well, then I guess we'll see how badly your country wants this alliance." Glimmer shook her head.

Catra snorted. "So, let's go back to the Naquadah items."

"Yes!" Entrapta nodded several times. "We need to examine them - they could be anything!"

"That's a little difficult," Daniel said. "Not all of them are in areas we can reach."

"Well, we could, but the diplomats would be angry with us," O'Neill added.

Catra shook her head. She didn't really miss the Horde, just… sometimes, she really missed being able to give orders or do something without having to ask everyone else if it was OK.

"And there's the question of precedent even for the items in Seattle," Daniel said. "If we just grab those, other countries will consider artefacts on their soil theirs to do with as they please. And there are a lot of artefacts in Egypt, it seems, one in Russia, one in Honduras…"

"Great," O'Neill muttered. "We have to pass this up the chain before we can do anything."

Well, at least someone else has the same problem, Catra thought.

"Can't we secure the artefacts and then sort out who gets them?" Adora asked. "Some of them might be dangerous. What if there's a Goa'uld on Earth?"

That question had everyone wincing.

*****

"Yes, Sir. There's a possibility that we're facing a Goa'uld on Earth," Jack O'Neill said, nodding at the large screen on the bridge of Darla, where General Hammond and Teal'c were looking at him. "The concentrations of Naquadah Captain Carter and Princess Entrapta have detected could easily include a snake." And his gut told him that this was probably the case. No matter what Carter said about probabilities.

"They could just be collections of artefacts," Teal'c pointed out. "Remains from before Ra left."

"Yes. But then, who collected them? Who brought so much Naquadah to Seattle? It wasn't Starbucks trying to create an Egyptian Latte." On the other hand, if it turned out that Starbucks was a vehicle for an alien infiltration, that would explain why that franchise had spread so far despite their horrible prices…

Hammond slowly nodded with a sigh. "And even if there's no Goa'uld present, we can't risk such a collection of advanced technology falling into the wrong hands."

"Unless it already has," Jack reminded his commanding officer. "We need to recover those artefacts. And it has to be done by someone with the experience to handle whatever might be hiding there." SG-1, in other words. And probably the Etherians.

“That will be difficult in the current situation, Colonel.” Hammond looked grim. “Washington was quite clear that we need to regain the trust of our allies at almost any cost. Unilaterally recovering alien technology from foreign countries would destroy what headway we made in that area.” He shook his head. “Even recovering the technology on US soil will be a delicate affair.”

“But we can’t ignore the danger a Goa’uld hiding on earth would present!” Daniel protested. “Or their technology.”

“Yes.” Hammond smiled wryly. “I’ll take it up with my superiors. You will probably be called to brief the President soon, Colonel.”

“Yes, Sir.” Jack nodded. That was likely. He wasn’t looking forward to it, though. He wanted to go out and recover the Goa’uld technology. Do something productive, for once - discussing politics with the Etherians wasn’t helping anyone.

“Hammond out.”

The image faded to black. “Well, let’s tell our friends that we’ve made the call,” Jack said. Not that he thought he had to tell them - this was their ship, after all. Hell, the way Entrapta talked to and about the ship, the ship might have told the Etherians already.

But appearances had to be upheld. Jack walked to the door and found Catra and Adora waiting outside. “Done already?” the catwoman asked.

Jack shrugged. “It’s out of my hands now. Up to diplomats.”

She scoffed. “And now we wait until they figure out how to do anything without ruffling any feathers?”

“Pretty much, yes.” Jack grinned widely. “And more politics!”

“That’s Glimmer’s job.” Catra scoffed again.

“Oh, you’ve been quite active in the meetings yourself, haven’t you?” Jack cocked his head.

She scowled at him, which made him grin more widely.

Adora cleared her throat. “But Catra is correct - we can’t just let this go on. The risk is too great.”

“Yes,” Daniel agreed. “Your arrival has changed the entire world and might prompt whoever controls those artefacts into action.”

Adora nodded. “And that means that we need to act.” She raised her chin. “And if we need an international agreement on this, then let’s get one right away!”

“From the United Nations?” Jack snorted. “We’ll be here for a year before they agree on who gets to speak first. And that won’t do anything, anyway.” Everyone knew UN resolutions were generally ignored. “All it would do is to alert everyone else about this - and start a race for the Naquadah.”

But Adora looked mulish. “We’ll have to see about that. This calls for action. Even your diplomats need to see that.”

“Feel free to try,” Jack said, shrugging. “I bet we’ll get called in shortly after things go out of control. If we’re lucky.”

“Then let’s talk to the Security Council. If they can’t do anything, then we can always act ourselves,” Adora said. “After all, no matter what the UN decides, we’re fighting the Goa’uld, and so we won’t just ignore a potential base of them.”

Ah. Jack almost smiled. Almost - the threat of the Etherians going ahead and tracking down Goa’uld on Earth without the consent of the countries affected would hopefully spur the UN Security Council into action. But it would also strengthen the faction that wanted the aliens gone or feared them taking over Earth. Still, they really couldn’t ignore the potential danger.

Another fine mess, and it was all the fault of the damn snakes.

“Well, let’s go then. The sooner we sic Glimmer on the United Nations, the sooner we can move,” he said. “I bet she’ll scare

them into doing something."

"Jack! You can't talk about a reigning Queen that way!"

He chuckled at Daniel's expression. Catra outright laughed, and Adora frowned in that way of hers that told Jack that she wanted to laugh as well but thought it was wrong.

As it turned out, Glimmer was all too ready to call for an emergency session. "Oh, yes! That should speed up negotiations! Once they see our technology in action, they will know what they are missing. And those who claim that the Goa'uld aren't a threat will shut up!"

"But they'll expect to share the Goa'uld technology we recover," Bow pointed out.

Glimmer snorted. "We can hand it over to the United Nations - they'll have to agree on what to do with it before they can even start trying to use the technology."

And such an agreement, Jack knew, could take a long while.

*****

Palais des Nations, Geneva, Switzerland, August 17th, 1998 (Earth Time)

"...and that's the last area with a substantial concentration of Naqadah!"

Adora watched the Security Council as Entrapta pointed at the holoprojection floating in the middle of the room. They didn't give much away, or not much that she could tell, but she thought they were concerned. Of course, being concerned about potential enemies on your planet was just common sense, and some of the people on Earth didn't have common sense at all, so she might be seeing things that weren't there…

Glimmer cleared her throat. “As you’ve seen, there are multiple locations on Earth that could hide a Goa’uld - or more of them. They can take over humans as easily as animals, as we found out on the way to Earth when we found a planet where Goa’uld had taken over large predators. Even leaving out the danger such advanced technology represents should it fall into the wrong hands, we need to make sure that there aren’t any Goa’uld on Earth.”

A delegate - from one of the small countries which didn’t have veto power, Adora knew - tapped their microphone. “But you don’t have actual proof that one of those aliens is present on our planet, do you?”

Hadn’t they explained that already? Adora frowned. And she saw that Glimmer clenched her teeth for a moment.

But her friend controlled her temper. “No, we don’t have proof. But the only way to get proof is to investigate those locations.”

“Surely the affected countries can investigate their own soil,” the Russian delegate commented.

“With the possible exception of the United States,” Glimmer replied, “I don’t believe any country on Earth has the experience and resources to handle the worst-case scenario: A Goa’uld with access to advanced technology who has been infiltrating Earth for hundreds of years.” She shook her head. “You don’t have the technology to detect Goa’uld in the field. They could easily go into hiding - or take over your own people. We can deal with them with the least risk.”

“That would be an intrusion on the territory of sovereign countries,” a third delegate commented. Again, a minor country. “If it’s done without the consent of the country in question.”

“And it could be seen as the attempt to deprive a country of its own resources,” the first delegate added. “Surely those Naquadah artefacts belong to the country on which soil they are found -

that's a basic principle. Unless they were taken from their country of origin, of course - we all know how many works of art and historical artefacts were taken from our countries and moved into the museums of colonial powers."

Adora bit her lip. This was a threat to the entire planet! This wasn't the time to squabble over resources!

The Chinese delegate spoke up: "We're faced with a threat against our entire planet. Single countries cannot deal with such a threat. This is the responsibility of all of us and should be treated accordingly. Therefore, we propose to put all alien artefacts under international control."

Adora wondered, privately, what the Chinese would have said if there were Naquadah artefacts in China.

The Russian delegate leaned towards his own microphone. "Would that include the advanced technology already recovered by certain countries?"

"Yes, of course. The time for single countries to face the Goa'uld and endanger our entire planet has gone. We need a united response to this thread." The Chinese delegate slowly nodded.

"The United States have the most experience with the technology recovered so far," the American delegate objected. "It makes no sense and could cripple the war effort to remove the technology already being used to fight the Goa'uld. Especially in light of our success so far."

"You almost got Earth invaded twice," the Russian shot back.

"Keeping the technology recovered so far would seem to reward the United States for their questionable actions in the past," another delegate cut in.

"Trying to take over a sovereign country's research and development programs would set a precedent that I doubt most countries here would want," the American countered.

“Maybe it is time to unite such programs,” the French delegate suggested. “We cannot afford to waste our resources, and uncoordinated research by various countries would surely be less efficient than a coordinated program under international control and guidance?”

“I think the outcome of the Cold War has decisively proven that competition drives progress far more efficiently than planned directives from the state,” the American delegate pointed out.

“Your Stargate program was entirely driven and controlled by the government,” the Russian retorted. “And international control over the existing alien technology - including artefacts recovered prior to today - seems a suitable response to this threat.”

Glimmer cleared her throat. “Why are you focusing on the technology already recovered instead of the imminent threat to the planet? We first need to ensure that Earth is safe. And that means investigating and securing those Naquadah artefacts we discovered and hunting down any infiltrating Goa’uld.”

“That’s a tricky matter involving international law and can’t be easily solved,” someone pointed out.

Glimmer narrowed her eyes. “We’re in a war, and those are potential enemy bases. We cannot afford to leave them be until you have sorted out who gets to use all the technology you might find or have found. Time is of the essence.”

The delegates looked at each other. “To clarify,” another of the smaller countries’ delegates asked, “are you talking about a response by the Princess Alliance or a response by a multi-national force?”

“I am telling you that the Princess Alliance cannot afford to let potential enemy bases be. The risk is too great,” Glimmer said. “We’re at war with the Goa’uld. We want to work with you - but not if that means we can’t deal with a potential threat.”

"We have enough ships in the fleet to stop an invasion from space," Adora added. "But that won't help if the invasion already started on Earth." Well, they could bombard sites from orbit, but if the Goa'uld hid amongst humans…

This time, she could plainly see that the delegates were concerned.

She hoped that that was a good thing.

*****

Geneva Airport, Switzerland, August 18th, 1998 (Earth Time)

Samantha Carter suppressed a yawn as she entered Darla's hold. It was early, and she hadn't had too much sleep. And she was still affected by the jetlag to some degree. But she had no time to sleep in - not with the current crisis brewing. She had had to brief the President and his cabinet until midnight, and it was barely six in the morning.

She took a sip from her coffee - the situation wasn't nearly dire enough to brave Entrapta's 'concentrated tiny tea' and walked over to the scanner. "Good morning."

"Sam!" Entrapta whipped her head around to smile at her. "You're here early!" She blinked. "I think?"

"I'm just a few minutes early," Sam corrected her. "Any changes during the night?"

"Well… the position of some of the artefacts in your country changed a little. Not by very much, but either they were moving around a bit - say, a few dozen metres, tops - or the scanner needs some adjusting," Entrapta said, cocking her head. Her goggles hid her eyes, but Sam knew the princess well enough to know they would be showing the woman's fatigue.

But this was alarming. That looked like someone was carrying the Naqadah concentrations around. "Did you check the calibration?" Sam asked.

"All night," Entrapta replied. "I think I improved the efficiency, but the results didn't change. Well, they kept changing, but that didn't change. You know what I mean."

"Yes." As Sam knew that Entrapta needed to rest. What was Hordak thinking, letting her work like this? And, speaking of… "Where's Hordak?"

"Oh, he has been working on ways to recover the Naquadah under the sea. He said we might need a specialised vessel or a bot," Entrapta replied. "I wanted to help, but then the scanner started showing movement, so I took over here and left him to his work." Her hair pointed to the door leading into the next part of the hold.

Sam glanced at it. "The United States Navy has submarines and trained divers," she pointed out. The artefacts weren't that deep - there was no need for a deep-submergence vehicle.

"But we need to go down there as well," Entrapta retorted. "How else can we do something if things go wrong?"

That was… well, it was the kind of argument Sam should've expected. The Etherians were very 'hands-on'. Or, a less kind interpretation, they didn't trust others to do such a mission.

Then again, Sam wouldn't trust the Navy either - they had no experience with Goa'uld or their technology. "I think the Naquadah in Seattle takes priority," she said. She finished her coffee just as her phone vibrated.

"Samantha Carter."

"Carter?" It was the Colonel. *"We've got a situation."*

Oh. "In Seattle?"

"How would you… The scanner showing movement?"

"Yes, Sir. Entrapta just informed me that the Naquadah concentrations are moving around - about a few dozen yards, tops."

He scoffed. *"Yeah, that would track. Anyway, the location was placed under surveillance - it's some resort or communal ranch or whatever. A religious community, according to the records."*

"A cult?"

"Don't let Daniel hear that," he joked. *"Anyway, we were still planning how best to approach that without tipping off a Goa'uld and without ruining our diplomatic reputation further when someone raided the resort."*

Sam closed her eyes. "The NID?"

"They claim that they have no information about any such operation."

The old 'rogue NID cell' excuse then. "What happened?"

"They got in and didn't get out. Shots were heard by the other agents in place, but no one called the police."

That was even more worrying. "We need to intervene, Sir!" SG-1 need to intervene. Before things deteriorated even further. If the Goa'uld managed to take control of NID operatives…

"Yes, we do. But we can't do it alone - not with the Security Council about to decide that this is an international affair under their control or something. And I bet that our alien friends will jump at this."

"I concur, Sir." And given the possible consequences of a Goa'uld base on American soil, having the Etherians with them was a good thing.

"So, the excuse will be that we have reports of fighting, and so we're sending in troops with the Etherians. That should shut up the complaints from other countries. And probably get the diplomats to finish their wheedling and dealing before the heat death of the Universe."

She laughed at the joke. "I'll inform them, Sir."

"Good. We're on our way to the ship. We'll be picking up Teal'c on the way."

"Yes, Sir."

He hung up, and Sam turned to Entrapta, who was staring at her with - presumably - wide eyes. "There's been an incident in Seattle," Sam told her.

"Yes!" Entrapta nodded several times. "I'll call the others. Wait! Darla! Wake up the others and get ready for liftoff! Hordak! Science-Buddy! We have a mission!"

The door from the other part of the hold opened, and Hordak stepped through. "Did they find a Goa'uld?"

"Possibly?" Entrapta pursed her lips. "Someone's in control of all that Naquadah, and they fought off an attack already. So… either a Goa'uld or someone else. But I bet it'll be interesting! And we can now go there without waiting for the Security Council!"

"Good. Any hope that we can expect similar developments in the other areas?"

"I don't know - the stuff there didn't move."

"A pity," Hordak commented.

Sam shook her head.

*****

Above Seattle, United States of America, Earth, August 17th, 1998 (Earth Time)

"Any new developments?" Catra asked as Darla closed in on the target area. It was still night here, unlike when they had taken off in Switzerland.

"The Naqadah concentrations keep moving around," Carter reported. "But none of them have strayed outside the resort."

"They were attacked…" Catra checked the clock. "...almost two hours ago. And they didn't move? Haven't they realised that they have been exposed?" This was suspicious.

"They might think this was an attempted robbery, not a government action," O'Neill said. "The NID is quite careful when staging their deniable operations. So they probably want to interrogate any prisoners for more information. In their place, I would want to know who attacked me and why before I made any plans."

"But whether there's a Goa'uld or just someone using their technology, they have to know about our arrival," Adora cut in. "Why wouldn't they expect us to come after them?"

Catra nodded. In their place, she would have been running already.

"If they don't know how they were found, they might not want to flee and give up whatever resources they have in the resort," O'Neill replied.

That was a good point. Still, the enemy should have run - now that Darla had arrived, the enemy couldn't escape any more. Catra scoffed. "Well, whatever they planned, time's just run out for them."

"Well, let's just make sure that none of them can run out on us," O'Neill said. "We've got the perimeter under surveillance, but… if

they have alien technology, they might have other options to escape."

"Scans show an extensive underground network of chambers and tunnels," Carter reported.

"Yesss!" Entrapta nodded. A lot.

Catra winced. They should've made sure that Entrapta rested instead of working through the night. With all the 'concentrated tea' she had drunk, she hadn't even been able to sleep during the flight to Denver and then here.

"So… escape tunnels?"

"It looks like it, Sir," Carter replied. "We've marked the exits on the map."

"Major Warren? We need to deploy SG-3 to cover those exits," O'Neill said, turning to the new officer on the bridge.

Catra bit her tongue to refrain from making a comment. SG-3, currently filling the hold, was under O'Neill's command. And they were supposed to work together in a 'joint operation' with them.

As long as they didn't get into their way… Catra would still feel better once the soldiers were off Darla.

"I'll brief the men, Colonel."

"There's one irregularity, Sir." Carter frowned.

"Yes?"

"There's a large tunnel not connected to the main building or any building," Carter explained. "It has an exit outside the compound, though."

"An unfinished escape tunnel?" O'Neill frowned.

“That’s a possibility, Sir. But why would they have dug so far from the outside instead of starting inside - or from both sides?” Carter asked.

“Good question,” O’Neill said, nodding. “I’d say they are stupid, but… stupid people don’t overwhelm an NID assault.”

“And we shouldn’t underestimate our enemies,” Adora added.

“Let’s just block the exit and leave it be for now,” O’Neill said.

Catra pressed her lips together. Something didn’t add up there. But O’Neill was right - sealing the exit should work.

“Yes, Sir,” Warren said.

“Good. So… how are we going to do this?” O’Neill asked.

Catra stepped closer to the hologram depicting the resort - including the escape tunnels. From what they had observed, the people inside the resort were not heavily armed. Just small arms and some crew-served light support weapons.

“We can hover above the building and drop down through the roof,” Adora said. “Right into their midst.”

Subtle as a brick, Catra thought with a fond smile. But sometimes, brute force was the best solution.

“If they have Goa’uld weapons, that might be very dangerous,” O’Neill said.

“And we can’t just blow up the resort - we don’t know how many innocent people are in there,” Daniel added.

“We’re not going to blow up the building!” Adora shook her head.

Catra bit her tongue again. And Hordak looked confused but, for once, didn’t comment.

“Well, we could sneak in,” Bow suggested. “Use the tunnels that we know.”

“They are likely trapped if this is the work of a Goa’uld,” Teal’c said.

“We can deal with traps!” Entrapta announced.

“We could drop Adora outside and have her draw attention, and we sneak in and hit them from behind,” Glimmer proposed.

“I can handle them, yes,” Adora said.

Catra sighed through clenched teeth. She loved the idiot, but sometimes… But it was a better plan than dropping into the middle of the compound. “Well, we should look into…” She trailed off.

All the Naquadah markers were suddenly moving - spreading out.

And people ran out of the buildings, towards the garage - and the gates.

“We need to move in now!” O’Neill barked.

*****

The Naquadah Crisis Part 2

Above Seattle, United States of America, Earth, August 17th, 1998 (Earth Time)

Jack O'Neill clenched his teeth. They had to move quickly before whoever or whatever was in this compound scattered - tracking down dozens of potential Goa'uld hosts would be a nightmare even with the scanner. If they got into Seattle or another city…

"Move in where?" Adora asked, returning to the captain's chair.

Jack turned to the holographic projection. "Zoom out."

"Show us the road network," Catra added.

The projection changed, becoming a 3D view of the entire area around the compound. "We need to block the main routes - we can track down any stragglers on foot later." He looked at the agents in place and made a snap decision. "Major Warren, deploy SG-3 here, here and here." He tapped the locations. "Spread out to shield Seattle. Go!"

"Yes, Sir." Warren finished marking the spots and rushed out of the bridge to brief his men.

Jack turned to his team. "Carter. Tell the agents in place to fall back to… this crossing here. Cover the tunnel exits in range."

"Yes, Sir." She tapped her radio and started talking in a low voice.

"If they're bolting, we should expect a trap or self-destruct in the building," Catra said. Jack could hear the 'it's what I would do' she left unsaid.

"Yes," Hordak said, nodding. "Depriving the enemy of your resources is a sound strategy."

“I’ll bow to your experience as evil warlords,” Jack said before he could help himself. Catra seemed to flinch for a moment, but that might’ve been his imagination. Hordak, though, merely nodded.

“So, let’s drop SG-3 right on their spots,” Adora said, pointing at the locations. “Then we drop down behind the main part of the runners.”

The ship was already moving - to Jack, it still felt wrong to see how the ship dived and banked, yet not feel any g-forces at all. The fighters you could construct with such technology…

“We’re at the first SG-3 drop zone! Disembarking troops!” Adora announced.

Jack was still staring at the spreading dots on the map. He was pretty sure there was a leader amongst them. But where would they be? If it was a Goa’uld, they wouldn’t be with the main force headed towards Seattle. They would use the distraction to escape in another direction. Unless they were planning a double-bluff.

“We’re at the second drop spot!”

More troops from SG-3 charged out of the ship. And one small group of dots on the map was inside the main escape tunnel somehow - the one not connected to the building. How had they managed that? But those might be the leader and his entourage…

“If it’s a Goa’uld, they might be counting on taking over one of our troops,” Catra said. “We wouldn’t be able to find them easily if they’re near Goa’uld technology.”

Jack looked at her. That made… a lot of sense for one of the snakes. “Only if they know how we found them.” The NID team might not have been privy to that information. On the other hand, it didn’t take a genius to suspect scanners.

“How else would we have found them? The timing will make them suspect it.”

“Yes.” Jack looked at the map again. “And that means you’re right - they will attempt to hide amongst us.” he looked at Carter. “Captain, inform Major Warren that his men have to keep a strict distance from any enemy. There is a high risk of Goa’ulds trying to take them over.”

“Yes, Sir.”

“But…” Daniel shook his head, pressing his lips together.

Jack nodded. He knew as well as his friend did that the odds of SG-3 taking many prisoners weren’t good to begin with, but this would make them even more trigger-happy. They had a number of zats, but not nearly enough for every soldier.

“We’re at the third drop spot!”

The remaining members of SG-3 rushed out, Warren waving at the ship as she lifted off again.

“Take the main force in the flank and roll them up?” Adora suggested. “I can draw their fire.”

Jack hesitated - sending a girl, a young woman, ahead to draw fire went against his instincts. But She-Ra was basically a walking main battle tank. So he nodded. “Yes.”

“Darla, drop us at this spot! Then hover above the area and…” Adora turned to Entrapta. “We need you to keep track of all Naquadah in the area.”

“I can do that!” Apparently, Entrapta was still hyped on caffeine.

That would end in a nasty crash, in Jack’s experience. Unless they were magically immune or something. Or Entrapta had some alien drugs to avoid that.

It didn’t matter right now - Jack and his team rushed towards the airlock, followed by the Etherians.

“We should be covering the second group as well,” Bow said as the doors slid open, and Jack heard the sound of automatic weapons.

“We’re tracking them,” Catra said. “We shouldn’t split up.”

“Never split the party,” Jack joked as he jumped off the ramp, clenching his teeth in anticipation of the strain on his knees - and blinked when he touched the ground. He felt perfectly fine. No strain at all. Hell, he felt as good as he had in his youth. How the…? He pushed the thought away. He could ask Adora later about her healing. Time to focus on bagging a snake.

He gripped his M4 as they rushed from the ship into the closest cover - a bunch of trees near a small mound.

*****

Outside Seattle, United States of America, Earth, August 17th, 1998 (Earth Time)

Adora easily outpaced the others, taking the lead. That was her duty - she was She-Ra, Princess of Power. And with power came responsibility. The others couldn’t shrug off bullets and energy blasts. She-Ra could. She had to protect everyone else.

She jumped through the tightly-clustered cove of trees, slashing with her sword, and landed on the ground behind it, sword held out at her side. Behind her, two trees toppled to the ground, granting cover for her friends.

Something moved ahead of her, leaning out behind a tree and firing at her. Adora moved her sword, parrying most of a burst from a rifle, two bullets bouncing off her chest and shoulder. The man in white robes kept firing at her until he ran dry. As soon as he started to swap the magazine, Adora rushed forward, driving her fist into his stomach. Gently, of course - she didn’t want to kill him.

He collapsed, and she quickly checked for a pouch. But then two more opened up on her, one with a zat'nik'tel. The first shot missed her as she charged the other shooter, but the second shot hit her back - and she felt that. Like an itch under her skin.

Hissing, she knocked down the first man. Then she whirled and jumped over the next shot, landing near the shooter, and grabbed his hand before he could line up another shot. "I'll be taking that," she told him.

He tried to get his hand free, then reached for his rifle, slung over his back, with his free hand, so she slammed him into the tree behind him. One more down, and…

A long burst ripped through the tree and the man, blood splattering over her as she dove to the side out of reflex. That was a support weapon! And that could spell the end for her friends. Where was it?

She turned around. There! Cleverly hidden in a bush. She just had to…

The bush exploded. Adora jerked back, then stared. Two bodies were on the ground, thrown away by the explosion. Who had…?

Ah. Jack and the rest of SG-1 were moving on her flank. That meant she had been too slow - she was the point to draw fire and get the enemies to reveal themselves.

Adora clenched her teeth and charged ahead. They were already reaching the firefight between SG-3 and those people. She passed a dead body on the ground, knocked out another behind cover, then started to roll up the flank. One flank - this was a chaotic mess, like fighting in the Whispering Woods. It seemed the frontlines were disappearing as the white-robed people charged into melee range. And they rushed at SG-3 but weren't trying to break through.

"They really want to get close," she said. Catra had been right.

Well, that gave her an idea. She grinned as she jumped into the middle of the largest battle, driving her sword into the ground as she landed and sending the robed people sprawling. "Surrender!" she yelled.

"Get her!" someone screamed. "Get her for your God!"

All the robed people nearby rushed towards her, yelling incoherently. Some were shooting, and she deflected a few bullets and zat'nik'tel shots with her sword, but most seemed to want to punch her - or grapple her.

Adora grinned as she started knocking them out and around. The shooting had stopped as well, at least near her. One managed to grab her from behind, but an elbow into his gut sent him to the ground, retching. Another threw punches and kicks she didn't feel at all - he wouldn't have made it through Horde training like that. She grabbed his throat and squeezed gently until he passed out while she kicked a knife out of another's hand.

More shots rang out - SG-3 and SG-1 were firing - and she saw another man collapse, clutching his guts.

For a moment, the others froze. Then they howled and seemed to lose their minds. People blindly rushed forward, shooting in every direction - someone tried to bite her ankle! This was…

Someone bit her neck? She reached around and… grabbed a snake. No, a Goa'uld! She gasped as she held the squirming, hissing thing in her hand.

A Goa'uld on Earth!

"I've got a Goa'uld!" she yelled.

"Get it to us!" Jack yelled back. "Cover her!"

'Cover her'? She scoffed and jumped, then rushed away from the still howling mob. Jack and the others were… There!

A quick dash through another cove, and she slid behind the fallen tree Jack and the rest of SG-1 were using as cover, holding out her prisoner to him.

He recoiled with a grimace. “Watch it!”

“It’s not going to escape,” she assured him.

“Carter, get the snake carrier.”

“It’s a containment unit, Sir.”

“It’s meant to carry a snake to the pound. A snake carrier.”

Whatever. Adora stuffed the snake into the container and closed the lid before it could attempt to escape.

Sam quickly sealed it. “There could be more,” she said.

Before Adora could answer, an explosion shook the ground. She looked up - the resort had blown up. Parts were flying through the air.

“Watch out!” Jack yelled as everyone dived for cover.

Catra has been right about that as well, Adora thought as she stared at the flying debris and raised her sword.

*****

Samantha Carter threw herself behind the closest tree just as the shockwave arrived and was blown off slightly, hitting the ground harder than intended. She rolled with it anyway and rushed forward to hide behind the trunk. The debris launched up by the explosion would be starting to come down about now, and even a little cover was better than none, even though Sam didn’t like her chances to…

A blinding beam close by made her gasp and shield her eyes. Blinking, she realised it was Adora, sword held with both hands,

pointed at the sky above them - at the expanding cloud of dust and smoke.

At the debris starting to rain down on them.

Sam stared as the concrete and wood fragments falling towards them were vaporised in the … magic beam.

"Well, looks like Magical Princess She-Ra just saved our bacon again," the Colonel commented next to her as he slowly got up.

"I think that might be an actual title, Jack," Daniel said, still cowering behind a felled tree trunk.

"Indeed."

The Colonel tapped his radio. "SG-3, report!" He tapped the radio again. "Entrapta, any movement on the scanner?"

"Uh… none any more. The group in the tunnel stopped moving short of leaving the tunnel. And the exit is now open."

Sam pressed her lips together - if the explosion had originated underground, and the lack of a massive shockwave indicated that, and someone had been in the tunnels there…

"Fried Goa'uld, anyone?" the Colonel asked.

Before Sam could react, SG-3's report came in. One dead, two wounded, two stunned.

"Jack! We'll have to check everyone for Goa'uld possession!"

Sam almost expected the Colonel to make a joke about them now being in possession of a Goa'uld, but the Colonel just nodded. And she berated herself, briefly, for thinking of such a cruel joke - Daniel's wife was still a Goa'uld host.

"Everyone OK? I can heal!" Adora looked around.

“We’ve got two wounded, and I think the cultists need some healing,” the Colonel replied.

Those who hadn’t been killed already.

“On it!”

Sam opened a channel to Entrapta. “We need a map of all Naquadah concentrations.” If there were more Goa’uld around, and if they started to go after people who weren’t as tough as She-Ra…

“Teal’c! Start collecting the zat’nik’tels!” The Colonel must have had the same thought. Teal’c was the obvious choice to collect the weapons - he could repel an attempt to possess him thanks to his superhuman reflexes.

Adora went towards SG-3, but Catra went after her. “Adora! What were you thinking?”

“What?”

“You were almost possessed by a Goa’uld!”

“It couldn’t even dent my skin!”

Sam shook her head. Adora in She-Ra form was… Apparently, she had shrugged off bullets from an M2 Browning heavy machine gun.

But they had a mission to do. With Entrapta’s help, she directed Teal’c to the scattered Goa’uld weapons - only zat’nik’tels, no staff weapons - while Adora healed the wounded and the Colonel and Daniel started towards the smoking ruins of the resort with the Etherians.

Then she joined the others. “I told you so,” Catra said. “Blew up the whole bunker.” She flashed her teeth. “They destroyed most of their tech rather than letting us get it.”

“Great. Wanna bet that the Russians won’t believe us?” The Colonel shook his head.

“Sir. Naquadah is resistant enough so advanced technology could’ve survived the explosion intact,” Sam pointed out. “It was a conventional explosive.” Her radiation detectors weren’t showing any reaction, at least.

“Yeah, blowing up the evil lair once the villain’s dead is kind of a convention.”

“Jack!”

“Daniel.”

“The Goa’uld might have hoped to make us think that the technology was destroyed, to return later to recover it. Much later,” she added when Daniel opened his mouth.

“Well, they won’t unless they can escape a snake carrier. But I guess we’ll have to ask Adora to play excavator again.”

That was a better and faster solution than waiting for an excavation team with both the clearance and the skill to deal with advanced technology. But to ask Adora…

“Just tell her,” Glimmer said. “Hey! Adora! We need you to dig a hole here!” she yelled.

A minute later, Adora appeared, jogging towards them. “I was just finishing healing the others,” she said.

Catra huffed, and Adora glanced at her before going on: “Entrapta didn’t find any more Naquadah than the weapons Teal’c collected. Outside the building - the ruins - at least.”

And there was Teal’c. “SG-3 is guarding the prisoners and the weapons,” he said. “But they had trouble recovering the prisoner glued to a tree.”

Bow grinned a little sheepishly. “I can use a catalyst to undo that.”

“I ripped the tree out,” Adora replied. “So… where do I need to dig?”

The other Etherians just pointed at the ruins.

Adora blinked.

“Just consider it punishment for letting a Goa’uld touch you,” Catra said. “Really! You’ve become sloppy!”

“What?”

“Enough!” Glimmer shook her head. “We need to secure whatever wasn’t destroyed by the blast.”

Sam nodded. Even if the artefacts were destroyed, the Naquadah was extremely valuable and could be extracted.

And they had to ensure that there were no other Goa’uld around. And that meant recovering and identifying every Naquadah concentration.

*****

Outside Seattle, United States of America, Earth, August 18th, 1998 (Earth Time)

“You sound like you’re enjoying yourself. Should I be concerned about being replaced by debris?” Catra flashed her fangs in a grin when Adora stopped heaving rubble and concrete remains around and blushed.

“Hey! It’s not like that!”

“So you claim. But you didn’t sound like that when you were burying the gate.”

“That was just earth, not rubble like this!” Adora retorted.

"So, I should be concerned…"

"What? No!"

"Oh, knock it off, you two! You're holding up the recovery operation!" Glimmer the spoilsport cut in. "It's already late."

"Someone's jealous…" Catra half-whistled.

As expected, that earned her a glare from Glimmer. "I'm not jealous! I just don't think we should waste any more time here. We need to recover the remaining Naquadah."

"Before it turns out to be a bomb," Bow added loyally.

That was a possibility, but Catra didn't think it was a likely one. The Goa'uld hadn't struck her as suicidal, and if he had been, the Naquadah would have probably gone off with the first explosion.

Still, they were right. "You heard them, Adora. Stop wasting time!"

"What? *I* am wasting time?" Adora stared at her.

"Yes."

"But…"

"Get shovelling!" And maybe you won't have to do too much grovelling later when we're going to talk some more about how you shouldn't let body-snatching aliens touch you, Catra added in her head.

Adora huffed and started digging again. And Catra sat down on a piece of conveniently sized and placed concrete and looked at the rest of the site. At least SG-3's men - all men, she had noted - had stopped staring openly at Adora. Some still sneaked glances, though. "Looks like your friends didn't believe you about Adora," she commented to Daniel, who was examining a burnt book nearby.

“Huh?” He blinked and turned his head, and she repeated herself with a nod towards the other American soldiers. “Oh.” He nodded. “Yes. I think they thought that we were exaggerating in our reports.” With a frown, he added: “We select Stargate Command staff for mental flexibility, but I think magical princesses were a bit too much for our marines.”

“The Horde was full of rather dull people,” Catra said, “but they wouldn’t have questioned your reports.” She stretched a little.

“But they were used to magic and princesses,” he retorted. “Our people aren’t. For most, this sounds like a fairy tale. Or a cartoon.”

Made-up stories, in other words. Or Lies. “Well, they better change views,” Catra told him. “Because we can’t really fight a war effectively if shared information isn’t trusted.”

“On the other hand,” he said, “blind obedience isn’t a good thing either. You need a balance between scepticism and trust.”

“Trust but verify?” She grinned.

“Well, you can’t really verify our reports independently, not as a soldier. They don’t have the time or opportunity.”

“Until they enter combat with us.”

“Yes. And I think you made an impression. There’ll probably be some hero-worship amongst a few of them.”

Catra shook her head. “As long as they don’t cause trouble.”

He chuckled. “Jack would say that they are marines - they will cause trouble. Especially if they’re bored.”

She sighed. “I wonder how you managed to run your army for so long with such people.”

“It worked out well - especially against enemies that prized blind loyalty and obedience.”

“Well, that…” Catra started to retort when Adora’s yell cut her off.

“I found it!”

Catra stood and began to walk over, but Entrapta was already running, Sam not too far behind. “Oh! What is it? It can’t be a Stargate, or they would have used it to flee, but it’s too big for a weapon, and… Oh! That looks fascinating!”

“It is a ring transporter,” Teal’c said, peering at the remains Adora was pointing at. “Or it was a ring transporter.”

“What? No fancy Egyptian name?” O’Neill asked.

“Well, the direct translation would be…” Daniel started to explain, but O’Neill cut him off. “Ring transporter is fine. I would hate to use more accents in my reports. “So, seen this before.”

“On Abydos,” Daniel agreed. “I wonder where this one led to.”

“A transporter? Oh! That would explain how they got into the tunnel without an opening!” Entrapta nodded. Several times. Then she yawned. “Clever!”

“But to use such a transporter for a few yards?” Daniel shook his head.

“If you have it, why wouldn’t you use it?” O’Neill shrugged. “But it’s broken.”

“But we can still study it - and find out how to copy it!” Entrapta beamed. Then she suddenly frowned. “But… can we examine it without causing trouble with the United Nations?”

That was a good question, in Catra’s opinion. “I think they’re mainly concerned about you taking it for yourselves,” she said, looking at O’Neill.

“They’re kinda insecure like that, yes,” he replied.

"Jack! We're talking international politics, not…" Daniel shook his head.

"Same thing, Daniel. They want what we have and don't want us to have more than they have." O'Neill tilted his head. "Kinda like it was in the Cold War, actually."

"The Cold War cannot be reduced to such simplified propaganda. It was much more complex, and…"

"I just did."

Catra shook her head at the men's antics. Daniel was probably right - the United Nations would want to have a say about this.

At least the presence of a Goa'uld should make most of the idiots realise how dangerous the whole situation was.

*****

Stargate Command, Colorado, August 18th, 1998 (Earth Time)

"...and we recovered the rest of the remains - both Naquadah and human - from the tunnel. It looks like the group trying to escape were all humans sent out as a distraction," Jack O'Neill said. He didn't bother to hide his scowl - according to Carter, the bomb had been triggered by the hatch of the escape tunnel opening. "The Goa'uld - named Setesh as far as we can tell - had planned to take over one of SG-3's men to hide amongst them."

"Do you have any proof for that?" General Hammond asked.

"The tactics, Sir," Jack replied at once. "He sent his guards against SG-3 to 'wipe out the enemies of their god', not to break through their lines to escape. And they were ordered to do so in melee range, not by using the prepared positions and ambushes on their land. His orders all but guaranteed that they would be wiped out."

"They fought from prepared positions, though."

"Only at the beginning, and then only with the heavy machine guns," Jack retorted. "Those wouldn't have been easy to move ahead."

"But as soon as he would have taken over a soldier, he would have been at risk from his own people," Hammond pointed out.

"Yes. But I think Setesh took a calculated risk." The Goa'uld was a bastard but no coward.

Hammond didn't seem to be convinced. "What about the survivors?"

"They're fanatics. And those who were taken alive tried to kill themselves for 'failing their god'." And they only had been able to take some of the cultists alive thanks to zats and, of course, She-Ra. "It looks like a cult problem. I guess we'll have to call in specialists. At least we can do that now without worrying too much about secrecy."

Hammond frowned. "We're still dealing with sensitive information here. But our pool of available specialists was widened by the revelation of the Stargate."

"They might also have been drugged, Sir," Carter cut in. "When we were running tests for poison, we detected an unidentified foreign substance in their blood."

"Yeah. Our local West Coast god pulled all the tricks of his human competitors," Jack said. Drugs, sex and what a Goa'uld thought was rock'n'roll.

"He might have actually been the inventor of some of those 'tricks'," Daniel said. "I've been looking into this, and I think I have identified two earlier cults ran by the Goa'uld. Both ended in mass suicides. If you can call it a suicide when a leader orders his brainwashed followers to die." He patted a stack of sheets on the table. "I'm working on a timeline, but I suspect that the Goa'uld was on Earth since Ra's departure - the names he used point towards that."

“We’ve had a Goa’uld on Earth for millennia, and he didn’t take over?” Hammond asked.

“He must have been afraid of Ra,” Daniel replied, “and kept a low profile. I assume we can get more information once we manage to interrogate him.”

“Yes. Your suggestion of granting the Goa’uld an animal as host so they can write or use a computer to communicate.” Hammond nodded. “It hasn’t been approved yet.”

“Why not?” Jack asked with a frown. “Did PETA veto it? Or did the Etherians mention that monkeys have rights on their planet?”

“No, Colonel. But the government is concerned about security and the optics of having a Goa’uld possess a monkey.” Hammond explained. Or not.

“They think we’d let a monkey escape? Do they think this is Disneyland?” Jack shook his head.

“‘Optics’, General?” Daniel asked. “Are they worried that people will have sympathies for the Goa’uld if it’s in a monkey’s body?”

“In a word, yes, Dr Jackson.” Hammond grimaced. “They’re worried that showing a small fuzzy animal using a computer will send the wrong message about the danger the Goa’uld present to Earth and humanity. And yes, some members of the cabinet voiced concerns about the public perception of sacrificing an ‘innocent animal’ to the alien invaders.”

Jack groaned. “Can’t we just pick an ugly animal then?”

“You would be surprised how many people would still care.” Hammond sighed.

“Are you talking about your granddaughters, General?” Carter asked.

"They wanted a pot-bellied pig after the last nature documentary they watched," Hammond said. "And they refused to eat meat for a week."

Jack groaned again. Since when did the government care about the opinions of little children? Would they ban broccoli at schools next?

"What about the international reactions, Sir?" Carter asked.

Hammon sighed once more. That was a bad sign. "As expected, the Security Council is moving to claim control over all technology we recovered. But some states also suspect that we didn't report everything we found, citing the lack of international observers. And some even suspect that this was staged to improve our position and image."

Great. "And what about Russia and China?" Jack asked.

"They haven't made their position known so far, except for supporting international control over alien technology." Hammond smiled a little weakly. "Pressure on Egypt and Honduras is increasing, and they haven't had access to the results from the scan Captain Carter and Princess Entrapta did, but that hasn't stopped either country from having their armed forces search for advanced technology."

Jack sighed himself. The Etherians would just love this.

*****

Palais des Nations, Geneva, Switzerland, August 18th, 1998 (Earth Time)

"You think this is a hoax?" Adora blurted out. She winced a little at the glance Glimmer stent towards her. Her friend was supposed to handle this, but Adora hadn't managed to control herself. "Twenty people died! And you think this was a hoax?" she spat.

The delegate from a minor country shook her head. "I merely pointed out how convenient this whole incident was. The Security Council is debating an unprecedented infraction against every nation's sovereignty, and suddenly, there's an emergency that would seem to demonstrate the urgency that was put in doubt by cooler heads?"

"We captured a Goa'uld who had been hiding on Earth for centuries!" Adora retorted. "And we secured a lot of their technology! Weapons technology!"

"So you claim," the woman said. "So far, there has been no proof presented to us."

"And the technology was secured by the United States," the Russian delegate added.

"Because the incident happened on our soil and the Security Council hasn't made any decision yet about the status of alien technology recovered on Earth," the American delegate said.

"How convenient for you." The Russian sneered for a moment.

"As if you're not already looking for the artefact in Siberia," the American shot back.

"It's really like an Alliance meeting in the bad old days," Adora heard Glimmer mutter. Then her friend cleared her throat. "We have records of the battle. And we took a count of all the technology secured by us."

"By you? Do you include yourself in the American forces now?" Another delegate asked.

"It was a joint-force action," Glimmer told him. "The Princess Alliance isn't beholden to anyone but will work with anyone against the Goa'uld."

The Chinese delegate spoke up: "But the fact that the United States secured this technology raises some concerns about the

sincerity of their stated willingness to cooperate with the rest of the world."

"So far, the rest of the world hasn't even been able to agree on a course of action," the American retorted.

"And the longer we wait, the greater the danger - we don't know what is hidden at the other locations," Glimmer said. "If there's another Goa'uld active on Earth, then they might have already infiltrated a local government."

"Is that going to be your excuse for violating a nation's sovereignty? A supposed threat of being controlled by an alien parasite?" Another of the smaller country's delegates asked with a scowl.

Glimmer frowned in return. "No. The only excuse we need to intervene is the fact that Goa'uld technology could indicate a Goa'uld base or operation."

They really didn't like hearing that, Adora saw.

"If it's so urgent, why haven't you told Honduras and Egypt the exact locations of the technology you detected inside their territories?"

"Because they have neither the experience nor the technology to handle the kind of threats that the Goa'uld represent," Glimmer said.

"Which you should know if you'd read our report!" Adora added. She had spent hours writing it! Daniel was right - it was very annoying if you wrote a report and no one read it.

"Anyone can claim anything in a report. We need actual proof. Show us this 'Goa'uld'!"

Several delegates nodded at that - not just the smaller countries.

“And the technology!” another delegate added. “We need to see if there’s any truth to this supposed danger.”

“Fine!” Glimmer spat. “We’ll show you the technology and the Goa’uld.”

“And I think we should talk to the Goa’uld,” the Chinese delegate added.

“The Goa’uld cannot talk unless they control a human body,” Adora pointed out.

“Then get a volunteer. We can secure the body so they cannot escape.”

“We haven’t found a safe way to remove a Goa’uld from a human host yet,” Entrapta said, looking up from her computer. “They can excrete a poison that kills the host when they’re removed. We’re looking into ways to bypass that, but we’ve just started.”

The Chinese delegate frowned. “What about using a condemned criminal?”

Adora gasped. They wanted to…kill a person for this? Or just… leave the person a prisoner in their own body?

Other delegates were shocked as well.

“You can’t be serious!”

“That’s barbaric!”

“This goes against everything we stand for!”

But the Chinese delegate stood his ground. “Barbaric? I’ll remind you that the death penalty is legal in the United States. There’s nothing barbaric about this - someone about to be executed might even volunteer for this.”

“That’s… no civilised country could condone this!” another delegate objected.

Hordak nodded - Adora saw he was tenser than normal. “It would be torture for the person, and I’ve been told that torture is outlawed on Earth.”

‘Cruel and unusual punishment’, Daniel had called it on the flight back to Colorado.

“Yes. We could use an animal as a host, I guess,” Entrapata added. She had finally slept on the flight back, but Adora was still concerned about her. She would have to make sure that her friend got a full night’s sleep after this.

“An animal?”

“Yes. Like an ape - they are close to humans. He wouldn’t be able to speak, but they could use a keyboard,” Entrapta explained.

“We would be interrogating an ape?” the Chinese delegate seemed to be surprised.

“The optics of that would be… questionable,” another delegate said.

“Many apes are an endangered species,” another objected.

“One more or less won’t doom a species.”

“Cruelty to animals isn’t a good thing either.”

“That the West cares more about animals than the people living in the developing countries is well-known.”

“Now wait a minute! This isn’t about animal rights!”

“Indeed. It’s about human rights - and nations’ rights!”

Adora blinked as another pointless argument started. “We should just have gone straight to the other locations,” she muttered.

*****

Stargate Command, Colorado, August 19th, 1998 (Earth Time)

"Why didn't we land the spaceship yet? We already have dozens of those zat'nik'tels!"

Samantha Carter pressed her lips together - facing away from Dr Davis so the scientist wouldn't notice. They had gone over this already. "General Hammond explained that landing a working faster-than-light spaceship under our control in the United States has been deemed to be ill-advised in the current political situation," she reminded him.

"But we're scientists, not politicians!"

Sam didn't have to turn to know the man was pouting. "Which means we leave international politics to the experts and listen to them when it concerns their field." Even though the politicians might not always listen to scientists when it concerned science.

"But this doesn't concern them! The ship is ours! The Etherians agreed! And it wasn't recovered on any foreign soil but in space! There's no other claim on it!"

Sam had been there when the ship had been recovered. She sighed, not bothering to hide her annoyance any longer, and turned to stare at Davis - who seemed surprised at her reaction. "That is a matter of debate," she told him. "There's substantial support in the United Nations to internationalise the entire Stargate Command."

"But that's just posturing! We'll just veto whatever resolution they come up with! That's how the UN works! Why do we let them keep us from working on an actual spaceship?"

Sam was tempted to call Daniel to explain things to Davis. Even if Davis was ignoring facts outside his expertise, Daniel might be able to talk until Davis agreed with him just to be able to get back

to work. But Daniel was needed in the examination and possible interrogation of the Goa'uld they had captured.

She should have volunteered to assist there, Sam realised, instead of examining the recovered technology. On the other hand, if that had left Davis in charge, they might end up missing something crucial. The man had the needed clearance for work at Stargate Command, but he wasn't ready to take such responsibility. She almost snorted at the thought that this must have been how Russian scientists had felt when working with 'politically reliable' 'colleagues' instead of the best experts in the field.

"That was how it worked before the arrival of aliens," she reminded Davis. "Things changed. The United States can't afford to act unilaterally right now." Perhaps never again, depending on how things might develop.

"But… the law's clear! We can veto anything the United Nations decide! Anything substantial, at least!"

"This isn't a matter of law, but politics," Sam explained as she put the zat'nik'tel she had been examining down on the table. "And if the United States would act as you suggest, the political and economic consequences would be harsh." Daniel had gone on about that a length after a joke by the Colonel. "In the current crisis, the country cannot afford that."

"But we've got a spaceship! If we figure out how to build more of them, we don't need anyone else - we can colonise space! Boldly go where no one has gone before! And with the second Stargate we have, we could just pick a planet and establish a private network!"

That wasn't how it worked - well, they could, in theory, use irises on both gates and only ever open and accept connections to the two gates - but… "Do you honestly think that the rest of the world and the Etherians would let the United States monopolise the gates like that? And how do you think we could afford to build enough spaceships to protect the country and the colony with the

rest of the world opposed to this? If we actually find a habitable planet that hasn't been colonised by the Goa'uld already. Or by another species."

"But…" He trailed off. "Why would the Etherians care?"

Oh for…! "Have you somehow missed that they have explicitly stated that they do not recognise the United States as the single representative of Earth?"

He looked honestly confused. "But… everyone knows that's just window dressing. They've been working with us, and with no one else, haven't they?"

"They have been working with us because we met them," she explained. "And because we have a common enemy. But they won't support us against the rest of the world if we want to monopolise the gate." She snorted. "Certainly not if we can't legalise gay marriage." She wasn't going to mention polygamy at this point.

That seemed to shock him. "But…" He shook his head. "But that's just their starting position! As long as we get rid of 'don't ask, don't tell', we're fine!"

What? She glared at him. "What gave you this absurd idea? This isn't their starting position - the Etherians aren't going to compromise on that." How could Davis think this? This was… "Wait!" She narrowed her eyes at him. "Do others share your views?" This needed to be corrected at once! If the politicians listened to those people…

"Uh…"

But before he could answer, the phone rang. Sam picked it up. "Captain Carter."

It was the Colonel. And he sounded… upset. "Carter? We need you upstairs. Someone just blew up part of Egypt."

*****

The Naquadah Crisis Part 3

Above the Mediterranean, August 19th, 1998 (Earth Time)

As Darla approached Egypt after picking up SG-1 in Colorado, everyone gathered on the bridge. Catra looked around - Adora was looking grim, but that was normal. Glimmer was scowling, which was also normal. O'Neill looked tense, which was… not normal.

"This was recorded by one of the ships in orbit," Entrapta, who had recovered from her collapse after her 'concentrated tea' ran out, explained as she pointed at the large screen showing a patch of desert. A patch of desert with a camp of Earth troops in it, surrounding some ruins on the ground. "It shows the location of the explosion - before it exploded, of course." She pushed a button with her hair, and the image zoomed in.

"Better resolution than our own satellites," Catra heard O'Neill mutter. Well, did he expect anything else?

Catra had seen the record before, but she still studied it. Earth tanks - four of them - were lined up at the edge of the camp. Smaller vehicles drove around them, and a lot of people walked all over the place. "Aren't those American tanks?" she asked, knowing the answer.

"It's the export variant of the M1-Abrams Main Battle Tank," Carter replied.

"The monkey model," O'Neill added.

"That means it's a more primitive version of the American model," Daniel said.

Adora cleared her throat, and Entrapta continued. "Four hours ago, the whole area exploded."

Behind her, the desert, camp and ruins on the screen vanished in a cloud of smoke and fire. The picture zoomed back to show the size of the cloud. It was huge.

"Entrapta and I have independently come to the conclusion that the power of the explosion is beyond what could have been achieved with conventional explosives based on Earth technology," Carter said. "Not to mention that the sheer mass of explosives needed for such an explosion would have strained the logistics of the Egyptian Army. On the other hand, the scanners do not show any radioactive fallout, though, which should be present if this was a nuclear explosion. In any case, the immediate shockwave barely missed the outskirts of Cairo. But part of the 6th of October City was devastated. Civilian casualties are still being tallied up but expected to be in the thousands."

And that was why everyone looked so grim. If the bomb had gone off a little closer… Cairo had, what, millions of people? Hell, the panic from the bomb probably killed as many as the bomb itself - they had seen pictures showing desperate people trying to flee the city…

The Security Council had declared this an international emergency and possible alien attack and assumed authority over the whole affair. Egypt hadn't protested, as far as Catra had heard - Darla had already been on the way to Colorado by then.

"Do we have more information about the cause of this?" Daniel asked.

"Well, we've narrowed the origin down to this structure," Entrapta told him. A building buried in the sand replaced the crater on the screen.

"That's the Desert Tempel of Osiris," Daniel said at once. "But it was empty when it was discovered fifty years ago - plundered by grave robbers." Everyone looked at him, and he shrugged as if he were embarrassed. Well, he might actually be. "It's just one of many such buildings that were left looted. It showed up on our

scan with the field of tombs nearby, but I tagged it as a low priority since they were known."

"Well, apparently, it wasn't as empty as people thought," O'Neill said. "And it seems the Egyptians sent soldiers to every ruin in the country that showed up on your scan. Someone must have tipped them off."

"We shared the data with the Security Council, Sir," Carter pointed out.

"I know." O'Neill frowned. "We shouldn't have done that. The United Nations leak like a sieve."

"But we had a leak as well - that's why the NID went to Setesh's base," Daniel retorted. O'Neill glared at him, but he shrugged in return. "Just saying, Jack."

Adora cleared her throat again. "So… do we know what triggered the explosion? We didn't get any data before we left to fetch you."

"We don't have any information yet either," Carter replied. "It could've been an automated defence mechanism left by the Goa'uld."

"You can call it a trap, Carter," O'Neill cut in.

She glanced at him. "That is the most likely explanation. It is theoretically possible that someone brought a nuclear bomb in there, but to generate an explosion of this power, it would have been too large to conceal from any guard - or it would have been a Naquadah-enhanced nuclear device."

Which on Earth, only the Americans were supposed to have, Catra knew.

"We've ruled out a missile, artillery barrage or airstrike," Hordak took over. "Although that is based on the assumption that no force on Earth can defeat our sensors."

And that, in turn, was based on the information SG-1 gave them. Catra looked at the Americans.

"To our knowledge, no country has such a capability," O'Neill said.

"Some of the media in the region blame Israel," Glimmer pointed out.

O'Neill groaned. "Of course they would."

"Israel and Egypt are at peace," Daniel said.

"Not everyone is happy about that," O'Neill retorted. "A lot of people would be happy if Egypt and Israel went at it again. And while I think we can dismiss an Israeli airstrike, I don't doubt that Israel's government would be happier if the Egyptians don't have advanced technology."

Ah. Catra hadn't studied that conflict in detail, but she had learned enough from an overview that she understood him.

"Other media claim that this was our work," Entrapta said. "A lot of them in the region, actually. They claim that we destroyed the technology before it could be secured by the Egyptians."

"But we said that this was up to the United Nations to decide." Adora shook her head.

"They don't trust us. Or they want us to look bad," Glimmer said.

"And then there are the media who claim that this was the work of a god, removing 'satan's temptation' before it corrupts the faithful," Bow added.

Catra shook her head. Earth people were weird. Very weird.

*****

West of Cairo, Egypt, August 19th, 1998 (Earth Time)

“That’s one big crater.” Jack O’Neill shook his head. “Well, if everything else fails, they can fill it with water and turn the area into a resort.”

No one laughed. Daniel made that interrupted gasping noise, Carter would be frowning at him for a moment, and Teal’c was more silent than usual.

Well, it hadn’t been a good joke. And it wasn’t a pretty sight - they were standing at the edge of a huge crater. A bit away from the wrecked suburb of Cairo.

“Radiation is at safe levels,” Carter reported without looking up from her devices.

“Good to know,” Jack replied. Though they had known that already - they wouldn’t have landed so close to the crater if it were still radioactive.

“Oh, no!” “This looks bad.”

Adora and the others had arrived.

“The devastation is impressive. The damage to foundations by the shockwave travelling through the ground will probably need some special sensor to detect,” Entrapta commented as she leaned forward to look at the crater’s edge.

Jack looked back and saw a bunch of Egyptian soldiers approaching them. “Ah… you locked the spaceship, right?”

“Of course,” Catra replied. “We don’t want more of those idiots getting killed by trying to break into a spaceship.”

“We don’t know if that was the cause of the explosion,” Glimmer told her. “It could’ve been a Goa’uld facing capture and deciding to suicide.”

“Or trying to fake his suicide,” Jack pointed out. Snakes were cunning, and any snake hiding in Egypt would have some sources

in the local government that would warn them about the scanners. Not that the scanner was a big secret any more - not after the Security Council had been informed. Jack expected the press to run some articles about it any day now. Probably wondering if that violated some privacy laws.

The Egyptian Humvee pulled up to a stop next to them, and a tall man - a colonel - got out, followed by another officer and two guards. "You! Are you in charge?" he snapped, staring at Jack.

"That depends on who you ask," Jack replied. "Colonel Jack O'Neill. Stargate Command."

The man's eyes widened. Who did he expect that the United States would send on this mission, anyway? The Navy?

"And I'm Queen Glimmer of Bright Moon," Glimmer spoke up. "Are you the officer in charge of the rescue operations?"

"What? No, I'm in charge of the security of the site!"

Jack pressed his lips together so he wouldn't crack a joke about the dire need a crater in the ground had for security. Hammond had been clear about the need to treat the locals with the utmost politeness - the Security Council had been anything but polite.

"You guard a hole in the ground? Someone in charge must hate you."

Obviously, Hammond hadn't told Catra that. The catwoman grinned at the Egyptian.

"You're the alien," the colonel - he still hadn't introduced himself, which was beginning to look less rude and more suspicious - replied.

"We're all aliens," Entrapta replied with a huge smile. "Although it depends on your definition - biologically, I think all of us except for Melog and Hordak could have fertile offspring with you without using genetic engineering. That means we're basically the same

species. But all of us were born on another planet, which means we're extraterrestrials!"

Jack briefly wondered if she had watched E.T. - few people used that word any more.

The Egyptian colonel, in any case, looked confused. "What?"

Entrapta repeated her explanation, which didn't seem to help at all. Especially not when she used her hair to handle another device - the soldiers really didn't like that.

Adora cleared her throat and stepped closer. "And I'm She-Ra, Princess of Power. We're here to help you. Do you have wounded in need of healing?"

All of the Egyptians stared at her. They probably hadn't expected her to be so freaking tall - Jack knew how imposing She-Ra looked when she was standing in front of you, and he was used to Teal'c towering over everyone.

But the Colonel shook his head. "Our doctors are handling the wounded," he said through clenched teeth. "We don't need your… magic."

"I wasn't aware that Earth medical science was as advanced as Etherian magic," Hordak commented.

"It isn't," Daniel told him.

"Then it seems ill-advised to refuse She-Ra's help. I can assure you that it's safe." Hordak smiled at the colonel. Or tried to - Jack had seen better smiles from greeters at Walmart shortly before closing time.

"I'm sure they have their reasons," Jack said. Like pride. Or they didn't want magic to be used on their countrymen.

"And what are your reasons?" Adora asked with a deep frown. "I can heal your wounded in an instant. Why would you want them

to take longer to heal up?"

"We can handle our problems ourselves," the man spat.

"Yeah, we can see that," Catra retorted, pointedly looking at the crater.

"The cause of the explosion hasn't been determined yet," Carter said.

One of the Egyptian soldiers muttered something - Jack thought it might have been 'sabotage'.

"Well, that's why we're here," Glimmer said. "To find out what happened and how to prevent similar accidents." She looked at the crater as well. "This can't be allowed to happen again."

The Egyptian Colonel snorted. "I'd like to see that."

"Well," the queen replied. "We'll be glad to show you. Are you our liaison, Mr…?"

"Colonel. Colonel Salah."

"Colonel Salah. We're here to secure the remaining potential artefacts left by the Goa'uld. For the United Nations," Glimmer said, smiling widely. "We were also here to help your rescue and recovery operations, but if you don't want our help with that, we can proceed to take control of the Naquadah."

The Colonel scowled in return. It was clear that he wanted them gone from the country.

Tough luck - the Security Council wasn't screwing around any more. Not after someone nuked part of Egypt - no one sane wanted this to happen to another country. Or that power in the hands of someone else.

*****

Those people were… Adora shook her head and pressed her lips together so she wouldn't blurt her thoughts out as they walked towards the centre of the crater. She knew that they couldn't alienate them. Not more than they already had, at least. Though the sheer stupidity grated on her. They had had a huge crater blown into their country, almost destroying their capital, and they still insisted they could handle it? They were worse than Catra had been at her worst.

She blinked and buried that thought. Catra wasn't like that any more. Not at all. And the local people would learn better as well. Hopefully without going through the same experiences as her lover.

And yet… people were suffering here for no other reason than pride. The pride of someone who wasn't hurt themselves, to boot. At least, that was Adora's assumption.

Entrapta waved her device around. "Radiation levels are normal for the area, I think. Nothing that would indicate that a fission-based bomb had gone off here," she announced. "Although it could've been a fusion bomb, of course - you have that technology."

"Even a fusion bomb would have needed a fission bomb to trigger," Sam added. "I think we can safely exclude the possibility of an Israeli strike with a nuclear weapon."

"I thought we already did that thanks to our surveillance from orbit?" Daniel asked.

"We did, but it's good to have confirmation, "Jack said.

"We need to tell the world so they stop blaming Israel for this," Glimmer said.

Adora nodded in agreement as she climbed over a broken rock the size of a cart. The protests she had seen on the television, aimed at both Israel and the Alliance…

“Yes, we should. And we will. But that won’t stop the claims,” Jack said.

“What?” Adora turned to look at him. He was standing on the rock she had just climbed over, then clenched his teeth and jumped down - and seemed surprised afterwards for some reason.

“Let me guess: It’s easier to blame foreign saboteurs than your own people, right?” Catra said, glancing over her shoulder at the Egyptians following them.

Adora did the same. Colonel Salah had fallen a bit back - he seemed to be struggling with the rocks in their way. The rest of his men didn’t seem to have such a problem but didn’t pass him. Which was fortunate since they might have heard Catra’s remark otherwise.

“Yeah,” Jack agreed. “Of course, we can’t exclude a Mossad operation with conventional explosives triggering a Goa’uld bomb - the last thing Israel wants is an Arab country with advanced technology.”

“But they are at peace with Egypt,” Adora pointed out, recalling the briefing. “They have been at peace for almost twenty years.” Almost as long as she had been alive.

“And the Egyptian leader at the time was murdered for making peace,” Jack said. “Not to mention that leaders change, and currently, everything’s changing.”

Once more, Adora pressed her lips together so she wouldn’t blurt out what she thought of that.

“I think there’s the epicentre,” Entrapta pointed out a little later. “It matches the geographic location, and the concentration of Naquadah in the environment shows a pattern that would support this.”

“Yes, the Naquadah that was all blown up and spread through the area,” Jack said, looking grim.

“Oh, don’t worry!” Entrapta smiled. “We can calibrate our scanners to ignore trace elements of Naquadah.”

“I was more concerned about the trace elements getting into people’s bodies. People such as us.”

Ew. Adora grimaced. She didn’t think that she had to worry, but Catra and the others?

“Oh, that shouldn’t reach any critical level. And we can purge it, I think - I would have to work out the details for a procedure, but it shouldn’t be too hard.”

They were at the lowest point of the crater now. And the ground…

“Glassed,” Daniel said.

“Yes. The heat must have been…” Sam mumbled something Adora didn’t catch. “If this wasn’t a nuclear bomb, then this had to have been a Naquadah-enhanced explosive, Sir.”

“Great. So, another suicide device by a snake?”

“In theory, you could create such an effect accidentally by using a conventional explosive near the right amount and isotope of Naquadah,” Sam explained. “Processed Naquadah is safe - the Goa’uld wouldn’t want to risk such explosions in combat - but there are certain isotopes that would be unstable enough to react to explosions.”

“An accidental nuke. Now we’ve seen everything.” Jack shook his head.

“We don’t know if that has happened here, Sir.”

“We’ll need more data to find out!” Entrapta announced. “But we should find traces of conventional explosives if those were used.” She cocked her head sideways. “Of course, if the soldiers here had explosives with them, we would find traces anyway, even if they didn’t use them.”

“So, in other words, we can’t find out if this was a Goa’uld trying to hide their tracks, or an accident, or sabotage?” Catra asked. She had lowered her voice, Adoara noticed - she must not want the Egyptians, who were arriving now, to hear this.

“That depends on the data we gather. There should be differences between explosives used to trigger Naquadah and explosives triggered by Naquadah. I think.” Entrapta was still smiling. “We might have to do some tests.”

“Right. Tests with Naquadah bombs.” Jack looked like he had bitten into something disgusting. “Let’s not do that right now. People get antsy if you want to blow up their country.”

“What?” Colonel Salah asked. He was huffing a little and red in the face.

“We were talking about tests to find out who blew up the area,” Entrapta told him. “We’ll have to find another location, then.”

“And we need to secure the other Naquadah artefacts in the country,” Catra reminded them.

Yes. Adora nodded again. That was what they were here for.

*****

Inside what she had come to think of their mobile lab in Darla’s hold, Samantha Carter peered at the readouts of their latest scan. “I think that’s as good as we can get,” she said.

“Yes. That should be all the Naquadah left that isn’t dust,” Entrapta agreed as she fiddled with the controls of the scanner.

“I concur,” Hordak added. He bent over the microphone and said: “No, to your left. The last artefact is to your left.”

“How do you know which way I am facing?” Adora’s voice came over the radio.

"We have the most advanced scanner on the planet," Hordak replied. "I can tell which way your hair is blowing."

"Big deal! That's where the wind blows!" another voice - Catra - cut in.

"Not if you take local conditions and windbreaks into account," Entrapta objected.

Sam stopped herself before becoming engaged in the discussion of windswept hair. The Colonel would never let her forget it. "Please focus on the recovery," she said instead.

"Why does it feel as if all I do is dig holes these days?" Adora complained.

"Because you're the best we have at that," Catra commented.

Neither the Colonel nor Daniel had spoken up, Sam realised. And this had been the perfect opening for a comment about archaeologists. "Sir?" she asked.

"Yes, Carter?"

He sounded as usual. Good. "What's the status of the Egyptians?" she asked. It was a logical question - Colonel Salah had been obviously unhappy to support them or their presence. And it was a good excuse as well.

"They're grumpy," the Colonel replied. *"But that's all so far. They haven't tried to take any Naquadah and squirrel it away, have they?"*

"Not according to our scanner," Sam replied.

"Good. Anything about the explosives?"

Sam pressed her lips together. "We're still analysing the samples." After a moment, she added: "I think that Entrapta is correct, and we need more testing to have a baseline. It wasn't as if they had

a lot of data about conventional explosives enhanced with Naquadah. "But we've identified the standard plastic explosive used by the Egyptian army," she added.

"Good."

It wasn't really helpful - a competent saboteur would have been able to use the same explosives, probably stolen or purchased from a corrupt officer - but it was another clue.

Although Sam had her doubts whether they would be able to find out for certain what, and who, caused the explosion. She glanced at the screen to the side, where several television programs were running. She was still leaning towards a breaching charge accidentally setting off Naquadah, but with several prominent religious leaders announcing that this was 'a sign of God's displeasure with the aliens and their blasphemous demands', it wasn't hard to imagine that this might have been a deliberate action by a fanatic amongst the soldiers. And she couldn't discount the saboteur hypothesis either. Or the failsafe.

"We got it! It's a… crushed zat," Bow announced over the radio.

"Great! That's the last piece then!" Entrapta replied. "We can move to the next site!"

"Finally!" Daniel's voice told Sam that he was pouting.

Well, it was understandable - the next 'site' was the Valley of the Kings. He was sure that the Naquadah artefacts their scan had shown would be in graves that hadn't been discovered so far. She chuckled - with the Stargate exposed, he could finally publish his findings, and this would be another feather in his cap, so to speak. And…

"Uh-oh!"

Entrapta sounded concerned. And that was, Sam had learned quickly after meeting the princess, a very bad sign. "What happened?" she asked.

“Darla said that there’s a large number of people moving towards us from the city.” Entrapta’s hair pointed at a screen showing a text, then started typing on the console next to it. “I think I can get a feed… there!”

The picture on the screen changed, showing a protest. No - a mob. She could see crude depictions of aliens hanging from gallows carried along. They must be blaming the Etherians for the explosion. “Colonel!” she snapped. “We’ve got a mob heading towards the ship and the crater. I suggest you evacuate the site.”

“We’re coming back! Everyone, pack up!” the Colonel snapped.

But they wouldn’t make it back in time. Sam pressed her lips together. “We need to pick them up.”

“I concur,” Hordak agreed. “Unless the screening forces use lethal force, I doubt they can stop this attack. Even with lethal force, I have my doubts.”

“Darla! Lift off!” Entrapta yelled as she headed out of the hold.

By the time Sam reached the bridge, the ship was hovering above the landing site. She couldn’t see any sign of the riot - or mob - headed their way, but the soldiers around them were restless. That could just be a reaction to the ship’s sudden movement, of course.

“We’re coming to you!” Entrapta said as Darla started flying westwards.

“You’ve heard her, folks! Get ready for the pick-up!” the Colonel ordered over the radio.

They reached the centre of the crater, now sporting more holes courtesy of Adora, in less than a minute, and Sam went to lower the ramp.

“Great to see you! Things were just getting boring,” the Colonel greeted her. “Everyone on board!”

"Colonel O'Neill! What are you doing?"

Colonel Salah had arrived, huffing - he must have hurried. His aide and the two soldiers with them were obviously in better shape.

"We're moving to the next site," the Colonel told the man.

"Before the mob gets here. Want a ride?" Glimmer added.

"Mob? What mob?" Salah blinked.

His aide checked the radio and paled, then said something in Arabic.

After a moment of gaping and looking over his shoulder and some quick back and forth in Arabic, Salah seemed to steel himself. "We will accompany you to the Valley of the Kings."

*****

Catra snorted at the officer's attitude as they boarded Darla. Salah made it sound as if this was some daring mission instead of him just coming along with them. Which, unless she was sorely mistaken, and she didn't think she was, would be what his orders said anyway.

Though, given the mob bearing down on them, maybe the colonel was worried about being attacked for siding with them? Either way, she'd keep an eye on him and his people - the possibility of saboteurs in the ranks of the Egyptian military was not negligible, after all.

And speaking of sabotage… She walked over to Entrapta, taking care to strut with her hands folded behind her head to appear bored, then whispered: "Did you scan Salah and his men for explosives?"

Entrapta blinked and looked at her, then at the two Egyptian soldiers, which were still sticking together near the ramp after

Salah and his aide had followed the others to the bridge. “You think… You think they might want to hurt Darla?”

“And us,” Catra added. “It’s a possibility. We still don’t know who caused the explosion here.”

“They aren’t carrying explosives,” Hordak cut in. “Not unless you count the propellant in their weapons, although even if they pooled all their ammunition, they wouldn’t be able to create a bomb that would be able to significantly damage a crucial component of Darla.”

That was a lot of qualifiers - too many for Catra’s taste - but Entrapta seemed satisfied. “I’ll still have Emily keep an eye on them!”

“Good.” Catra grinned as she passed the Egyptians on her way to the bridge. Emily bearing down on them should spook them enough to keep them from doing anything they shouldn’t do. The bot was a walking tank, especially after Entrapta and Hordak’s enhancements.

Her good mood vanished as soon as she entered the bridge, though, and saw Adora staring at the side screen with a grim expression. And with good reason - it showed the protesters attacking the soldiers. And the soldiers shooting them.

Catra didn’t whistle at the sight - Adora wouldn’t take any levity, even gallows humour, very well right now.

“Why are they doing this?” Adora asked. “Do they really blame us for the explosion?” She pressed her lips together.

“In a word: Yes.” O’Neill shrugged. “At least that’s what their signs say, though my Arabic is a little rusty.” He apparently couldn’t read Adora.

“It does say this on the signs, yes,” Daniel added.

And the various depictions of Catra and her friends hanging from gallows or being burned were a big clue as well, in Catra's opinion.

"They have been misled by traitors," Salah said. "But this wouldn't have happened if not for the… alien artefacts exploding."

"Or being blown up," O'Neill said. "So, let's avoid blowing up more artefacts and parts of Egypt, alright?"

Salah glared at him. "There won't be any saboteurs at this site."

"So you claim." O'Neill shrugged. "As long as you stop trying to find the artefacts yourself, you should be fine with proper security."

Adora shook her head. "Feuding amongst us won't help anyone. We need to secure the Naquadah before another catastrophe happens." She glanced at the television screen again even though they were reaching another military camp. "And this needs to be stopped. We aren't here to hurt anyone - we aren't hurting anyone. We just want to help you."

"Whether you wanted it or not, your arrival did result in a lot of my people getting hurt!" Salah spat.

Adora flinched, and Catra clenched her teeth. How dare this idiot do this to Adora! "Your people got hurt because of your own damn fault!" she spat. "If you hadn't tried to secure the Naquadah for yourself, none of this would have happened!"

"There were riots before all this!" Salah retorted. "People got hurt then - lots of them!"

"That's not on us either!" Catra snarled. "It's not our fault that you people freak out at meeting aliens!" It wasn't as if they were very different from Etherians, anyway.

"Or cannot stand people who love the same sex," Glimmer added with a scowl.

Salah opened his mouth with a gasp but closed it again without saying anything - even though it looked as if it was killing him to keep his mouth shut.

Catra bared her teeth in a sneer in return.

"So… we've landed," Bow said into the sudden silence. "Let's go and…" He looked at the main screen, which showed a group of soldiers walking towards them. "...meet the locals?"

Salah nodded, still clenching his teeth - Catra thought she could hear the noise they made - and then turned to leave the bridge, followed by the grimacing aide.

They stepped down the ramp just as the dozen soldiers led by another colonel arrived. Salah and the other colonel exchanged salutes, then talked to each other in their own language.

Catra glanced at Daniel and O'Neill. Both didn't seem to be concerned, so the two Egyptians probably weren't saying anything worrisome.

"This is Colonel Khaled," Salah finally introduced the man. "His men have secured the valley but haven't started excavating any site yet."

"We don't have their precise locations," Khaled admitted with a grin. "And I didn't want to have my men dig holes at random." Then he grew serious. "Given the events at the other site…"

Glimmer nodded. "This won't happen here. We won't let it happen."

And they had the exact locations thanks to Entrapta and Carter's scanner, Catra knew. This should be a breeze.

*****

Valley of the Kings, Egypt, August 19th, 1998 (Earth Time)

Jack O'Neill jumped off the short ledge, landing on the sandy ground below without the slightest hint of pain. He really needed to talk to Adora about this - as much as he liked his body working as if he were twenty again, it was the result of magic. Magic he knew nothing about. If there were side-effects, or if this would suddenly revert back, he needed to know that.

He shook his head - he had to focus on the task at hand. Namely, the Goa'uld artefacts hidden under the sand and rock here.

"You're impatient, Jack," Daniel commented as he caught up - the others had taken a small path leading down the slope.

Jack glanced at his team. Daniel seemed honestly curious, but Carter's lips were doing that twisty thing they usually did when she was pondering something, and Teal'c… it seemed his right eyebrow had twitched about a tenth of an inch. "Just taking the direct way down," Jack said.

"We don't want to stay here forever, after all."

"Right!"

He looked up at the interruption and saw that Catra was already jumping down from the top of the slope - that was almost twenty feet. His eyes widened for a moment as the catwoman landed on all fours, then straightened as if that was just a particularly tall step. But he nodded as if he had expected that. "See?" He looked at Daniel. "That's impatient!"

Catra laughed. "I'm practical."

"You're a show-off!" Adora yelled.

The rest of the Etherians arrived in a less showy manner - though Jack had no doubt that Adora at least could've just jumped down as well. Hell, the woman could probably drop from orbit without feeling it! He blinked, then suppressed the urge to ask Carter whether that would actually be possible - she would probably try

to work it out. He cleared his throat. "Anyway, now that everyone's here…"

"The Egyptians are still on the way," Catra interrupted him.

He rolled his eyes. "Anyway, now that that everyone who actually matters is here, where's the Naquadah thingie?"

Entrapta pointed to the side with a tendril of her hair. "About… twenty metres that way!"

"Right!" Jack saw that Salah and Khaled and about a dozen soldiers were just joining them. "There you are. We're about to begin the excavation."

"Ah." Khaled nodded, then looked around. "Are you planning to use explosives?"

The man looked rather queasy at the thought, not that Jack could blame him.

"No, we're going to use a shovel," Catra said, grinning widely. "And by 'we', I mean 'Adora." Adora frowned at her friend, which didn't impress Catra at all, from what Jack could tell. "Atta, girl!"

With a sigh, Adora walked over to the spot Entrapta had indicated - and which Carter had confirmed, Jack checked with a glance - and raised her hand. A moment later, the by now familiar giant shovel appeared.

The soldiers started muttering at the sight, but Khaled seemed to take it in stride. Salah, of course, had seen it before and puffed his chest out a little.

Well, whatever let the guy save some face - the orders had been to play nice with the locals.

Grunting, Adora started digging, and Jack wandered over to check the perimeter. They were supposed to be far away from any mob, but he didn't exactly trust the soldiers guarding the site - it only

took one fanatic to sabotage everything if they got the opportunity.

Well, between Jack, Teal'c and Catra - he hadn't missed how she tended to lounge just where she had a good view of most of the soldiers - any saboteur would find their mission quite difficult.

*****

It didn't take Adora long to reach worked stone - the roof of a tomb, according to Daniel. Jack refrained from making a Tomb Raider joke. Mostly so he wouldn't have to explain why he knew the game - he had a reputation to defend, after all.

A few minutes later, they were staring at the sealed door. And Daniel was almost salivating. "This is… an untouched tomb!"

"Yes," Jack said, nodding. "Unless thieves got in and were polite enough to close the door behind them."

"Jack!" Daniel pouted. "Don't joke about this! Besides, the fact that there's Naquadah behind this door is a very strong clue that it is untouched - grave robbers wouldn't have left any item made of Naquadah behind!"

"In other words, we get to rob the grave!" Catra said, grinning widely.

Daniel turned his frown on her. "We're here to secure the Naquadah artefacts, not to rob a grave! We need to be extra careful so we don't destroy priceless historical artefacts!"

"No acting like Indiana Jones, got it," Jack said. "But we need to get through the door."

"That would be a lot easier if we had already activated Earth's magic," Glimmer said. "I could just teleport into the tomb."

"Or into a trap," Entrapta said. "Like in my castle, remember?"

“Don’t trigger any trap!” Salah blurted out.

“We won’t,” Entrapta told him. “We’re going to drill a hole and then check carefully for any traps.” Just as the man - and Khaled next to him - started to relax, she added: “The odds of drilling into a trap are very, very low.”

“And we’re not going to drill through without checking ahead with our scanner,” Carter quickly added.

That didn’t seem to do much to calm the two officers down.

Jack snorted. Well, that was Entrapta for you.

He quickly grew serious, though - he hadn’t missed that Glimmer was talking as if activating Earth’s magic was just a foregone conclusion. He could only hope the Egyptians had missed that.

*****

“Alright… penetrating the chamber now!” Entrapta announced.

Adora nodded. Finally! This had taken them long enough. She knew that they had to be cautious, but… Adora had trouble waiting and doing nothing while others worked hard. Unlike Catra, she added in her head while she looked at her lover sprawled over a larger rock, apparently enjoying the sun.

Though in this case, Catra wasn’t as calm and bored as she appeared - Adora could see her friend’s tail twitch.

“So, now we’ll find out if there’s a spoilsport device,” Jack commented. “Anyone taking bets?”

“Jack!”

“You are? Great. Five bucks on ‘we’re not going to get blown up’!”

Adora couldn’t help but giggle at Daniel’s expression, and she wasn’t the only one. But the Egyptians didn’t seem to think this

was funny. Perhaps it was something cultural.

“And we’re through!” Entrapta beamed at them. “Without blowing up! Now, let’s see what’s hidden here!”

And Jack was serious again, waking over to Sam and Entrapta, who had been joined by Daniel. “What do you see?”

“It looks like the expected interior of an Egyptian tomb of this era,” Daniel said. “The sarcophagus, the different vessels for the organs extracted during the mummification process and the burial objects.”

“The treasure, you mean.” Jack chuckled.

“Scanners show no active power sources, Sir,” Carter said.

“Batteries died?” Jack asked.

“No. But there’s no power being consumed right now.”

“Ah, good. We wouldn’t want to recover expensive paperweights.” He chuckled.

“So, this is safe?” Khaled asked.

“Define safe?” Entrapta turned to look at the man. “I mean, we didn’t detect a bomb - and my analyser shows no chemical explosive compound, either - but we haven’t checked for biological agents yet. With regards to chemical weapons, it should be safe since we didn’t detect anything particularly complex, so…”

“Biological weapons?” Colonel Salah’s voice sounded higher than before.

“One of the theories about the ‘curses’ placed on some tombs was that the Egyptians hid some toxic mushrooms or similar organisms in the tomb so any grave robbers would get sick and die,” Daniel explained. “It hasn’t been verified so far, though.”

Which was a very good thing, even though Adora was pretty sure she could heal such a poison. To do all that, just to protect a grave… She shook her head. "So, once it is safe, want me to break down the door?"

Daniel gasped. "But that would destroy it!"

"I think we can use a bot to open it - we need to repair the mechanism that sealed it, then you should be able to open it," Entrapta replied.

"Or we can cut the door out and have it taken away whole," Sam suggested.

"I guess that would be faster," Entrapta admitted. "But it would destroy this fascinating mechanism."

"Let's go with 'faster' - we're kind of on the clock here. A doomsday clock," Jack said.

Most seemed to agree, and Entrapta pouted a little but then started on the cutting process with Sam.

Adora walked over to Catra. "Relax," she whispered as she reached her friend. "It should be safe now."

"I'm not concerned about the tomb," Catra replied. "I'm keeping an eye on the soldiers."

"Oh." Adora blinked.

"It would only take one traitor amongst them to wreck this mission," Catra went on.

Adora bit her lower lip to avoid mentioning Double-Trouble. That was still a sore spot for her lover - and probably the reason why she was so suspicious of everyone except for Adora and her friends. Well, that and Horde Prime's mind-control chips. "Ah," she said instead, looking up at the people guarding the site.

Fortunately, Entrapta called for her before the silence became awkward.

“I’ll keep an eye out. Go use your muscles!” Catra grinned at her.

Adora smiled back, then bent down, placing a quick kiss on Catra’s lips. “Thanks.”

“Someone has to keep you guys alive,” Catra mumbled when Adora withdrew - but she was blushing.

And then Adora was grunting as she pulled the stone door away. It wasn’t particularly heavy, but getting a grip was difficult. She would’ve liked to cut some handholds into the stone, but that would probably upset Daniel.

She almost dropped the thing - and wouldn’t that have been embarrassing! - but finally managed to lean it against the wall next to the door. Whew!

Daniel was already trying to move past her, but Jack held him back. “Let’s check for booby traps first.”

“We already did, Jack!”

“I mean, let someone else enter,” Jack explained. “Just in case.”

And that meant Adora. She stepped into the grave, wrinkling her nose at the stale and dusty air, and looked around. It seemed safe. “Looks safe,” she said. “At least this room.”

“‘This room’?” Daniel asked. “Jack!”

“I said wait, Daniel!”

“Well, there’s a door to another room, I think,” Adora replied, walking past the stone casket. It looked like a door, at least.

“Scanners do show a second room, now that the seal has been breached,” Sam reported.

“Oh! Let’s open the door!” Entrapta suggested.

“Let’s drill through it first,” Jack told her. “Nice and slow.”

Adora smiled when she heard Entrapta sigh. Her friend was still very impatient when she was intrigued.

And here came Daniel. “That’s a fake door, carved into the wall after building it. But if there is a room behind it…” He looked at the symbols on the door. “‘Chariot of the Sky’?” He gasped. “This must be a ship!”

*****

The Naquadah Crisis Part 4

Valley of the Kings, Egypt, August 19th, 1998 (Earth Time)

"Chariot of the sky - this has to be a ship!" Daniel repeated himself.

Samantha Carter frowned. "The room can't be large enough for an Al'kesh. Maybe a Death Glider," she added when she saw her friend frown.

"Why would anyone bury a spaceship?" Adora asked.

"Many ancient cultures believed that the dead would be able to use the items that were buried with them in the afterlife," Daniel explained. "Warriors were often buried with weapons. Sometimes, this extended to their horses and dogs. Even people - usually slaves - were sometimes killed and buried with high-ranking persons, to serve them even after death."

"That's sick!" Glimmer blurted out.

"Well, it wasn't common," Daniel retorted.

"But… perfectly fine tools, weapons and jewellery?" Catra shook her head. "What a waste!"

Sam had to agree with that. Even though such finds were very helpful for archaeologists.

"That's why substitutes were also common - clay soldiers, non-functional chariots…" Daniel blinked. "This could be the case here as well."

"A mock-up of a spaceship?" The Colonel raised his eyebrows.

"It would certainly fit Egyptian culture. Although…" Daniel bent down to check the sarcophagus. "'Favoured of Ra'..."

“So, what? Is there a Jaffa in that tomb?” The Colonel asked.

“The Goa’uld believed in clay soldiers as grave gifts?” Glimmer asked.

“They wouldn’t - but their soldiers and slaves did. At least, they did so on Abydos.” Daniel frowned, as usual, when talking about the planet of his wife. “Although this could be a tomb dating to the time after Ra was driven off Earth. The inscriptions only talk about mighty victories, without naming anything we could use to determine the time period or location.”

“But would they mention a ‘sky chariot’ as a grave gift?” Sam asked. That seemed a bit… Odd.

“If the man buried here was a great warrior, he could have passed into myth, and so the grave inscriptions would reflect that. Especially if the grave was built several years after his death.”

“Or her death,” Adora said.

“Ah… The iconography used here, and the culture of Ancient Egypt, makes it very unlikely that this would be a woman’s grave,” Daniel said. “Ancient Egypt was a patriarchal culture. Women wouldn’t have been praised as great warriors.”

Sam pressed her lips together. On Etheria, this kind of sexism didn’t exist. She wasn’t about to immigrate, but it was nice to know that not every world had copied Earth’s cultures.

“Wasn’t their culture installed by the Goa’uld?” Bow asked with a frown.

“We don’t actually know if the Goa’uld decided to take over an existing culture by impersonating their gods, or if they installed the culture posing as gods,” Daniel explained.

“Well, how about we check?” the Colonel suggested. “I mean the ship. We can rob the grave afterwards.”

“Colonel O’Neill!” Salah gasped.

“I was joking,” the Colonel told him. “But we will have to check the sarcophagus as well for any Naquadah items.” He grinned. “So, technically, we will be grave robbers.”

Catra snorted, but the others weren’t amused, Sam could tell. Shaking her head, she turned back to examining the wall with Entrapta.

Her research partner - she wouldn’t call them ‘science buddies’, especially not since that was Entrapta’s term for Hordak - hadn’t paid much attention to the discussion about Egyptian beliefs. She was waving her multi-purpose tool around and noting down numbers.

“Are you scanning the wall’s width?” Sam asked.

“Yes. But it’s uniform. There’s no door that was bricked up or a weaker portion - the wall was built in one piece.” Entrapta frowned. “No interesting mechanism to open it.”

“Sometimes, that simplifies things,” Sam said.

“Simple is boring.”

But boring was often quite nice. You couldn’t really do proper research if you constantly had to fight for your life. “If we don’t want to risk explosives, we could dig through the wall with a jackhammer,” Sam suggested.

“A jackhammer?” Entrapta turned to look at the Colonel.

“It’s the name for a powered tool that combines a hammer with a chisel,” Sam explained with a smile. “It has nothing to do with the Colonel.”

“Ah.” Entrapta nodded. “But that would take time. We could have Adora slice through the wall.”

“Yeah, that would be best,” Catra cut in - the woman had literally ears like a cat, Sam reminded herself. “Quick and dirty.”

“Hey!”

Sam shook her head with a wry smile. But the Etherians were correct - Adora’s sword would make short work of the wall. “We should drill through first to check for traps,” she cautioned.

“Yes!”

Carefully drilling through solid stone took some time, but they were now quite used to it. After a few minutes, they were through - and had avoided triggering an explosion. She sighed softly with relief. They had scanned for any trigger or suspicious device and hadn’t found anything, but Sam knew that there was always the possibility that they had missed something - no one and no technology was perfect, and Sam was pretty sure that magic wasn’t perfect either.

“We’re through!” Entrapta announced as Sam picked up a camera to push through the hole.

It took a bit of finagling, but Sam was an old hand at that. The thin cone of the lamp attached to the camera cut through the darkness on the other side of the wall, and Sam drew a sharp breath. That form…

“It’s a Death Glider!” Daniel whispered. “And it’s not a wooden or clay copy!”

It wasn’t - but, as Sam realised quickly as she let the flashlight pane over the craft, it wasn’t a working Death Glider. There were obvious signs of damage. And of wear and tear far beyond the usual.

“They took a wreck and buried it with him!” Daniel exclaimed.

“What a waste,” the Colonel commented.

Sam glanced at Daniel and shook her head before her friend could try to correct the Colonel.

“A spaceship?” Colonel Salah asked. Sam saw his eyes widen.

“A wreck,” the Colonel corrected him. “Which we will be taking with us.”

The Egyptian stared at him.

“That’s what the United Nations Security Council decided,” Daniel reminded Salah. “All alien technology found on Earth is to be recovered and put under the control of the United Nations.”

“Egypt is a member of the United Nations,” Salah objected. “We can keep it safe for the Security Council’s final decision.”

“Yeah… I don’t think so,” the Colonel said, shaking his head. “You don’t have a good record when it comes to keeping alien technology safe, sorry.”

Sam suppressed a sigh at the Colonel’s very much not apologetic grin. The Colonel was a great officer - brave, smart, caring - but he wasn’t a diplomat. Hordak nodding in obvious agreement wasn’t helping any, either.

*****

“You seriously think we’ll leave the ship here? After your capital almost blew up?” Catra shook her head. She’d seen less ridiculous proposals by Kyle during cadet training.

Khaled cringed at the reminder, but Salah frowned. “That was sabotage.”

“Sabotage you should’ve prevented,” Catra retorted. “I would say that disproves your claim that you can keep the ship safe.”

“Yes,” Glimmer agreed. “We can’t risk another such explosion.”

“We don’t know what or who caused the explosion,” Bow added. “And so it seems best to move the ship to a safer place.”

Like, anywhere but Egypt, Catra thought.

“Moving it may set off a bomb,” Khaled pointed out.

“Carter is the best expert for alien technology on Earth,” O’Neill said.

Catra was tempted to argue that Entrapta was technically on Earth as well but held her tongue. The faster they got this settled, the faster they could leave this place. Hordak must share her thoughts since he didn’t comment either.

“So, yeah, we’ll be taking the ship with us,” O’Neill repeated himself. “Before someone blows it up for whatever reason.”

“And how will you move it?” Salah asked with a sneer. “You need our cranes and heavy machinery for that!”

“Nope!” O’Neill grinned again. “We’ve got all the heavy lifting we need here.” He pointed at Adora, who nodded, then blinked.

“Hey!”

Catra giggled at her lover’s expression. And at the blinking, shocked faces of the Egyptians.

They really had no idea about Adora’s power.

“So, let’s cut our way in,” O’Neill said.

“Wait! Let’s take a few more pictures. Just for safety’s sake!” Daniel stepped forward and started taking pictures of the wall with his camera.

“Actually, Sir, if we have to move the craft anyway, we might as well go in through the roof,” Carter suggested.

“After we checked for boobytraps there,” O’Neill replied. “And we best do that from the inside.”

“So, let’s cut the door open!” Entrapta hefted a large, vaguely weapon-like tool. One of her cutting lasers, Catra realised. “We’ll make a real door out of the fake door! In fact, if we had heavy-duty hinges, we could make a door we can open and close.”

“Let’s focus on securing the ship,” Carter said. Before Entrapta started turning the tomb into a working hangar.

Cutting along the lines of the fake door would take a while, Catra knew. “I’m going to get some fresh air,” she announced, wrinkling her nose.”And I don’t want to get dust on my fur.”

Glimmer snorted in return, and Adora nodded after a moment, but the Egyptians and Daniel were probably fooled.

Outside, she spotted a dozen guards - she couldn’t tell if they were the same who had been with Khaled when Darla had landed - surrounding the site. No heavy weapons, though. No tanks, no APCs. And about half of the soldiers were staring at her instead of keeping an eye out for threats.

Then again, she thought, I am one of the bigger threats here, so I guess I can’t blame them for that.

She stretched, just to make it believable, then started a light jog up the slope, towards Darla. A soldier on top of the slope moved as if he wanted to block her way, but another held him back. Grinning, she waved at them and then sped up, racing towards Darla. She didn’t go on all four, though - it was always better to keep some ace up your sleeve, as Daniel had explained the saying.

Which was another reason for her quick trip back to Darla. She entered the ship - Darla extended the ramp as she approached - and went to the weapons locker. It contained both Shock rods and staves, some of them Horde issue and some that were probably

spares in case Glimmer broke her own staff over the head of someone who annoyed her too much.

Chuckling at the idea, she grabbed a Horde-style staff and left the ship again.

"Ah, you remembered that you should never enter a dungeon without your trusty ten-foot pole?" O'Neill asked when Catra rejoined them. Judging by his grin, that was a joke she wasn't supposed to get.

"Jack!" Daniel shook his head. "He's referring to Dungeons and Dragons where the players can use poles to check for traps."

"Your miniature game!" Bow beamed. "We really should play a game together!"

Catra frowned, and Adora and Glimmer groaned. Bow was a little too enthusiastic about this. But she wouldn't shoot him down - she'd leave that to Glimmer.

So she grinned and twirled her staff in her hand. "I just wanted a few more options if we're facing something that I don't want to get too close to."

Fortunately, Entrapta announced that they were through the door, and people got serious again. Catra really didn't want to talk about miniatures.

*****

Jack O'Neill was really glad for Carter and Entrapta's timing. The last thing he wanted to do in the middle of an ancient tomb was talk about Dungeons and Dragons. Especially with an enthusiastic fan - Jack really should have known better than to crack a D&D joke. Sometimes, he played himself.

But now he got to watch Adora show off again as she grabbed the cut-out 'door' and pulled, slowly dragging the massive slab of stone out of the wall. It wasn't the first time he saw it - she had

done the same to the door into this chamber - but it was still a sight to see. Like a comic book hero come alive.

He blinked and then shook his head to push the picture of Adora in a Supergirl outfit away. Besides, the woman couldn't fly, and he preferred Batman, anyway. You didn't need superpowers to defeat an enemy; just skill and smarts and some luck. Like… No, not going there.

He felt a slight draft of air as the door was pushed to the side - without breaking apart, as he had half-expected - and they could enter the second chamber, then held back Daniel; Carter was too sensible to rush in. "Let the magical girl enter first, Daniel," he told his friend. "She can take a hit from a tank gun - you can't."

That made Catra snort and the two Egyptians goggle at them. Probably revising their estimates of the aliens? That would be a good thing. The sooner the rest of Earth realised just how powerful the Etherians were - and how dangerous the Goa'uld were - the better. Jack was heartily sick of all the posturing and denial.

Why couldn't the politicians not simply trust them? Just because they had kept the Stargate a secret for so long? He snorted and pushed the thought away; he was here for a mission, not to think about politics.

Adora was already entering the room with the wrecked Death Glider, so Jack followed her, ignoring the way Carter frowned at him. He led from the front, damn it, and he was responsible for his team!

The room wasn't much larger than the ship - probably literally built around it before the sand buried it or something. No sign of any traps, but that didn't mean anything.

"I don't detect any Naquadah outside the ship," Entrapta said behind him - he could see the tips of her hair tendrils move just inside his field of vision.

“No sign of any power in use,” Carter added. “Not in the wreck or the walls.”

Well, that made things look a little safer.

Jack took a step to the side as the two women passed him and started to examine the ship, followed by Bow and Daniel. Hordak, though, stayed back, watching the Egyptians. And the entrance to the tomb. Well, Jack couldn’t blame him for that.

“This looks like battle damage. Staff weapons, probably,” Entrapta said.

“Yes. There aren’t any signs of any attempt to repair it. Maybe it was damaged and abandoned during the rebellion?” Carter speculated.

“They recovered it to entomb it here, though,” Daniel objected. “So, either this happened after the rebellion - and why would the victorious rebels honour a follower of Ra like this? - or Ra’s forces recovered the ship during the rebellion but then spent the time to entomb it. Which also seems unlikely. No, based on the information so far, I think this tomb predates the rebellion!”

“But would the head snake really sacrifice a ship like that?” Jack asked. Ra hadn’t struck him as a guy who cared about honouring his followers like that.

“If it was irreparable, he might have felt the gesture worth it - such an honour would likely have helped tie his guards to him,” Daniel said. “Oh! If this happened during Ra’s reign on Earth, then this might be a Jaffa’s grave! On Earth!”

Jack glanced at Teal’c, who was looking at the ship, then back at the sarcophagus. His friend was hard to read normally, and right now, Jack couldn’t tell what he was thinking at all. Teal’c’s expression looked like stone.

He cleared his throat. “So, is it repairable?”

“Anything is technically repairable as long as you are willing to spend the resources,” Entrapta said. “So, even if the engine and electronics are gone, we could replace them, I think.”

“But it would probably not be cost-effective,” Carter objected. “If we are basically rebuilding a ship, we might as well build a model more suited to our purposes.”

Jack nodded and suppressed the urge to make a Star Wars or Battlestar Galactica joke. Even though flying an X-Wing or a Viper would be a dream come true. But Daniel would never let him hear the end of it. And Carter would be worse - she might even design such a ship… “So, how damaged is it?” he asked.

“Well…” Entrapta cocked her head to the side, visor sliding down over her face.

“The engine is damaged, but the damage doesn’t seem too extensive,” Carter said.

“Yes. But the control system… all the crystals have been removed. Or destroyed. The ship is basically braindead,” Entrapta added. “Can you lift it a little, Adora?”

“Sure!”

“I don’t think the ship had much of a brain.” Bow pointed at a wrecked part. “That doesn’t seem to be able to house a crystal big enough to grant a personality.”

“Right. Poor thing.” Entrapta sighed. “We’ll do better when we rebuild it! And we need to name it!” She tilted her head to the other side. “I’m thinking… Clarice!”

“Clarice?” Bow asked.

“She looks like a Clarice. And sad.”

Jack wasn’t going to ask about that. Not at all. But he would have to impress upon Hammond that Entrapta wasn’t allowed to name

any ship Earth might be building with her help. Serving on a battleship named 'Hannah' or 'Sophie' would be simply embarrassing. Ah, well, time to…

"Oops."

He froze. That wasn't something he wanted to hear from anyone, least of all Entrapta.

*****

"'Oops'?" Adora froze in the middle of lifting the left wing of the ship. If Entrapta said 'Oops', that often meant 'Run!'.

"Moving the ship just started something that moves - it's not magic or electricity-based, or we would have detected it," Entrapta explained. "Don't move while we analyse it!"

"Ok…" Adora clenched her teeth. The ship - a Death Glider - wasn't particularly heavy - not nearly as heavy as a tank, and she could throw those - but she didn't have the best leverage, and the metal felt a little… not quite slippery, but fragile. If she gripped it too hard, it might bend. Or break.

And then Entrapta crawled under the ship, her hair fanning out. "Oh… it's a purely mechanical mechanism! Fascinating!"

"Yeah, fascinating. And what does it do?" Jack asked.

"We don't know yet, Sir," Sam replied - she was crouching down to take a look at the underside of the ship as well. "But it's a clockwork mechanism."

"And it is still working after all those years?" Daniel, like Entrapta, sounded more intrigued than afraid. "That's… actually a point against my theory that this tomb dates back to the time of Ra's reign on Earth."

"Don't sound so disappointed," Jack told him. "Maybe you catch a break, and we all get blown up before anyone can reveal your

mistake."

"Jack!"

Adora heard Catra snort.

"It looks like the mechanism is connected to a small container made out of Naquadah," Sam said.

"And the mechanism is made out of Naquadah," Entrapta added.

"And what's in the container?" Catra asked.

"We can't tell yet," Sam replied. "The container is shielding the contents."

"We should be able to calibrate the scanner to get around that," Entrapta said. "I guess we don't want to open it before we know what's in it."

"Yeah, I don't think we want to risk releasing whatever the Goa'uld might have put into a Pandora's Box."

"What's a Pandora's Box?" Adora asked.

"It's a myth - a container that held all the evils of the world, which were released because the holder, Pandora, got curious," Daniel explained. "This could be a trap to deal with grave robbers."

"But it's not open yet?" Glimmer asked.

"Not as far as we can tell," Bow replied from under the wing - Adora could only see his legs.

"If it's a trap, why didn't it trigger already?" Glimmer knelt down next to Bow.

"It must have some leeway or delay - a security margin - so it's not triggered by an Earthquake," Daniel speculated.

“Yes. The clockwork mechanism might be a way to introduce a delay,” Sam agreed. “But it’s still working, if slowly.”

“So we’ve got a time bomb,” Jack said. “Can you defuse it?”

“We should be able to, Sir. But you might want to retreat to a safe distance,” Sam told him.

“If it’s a nuclear or Naquadah-enhanced bomb, there might be no safe distance,” Daniel pointed out.

And someone had to hold up the ship so they could work, Adora knew.

“Though if there’s a delay, then there’s also a safety,” Entrapta said.

“Yes,” Sam agreed. “If removing the weight of the ship triggers the mechanism, replacing it should stop it - so an Earthquake shaking the ship would not trigger it after the ship comes to a rest again.”

“Yes. So… let’s see which of the studs sticking up would do that.” Entrapta wriggled fully under the ship.

“Or I could just put the ship down,” Adora suggested.

“But then we couldn’t get at the mechanism or get the ship out!” Entrapta retorted from below. “Don’t worry - it’s a simple mechanism once you see it.”

“And it’s still running?” Catra asked.

“Yes.”

That wasn’t reassuring. Not to Adora. But Sam, Bow and Entrapta were all underneath the ship now. Even Hordak had stopped standing guard and was using a scanner to analyse the ship.

“This looks good,” Entrapta said.

“But it’s not connected to the mechanism according to the scanner,” Bow objected.

“Right. It might be a decoy then. Too good to be true.”

“How about this?” Sam asked.

“Oh, yes. That… see the strut there? And the lever?”

“Yes.”

“Now, how do we depress it enough to trigger the failsafe?”

Adora drew a sharp breath. The failsafe? Like back in the Heart of Etheria? No. This wasn’t a magical superweapon about to destroy the world and the local sector. This was just a bomb or something.

But it would kill all her friends anyway if it went off.

“I’m pushing it down… Or not,” Bow said. “It seems stuck.”

“No, I think the mechanism just needs more power to trigger.”

More power? But Adora had to keep holding the ship.

“We need leverage. Catra! Your staff!”

And now Catra crawled under the wing as well!

“Put it here… yes… now we can… Teal’C? If you could help push the staff down?”

“I shall try.” He started to push the end of the staff down, bracing himself against the wing Adora was holding.

“Something went click,” Catra said.

“That’s the failsafe. Now we need to weld or solder the clockworks together to keep it stuck,” Sam said.

“Aw. That’ll ruin it. And after thousands of years of working perfectly.”

Adora gritted her teeth. It wasn’t Entrapta’s fault that she was like that. But sometimes, it was really annoying.

At least they had defused whatever trap this was.

*****

“Do we really have to destroy the mechanism?” Entrapta asked.

Samantha Carter suppressed a sigh. While she could understand Entrapta’s stance towards destroying such an old piece of technology - she wasn’t fond of that herself - she would rather not take any risk when it came to traps laid by - possibly - Goa’uld. Not after seeing the crater near Cairo.

“We could block it.” Bow, obviously, was a bit more prone to taking risks.

“That would likely damage it as well, at least if we wanted to ensure that the mechanism doesn’t work any more,” Sam pointed out.

“Well… what would be easier to repair?” Bow asked.

“Using something to block the clockworks,” Entrapta said. “The clockworks can’t exert too much force, but we should probably use Naquadah alloys to be sure it won’t just be crushed and spat out.”

“Yes!” Bow nodded, almost hitting his head on the wing above him.

“Or we can destroy the shaft that links the mechanism to the container,” Hordak suggested. “We only have to go through the stone here.” He pointed at a slab of stone in the ground.

“Technically, that would destroy the mechanism as well, since that’s part of it,” Bow pointed out.

“Are you arguing whether or not you should damage a trap that might kill us all if it triggered?” the Colonel sounded incredulous.

Sam felt herself blush and was glad she was currently hidden from sight by the craft above her.

“Jack! This is a historical artefact that might give us crucial clues about the origin of this tomb!” Daniel, predictably, protested.

“I vote for ‘destroy it to be sure’,” Catra cut in.

“Can we move the ship now?” Adora asked.

“Oh, sorry - I forgot about that,” Entrapta replied. “Yes, you can move it to the side.”

Adora grunted, and then the entire ship tilted forward, sliding a little over the floor before the nose was stopped by the wall. Then the woman turned it to the side and put it down. “I need some better grip to carry it out.”

“We can get some cables to make a harness,” Catra suggested.

“Can we stop the bomb or whatever it is, first?” the Colonel asked. “Like, priorities, people!”

“Alright… let’s uncover the mechanism first,” Bow said.

That didn’t take them long.

“Oh! It’s a beautiful piece of craftsmanship!”

“It reminds me a little of the Antikythera mechanism,” Daniel commented. “Although that is thousands of years younger.”

“And the underlying mechanics would demand a similar construction,” Sam pointed out. “This does not have to mean anything.”

“But it would explain how such a mechanism appeared almost out of the blue,” Daniel insisted.

The Colonel coughed behind them.

“Well, let’s cut the shaft - that’s easier to repair than the clockworks,” Bow repeated his idea.

Cutting Naquadah alloys was always a bit of an effort, complicated by having to reach down alongside the clockworks, but Adora transformed her sword into something like a slim sabre, and not even Naquadah could offer much resistance to a magical blade. Or a blade made of magic - Sam made a mental note to ask the princess if she could analyse it.

“Yes!” Entrapta’s hair wriggled into the opening and lifted the mechanism out.

“Now we need to secure the container with the payload,” Sam reminded the others.

“And find out what would have happened if we hadn’t stopped the mechanism, yes.” Entrapta nodded in agreement.

With a bit more help from Adora, who got teased by Catra about being a nice tool, and by the Colonel for having a ‘magical swiss army sword’, the container was exposed. It was made from Naquadah as well, and…

“This is sealed very tightly,” Sam commented. “Airtight according to the scan.” And, in her experience, people didn’t do that unless they needed such a seal.

“Yes. Whatever is inside must not have been allowed to get out.”

“How reassuring,” the Colonel commented.

“Probably a biological or chemical weapon, based upon your comment earlier,” Hordak said, nodding at Daniel.

Who paled a little. “The curse… if this contains poison…”

“...then we might not be dealing with some poisonous spores, but an actual Goa’uld bioweapon,” Sam finished the thought for her friend.

“A bioweapon?” Salah blurted out - Sam had almost forgotten that the Egyptians were there. Sloppy, she berated herself.

“That would be the worst case,” she told the officer. “It could also be a chemical weapon. Or merely a poisonous substance or a pathogen available to ancient Egypt.”

“But since that container was made out of Naquadah alloy, we shouldn’t assume it’s something harmless,” Daniel added.

“Well, let’s calibrate the scanner and see if we can find out what it is without opening it!” Entrapta said.

That took a few minutes, and the scan itself took a bit of time as well, but the results…

“There’s definitely something in there,” Bow said.

“And it’s under slight pressure. If the lid opens, it would quickly escape into the air,” Samanta said. Ideal for a trap using poison gas. Or a biological weapon.

“But you can’t tell what it is?” The Colonel asked,

“No, sorry - we need to take a sample for that,” Entrapta told him.

“No! The risk is too great!” Salah protested.

“Not here,” Entrapta told him. “We’ll probably do it in orbit in a safe lab.”

Sam suppressed the slight jealousy she felt at hearing that. An orbital lab would allow so many research projects…

*****

“Careful, Emily - don’t break the seals!”

“Yeah, be very careful,” Catra muttered under her breath as Entrapta pep talked the bot carrying the container. “Or at least if you do, don’t break your hull.” The sealed hull of the bot should contain any poison or pathogen.

“Catra! Align the doors!” Adora yelled from below.

Right. Catra sighed and squinted down the ramp. “A little to the left, Bow,” she spoke into the commlink. “The other left,” she added when the ship drifted to the right. “OK, a bit more… stop!” She checked again, then yelled. “It’s alright, you can lift!”

Down below in the tomb - now with the roof removed - Adora pulled on the makeshift pulley, braced against the floor, and the Death Glider - and wasn’t that an ominous name for a ship? - started to rise. A minute later, it was hanging in front of the lowered ramp of Darla, and Catra quickly attached a few more ropes to pull it inside. Well, far enough so it would rest on the ramp - Adora could do the rest once she climbed out of the tomb.

“Well, I can’t fault the efficiency of using brute force.” O’Neill thought he was funny.

Catra snorted. “It’s not exactly brute force - Adora’s not simply carrying the thing inside.” That would have been Plan B.

“It’s pure muscle power. Brute force,” the man insisted.

“Whatever,” Catra said, stretching. “It works.”

“Can’t argue with that,” he agreed. “And it impressed the local yokels.”

“Aren’t you supposed to be diplomatic?” She raised her eyebrows at him.

“What? They can’t hear me - they’re both still in the tomb, arguing with Daniel about the sarcophagus.” O’Neill chuckled.

“They don’t know how stubborn Daniel can be, for all his niceness. Although if you could have claimed that there was some Naquadah in the sarcophagus, we wouldn’t have to argue about taking the thing with us,” he added with a nod at Entrapta.

“I won’t lie about data!” Entrapta retorted with a frown. “How can we expect people to trust us if we lie to them?”

Well, as long as they didn’t realise that they were lied to, their trust wasn’t affected. But any lie tended to be revealed sooner or later.

“It would have been a white lie,” O’Neill insisted. “And we don’t know if the sarcophagus doesn’t contain something dangerous, so it wouldn’t have been a real lie.”

“But we didn’t detect anything dangerous!” she protested.

“Your scanner couldn’t identify the contents of this little surprise, could they?”

“I said so.”

“Let it go,” Catra told him, baring her teeth at him for a moment. Entrapta wasn’t one of his subordinates. And she didn’t deserve to be berated for being herself, instead of some… someone like that traitor Double-Trouble.

He met her eyes for a moment, then sighed. “Sorry. I’m just sick of all the talking when the end result is clear.”

She snorted again - she could understand the feeling.

“I thought the real problem started when you stop talking,” Entrapta commented.

Catra grimaced. That was… not wrong.

“Not always,” O’Neill said. “Sometimes, too much talking and not enough doing is the problem.”

“Sounds like that’s mostly an Earth problem,” Catra couldn’t resist saying.

He frowned at her. “I’m sure you had your pointless meetings as well.”

“Not too many when I was in charge of running things,” she retorted.

“Well, we did have a lot of talks in the Alliance,” Entrapta said. “But I wouldn’t call them pointless.”

“What are you doing?”

Catra turned. Adora was standing on the ramp, looking at them with narrowed eyes. She was a little dusty. Or was that sandy?

“We’re discussing whether too much talking or too little taking is the bigger problem,” Entrapta told her with a smile. “What do you think?”

“I think not enough thinking is the problem,” Adora shot back. “Now help me pull the ship fully into Darla.”

Well, if she asked like that… Catra grinned and went forward to help her lover.

It took them five minutes and two almost broken ropes, but they managed to help Adora move the Death Glider into the hold of the ship and secure it there with the magnetic clamps. Adora sighed. “Finally!” She wiped the back of her hand over her forehead as if she had sweated.

“And now we can go and pick up the sarcophagus. And by ‘we’, I mean ‘you’,” Catra told her.

Adora groaned again. “Why is it that I’m always doing the heavy lifting?”

"Because you're the logical choice for that," Entrapta told her with a smile. "None of us can lift as much as you can."

"I know that," Adora said.

"Oh. Why did you ask then?"

"It was a rhetorical question," Adora told her. "Let's go and grab the coffin."

Catra followed her down the ramp into the tomb. Her ears twitched as she heard Daniel's voice before she saw him: "...and I assure you, you will get the sarcophagus back should we determine that it's not of alien origin."

"That is not good enough. This belongs to Egypt - it's our history!" Salah argued.

"Not if it's of alien origin."

They entered the grave chamber. "He's still arguing," O'Neill muttered, and Catra couldn't tell if he meant Daniel or Salah.

Not that it mattered. Adora harrumphed and picked up the sarcophagus without a word, then turned and carried it out.

Catra flashed her fangs at the Egyptian. "Thank you for your cooperation!" she quoted one of the movies she had watched.

*****

Above the East Mediterranean Sea, August 19th, 1998 (Earth Time)

...dozens, maybe hundreds, dead or wounded in the so-called 'crater riot' - it's hard to tell, with thousands being injured or killed in the blast that almost destroyed Cairo. The Egyptian authorities didn't answer questions at the press conference and merely released a statement that the threat to the country had been handled.

Jack O'Neill didn't wince when he watched the news on the bridge of Darla. He had expected that once he had seen the size of the riot - and that the people were attacking a line of soldiers, not cops prepared for riot control.

But the Etherians hadn't expected that. Well, they had seen the start, before the trapped tomb kind of took priority, but they seemed still shocked. Those on the bridge, at least - Entrapta and Bow were with Carter in the hold, analysing the Death Glider. And, hopefully, keeping Entrapta from tinkering with the Naquadah container before they were in a secure lab in orbit.

"This is…" Glimmer shook her head. "Why did they keep attacking? Why didn't they break after the warning shots?"

"Or after the first volleys from the soldiers?" Catra asked.

"They showed a much stronger morale than expected," Hordak commented. "I will have to revise my estimate of the quality of troops from Earth."

Well, some probably were just surprised. Just as Jack was surprised that Hordak wasn't with Entrapta in the hold.

"Hordak!" Glimmer snapped. "Those weren't soldiers - those were civilians!"

"Exactly." The alien nodded. "That means a trained soldier should be even fiercer." He cocked his head to the side. "Perhaps the sheer number of people on the planet shaped a culture that considered lives expendable in war?"

Jack clenched his teeth. This was…

"Well, in the past, similar sentiments were quite common in certain cultures, but as history proved, societies where soldiers were considered expendable tended to be less stable than those who cared for all their members," Daniel said. "And these days, most countries try to avoid taking casualties."

“Human wave attacks went out of style fifty years ago,” Jack quipped.

Hordak turned to face him. “That seems to contradict some of the movies we saw about the last protracted conflict your country was involved in.”

Jack sighed. “Those are movies, fiction, not historical documents.”

“Ah. Still, wouldn’t the existence of such fiction indicate a lingering tendency for such tactics?”

Jack looked at Daniel. Cultural clashes were his friend’s field. Jack was the expert for the other kind of clashes.

Daniel pushed his glasses up his nose and nodded. “It would generally indicate an attempt to portray the enemy as unsophisticated, uncaring and cruel towards their own people.”

“Ah. Propaganda.” Hordak nodded.

Daniel opened his mouth, blinked, then nodded as well. “Effectively, yes. It reinforces cultural stereotypes.”

Jack snorted - softly; the pictures of the carnage in Egypt still played on the screen. “That’s quite the condemnation of Hollywood.”

“The movie industry as a whole does tend to cater to the target audience’s cultural values,” Daniel replied.

“You must be a very violent society, then,” Glimmer commented. “Judging by your entertainment.”

Jack bit down on a flippant remark about not doing blood sports any more since the Romans Empire fell. “We also have lots of wholesome family entertainment,” he said instead. “And we have the Simpsons.”

"Which often feature violence in an exaggerated form used for comedic effect," Daniel cut in. Jack glared at him, but his friend shrugged. "It's true."

"Well, we saw some of those shows as well," Glimmer said. "They seemed rather… formulaic was the word, I believe."

"Yes. And they were also very 'conservative'," Catra added. Though she used the word as if it were an insult. Well, if they had seen some of the favourite TV shows of the conservatives, it probably was an insult for her.

"Oh, yes. Such shows tend to be rather conservative," Daniel agreed. "There are exceptions, but most reinforce current values, often by portraying an idealised family. Some scientists suggested using the portrayal of alternative lifestyles in daytime TV as an indicator to gauge how progressive a society is. This kind of approach does seem to be…"

Jack sighed with relief when Daniel's explanation was interrupted by an incoming call from Stargate Command. It was Hammond. "Colonel O'Neill. Queen Glimmer. Princess Adora. Dr Jackson. We've received your preliminary report."

"We haven't had the time to work on a more comprehensive report," Daniel said as if Hammond would expect a dissertation in a day.

"I'm aware of that. Good work." Hammond nodded.

Jack shrugged, "We just went in and got the stuff."

Hammond snorted. "I'm aware of the situation on the ground. Egypt already filed a protest with the Security Council, demanding access to the 'cultural relics taken from Egypt'."

"Well, some of the best experts on ancient Egypt are Egyptian historians and archaeologists," Daniel said. "They could help with analysing the recent find. Just cross-checking assumptions would facilitate the translations."

“I’m sure that will be taken into account, Dr Jackson,” Hammond replied. “Though recent events also have raised some security concerns.”

Daniel blinked, so Jack added: “They need to be vetted.”

“Oh.”

“But I am not calling because of that,” Hammond went on. “As of half an hour ago, Honduras formally requested assistance with recovering an alien artefact in their country.”

Jack blinked, then pressed his lips together. “Why do I have a bad feeling about this, Sir?”

“Because we’ve been monitoring their communications, and they lost contact with the soldiers sent to ‘secure’ the artefacts. After incoherent screaming about the ‘dead walking again’ according to our interpreters.”

Jack groaned. “Don’t tell me we’re dealing with zombies, Sir.” Couldn’t they catch a break for once?

*****

The Naquadah Crisis Part 5

Earth Orbit, August 19th, 1998 (Earth Time)

"And guard it well. Do not let anyone tamper with it." Adora tried to smile as she gave the order. Just so the clones wouldn't…

"We shall defend it with our lives! None shall even as much as gaze on it while one of us yet draws breath, Your Divine Highness!"

…do that. Overreact to every little request. She suppressed the urge to grimace. They didn't know any better. Not yet. "Very well. We will depart, but we - or some of us - will return to properly analyse the threat this container poses."

"As you command, Your Divine Highness!" every clone present chorused, saluting her.

Adora didn't sigh until she was back inside Darla. It wasn't the clones' fault that they had been raised to revere a leader as if it was a god. Horde Prime had committed many crimes, and while most wouldn't think what he had done to his clones was comparable to rendering entire planets and species extinct, Adora had to disagree. The way he had raised his clones, shaped them - indoctrinated them so they would blindly follow him, even at the cost of their lives, thinking it was a great honour to serve as his vessel… She couldn't help thinking of her own training. And what she might have done, not knowing any better, if she hadn't found the sword. And if she hadn't met Glimmer and Bow.

At least WrongHordak and Second Fleet showed that they could change - and grow past their conditioning. Even First Fleet's remnants were, in a way, encouraging with their reluctance to commit to the Alliance - they were not blindly following a leader any more.

“Cheer up! At least they’ll keep it safe. Unlike everyone else,” Catra told her with a scoff.

As usual, she knew what Adora was thinking. Then again, everyone knew how Adora thought about the clones worshipping her. Even the clones, but they somehow ignored it completely.

Although… “That’s unfair. We don’t know what happened in Egypt or in Honduras,” Adora said with a slight frown.

Catra shrugged and stretched her hands over her head, stretching. “We do know that the relics or whatcha call them weren’t kept safe.”

“The people on Earth didn’t know about them until we told them,” Adora pointed out.

“Details, details. Our success rate is a hundred per cent, and theirs is… zilch?” Catra retorted as they entered the bridge.

“SG-1 has a great success rate when it comes to handling alien technology,” Jack told them with a frown.

“Too bad your planet is ruining it,” Catra shot back.

“Well, you wanted to deal with the entire planet.” Jack bared his teeth in a grin.

Catra narrowed her eyes and flashed her fangs in return. “Who let a Goa’uld create a cult under their nose?”

“Oh, stop it, you two!” Glimmer snapped. “We have a country to save, and we don’t need this posturing.”

“Yes,” Adora agreed. “Did we get any more information about what’s going on while we handed over the container and the Death Glider?”

“No,” Catra said.

“You weren’t on the bridge,” Jack pointed out.

“I’ve got good ears,” Adora’s friend told him.

Glimmer loudly sighed. “Nothing concrete. Just more translations of what’s basically screaming and crying about the ‘walking dead’.”

“Zombies,” Jack said. “The walking dead are zombies.”

“Zombies are fictional, Sir,” Sam told him. “And, seeing as Earth’s magic hasn’t been activated, we can rule out a magical origin of whatever is happening in Honduras.”

“Unless someone sneaked out and did the magic thing,” Jack said - looking at Adora.

She glared at him. “I wouldn’t do that behind your back!”

“But you would do it against our will.” He stared at her.

“Many people on Earth want magic returned,” Adora said. “We know that.”

“From your own television,” Catra added with a grin.

“Many don’t want magic to make a return,” Jack countered.

“Too bad for them,” Glimmer said. “They don’t have to use magic if they don’t want to, but they don’t get to forbid others from having magic returned to them.”

“Ah, that’s oversimplifying things, I think. The matter is more complex. Even those who do not want to use magic will see it used on them.” Daniel smiled weakly. “And they are afraid of that.”

“You shouldn’t make decisions motivated by fear,” Entrapta cut in. “They tend to be illogical. And usually bad for you.”

“Yes,” Adora said, nodding firmly. “From what we can tell, the same people who fear magic also fear gays.”

"Or science," Entrapta added.

"So, screw them!" Catra grinned. "We're not going to listen to those idiots."

Jack pressed his lips together.

Daniel frowned. "Their fear might be irrational, but it's still something to take into account. The world is complex, and simple solutions often turn out to have unintended consequences."

"Sometimes, it's not about what's simple or complex, but what's right and wrong," Adora told him. "Just as we won't let others tell us who we can love, we won't let them tell us that we can't return magic to Earth. Not when people on Earth want it back. It's their birthright."

"Think of it as returning something that was stolen from Earth a thousand years ago," Catra said. "Oh, wait - returning stolen things, that's also a complex problem on Earth, isn't it?"

Jack glared but didn't say anything. Daniel, though, dug his heels in. "It's not quite that simple. In the past…"

"Hello! We're about to land in Honduras!" Glimmer interrupted him. "You can argue about magic and stolen goods once we've solved the problem!"

Adora nodded, once again in agreement with her friend. Saving people came first.

*****

Reserva de la Biosfera de Río Plátano, Honduras, August 19th, 1998 (Earth Time)

"Alright, let's meet the locals! Let's hope they're friendlier than the last batch."

Samantha Carter smiled wryly at the Colonel's comment as the ramp of the ship started to extend. It wasn't entirely the Egyptians' fault that they had parted on less than cordial terms.

"Well, if you're polite and friendly, it's generally reciprocated," Daniel said.

"I'm very friendly," the Colonel replied.

"Not everyone has the same cultural norms, Jack. What you consider friendly might be seen as rude by others," Daniel retorted. "The stereotype of rude Americans exists for a reason."

"Technically, we're in America," the Colonel said.

"Central America. The people here have had some unfortunate experiences with the United States policies in the past," Daniel said. "And some might carry a grudge."

Sam was all too aware of that. And she was certain that the Colonel knew it as well - he might have been involved in some of it, in the past - his file had a lot of classified parts, as she knew from testing Stargate Command's computer security. But she also didn't expect the Colonel to change his general approach to meeting new people. That just wasn't him.

"Great," Glimmer commented with a sigh. "More old grudges."

"People should learn to let go of the past," Entrapta said. "You shouldn't let past grievances define your future."

"Well… there's a saying: Those who forget history are doomed to repeat it," Daniel said.

"And there's another saying: Don't waste time when you're under attack," Catra cut in.

The ramp touched the ground, and the airlock opened. The Colonel was first out of the door, walking with an easy gait. Sam

narrowed her eyes. Something was different. She couldn't put her finger on it, but the Colonel was… not off. Just different.

Four people were waiting at the edge of the landing site. One of them would be the local commander of the Honduran Army - probably the major to the right. The general next to him was too old to be in the field - and too high in rank. There was a captain, probably an aide, and a man in camouflage clothes without any rank insignia.

And the Colonel tensed. That was a bad sign.

"Hello!" Adora said - she must have missed that. "I'm She-Ra." She proceeded to introduce everyone.

"I'm General Bonilla." The older officer nodded at everyone. "These are Major Reyes, commander of our forces in the area, Captain Benìtez and…"

"Burke," the Colonel spat.

"O'Neill." The man - apparently Burke - replied with a glare.

"You know each other?"

"Yes."

"Jack?" Daniel asked.

"Classified."

"Oh."

Burke snorted.

"Ah." The general looked from the Colonel to Burke and back. "This won't be a problem, I hope."

"No." "No."

Sam hoped that neither was lying.

“So, you’ve got a zombie problem?” the Colonel nodded at Bonilla.

“We have a problem,” Bonilla replied, gesturing towards a tent nearby - a mobile command centre. As they walked over, the general continued: “We’ve sent forces into the reserve to secure the site of the alien artefact. They had strict orders to avoid contact with any piece of technology - observing and guarding only. But soon after entering the area in question, they reported a clash with unknown forces. The officer in charge considered them to be bandits or poachers.”

“Or guerrillas,” Burke commented.

“We don’t have guerillas in Honduras,” the general replied with a frown. “In any case, soon afterwards, we received the reports you already saw and then lost contact completely.”

They reached the tent, and two soldiers drew the flaps back for them. Inside was a rather modern radio and computer centre - Sam honestly hadn’t expected that kind of quality here. She saw top of the line encryption gear - even SG-1 didn’t have anything better except for what they had constructed themselves using advanced technology.

“So… what’s so important that Uncle Sam sprang for all of this?” the Colonel asked Burke, nodding at the gear.

The Honduran officers glanced at each other. The soldiers present carefully didn’t look at anything except their screens.

“Uncle Sam?” Adora asked. “The United States?”

“We’ve been running a clean-up operation here,” Burke said.

“‘Clean-up’ operation?” The Colonel snorted. “Some formerContras going freelance for the Cartels?”

Burke grinned, which was probably answer enough.

“So, your troops got wasted by veterans from the Nicaraguan civil war, and now they control the alien technology.” The Colonel sighed.

“We don’t know the identity of the forces in question,” Bonilla insisted.

“Well, we’ll find out.”

“So, we’ll have to fight bandits over alien technology.” Catra chuckled. “That brings back memories.”

Adora groaned. “At least it’s not a desert.”

“I’d prefer a desert - fewer places to hide,” Catra said.

“Our scanners show the location of every concentration of Naquadah in the area,” Sam spoke up. “But they won’t detect humans who aren’t using the technology. And we haven’t detected anything that would explain those reports of ‘zombies’.” Sam pressed her lips together. She didn’t like using this terminology, but if she used a more technical term, the Colonel would joke about it and call it zombies anyway.

Catra stretched her arms over her head - and that did attract the attention of the soldiers near them, Sam noticed - and yawned. “Well, whatever it is, we’ll deal with it.”

“Yes.” Adora nodded firmly. “We won’t leave you to deal with this, trust us.”

That was potentially stretching their mission objective. On the other hand, Sam expected whatever was posing as zombies to fall under the definition of alien technology anyway.

But the Hondurans smiled - for the first time since they had met. Burke, though, was scowling.

*****

“The Naquadah concentration is now directly below us,” Entrapta announced.

‘Below us’ apparently meant ‘below in the jungle, hidden by the trees’. Catra shook her head. She had been right - a desert would’ve been much better. You couldn’t hide as well in a desert. “So, let’s land?” she asked. “Darla can crush the trees beneath her, right?”

“But that could damage the landing gear!” Entrapta protested. “And all the crushed trees could block something!” She blinked. “And there are people below us,” she added belatedly, tapping a few keys on the console with her hair. “Dozens of them.”

“Some might be civilians. Or captives,” O’Neill said.

Burke, standing next to him, nodded.

“We weren’t going to land directly on top of them,” Catra replied while she rolled her eyes. Even if there were no people around, that would be a bad idea since they didn’t know what the device did. “Just land nearby.”

“That would still crush a lot of trees. It’s a nature reserve,” Daniel pointed out. Then he blinked and blushed a little.

“I doubt that this would do enough damage to be noticeable,” O’Neill said. “It’s a big reserve.”

“We would consider this an acceptable sacrifice,” Reyes said. “We’ve cleared landing zones for helicopters as well if we needed them.”

“Sir? Scanners are showing unidentified radiation,” Sam said.

“Radiation?” O’Neill tensed.

“Yes,” Entrapta added, cocking her head to look at the screens in front of her and Sam. “It’s not radioactivity, though. It seems…

magical in nature. Yes," she added after the screens flickered in rapid succession, "definitely magical."

"I thought magic didn't work on Earth without Adora… unblocking it?" O'Neill asked.

"Well, sorcery and most powers of princesses won't work," Entrapta explained. "Those rely on the magic field generated by life on a planet. But magical devices, unless constructed to rely on that field as well, work as long as they have another source of power." She smiled. "And no one would construct magic devices that only worked on a planet if they went to space!"

"Great. So we could have magic zombies running around," O'Neill commented.

"What?" Burke blurted out. "You're bullshitting me!"

O'Neill turned to glare at him. "You're surrounded by magical princesses, Burke. She-Ra here could turn an aircraft carrier into a plant. A few zombies wouldn't strain her."

"I wouldn't create such creatures!" Adora protested.

"It was just an example," O'Neill retorted.

"A stupid example!" Adora frowned.

Catra nodded in agreement. Adora didn't create monsters - she killed them. And she healed people and kingdoms. "What kind of magic is it?"

Entrapta wrinkled her nose. "It's… healing magic."

Catra blinked, surprised. "Healing magic?" That was a good thing, wasn't it?

"Very strong healing magic," Entrapta went on. "It's healing all damage suffered by living organisms in the area of effect."

“Then there’ll be some very healthy wildlife down there,” O’Neill said. “But that doesn’t explain zombies.”

“Unless the magic has side effects,” Sam speculated. “If it induces a trance while it works, and if it’s strong enough to heal bullet wounds, the effect could look like… zombies.”

“But wouldn’t that have affected our troops as well?” Reyes asked. He looked a little queasy.

“Well…” Entrapta bit her lower lip. “If they were caught at the edge of the area of effect, they wouldn’t be affected. Though…” She turned away and checked the screens again. “Oh. It’s spreading. The magical field, that is.” She beamed at them. “So, they encounter tranced people, shoot at them - the tranced people shoot back maybe, we don’t know how functional they are, but shooting usually doesn’t take much cognitive activity - but the people inside the field are getting healed, and then the expanding field catches your soldiers, who then enter a trance as well and stop reporting.”

That sounded like a good theory, in Catra’s opinion.

“It’s expanding? At what rate?” Reyes asked.

“And is it affecting us?” O’Neill added.

“We’re too high above the ground to be affected,” Entrapta replied. “And our shields should block the radiation. If we tweak them a little.”

“But the rate of expansion is growing,” Sam added before Catra could feel much relief.

“So, if the theory is true, we can’t approach the device without being turned into zombies,” O’Neill said. “Great. How do we stop it before Honduras is zombified?”

Reyes gasped at that. “We need to bomb it! We cannot risk that! Nuclear bombs, if needed!”

And Daniel gasped at that.

“Don’t worry - there’s one who can work safely inside the area of effect!” Entrapta announced.

“Me!” Adora nodded with a grim expression.

“You might be able to ignore the magic, yes,” Entrapta said, nodding. “But I was talking about Emily!”

“Oh.” Adora looked almost disappointed.

Catra shook her head at her stupid lover. “Yes, this sounds like a job for Emily.”

“Emily?” Reyes asked, looking around on the bridge.

“She’s a bot!” Entrapta explained. “Not organic, and her hull has been strengthened to be fully sealed. She can walk into the affected area and contain the device.”

“Or destroy it with her laser cannon,” O’Neill added.

“It’s actually a blaster cannon,” Entrapta corrected him. “But that depends on how tough the device is.”

“But if it carries it back to us…” Reyes trailed off.

“Oh, don’t worry - we’ll build a containment device that will block the healing energy.” Entrapta grabbed Sam’s hand with her hair. “No time to lose! To the lab!”

O’Neill stared as Sam was all but dragged off. “What kind of shows did you let her watch?” he asked.

Catra gave him a look. “Don’t blame your entertainment on us.”

*****

When Jack O’Neill had been told by General Hammond about this mission and how urgent it was, he had imagined quite a few

things. Like fighting a zombie plague in the jungles of Honduras, shooting the walking dead and blowing them up, maybe desperately holding the line while Carter and Entrapta tried to defuse some evil artefact. Or charge some magic thingie to wipe out all the zombies.

Safely waiting on the bridge of a spaceship high above the jungle while Carter and Entrapta prepared a robot to go and retrieve the artefact hadn't been amongst his ideas. Though maybe it should have been, given what he knew about the Etherians. Still, he had at least expected to stand next to Adora when she did something impressive, not… watch from way behind the lines while others risked their lives. Or their… circuits? Crystals? Whatever robots used to think.

"So… is this how it works?"

Jack clenched his jaw. He also hadn't imagined meeting Burke on this mission. The bastard who 'mistakenly' shot Wood on their last op. Which never happened, of course, since there were no records of it.

"What do you mean?" Daniel asked.

Jack cursed inwardly. He should've told his team about Burke. But there hadn't been a good occasion since they had gone straight back in the air after meeting the Hondurans - he couldn't really call for a huddle and whisper explanations while the rest watched and wondered. Catra would probably blurt it out anyway just to see what would happen.

"I was called in to fight bandits or maybe zombies." Burke tapped the grenade launcher he was carrying. "I didn't expect to… watch a robot do the job, I guess. But maybe that's normal for you guys?"

"Ah." Daniel smiled. "Well, it's not abnormal, but usually, we…"

"That's classified," Jack snapped with a glare at his friend.

Daniel blinked. “But…”

Jack narrowed his eyes at him. For someone so smart, Daniel sometimes really failed to read the mood. “Past missions are classified.”

“Oh.”

Burke snorted, and Jack glared at him. The man was the last person who had any right to comment about classified missions.

Burke met his eyes, frowning as well, then looked away and scoffed.

“Oh,” Daniel repeated himself.

“Wow, you guys are tense,” Catra cut in. “Don’t start shooting up the bridge, you hear? If you want to fight it out, do it outside.”

“We’re not going to fight it out,” Burke said.

Jack snorted at that. He wouldn’t mind getting back at Burke for killing Wood, but they had a mission. Even though they were just about useless right now.

Burke stared at him again, and, once more, he looked away first. Jack hoped that the bastard felt at least guilty about what he had done.

“And we’re checking our targets carefully,” Jack couldn’t help adding.

Burke jerked at that but didn’t react any further.

At least Daniel, even though he looked confused, had the wits to keep silent.

Catra, though, didn’t. “Oh!” she almost crowed. “You already shot each other?”

"If I did, he'd be dead," Jack said, at the same time Burke said it as well.

Catra shook her head. "Whatever it is, keep it down." Then she tilted her head to the side. "Though… What was it, anyway? Did you have a nasty break-up? Cheated on the other?"

Jack stared at her. She sounded *sincere*. Did she really think Jack would have…? With Burke?

"What?" Burke blurted out. "How can you even suggest such a thing?" He sounded shocked.

Oh. Jack blinked as he understood - of course, Catra would assume that, given her history with Adora. And Burke must have missed that part about the Etherians. He smiled. "Ah, no, we never were together," he said, as innocently as he could. "I was already married when we met." He suppressed the brief guilt and pain he felt when he remembered how his marriage had ended. And why.

"What do you mean?" Burke snapped at him.

"Ah." Catra nodded. "Well, then I guess I can't give you any advice how to get over this." She nodded at them and turned away.

"What the fuck?" Burke cursed as soon as Catra had stepped away. "She just called us… And you acted as if that was OK!"

Jack grinned. "Why, Burke, is there anything wrong with it?"

"Yes!"

"Don't worry, I've got it on good authority that 'don't ask, don't tell' will be revoked as soon as possible. Being gay won't be grounds for being discharged any more."

"That's not…" Burke trailed off. "You're bullshitting me!"

He sounded both offended and almost glad, Jack noticed with surprise. About the bill being repealed, or about Jack bullshitting him?

"Actually, no," Daniel decided to cut in. "Equal rights for homosexual people is one of the conditions for an alliance with the Etherians. Haven't you heard about that?"

"I was busy in the jungle," Burke replied.

"You missed hearing about aliens?" Jack shook his head.

"I missed that detail," Burke retorted.

Like he had 'missed' that the guy in the jungle in front of him was Woods, not some guerilla. Jack stopped grinning. For a moment, Jack had felt like before the last op. Just bullshitting around with friends. But Burke wasn't a friend. Not any more.

Not since he murdered Woods and claimed he had mistaken him for an enemy. As if Burke would have made such a mistake. And if he had made such a mistake, he would've acted completely differently than he had when Jack had found them.

He turned away and watched the screen again. "I hope they'll hurry. The magic must be spreading."

*****

Waiting. Adora didn't like to wait. She was She-Ra. She should be doing something while danger was threatening people. Or wait for others to do something like… like…

"Oh, stop pacing!" Catra snapped.

Adora turned to frown at her friend. "But this wave is spreading below us! It's harming people as we wait!"

"They evacuated the surrounding area," Catra pointed out. "And the people inside the area of effect were already hurt before we

arrived.”

“It’s still spreading.”

“Slow enough so it won’t really pose a problem for a long time.” Catra shrugged. “So, stop fretting and let Entrapta and the others do their thing.”

“I should help them…” Adora eyed the door leading from the bridge to the rear of the vessel.

Catra rolled her eyes. “I think they’ll call if they need you.”

Adora pressed her lips together. She knew she wasn’t a genius like Entrapta or Sam. Or a techmaster like Bow. She could use her power as a princess, but she couldn’t build stuff. She was a brute. And she was utterly useless right now. She was…

…getting hit on the head?

“Stop brooding!” Catra glared at her. “You aren’t useless just because you can’t do everything by yourself.”

Adora bit down on what she was about to say, then sighed. Catra was right. “I know.” She sighed again. “But it doesn’t feel right.”

Catra shrugged. “Trust our friends to do their job and focus on yours.”

“I don’t have a job right now.” That was the problem!

Catra grinned, though. “What did Earcut teach us in cadet training?”

The grizzled instructor? Adora blinked. He had taught them melee combat - the basics of it. How would that be applicable… Oh!

Her lover grinned. “Yes. If you have nothing to do, rest. Soon enough, you’ll get another task. So, be a good cadet and rest.”

Adora scoffed. “Resting while below us, some harmful magic is spreading?”

“Oh, don’t worry,” Catra told her as she hooked an arm through Adora’s. “I’ll help.”

Oh. “But…”

“No buts! We’ll be good soldiers and rest now. And relax.”

And then Adora was pushed into the captain’s chair, and Catra planted herself in her lap. “You’ll relax even if I have to sit on you.”

“But…”

“No buts! We’ll wait until the others have the bot ready, like the veteran soldiers we are!”

She could easily push Catra off her lap. But… Her lover was right. She couldn’t do anything useful right now.

Grumbling, Adora tried to relax.

*****

“OK, I think I’ve nailed down the thaumaturgical frequency of the healing energy. Now we need to attune the crystal to it.”

Samantha Carter nodded. Once the crystal was attuned, it could be used to counter the energy, shielding an area from its effects. Or, if six such crystals were aligned in a cube - or along the hull of a bot - form a containment unit. Provided they had a sufficient power supply. “How do we power it? Emily’s main battery won’t last long if it has to counter the amount of radiation we’re registering.” Sam had studied the battery’s output.

Entrapta blinked. “Right. So, we could pack her hull with spare batteries - though that would only work for a limited amount of time, either.”

Sam nodded and quickly ran a few calculations. “If the power of the healing device remains steady, even six batteries would last barely long enough to reach the device and bring it back to us. No safety margin at all.” And from what she could tell, six batteries was about the maximum Emily could handle and still move.

“Yes.” Entrapta bit her lower lip.

“I vote for a bigger safety margin,” Bow spoke up. “Our plans tend to run into some hiccups.”

“Not always,” Entrapta retorted. “But often enough to plan for it, I guess. So… no battery packs.”

“I would suggest an alternative solution,” Hordak cut in. “If we connect Emily to the main reactor of Darla, the power should be sufficient to counter the device.

“Like, a long line?” Entrapta asked. “Like in that show?”

“Show?” Sam asked.

“A television show with huge bots running around fighting other constructs. They are supplied with power through giant power lines that they have to plug in.”

That sounded… weird. Sam couldn’t recall hearing about any such tv show. “The cable would be vulnerable,” she pointed out. Even bandits would have weapons that could damage such a cable.

“We could armour it, but that would mean it would be too heavy to be dragged along by Darla,” Entrapta mused. “And you can’t use wheels in the jungle to take the weight of an armoured power line. Maybe a bot to carry it?”

“We could send escorts to guard the cable,” Hordak suggested. “A few guard bots should be enough to discourage interference.”

“But we don’t have guard bots or bots to carry the cable. We would have to ask Third Fleet,” Bow said with a grimace.

The others looked torn as well, Sam noticed. Well, that was understandable. Third Fleet was run by fanatics, after all. And in the current political situation, it wouldn't take much to set off another powder keg. Although… "What about wireless power transfer?" she asked. "If we add another crystal to act as a conduit and attune all of them to each other…" The crystals were linked and sharing power, after all, and the range of the synchronisation effect should cover the entire area.

"Yes! That would work - they'd form a thaumaturgical grid and spread the power equally!" Entrapta cheered. "And the crystal would act as an additional shield for Darla. And us. Let's do it!"

As the princess rushed to the side of the hold where the crystals were stored, Bow smiled at Sam. "That was a good idea. How did you come up with it?"

"People are working on wireless power transfers. I just applied the basic principles to enchanting," Sam replied. It still felt weird to talk about magic like this. Then again, magic was a bit of a misnomer - it worked according to rules and could be experimented with. It was a form of advanced technology following general principles. Principles Sam still had yet to fully learn in some cases, though.

"Ah!" Bow nodded. "I guess once Earth's magic is restored, you'll produce more such devices."

Sam pressed her lips together for a moment. 'Once Earth's magic is restored'... That was a touchy subject, to say the least. "A lot of people would start research into magic," she said. "And not all of them would be good people."

Bow shrugged. "That can't be helped. But how many of them are as smart as you are? They would have to start without any information about magic, either. Just like your sorcerers won't be able to do much for quite some time. Not without help from Mystacore."

Sam knew that she was smarter than most other scientists. It wasn't arrogance - she was well aware that she was exceptional. "But there are too many who will work on this. Some of them will have ideas that pay out. And some will cause problems."

Bow nodded. "But you can handle those."

He sounded very confident. Sam wished she shared his confidence. And yet… thaumaturgical technology offered so many possibilities…

*****

"Alright! Go, Emily! Don't be afraid - the magic can't hurt you!"

The massive bot beeped in return, turned in place, then started to head down the ramp. Catra watched it touch the ground and then stalk into the jungle.

"Power transmission is steady," Carter announced from the hold behind her. "Fluctuations are within the expected range."

"Good! Emily's a good bot; she'll do her job!" Entrapta said, nodding firmly.

But Catra didn't miss how her friend bit her lower lip when she turned to look at the screens. She was worried, then.

"If anything happens, I can retrieve her," Adora said. Apparently, she hadn't missed that either.

Catra clenched her teeth. Adora didn't have to risk herself at every opportunity. But… Emily was not just a bot. She had been with them for years and was family for Entrapta. "We can send in a few more bots if anything happens to Emily," Catra said. "Anything that can stop her can also be a problem for us."

"I can handle much more than a bot!" Adora insisted.

Catra clenched her teeth again. It was true - but it was also stupid. “But we don’t know if you can resist the magic down there.”

“If I go into a trance, you can send bots to retrieve me,” Adora retorted with a pout.

“We don’t know what exactly the magic does - a trance is just a theory,” Catra pointed out.

“Yeah, let’s not be too hasty,” O’Neill chimed in. “Let’s stick to sending robots in before we risk people.”

“Emily isn’t just a bot!” Entrapta protested. “She’s not a tool - she has feelings!”

“Emotions?” Daniel tilted his head slightly to the side as he pushed his glasses up. “Simulated or… how does that work?”

“It’s a neural matrix, like a neural net,” Carter explained. “Artificial Intelligence research has been exploring such concepts for a while.”

“Yes,” Entrapta said. “Emily is smart. Smarter than many people.”

Catra bit her lower lips to keep herself from making a comment about Adora; it wouldn’t have been funny.

“So… are all your bots like that?” O’Neill asked.

“No,” Hordak said. “Many bots are just programmed with a set of instructions. Not every task needs intelligence. Often, it’s a hindrance. And it takes a lot of different experiences for neutral matrixes to adapt to and develop even rudimentary intelligence.”

O`Neill snorted and mumbled something about marines.

Entrapta shrugged. “And even Emily wasn’t as smart at the beginning - a neural matrix takes time to learn.” She smiled. “But she did learn!”

“So… those combat robots you mentioned are like… baby bots?” O’Neill looked queasy. As did Daniel. And Carter looked shocked.

Hordak, though, nodded. “Those with neural matrixes, yes. Although larvae would be a more correct term. They need stimuli to develop their cognitive facilities. Merely growing older won’t do anything.”

“But do they have a sense of self?” Daniel asked. “Once they are, ah, like Emily?”

“Yes.” Entrapta nodded.

“That throws up a lot of ethical questions,” Daniel commented.

“Why?” Hordak, of course, didn’t understand.

“Oh! Emily is approaching the device - the location from which the energy spreads!” Entrapta interurpted them. “Look at her go!”

The screen showed what the bot saw - with a map in the lower corner. She was breaking through the underbrush, shooting thicker trees if she needed to.

“Very effective. If the armour can withstand staff blasts, she will be a terror on the battlefield,” Teal’c commented.

“Yes! She’s got an experimental blaster cannon!” Entrapta beamed. “Go, Emily!”

The bot beeped in return.

And then she entered a clearing - a campsite. Or what was left of it. The tents were torn, and… there was a man standing next to a glowing cube within a cube-framework thingie. A bit bigger than a head, all in all. And he was armed with one of the Earth rifles. A different model than what SG-1 carried, Catra noticed.

“He’s shooting at Emily!” Entrapta complained.

And he was. Not that the rifle had any chance of hurting the bot. Catra had to give the man kudos for standing his ground, though - few soldiers would have managed that in the war. But… something was off. That was a weird trance.

Emily, meanwhile, ignored the man and walked past him to the cube, her hull opening and two metal tentacles shooting out of the bot's body to grab the cube. The man tried to stop her, but a quick jerk sent him flying into the underbrush.

Then the cube disappeared into Emily's body.

"Containment field active," Carter reported.

"And… no more healing magic radiation!" Entrapta announced with a smile. "Our plan worked."

"Someone needs to tell the guy that," O'Neill said. "He seems to have missed the memo."

And indeed - on the screen, Catra saw the man stumble out of the bush and attack Emily again. And… "His eyes. Check his eyes," she said.

Entrapta frowned, but Emily zoomed in on the man's face.

His eyes were white and looked… wrong. And his throat…

"I think the healing energy did more than just trancing people," Hordak commented.

*****

"No shit, Sherlock," Jack O'Neill blurted out before he could stop himself. The man on the screen - probably one of the 'bandits'; his uniform didn't match the Honduran fatigues - had a piece of wood embedded in his throat. He hadn't turned yet, so Jack couldn't check if it went all the way through, but the way it stuck out of the throat… "Even if the wound were healed around that, he couldn't breathe properly."

Daniel looked at Jack with a disturbed expression. "Ah…"

"Speaking from personal experience?" Catra asked.

"Not on the receiving end, no," Jack replied.

"Ah."

"What's a Sherlock?" Hordak asked.

"A fictional character renowned for his powers of observation," Daniel explained.

"Ah." The alien nodded. "Sarcasm, then."

Jack held his next comment back. "So… how long until the healing energy runs out?"

"Uh… it's no longer radiating," Entrapta said. "So…" She cocked her head sideways. "Perhaps some energy lingering in the body? Probably directly keeping the cells alive and working, so damage like that doesn't incapacitate him. But how do they control the body? Is the central nervous system still working? It must."

"He, uh, doesn't look particularly aware," Daniel pointed out.

The guy was still trying to stop the robot from walking away. Emphasis on trying. Jack made a mental note not to engage any robot with anything lighter than an RPG.

"Wait!" Carter snapped. "Move back to a shot of the man's chest and freeze the picture!"

"Alright!" Entrapta's hair tentacles flew over the console, and the screen changed.

Catra whistled. "Either the man picked his uniform fresh from the morgue, or he was shot earlier."

She was right - Jack could see holes in the man's top, some covered with dried blood. "So it is a zombie."

“We don’t know that!” Daniel objected. “He could’ve been healed before death happened.”

“We need to scan him closely,” Carter said. “We need to find out what happened - and how we can deal with it. Sir,” she added belatedly.

Jack nodded, overlooking the slight lapse. “Yes. So, how do we do that?” He wasn’t keen on entering the zombie area even with the thingie contained. Who knew how many animals had been affected? Would zombie mosquitos still suck your blood, or would they go for your brain fluid?

“I can go grab him!” Adora offered.

“Or we can just let Emily lure the man to us,” Catra objected. “No need to expose ourselves.”

“Right. He can’t really hurt Emily,” Entrapta agreed. “And he seems to have run out of ammunition. That’s a drawback with your weapons.”

“He would’ve run out of power as well with a Horde laser rifle,” Catra pointed out.

“Right. Still…”

“Can we focus on capturing the zombie?” Jack asked. This wasn’t the time to discuss weapon technology and doctrine.

“Possible zombie. We don’t know what happened. All we know is that he’s a victim of alien technology,” Daniel said.

Jack rolled his eyes.

“And we need to track the other victims,” Glimmer spoke up. “If they wander off…”

“We don’t want a zombie apocalypse.” Jack nodded. He noticed that Burke was staring at all of them and snorted. “Welcome to

the galaxy."

The mangled quote shook Burke out of his apparent shock. "What the hell is going on, Jack?"

"You heard the scientists: Possible zombie plague." Jack shrugged with more nonchalance than he felt. "Just wait until they tell us how to deal with them."

"What?" Burke shook his head. "Since when do you trust the brass about intel?"

"Since working with Stargate Command," Jack told him in a flat tone. His team had never let him down. Or shot each other.

"Lucky you," Burke spat.

"Well, if you don't 'mistake' your teammate for an enemy and shoot them, people tend to trust you with more than some shitty counter-terrorism mission in the ass-end of nowhere," Jack shot back. All this jungle needed to recreate Vietnam were some rice fields. And a horde of Viet Cong trying to kill you.

Burke glared at him again, opened his mouth, but closed it without more than a muttered curse.

Jack scoffed. Couldn't even defend himself.

"It wasn't like that!" Burke blurted out as if he had read Jack's mind. "Wood was about to shoot me."

"Really?" Jack scoffed again. "And you forgot to mention that at the court-martial?"

"I couldn't say anything! It would have cost Cindy his pension!"

Cindy? Jack blinked. Who was Cindy? Then he remembered. Cindy Wood. The widow. "What?"

“He was going to shoot me because I discovered that he was selling us out,” Burke snapped. “I was faster than him. But if he had been exposed as a traitor, Cindy would have lost his pension.”

“What?” Jack stared at him. “Wood was trying to sell us out, and you kept quiet about it?” For his widow?

“What good would have come of it?” Burke shrugged. “Wood was dead, and I knew you weren’t a traitor, so there was no other leak.”

Well, of course Jack wasn’t a traitor! But… Burke trusted him? Well, he should have. Jack still felt some guilt. “You should have said something anyway,” he said.

“You knew Cindy. Would you have said anything?” Burke shot back.

Would he have said anything? Jack hesitated. That had been a different time. He had just married; Charlie hadn’t been born yet… Would he have said anything?

Burke nodded as if Jack had given him an answer. Damn jerk.

*****

The Naquadah Crisis Part 6

Reserva de la Biosfera de Río Plátano, Honduras, August 19th, 1998 (Earth Time)

"Are they going to fight?" Adora asked in a low voice, looking at Jack and Burke in the corner across the hold. They had been staring at each other ever since they had met today. A lot of tension, but she couldn't quite place what kind of tension.

"Ah, they seem to be making up," Catra whispered next to her.

"Oh?" Adora turned to look at her lover. "So, they were…?"

Catra tilted her head to the side. "I don't think so. Just friends who had a falling out over a dumb secret or something."

"Ah." Adora envied Catra's ears at times. She had had no clue - well, some clues, but nothing that would help - about this whole thing. "So, they're good now?"

"Dunno." Catra shrugged. "Hard to tell."

Adora scoffed. Well, if they hadn't made up, that was their problem. Emily was almost at the ship. She cleared her throat. "We need to catch the… suspect now." She pressed her lips together - she should have thought of a good name for their target before speaking.

"Let's just call him zombie guy," Jack said, grinning.

"We're not calling him 'zombie guy'," Glimmer said with a glare at him.

"What about 'specimen number one'?" Entrapta asked - honestly; Adora could tell.

"Are you really arguing about what to call a walking dead?" Burke asked - the man was, again, looking shocked.

“Yes?” Jack looked at him as if he couldn’t understand why Burke would ask that. But that was an act. At least Adora was pretty sure it was an act. “The correct nomenclature is very important in our line of work.”

Yes, definitely an act. Adora shook her head.

“Jack!” Daniel protested.

“What? Don’t you always insist on using the correct terminology?”

“Emily is almost back with us,” Hordak cut in. “We should focus on dealing with the threat instead of on what to call it.”

“Yes.” Adora nodded firmly. “And since we’re not in the range of the healing energy - which isn’t spreading any more, right?” she added with a glance at Entrapta and Sam.

“It has disappeared,” Sam confirmed.

“Right. So, I can go and just grab the man,” she said. “If he can’t hurt Emily, he can’t hurt me.”

“Unless it’s some infectious disease,” Entrapta said.

“What?”

“Well, we haven’t detected any pathogen or viruses,” her friend explained, “but that’s one possible cause for such behaviour - at least according to Earth myth.”

“That’s Hollywood,” Daniel said. “I wouldn’t assume that there’s any base in reality for that.”

“There are parasites that can change human behaviour,” Sam added. “But we haven’t detected anything - simply magical radiation. Healing magic.”

And Adora was all about healing magic. Amongst other things. “Either way, I’m the best choice for this.”

She looked at Catra, who sighed and nodded. “I guess so - if there are no germs.”

“There shouldn’t be.”

“Biological warfare…” The Honduran officer shook his head. Adora had almost forgotten that they had guests around.

“Nothing we can’t handle,” Jack said with a wide smile.

Adora nodded. She could heal entire countries, after all. Granted, that had been a special occasion, but she was She-Ra. She could do this. “I’m going to fetch the man. And hold him outside while you deal with the device.”

“We’ll prepare the containment unit!” Entrapta said. “And the containment unit for the affected human!”

Adora nodded and headed to the airlock.

Catra followed her. And Melog followed them.

Adora looked at her lover.

“I’m not going to join you,” Catra told her with a wry grin. “But I’ll be waiting here.”

“Ah.” She nodded at Catra, then bent forward and placed a quick kiss on her lover’s head. “I’ll be right back.”

“I’ll hold you that, dummy.” Behind her, Melog glowed.

Adora stepped outside, jumping off the ramp. Emily was approaching - and the man was still trying to stop her - even though all he was doing was hugging one of her legs now. It was almost too easy - she grabbed him by the scruff of his neck and pulled him away, ignoring his flailing. “All done, Emily.”

Emily beeped in return and entered the ship.

Adora took a closer look at her captive - and grimaced at the sight. The piece of wood had gone through his entire throat. Jack had been correct - there was no way he could breathe like this. And his eyes were white. Not glowing, not like when someone was possessed, but… not natural, either.

What kind of healing magic could do this? And could she do such a thing by accident as well?

That was a disturbing thought. Very disturbing. She didn't remember any such incident - but would she have noticed if she had done this to some animals when she healed the Fright Zone?

"We've secured the device," Catra yelled from the ramp. "Melog doesn't sense anything, either. You can bring the zombie inside."

Adora didn't protest the name as she carried the man - or former man - inside and dropped him in an airtight cell Entrapta and Sam had prepared.

*****

"Oh. The cells are all alive, but the brain is not working at all. The brain cells are working individually, but there's no trace of a neural network. It's like a colony of single-cell organisms all working in concert without a discernable biological directive. This is so fascinating." Entrapta all but cooed, Samantha Carter saw. Then the princess blinked. "I mean, it's horrible that this happened to a person, but the result is fascinating. In a horrible way." Entrapta's smile looked more than a little forced.

But Sam could understand the feeling. Did understand it - this 'zombie' was, from a strictly scientific point of view, fascinating indeed. And horrible. "So, they must be controlled by magic - the human organism couldn't, without a working nervous system, move at all, much less in the way we've observed."

"Exactly! Our sensors show a magic field around the body, focused on damaged cells. See how the field is stronger at the

wrists and ankles? It must be repairing the damage done to the body by the attempts to break free."

Sam nodded - she could see that the man - or, now confirmed, corpse - in the cell in front of them was struggling against the thick metal bands that held him, baring his teeth but not making any discernible sounds. Just like a zombie in those cheap horror movies she had watched in college. "So… can we save him?"

"Restore higher brain functions? Or any brain functions at all?" Entrapta cocked her head as her hair moved over the console, pushing buttons.

The things she could do with such hair… Sam suppressed a brief, weird bout of envy. "Yes." That would be… Well, the Colonel would probably call it resurrection. Or 'de-zombification or something similarly silly.

Entrapta shook her head with a sigh. "I don't think so. I doubt we can restore the network that, well, made him him. I doubt that we could even restore the basic brain functions that keep the body alive and breathing - the magic healing must have completely disrupted it."

"Well, that can be relearned," Hordak said. "Or we could attempt to copy an existing lower-level network pattern onto a clean brain."

Sam's eyes widened at the proposal. "What? You want to copy a person's mind?"

Hordak frowned at her. "Of course not - we don't have the technology or magic to achieve such a feat. But we might be able to copy a less complex pattern well enough to speed a relearning process along."

"Uh, I don't think that's a good idea. In fact, I think that's a very bad idea," Bow cut in.

"Yeah," Entrapta agreed. "Even if we manage to copy a pattern well enough to imprint on a brain, the new brain cells will be trying to copy actions from another body. That won't work on that level, much less a higher one."

"True," Hordak agreed with a frown. "I forgot that this wouldn't be a basic clone pattern."

"Oh." Bow looked at Entrapta with a grimace, Sam noticed. And Entrpata nodded with a… sad expression?

Ah. That must be how Horde Prime's clones had been… programmed was the word, even though, or especially, since it was dehumanising. Sam cleared her throat. "So, we could only create a new person in an old body."

"More or less. Like a baby. Just with a larger body," Entrapta nodded.

"Well, I don't know about you, but I'm not ready to become a father right now," Bow said with a weak grin. "So… I don't think we should create a new life here."

Sam winced at the implications.

"Right!" Entrapta nodded again. "If we do make a baby, it won't be in the middle of an experiment."

"Yes," Hordak agreed.

Sam glanced at Bow. He looked as disturbed about this exchange as she felt. But they had a task to do. "So… this healing energy disrupted the neural network in people's brains - presumably in other creatures as well?"

"I think so… some of the more primitive creatures might not be affected, and some at the outskirts of the field might not have suffered complete disruption, but those in close vicinity…" She shook her head. "Probably gone."

“So, we have a zombie area in the jungle,” Bow said. “Why would anyone do this?”

“I think a lower-powered application would restore a body without wiping the neural networks controlling it,” Hordak said. “The network would still suffer some degeneration, but it would, properly controlled, not be significant unless someone was repeatedly exposed to such magic.”

“Does that mean that magical healing damages your brain?” Sam asked.

“This form of magical healing does,” Entrapta replied.

“People have been healed repeatedly during the war without suffering such effects,” Bow pointed out. “And I don’t recall any lecture about such a risk. It must be unique to this device.”

That was a relief. And yet… “We still have an unknown number of such affected people and animals to deal with,” she said.

The others nodded.

“We might consider using a bomb, as was suggested by the representative of the local population,” Hordak.

“I don’t think we should nuke part of Honduras,” Sam retorted.

They had to find a better way to deal with this… zombie infestation.

“Well, we could just wait until the magic effect fades - it takes a lot of energy to keep all the individual cells not only alive, but working together, and without the device to provide the energy, it’ll shut down sooner or later - I guess we can calculate a rate of decay if we get more data,” Entrapta said.

That was a better solution - provided that this ‘sooner or later’ was sooner rather than later. Sam doubted that the Hondurans wanted to cordon off the entire area for a decade or two. But she

needed more than a theory to suggest a course of action to the Colonel. "Let's check."

"Yes!" Entrapta whirled and started using her instruments again. Sam stepped up to the console and added some calibrations.

*****

"...and our conclusion is, although based on only one set of data and extrapolated, accounting for the lack of a natural magic field and the interaction between the magic and the internal chemical energy reserves of the cells, that the affected organisms should stop being able to move in about two days to a week. It depends on how much energy they use to move, so more primitive organisms could function for a longer time while people and similar creatures wouldn't last too long," Entrapta explained.

Catra blinked. "So, we just have to wait, and the problem solves itself?" That was convenient!

"Yes," Entrapta replied, nodding.

"Although we cannot completely exclude the possibility that the affected organisms might display unexpected characteristics in the meantime," Carter added. "They might mutate with all the magic energy affecting every cell."

"Mutant zombie mice?" O'Neill asked, shaking his head. "If we tell Hammond that there's a danger of that, we'll get sent to a shrink."

"I think General Hammond will not dismiss the possibility of such a threat after studying our other reports," Teal'c commented.

"Yeah, I was trying to make light of the fact that we have a bunch of effectively dead people walking around without a chance of curing them." O'Neill sighed. "So much for magic healing."

Catra saw Adora flinch and clenched her teeth. How dare he! "That wasn't the fault of healing magic!" she snapped. "That was

the fault of an idiot creating a dangerous artefact and another idiot turning it on! Don’t blame magic healing for this!”

O’Neill turned to frown at her. “Hey! I’m the one who was healed by magic here - I’ve got a right to be concerned.”

She hissed. “I was brought back from death by Adora’s magic! You just got healed!”

He recoiled a little, then dug in his heels. “Then you should be concerned as well!”

“No, neither of you should be concerned,” Entrapta cut in. “If Adora’s healing had such side effects, we would have noticed them long ago - she did restore the Fright Zone, after all, and healed the forest in Plumeria. If there was anything wrong, Perfuma would have noticed.”

“Yes, I think we would have noticed zombie animals wandering around,” Glimmer said. “Also, I’m a trained sorceress.” She raised her hand. “Mystacore’s best sorcerers tested for negative effects of ‘overhealing’ long ago and found nothing with the standard healing spells.”

“Well, something went wrong here,” Daniel pointed out. “So, there is a danger even if you didn’t encounter it before. Adora’s healing is safe, but what if anyone else tries to invent a new way of magic healing?”

Catra heard O’Neill mutter something about unsafe magic and clenched her teeth again. Working with this kind of attitude was so frustrating! “We know what we are doing,” she said, flashing her fangs.

“But you want to restore magic to the world,” O’Neill shot back. “That means a lot of people who don’t know what they are doing will dabble with magic. Who’s to say that they won’t create a real zombie plague?”

Daniel, to Catra's surprise, nodded. "I have to agree. It seems that this was a localised effect dependent on a single item. But what if it could tap into a natural magic field to power itself?" He grimaced. "Like a magical zombie plague?"

"Zombie apocalypse," O'Neill added.

Glimmer shook her head. "That's not how it works. You don't realise just how difficult it is to create such devices as the one here. You can't just 'dabble' and create that by accident. And the idea that you could create a spell that does this…" She scoffed. "You might as well bang together a pair of rocks and hope to get a nuclear bomb out of it."

"Oh, yes!" Entrapta chimed in. "The thaumaturgic equations used here are incredibly ahead of anything else I've seen. This can serve as inspiration for so much research! Those Ancients were such geniuses!"

Catra had to wince at that. "But let's do any such research in space." Where they could blow up a lab if something got out of control. Melog agreed, she could feel them.

"Right. We really need a lab ship for research." Entrapta nodded.

"That sounds like a good idea," Daniel said. "But even if the risk is minimal, should you really unlock magic on Earth?"

Glimmer frowned at him. "Why not? It certainly didn't prevent this device from being created. Magic being returned to Earth just means that sorcery becomes possible."

"But this device was created when magic was available," Daniel retorted.

Carter cleared her throat. "We've been working with magic since we arrived on Earth. Our scanner works with magic but is powered by advanced technology. That's also how the containment fields work." She looked at O'Neill, Catra noticed, as she went on: "We're using magic. We're doing magic research."

"And you can bet that your government is already working out how to do magic research as well," Glimmer added.

"But we'll do it in a responsible manner!" O'Neill retorted.

Catra looked at Daniel, who winced, and then at Carter, who was not meeting anyone's eyes.

Yeah, right.

*****

Jack O'Neill suppressed a wince. Yeah, the United States weren't perfect, but if he had to choose who got to experiment with magic, he'd pick a government laboratory with good supervision over some weird New Age Wicca with a grudge against their neighbours any day of the week. "Generally, we'll do it in a more responsible manner than some random person on the street. Carter here answers to the government, for example, and the government answers to the people. That means Carter can't just decide to create magical kudzu and let it loose on the prized garden across the street." He grinned at her, "No matter how much you might want to after the last homeowner association meeting."

She smiled back at him, but he could tell she was… at least slightly annoyed. Even though he was absolutely sure she had thought about doing this at least once. Who hadn't?

Good enough, though. He nodded. "Anyway, the government might not be perfect, but our scientists have supervision. And budgets."

"That feels very restrictive," Entrapta said with a pout. "I don't think non-scientists are the best people to direct research. What if they don't understand the subject? Or have an irrational fear of the potential results?"

"Well," Jack replied. "The restrictions are kind of the point."

A point, or so he believed, judging by some of the glances exchanged between their friends, that the Etherians might accept.

"So much for free enterprise," Catra commented with a toothy grin.

"Well, most scholars would agree that no freedom is absolute, and ensuring the safety of the general population is usually a sufficient reason for proportionate and effective restrictions," Daniel remarked.

"Like no zombie plagues," Burke added.

Entrapta didn't seem to be convinced.

"Or not creating portals that might destroy the world," Glimmer added.

That made Entrapta flinch. "Oh, right."

And Catra flinched as well, Jack noticed.

"But you can't really control all research either," Glimmer pointed out. "Not unless you control every country and its population. Which you don't. And your governments do run secret research projects."

"Like Stargate Command," Adora added.

Jack managed not to wince at that. "Yeah, and imagine what would have happened if that project had been without any supervision or backup by the government. Anyway, how about we talk about this once we're sure the zombie-generator is safely stashed somewhere? Like between Earth and the Sun?"

"Good idea," Adora agreed.

"Yes," Reyes spoke up. "The sooner this is out of our country, the better."

And Jack suppressed a curse. The Honduran had stayed silent during their entire conversation. They hadn't exactly spilt classified information, but the officer would have gotten more insight into the Etherians - and SG-1 - than most people. Ah well, that couldn't be helped right now. Jack would claim it was a trust-building measure.

*****

Earth Orbit, Solar System, August 19th, 1998 (Earth Time)

"We're in space. Like astronauts." Burke shook his head as he stared out of the window.

"Yep," Jack said as he stepped up next to the agent. "And it's cold out there." And hot if you were facing the sun, but Carter wasn't here to correct him.

Burke scoffed. "It might be old news to you, but to me…" He shook his head again. "I would have never expected to experience this."

"And you can't talk to anyone about it," Jack replied before he could help himself.

Burke snorted. "That's normal in our business."

"Yes. And speaking of your business… You aren't too attached to your cosy little jungle, are you?"

Burke narrowed his eyes at Jack. "What do you mean?"

"We're always on the lookout for people who don't freak out if they encounter aliens. Or zombies."

Burke snorted. "You mean I know too much to keep running black ops."

Jack shrugged. No sense in denying that - Burke knew how the game was played.

"I don't fancy having an accident on the next mission or getting kidnapped, so I guess I don't mind getting a new assignment." Burke glanced at the window again.

"Stargate Command doesn't do that kind of stuff," Jack told him.

"Sure you don't."

"No, really. We have ethical officers and staff who wouldn't look kindly on such antics," Jack explained.

"Ah." Burke looked at Daniel. "So, no one's going to off Reyes?"

"None of us, at least," Jack replied. Who could say what the NID or CIA would do? Jack hoped they would restrain themselves - the Etherians wouldn't be happy if they found out about such operations. He had stressed that in his reports.

"Ah."

"So, welcome aboard. Don't get taken over by space snakes," Jack said with a grin. Now he wouldn't have to feel guilty any more about thinking the worst of Burke for years. Though how could he have known that Burke wouldn't tell the truth at his own court-martial? He ignored the small voice in the back of his head that told him he should have known better since Burke had been a friend.

Burke nodded, smiling almost reluctantly as he looked at space again. And at the frigate they were currently docked with. "Do I get a laser gun?"

Jack grinned again. "Well, those are actually not as good as you might expect. We use carbines, rifles, SMGs - stuff you're familiar with."

"Really?"

Jack nodded. "And if we stick with the Etherians, swords and bows might make a comeback as well."

Burke blinked, then glanced at Bow, who was talking with Glimmer in the corner. And then back at Jack. "You're bullshitting me!"

Jack chuckled. "I sure hope so." He would make a very bad Green Arrow or Hawkeye.

They spent a few minutes stargazing - well, Jack was stargazing; he should have brought his telescope - before Carter, Entrapta and the others returned to the bridge.

"All set!" Entrapta announced. "It's not quite a secure lab, but the frigate will keep it safe, and with a bot crew, so even if the containment falls, they won't be affected."

"Good." Jack wasn't about to comment about how such setups never worked in the movies. "Then we can drop off the good Major now."

"And then go after the next Naquadah item!" Entrapta said.

"Which is classified," Catra quickly added before the princess could reveal even more to Reyes.

Jack nodded in agreement and turned to the Honduran. "Need to know and all, you know."

"Of course, Colonel."

Reyes was far too quiet for Jack's taste. He was sure that the man hadn't missed much. And since he had been in command of tracking down 'bandits', he might have a background in intelligence. Probably counter-intelligence.

Jack would be much happier once the man was off the ship.

*****

Over the Atlantic Ocean, Earth, Solar System, August 20th, 1998 (Earth Time)

“So, what’s next? Siberia or the ocean?” Adora asked as Darla kept hovering over the big ocean - Mermista would probably love to explore the sea here.

“Well, the UN Security Council is a bit torn on the issue. It looks like Russia and China want us to go after the thing in the ocean first,” Jack said.

“And the United States want us to secure the object in Siberia before the Russians do it, right?” Catra asked, leaning against Adora’s chair, her tail brushing against her leg from time to time.

Adora still hadn’t been able to make Catra admit that she was doing this intentionally.

“Yes.” Jack nodded.

“We could split up,” Bow suggested. “Go after both simultaneously.”

“I think it would be easier to head to Siberia,” Jack said. “Unless this ship can dive better than a submarine, you’ll need our help to reach that.”

“Well… if the depth is not too high, Darla should be able to withstand the pressure,” Entrapta said. “But she’s not really ready for operations under the sea.”

“We usually left that to Mermista and the Salineans,” Bow said.

“It’s kind of her shtick,” Catra added. “And she gets all huffed up if we don’t let her do all the water stuff.”

Adora frowned at her lover. That was a pretty biased description of Mermista. “It’s only logical that she would take care of such situations, like Perfuma handles plant problems.”

“Redundancy is a good thing,” Catra retorted. Adora didn’t believe her innocent expression.

Glimmer snorted. “Anyway, can we dive that deep?”

“I wouldn’t want to risk Darla. What if she springs a leak?” Entrapta said. “We could keep the shields up, but that would mean that we have trouble doing anything outside.”

“Or we could leave that to trained divers and submarines,” Jack suggested.

“Your divers aren’t trained in handling Goa’uld technology,” Hordak retorted. “What if they set up another explosion underwater?”

“The shockwave might even be able to cause a tsunami,” Carter said.

“I could make diving suits for us. It would take me some time, though,” Entrapta told them.

“That’s a good idea,” Glimmer said. “Just in case.”

“We could hit the Siberian location in the meantime,” Daniel said. “We can find it more easily than the Russians, right?”

“Oh, yes! We have determined its exact location with the last scan!” Entrapta said. She pointed at the hologram showing both locations with her hair. “It’s underground and in some tomb or other structure.”

“Is that a Goa’uld site or a facility run by the Russian government?” Jack asked.

“Uh… I can’t tell from here. It’s blocking our scans to some degree.”

“Which could indicate either,” Sam added before Adora had to ask. “It’s rather deep in the ground, Sir.”

“Well, my gut says Russian,” Jack commented.

“Are you sure that your gut isn’t stuck in the Cold War, Jack?” Daniel asked.

“Are you sure that the Russians aren’t back in the Cold War?” Jack snorted. “They want to use the alien technology to surpass us.”

“And we want the alien technology to keep our position,” Daniel retorted.

“And we need trustworthy allies to fight the Goa’uld and save the galaxy - and Earth,” Glimmer cut in. “So… can we hit this already?” She pointed at Siberia. “I don’t want to wait until your people make up their minds. This is too dangerous.”

“Don’t we have a mandate from the Security Council to secure all the technology we discovered?” Adora asked. That was what she had taken from the last meeting.

“Anything that isn’t already safe and secure,” Catra corrected her. “That was probably slipped in by the USA.” She flashed her fangs at Jack.

“But what technology we’ve recovered is already known. The Naquadah in Siberia is not known.”

“The Russians might have lied? I’m shocked!” Jack gasped and held a hand over his heart.

“You know, even at their worst, the Princess Alliance worked better than this,” Glimmer said, shaking her head.

“At their worst, the Alliance didn’t do anything,” Bow objected.

“That’s still better than working against each other,” Glimmer told him.

“Well…”

Adora cleared her throat. “Let’s tell the Russians we can assist them. And that we need to ensure we’re not dealing with another

‘zombie plague’.”

Jack grinned. And Catra patted Adora’s shoulder. “Who knew you could be sneaky!”

Adora frowned at her friend. She could be sneaky if she wanted to! She just usually didn’t want to - honesty was better than trying to trick people who were or could become friends.”

“Yeah, let’s head over to Russia with your shiny space ship with the space guns and tell the Russians we’re here to help,” Jack said. “Let’s see them try to tell us to get lost. Hey! Do you think we could land on the Red Square in Moscow first?”

“Jack!” Daniel protested. “We can’t just antagonise Russia!”

“We certainly can,” Jack said. He was grinning in a manner that reminded Adora of Catra when she was annoying people.

“We won’t annoy the Russians - or anyone else - unless we can help it,” Adora stated. “Darla, take us to Siberia.”

*****

North of Bratsk, Russia, Earth, Solar System, August 20th, 1998 (Earth Time)

“We’re right above the location,” Entrapta said. “I double-checked.”

Samantha Carter nodded. “Yes.” She had done the same. Just to be sure. Whoever had hidden the facility holding the Naquada artefact had done a thorough job - she couldn’t see any sign of it from above. Then again, if this was a Goa’uld site, the millennia since they had left Earth would have done most of the work. But if this was, as the Colonel suspected, a Russian installation… “Can we map the site?” she asked.

“Yes… although it has a really confusing layout. I cannot make out a pattern… Wait! Let’s scan for other metals!” Entrapta’s hair flew

over the console, pushing buttons and keys before Sam could react.

Other metal… Oh! "You think it's a mine?" Sam asked.

"Yes! That would explain why the tunnels aren't following logical patterns. So, there should be residual ore… Yes!" She beamed at Sam, then at Hordak. "It's an old mine!"

"And was it repurposed?" Sam asked. She eyed the screen. "Can we get more details here?"

"It's not shielded like a First One site, but the ore in the ground and the depth of the site make it hard to detect details," Entrapta explained. "Although… yes, this looks like the entrance."

On the main screen, the map zoomed in on a spot quite far away from the Naquadah's location. And that spot… there were no roads, but… Sam tilted her head. "That looks like tracks."

"Yes. All-terrain vehicles," Hordak agreed. "Someone has been visiting the site recently, or they would've been covered by vegetation again."

"Right. Without Perfuma, you can't easily erase such tracks," Entrapta said.

"There are ways to hide your tracks," Sam corrected her. "But they aren't perfect." And the closer you were to the hidden tracks - or the better your instruments - the harder it was to hide them.

"Right! So… someone's down there. Bandits?"

Bandits? Russia had a problem with organised crime and corruption, but Sam didn't think this was related to either. "I think it's more likely that this is a site controlled by the Russian government - or part of it."

"In that case, we should proceed with caution," Hordak said. "We wouldn't want to accidentally kill government troops."

Or not so accidentally. In any case, they had found the entrance. Sam suppressed a sigh - they had to call the others, who were currently resting. She knew the Colonel needed more sleep, but they couldn't risk another Egypt. "Let's call the others," she said.

"Yes!" Entrapta hit the button for the intercom. "Everyone! We found the entrance!"

Not even a minute later, the Colonel and the others entered the hold. "So, what have you scienced up?" he asked with a grin that didn't quite manage to hide how tired he was.

"We found the entrance to the installation. It's a mine! An old mine!" Entrapta said.

"And it's recently been visited," Sam added.

"So… it looks like the Russians are playing their old games again," the Colonel said, shaking his head.

"You think this is run by the Russian government?" Glimmer asked.

"You betcha," the Colonel replied. He bared his teeth. "Let's see if we can foil whatever they are planning. Without blowing up the taiga, of course."

"Of course," Entrapta added, a little too serious for Sam's taste.

"Why would they do this? They were behind the resolution to secure all alien technology not yet secured," Adora said.

"They're Russians." The Colonel shrugged. "Saying one thing and doing another was the norm for them back in the Cold War, and I doubt they changed since then."

"The United States weren't exactly very honourable and trustworthy either," Daniel said with a frown.

“But we didn’t try to hide alien artefacts after telling the UN to secure them,” the Colonel shot back.

“Because we already had them secured,” Daniel retorted.

“It still makes no sense. They know we can detect the Naquadah,” Adora said. “They can’t hide from us.”

“But they can blame it all on a subordinate and say their orders were misunderstood,” the Colonel said.

“Or this could be a splinter group, criminals - or a Goa’uld base,” Daniel said.

The Colonel frowned. “That’s… also possible. Damn, I knew this was too good to be true! I was so looking forward to ruining the Russians’ day.”

“Jack…” Daniel shook his head.

“You weren’t there,” the Colonel replied. “It’s a Cold War thing. Well, let’s find out if we’re going to hunt a Snake or poke the Russian bear.”

Catra snorted. “Sounds fun.”

“Catra!” Adora shook her head. “This could be a diplomatic disaster!”

The catwoman shrugged. “It’s not our fault. We’re honouring the request of the Security Council, aren’t we?”

The Colonel nodded with a matching grin. The two were quite alike in some ways, Sam thought, not for the first time. Though she was also aware that the US government would be happy if the relationship between Russia and the Etherians would become strained over this.

Very happy.

*****

"...and thank you. Have a nice day."

Catra leaned against the wall next to the door of the bridge, ears twitching, as O'Neill finished the call. Audio only, since for some reason, the Russians didn't want to transmit a picture or something.

O'Neill was smiling widely - like Glimmer when she got one over Catra - as he turned to face the rest of them. "Hah! I knew it! It's a secret government facility!"

"And they admitted it?" Daniel asked.

"We're hovering over its location with a spaceship," O'Neill said. "Not even the Russians would try to bluff that out. Well, most of them wouldn't." He shrugged. "Anyway, we can land next to the entrance - someone's supposed to meet us there. The 'caretaker to this absolutely not functional research station that the government totally forgot about'."

"My Russian is a bit rustier than yours, Jack, but I don't think that's an exact quote," Daniel commented. He sounded a bit jealous, in Catra's impression.

"It's a concise summary of their claims," O'Neill retorted. "Anyway, let's land - but carefully. We don't know what's in there since the Russians claim they don't know either, just that it is a storage site dating back to the Second World War."

Ah. "So there could be a Goa'uld in charge?" Adora asked.

"The Naquadah concentration hasn't moved and is too large for a Goa'uld, according to our scanner," Carter told her. "Although if a Goa'uld was wearing or carrying Naquadah devices, it might match the result we got."

"Great. So, stay sharp, folks! And don't leave the ship unguarded."

“We can take the shuttle down,” Adora suggested. “Who gets to stay on it?”

Since Adora would certainly be going down, Catra would be going down as well, so she didn’t even twitch at the question. By now, people should know better than to try and separate them. And Melog would likely tag along anyway - it was almost impossible to keep them out of something they wanted to enter.

Entrapta looked torn. “Someone who can use the scanner should stay… But I really want to see the technology down there! Maybe they have other, non-Naquadah-based technology?”

“Well, Russian technology of the time was said to be so durable, it would keep running even if Russians maintained it,” O’Neill said with a chuckle. “But I don’t think it’ll be impressive.”

Catra glanced at Carter. The scientist was fiddling with a gadget - it was obvious that she wanted to go down into the mine as well.

“I will stay on the ship,” Hordak said. “I can operate both the weapons and the scanner, should you need assistance.”

“Oh, thank you!” Entrapta went to hug him. “We’ll bring back the most interesting piece of technology we find!” She blinked. “If we’re allowed to, of course.”

“Let’s stick to alien technology,” O’Neill said. “That way, the Russians can’t really complain. I mean - they forgot about alien technology? Hah!”

“Well, it’s possible,” Bow said. “We once forgot…”

“Yes, it’s possible,” Glimmer cut in with a frown at him. “But we should go now.”

Catra smirked as they walked to the shuttle - she had to get that story from Bow once they weren’t rushing to secure Naquadah any more.

It took them longer to board the shuttle and fly out of Darla's hold than to land the thing, and by the time they disembarked - after checking for ambushes - the side of the hill in front of them was parting, revealing camouflaged doors. As soon as they opened, a slightly out of breath man the size of, well, almost Scorpia, greeted them with a funny accent. "Hello, Etherians and Americans! Welcome to Siberia! I am Dr Iwan Georgovich, sent here to take inventory of storage site!"

Behind him, four soldiers who didn't look out of breath appeared. Catra kept an eye on them.

"Hello. I'm Colonel Jack O'Neill, Stargate Command, and these are…"

"Oh, but we know them! Of them!" Georgovich beamed. "The aliens who came to visit Earth and protect us! Magical Princesses from Outer Space! You must have so much knowledge! And stories!"

"Oh great," Catra heard O'Neill mutter. "We've got a royalist Russian."

"Yeah, that's us," Adora said, smiling back. "And we'd love to talk about it. But we need to secure an alien artefact first."

"Wouldn't want to see this part of the planet blown up," O'Neill added.

"Oh, of course not, of course not! And you are in luck - we already secured the artefact - without touching it, mind you! Come in, come in! It's just a short drive!"

"A drive?" Adora asked.

"Da! Long tunnel, for safety reasons - back when Cold War might go hot - so we drive!"

In an Earth vehicle that looked a few decades old, according to the movies they had seen. And it ran on rails. If they ended up

jumping tracks in an old abandoned mine, Catra would claw someone.

"So," the big man went on as they got into the car-thing, "this site was made after Great Patriotic War - Second World War - to store all the technology secured from the Nazis."

"The Nazis? Don't tell me that Hitler was a snake!" O'Neill blurted out.

"We do not think so," the man replied. "But we cannot tell. But if he was, wouldn't he have won the war with alien technology?"

"Not necessarily," Daniel said. "He might have been afraid to catch Ra's attention, and so he would…"

"It was a joke, Daniel," O'Neill said.

"Oh."

The Russian laughed. "Hah! Anyway, we take fascist technology and sort it out. Pieces left over are stored here, to be sorted out later. But later never comes, so we forgot. But we're back now, and cataloguing everything!"

"We're close to the concentration now, Sir," Carter said as the car came to a stop.

"Right, we brought crate here."

And there was a wooden crate sitting on what looked like a small loading dock. An open crate, with a…

"A DHD!" O'Neill blurted out. "We've been looking for one for ages, and there's one here? On Earth? You've had it for decades after you took it from the Nazis?"

The big Russian smiled. "Da! Good thing, yes?"

Catra chuckled at O'Neill's expression.

*****

The Naquadah Crisis Part 7

North of Bratsk, Russia, Earth, Solar System, August 20th, 1998 (Earth Time)

A DHD. On Earth. Stargate Command had had to build a supercomputer to operate the gate and deal with all the bugs that popped up until it worked, and the Russians had a DHD stored in some bunker since World War II! Even worse, the Russians hadn't even known about it!

Jack O'Neill barely managed not to snarl at the far too happy scientist.

"So, this is a nice piece of alien technology, da? You know what it does, right?" Dr Georgovich prattled on. "The symbols, they look like on the gate, da?"

"Oh, yes!" Entrapta nodded. "This is a DHD. It's used to operate a stargate. Well, you can use a Stargate without it, but you need to emulate this, and that takes a lot of computing power. Although if we can analyse this, we should be able to streamline the process. Probably - science doesn't always produce the results you want, after all." Her hair flew over the DHD, not moving the dials, but almost caressing it.

"Ah, the key to Stargate. Very important. Good thing Russia secured it before the Nazis could use it." Georgovich nodded. He seemed a little distracted by the hair tendrils.

"You looted it after the Nazis were beaten," Jack corrected him.

"Defeated by glorious Red Army, yes. Before Nazis could use alien technology."

"I remember some other countries fighting the Nazis as well. And delivering lots of supplies to the Red Army," Jack retorted.

“Da! Good example of spirit of international cooperation against tyranny, yes?” Georgovich was beaming at him. “Nazis back then, Goa’uld now!”

Jack narrowed his eyes at the Russian. He was sure that the smiling bastard spoke much better English and was not half as simple as he acted. “It’s that how you want to play it?”

“Play? Is no game. Very serious situation. All of Earth needs work together to beat evil space aliens, da? Russia offers secured alien technology for alliance!”

So that was their game.

“Great!” Adora, of course, was eating it up. “So, can we take the DHD off your hands?”

“Da! Russia hands over the alien technology to United Nations and Magical Princess Alliance! In the spirit of international cooperation!”

“Like the Security Council ordered,” Jack pointed out. “We were tasked with securing this.”

“Security Council ordered all unsecured alien technology to be secured. This technology was secured. Very secured in secret bunker. This is Russia’s contribution to alliance against Goa’uld. First contribution.”

“And you can make this decision for Russia?” Jack asked.

“Oh, no! Decision was taken by Russian government in spirit of international cooperation. I merely execute it.” Gregorovich smiled at Jack. “We all should cooperate like this.”

“Yeah, right.” Hand over all alien technology to the United Nations? This was a DHD, but Stargate Command didn’t really need one. They had built a work-around, and they had a lot more knowledge and technology than a single piece of technology that was useless without a gate. Knowledge and technology Stargate

command had often paid dearly for. There was no way they would just hand over everything so the Russians and the others could take over and profit. Next, they would want them to sing The Internationale every morning or something.

But again, the Etherians seemed fooled. Adora beamed at the far too jovial Russian, and Glimmer nodded in apparent approval. At least Catra wasn't fooled - though Jack gave it even odds that she found this amusing.

"So, let's get this on the ship then," Adora said. "Is there any either alien technology stored here?"

"Nothing using Naquadah," Entrapta said, looking up from her scanner thingie. "But there might be more advanced technology. Or interesting Earth technology."

"Is that the alien scanner?" Gregorovich leaned forward and craned his neck. "You can scan for alien metal with it?"

"Yes! Well, it's a remote control for the scanner in Darla," Entrapta explained.

"Ah! How does it work?" The man's grasp on English improved when he was asking such questions, Jack noted.

"It uses the law of similarity for Naquadah," Entrapta said. "That's a basic law of magic."

"Magic?" Gregorovich pulled back a little. "This is magic? Not technology?"

"It's basically the same," Entrapta, apparently not having noticed his reaction, explained. "It just uses different principles, and in order to use a nonmagical power source, you have to have a converter. And you also need to apply First Ones technology so you can scan on a planet - or in space - where there is no magic field. So, it's a bit more complicated than a standard magical scanner but much more useful in various environments."

"Ah! And what's its range?"

"Well… it covers the whole planet? But mostly for a generic scan; more detailed information needs closer attention, and sometimes recalibration."

"It's a complicated procedure that requires extensive experience," Carter added.

"Ah." Gregorovich smiled again. "But anyone can do it, da?"

"In theory, yes, but you'd need to understand both magic and First One - or ancient - technology. Although Goa'uld technology might be enough as well," Entrapta said.

"Ah." And that damned smile widened. "I am looking forward to more cooperation. In science!"

"Great!" Entrapta beamed at him.

"Just don't blow up the planet by accident," Jack commented.

"I wouldn't!" Entrapta protested. "That only almost happened because of special circumstances which are very unlikely to be reproducible on Earth."

Seeing the Russian's smile vanish was very satisfying for Jack.

*****

Adora was happy that at least one country wasn't trying to be obstructive. And the Russians weren't even forced to cooperate by a zombie plague or a bomb threat. They just handed over the DHD 'in the spirit of international cooperation'. She smiled as she hefted the crate containing the device and carried it to the waiting transport vehicle.

"Very strong indeed!" the Russian, Iwan, commented.

Adora smiled. "I'm the Princess of Power."

“She lifts, she digs, she carries,” Catra added.

Adora frowned at her lover - that hadn’t sounded like an honest compliment.

“So, this is important contribution, da?”

“It’s great! We can examine it and copy it - I think. At the very least, we can copy the communication protocols,” Entrapta said.

“The DHD also provides the Stargate with power,” Sam added. “It must have an incredible power generation method to provide power for millions of years.”

“Or huge batteries?” Jack speculated with a grin.

“Batteries run out,” Iwan said. “But generator can explode. If this breaks, and all the energy set free…”

Adora didn’t freeze. But she was a little more careful with her cargo. Just in case.

“Well, I don’t think we should do destructive testing until we can duplicate the device in its entirety,” Entrapta said. “But if the power contained inside it - unless it’s just a conduit - were released by an explosion… Hm… I have to calculate if it would destroy the planet or merely cause enough destruction to wreck the biosphere.”

Yes, she had to be very careful.

“How about we take it to space as well?” Jack suggested.

“We haven’t heard of any such explosion, Sir,” Sam retorted. “And none of the Jaffa showed any reluctance to use weapons near or at the DHD on our missions. So, I would assume that they are very hard to set off - if that’s even possible. If the power is syphoned off from the source - like another dimension - then destroying the device would merely interrupt the power, not set it off.”

“That would make more sense,” Daniel said.

“Well, the Ancients didn’t strike me as people with a lot of common sense, at least as we see it,” Jack said.

“True,” Daniel said.

“But they were geniuses! Their technology is still beyond us!” Entrapta protested.

“Yes, but they had a rather tenuous relationship with safety procedures and fail-safes,” Jack retorted.

Adora put the crate down and pushed the memory of the First Ones fail-safe away.

“Yeah, maybe we should be a bit more careful when following their footsteps,” Glimmer said.

“But the Stargates are safe and easy to use!”

“Ah…” Jack grimaced.

“We are using a Stargate with a control device of our own design, Sir,” Sam said. “That might cause some issues - which I hope we can remove now that we can study a DHD.”

“Yeah, I bet we would have voided our warranty for using non-factory parts.” Jack grinned, and the others laughed. Adora joined in, even though she didn’t quite get the joke.

“Before we move the DHD away from Earth, we should check with the Security Council,” Glimmer said. “This is all under their authority, after all.”

“Da!” Iwan nodded. “And we share scientific knowledge, right?”

“I would think so,” Glimmer said.

“Why not? It was yours, right?”

“Because it might contain enough power to blow up Earth if it gets some Russian percussive maintenance?” Jack bared his teeth.

Iwan laughed. “Very funny, Colonel O’Neill. Dark humour - very Russian.”

That didn’t please Jack, Adora saw.

“Or British?” Daniel added. “They have a reputation for black humour.”

“Well, the DHD is secured on the transport now - let’s get it to the ship?”

“But we need to check the rest of the mine for more technology!” Entrapta said. “Who knows what else might have been forgotten inside here?”

“Our mandate only covers the alien technology,” Glimmer told her.

“There could be alien technology that doesn’t use Naquadah,” Entrapta said.

“And it could be as dangerous - like magic,” Jack added. “Better take a closer look, right? And I’m sure the Security Council didn’t want us limited to Naquadah.”

“Da,” Iwan agreed, although a little less enthusiastic.

“Let’s go!” Entrapta dashed away, carried by her hair, striding past the other soldiers present.

“Very enthusiastic scientist, yes?”

“Yeah, that’s Entrapta for you,” Catra said. “Now, let’s go help her sort through your stuff.”

Adora looked at the crate. They couldn’t leave it unguarded here. “I’ll take it back to the shuttle, then I’ll join you.”

She took the transport back to the entrance, with another soldier operating it, and easily but carefully carried the device inside. By the time she was back in the mine, Entrapta and Sam had already gone through one storage area and were starting on the next.

"So far, it's just been ugly art and some primitive tech," Catra, leaning against the wall, told her.

"Nazi technology and stolen art," Jack corrected her.

"As I said."

"Some of those artworks were thought lost!" Daniel protested.

"Oh?" Adora blinked. "More ancient treasures looted by your Empires?"

"Ah…" Jack trailed off.

"You could say that, yes," Daniel said.

"Shouldn't that be returned to the original owners then?"

"Ah… it complicated," Iwan said. His smile looked rather thin.

*****

Naval Station Norfolk, United States of America, Earth, August 21st, 1998 (Earth Time)

Samantha Carter felt slightly guilty as she looked down at the base. She'd just slept almost ten hours, even though they still had to secure the concentration of Naquadah under the sea off the US East Coast. Of course, she had needed the sleep - almost as much as the Colonel and Daniel - and she knew taking care of yourself was crucial for fulfilling your duty; exhaustion, both mental and physical, led to mistakes. And you couldn't afford mistakes when dealing with Goa'uld.

But she could have studied the recovered artefacts. Recalibrated the scanner. Written a better report about the DHD they had recovered from the Russians - one that might be given greater weight when the government made its decision about how to handle the 'Russians' game', as the Colonel put it. Especially since the DHD was still in the ship's hold.

"So… that's the submarine?" Bow asked next to her, peering down at the Los Angeles Class vessel moored next to a pier.

"That's a submarine," she corrected him. "But it won't do the actual recovery. That will be done by a specialist vessel." She pointed at the USNS Salvor on the other side of the base. "It's a specialised rescue and salvage ship. They have divers and specialised mini-submarines for missions such as this. The submarine here will provide additional security." They already had one sub in place over the wreck that contains the Naquadah and two more patrolling the approaches - the Colonel wasn't the only one who suspected that the Russians wouldn't mind pulling something underhanded.

"Ah." Bow smiled. "Entrapta will be disappointed if she doesn't get to board a submarine."

Sam nodded - she was well aware of that fact. And, speaking of the princess… "Where is she?"

"Still asleep," Bow replied with a slight shrug. "She stayed up longer than you, and when Catra switched her concentrated tiny tea for flavoured water, she fell asleep in the lab. Hordak carried her to bed."

"Ah." She looked around. They were alone on the bridge.

"Most are still asleep as well," he said, smiling - he looked well-rested. "Glimmer's preparing her next speech - but don't tell her I told you. And Adora and Catra are…" He shrugged, blushing slightly.

Sam nodded again. She could imagine very well what the two were up to or had been up to. Catra had never tried to hide it - quite the contrary. The Etherians didn't have any regulations against fraternisation within the same chain of command, after all.

She suppressed the pang of envy. The regulations made a lot of sense. You were never as professional as you thought you would be. And even if you could handle such a relationship, others wouldn't, and personal exemptions would only cause more friction and resentment.

That didn't mean she had to like it, of course.

Bow must have misinterpreted her short silence since he smiled apologetically. "You could say they have a lot of wasted opportunities to make up for."

She was aware of that, if not of the details. But you didn't have to be a genius to figure out that two people on different sides of a war couldn't be together, so she nodded. Besides, it was the Etherians' custom, none of her business.

"Of course, what with the 'unnatural relationship' complaints from your country, Catra might also want to be more blatant about it," Bow added.

Sam blinked. "What complaints?"

"Oh, not official ones. Just some tv show or something." Bow made a dismissive wave with his hand. "We know it's not representative of your country. As Glimmer said, every country has a bunch of idiots." Before Sam could inquire what exactly they had seen - she certainly hadn't had any time to watch TV - he went on: "We're more concerned about the people who blame us for the explosion in Egypt."

Sam suppressed a groan. Of course some would blame this on the Etherians. The Egyptian army and its government would probably not mind if they were cleared of any blame. "Any investigation will

show that this wasn't your fault. You weren't there when it happened."

"Well, one of the arguments used is that without our arrival, none of this would have happened." He shrugged. "It might be true, even - without our warnings, the Egyptians might not have investigated the temples."

"We don't know what caused the explosion," she pointed out.

"Yes." He shrugged. "Anyway, let's hope this operation goes off like the last one." He smiled again. "I mean, without an explosion or zombies. Glimmer's aware of the political implications."

Sam nodded. She wasn't certain whether or not Glimmer caught all the nuances - or if anyone, Russian or American, did - but it was a good reminder that while the Etherians might appear naive and idealistic, they were also - at least Glimmer and Catra - pragmatic and had experience with politics. Something Sam feared not all members of her own government, much less Congress, might realise. "Well, we should focus on recovering the Naquadah here," she said.

"Yes. At least to what degree we can, without being directly involved," he agreed. "Staying back and watching while others risk their lives…"

"Adora's not going to like it," Sam said.

He chuckled at that. "I think that half the reason Catra's teasing her about being a nice multipurpose tool is to make her realise that she doesn't have to do everything herself."

That made sense. "And the other half?"

"Because she likes teasing Adora."

"Ah." That made sense as well, of course.

They stared down at the base in silence for a moment before Glimmer stepped on the bridge, complaining about their schedule.

*****

Off the East Coast, Atlantic, Earth, August 21st, 1998 (Earth Time)

"We should have stayed on Darla," Catra said, glancing at the railing. "We can react much quicker to anything up there, and we have better sensors to spot trouble. And more firepower to deal with it. This ship is rather flimsy - it doesn't even have shields and barely any weapons." And there was an ocean below them, full of deep, cold water…

"You could've stayed on Darla if you wanted," Glimmer commented. With a grin, she added: "Where you are safe from the big, bad, evil water."

Catra glared at her, but Glimmer giggled in return.

And, worse, O'Neill picked it up. "What? Don't tell me you're afraid of water! Like a housecat!"

She narrowed her eyes at the man, but Daniel piped up before she could come up with a good comeback. "Actually, there are housecats that love swimming in water."

"I'm not afraid of water," Catra snapped. "I just don't like the thought of swimming in this… this sea here, with some unknown Naquadah devices on the seabed that could turn me into a zombie!" There! A perfectly valid reason not to want to go swimming. "And salt water is hell on my fur," she added.

"It's true - it makes her fur all crusty and salty." Adora nodded. "And then we have to spend an hour in the bath to get her clean."

"Well, let's hope that you didn't frighten off our brave Navy divers," O'Neill said with a stupid smirk and a glance at the two people pulling on diving suits and stuff a bit away from them.

“I doubt they heard me over all the noise on this ship,” Catra shot back. “And don’t tell me that you’d send them down there without telling them the risks?”

“We wouldn’t,” Daniel said. “They are volunteers.”

“Real volunteers?” Catra raised her eyebrows - she knew how that had worked in the Horde.

“Yes, real volunteers,” O’Neill replied with a frown. “Some people are like that.”

“Not very smart then,” Catra said. “Let’s hope they’re smart enough to handle the artefacts without blowing us all up.”

“Well, they’re Navy, so they weren’t smart enough to get into the Air Force, but since they survived doing dangerous diving missions, I think they should do.” O’Neill nodded.

“Jack!”

“Daniel, ribbing the rival services is a centuries-old tradition. Not doing it is supposed to bring bad luck,” O’Neil claimed.

“What the…? Oh, for… Sam! I’ve got a question!” Daniel went on towards the aft of the ship, where Entrapta and Carter had set up.

“That wasn’t very nice,” Adora said. Of course she meant Daniel getting ribbed, not Catra. Catra frowned at her, and she smiled. “You can take it, Catra. Besides, you do hate water.”

Catra narrowed her eyes for a moment. This was… ah! She smiled - saucily. “Oh, I like it when it’s hot and soapy, and we’re washing each other’s back, and you make those cute noises when I…”

“Catra!” Adora hissed, blushing crazily.

Catra snorted in return. As if Adora could beat her at teasing!

O’Neill cleared his throat. “Very informative.”

Catra eyed him. He put up a good front, but she was sure that the man was jealous. Or at least didn't like the teasing.

Daniel returned, glaring at O'Neill but not saying anything. O'Neill grinned.

"I believe they are now ready to start the operation," Teal'c commented - he hadn't shown any reaction to the whole scene, not that Catra had expected him. The big man was more stoic than a stone statue. Most of the time. But she wondered what would happen if he ever lost his temper.

And he was right - the divers were now mounting what looked like some underwater vehicle. Or a bot with seats. And some Navy officer was walking over to the group. "Do you wish to follow the operation from the bridge?"

"Naw, we're good here," O'Neill replied before anyone else could say anything. "I bet we have the better view from here."

The officer frowned for a moment before nodding. "As you wish, Colonel."

"Carter and Entrapta probably can see more from orbit than the Navy can see in front of their eyes," O'Neill said as the man left.

"You really take this ribbing seriously, do you?"

"It's a…"

Daniel cut him off with a frown. "He likes to needle others."

"Keeps them on their toes," O'Neill grinned again. "Let's see how the operation is going."

It seemed to be a straightforward operation, in Catra's opinion. Go down, grab the stuff - with Entrapta and Carter directing the divers, if needed - and bring it up. And it did start that way, even though it took the divers longer than she had expected tor each the wreck.

“Looks like an old tramp freighter,” O’Neill commented.

“We already knew that,” Daniel told him. “We actually identified it as the ‘Esmeralda’, a ship chartered by the Steward expedition to Egypt in 1930.”

“I know.”

“And you didn’t track it down after you knew about the Stargate?” Catra asked.

“We had no idea where it had sunk,” Daniel told her. “I actually recommended checking out every Egyptian relic in public and private collections, but we didn’t get around to do it yet.”

“Daniel wanted to do some sightseeing on Uncle Sam’s dime,” O’Neill said.

“Jack!”

“What?”

“Oh!” Entrapta piped up. “Look, they found something!”

Something alright - in the cone of the diver’s flashlight, Catra could see what looked like busts.

“That’s a depiction of…” Daniel squinted. “...Osiris. And Isis.”

*****

“Osiris and Isis. And that means?” Jack O`Neill asked, cocking his head to the side. Daniel was a great friend and great archaeologist, but he usually needed a bit of prodding and poking to get to the point.

“Osiris was the god of fertility, agriculture, the afterlife, the dead and resurrection. According to legend, his brother Set cut him into pieces, and his wife, Isis, gathered the pieces and put him together again, resurrecting him,” Daniel explained… nothing.

“Talk about marital devotion,” Jack joked. “So, was that a power struggle amongst the Goa’uld?”

“I don’t know. We’d have to ask our captive from Seattle once we find a way to communicate with it,” Daniel replied. “And this one, if this contains Osiris and Isis… This could shed so much light on the earliest period of Goa’uld rule!”

Jack raised his eyebrows. “So, these are stasis pods containing two ancient Goa’ulds?”

“Osiris and Isis have been missing since before Ra’s retreat from Earth,” Teal’c commented. “Which would support that these pods contain them.”

“Great. Two more snakes for our collection.” Jack grinned. Too bad that the snakes’ intel would be outdated, but they were talking about Goa’uld - they carried grudges for millennia, so there might be something actionable to gain from this. But they had to be careful. “Tell the divers to proceed with extreme caution. We don’t want those things to break.” The last thing they needed was a snaked sailor. Though… “Can snakes survive at that depth?”

“I don’t think the pressure would be too harmful, but the lack of oxygen and the sudden shock from their stasis pod breaking would likely be fatal,” Carter replied.

“Indeed,” Teal’c confirmed it.

“Well, that’s good news,” Jack said. He wouldn’t shed a tear if the pod broke and a snake died before it could take over people.

But the divers knew their stuff - well, they should; the Navy knew how important this was - and recovered the two things without breaking them. That was one advantage at least of having to reveal the Stargate project: They could tell the rest of the armed forces the truth about their missions. And while Jack wouldn’t admit it, ever, no longer having to claim that they were doing Deep Space telemetry was very nice as well. He wouldn’t miss the

pitying glances from other officers who thought he was a wash-out or screw-up in a dead-end assignment.

"So, anything else down there?" he asked when the pods had been secured.

"Well… there are a few more things according to our scanner," Entrapta said. "Not quite as large, but still looks to be refined Naquadah."

Which turned out to be a zat'nik'tel and a… thingie.

"Oh! That's new! We haven't seen this before!" Entrapta squealed. "I can't wait to find out what it does!"

Jack was about to caution her about being cautious when Teal'c spoke up again: "That is a scales cleaner."

"A what?" Jack asked.

"When a Goa'uld outside a host needs their scales cleaned, they can slip into this device, and gentle pressure from the muzzles inside will clean their scales as they pass through the tube," Teal'c explained.

"It's a snake washing machine." Jack chuckled. "Now I've seen everything."

"Aw! That doesn't sound particularly interesting." Entrapta pouted.

Daniel, though, was intrigued. "It's fascinating. In order to use this, a Goa'uld had to leave a host. So, was this reserved for special occasions? Or did they regularly leave a host - temporarily - to do this? Do they have to clean their scales for a biological reason, or is this merely a convenience? Or a cultural ritual, like a symbolic shedding of an old skin?"

Jack stared at him. Those were… very Daniel questions. Although… "So… if they leave a host for this machine, we could trap those and kill a Goa'uld without hurting the host?"

Daniel's eyes lit up. "Sharee…" he whispered.

Jack clenched his teeth. He shouldn't have speculated like this. They had no idea how to get to Daniel's wife, much less do so without being detected and then wait for such an occasion for who knew how long. Giving his friend false hope…

"We'll save her!" Adora said, nodding firmly. "No matter where she is, we'll save her!"

Jack usually would make a sarcastic remark, but… Daniel looked so hopeful, and Adora looked so determined, he couldn't make himself do it.

And as much as he knew it was wrong, he couldn't help feeling hopeful himself.

*****

Adora nodded with a smile. They would help Daniel save his wife. That was what She-Ra did - help those in need. Protect and save people.

Though they would have to find her, first. And in order to do that, they would have to be ready for war - and that meant making an alliance with Earth. Or at least with some countries on Earth.

"They're coming up again!" Entrapta said. "Or not."

"They need to take it slow so they won't get the bends," Sam explained.

"Ah. Shouldn't the diving suits do that for them?" Entrapta blinked. "That seems like an obvious feature."

"These diving suits aren't as advanced as the ones you are thinking of," Sam told her.

"Why are they using them, then?"

“They allow more flexibility underwater at those depths.”

“Oh. We should have constructed better suits then!”

“That would have taken too long,” Sam said.

“Well, we can add it to the list!” Entrapta nodded.

“No, you wouldn’t have been able to do it faster,” Catra said behind Adora.

“I wasn’t thinking about that,” Adora retorted with a pout. But now that Catra had mentioned it…

“You’re not invulnerable,” Catra insisted.

She knew that. And she refrained from rubbing her back, where she still had some faint scars from Catra’s claws. “Anyway, that’s the last Naquadah that wasn’t accounted for,” Adora said. “That means that Earth is safe again.”

“Safer,” Jack corrected her. “I wouldn’t say we’re safe.”

“You’ve got too many idiots on the planet for that,” Catra agreed.

Adora shook her head. “The planet is safer, then.” She scoffed. “You need to stop being such…” She frowned. What was the best word?

“Downers,” Bow said. “Always seeing gloom and doom.” He smiled. “We did well.”

“We haven’t secured the pods yet,” Catra pointed out.

“If anything happens now, Adora can jump in and grab them.”

She nodded. She could do that - she had fought a sea monster before she had really understood her power. Powers.

Catra scoffed, as she usually did when she lost an argument. “Yeah, yeah. Anyway, after this, it’s back to negotiations.”

Right. Negotiations with stubborn and weird people. And stupid people.

Not even Bow had a good answer to that.

And before Adora could come up with a comeback, the divers reached the surface, and everyone rushed to take the pods and the other things.

“Put the busts into the containment unit!” Sam ordered them as Entrapta put the container down next to the still dripping underwater vehicle - it wasn’t a submarine; Adora had asked.

“Wait!” Daniel held his hand up and knelt down next to the female bust. Pod. Thing. “This…”

“Watch out, Daniel! You’re not snake-poof!” Jack moved, and Adora thought he’d pull Daniel back, but the man only knelt down next to his friend.

“The seal!” Daniel said. “It’s broken!”

“What?” Adora tensed, and she saw Catra look around. “We need the Scanners!”

“There’s no Naquadah nearby - except for the pods, the zat’nik’tel and the tool,” Sam told them a moment later.

“Yes,” Daniel said. “I think the seal broke long ago. And the Goa’uld is still inside.”

“Oh.” Adora blinked as Daniel reached out and opened the pod before anyone could stop him.

But the Goa’uld inside looked very dead.

“Well, I guess Osiris isn’t coming back from death this time,” Jack said.

“That’s actually Isis, Jack,” Daniel said. “Unless they mixed up the busts when they put them into stasis.”

“Well, we could attempt to revive them using the other device,” Entrapta suggested.

“Yeah, let’s create a zombie snake. That’s what I was missing my life,” Jack said.

Entrapta looked at him for a moment. “Really? If you had said something earlier, we could have gotten you a zombified snake from Honduras.”

Jack stared at her.

“Ah, you were joking.” Entrapta nodded. “Anyway, usually, the brain would be wiped clean, so it would just be a mindless creature, but since they have a genetic memory, it might actually restore them with their genetic memory,” she said. “If it works. Which isn’t certain - we don’t know yet how exactly it works, and we also don’t know enough about Goa’uld biology to tell.” She perked up. “But we could find out!”

“Ah…” Jack grimaced. “I think we should focus on other areas of research first.”

“Like the DHD,” Sam suggested. “And the alien data core.”

“Yes.” Entrapta nodded enthusiastically. “We’ve got so much science to do!”

Well, at least she was happy. Adora smiled.

“And we have another Goa’uld to interrogate. Or not to interrogate, as things are.”

Entrapta frowned again. “Oh. We could use the zombies as hosts, couldn’t we?” They already are dead and just going on, so… it might just work?” She smiled.

Adora wasn't the only one who grimaced. "Uh…"

"That sounds… morbid," Daniel said.

"Would it even work if the body's actually dead and just the individual cells are kept alive?" Sam asked.

"Worth a try?" Entrapta asked. "Although we might have to hurry because the human bodies probably aren't lasting much longer because the cells will soonish run out of energy."

"I don't think we should use zombie hosts," Jack said. "That never ends well in the movies."

"And we don't know what it would do to a Goa'uld. It could hurt them - then that would be torture of prisoners," Daniel pointed out.

"Oh." Entrapta slowly nodded. "That would be bad."

"Yes," Adora agreed.

"So, plenty of reasons not to risk a zombie Goa'uld escaping," Catra said.

"Oh, we would do it in space, so they wouldn't be able to escape. Unless zombies could survive the vacuum and reentry, or they had help, I guess," Entrapta said.

"Which we shouldn't test," Sam said.

"Well, it would count as a space burial?" Jack asked.

It was probably meant as a joke, but Adora didn't think it was funny. Even though Catra snorted.

Really, her lover's sense of humour was sometimes a bit too dark for Adora's taste.

*****

Above the Atlantic, Earth, August 21st, 1998 (Earth Time)

"So… Do you think that using a zombie body as a host would work? Hypothetically, I mean."

Samantha Carter stiffened for a moment when she heard Entrapta's question. Then she put the scale cleaning tool she had been examining in Darla's hold down and turned to face the princess. "We don't know enough about the workings of that ancient device. And we don't know enough about the way Goa'uld possession works."

"That would seem to be a compelling reason to research the matter thoroughly," Hordak commented.

"Yes." Entrapta nodded. "The data would be very useful, wouldn't it? We will probably get other prisoners. We already have two and would have had a third if the stasis pod hadn't have failed."

The pure scientist in Sam agreed, of course. If they wanted to be able to free hosts from the Goa'uld controlling their bodies, they needed to know exactly how that worked. And to be able to interrogate Goa'uld would be very useful for gathering intelligence. And there was the possibility of coming to an arrangement with selected Goa'uld. Making a treaty would be more palatable for Earth - and for the Etherians - if you didn't have to accept that a human being would be used as a host. Of course, for that, the Goa'uld would have to free their slaves as well, and the odds for that were…

She shook her head. "It's not just about what is useful. There are moral aspects to consider. Important aspects."

She wasn't an expert on alien expressions, but Hordak looked like she had said some gibberish. And Entrapta looked confused. "But we already know that the zombies are dead - just a collection of individual cells without a higher consciousness left. Where's the moral aspect in using that?"

“Many cultures on Earth consider experimenting on the dead the same as desecrating the dead unless the deceased gave permission,” Sam explained.

“Ah. So, it goes against Earth customs.”

And probably Etherian customs as well - Sam couldn’t see Adora or Glimmer allowing experiments with dead bodies. She could be wrong, but Daniel would have told them if he had found such an important difference between their cultures.

“With six billion people, it shouldn’t be hard to find volunteers who are about to die,” Hordak said.

“But wouldn’t Adora heal them?” Entrapta objected. “She wouldn’t want to let them die if she could heal them, would she?”

And wasn’t that an entirely different can of worms! Sam sighed. “Even if we had animated corpses that we could use for experiments without breaking the law and violating moral principles, there’s also the fact to consider that we don’t know what such a host would do to a Goa’uld. We mentioned that before.” Though Hordak hadn’t heard that discussion.

“They are enemies. Prisoners.” Yes, Hordak definitely hadn’t heard that.

“We do not experiment on prisoners. Or torture them,” Sam told them. “It’s against the law.”

“Is that the law in the United States or one of your few global agreements?” the alien asked.

“It’s international law,” Sam replied, as firmly as she could. “And the Goa’uld being aliens doesn’t change that they are protected as prisoners of war.” She suppressed the sudden urge to add a qualifier about uniformed soldiers and spies. This was about ethics, not lawyering.

"I see. So, we would need the Goa'ulds' agreement to conduct experiments."

That wasn't what Sam had been aiming for, but she couldn't really walk back on that. So she nodded.

"And we can't get that if we can't talk to them. I guess we'll have to build a tiny keyboard for them so they can communicate with us," Entrapta said, smiling.

Well, Sam thought, there shouldn't be an issue with that. "As long as it's completely isolated - no connection to other systems, just a screen to show the text."

"Right. And maybe to each other? Now that we have two prisoners," Entrapta suggested.

"Since, according to our legends, Set was the one who murdered Osiris, we might want to be a bit cautious with that," Sam reminded them.

"Oh. I forgot about that. But wasn't it several thousand years since that? And he obviously got better!"

"Goa'uld carry grudges," Sam said.

"Perhaps related to their genetic memories," Hordak speculated. "And that would mean such grudges spread to others as they give birth to more Goa'uld. The Goa'uld Empire might be even more fragile than we assumed."

"I wouldn't want to be too optimistic," Sam cautioned. "Ra ruled it for millennia, and while he is dead, his example shows that a sufficiently powerful Goa'uld can control the others."

"Then we should take care to strike at the most powerful Goa'uld, to keep the enemy fractured and foster infighting," Hordak said. "Although if we appear to best their strongest with ease, we might also incite the rest to unite out of sheer fear." He looked at Sam. "That happened on Etheria."

Sam wasn’t sure how they went from discussing the ethics of zombie experiments to discussing grand strategy. “I think this is a topic for a strategy session,” she said.

“Yes. We should call the others!” Entrapta said.

That wasn’t what Sam had had in mind. But the princess was already using the intercom. It seemed they would be discussing strategy instead of analysing technology until they returned to Stargate Command.

Well, it was less stressful than trying to explain the finer points of ethics to Hordak and Entrapta.

"...unions called for government aid for struggling businesses affected by magic and alien technology, and…"

"...armed forces were called in to keep a crowd from storming tombs and temple ruins. The government released a statement that they would do 'everything to prevent the tragedy in Egypt from happening here' and ordered a curfew and…"

"...the police in Geneva and the Swiss Army have cordoned off the Palais des Nations after the authorities received threats against both the United Nations and the aliens currently in talks there…"

Sitting in ‘their’ waiting room in the United Nations building, Catra sighed as she switched channels again. Earth news was, well, not completely depressing, but it came close. She had had happier briefings during the height of one of the Alliance’s offensives when Adora had been kicking Horde butt all over the place.

“Can’t you stay on one channel? I have no idea what any of the speakers actually said!” Glimmer complained.

Catra turned her head to look at her, rolling her eyes. “Earth people are crazy and kill each other over imaginary sorcerers. They lie about what happened with alien technology and claim their gods say we’re evil. And everyone is going crazy.”

“You missed that several countries are changing their laws about same-sex relationships,” Bow added, looking up from his tablet.

“That’s common sense and shouldn’t be mentioned.” Catra shot back with a sniff. “Or do you want a report each time someone doesn’t ram their head into a wall instead of opening a door?”

“This is Earth,” Glimmer said. “You can’t expect common sense.”

Catra laughed with her while Bow frowned. “It’s not that bad,” he protested.

“I’ve spent hours in negotiations with the Security Council,” Glimmer corrected him. “Yes, it’s that bad.”

“But the Russians and the Americans are supporting us now, aren’t they? And the French and British too.”

Glimmer snorted. “Everyone wants to get on our good side - and paint the others as the worst possible choice as an ally.”

That was, at least in Catra’s opinion, exaggerated. Slightly.

Bow frowned. “The NATO alliance doesn’t do that to each other.”

“They do it in a more subtle manner. The French representative informed me how quickly they’ll change their laws - and expressed his regrets that not every NATO country could do the same. You should have seen the glare from the American!” Glimmer shook her head. “And the British representative gave me another invitation to a dinner with their Queen.”

“You could accept,” Catra suggested with a grin. “Queen to queen. She likes tea, I think.”

“It wouldn’t be a bad idea,” Bow said. “Would it? She’s the most important queen on the planet.”

“She doesn’t have any political power,” Glimmer objected, as Catra had known she would. “She would just say what the Prime Minister wants her to say. And yes,” she added when Bow opened his mouth, “I know she’s rich, and that many listen to her, but that’s not the same.” She turned to point at the television screen. “And if I meet with her, those people will scream that I want to impose monarchy on the planet.”

“They’re doing that anyway,” Catra pointed out just to be contrarian. Not that it was wrong.

“Yes.” Glimmer scowled. “But if I meet with the Queen of England, everyone else will expect a meeting as well.”

“And you’ll get more marriage proposals.” Catra grinned widely.

Glimmer scoffed. “So does Adora.”

Catra scowled in return. That was true - some people on Earth had no sense at all. And no shame. Adora was with her! She was taken!

“Uh…” Bow cleared his throat while Glimmer giggled, and Catra glared at him. “What?”

He pointed at her hands. “Claws…”

Oh! She had wrecked the armrests of her chair. For a moment, Catra felt ashamed. Then she snorted. Why should she care about that? It wasn't an expensive chair. She deliberately ran another claw over the fabric, splitting it. "Yes?"

Bow sighed.

Glimmer leaned forward, smiling toothily. "And you got marriage proposals as well, didn't you?"

From weirdos. Catra shrugged as if she didn't care at all. "What can I say? People think I'm attractive."

"They like cats."

"At least they don't want to marry me just for power," Catra shot back.

"If you were a princess, they would!"

Bow cleared his throat again. "Anyway! Leaving offers of questionable morals aside, we are making progress, aren't we?"

Glimmer sighed and nodded. "Slowly, but yes. But the Russians and the Chinese…" She shook her head.

"The Russians have been nothing but friendly," Bow said.

"A bit too friendly," Glimmer said. "I don't trust them."

Catra nodded. Iwan was friendly, but Russia's offer was a bit too perfect for her taste. Spirit of international cooperation or not, every country had some issues that complicated an alliance. That was the same for Earth and Etheria.

"But what can they do to earn our trust?" Bow spread his hands. "They are changing their laws, they have offered all their advanced technology to share, and all they ask for is that everyone cooperates."

"Exactly!" Gimmer nodded. "No hints at special exceptions or advantages. Very suspicious."

Bow rolled his eyes and looked at his tablet.

Catra shook her head as she exchanged a glance with Glimmer. Sometimes, Bow was as naive as Adora. She blinked. Would that make her like Glimmer? She scowled and grabbed the remote for the screen again. "Let's watch more news while Adora is busy helping Entrapta move some stuff."

"...and several civil rights organisations are currently debating whether or not magic is protected by the freedom of religion, as members of various Wiccan organisations as well as representatives of the First Nations claim. So far, no conclusion has been reached, and…"

Mixing magic and Earth religion? Catra sighed and switched channels again.

*****

The Mountain, Colorado, United States, Earth, August 21st, 1998 (Earth Time)

"So, what's the verdict, Doc?" Jack O'Neill asked, trying to sound unconcerned and casual. Just a routine examination, nothing else. No reason to worry about mutations or alien genes turning him into a magical princess.

"You're in peak health, Colonel," Dr Fraser told him, glancing from the notepad in her hands to him and back. "For your age, that is."

"So, I won't need a walker this year, but if I find one on sale, I should buy it for next year?" Jack joked to hide his relief.

She frowned in return. "Puerile jokes aside, your body, particularly your knees, don't show any sign of the kind of accumulated microdamage you had before your contact with Etheria."

“I noticed that,” he said. No pain at all was very noticeable.

“That’s why you asked for this examination.” She shook her head. “Which is a first. How ironic that you asked for a thorough examination because you were ‘feeling too well’.”

Jack kept grinning thanks to his long practice of putting on a happy face. He knew that Fraser knew that he hated medical exams because he could hear the day approaching when she’d pronounce him medically unfit for the field. He could feel it in his bones every time he got up in the morning. Well, he had - things had changed after Adora had healed him.

“And I have to note that you didn’t report this right away,” she went on with a deeper frown.

He shrugged. “I wasn’t aware that feeling well was a medical condition I had to report. I’ll be sure to pass it on to the rest of Stargate Command.”

This time, she rolled her eyes. “You know what I mean, Colonel. This examination should have happened at the first opportunity after your return.”

“We were examined,” he pointed out. “You handled it personally.”

“I focused on the usual - signs of being controlled by a Goa’uld, genetic tampering, foreign substances - and not magical healing of the accumulated damage a life as a soldier causes.”

“It was in the report.” Not very prominent - he kinda, sorta had glossed over it - and not with many details, but it had been there.

“A classified report I couldn’t read,” she shot back.

That made him frown. “You should have access to all our medical records.”

“‘Should’, yes. Apparently, someone classified all mentionings of ‘magic’ as above my clearance.” That was a scowl now.

“That wasn’t me,” he protested.

“I’m aware of that, Colonel.” She sighed. “I will have to examine your entire team. And your latest recruit. This is likely related to the… treatment you received from Adora, but it could also be related to this ‘healing device’.”

“The zombie cube,” he corrected her.

She ignored that. “Odds are it isn’t, but we have to be sure.”

“I’ll pass it on,” he said. “But Burke will take some time to arrive here.” Provided he was vetted by Stargate Command. And released by the CIA.

She didn’t like that either. Fraser was a great doctor, but she had a tendency to treat everything related to the medical aspects of Stargate Command as her kingdom and didn’t like it when other concerns - perfectly valid operational concerns! - took precedence. “Send your team to me, Colonel.”

“What about the Hondurans?” he asked.

“If I find anything amiss with your team, we’ll have to look into examining them.”

Good luck with that, he thought. “Will do!” He rose, nodded at her and left the med bay.

“So… at this time of the day, Daniel and Carter will be… in their labs.” He nodded.

*****

Jack O’Neill found Daniel in his lab, surrounded by dusty stones, and staring at his computer. “Hey, Danny-boy! Change of orders!”

“What? Jack!” Daniel looked vaguely offended at Jack interrupting him. “I’m writing my report on the recovery mission!”

Jack made a mental note to get a copy of it. It would make writing his own report easier. “Yeah, drop it for now and report to medical. Fraser’s orders.”

“What? She already examined us.”

“That was the usual check to see if you were a snake in disguise or about to turn into a monster. But she wants a thorough examination to check if we got hit with anything related to zombies.” Technically true.

Daniel grimaced. “Oh. I guess that’s a good idea, even though Sam and Entrapa scanned us already, and we never were in range of the unshielded device.”

“Exactly.” Jack shrugged. “You know how things are with the Doc - what she didn’t personally check isn’t reliable in her opinion.”

Daniel nodded. “I guess I’ll report to her then. Get it over with.” He did look a little concerned, Jack noted.

Well, that couldn’t be helped.

“I’ll inform the others,” Jack told him.

“See you there.”

“I already got examined.”

Daniel blinked, then turned to stare at him. “You did?”

“Yes.” Jack turned. Carter would be in her lab or the control room of the Stargate. The lab, he guessed.

“Jack! What’s going on?”

“Nothing. Just a routine check.”

“Jack!”

Jack hesitated for a moment. “It’s really just a routine check.”

“Really?”

“Yes.” Technically, such examinations were routine after such a mission.

Daniel, though, frowned. “And they examined you before informing us?”

“Yes.” Jack nodded and made shooing motions with his hands. “Now go get prodded and poked! I suffered through it already.”

Daniel still looked suspicious but nodded.

That left Carter.

*****

Palais des Nations, Geneva, Switzerland, August 21st, 1998 (Earth Time)

Adora should have stayed with Entrapta, just in case her friend needed another piece of heavy machinery moved around. Or a bot. Or some tiny tea brewed. Anything would have been better than attending another meeting with the Security Council. She was getting flashbacks to the Princess Prom - and not the good ones about dancing with Catra. The bad ones, where she discovered that for all the hours spent on preparing, she still hadn’t gotten a grip on princess politics because they weren’t acting rationally at all.

“...and, therefore, we suggest creating an international agency to oversee the Stargate Program and take control of the Stargate. With the DHD graciously donated by Russia under control of the agency.”

Oh. The Russian had finished. Adora smiled at him and hoped it didn’t look forced. Hadn’t they suggested such an agency before?

And the American representative started speaking. “While the United States embraces the spirit of international cooperation…”

Adora could hear the sarcasm this time. "...we cannot forget that we are at war with the Goa'uld. This is no time to sacrifice our hard-earned experience and cripple our war efforts for symbolic gestures. The Stargate Program might not be perfect - yet what and who is? - but its successes speak for themselves. To break up the crew who saved the world before and struck decisive blows against our enemies would be foolish. What the world needs now is pragmatism and efficiency, not empty symbols. We need the best and most experienced in charge, not political appointees."

Adora wasn't an expert, but she didn't think that the Russians had suggested breaking up Stargate Command. Although they might have implied it.

The Chinese representative was next. "China recognises the successes of the American program - and its failures - but refutes the attempt to portray a direly needed international oversight and control of the Stargate as a mere symbolic policy. The Stargate is not merely the most crucial piece of alien technology but the one link of Earth to the rest of the Galaxy. As such, it cannot belong to any single nation but has to belong to the world as a whole and, therefore, needs to be under international control. It would indeed be a betrayal of the ideals of international cooperation if the United Nations were reduced to symbolic oversight while the Americans continue to run the program and make decisions for the entirety of Earth."

That had pretty much everyone nodding in agreement, Adora noted. "I think that's a good point," she whispered to Glimmer.

"It is," her friend agreed in a low voice. "But it doesn't really concern us. That's an internal matter for Earth. This meeting was supposed to be about the relationship between the United Nations and Etheria."

At this point, Adora was glad about any agreement. Yet, Glimmer was correct. "So, should we leave and let them hash out how to handle the Stargate?" Because, apparently, they still hadn't come to an agreement despite Adora thinking they had.

Glimmer snorted. “No. That would be rude.”

Catra, sitting on Adora’s other side, snorted. “What’s wrong with being rude?”

“It’s not done in diplomacy,” Glimmer replied with a slight frown. “It makes working together harder.”

“I don’t see much cooperation anyway.”

The British - or was that United Kingdom? - representative spoke next: “As much as we understand the need for international control, we first need to define the nature and objectives of the Stargate Program. Is it meant to be a military project to wage war? Or a civilian agency responsible for the security of the Stargate? Or a diplomatic initiative to contact other planets for peaceful contact?”

“We’re at war,” the Russian delegate replied. “A war against an enemy willing to destroy Earth and enslave humanity. Anything has to be subordinated to winning this war.”

“China concurs. The military matters have to take precedence.”

“France agrees, although we should not neglect planning for the time after the war.”

“The United States does not dispute that the war is of utmost importance. And it is because of that that my country opposes reckless changes to the Stargate Program.”

“The Stargate Program cannot remain an American operation,” the Chinese diplomat retorted. “That is unacceptable.”

“Da. Russia proposes to form an international unit tasked with the security of the gate and subordinated to the Security Council.”

“France supports this and suggests that the current Stargate Command would form the core of this unit so the experience of the current staff will not be lost.”

“The United Kingdom agrees with the proposal.”

“China as well.”

This looked like they had agreed on that beforehand. So why the posturing in the council?

The American delegate didn’t look happy. “The United States has important concerns about this proposal. The Stargate Program represents an enormous investment of my country, and simply handing it over to the United Nations without compensation is not acceptable. Think of the precedent this would set if any nation, at great cost, develops new technology only for the United Nations to take it.”

“Like you took the Stargate from the United Kingdom?”

“You took it from Egypt.”

“That was covered in a treaty.”

“A treaty forced on Egypt at cannon point.”

Adora sighed, not bothering to hide her mood as the delegates started bickering again. At least it seemed as if they were making progress.

“I bet if the Horde were attacking Earth, they would quickly come to an agreement,” Catra said. “Do you think we should ask Priest to attack a country no one would miss?”

Adora struggled not to giggle at her lover’s joke. Well, she hoped Catra was joking.

*****

The Mountain, Colorado, United States, Earth, August 21st, 1998 (Earth Time)

Samantha Carter usually was happy when she was in her lab. Except for when she was desperately trying to find a solution to an urgent and deadly problem, but even then, there was a certain satisfaction to be found in giving your all and saving the day - not that she'd ever admit to liking that particular feeling.

But after spending so much time in Entrapta's lab, her lab in the Mountain felt… inadequate would be a polite description. Not primitive - while not as advanced overall as the Etherian's facilities she had visited, Sam had several pieces of Ancients technology. And as she had found out, Earth Computer technology stacked up decently well against crystal matrices, though the Etherians had a large lead in neural networks. Nor was it the fact that her lab was a little cramped - there were limits in the Mountain, and she had the space she needed. It wasn't as if she needed to pace to think.

But Entrapta's lab… lacked limits in more than one way. Whatever she needed, she got. And kept it. Space, tools, help. Sam felt a little isolated. She had her team - good friends - and there were other scientists to collaborate with, but when it came down to it, Sam was alone. Her against the world, in a way.

And there was the fact that Entrapta had a relationship. A potentially problematic relationship - Sam hadn't missed that even Adora and Bow seemed a bit wary of Hordak - but also a happy relationship as far as Sam could tell. Not that she had examined the issue. Or that she was jealous.

Well, she was a little envious. To work with the partner you loved… As much as she told herself that it was against regulations and prone to cause trouble, she couldn't shake that feeling. Well, with the Naquadah items recovered, and the Etherians back at negotiating with the Security Council and individual countries, Sam could focus on her work. That should help to get over this.

A knock at the door made her turn. Oh. The Colonel stood there, leaning against the doorframe with his arms crossed. "Carter?"

“Yes, Sir?” She tilted her head slightly and straightened a bit. As the professional soldier she was.

“Dr Fraser’s waiting for you for an examination. In case we got a bit too close to the zombie cube in Honduras.”

She didn’t smile at the name. The Colonel liked these kinds of jokes, and they were often funny, but it wouldn’t do to encourage him. She nodded. “I’ll make an appointment later.”

“Ah… it was kind of urgent,” he said, smiling almost apologetically. “Well, she did give me the impression that she wanted to examine you right away.”

“‘You’?” Not ‘us’?

His smile slipped a little, then widened but became less honest. “I already got poked and prodded.”

She frowned at that. The Colonel didn’t like getting examined. “Did she contact you first?”

“I went to get a thorough checkup,” he said. “Felt that I needed one - it’s been a while since the last, and we kind of travelled the galaxy.” He grinned.

The Colonel had gone to Dr Fraser and asked for a checkup? “Sir… is there anything…?” She trailed off. You didn’t ask your superior officer about medical issues unless it threatened the mission. But you’d ask your friend. And the Colonel had been acting a little… different lately.

“Oh, everything’s fine!” He smiled. “Better than fine, actually. That’s why I got a checkup. Turns out I’m at peak health, and while we don’t think it’s because of the zombie cube, it’s better to make sure.”

Peak health? She blinked. Oh. “The magical healing you received by Adora.” After he had been poisoned by those alien predators.

He nodded. "It's like all the 'accumulated microdamage' - which is Fraser-speak for growing old and frail, I guess - was healed."

"You were rejuvenated?" That was… She drew a hissing breath. If magic could offer eternal youth… People would go crazy. And if it was only Adora who could offer this…

"What? Not exactly." He shrugged, and she couldn't help noticing that it seemed a bit more graceful. And briefly wonder if his body looked any different now. "It's more like the growing frail part was done with. 'Peak health for my age', the good doctor called it. I'm still not twenty any more."

But, a voice in Sam's head said, he would be about as healthy as a twenty-year-old. And with the experience of a man in his forties.

She pushed the voice away into the corner of her mind, where all the other inappropriate thoughts went. The kind of thoughts that would make the Colonel call her a mad scientist. Or something else she didn't want to think about. At all.

"Carter?"

She hid her slight embarrassment with a sigh. "I'll report to medical, Colonel."

"Good. Sorry about that, but better safe than sorry, right?"

She chuckled at that. And hoped Janet wouldn't want to gossip about certain topics. Sam was… distracted enough watching the Colonel walk away.

*****

Geneva Airport, Geneva, Switzerland, August 22nd, 1998 (Earth Time)

"Adora? Adora! We've got a problem! A huge problem! A really huge problem!"

“What?”

“Hey!” Catra scowled as Adora, on whose lap she had been napping, jumped up, almost sending Catra from the bed in their cabin to the floor.

“Sorry!” Adora turned to smile apologetically at her.

“Adora!”

Then she whipped her head around and continued towards the door. “What emergency, Bow?”

Catra rolled her eyes. “Did the Tau’ri blow up another of their countries?”

Adora opened the door, and Catra saw Bow shake his head. “No! Worse! Priest watched television!”

Adora blinked. “What?”

Catra frowned. Why would that…? She gasped. “He saw some of the nutcases ranting about us?”

Bow nodded with a grimace. “He’s calling for a holy war against the heathens. You have to stop him!”

Adora was already running, Catra hot on her heels. They skidded as they took a corner - Catra’s claws didn’t find enough purchase on the floor - but reached the bridge without trouble.

“...and I doubt that you have the authority to call for a holy war without asking Adora first!” Glimmer was telling Priest on the screen.

“Yes!” Adora cut in. “What’s this about a holy war?”

“Your Divine Highness!” Priest bowed so deeply, he almost disappeared from view. “I have seen the most terrible sacrilege! Insults so vile, they call for the blood of the heathen! I dare not

repeat the words - I choke on the mere thought of it, my blood is boiling with righteous anger! Such blasphemy demands the harshest punishment possible!”

Now Catra really wanted to know what the clone had seen. That reaction seemed a little excessive even for Priest. Then again, the clone was the most fanatical of Adora’s followers.

“Ah…” Adora grimaced, then frowned. “But a holy war in my name cannot be started without my permission!”

“Yes!” Glimmer chimed in. “I’ve been saying that all along!”

Priest ignored her. Catra had expected that - the clone had a habit of ignoring what didn’t fit into his plans. But he couldn’t ignore Adora.

“So, what happened?” she asked.

“But your Divine Highness! You cannot possibly expect me to repeat such… such heinous blasphemy!”

Adora blinked, then nodded. “Then send me this… recording. I will judge the matter.”

“As you command, Your Divine Highness, but I have to warn you again - it’s the vilest filth imaginable! I cannot fathom how anyone would dare to do this!” He turned his head to the side. “Send the…” He took a deep, shuddering breath. “...the recording.”

A moment later, the console on the bridge beeped. Catra beat Adora to it and quickly displayed the message on the side screen.

“And what do you think about the aliens and their demands, Reverend?”

“Those heathens are an insult to God! Not only do those vile temptresses entice our youth to follow their disgusting example and live in sin and debauchery, but they also use magic! Thou shalt not suffer a witch to live! Whosoever lieth with a beast shall

surely be put to death! That is what the holy book commands us to do when faced with magic and bestiality! And yet, our heathen government, faithless men beholden to money instead of God, is not only tolerating their existence - in the sky above us, making a mockery of heaven - but they plan to spread their poison in our godfearing country! We cannot let this happen! We cannot sacrifice our immortal souls for the false promises of evil magic! If we falter, if we fail, soon our country will harbour the vilest of sinners, eclipsing even Sodom and Gomorrah!"

"The government claims that the United States need this alliance to successfully battle the Goa'uld Empire. What do you say to that? They claim that your movement is putting the entire world at risk."

"Lies! Filthy lies! God protects his own! And God punishes the sinner! If we bend to those alien demands, if we abandon God, he will strike us down - with fire from the sky! Salvation can only be granted by God, not by vile witches from space who consort with animals and monsters!"

Catra shook her head. Yeah, that would rile up Priest. Hell, the line about not lying with beasts was making her want to go and claw the guy. She wasn't a beast! But if she lost her temper, Adora would take this even worse. "That's one of the more extreme ones, I think," she said, unsheathing her claws.

"Yes," Glimmer agreed. "Most don't go as far as this fool."

"See, Your Divine Highness? We cannot let such crimes remain unpunished! The man denies your divinity! He calls you a false goddess! He wants to kill you!"

Adora grimaced. "Yes, Priest. But we cannot declare a holy war over this."

"What? But why not?"

Adora faltered for a moment. Catra was about to tell Priest that he was not to question Adora's will, but her lover shook her head and

spoke up before she could say anything. “Because he is clearly insane, and we do not punish those who don’t know better because they are mentally ill.”

Priest blinked. “Insane? You mean… defective?”

“Ah… in a way, yes.”

“But defective clones are purged - restored. Should we apprehend the… insane man and restore his facilities, Your Divine Highness?” Priest tilted his head. “I think we can duplicate the process.”

They wanted to mindwipe the man? Catra hissed through clenched teeth as she remembered what had been done to her. No one deserved that! And she’d kill Priest before she let him do this!

But Adora was already talking again. “No! Absolutely not! We will not follow in Horde Prime’s footsteps! We shall tolerate this man and his followers and hope that they will see the error of their ways in due time.”

“As you command, Your Divine Highness. Your mercy is as great as your power!”

As soon as the transmission ended, Adora sighed. “This could have ended very badly.”

“Yes,” Catra agreed.

“Should we tell the Security Council about it so they can do something about this?” Bow asked.

“Yes,” Catra said.

“No,” Glimmer objected. “Freedom of speech is very important on Earth - remember what Daniel told us? If we ask to stop such talk, that’ll cause more trouble for the negotiations.”

"If Priest starts an orbital bombardment over the next blasphemy, that'll cause even more trouble," Catra pointed out.

"I think we need to ask SG-1 about this. They should know how to handle it," Adora said.

Well, it shouldn't hurt, in Catra's opinion. Probably.

*****

The Mountain, Colorado, United States, Earth, August 22nd, 1998 (Earth Time)

"...and that's about it. I've told Priest that he can't declare a holy war on anyone who insults me, and he should be obeying, but we thought we should discuss the situation with you."

Jack O'Neill stared at the screen on which Adora smiled a little embarrassedly. Hearing that the United States might have suffered an orbital bombardment by the very fleet that was supposed to protect Earth if not for some quick words by the resident space magical girl wasn't how he liked his day to start. "Right. We've got a fleet crewed by fanatical clones orbiting Earth. How could that have slipped my mind?"

"Probably because of the lack of sleep and all the other important things we had to worry about," Daniel oh so helpfully replied.

"It was a rhetorical question, Daniel," Jack told him.

"Ah."

"Are you telling me that your fleet almost started a crusade against Earth over a television interview?"

Right. General Hammond was present as well. And he sounded as amused as Jack felt.

Adora looked confused for a moment. "Yes? That's what I just told you. Although I ordered them to tolerate such people, so Earth

should be safe."

"For now," Glimmer added. "And it wasn't just an interview - the man was calling for the 'faithful' to murder us." She didn't look amused either.

"So, you could say that you guys started it." Catra, on the other hand, did look amused. Then again, her sense of humour was a bit like Jack's own - very dark.

"Anyway," Adora spoke up again. "We wanted to know if you have any ideas on how to handle that. The whole free speech and murder threat thing Daniel mentioned."

Jack raised his eyebrows at his friend, who was quickly blushing under the scrutiny of most of the room. "I did mention how important free speech is, at least for the United States. Although incitement to violence isn't protected."

"So why's the nutcase calling for us to be killed not in jail? Or dead?" Catra asked.

"Good question," Jack said before he could help himself.

"Well, it touches on erring on the side of caution when it comes to constitutional rights," Daniel said. "And this also touches freedom of religion - he could argue that he was just quoting the Bible."

"So, murdering someone's alright if it's for religious reasons?" Catra scoffed. "We should tell Priest that."

"No, no!" Daniel blurted out. He probably hadn't caught that Catra was joking. At least Jack thought she was joking. "Quoting scripture is protected both by free speech and religious freedom. But you're still not allowed to incite violence."

Adora frowned. "He seemed to be pretty clearly calling for violence - here, let me send you the recording." Her frown deepened after a moment. "Uh. Your computers aren't compatible."

“Let me handle this,” Carter spoke up. She hit a few keys on her laptop. “Entrapta shared your protocols.”

A few moments later, Jack saw a broadcasting logo appear on her screen. And groaned. “You know, I was joking when I said we’d be doomed by US daytime television!”

The actual interview - if you could call the soundbite that - wasn’t funny even by Jack’s standards.

“Uh, well… This is obviously a very extreme and not all common view,” Daniel said, pushing his glasses up. “And the channel probably broadcast it to, well, raise a controversy. And get higher ratings.”

That would fit in Jack’s experience. “So, we’re going to get nuked for more ad revenue.”

“No one is getting nuked if I can help it,” Hammond snapped. He turned to address the Etherians. “We’ll have the government look into this. Please stay your hand.”

“Thank you.” Adora smiled. “I’ve told Priest that the person on the recording was obviously mentally disturbed and so couldn’t be held responsible for what they said. But I can’t keep using that excuse if too many say the same.”

“Oh, everyone knows we’re nuts,” Jack quipped. “It’s part of our charm.”

“Colonel O’Neill!” “Colonel!” “Jack!”

Oops. Jack knew not everyone shared his humour, but annoying three out of four - only Teal’c hadn’t scolded him - was a bit much.

Catra snickered, but Glimmer frowned. “In all seriousness, calling for our murders is not acceptable no matter how you excuse it. And other countries don’t have the same laws about free speech that you have.”

“Well, yeah,” Jack couldn’t help but shoot back, “they tend to like that they can lock up their people if they should disagree with the government. Or not agree fervently enough.”

Glimmer scowled at him. “That wasn’t what I meant.”

Daniel cleared his throat. “Well, authoritarian governments tend to limit free speech, so the United States historically tends to err on the side of caution. And that’s even without touching freedom of religion.”

“You know, I bet Priest would love that view,” Catra said. “And the idea that if it’s just a handful of people, it’s not a problem for the government.”

Was she threatening them - or warning, to be more generous - that Priest might send a hit-squad to Earth and claim it was some rogue clones?

“We will inform the government,” Hammond repeated himself, “and get back to you. Please ensure that there are no incidents in the meantime.”

“We’ll do our best,” Adora said. “Please solve this.”

Once the connection was cut, Hammond sighed. “What a mess. The President will have to hear of this.”

“There’s not much he can do about it,” Daniel said. “He can’t limit free speech. The Supreme Court was pretty clear on how limited the exception for inciting violence is.” Jack stared at him, and Daniel flushed. “I had to write an essay in high school.”

“Once we’re formally at war, the President will have more options,” Hammon said. “But this isn’t the 1940s any more - we can’t just reintroduce censorship.”

“We might have to,” Jack said. “If only to keep the nutcases from triggering a crusade against us. It’s like yelling fire, only not in a crowded theatre, but when facing a machine gun.”

“There’s a lot we should be doing but can’t,” Hammond said.

Well, Jack couldn’t disagree with that. But that didn’t help with solving this problem. He was no lawyer or scholar, but he was pretty sure that endangering an entire country wasn’t covered by free speech. Or shouldn’t be.

*****

Public Relations Part 1

The Mountain, Colorado, United States, Earth, August 23rd, 1998 (Earth Time)

"You know, this feels a little dishonest," Bow said as he stepped onto Darla's ramp. "We're supposed to negotiate with the United Nations right now."

Adora felt a pang of guilt. They had claimed an urgent issue to bow out of the negotiations. Then again, they hadn't actually done much during the last session, except for answering a few questions and not taking anyone's side while the supposedly greatest powers of Earth bickered.

And, this was urgent - if Priest or one of his followers lost control upon stumbling onto another rant, the consequences could be catastrophic. Adora had seen records of what happened when a Horde fleet conducted orbital bombardment, and Priest hadn't really understood the concept of collateral damage last time they had discussed the issue.

"Bah! We were due a break!" Glimmer replied.

"This isn't actually a break," Catra said as they walked down the ramp. "It's work."

"But it's work with friends!" Entrapta objected. "I'm happy to see Sam again. I bet we have a lot of data to exchange! I can't wait to show her my prototype tiny keyboard!"

Adora wasn't an expert, but she wouldn't have thought that it took a prototype to build a miniature keyboard. Entrapta probably added a lot of functions to the thing.

Jack, Daniel and Teal'C were waiting for them at the foot of the ramp. Jack looked a little uncomfortable, Adora noticed.

"What's wrong?" Catra must have noticed it as well.

“I’m still not used to conducting such business out in the open. We’ve spent years keeping this secret,” he replied, and now we’ve got alien visitors landing right next to the mountain in their spaceship.

“We’re on a military landing pad,” Glimmer said with a frown.

“But it’s open to satellite surveillance. I bet your flight was tracked by half the country.”

“We’ve told the Security Council that we had urgent business with Stargate Command regarding a diplomatic incident,” Adora said.

“You did…?” Jack closed his eyes and sighed. “Of course you would.”

“Honesty is the best policy,” she told him.

“Yeah…” He grimaced. “Are you familiar with ‘white lies’?”

White lies?

“That’s when you tell a little lie because being honest would be rude,” Daniel explained. “Like you don’t tell someone that their favourite painting looks ugly, for example.”

“Ah.” Well, that wasn’t a real lie. You shouldn’t be rude to people.

Catra snickered. She probably thought this would excuse being rude. Well, they had more important problems than that. Like some people trying to rile up Third Fleet - well, they didn’t know about Third Fleet, but still! Since when was it acceptable to insult people like that?

“So, General Hammond talked to the President about the whole thing,” Jack told them as they entered the bunker - the Mountain it was called, Adora reminded herself. “It’s a tricky problem.”

Adora didn’t need to see Glimmer to know her friend was rolling her eyes. “If it were easy, it wouldn’t be a problem, would it? But

why exactly is it a problem to do something about people calling for our deaths? Isn't murder illegal in your country?"

Catra snickered.

"It's not quite the same," Daniel said. They reached an elevator and stepped inside. "Freedom of speech is one of the most important rights in the United States. Limiting it is… a very delicate prospect. Many people fear - not entirely unjustifiedly - that such a limit would just be the first step towards abolishing it entirely."

"No one likes censorship," Jack said.

"You censor your entire media. You censor *bad words*!" Glimmer objected. "So, it's not allowed to curse on television, but you're allowed to tell people to murder others? You've got some *fucked-up* priorities!"

"You're not the first one to point this out. But I would wager that your countries have some traditions and peculiarities that seem weird to others as well, right?" Daniel smiled.

"The princesses are all weird," Catra said. "You should've seen them at the Princess Prom."

"That's a matter of perspective," Bow cut in while Glimmer glared at Catra. "Every kingdom has its own traditions, yes. But few of them would be able to trigger a war. Those that did kind of… did that in the Age of War, and well, that settled most of them. Violently."

Glimmer frowned at him, but Adora nodded in agreement. Etheria wasn't perfect.

"That sounds like 'an armed society is a polite society', just for countries," Jack commented. "I don't think that's a good role model."

By the time Daniel had explained what the saying meant, they had reached the meeting room in Stargate Command.

"Welcome," General Hammond greeted them. "And thank you for coming to discuss this issue." He pointed at a tall, thin man next to him. "This is Mr Smith, representing the Department of Justice."

"Hello." The man smiled, but it looked like he was just being polite. Or he was nervous.

"Hello!" Adora smiled at him. "Thank you for coming!" They were here to work together, after all. She shook his hand - he didn't have a firm grip, but he wasn't sweating, either.

"So, what can you do about this?" Glimmer said as soon as they had taken their seats. "We've told Priest to treat those people as insane, but that might not be a permanent solution."

"You think he will disobey a direct order from his 'goddess'?" Hammond asked.

"Priest has a tendency to, ah…" Adora trailed off. How to say this?

"He thinks he knows what Adora wants and doesn't think he should ask her to make sure," Catra said.

"Yes, that." Adora nodded and pointed at her.

"Like every religious fanatic ever." Jack grinned.

"Although God doesn't answer questions, unlike Adora," Daniel said.

"Well, we should treat this as a legal problem, not a religious one," Mr Smith said. "Unfortunately, the Supreme Court has defined the limits of Freedom of Speech quite strictly in several rulings. Inciting violence, for example, needs to be imminent - and this isn't the case here."

“Can’t your court redefine that?” Adora asked the obvious question.

Judging by the man’s grimace, no, the court couldn’t do that.

“You see, the separation of power is the foundation of our country. The President can’t order a judge to rule a certain way,” Mr Smith confirmed Adora’s assumption.

“Ah, the famous checks and balances,” Catra commented.

“Why, yes.” Mr Smith smiled at her.

Adora closed her eyes for a moment when Catra smiled back, showing her fangs. “Be nice,” she whispered.

To her surprise, Catra didn’t mention, as she had done before, that it was the same as the Horde leaders’ policies of fostering the rivalry amongst Force Captains so they would keep each other in check. Instead, Catra shook her head. “But shouldn’t there be an emergency rule or something? If a decision threatens your world?”

“Not that there is currently a threat to your world - from Priest, at least,” Adora quickly cut in before someone could mistake Catra’s comment as a threat. “But it’s a potential threat. Kind of. A danger?” She pouted at the glance from her lover. And at the groan from Glimmer.

“Well, if our performance faced with global warming is any hint, then no,” Daniel said.

“Well, it’s not quite cut and dry,” Mr Smith said. “The President will talk to the broadcasting companies and voice his concerns about the risks to international relations that certain interviews might cause. This should cut down on the, ah, screen time of such extremists.”

“Remind them how the First World War started when you’re at it,” Jack interjected. With a grin, he added: “I think some journalists

have forgotten that not every royal is a figurehead. Some have space fleets with big honking space guns at their beck and call."

"Yes, that will be mentioned." Mr Smith's smile looked more than a little forced.

Glimmer smiled. "And what if they won't comply?" She leaned forward. "It's hard to work together if we have to wonder who amongst your people is waiting for a chance to kill us for their god."

"Our soldiers are thoroughly vetted," General Hammond protested.

"Yes. Those here," Catra said. "And once we're expanding operations from a few small teams to massed troops?"

"That might be a problem," the general admitted. "Although censoring broadcasting won't solve this."

"Battling worship of false gods is part of our mission," Teal'c commented.

"Yeah…" Jack grimaced. "Teal'c, I fear the US Army can't declare war on God. We've got laws against that. Freedom of religion and all that. Separation of church and state, and everything."

"They would crucify us in Congress and in the courts," Mr Smith whispered.

"Not on your god - on a false god," Teal'c replied. "You did tell me about your god, about his message of love. It is clear as day that your god would never condone murdering people simply for their choice of partners. Therefore, those people are worshipping a false god." He nodded.

Mr Smith looked as if he had eaten something that didn't agree with him. And Catra grinned. "Yeah. False gods are false gods, aren't they?" she asked, cocking her head.

"It's not quite the same," Daniel replied. "Goa'uld declare themselves as gods and demand worship when they manifestly, provably aren't gods - they merely use technology to fake their divine powers. That's what makes them false gods. The god those extremists worship is a different case since they aren't, well… the only claim that they exist is made by those who already worship them. No one is actually claiming to be god."

"Well, those who do are in the loony bin," Jack said.

"That's not entirely correct," Daniel turned to look at him. "Several people were and are worshipped as gods."

"And did they demonstrate any divine power?" Jack raised his eyebrows. "Loony bin."

General Hammond cleared his throat. "This is a political and not a theological problem."

"It's both, actually," Daniel retorted.

Entrapta frowned. "If the Goa'uld are false gods because they use technology to fake their divine powers, then what's a true god? And what are divine powers?"

"Well…" Jack shrugged.

"They aren't actually defined. It's a question of faith," Daniel said - a little too quickly, Adora thought. "It's like… we can't define a true god, but we can define false gods."

"Ah." Entrapta nodded. "So, unless a god makes a claim that can be proven or disproven, they can't be judged, right?"

"Ah… yes." Daniel nodded.

Well, that sounded confusing, but anything that didn't lead to someone claiming that Adora was a goddess was fine in her book. The last thing Adora wanted was to be worshipped.

"But that doesn't give us a solution to handle those nutcases," Catra said. "We're going to keep Priest on a short leash, and Adora will tell him and his followers very clearly that they aren't allowed to attack Earth without her permission, but what are you doing about your fanatics? Just pretending that they don't exist won't work."

"And how can we convince them to stop trying to murder us if we can't prove that their god is wrong?" Entrapta asked.

Mr Smith's smile was so thin, it was barely visible. "We're working on that. For now, I think restricting their reach will already significantly reduce the threat they pose."

Adora wasn't sure that she would agree with that assessment. But she didn't have a better idea.

*****

Samantha Carter didn't sigh with relief when the meeting with Smith finally ended - well, the official meeting; apparently, Glimmer had some questions, probably pointed ones, about the general US policy with regards to censorship. But Sam certainly felt like sighing.

Entrapta, on the other hand, sighed loudly when they started towards Sam's lab. "Wow, your politics are more confusing than I remembered." She cocked her head to the side. "Wait - they are confusing because I wasn't aware of your stance towards censorship and broadcasting, so maybe I should reword that."

Before Sam could weigh in, Entrapta shrugged. "Anyway! I've got the prototype of the tiny keyboard here! Once we incorporate your additions, we can finally communicate easily and in an ethically appropriate way with the captured Goa'uld!"

My additions? Sam wasn't sure what kind of additions she would make to a miniature keyboard. Well, maybe some added security features so it couldn't be dismantled and used to escape a cell, and she would have to check the software and encryption to

ensure that no one could compromise the data, probably some proprietary protocols so it could only communicate with a specific computer…

She was still pondering possibilities when they reached her office, but as she quickly found out, Entrapta had several of them already incorporated. Not all of them, though, and both of them spent half an hour hashing out interfaces that would be safer from hacking than the standard ones.

"I think that's it," Entrapta finally declared. "It would be a tiny bit safer if we used crystals, but you can't produce them yet, and this is meant to be built and maintained on Earth."

Sam wasn't aware that this was a requirement, but it made sense; in the current political climate, any solution that required alien resources would be more difficult to implement unless it was clearly superior to the alternative. And a single percentage improvement wasn't worth it. "Yes. I think we can construct that in an hour."

"So, give it to your… wait! You don't have bots. I forgot, sorry!" Entrapta blurted out. "That's something we should work on, actually - constructing anything goes much easier with bots."

"Autonomous robots are a security issue, I am afraid," Sam replied. She had asked before, after all.

"Yes?" Entrapta cocked her head to the side.

"There are concerns that they could either go out of control or be taken over by an enemy," Sam explained.

"Oh. Well, that can happen - it happened to me when I worked on analysing what turned out to be a First Ones computer virus; all my bots went berserk and tried to kill my staff and me. The others fixed it, though. And it gave me so much data!"

Sam forced herself to keep smiling. While she was aware that sometimes, you had to take risks for science - and be willing to do

so - her friend seemed to treat a potentially fatal incident as just another opportunity to gather data. But that was her way. “Well, we’ve got a lot of people here in the Mountain,” she explained. “They would all be at risk.”

“Right. You really need a secure lab in orbit or on the moon,” Entrapta replied.

“I’ll see if I can get the budget approved,” Sam told her with a grin before she could stop herself. She blamed the Colonel’s influence.

“Yes! It’s sooo useful!” Entrapta nodded emphatically. “I’ve had barely any complaints since I got a lab in space. Well, I was barely home, where people would complain about explosions, but that’s kinda the idea.”

“I see.” Maybe Sam should apply for a lab on the moon and see what happened. With the technology they had recovered, reaching the moon would be child’s play once they could build their own ships. Which, of course, would take a while, and the war would take priority. But a lab on the moon…

Entrapta sighed and sat down on Sam’s desk, letting her feet dangle. “I still don’t get your politics. They’re so irrational.”

“That’s because most people are irrational,” Sam replied as she started to fill out a request form to get the keyboards and base stations built.

“They shouldn’t be. And there’s irrational and irrational. If Netossa doesn’t want to work with Sweet Bee because Sweet Bee once was Spinnerella’s girlfriend, then that’s, well, silly, but I can understand it. But I don’t get how you can dislike someone for something that didn’t happen. We’ve never been to Earth, we haven’t done anything to those people who want us dead, so why are they like this? We’re here to help them. If we wanted to hurt them, we could just bombard them from orbit. We wouldn’t play silly games.”

That was probably Hordak's influence, Sam thought. "They don't see things like that. They have their own view of how the world works, and they fit everything into that." No matter how much they had to bend and break facts.

"That's stupid."

"Yes," Sam agreed. "But that's how people - some people - are. We have to teach them that they're wrong."

"That's kind of hard if they want to kill you."

"Yes. Fortunately, the vast majority of them don't really want to kill anyone. They can be reached with the right approach." Sam hoped that she wasn't wrong.

"And what is the right approach?"

Sam winced. "I think that's a question for public relations."

"'Public relations'?" Entrapta looked a little confused.

This time, Sam sighed.

*****

Earth Orbit, August 23rd, 1998 (Earth Time)

"...so those public relations people are experts on how to make people like you, and Sam said we should look into hiring one. She said every government and every big business had one."

Catra, leaning against the wall in Darla's hold, frowned a little at Entrapta's explanation. "That sounds like… Like a bit questionable." People who knew how to make you like them? She knew someone like that.

Adora nodded in agreement. She would, of course - she had been raised by Shadow Weaver as well. "Yes. It doesn't seem to be very honest. How can people trust us if we lie to them?"

“Oh.” Entrapta looked confused.

But Glimmer shook her head. “It’s another form of diplomacy, of sorts - you know, when you try to present your proposal in the best possible way depending on who you talk to. You don’t lie because if you get caught in a lie, people stop trusting you.”

“Ah.” Adora nodded.

Catra narrowed her eyes. Knowing what to say to whom - that was how Catra had managed to recruit Entrapta to the Horde.

“Well, you also have to consider how far you can and want to go,” Glimmer went on. “At some point, there’s not much difference between outright lying and omitting things.”

“People will feel that they have been lied to even if everything you told them was technically correct,” Bow added.

Catra rolled her eyes. That was obvious. No one liked being manipulated and made to look like a fool.

“And how far do we want to go?” Adora asked.

“We want a lasting alliance, so we need to show the people of Earth that we aren’t their enemies,” Glimmer replied.

“Yes!” Entrapta agreed.

“We’ve been trying that,” Catra pointed out.

“In diplomatic negotiations,” Glimmer retorted. “This is different.”

Catra shrugged. People were people. Even princesses, when it came down to it, were people.

Glimmer frowned at her even though she hadn’t said anything. “I think we all realised that we don’t really understand the people here.”

That Catra could agree with. “Yes. They’re all nuts.”

“Not everyone,” Adora objected. “But a lot seem to be a little…”

“Irrational,” Entrapta finished for her.

“As I said, nuts,” Catra said.

Glimmer sighed. “They aren’t crazy - not all of them. But they’re different. We need to understand them better, and I think such a public relations expert might help.” With a glance at Adora, she added: “It’s like preparing for Princess Prom: If we know what makes them tick and what they hate, we can avoid blunders.”

Adora pouted. “We still made blunders. Like with Frosta. I don’t think anyone liked us afterwards.”

“That was because Catra manipulated us,” Glimmer replied.

Catra didn’t react. It was true, after all. She had played them - and she had enjoyed it. Especially the dancing. In hindsight, she should have realised a lot of things back then. But she’d been young and stupid. Very stupid.

“So, we hire someone to teach us about Earth? Like Daniel?” Adora asked.

“Daniel is an archaeologist and historian. Not a public relations expert,” Bow said. “But probably someone like him, yes.”

“We’ll need to find someone we can trust, though,” Catra pointed out. “Such a person could easily manipulate us.”

“Yes.” Glimmer frowned. “This will be tricky. We might have to hire two or even more to guard against that.”

“Don’t the United Nations have such people? You said everyone has them,” Adora asked. “We could ask them for help.”

“But they would be loyal to the United Nations, not to us,” Glimmer objected.

Catra nodded. Negotiations were tricky enough - they couldn't afford to introduce a spy. And she was sure that anyone recommended by the United Nations would be a spy for one country or another.

"Well, we know there are many such people on Earth," Bow said. "So, let's talk to some of them and see if they make a good impression?"

Catra snorted. If someone made a bad impression, they obviously weren't competent at public relations.

"Yes. Let's put up a wanted ad!" Entrapta said.

"A wanted ad?" Adora asked.

"That's how you hire people - you put up an ad in a newspaper and online. Sam explained that to me." Entrapta nodded. "Well, you could also use a headhunter - which isn't what it sounds like, I asked - and then they would look for one."

"That would be more discreet," Catra commented.

"But we would have to find a trustworthy headhunter first," Adora objected.

Which would put them back to square one. Catra nodded.

Glimmer didn't look convinced. "I was thinking we would contact various public relations firms. Putting up an ad would make us look…"

"...like we need the help?" Catra grinned at the princess's scowl.

"We do need the help," Adora said, nodding. "But I think asking people is better. And we can ask our friends to help us look for trustworthy people."

"The Americans want to manipulate us like everyone else," Catra pointed out.

"Daniel is honest."

Catra had to agree with that. Daniel could be trusted - to an extent. "But his superiors aren't." Not even O'Neill.

"I trust Sam," Entrapta added. "So, we can ask her too!"

Glimmer nodded. "We have to trust someone, anyway."

*****

The Mountain, Colorado, United States, Earth, August 24th, 1998 (Earth Time)

"The Etherians are looking for a spin doctor?" Jack O'Neill looked at General Hammond, then at Daniel and Carter. Carter blushed, which was a surprise. He raised his eyebrows.

"I may have mentioned the concept of public relations to Entrapta," she said.

'May'? Carter usually wasn't as… diplomatic. She must be really embarrassed. But this wasn't some private moment where a joke would be appropriate. They were in a meeting with the general. "And they've asked us for a recommendation?"

"They have explicitly asked for Dr Jackon and Captain Carter's help," Hammond replied.

"I don't know why they would ask for my help. I don't have any experience with public relations," Daniel said. "I don't even know a public relations expert."

Jack was already aware of that. Otherwise, his friend probably wouldn't have blundered into the whole 'cuckoo archaeologist claims aliens built the pyramids' debacle.

"I am familiar with the concept, of course, but I don't know any public relations expert either," Carter added. "Entrapta must have got the wrong impression from my explanation."

Hammond looked grim. “This poses a problem, of course.”

Daniel looked confused, but Carter grimaced. Jack nodded. “Washington wants us to recommend specific ‘experts’.”

“Yes.” Hammond didn’t like the idea either. “I did point out that the Etherians specifically asked for Dr Jackson and Captain Carter because they trust them.” He sighed. “The President pointed out that whoever the Etherians picked would be approached by various groups anyway.”

“Like the NID,” Jack said. “Or just some interest group with a bag full of money. Or some foreign spy.”

“Exactly.” The general nodded. “However, I could persuade the President that we cannot afford to lose the Etherians’ trust in SG-1, so he agreed that we’ll be putting our cards on the table from the start.”

“Honesty is the best policy,” Daniel agreed.

Although… “Were you just quoting Adora?” Jack asked.

Daniel flushed a little. “It’s a sound policy.”

Maybe we should start worrying about the Etherians manipulating our own people, Jack thought. Though could you call it manipulation if they were simply being themselves? “So, how do we honestly recommend a trustworthy spin doctor that won’t sell out either the Etherians or us?” If such a person even existed - Jack didn’t really trust any PR guys.

“We investigate them beforehand,” Carter offered - she must have been thinking about this for a while. “As if we were screening applicants for Stargate Command recruitment.”

“Right. Because we’ve done this before.” Although Jack knew that despite their best efforts, they would have missed some NID moles in the past.

"And we'll tell the Etherians that," Daniel insisted. "They need to know that whoever we recommend will be loyal to the United States."

"Of course," Hammond agreed.

"Let's hope that they won't take offence at that," Jack said.

"They shouldn't." Daniel frowned a little. "They are, despite their age, experienced politicians, after all."

"Carter had to explain to them the concept of public relations," Jack retorted.

"That wasn't because the concept was unknown to them, but because they must have seen this as part of being a ruler," his friend protested. "And, well, because it was Entrapta. I keep telling people that we can't underestimate them. The Etherians have a sophisticated civilisation, even if their aesthetics might not look like that to us. It's the same with how people tend to see past cultures as ignorant and primitive even though most had complex societies. Like the Bronze Age, which had a complex network of trade and diplomacy relations that covered a significant part of the world and…"

Jack sighed. Here came the history lesson. Although his friend had a point about underestimating the Etherians. They were just so young. And so earnest. Well, most of them. Catra was a sneaky cynic, or tried to be, and Glimmer certainly acted like a politician often enough.

*****

Jack O'Neill pushed back with his seat and resisted the urge to spin around on it. With no emergency to deal with, he was supposed to catch up on paperwork. Which he had done - at least he had finished the essential reports. And what the government considered essential. Opinions on that differed, of course.

In any case, it was mid-afternoon-ish - time for a break. Usually, he'd drag Carter and Daniel out of their caves, but both were busy working with Stargate Command's support staff on vetting public relations firms. That left Teal'c. Who would, at this time, either by working out with the marines of SG-3, which meant sparring, or meditating in his room.

A quick check confirmed that Jack's friend wasn't in his room. Which meant he would be in the gym - and unlikely to take a break in the middle of a training session. Still, Jack felt like talking to a friend, and the mess hall was on the way, so if he grabbed a doughnut and coffee, he could then watch Teal'c flatten cocky marines in sparring matches. You could have worse breaks.

In the canteen, he stood in the short line - one airman ahead of him tried to surrender his spot, but Jack waved him off. As if he'd pull rank in the chow line! Besides, the TV was on and showing the news. Or what they thought was the news. Nothing new there… Wait! He frowned. He knew that face on the screen - that was the nutcase who had called for the death of the Etherians. He walked closer, listening to the announcer.

"...arrested for misuse of donations and child pornography. The reverend's lawyer refuted the accusations and claimed that his client was being framed."

An airman next to Jack snorted. "They always say that!"

Another cursed about paedophiles.

Jack would certainly not dismiss the idea that the good reverend was a conman and sexual predator. But he couldn't help feeling that the man's arrest so soon after he caught the Etherians' attention was more than a little suspicious.

*****

Earth Orbit, August 24th, 1998 (Earth Time)

"...and while the police refused to comment on the speculation that the reverend's recent controversial statements about the Etherians were the reason that his finances had come under scrutiny, several sources claim that despite the fact that the information about the reverend's suspicious financial activities was provided anonymously, the police acted as if they trusted the source, which raises suspicions that…"

"They arrested the nutcase?"

Adora nodded. "According to the news, yes."

"But not because of the death threats," Catra went on as she sat down in the lounge of Darla.

"Financial crimes and child pornography," Glimmer said with a deep scowl. "Figures."

Adora nodded, but Catra snorted. "Easy to plant such material on someone."

Adora blinked. "You think that someone, ah… framed him?"

Her lover shrugged. "It's possible. It's quite convenient that he was arrested - and for such despicable crimes - shortly after he made waves. If you can't get him for what he did, get him for something he didn't."

That was… Adora's first impulse was that this was bad. Very bad.

"We don't know that," Bow pointed out. "And according to what we found out, a lot of such 'televangelists' get very rich on donations."

And a lot of them didn't like people like Adora and Catra - they had said so in the past. Not many had been as hateful as the reverend in question, though. Still… "But child pornography?"

"It's not impossible either," Glimmer said, "according to the information we found about religious organisations."

“Of course,” Catra pointed out, “that also means it’s an easy and plausible charge.”

“But would they do this? Frame a man for crimes he didn’t commit just to please us?” Adora asked.

“In a heartbeat,” Catra replied.

Adora frowned at her. “We don’t know that.”

“We know they did such things - and worse than this - in their ‘Cold War’,” Bow said.

“But that was years ago,” Adora protested. When she saw Catra shaking her head with a sigh, she pouted. People could change - Catra was the best example! SG-1 were good people, too.

“But is this a bad thing?” Entrapta looked confused. “He told people to kill us - and we didn’t do anything to him. So, he was obviously a bad person who deserved to be arrested.”

“Yes, he was - but he might have been arrested for a thing he didn’t do,” Adora explained.

“But why would that matter, as long as he is arrested?” Entrapta asked.

“Two reasons,” Glimmer replied. “First, if he wasn’t arrested for telling people to murder us, then that means it’s still allowed to do that. Tell people to kill us, I mean, not killing us.”

“In the United States. In other countries, it is legal to kill us,” Catra interjected.

“We’re talking about the United States,” Glimmer told her with a frown. “Anyway, the second reason is that we have to wonder if we can trust people who break their own rules like that.”

“If a rule is stupid, it should be broken,” Entrapta said.

Adora narrowed her eyes - at Catra. She knew that quote.

Her lover frowned. “Hey, it’s true - you shouldn’t be following stupid rules.”

“Sometimes,” Adora admitted.

“This isn’t about following stupid rules - this is about trusting someone who ignores their rules when it’s inconvenient but won’t change them,” Glimmer explained.

“Ah. So, you think they will do the same when it comes to an agreement with us?” Entrapta asked.

“We don’t know if they did it in the first place,” Adora cut in.

“It would be wise to assume the worst,” Hordak commented. “Your friends in Stargate Command might be trustworthy, but they aren’t the rulers of their country.”

“And I’m sure that Jack’s been involved in such stuff,” Catra said. “Remember him and Burke?”

Oh. Adora frowned. “But that was years ago. He’s changed.”

Catra frowned as well - she understood Adora’s point. But she shook her head. “But there will be others. And either the President is behind this, or he tolerates it, or he can’t stop it. No matter what, it’s not a good thing.”

“Indeed,” Hordak agreed. “A leader must have total control over his underlings.”

“Yeah, how about we don’t go there?” Glimmer said. “But a leader is responsible for their people.”

“You can’t have responsibility without control,” Hordak retorted.

“This is getting a bit too philosophical. Can we focus on what this means for us?” Bow frowned.

“We don’t even know if our suspicion is true,” Adora told him. “We shouldn’t assume the worst without any evidence.”

“Neither should we blindly trust everyone,” Catra objected.

“I think we shouldn’t do anything, but we should be more cautious when negotiating,” Glimmer said.

“And what about the public relations experts we asked for help with?” Catra leaned back in her seat.

“We already decided that we would hire several people,” Glimmer told her. “So, we have to look for some people ourselves.”

“Great.” Catra, obviously, wasn’t fond of that idea. “Just what we wanted to avoid by asking SG-1 for help.”

Adora smiled and patted her lover’s back. “Not every plan works out.”

“But it would be nice if some worked out without having to work harder,” Catra retorted.

“You haven’t done much work in the negotiations at all, “Glimmer said with a frown.

“I’m not a princess,” Catra told her with a grin.

“Anyway,” Adora spoke up before her friend and lover could start a row - Catra was a bit lazy when she thought she could get away with it, but Adora didn’t think Catra being more active in negotiations would help a lot. Quite the contrary, in fact. “We should wait and see for now. And look for public relations experts. You can help me with that!”

She ignored how Catra sighed theatrically and slumped at the table. Catra couldn’t fool her with such antics.

*****

Earth Orbit, August 25th, 1998 (Earth Time)

Samantha Carter wouldn't call working with Entrapta a chore. Not at all - it was refreshing to work with someone as intelligent and driven as she was who didn't harbour some mixed feelings because Sam was a woman. The number of times she'd had to establish ground rules that should have been obvious with some of her male colleagues… the Colonel's jokes about her enforcing the pecking order had stopped being funny long ago.

No, working with Entrapta, a genuinely nice person as well, was a great experience, especially if they worked in space - despite Sam's experiences, part of her still marvelled at watching the Earth float beneath them through a window. At least it should be.

But part of her had also been dreading today's work on the ring transporter. Because while Entrapta was one of the nicest persons Sam knew - not counting when she had some mad scientist moment - she was also both very open and very curious. Which meant that she would ask rather uncomfortable questions that Sam didn't like answering.

"So…" Entrapta bit her lower lip. "Did you plant fake data in that guy's computer to arrest him?"

Questions like this one. "That would be illegal," Sam replied before she could help herself. Damn, That was an evasive answer if she ever knew one.

"Yes, I had that explained to me." Entrapta nodded. "It's a little weird that getting the right result but with a different method is not allowed, but apparently, the side-effects are bad."

"Yes," Sam agreed. "Breaking the law isn't a good thing."

"Unless it's a stupid law," Entrapta objected. "At least Catra said so, and Glimmer didn't really contradict her - well, not if she really meant it."

That was… a rather worrying fact. Not really a surprise, though - Catra certainly struck Sam as the type to only worry about getting caught with regards to rules, and Glimmer had a pragmatic side that bordered on ruthless.

"Anyway!" Entrapta nodded. "Whether or not it's legal doesn't answer the question I asked."

Damn. "Stargate Command didn't do anything like that. And I have no knowledge of any other organisation of the United States framing the reverend," Sam replied.

"But would you know about that?"

"No," Sam admitted. "Whoever would have done such a thing would have kept it a secret from everyone because it would be illegal."

"That's a lot of 'woulds'." Entrapta pouted a little. "You usually don't use so many."

Entrapta was much more focused on this than Sam had expected - usually, the woman was focused on science. "I don't want to present speculation as facts," she told her.

"Ah." Entrapta nodded, smiling. "That's a good stance."

"But," Sam went on, "some people think the timing of this is suspicious. Usually, such investigations take longer before an arrest is made." The police generally weren't eager to make waves like this without solid proof. Certainly not when it concerned the leader of a local church. The white male leader of a Christian Church, a voice in the back of her mind added. But that was another subject she wasn't going to touch unless forced to.

"On the news, they said they had received information from an anonymous source." Entrapta cocked her head to the side. "Wouldn't that be enough to act?"

Sam pressed her lips together. “The police tend to act a bit more cautious when receiving such information. It could be an attempt to frame a rival. Of course, it could also be information from someone close to the reverend who was pushed to act after the man called for your deaths.”

Entrapta frowned. “But if they knew about his breaking the law, why wouldn’t they have said something before?”

“Perhaps they didn’t think it was bad enough to call the police - especially if they were only aware of the financial crimes,” Sam explained. “The police would have discovered the other crimes once they took his computer and examined it.”

“Ah. So, it’s possible that he did those crimes.”

“Yes.”

“But it’s also possible that he didn’t, and someone faked the data.”

“Yes.”

“Is there any way we can find out which is the case?” Entrapta frowned. “Because this seems to be an important question that should be answered.”

Sam sighed. “Not without breaking a few more laws.” Such as hacking the computers and electronic communication of a certain Senator. Though not even that would probably help - Kinsey was too smart to leave incriminating evidence on his computer.

“Your laws seem to need a lot of revising,” Entrapta said.

“Yes. But altering the law is hard - and that’s by design.”

“Why?”

“Because people need to be able to trust that a law won’t be changed on a whim. They need to be able to trust the government, and they can’t do that if they have to fear that

whatever was legal yesterday could be illegal tomorrow just because the president didn't like it. Especially if they invested a lot and expected to be able to keep doing it."

"Oh." Entrapta nodded. "Like investing a lot into an experiment and then being told you can't do it."

"Yes." Sam nodded.

"But why would anyone invest a lot in telling others to kill people?"

Sam sighed again. She really didn't want to discuss religion with Entrapta.

*****

Public Relations Part 2

The Mountain, Colorado, United States, Earth, August 27th, 1998 (Earth Time)

"So… that's the government-approved list of public relations experts." Catra craned her neck to look at the list in front of Adora. "Took you long enough. I would have thought sending us a copy of your payroll would be faster."

As expected, Daniel frowned at that. "We didn't get you a list of government employees," he said with a slight pout.

"We wouldn't have taken two days for that," O'Neill added with a smirk.

"Catra's joking," Adora said. "Thank you."

"Mostly joking," Catra corrected her lover. "I'm sure none of them is hostile towards the government."

"Few businesses are," Daniel said.

"None of them is hostile to their employers," O'Neill said.

"Colonel," Sam hissed.

"Just being open and honest," he defended himself. Then he grinned at Catra. "Besides, I'm sure you already assumed that anyway."

Catra matched his grin. "Of course."

Glimmer rolled her eyes. "It's generally thought to be both rude and crude to point that out."

"Well, I'm no diplomat," O'Neill said.

“As a number of unsuccessful first contacts can attest to,” Daniel muttered.

“Hey! None of them was my fault… well, perhaps one or two…” Now O’Neill was pouting. “Anyway, here you got your list of American PR guys willing to sell their souls to land this job.”

“We don’t need their souls,” Adora said. “We just need honest advice and expertise.”

“Well, that’s good - I think they sold their souls already. Or would have, if Earth had magic.”

“That’s not exactly how magic works,” Glimmer commented.

“Yes. Unless that’s how Earth magic works. I’ve never heard about soul magic until Earth. It sounds fascinating!” Entrapta beamed. “Can we measure souls and analyse them without harming them?”

“It’s not quite clear if souls exist,” Sam said.

“Those are myths. Souls… well, it’s more a question of faith and belief,” Daniel added. “Not something you can measure. Or even see.”

That sounded like their gods to Catra: Imaginary things.

“Well, Earth tales of magic do seem to emphasise spirits and similar creatures,” Glimmer said. “As do your religions. So, it might be possible that Earth magic is focused on spirits.”

“That’s not quite the same as what we think souls are,” Daniel argued.

“Perhaps spirits are what happens when the original body dies, and the intangible consciousness hangs around?” Entrapta speculated.

“That’s very fascinating, I’m sure,” O’Neill said, “but we’re here to talk about public relations.”

“You don’t like public relations, do you?” Catra asked.

Jack frowned at her. “They’re a necessary evil. Too closely related to politics.”

“Politics aren’t evil,” Daniel protested.

“My experience disagrees,” O’Neill retorted.

Catra snorted. “Earth politics, maybe.”

“Well, Alliance politics were sometimes frustrating as well,” Adora said.

“We all know that,” Glimmer said. “Let’s talk about public relations.” She picked up the list. “So, we’ve got half a dozen names here. Groups, mostly.”

“Yes. We’ve vetted them,” Sam said. “They’re honest as far as we can tell - reasonably honest.”

“For public relations people,” O’Neill grinned.

Catra shook her head. “Your jokes are getting older than you.”

“Hey! Low blow!” he protested.

“Can we focus on this list?” Adora was getting annoyed. And not the fun kind of annoyed.

“Sorry,” Catra said in a low voice.

“Alright.” Glimmer read the list. “They’re in alphabetical order. No preferences?”

“Ah… no,” Daniel said. “We don’t really have much experience with this sort of business.”

“We were too low on the totem pole to need such people,” O’Neill explained. “And too secret.”

"You sounded like you had personal experience," Catra pointed out.

"I have personal experiences with the constraints PR shackled us with," O'Neill said.

"I think that means he wasn't allowed to be as snarky and immature as he wanted," Daniel said.

"Hey!" But O'Neill was grinning.

"So… I guess we'll just meet with everyone and see who fits us best," Glimmer said.

"And you need to work out how to pay them," O'Neill said. "They won't work for free."

"That shouldn't be a problem," Bow said. "I've looked up the prices for space travel - passengers or cargo. Just transporting a satellite or two should give us enough cash to pay for them. Or we could offer to take a people to the Moon or Mars."

Catra suppressed a smirk when she saw how surprised the others were. Well, except for Daniel, who looked pointedly at O'Neill.

"You're going to offer space travel for cash?" O'Neill asked.

"It's an obvious service we can provide. There isn't much competition, and it won't require us to give away our technology," Glimmer replied.

"NASA's going to love this," he muttered.

"They will - if they can be the first to hire you," Sam said.

"How much would people pay to be the first person to visit Mars?" Daniel asked.

Catra grinned. It seemed the obvious way to make money for trade hadn't been as obvious to Stargate Command. Well, did they

expect them to peddle their technology? Or hire out Adora as a healer for money?

As if Catra's lover would have accepted that. No, offering trips to space was the easiest way to get money.

*****

Washington DC, United States, Earth, August 28th, 1998 (Earth Time)

"I'm not a politician. I shouldn't be here," Jack O'Neill grumbled as he shifted in the - admittedly very comfortable - seat in the White House's waiting room.

"We're here to advise the President and the cabinet, not to make policy," Daniel said, looking up from his book. Carter didn't look up from her laptop.

"I'm not a consultant either," Jack retorted.

"Jack! This is just a briefing - you've done those before."

"Under protest," Jack lied.

Daniel rolled his eyes and went back to reading.

Jack frowned. He was old; he had a right to be grumpy! Besides, he was sure that they would get the blame for whatever crazy thing the Etherians did next. "They haven't put up an ad for space cruises, have they?" he asked, looking at Carter.

"No, Sir," she replied.

"You haven't looked!" he accused her.

"I have a program checking for such things," Carter replied.

That was impressive. Jack hadn't known that they could do that.

“And Entrapta said she wanted to run the ad by us before they put it up,” Carter added with a slightly embarrassed smile.

Jack groaned. “I was joking about the ad!”

“Well, Jack - how else would they advertise their services?” Daniel asked.

“By giving an interview?” Jack raised his eyebrows. “They wouldn’t have to pay a dime that way.”

“That’s true,” Daniel admitted. “How are they paying for an ad anyway?”

“Credit,” Carter replied. “They don’t have to pay immediately.”

Jack couldn’t help noting that Carter knew a lot about the Etherians’ plans. “Been getting cosy with your mad science buddy, have we?” he asked, taking care to keep his tone light.

“I’ve been cooperating with our prospective allies as per our last orders, Sir,” she replied, tensing a little.

So, his tone hadn’t been light enough. Damn. “I’m not judging you,” he told her. “I’m just a bit curious - and envious. They aren’t as cosy with me.”

“That’s because the alien you’ve got the closest rapport with is prickly and too much like yourself,” Daniel replied.

The alien he had what? Jack blinked. “What? Catra’s a kid! We aren’t alike at all!”

“She’s a veteran with a dark past and hides her feelings behind dark humour and snark,” Daniel explained. “That’s like you with cat ears and a tail.”

Jack glared at his friend. That was going too far. “She doesn’t hide her feelings at all. She’s quite blatant about public displays of affection with Adora,” he retorted.

Daniel blinked, opened his mouth, then closed it again. What was his problem? And Carter was now hunched over so much, her face had disappeared behind her laptop.

Oh. Jack cursed himself, but before he could rectify the misunderstanding - and it was a misunderstanding, damn it! - the door was opened, and one of the White House interns peered inside. "Colonel O'Neill? Captain Carter? Dr Jackson? The President is now ready for you."

"Perfect timing," Jack muttered as he got up.

"Pardon?"

"Nothing." He waved the young woman off. "Let's not leave the President waiting."

"Thank you for coming. Please have a seat!" the President greeted them warmly as they entered the meeting room. The rest of the cabinet was more polite than friendly. And Kinsey, who, of course, had to be here for some damned reason, didn't bother smiling at all.

In return, Jack bared his teeth as their eyes met. If anyone asked, it counted as a smile.

"So!" The President clapped his hands together. "Things with the aliens have taken another turn."

"I'll say," the Secretary of Commerce. "My phone hasn't stopped ringing since news about their latest idea got out."

"Which was supposed to be a secret," the Secretary of Defense spat. "You've got a leak in your department!"

"It could have been any department," the Secretary of Commerce retorted.

"Well, at least it hasn't leaked to the press yet," The President said.

“Would save the Etherians some bucks for advertising,” Jack said before he could stop himself.

Everyone turned to look at him. “They’re planning to advertise?”

“Apparently,” Jack said. He wouldn’t throw Carter under the bus. “They seem to want to do things by the book.”

“They have been watching Earth TV since their arrival, so they would be aware of many of our customs,” Daniel said. “And they couldn’t have missed advertising, even though that’s not really known in their home.”

“Will they apply for a license to operate commercial aircraft?” the Secretary of Transportation asked. “If they do, would we have to certify their craft?”

“We haven’t exactly asked them to get their spaceship certified,” the Secretary of Defense remarked.

“But they didn’t operate it as a commercial transport,” the Secretary of Transportation replied. “That’s different now.”

“You want to set the FAA on the Etherians?” The Secretary of Commerce sounded shocked.

“I wonder how they’ll take the fact that Darla is a thousand years old,” Daniel muttered next to Jack.

“Folks,” the President spoke up, “let’s not quibble over regulations. We all know that if we won’t let them do this, another country will jump at the chance.”

“And NASA will be pissed,” the Secretary of Defense added. “They’re already starting a crash program to get a Mars habitat ready.”

“But what if something goes wrong? What if there’s an accident?” the Secretary of Transportation objected. “What if a spaceship crashes on a city?”

“We can weather such a crash better than a complete crash of the economy,” the Secretary of Commerce said. “And if we alienate the aliens, that is what will happen.”

Jack clenched his teeth and kicked Daniel before his friend could blurt out something impolite. That was one of the reasons he hated politics.

“Surely it can’t be that bad?” the Secretary of Transportation objected.

“Have you seen the latest report from my department?” The Secretary of Commerce scoffed. “The global economy is reeling. People are worried about the war. The only thing that kept the stock market from crash-diving into crushing depths is the hope that the aliens will usher in a new golden age thanks to their technology - and even with that factor, the panic is greater, especially in many developing countries. And the number of startups that can’t get money is increasing rapidly because everyone thinks their ideas and products are already obsolete..”

“And in the established industry, people scale back their staff. We didn’t have large numbers of workers getting laid off yet, but it’s just a question of time if this continues,” the Secretary of Labor added. “They know that not everyone will profit from the coming tech revolution.”

“And even the corporations hoping to profit from the aliens are worried,” Kinsey spoke up for the first time. “Several aerospace industries reached out to foreign firms for possible joint-ventures, but the reception in Europe has been… less than enthusiastic.” He looked grim, Jack noted, but Kinsey was an accomplished liar. “I’ve called a few contacts in the United Kingdom, and they told me that their firms aren’t convinced that the United States will manage to get an alliance with the aliens.”

“What? We’ve been working closely with them - we just stopped some zombie plague and captured alien infiltrators!” the Secretary

of Transportation protested. “They haven’t even talked with the United Kingdom!”

“The British have been active in the United Nations,” the Secretary of State replied. “And they’ve been preparing the field, so to speak - they’re rushing through pro-gay legislation, so when they officially talk, they can present themselves as the most progressive country. It’s the same with the French and the Germans.”

“Their industrial leaders are putting pressure on them to make a deal, same as ours,” the Secretary of Commerce added. “Only, they can ignore the religious conservatives.”

“So can we,” the Secretary of Transportation retorted. “They’re not our problem. We can replace ‘don’t ask, don’t tell’ easily enough.”

Daniel cleared his throat.

“Yes, Dr Jackson?” The President nodded at them.

“The Etherians are aware of how easily ‘don’t ask, don’t tell’ - or something worse - could be reinstated by a new president,” Daniel explained. “And they are aware that you’re limited to two terms, Mr President.”

The President nodded. “And they’re used to monarchs ruling for much longer times.”

“Magical princesses,” someone muttered.

“Yes, Mr President,” Daniel confirmed. Jack knew he struggled not to add: ‘I’ve already told you so’. “And, well… they expect full rights for gay people. Several western countries are passing laws to legalise gay marriage.”

“Laws they can change much more easily than we can change ours,” the Secretary of Transportation grumbled.

"But they also don't have their nutcases screaming to burn witches on live television," the Secretary of State added. "We do. That's not a good optic."

"He was arrested," someone else said.

Jack winced and raised his hand.

The President looked at him. "Colonel O'Neill?"

"They voiced concern about a possible frame job," he said - carefully not looking at Kinsey.

"Great. The absolute monarchs care about due process," someone else sighed.

"Many of the more extremist religious leaders have been a bit lax with regards to financial regulations," Kinsey commented. "I feel that several of them will want to avoid drawing attention that might lead to an investigation."

"Will that be enough to mollify the aliens?" the Secretary of Commerce asked.

Daniel pursed his lips. "They also mentioned that it's hard to trust people who break their own rules and laws when convenient but won't change them. It's like… they do respect our customs - mostly - and understand that our legal and legislative procedures and rules are different, but they aren't as understanding when we don't follow our own laws. It's a trust issue."

"But they trust you," the Secretary of Defense said. "They consulted your team to hire PR consultants, and you've fought together."

"Yes, but that's a personal relationship which doesn't extend to the United States as a country," Daniel explained.

"So, as a gesture of trust, we need to change the laws." The President looked at Kinsey.

Kinsey nodded. “My people are still working on the other party. This whole magic business has several key members worried about their constituents. No one wants to be primaried for ‘consorting with witches’.”

“Actual witches, as I understand,” the President said. He sighed.

“But we’ve got leverage - we have the Stargate. And we have alien technology. And the most experienced and powerful army in the world,” the Secretary of Labor said. “Surely we could find a compromise?”

“We’ll lose the Stargate,” the Secretary of State told him. “The other nations in the Security Council are bickering over the details, but everyone is in agreement that the Stargate belongs to the whole planet.”

“And we can’t stand against the entire world,” the Secretary of Defense added.

“We’0ve got a spare gate, don’t we?” The Secretary of Labor looked at SG-1. “Can’t we hand that one over and keep the first?”

“Stargates on the same planet tend to interfere with each other,” Carter explained. “It’s not entirely safe running two on the same planet.”

“To be fair, with all a Stargate entails, it is hard to argue that they shouldn’t belong to the entire world,” the Secretary of Education said.

“And ‘one gate for us, one for the rest of the world’ won’t really go over well either,” the Secretary of State said.

“What about the war we’re fighting?” the Secretary of Labor asked.

That was Jack’s cue. After a nod from the president, he said: “The Ehterians have a space fleet. They need ground troops - but given our performance so far against the Goa’uld, pretty much any

modern military will have the troops to beat the Goa'uld on the ground if they have support from space." And between all of their countries, the Europeans had enough ground troops for that.

"So, we might have the most experience and the best troops, but we're not irreplaceable," the Secretary of Defense said.

"What about our alien technology?"

Jack glanced at Carter. That was her field.

*****

Dulles International Airport, Washington DC, Earth, August 28th, 1998 (Earth Time)

"Hello, Mr Finnigan." Adora smiled as friendly as she could at the man in a suit. "Please have a seat."

"Thank you, Your Highness. Your Highness. Your Highness. Miss Catra. Mister Bow." The man nodded at all of them as he took a seat in Darla's lounge. He wasn't gawking around any more, unlike when he had entered the ship.

Adora glanced at Catra, who seemed ready to comment on her form of address. "Don't," she whispered.

Her lover snorted as the man opened his suitcase and pulled out one of the small computers with a keyboard that they liked on Earth - a laptop, they were called. Catra found the name very amusing for some reason she hadn't shared yet.

"So, Mr Finnigan, you represent Mackenzie and Sons," Glimmer said when the man seemed finished setting up.

"Yes. We're a traditional consultant firm specialising in public relations." He nodded, then added with a smile: "You certainly don't need any introduction - I think everyone on Earth knows you by sight now."

“I don’t think everyone has seen pictures of us,” Entrapta retorted at once. “And we’ve got data that there are several communities which do not follow global media. So, not everyone would recognise us on sight. And we also need to consider that not every human being has the same ability to recognise individuals based on pictures. So, I would say we are probably known to the majority of the population of Earth, but not to everyone.” She nodded several times.

Finnigan blinked, and his smile slipped a little. “Ah, yes, of course. Thank you for the correction.”

“No problem!” Entrapta beamed at him. “I’m happy to help!”

Glimmer cleared her throat. “So, do you know why we are looking to hire a public relations expert?”

“You want to get your message out to the people on Earth and control your image,” Finnigan replied at once. “Mackenzie and Sons specialise in that sort of task. Whatever your message, we can get it out - and make people accept it.”

Adora frowned a little. “Whatever our message?”

“We’re professionals, Your Highness.”

“Just Adora,” she interrupted him. ‘Your Highness’ reminded her of how Priest addressed her.

“Certainly, Adora. Anyway, we’re professionals - we don’t care about your message or your goals, only how we can present them to your target demographic in the most effective way possible.”

He didn’t care about their message or their goals? Adora blinked.

“Sounds very mercenary,” Catra commented.

His polite smile turned a bit more genuine, or so Adora thought. “That is one way to look at it. We don’t judge our clients or try to

influence them - we don't have a horse in any race. All we want is to do our best to help our clients."

"And to earn money," Glimmer said.

"Of course."

"But what if we had goals that would run counter to your personal principles?" Bow asked.

"As I said, we're professionals. Whatever the client wants, they get. Our own private views play no part in this. We've worked for politicians from both parties in the USA - usually at the same time, albeit in different areas."

"I see." Glimmer's smile was also very polite.

*****

"...and I was thinking that you are a shoo-in for the younger market - the younger demographics. They can identify with you. They, too, are faced with a world of adults who do not take them seriously due to their age, and they often feel alienated from their parents because of their different life experiences. And, of course, you already cover part of the teenage pop culture - magical princesses? Catgirls? The ads practically write themselves! What you mostly need help with are the older generations." Miss Glendale beamed. "And we at PR Solutions Inc. know how to catch them. Leave it to us, and you'll reap the benefits of a targeted campaign in no time!"

Adora had the distinct impression that Miss Glendale, who was about forty, didn't really take them seriously either.

"I think for the older generation - especially those who remember the Second World War - we should focus on your war experiences. That will create common ground. Of course, you'll have to manage your appearances; what appeals to the younger demographic won't appeal to the older demographic. I would suggest you split your appearances. Some of you focus on the

younger targets - I would think you, Adora, and Catra, are best suited for that since they are the most tolerant demographic and you fit several popular archetypes in comics and animation - while Queen Glimmer should focus on the older demographic. We'll have to see what the polls say about your choice of partner to decide whether or not to emphasise your relationship in contrast to Adora and Catra's or not. But I think with careful brand managing, your approval rates should soar."

Adora wasn't sure if she wanted to be managed. But she was sure that she wasn't a brand.

*****

"I'll be frank - you've got some real issues when it comes to public relations. I took the liberty to have our data department run some polls in preparation for this interview, and, honestly, you're very polarising. The liberal urban population is poised favourably towards you, especially the younger generation, but the politically active part of that demographic is somewhat sceptical of your political views with regard to democracy. And the fringe groups there are concerned about being colonised. Still, that's your core support demographic - they share a number of your values and can be worked with." Mr Brown, of 'Brown, Wallander and Co.', nodded.

"However, on the other end of the spectrum, the Evangelicals are, at best, very sceptical. At worst, they loathe you. You represent everything they fear - you're literal aliens, you have same-sex and interracial couples, you don't follow their religion and you can do magic. And you're very open about everything." He took a deep breath. "And between those, you have the average American - they're sceptical, worried about the war and the changes that your arrival will cause to their lives, but also hesitantly optimistic. You need to convince those that you're not here to destroy their way of life but to help them if you want their support. Brown, Wallander and Co. can help you there, but whether or not they will be convinced depends on your actual plans for the planet."

The man - middle-aged and balding - sounded quite… Adora would say 'professional', but Finnigan had called himself that, and she didn't want to associate Brown with that.

"And, of course, this all depends on what is your ultimate goal," the man went on. "Do you need popular support to put pressure on the government? Or on certain factions in Congress?"

"We would like it if we didn't have to fear that whatever changes to your laws the current President does, the next one undoes - after we have shared our technology and magic," Glimmer summed it up. "And, as far as we know, for some reason, the people who loathe us have a comparable greater influence on your politics than their numbers and economic power would suggest."

"And that is because your democracy is weirder than most other democracies we saw," Catra added.

Brown nodded with a wry smile. "Yes, the system does favour certain demographics. Which in turn, means politics favour them. But changing - breaking up - that conservative alliance will be difficult. Not impossible - you already have big business on your side, so to speak, and the big donors are putting pressure on the usual suspects to change their policies - but a lot of the politicians involved need the Evangelicals to keep their positions."

Adora frowned. Such people shouldn't be in power.

"So, what can we do?" Bow asked.

"We - that is, Brown, Wallander and Co. - can help you with battling the Evangelical propaganda." Brown nodded. "But you won't really convince the hardcore Evangelicals since, in their eyes, you are a threat to their way of living."

Adora shook her head. "We aren't. All we want are equal rights for people like us."

Brown's smile turned sad. "They see that as a threat because their way of life includes forcing their views on everyone else. So, don't expect miracles. Some of them can be reached, but many, perhaps even most, won't change."

"Which means we need to hit the switch voters?" Catra asked - she and Adora had read up on American politics, though Adora didn't think that was the correct term.

"In a way. You mostly need to convince most of the rest of the conservative base that legalising gay marriage and magic isn't going to turn them into gay witches."

"They actually believe that?" Adora blurted out.

"Yes." Brown nodded. "Part of the reason for that is, of course, that no one really knows what magic can do. The rumours of a zombie plague didn't help there."

Adora winced.

"Well, we don't exactly know what Earth magic will do," Entrapta spoke up. "But based on your myths and history, I don't think the sexual preferences of people will be changed."

"I see." Brown slightly inclined his head. "In any case, Brown, Wallander and Co. can help you improve your image in the United States. No more and no less."

"Thank you, Mr Brown. We'll contact you once we have made our decision," Gimmer said.

*****

"...and if you want to improve your image, you need to optimise your presentation. Get people to focus on your strengths and ignore your flaws. Give the public what they want. You're young, attractive and fighting evil body-snatching aliens. That's enough to forgive a lot of sins - people love war heroes. Keep your private life private, and you'll have them singing your praises soon

enough. Of course, if you really want to gain the Evangelicals' support, then converting to their faith would be a big help - they love repenting sinners." Alois Baker, of Smith and Baker, flashed pearly white teeth. "As long as you go through the motions, you're set and can do what you want in private. Most of them do the same, after all."

"Thank you," Adora lied. "We'll stay in touch."

*****

"Frankly, trying to correct your image by catering to the kind of people who rant about hell and damnation is a fool's quest." Julie Callaghan shook her head. "You won't ever win over most of them - unless you're white, male, straight and Christian, they will never accept you as equals. You have to change them if you want them to stop hating you, and that will take a lot of time, and you won't be able to change all of them."

"That's kind of pessimistic," Bow said.

"It's realistic. You can't win them all, so you need to decide who you want to support you. I've advised several politicians and I've always told them that if they have to lie to gain the support of a group, if they have to hide their real self, play a role, put up a facade, then that will, sooner or later, blow up in their faces. Someone will tell on you and the truth will get out. And that will cost you a lot more support than any lies could gain you."

Adora nodded in full agreement. As did her friends. Well, Catra smirked, but that counted.

"But ignoring them won't really stop people calling for our deaths," Glimmer pointed out.

"Oh, you shouldn't ignore them - but you shouldn't bend over to cater to them. Stress what you have in common. Whether gay or straight, most people want a loving, happy relationship. They want their children to be happy and safe. You want them to realise that they aren't losing anything that matters just because

gay people can marry." Julie smiled before turning serious. "Of course, magic complicates that."

Adora sighed.

*****

"So, the first question you need to answer is: What do you want? What is your ultimate goal? Then we can find out who you need to target and focus on them. Don't waste your money on people who don't matter, I always say - targeted ads are where it's at. And once you have your target group defined, you analyse it and then go for the opinion leaders. The world works top-down - but, being monarchs, you'd know that, wouldn't you?" Mr Cassidy, of Cassidy Analytics, smiled. It was a nice smile, but a little… Adora couldn't really put it down, but it felt a little condescending.

"According to what we know, the United States are a democracy, and public opinion greatly influences policies," Glimmer told him.

"Yes, yes, polls make policies, I always say. But people don't make individual decisions - people are, by and large, followers. The democratic ideal of the informed voter, carefully weighing the pros and cons before making a decision, is an illusion. People don't think. They pick a candidate by gut feeling. Or because someone they trust told them to. And those people - the opinion leaders and shapers - are your targets." Cassidy nodded at his own words. "Let's take the Catholic Church. You don't change the opinions of the Catholic Church by appealing to the masses - you influence the Pope because the Catholics listen to him. Well, they listen, and then they break their own rules all the time, but the Catholic Church considers all of humanity as sinners for a reason, right?" Another smile appeared.

Adora frowned. That sounded… well…

"And who leads those opinion leaders?" Catra asked.

"Well, those who know how they tick and how they can be motivated." And again, he smiled. "You, if you hire me."

"But how do you influence people who believe that their god wants us to die?" Bow asked.

"Oh, they don't - the leaders never believe their own words. It's all an act." Cassidy chuckled. "They're too smart to fall for the lies they tell their rubes."

"You think every leader is like that?" Adora asked.

"I *know* it."

"Thank you. We'll contact you once we have made our decision," Glimmer said.

*****

Washington DC, United States, Earth, August 28th, 1998 (Earth Time)

"...and so it is my informed opinion that the United States couldn't match a program by other industrialised nations supported by the Etherians with a domestic effort of our own." Samantha Carter finished her explanation.

Or so she thought - the Secretary of Commerce frowned at her. "But we have more samples of alien technology than any other nation. And we have the most experience - I distinctly remember the budget for the Stargate program and the research into adapting advanced technology for domestic production. Are you telling me that all the claims made by Stargate Command were false?"

"No, Sir," Sam replied, managing not to frown. "I stand by our claims - but, as our reports clearly state, it will take considerable time until we can reasonably expect results - even accounting for the lack of secrecy now," she added before the man could bring that up. "We simply don't have the resources the Etherians can provide. We have a dozen scientists who have been researching alien technology - for the Etherians, this technology is what they work with. They can provide engineers and technicians to their

partners who have been working with this technology all their lives - and know it inside out."

Most of them were clones, as far as Sam knew, but there were hundreds if not thousands of former Horde soldiers who had experience building and maintaining Horde technology as well. She went on: "While we will be trying to teach our engineers and technicians the basics of the technology, the Etherians will be teaching their partners how to build and run factories for finished products."

"Ah."

"Our assets would, of course, use any opportunity to gain information and knowledge," Kinsey added, "but I don't have to explain to you that that would never replace such a deal."

"And it might be seen as an unfriendly act," the President added.

"It would be an unfriendly act," Daniel corrected him. Many glared at Sam's friend for his remark, but he raised his chin and weathered the hostility.

"So, you see - we need that alliance if we want to maintain our technological and miliary lead," the Secretary of Defense said.

"Easier said than done. The Etherians don't understand how our system works." The Secretary of State snorted. "Or, rather - they do understand, but they don't care."

"They're concerned about the extremist elements in our country," the Secretary of Education said. "And with good reason, I dare say."

"Tell that to the conservatives," the Secretary of State grumbled.

"We did speak with them," Kinsey said. "They understand the problem, but… they have some difficulties reining in the radical fringe they cultivated for so long."

“Die Geister die ich rief, die werd ich nicht mehr los.” The Secretary of Education chuckled.

“That’s from Goethe’s ‘The Sorcerer’s Apprentice’,” Daniel whispered.

“I don’t remember Mickey Mouse speaking German,” the Colonel replied in a whisper.

Daniel looked shocked for a moment - until he realised the Colonel was teasing.

“Well, their problems are now our problems,” the Secretary of State said. “We can’t get a good deal if people keep screaming to burn witches on live television.”

“We can’t limit Free Speech,” the Attorney General said.

The Secretary of Defense muttered something that Sam couldn’t hear. She was certain that it wasn’t a compliment.

“We could reclassify calling for a lynch murder as inciting violence,” the Secretary of Education said.

“We can’t keep people from quoting the Bible!” the Attorney General replied. “It would violate both Free Speech and Freedom of Religion!”

“We certainly could!” the Secretary of Education snapped. “If it’s done to incite violence, it shouldn’t be protected.”

“The press would crucify us,” the Secretary of Transportation said.

“The press will crucify us if we don’t get a deal,” the Secretary of Commerce retorted.

The President looked at the Attorney General. “Can you talk to the Supreme Court? Ask them if national interests would be

considered in a ruling whether or not the definition of inciting violence could be expanded?"

"I don't think they'll be receptive to that," the man replied. "They generally don't value economic interests higher than our freedoms. And they don't react well to any political pressure."

The President scowled for the first time. "Remind them that we're not just talking about the economy - we've got a fleet crewed by religious fanatics in orbit, and our religious fanatics are talking in public about burning their goddess and her consort. This is a clear and present danger for our country."

"Also, not too many of our allies agree that calling for murder should be protected by Free Speech," the Secretary of State added. "It's not as if we're talking about violating the UN charter of human rights here."

The President nodded. "Yes. I'm not asking to suspend our freedoms - I am asking for a bit of common sense."

The Attorney General sighed. "I'll see what I can do. Maybe we can use the lynching angle."

And the Colonel muttered: "Common sense? From lawyers?"

*****

Dulles International Airport, Washington DC, Earth, August 28th, 1998 (Earth Time)

"So…" Catra stretched her arms over her head. "Who do we pick?"

"Not Smith and Baker!" Adora blurted out. "They're too…"

"..dishonest, cynical and smug?" Catra asked.

"Yes!" Adora nodded emphatically. "Too manipulative."

Catra pressed her lips together. That summed it up.

“Well, we want to manipulate public opinion, don’t we?” Entrapta asked.

“We want to improve public opinion - but not by manipulating people like Cassidy wanted to,” Adora retorted. “I don’t want to hire him either.”

Not like Shadow Weaver would have done it. “Neither of them cared about our goals and principles - only the end result.”

“And the end doesn’t justify the means,” Bow agreed.

Catra glanced at Glimmer, but she didn’t contradict Bow. Instead, she said: “And such manipulations tend to blow up in your face.”

Catra clenched her teeth. Like her own. She had been so stupid! She had been… A hand on her thigh distracted her. She looked to her side. Adora smiled at her, shaking her head. Alright.

“So, we’re all in agreement: Smith and Baker as well as Cassidy Analytics are out,” Glimmer said. “What about Mackenzie and Sons?”

“I don’t like them,” Bow said. “They didn’t seem to care at all about what we are doing.”

“They only care about money,” Catra said. Such people had their uses - but only if you didn’t have any other options. And you couldn’t trust people who were in it for the money. “They might sell us out if the offer is good enough. Or use what they learn after they stop working for us.”

“I don’t think they would still be in business if they did that,” Glimmer objected. “No client would trust them.”

“If they keep their knowledge for their own use, who would be able to tell?” Catra retorted. “I vote for not hiring them.”

“Yes,” Adora agreed.

“Me too,” Glimmer added. “That leaves…PR Solutions, Brown, Wallander and Co. and Julie Callaghan.”

“The woman from PR Solutions was pushy,” Entrapta said.

“And she talked as if we were children,” Adora added.

Catra thought the same. “She acted as if she would take over. But we’re looking for a consultant, not a commander.”

Glimmer scowled. “Yes. So, all in agreement that they’re unsuitable?”

Everyone nodded.

“What about Brown, Wallander and Co.?” Catra asked.

“I like their method!” Entrapta piped up. “He came with data!”

“And he didn’t make big promises,” Bow added.

“Yes. And he didn’t treat us like idiots,” Adora said.

“So, we’ll hire them. What about Julie Callaghan?” Glimmer asked.

“She seemed a lot like him,” Catra said.

“But she didn’t have any data,” Entrapta pointed out.

“I think she simply didn’t gather fresh data like Brown did,” Bow told her. “But her conclusions were close to his.”

“So… should we hire her as well? We need more than one consultant so we can check their plans, but if she thinks like Brown…” Glimmer shrugged.

“Well, if they have the same correct answer to the same question, then that’s a good thing,” Entrapta said.

“Yes,” Catra said. “But we need a few consultants who aren’t Americans. Or referred by the government.”

“Yes. But I think we should hire these two,” Adora said. “They made a good impression.”

“And their rates are reasonable. I think,” Bow said. “Compared to the others, at least.”

“Alright. Let’s hire them. And then see what we can do about those nutcases,” Glimmer said.

“And then see who else we can hire,” Catra corrected her. “And see how many trips to space we can sell.”

“Yes.” Adora nodded. “We need to get money to pay them, after all. Let’s hope we get enough offers.”

Catra snorted. Sometimes, Adora was an idiot. But she was her idiot.

*****

The Interview Part 1

The Mountain, Colorado, United States, Earth, September 7th, 1998 (Earth Time)

"The visitors have arrived, Sir."

Jack O'Neill nodded at Siler. "Thank you, Siler." He sighed and got up. Usually, he'd appreciate any break from paperwork, but today… "Let's go give the commies the tour."

"Russia isn't communist any more, Jack." Daniel had to comment, of course, as they filed out of his office.

"They've still got the same people in uniform. Every one of their generals was in the Red Army," Jack retorted. "And the Chinese are communist."

"Well, that's a matter of debate," Daniel replied. "Some might claim that they are more capitalist than many western countries since their economic reforms took off."

"They're still ruled by the Communist Party," Jack shot back. Who had brutally crushed protesting students not even 10 years ago. Literally crushed in some cases, or so he had heard.

They collected Carter on the way. Teal'c joined them before they reached the elevator.

"And the British are ruled by socialists," Jack said as they stepped inside the cabin.

"Sir?"

"Just telling Daniel why calling our visitors 'commies' is perfectly factual, Carter," he explained.

"It's actually not," Daniel insisted. "And calling the delegation from the United Nations Security Council 'commies' would be a major

diplomatic blunder!”

“I’m not going to tell them that to their faces,” Jack assured his friend. “But I am permitted to be grumpy about a bunch of strangers coming and taking over.”

“Our government agreed with the decision,” Daniel said.

“Under protest.”

“Actually, they didn’t file any protest,” Carter said.

“Because that would’ve been bad for our image.” Jack snorted. It had probably been inevitable - not even the United States could defy the entire world. Especially with the Etherians willing to uplift, as Daniel called it, other countries. But that didn’t mean that he had to like it.

“Well, that is a consideration,” Daniel said. “But the Stargate is supposed to be for the entire world, so… we shouldn’t expect to be able to monopolise it.”

“Monopolising is a proud capitalist tradition,” Jack quipped as they entered Hammond’s office.

“Don’t make any jokes about communists, Colonel O’Neill,” the general told him. “The President himself told me to extend every courtesy to our guests.”

“My lips are sealed,” Jack replied and mimed zipping them.

Hammond snorted. “I don’t like this either, but politics are politics. We can but try to make the best out of this.”

“At least it’s going to be a military operation,” Jack said. “Some people wanted to put us under civilian oversight.” You couldn’t wage war like that.

Daniel was about to comment, as Jack had known he would, but Siler’s voice over the intercom informed them that the delegation

had reached their floor.

And there they came. Russian, Chinese, British and French officers. Undoubtedly taking in everything - this was, after all, one of the most important military installations in the United States even if you didn't count the Stargate.

"General Sidorov, General Li, General Haig and General Dubois, welcome to Stargate Command," Hammond greeted them. "This is SG-1, our best team."

"Thank you, General. And I think everyone here knows SG-1." Sidorov smiled. "We've met at the United Nations."

Jack returned the smile with about as much sincerity. Yes, he remembered those briefings. Or interrogations.

"And I think you've met Dr Georgovich already."

The Russian scientist beamed at them. "Yes! Hello! Fancy meeting you here, da? Who would have thought we meet again so soon!"

Just about everyone with half a brain, Jack thought. Too bad that telling Georgovich to drop the act would be undiplomatic. He glanced at Carter - she was smiling. She didn't actually like the Russian, did she?

"So, gentlemen, let me give you a tour so you can get an impression of how we run things here," Hammond said.

"Yes," General Haig replied. "We need to know that in order to determine how to transfer the entire operation to a more suitable location." He looked around. "While this is very secure, I can't see us operating an entire invasion through this installation."

"Or peaceful exploration and diplomacy," Georgovich added. "Bunker makes not good first impression, no?"

The General Sidorov didn't look angry that the scientist spoke up without having been asked a question. That told Jack a lot about

the dear doctor's standing in Russia.

"So the decision has been made to move the Stargate?" Hammond asked. He was taking that much better than Jack would have in his place.

"Yes. Although the new location hasn't been finalised yet," General Dubois answered. "The need of the new location to be accessible for bulk transport as well as being secure and easy to defend pose a slight challenge."

"And prestige warring with security. Great honour to host gate, but great embarrassment if gate invaded and need to be blown up," Georgovich said.

"It's a tricky decision indeed," General Haig agreed. "Completely out of our hands, though."

And that was another reason Jack wasn't happy with this. He didn't want to move to some foreign country where he couldn't go out and have a decent American dinner in town. It was petty, but after travelling the Galaxy - and getting shot at - he really liked heading home instead of to some barracks.

But there was nothing he could do about this.

*****

Dulles International Airport, Washington DC, Earth, September 7th, 1998 (Earth Time)

"...and I believe that it is past time to start giving interviews," Julie finished her, well, briefing. Even though she was a civilian. "Some members of the press are already portraying you as 'aloof' and 'distant', and the longer this goes on, the worse it will get. If you wish to improve your public image, you need to start talking to the press."

Adora frowned. They had been busy with negotiations and diplomatic meetings nonstop - even the so-called European Union

hadn’t actually spoken for their members. Apparently, the military alliance part wasn’t included in the Union. But since they regulated trade, they had a say about any agreement being made. Or something - even Glimmer was still a little confused about how this was supposed to work.

“Democracy in action.” Catra snorted. “Why is it that the people’s opinion only counts when it’s making trouble for us?”

“That would be because the media and the public in the United States have certain expectations that politics need to take into account,” Julie said. “And in true American fashion, they extend that to everyone else.”

“Charming,” Glimmer commented. “And once we start giving interviews, we can’t really stop until everyone got theirs, right?”

Julie shook her head. “You can stick to the most important ones. A snubbed journalist is one of the worst enemies you can make in the USA - if they have the backing of their employer. Some of them are so petty, they will portray everything you do in the worst light possible in retaliation. But if they don’t have the reach to cover the country, they can’t really hurt you no matter how hard they will try.”

“You mean they aren’t doing that already?” Catra asked. “Some of them could’ve fooled me.”

Adora nodded. “Do they really expect us to talk to them before we actually finish our negotiations with the United Nations?”

“In a word, yes,” Julie replied. “Some of them - most actually - will understand that you’re not American and won’t act like our own government. But a few have such huge egos, they think they have more influence on the public than the government and should be treated accordingly. And in some states, they would be correct. Now, some of them won’t really change their attitude and will use the interview merely as another source for their criticism. They are too invested in their fanbase. But others can be won over if

you handle this right." Julie slowly nodded. "But you will have to prepare thoroughly for this - a blunder could seriously damage your reputation."

Adora perked up. She was good at such preparations! "Oh, we can do that! We'll prepare as if this were a diplomatic mission of utmost importance!"

Glimmer sighed. "Oh, great - it's Princess Prom again."

Adora frowned at her friend. Granted, her preparations hadn't been as helpful as she had hoped, but that didn't mean they had been bad. If she hadn't prepared as extensively as she had, things might have gone worse. And her worst mistake had been that she hadn't accounted for Catra's presence, anyway - and that wasn't a problem any more!

Julie wrinkled her forehead a little. "Princess Prom?"

"The most important ball on Etheria," Bow explained. "All the princesses and their consorts gather at the Princess Prom every ten years. It goes back centuries, to the Age of War, and is used not only to socialise but also to negotiate agreements, alliances and settle disputes."

"Oh, yes," Adora added. "And the list of rules for it is longer than I am tall - as She-Ra."

"But you don't need to know all of them, just the most important ones," Catra said.

"You would think that - you blew up the last one!" Glimmer protested.

"You blew it up?" Julie looked… well, the most surprised Adora had ever seen her in the week since they had started working together.

"Not really," Catra said, making a dismissive gesture with her hand. "It was mostly a distraction. I didn't use decent charges."

“Yes.” Entrapta nodded. “Those were microcharges. Scorpia told me about them after I joined the Horde.”

“They caused a panic,” Glimmer said.

“And they caused Frosta to ally with us,” Bow added. “Even after Adora alienated her.”

“I was surprised at her age,” Adora defended herself.

“And she would have joined the Princess Alliance sooner or later anyway,” Catra said. “But others were scared off, and we got our objectives, so I’d say, overall, it was a qualified success.” She turned and flashed her fangs at Adora in that way of hers that made Adora feel butterflies in her stomach. “And I got to dance with you!”

“The dance that will live in infamy,” Bow said. “Or would, if there were any records.”

“Actually, there are,” Entrapta said. “I recorded everything for my research into social occasions and interactions.”

Adora felt herself blush a little. Entrapta had recorded that dance?

“Oh, great! I need a copy!” Catra beamed. “Did you record how I fooled Adora as well?”

“I think so?”

“You recorded the Princess Prom?” Glimmer blurted out. “But that’s against the rules!”

“It is?” Entrapta looked confused. “They said you weren’t allowed to use magic to record the events at the ball, but I used a completely different way of recording things!”

“I think you and I both better clear our schedule to prepare for your first interview, “ Julie commented.

Adora frowned. The Princess Prom had been an exception, and that had been years ago. Everyone had changed since then. And for the better.

But Julie didn't look as if she'd believe that.

*****

The Mountain, Colorado, United States, Earth, September 7th, 1998 (Earth Time)

"...and this is the central vault where we store the recovered alien technology. While I'm not going to detail the exact security measures, you can see that it is quite secure," Samantha Carter said as she approached the vault and nodded at the two guards there.

"Yes, yes. Very solid door," Dr Georgovich said, nodding. "The walls - reinforced as well, right?"

"Of course," Sam replied. "It wouldn't make sense to have a reinforced door anchored to walls that you can easily breach."

"You would think, but sometimes, mistake happens. I saw vault that had door one metre thick, stainless steel, but the walls? Natural stone. You see, specifications only said thick door, not walls, and workers did follow specifications to the letter. Was very embarrassing for officer in charge when hinges broke out of wall and door almost fell on important visitor." The Russian eyed the door - no, the guards. "Ah, no flinching, they trust door. Good."

Sam narrowed her eyes at the man. "I can't believe someone would make such an obvious mistake." He had to be joking.

"Ah, you never visited Soviet Union, da? If door was your task but not wall, you only did door. Wall was other problem. You did your problem and done."

"Yeah, I can believe that," the Colonel commented.

“Ah, you’ve visited Soviet Russia, da? No comment or no confirm or deny?” Dr Georgovich beamed at the Colonel.

“Something like that, yeah.” The Colonel shrugged. “Anyway, that’s the vault.”

“So, can we enter? Just for a look - evaluate.”

“We do need to take stock, after all,” General Haig added.

“As long as you keep your fingers to yourself,” the Colonel said.

Sam would have frowned at him - suggesting that their guests might attempt to steal from the vault wasn’t very diplomatic - but they were under scrutiny right now.

So she had the guards open the vault and then stepped into the door - she wouldn’t let anyone actually enter the vault. Not until and unless they had the necessary clearance.

“Oh! I feel like Dr Jones! You know, movie with Harrison Ford, Han Solo, right?”

“Yeah, we know Indiana Jones,” the Colonel said.

This had to be an act. Sam was certain now.

“I have watched Star Wars fourteen times,” Teal’c said. “Han Solo is undoubtedly Harrison Ford’s best role.”

Dr Georgovich blinked. “Fourteen times?”

“It was thirteen times, but I found myself with time on my hand after our return from Etheria,” Teal’C replied.

When he had been sidelined by their superiors. Sam clenched her teeth for a moment - she didn’t support that decision. Teal’c had earned their trust over and over again.

And seemed to have confused the dear Dr Georgovich - a feat not even the Colonel had managed so far.

“Ah, I see.” The scientist blinked. “So… how many alien artefacts are in vault?”

“That’s classified,” the Colonel told him.

“I thought you were told to cooperate,” General Li said.

“Yes. Within limits set by the President himself.” The Colonel grinned widely. “You aren’t in our chain of command yet, and treating you as if you had the necessary clearance would be a grave breach of regulations.”

“Da!” Dr Georgovich smiled. “Very loyal, very obedient, yes! Good soldier follow orders, right?”

“Yeah…” The Colonel narrowed his eyes at the man, but the scientist was already talking to Sam again. “So, here is vault, but where is your lab? How do you work here? I am very curious about working conditions!”

“My lab is a level above this floor,” she told him.

“For safety? So not blow up both vault and lab, da?”

“Oh, Carter hasn’t blown up anything in ages - it should be pretty safe to enter her lab.”

That was too much! “Colonel!” she hissed under her breath.

He made an innocent face.

And Georgovich beamed again. “Ah, joke! I understand. Good joke!”

Sam turned to lead them to her lab, rolling her eyes as soon as she was facing away from their guests. What was with the Colonel? He couldn’t really be holding a grudge from the Cold War, could he?

They reached her lab after another short ride in the elevator.

“Oh. Very small. Not much room for pacing - do you not pace? I think best when pacing.”

Well, Sam hadn’t really expected that their guests would be impressed, but… this was a little rude.

“Think when relocating, get better lab. More spacious. And with bed and shower, in case you work late. Maybe kitchen and fridge, tto. Good idea?”

Sam blinked. That was actually a very good idea. She had lamented the lack of space in her lab a few times in the past. And to be able to sleep in the lab would save time in a crisis…

“Carter! Accepting a bribe is illegal!” The Colonel commented - she must have let her expression betray her thoughts.

“No crime!” Georgovich protested. “But scientists need space to work. No poaching - unless you feel like getting poached, of course!” He beamed at her. “We offer spacious lab and much better coffee!”

He was joking. Probably. But the Colonel was glaring as if this had been a serious attempt to recruit her.

“As things stand, most of Stargate Command will be transferred to the United Nations Stargate Command,” General Haig cut in. “But we will add both military and civilian staff. The scope of the operation has to expand, after all, now that we’re going to have a proper war.”

“‘A proper war’?” The Colonel narrowed his eyes at the General. “Sir?”

The British officer didn’t seem impressed at all. “Yes. So far, you’ve conducted the war through special operations. With the Etherians, this will change. We’ll be shifting to conventional warfare, with special operations in support of planetary invasions.”

“There will be independent operations as before,” General Sidorov said in accented English, “under control of the United Nations.”

“We will have to hash out with the Etherians how best to move troops and supplies,” General Haig went on. “But the Stargate will play an essential part of any invasion, I think.”

“You seem pretty confident that you will manage to negotiate an alliance with the Etherians,” the Colonel commented.

Sam had to agree - this sounded very optimistic to her.

“Shouldn’t we?” General Haig shrugged. “The conditions set by them can and will be easily fulfilled by Her Majesty’s Government.”

“Indeed,” General Dubois agreed with a smug smile, “full equality before the law for every citizen, no matter their sexual orientation, is certainly in line with the founding principles of the république. France is united in this.”

The Colonel pressed his lips together instead of answering at once. That wasn’t a good sign.

Daniel, though, spoke up: “But the Etherians expect more than lip service. They expect full commitment to ensuring that the laws you pass are enforced.”

General Haig was unfazed. “As I said, Her Majesty’s Government’s stance is that such conditions are easily fulfilled. Inquiries were made, and assurances received that the Etherians are aware that attitudes among some part of the population wouldn’t change overnight.”

The Colonel glanced at General Sidorov. “Equal rights by authoritarian decree should be a good trick. Especially after killing off the Tsar and his entire family.”

The Russian didn’t seem to let himself be baited. “That is a matter for politics. Even without an alliance with the Etherians, the

Stargate will be under the control of the United Nations, and exploration and diplomatic missions will continue - for the world."

Sam blinked. That sounded like…

"You want to keep us out of the war?" the Colonel blurted out.

"That's a question for the politicians," Sidorov replied. "But in order to wage war, we need an alliance or at least a way to coordinate with the Etherians."

"And with their allies," General Dubois interjected.

"We only know for sure that the Stargate will be under international control," General Li said. "but we remain optimistic that an agreement can be reached - in a war, compromises must be made, after all."

"Good luck getting the magical princesses to compromise," Sam heard the Colonel mutter next to her.

"In any case, we will do science!" Dr Georgovich spoke up again. "And in new, spacious lab!"

That would be a small consolation, in Sam's opinion, if Stargate Command ended up relegated from Earth's premier force facing the Goa'uld to some… guard and support unit for diplomatic missions. She wasn't arrogant, but SG-1 had the most experience in dealing with the Goa'uld. That kind of knowledge shouldn't be dismissed.

And she wanted to keep doing crucial work, a small voice in the back of her mind added. Especially now that she could publish her findings.

*****

Dulles International Airport, Washington DC, Earth, September 8th, 1998 (Earth Time)

“I agree with my colleague,” Brown said. “An interview is almost overdue. But you need to prepare extensively for your interview. And you need to pick your interviewer carefully. I would suggest CNN - the channel has a global reach and a good reputation.”

Catra suppressed a snort when she saw Adora nod eagerly - she’d already had to keep her lover from spending all night working out increasingly complicated relations between the most prominent journalists without even knowing who would be relevant - or what.

“They’re an American channel,” Gimmer pointed out. “And one that isn’t too popular in the conservative circles, as far as we could tell.”

“Yes.” Brown nodded. “But you hired me to improve your image with the American public, and picking a news service in the USA will play better with the conservative crowd. Though no matter their views, almost everyone will be watching CNN for your interview.”

“No pressure,” Bow mumbled with a grin, too low for anyone except for Glimmer, who was sitting very close to him, and Catra to hear.

She chuckled. Adora was fretting already about being watched by billions.

“Won’t that be resented by the other countries?” Entrapta asked, tilting her head.

“Not as long as you don’t wait too long with giving foreign news services interviews as well,” Brown told her. “And your image in most countries in Europe is better than in the USA, according to the latest poll we ran.”

“Oh! You’ve got new data?” Entrapta piped up.

Brown smiled. “I’ll send you a summary.”

“Thanks!”

“But now for your preparations. I don’t know what my colleague told you already, but there’s a whole science to presenting your best side on television. Elections were lost for bungling up a TV appearance,” Brown went on. “So, I would like to hire a specialist for the visual aspect of that.”

They still hadn’t hired more public relations consultants from other countries, but this sounded like a good idea. Catra glanced at her lover. Adora was already fretting too much about this as things were. If she had to sit through a few hours worrying over what to wear… “Good idea!” she said.

Bow stared at her. “You want a stylist working on you?”

Catra returned his stare with a frown. Why would that surprise him? “Why do you think I wouldn’t want that?” Granted, it was mostly for Adora, but it wouldn’t hurt her either.

“You’re always wearing the same clothes!” he blurted out.

So was he. “Did you forget Princess Prom?” she shot back.

He blinked, then nodded. “Ah.”

She rolled her eyes. She was wearing her old uniform so she had a reminder of… things she wanted but couldn’t allow herself to forget. Not because she thought it was the best outfit ever. And she wouldn’t beg for a new outfit.

“It’s more than styling, actually,” Brown spoke up. “It’s also about how to sit, move and talk, treat the camera, body language in general and, crucially, what pitfalls to avoid.

“Pitfalls?” Adora tensed.

“Verbal pitfalls - statements that might be misconstrued, phrases and their meaning in the United States, and such things. How you

say something is as important, sometimes more important, than what you say." Brown spread his hands. "It's a science."

Entrapta perked up. "Fascinating! Can we do experiments?"

Brown's smile slipped a tiny bit. "I think rehearsals would be mandatory, but I wouldn't experiment with public relations. Failures will have consequences."

"Oh." Entrapta blinked. "So, if we wanted to test a hypothesis, we would need to run an experiment without the test subjects being aware of our involvement. Although that might influence the results…"

Catra drew a breath through her clenched teeth. "Maybe wait with running social experiments until you have a better baseline?"

"You mean stick to passively gathering data?" Entrapta cocked her head. "I guess that would make sense. You need data to prepare a proper experiment, after all." She nodded with a smile. "I bet we'll get a lot of data from this!"

Brown wasn't the only wincing, Catra noted. But when it came to wrangling Entrapta, this was a good result.

She was a great friend and a very nice person, but she could scare you without meaning to.

*****

The Mountain, Colorado, United States, Earth, September 7th, 1998 (Earth Time)

Jack O'Neill was thoroughly sick of Dr Iwan the Terrible Comedian. His - absolutely fake! - accent grated on Jack's nerves, his constant smiling made Jack feel like he was about to be ambushed, and his subtle-as-a-brick-to-the-face attempts to poach Carter begged for some good old Cold War-style retaliation.

"...oh, what ingenious solution! Very Impressive, Dr Carter - I mean, Captain Carter. No wonder you are head scientist here."

"Thank you, Doctor."

"Call me Iwan, please - we are colleagues of sorts, yes?"

No, you are rivals. Rivals from rival powers, Jack thought.

But Carter didn't rebuke the man - she was just too polite to do the right thing. "Call me Samantha, then. Or Sam."

"Thank you! Which do you prefer?" The Russian spy was beaming again.

"I don't have any preference."

That was a lie. Jack was sure Carter had a preference.

"Samantha then. It is a beautiful name."

"Thank you."

"And speaking of names," Daniel cut in, finally making himself useful, "I noticed on your name tag that your name doesn't use the usual Russian spelling of 'Ivan'. Do you have German ancestry, perhaps?"

Asking a Russian if he was German? Jack winced.

But the man smiled at Daniel. "Ah, common assumption, yes, but mistaken. It is actually Welsh name."

Jack blinked. "Welsh?" he asked before he could help himself.

"Yes. Grandmother was from Cardiff."

So he was both British and Russian - that explained why he was doubly annoying.

But the man was still talking. “She was nurse in Spanish Civil War, fighting fascists, and met my grandfather, who was volunteer from Russia. Commissar, actually, but we don’t talk about that.”

Then why are you mentioning it? Jack thought. But both Daniel and Carter were listening attentively.

“So, they met, fell in love, and when fascists won despite best efforts, she went back with him to Russia. She was killed in Great Patriotic War but already had my father, also named Iwan. Family tradition of naming first son Iwan.”

“Ah.” Daniel looked torn between his curiosity and empathy. And Carter looked…

…entirely too sympathetic for Jack’s taste. The man’s grandfather had been a political commissar, for crying out loud! If they hadn’t killed more republicans than fascists in Spain, it hadn’t been for lack of effort!

“That is why I have been learning English. Too bad grandmother died before teaching father. I also hope to learn Welsh - perhaps after retirement.”

And there went Daniel. “Oh, it’s a fascinating language!”

“Da! But need to improve English more, to work together at Stargate! Fortunately, science is universal language, right? Especially mathematics.”

Carter smiled far too kindly at the man.

“Do not worry, O’Neill,” Teal’c said, sotto voce, as Carter showed Dr Iwan-the-Terrible the main gate control room, “Captain Carter is an honourable soldier and will not leave your service in the middle of a war.”

“Thanks, Teal’c,” Jack replied. “But I don’t think Carter would leave the team even if we weren’t at war with the Goa’uld.” At least he hoped so.

“Indeed.” Teal’c nodded sagely, but there was a hint of a grin - or smirk - on his face.

Jack stared at him, but Teal’c had put up his usual inscrutable expression again.

*****

Dulles International Airport, Washington DC, Earth, September 10th, 1998 (Earth Time)

“...so, let the interviewer speak. Don’t interrupt them - even if you think you know what they are asking. And don’t lecture people. The public reacts negatively to presumed arrogance. Also, watch your body language like - exactly like that! Don’t do that on TV!” Melissa Barnaby, Brown’s ‘specialist’, pointed at Catra, who had her arms crossed over her chest and was frowning at her.

Adora suppressed a sigh. The woman certainly seemed to know her business - her advice about Earth fashion sounded very, well, sound. But Catra didn’t like to be told, well, that pretty much everything she did was wrong.

“I thought we also should be authentic,” Catra snapped. “And not act as if we were all sunshine and roses even when we’re talking to idiots.”

“You aren’t going to talk to idiots,” Melissa retorted. “Not unless you pick the wrong channel to give an interview.”

“So, make it ‘even when we’re faced with lies and questions from idiots they quote’ then,” Catra said with a sneer.

“Even then, you can’t lose your temper - that would leave a bad impression. You want to appear friendly. Firm in your stances but polite and respectful. No one likes a gloating jerk.”

“They seem to be very popular in media,” Glimmer pointed out.

“Jerks are popular in a certain crowd - if they are rude to people whom that crowd doesn’t like. So, yes, being rude and dismissive about conservatives will be popular in more liberal circles, but won’t make you more popular amongst conservatives,” Melissa replied. “And that’s your goal, isn’t it?”

Glimmer’s expression mirrored Catra’s.

Bow cleared his head. “But we shouldn’t put on an act,” he said. “We don’t want to lie to people to get them to like us.”

Adora nodded emphatically. “We want to be honest.”

“Besides, I’m already being nicer than usual if I don’t scratch an idiot,” Catra added with a scoff, flexing her claws.

Melissa blinked.

Adora quickly said. “Catra’s kidding.” She added a glare at her lover to ensure that this was true.

Catra nodded with a pout. “Unless they attack us, I won’t touch them.”

“You won’t be attacked in a studio,” Melissa told her.

“I wouldn’t be so sure,” Catra retorted. “I’ve organised an attack at a ball.”

Melissa blinked.

“Stop sounding so proud about it!” Glimmer snapped.

Adora sighed.

*****

“What’s wrong with my uniform?” Adora asked a short explanation and a quick assessment of her wardrobe later. “It’s comfortable and sturdy.” And it held a lot of memories.

“But it’s rather plain,” Melissa said. “The cuts in the sleeves are a nice style element, but the shoulders are a bit over the top. Overall, it lacks a certain something.”

“Something what?” Adora frowned.

“Something that says ‘I’m an alien magical princess and I’m here to help you’ without being too in your face about it. No tiara, but…” Melissa took a step to the side and eyed Adora’s hair. “...maybe a change of style there as well.”

Adora resisted the urge to put a hand on top of her hairdo. She liked her hairstyle just as it was!

Catra snorted, and Adora glared at her - her lover’s hairstyle had been deemed ‘passable’ already.

“What about a bare midriff?” Bow asked. Melissa narrowed her eyes at him, and he recoiled.

“That would not go over well at all with your target crowd.”

“Are you sure?” Entrapta chimed in. “A lot of your media popular with conservatives feature such outfits rather prominently.” She showed a picture of a woman in shorts and a knotted shirt in front of an orange car on her tablet. “See?”

Melissa sighed. “You don’t want to be likened to such characters, trust me - that would sabotage your image.”

“Ah.” Entrapta frowned. “Is this an example of them liking something but pretending not to like it because it goes against a dominant part of their culture?”

“No, that’s an example of conservative sexism. If you appear like that on television, they won’t take you seriously at all,” Melissa said.

Bow looked taken aback. “They won’t?” He stared at his midriff.

Melissa sighed again. “It’s different in your case.”

“Homophobes! I got data about them!” Entrapta smiled. “Most of them will be attracted to you, Bow, but they will try to deny and suppress their feelings.”

Bow grimaced. “I’m not sure if I should be flattered or alarmed.”

“Alarmed. Definitely alarmed,” Melissa said. “But we can work with your style - but it’s not for everyone else.”

“Aw! I bet Adora would rock that look!” Catra crowed.

Adora felt herself blush in response. She cleared her throat. “Anyway, we have been seen on television already. Shouldn’t we stick with our, ah, image?” The Earth leaders basically always wore the same suits anyway, right?

Melissa nodded. “But a few touch-ups would greatly improve your image. You might even set a new trend. Or rather, you’ll boost an already starting trend.”

“Well, Glimmer, you can put your royal coronation outfit on,” Adora suggested.

“That’s just my cape,” Glimmer replied.

“It still looks nice and, uh, regal?” Adora tilted her head with a forced smile.

“We should stick you into your prom dress,” Catra said.

“But it’s not a ball,” Entrapta protested. “Or is it? I’m still working on gathering data on Earth social conventions.”

Melissa sighed once more.

*****

Pentagon, Washington DC, Earth, September 11th, 1998 (Earth Time)

Samantha Carter wished she had a spaceship. Or a working ring transporter. It would make the trips to Washington to brief generals and politicians more bearable. Since there hasn't been a C-37 available today, and commercial flights had been deemed not safe enough, she'd had to hitch a ride on a C-130 today. That hadn't been comfortable enough to work efficiently and had taken much longer than a spaceship would have. And all for a briefing she could have done remotely through a video conference, anyway - and she had refuted the Pentagon's security concerns thoroughly in her latest report, which apparently had been ignored.

'Ours is not to reason why', as Daniel would quote if she complained to him. And that was why she was here for what the Colonel would call 'a complete waste of time'. At least she had been able to catch up on paperwork on the flight.

"No, Sir, I don't think handing the spare Stargate over to the United Nations is a workable solution," she repeated herself. They had gone over this already, back when it had first been proposed as a response to the demands from the Security Council. There was a reason everyone was busy planning to make the takeover of Stargate Command go through with the least amount of friction.

"I wasn't talking about diplomatic issues, Captain." The Army general who had asked her about it frowned at her. "We called you here for technical advice."

"And I am talking about the technical aspects," she retorted. "As my report about this stated, running two Stargates in one location - on one planet - creates interference since both use the same gate address." A report she had written shortly after discovering the second gate through this very effect, which had ended with herself and the Colonel getting stuck in an ice cave in the Antarctic. "We would end up with multiple misconnections - and possibly fatalities from our defences."

“Thank you. We didn’t call you here to discuss that, anyway,” the Chairman of the Joint Chiefs of Staff said, shutting up the obnoxious general with a glare. “There is talk about relocating the Stargate to a more accessible location, either in Canada or Australia.”

Ah. She nodded - Iwan had told them about that. Russia’s proposal to use Siberia had apparently been rejected despite, as he claimed, their great experience with ‘building entire research centres and bases in the middle of nowhere so expected accidents do not hurt civilians.’

“So, we would like your assessment of the proposed locations from a technical point of view,” the Chairman went on.

Did they expect her to give an assessment of the logistical issues without any time to study said locations in detail? Sam almost shook her head. “As long as the power requirements for the operation of the Stargate are met and there is enough space to house the equipment and staff, any location will be suitable for running Stargate Command, as far as the technical aspect is concerned,” she said. “Unlike with satellite launches, location provides no inherent benefit or drawback.” And with alien technology, the advantage of being closer to the equator for launches would vanish as well.

“That would require a large power plant,” another general said. “A very large power plant.”

“Yes, Sir.”

“Are there alternatives to such a plant?” he asked.

“The DHD the Russians recovered could fuel the Stargate independently, but its capacity is limited,” she said. “Enough for the average use of a Stargate, but not enough to power it for constant high-volume traffic. Its recovery rate is not high enough, and we haven’t yet managed to duplicate its power generation method.” Not for lack of trying on her part.

“Ah.”

“Etherian technology would offer compact alternatives - compact compared to a conventional power plant, not a DHD,” she went on.

She noted that several Generals frowned or even winced. The Chairman nodded, though. “That would require their support.”

“Yes, Sir.” She nodded emphatically. If any of the people present thought the United States could accomplish this without outside help, they hadn’t read her reports at all.

“Wonderful,” the Army general who had asked her about the second Stargate muttered. “More leverage for them.”

“Speaking of the Etherians,” an admiral spoke up, “did they voice any preference or resistance to specific locations or climates?”

Catra didn’t like the ocean, but Sam didn’t think that was relevant here. “Based on their references to events during their war, I think they would prefer to avoid arctic climates as well as deserts.”

“We can plant our Stargate where we damn well want,” the first general muttered again.

“You mean where the Security Council wants it,” the admiral corrected him. “Canada would be much closer to us - and to Europe. Wherever this gate is installed will become a hub for the entire planet. It needs a good harbour - we’ll want to base a fleet there to protect the shipping.”

“A space fleet,” another general - Air Force - added with a smirk.

The admiral frowned at him. “I do not think cargo ships will be replaced by spaceships any time soon, at least on Earth. And by the time space cargo ships are common, the Navy will have adapted.”

“What?” The Air Force general glared at him. “Space is clearly the domain of the Air Force!”

“Only as long as it was about satellite reconnaissance. If anyone has the experience to run a ship, it’s the Navy. You can’t run a ship, or a spaceship, as if it were a plane!”

“Oh, yeah? Just watch us!”

Sam refrained from rolling her eyes or otherwise showing her reaction. They still hadn’t made much progress forming an alliance with the Etherians, and the Navy and the Air Force brass were already squabbling over who got to run a hypothetical fleet in space?

They needed to get their priorities straight!

Besides, it was clear that the Air Force had the most experience here.

*****

The Interview Part 2

Earth Orbit, Solar System, September 12th, 1998 (Earth Time)

"Oh, my! I never expected to do an interview in space!"

Catra raised her eyebrows at the outburst from the CNN journalist.

Mr Pullmann - he hadn't asked them to call him Bob, unlike in his latest interview - stared through the windows on Darla's bridge, shaking his head before he turned to face them. "You know, it looks exactly like on the picture I've seen, but it's so different if you're seeing it in person."

"Really? That is weird," Entrapta spoke up. "Are you sure that this isn't just an emotional bias?"

Pullmann blinked. "Ah… Actually, that is what I was talking about."

"Ah! So it wasn't because of inferior optics." Entrapta nodded, satisfied, then turned around and started to dictate her findings into her device.

Pullman blinked again.

Glimmer cleared her throat. "So, do you want to do the interview on the bridge or in the lounge?"

"We would also offer the hold, but it's also serving as our laboratory, so that's not going to work well," Entrapta added, looking up and letting her hair handle her device.

That didn't seem to unnerve Mr Pullmann, Catra noted - he had prepared for this, of course. Or had been prepared. That made her wonder if his awe at the sight of space was an act as well.

“I think the bridge will do nicely. The throne makes for a nice background,” he replied.

“Throne?” Glimmer frowned.

Catra chuckled. “That’s not a throne. That’s the Captain’s Chair.”

“Yes!” Entrapta piped up. “Darla is She-Ra’s ship, and when Mara, Adora’s predecessor, was in control of it, she wasn’t a Princess. Well, as far as we know - there probably were princesses back then, but we don’t have any definite records about She-Ra’s status. Especially since Mara was a foreigner.”

“Oh.” Pullman nodded. “I know you should never ask a lady about her age, but… how old is Darla?”

“About a thousand years, give or take a century,” Entrapta replied as Pullmann’s eyebrows rose. “But we completely restored her and brought her up to modern standards.”

“Yes.” Adora nodded. “Darla’s the equal of any other ship in her class now.”

Catra knew Darla was now actually better than any other ship in her class that they knew about, but there was no need to share that information. So she shrugged. “She still looks ancient, of course. But I doubt that we could fool anyone like we did in the war.”

Pullman, as expected, perked up at that. “Maybe we could talk about that during the interview?”

“Of course,” Adora said. “Although you’ll understand that we can’t go into every detail - we’re still at war.”

“Oh. Do you expect there to be more alien spies on Earth?”

“It’s just good practice not to share potentially crucial intel,” Catra told him.

“Loose lips sink spaceships, huh?” He smiled.

“Something like that,” Glimmer said. “Although usually, it’s Sea Hawk who sinks ships.”

“And sings,” Catra added.

Pullman frowned just a little but didn’t ask who Sea Hawk was. Too bad - Catra would have loved explaining.

“So, let’s start?” Adora said. “What about the Earth as a background?” she pointed at the seats lining the wall below the window. Just as Melissa had suggested.

“It’s your ship,” Pullman replied.

“Then let’s get set up,” Adora said. “We have the camera prepared.”

“It should be compatible with your system - just from watching your program, we didn’t hack your systems to check,” Entrapta said. “But once you upgrade to full holographic projections, you can use the recording for that as well.”

“Ah. Good to know - although that will probably take a while. No one in the United States, or on Earth, has a holographic system,” Pullman said.

“Well, that should change once you start upteching. Until then, you could run both systems in parallel - I thought about a way to do that if you’re interested in some outlines.”

Adora coughed.

“Oops. Sorry - we didn’t start the interview, and I’m already questioning you instead of the other way around. Sorry!” Entrapta beamed at him.

Pullman smiled. “Oh, no - I like it when an interview feels more like a discussion than an interrogation.”

"Oh, yes. In a discussion, people don't get annoyed if you keep slipping out of your cuffs."

And there he was confused again. Catra still wasn't entirely sure that including Entrapta in the interview was a good idea, but it seemed to be working for them so far.

"So, let's take our seats," Adora said. "The camera's here."

"I wanted Emily to record it, but she doesn't fit into the bridge," Entrapta added. "Emily's my best bot. She's a modified assault bot with reinforced armour plate and a stronger blaster. I'll introduce you after the interview."

Pullmann's smile didn't slip, but his eyebrows rose again. "I'm looking forward to it."

And then they sat down. Adora and Glimmer in the middle, flanked by Catra and Bow, with Entrapta on Bow's other side and Hordak next to her. And Melog next to Catra.

"So, we're here, floating above Earth," Pullman started, "in Darla, Princess She-Ra's personal spaceship. And I think everyone knows Queen Glimmer of Bright Moon, She-Ra, Princess of Power, Queen Entrapta of Dryl, Catra, Bow, and Hordak. And Melog. I'm Bob Pullman, for CNN."

*****

The Mountain, Colorado, United States, Earth, September 13th, 1998 (Earth Time)

"...and I'm just saying - the Marine Corps has the experience when it comes to landing operations and boarding ships. We're the obvious choice to expand into space-based landing operations and security on spaceships."

Jack O'Neill rolled his eyes as he stepped into the lift - he could do that; he was a Colonel, Warren was a Major. And the commander of SG-3 was a Marine. Of course he'd claim that the Marines were

the first choice to go into space. “No one has any experience with space-based landing operations,” he replied.

“But the fundamentals are the same - we’re used to living on ships for lengths of time, landing on hostile shores… the Army isn’t used to that.”

Jack shook his head. “It’s not the same. Space is different.” Otherwise, might as well let the Navy take over.

“Really? And you’re not just saying this because the Navy’s trying to take over space-based forces from the Air Force?” Warren asked.

Jack snorted. “It’s the same for them - they have no experience in space.”

“But they have experience with submarines. Which are pretty close to spaceships.”

That was a good argument, actually. But Jack would be damned if he’d let such a thing influence him when it came to defending Air Force turf. “Stargate Command is an Air Force program - we’ve got the most experience with aliens, alien technology, other planets - you name it, we did it.”

“I recall SG-3 being Marines,” Warren retorted.

“You’re honorary Air Force.” Jack grinned at Warren’s scowl. “But yes, in a pinch, I’d take the Corps over the Army. You’re more used to operating on a thin supply line.”

“Good. This is going to be bloody. Very bloody,” Warren said. “I’ve got calls from every officer I know or have heard of about Stargate Command. And I’ve been called in for a meeting with the top brass.”

Jack snorted. “Of course it’s going to be bloody. The service that gets to control the American space forces will dominate the armed forces. The Navy is looking at becoming obsolete in short order.”

Once spaceships were on the horizon, the Navy would lose all relevance - who wanted or needed aircraft carriers if you had spaceships? Or missile cruisers? Or destroyers?

"They will suffer so many cuts, the Coast Guard will have a bigger budget," Warren said.

Jack chuckled. Served the Navy pukes right.

"On the other hand, if they get to expand into space, the Air Force's done for," Warren went on.

Jack clenched his teeth to avoid cursing. Warren was correct - if the Navy became the space force, they would get all the shiny new space fighters. The Air Force would lose out - hell, they might even get folded back into the Army, to provide close air support and transport or something. "That won't happen," he said. "We've got both the Space Command and Stargate Command. We've got too much experience." And personal contacts with the Etherians. "You'd have to be an idiot to throw that away."

"That never stopped Washington," Warren said. "And Space Command? Really?"

Jack shrugged. General Naird and his bunch of nerds didn't have any real experience with aliens or combat, being glorified satellite handlers. But they were Air Force Space Command. And with Stargate Command apparently being put under United Nations control, the Air Force needed every little bit of help.

They reached their floor - the canteen. Where the television would be showing the first-ever interview with the Etherians. Warren and Jack entered and moved to the front, where Daniel waved. "I saved us a table!" he said.

"I'll be sitting with my guys," Warren said, nodding and walking over to SG-3 in the corner.

Jack sighed as he sat down. "So… what are the pundits saying about this?"

Daniel shrugged. “Mostly nothing.”

“But in many, many words.” Jack chuckled.

“Indeed,” Teal’c agreed. “Their use of words was very inefficient.”

“That’s because they are paid to talk,” Carter said.

Jack nodded. “And if they don’t talk at length whenever they can, people might question their salaries.” But he didn’t want to discuss budgets again. “So… does anyone have the inside scoop?” He looked at Daniel and Carter.

“No,” Daniel said. “I know they’ve been preparing for this with consultants, but that’s all.”

“Entrapta sounded quite optimistic about their preparations,” Carter added.

“Well, it’s not live at least,” Jack said. “So, whatever is being broadcast won’t be too bad.”

His friends didn’t seem to share his optimism. “CNN won’t accept too much editing,” Daniel said. “If they accept any at all.”

Carter nodded. “Entrapta didn’t mention anything about final approval.”

Great. Jack wished the canteen would serve alcohol. He had a feeling that he’d need a stiff drink soon.

*****

Earth Orbit, Earth, Solar System, September 13th, 1998 (Earth Time)

“It’s starting!”

Adora couldn’t help feeling that Catra sounded far too cheerful about this. Or far too confident about the interview. Adora didn’t share that confidence. She was sure she had done something

wrong. Mr Brown had been a bit… diplomatic after watching the recording. And Julie had been terse. And Melissa had stuck to comments about their body language, makeup and clothes. But if it was truly bad, wouldn't they have said something? Or kept Entrapta from handing the recording over to Mr Pullman?

"Good!" Entrapta, of course, was happy as ever as she used her hair to lift her over the back of the couch she had installed in the hold and plopped down in front of the huge television screen she had constructed for the occasion. "I made popcorn since I was told that that is the traditional meal to eat while watching this!"

"I think popcorn is for watching entertainment," Bow commented as he took a seat on the second couch.

"This certainly should be entertaining," Catra said. "Come on, Adora! It's starting!"

Adora glanced at Glimmer, who sighed, obviously also not as confident as the rest of them, and joined her lover on the third couch.

Hordak, carrying a huge tray loaded with Earth drinks of all kinds - Adora wondered if he needed his armour's servos to lift it - arrived just as the logo on the screen faded, and they saw a studio with Mr Pullmann seated behind a big desk.

"Good evening, America! I'm Bob Pullman," he said - even though his name also appeared in a small band at the bottom of the screen, *"and I'm here to present the first in-depth interview with our visitors from the planet Etheria."*

"So they did count the questions we were asked in Switzerland as an interview!" Entrapta nodded.

"Not necessarily," Hordak retorted. "They might just want to stress the personal aspect."

"Shhh!" Bow hissed. "It's starting!"

And indeed, once more, the screen changed - this time to a view of Darla's bridge, every one of them lined up, with Earth visible behind them and Mr Pullman on the right side, facing them. And their names and titles appeared below them on the screen.

"Queen Glimmer, Princess She-Ra, Princess Entrapta, Mr Bow, Miss Catra, Mr Hordak, Melog, thank you for granting me an interview. I am aware that you are terribly busy with politics and the war, and I appreciate that you made time to answer the questions of the public." Mr Pullman nodded with a smile.

"Oh, think nothing of it!" Adora said. "We appreciate the opportunity to explain more about ourselves. You should never blindly trust people, after all, right?"

Adora winced. Her smile looked forced - but she had been so nervous!

"Honesty is the best policy, or so you said, right?" Mr Pullman asked.

"Yes!"

"I don't want to pry, but that sounds as if this stems from personal experience." The man leaned forward with an earnest expression on his face.

"Ah… Yes, we've had experiences with betrayal and lies." Adora nodded earnestly. As did Catra, although with a scowl on her face.

"But also with misunderstandings based on a lack of reliable data!" Entrapta piped up - she was sitting on the edge of her seat, her hair moving around her. "Once I thought I had been abandoned in the war, but my friends thought I had been killed, so they didn't send a rescue mission while I was waiting."

"Oh?" Mr Pullman tilted his head, eyebrows raising. "That sounds like a harrowing experience, But you obviously survived."

"Yes! And I met Hordak and Catra through it!" Entrapta replied. "Although I had met Catra before, at the Princess Prom."

"Which is a ball for all the Princesses and Princes of Etheria, held every ten years," Glimmer cut in. "It is the most important event in international politics and diplomacy."

Adora saw herself reaching over and squeezing Catra's thigh before her lover could say that she had blown it up. Catra might be doing it because she still felt guilty about it or because she liked to grandstand or a bit of both, but this wasn't the time for either.

"Which brings us to the first topic. Etheria." Mr Pullman nodded. "It is a planet ruled by princes and princesses, right?"

"Yes," Glimmer told him. "There are over a hundred kingdoms of various sizes."

"And you're the queen."

"The traditional title for the ruler of Bright Moon is Queen," she said. "But that doesn't mean I have a higher rank than Princess Entrapta. We're both sovereign rulers of our respective kingdoms."

"Yes! Although Dryl is much smaller than Bright Moon, and I'm not an Elemental Princess," Entrapta cut in. "My magic power is my prehensible hair while the Elemental Princesses control the elements - well, after a fashion."

"But we're all equal in the Alliance," Glimmer said.

"Speaking of equality," Mr Pullman spoke up again. "You are undoubtedly aware that on Earth, absolute monarchies are very rare nowadays. Most countries are democracies. Are there any democracies on Etheria?"

"Not really," Bow spoke up. "Not on a kingdom level, at least. Many villages elect their leader or mayor, but that's often the son or daughter of the previous leader. And of course, pirates elect

their captains, but I don't think they count." He grinned before growing serious again. "The rule of princesses and princes goes back to before the Age of War and has never been seriously challenged on Etheria. Part of the reason for that is, of course, tradition at this point, but in the past, it was likely based on the fact that all princesses and princes have a magic talent."

"That sounds as if it would be very difficult to replace a princess with a democratically elected representative," Mr Pullman said.

"Well, certain kingdoms do rely on the magical power of their ruler. Like Mermista's control over the Seagate, which keeps Salineas safe. Or Perfuma's control over plants, which feeds her kingdom," Bow said.

"Two kingdoms, actually, since the Fright Zone still needs her help," Glimmer said.

"Ah. So, if people would turn against their princess, they would lose their help?"

"Yes," Hordak said without hesitation. "Not unlike the Earth custom of granting special privileges to the rich in the hope that they will share their money with the poor, I believe."

Mr Pullman's smile grew a bit blander in response, and he leaned forward. "Do you think that the position of rich people on Earth is comparable to princesses on Etheria?"

Hordak looked as if he didn't understand the question. "I just said that, didn't I?"

"Yes, you did." Mr Pullman nodded.

"It's similar," Adora spoke up. "As a princess, you have responsibilities. You have power but also a duty to use it well. Especially as a ruling princess. You have to protect and help those who need it."

"Noblesse oblige?" Mr Pullman asked. "Privilege entails responsibility?" He smiled. "With great power comes great responsibility?"

"Of course!" Glimmer agreed, nodding emphatically. "That is what the princess alliance is all about."

"It's also a defence pact," Hordak added.

"Yes," Glimmer told him, looking a little annoyed. "But at its core, it's about using your power to protect your people - and everyone else."

"Let's come back to the comparison of princesses to rich people on Earth," Mr Pullman said. "Or, to be precise, to rich people. Do you need to be a princess to be rich on Etheria? How does the economy work?"

"That depends on how you define 'rich'," Bow replied. "There are many merchants and other people who are wealthy, but the differences between them and the other people aren't as large as on Earth." He frowned. "As far as the economy goes… I'm not an expert, that would be my brother, Count, but Etheria has a much smaller economy. And it's not quite as industrialised."

"Yes," Catra chimed in. "The Horde's factories were a major advantage in the war. The Alliance couldn't match their production."

"We did pretty well in blowing up the tanks and bots," Glimmer said with a toothy smile.

"Only once She-Ra appeared," Catra shot back.

Bow coughed. "Anyway, one difference I spotted is that more of the economy is run by the kingdoms. There are lots of farmers and artisans, but most of the big projects are controlled by the princesses and princes."

"A state-controlled economy?"

"Of course," Hordak spoke up again. "How could you efficiently run a kingdom if you didn't have control over its production? Salineas would have fallen far sooner if they had been producing merchantmen instead of warships during the war."

"That sounds like a planned economy," Mr Pullman said. "That was attempted on Earth a few times, but with mixed results."

"You probably lacked the data to properly plan," Entrapta said. "That happened to me a few times - I had built so many bots, I couldn't use all of them. And the Horde ran into supply issues when it built too many tanks and not enough transports."

"Oh. You're talking about a war economy," Mr Pullman said.

"Yes?" Adora tilted her head. "We are at war, after all. Well, we were recovering from the war against the Horde when we heard about the Goa'uld, but we were quickly back on a war footing."

"Something Earth hasn't done," Catra added. "Despite being at war with the Goa'uld."

"Well, we weren't even aware of being at war with them," Mr Pullman replied. "Most of Earth, at least."

"Yeah, we were very surprised when we heard that," Entrapta said. "But now that you know, you can spin up war production!"

"That's for the government to decide," Mr Pullman told her. "But let's talk about the war some more. You were fighting the Horde on Etheria for decades, or so I've heard."

"Yes," Glimmer said. "My parents were founding members of the Princess Alliance. That was before I was born, after the Horde had taken over the Scorpion Kingdom and started its conquest of Etheria."

"It was the first such alliance since the Age of War," Bow added. "And the largest in recorded history. There were temporary alliances since then, but none involving so many princesses."

"And it barely managed to slow down our advance at the start," Hordak said. "Despite my preparations having been, in hindsight, insufficient."

"You mean you underestimated us," Glimmer retorted.

"Pardon me," Mr Pullman said. "But you fought each other?"

"I created and led the Horde on Etheria!" Hordak said. "I introduced its technology to Etheria - although since I was alone and had to rebuild my tech base by myself, my means were limited."

"Which was a very good thing," Bow quickly said. "Otherwise, you might have conquered Etheria for Horde Prime."

Hordak scowled. "Yes, as it turned out, I was misguided. Manipulated and exploited."

"You weren't the only one," Catra said.

"But it all worked out in the end!" Entrapta patted Hordak's thigh with her hand. "We came together and beat Horde Prime!"

"Yes," Adora said, nodding emphatically. "Once Horde Prime's fleet arrived, everyone fought him, and we won."

"You allied with former enemies? Even the leader of the Horde?" Mr Pullman sounded surprised.

"I was the leader of the Horde on Etheria. Until Horde Prime made it very clear that there was only one leader in the entire Horde - himself. And that we others were merely vessels for his will." Hordak scowled. "He tried to wipe out my consciousness, but I defied him."

"And you beat him," Entrapta said.

"Adora did kill him," Catra pointed out.

"We all worked together," Adora said. "And yes, we took in everyone who wanted to change. I was a former Horde soldier myself."

"You were a cadet. You never led the Horde," Catra cut in. "I did."

"You got better," Adora shot back. After a moment, both of them laughed.

Mr Pullman looked… very surprised.

*****

The Mountain, Colorado, United States, Earth, September 13th, 1998 (Earth Time)

Samantha Carter suppressed a groan while on the screen, Adora started to explain how they grew up and how they 'split up temporarily', with Catra making snarky remarks.

The Colonel didn't hold back. "For Crying out loud!" he muttered. "Why did their consultants let that go through?"

"Probably because if they tried to hide that, it would have been revealed anyway, possibly at the worst moment?" Daniel speculated. "You know that Adora isn't the best at hiding something like that."

Or anything. Sam agreed with the assessment. Anyone expecting Adora to hide anything about her relationship with Catra was a fool. "I concur."

"Yeah, yeah, she's all for being honest - but I bet that 'reformed conquering warlords' wasn't the public image the Etherians were aiming for," the Colonel said.

Teal'c tilted his head. "Why would they not aim for such a revelation? As I was told, and have seen on television, the people of the United States love repenting sinners."

The Colonel winced. “Yeah, but repenting sinners usually don’t joke about their sins. Not on television, at least. They do that repenting thing.”

Sam had to agree.

“...and then we saved her and returned to Etheria to fight Horde Prime,” Adora finished her - quite edited, Sam knew - story.

“Now that’s a story!” Pullman was smiling widely again. “So, not only did you recruit former enemies during the war, but after you won, you incorporated them into your countries?”

“Not quite,” Glimmer spoke up. “Scorpia restored her kingdom, the Scorpion Kingdom, that the Horde had turned into the Fright Zone. And she decided to join the Alliance.”

“She decided to join Perfuma,” Catra commented with a grin.

Adora frowned. “I am sure that Scorpia would have joined the Alliance even if she weren’t together with Perfuma. It was a sound decision, given her experiences.”

“Well, you said that she defected during the war on Etheria. But what about the Horde soldiers who didn’t defect to the Alliance during the war?” Pullman asked. “Weren’t you concerned about what they would do - and what they had done?”

“If they want to change they still deserve a second chance,” Adora said. “Everyone deserves the chance to change. Just because you made mistakes in the past doesn’t mean you should be damned forever.”

“And there weren’t many die-hard Horde soldiers - most of their troops defected before the end,” Glimmer replied. “Horde Prime made it clear that he didn’t really care for anyone but himself. Not at all. Not even for his clones.”

“Yes,” Hordak said. “And with Horde Prime dead, my brothers were, for the first time in their lives, free to make their own

decisions. So it was easy to recruit them."

"We didn't 'recruit' them," Adora protested. "They joined us because of WrongHordak and Priest."

"WrongHordak was our first friend from the Horde," Entrapta explained. "We saved him when we saved Catra. Priest saw She-Ra eradicate Horde Prime and decided to worship her. And many followed his example."

"When you say 'worship', what exactly do you mean?" Pullman asked.

"Uh… exactly, that, worship?" Adora said with a strained smile.

"They consider her a goddess," Catra added with a smirk.

"I didn't ask for it! And denying it doesn't work!"

"And this 'Priest' would be in command of the ships currently orbiting Earth?" Pullman's smile looked fake now.

"Yes!" Entrapta nodded. "And the rest of the Fleet currently stationed outside the Solar System. We didn't want to scare you accidentally by bringing all the ships. And their numbers might distort the night sky, which might affect the work of your astronomers."

"I see." Pullman nodded. "And, speaking of space and war fleets, you first heard of the Goa'uld when a team from Earth accidentally landed on your planet, right?"

"Well, they arrived through a Stargate, so they didn't technically land, but yes," Entrapta said.

"You'd never heard of them before?"

"Melog did," Catra said, pointing at the big cat next to her seat. "Their people knew them and what they were. We almost fought SG-1 because they felt the larva inside Teal'c."

Sam winced, and the Colonel cursed. That hadn't been widely known yet. Teal'c wasn't showing any reaction, but Daniel looked worried.

"Teal'c?" Pullman asked.

"Yes." Adora nodded. "He defected from the Goa'uld and joined Stargate Command."

"And he carries a Goa'uld inside him?" Pullman was leaning forward.

"Yes, a larva. That's how the Goa'uld breed, you know," Entrapta explained. "They put a larva inside one of their Jaffa, where it grows over several years until it is mature, at which point it gets a host, usually a human, and the Jaffa gets a new larva. The Jaffa depend on the larva for their immune system, you know? I would have thought that that was a defect, but the Goa'uld made the Jaffa that way so they had to stay loyal." She frowned. "They could have had their loyalty just by being nicer, I think."

"That sounds… horrible, actually," Pullman said.

"Yes! Not only do they enslave people, but they also use them as hosts, trapping them in their own bodies, and treat their soldiers as slaves and incubators." Glimmer nodded with a grim expression. "They are as bad as Horde Prime was. As soon as we heard about them, we knew we had to fight them."

"Yes," Adora agreed. "Such evil can't be tolerated. They already oppress countless people and they want to conquer everyone else - and they have destroyed worlds like Horde Prime did."

"Not on the same scale or using the same means," Entrapa added, "but for the dead people it works out the same, I think."

"So you think everyone needs to fight the Goa'uld?"

"Of course," Adora said. "If you don't fight them, they'll destroy you. They'll wreck your cities, kill your people and raise your

children as their brainwashed slaves. Together, we can beat them and free their slaves!"

"That seems logical." Pullman nodded. "Although something seems a little strange. If the Goa'uld are such a threat, and you're used to working with former enemies, why are you so hesitant to form an alliance with Earth? Or at least with the United States, since you've been working with Stargate Command for a while already?"

Sam winced again. She was certain that many Americans wouldn't like the answer.

*****

Earth Orbit, Earth, Solar System, September 13th, 1998 (Earth Time)

"Now comes the best part!" Catra grinned. Adora groaned, and Catra patted her arm. "Honesty is the best policy, right?"

On the screen, Adora raised her chin with that adorably determined expression of hers. "That actually ties back to our history. When Hordak was stranded on Etheria, he was welcomed by the Scorpion Kingdom and taken in as a shipwrecked stranger. And in a few years, he had taken over the kingdom, turned it into the Fright Zone and started to conquer Etheria."

"It wasn't quite as simple," Hordak cut in. "The rulers of the Scorpion Kingdom didn't just take me in out of the goodness of their hearts - the princesses were interested in my technology. Especially my weapons. Without their support, I couldn't have formed the industrial base for the Horde on Etheria."

"I'm sure they didn't want to conquer Etheria," Glimmer said.

"But a little border adjustment?" Catra grinned.

"Anyway!" Adora raised her voice a little. "We want to limit our technology to countries that we can trust not to abuse our help to

conquer their neighbours - or attack us."

"And you don't trust the United States?" Pullman raised his eyebrows. "Your actions with Stargate Command seem to indicate a close relationship."

"We trust SG-1," Adora replied. "They're our friends. But that doesn't mean we trust everyone else in their country." She wrapped an arm around Catra's shoulders. "I mean… they wouldn't have let us into the army just because we love each other! How can you trust a country with such… such…"

"...such prejudices," Bow finished for her. He nodded with a serious expression. "I have two Dads. That wouldn't be possible in your country - it would be illegal. They couldn't marry. They couldn't have my siblings or me."

"But that doesn't mean that the USA would turn on you - the United States isn't in the business of enforcing their own morals on others," Pullman retorted. "Least of all their allies. Just look at Saudi Arabia or Kuwait."

"Well, a lot of your people seem to disagree," Glimmer said with a frown. "They call for our murder." She shook her head. "Yes, they are supposed to be a minority - but what kind of ruler would tolerate such demands when trying to form an alliance? What kind of ruler would let his subjects plot their supposed allies' death?"

"And it's not just the hostility - it's the insanity of it," Catra added. "We haven't done anything to them. Just because Adora and I are in love…" She blushed a little. "...apparently is enough of a reason for them to demand that we should be killed."

"Yes!" Adora nodded emphatically. "It's so insane! Completely crazy! What does it matter if we're both women? We love each other! We want to be happy together! Perhaps… form a family sometime in the future!" She blushed. "Just like everyone else! Why would that be wrong? We're not harming anyone!"

"We're not trying to 'make people gay'," Bow added with a scowl. "We're not telling anyone to stop loving their partner or partners."

"Unlike your people," Catra added.

Pullman frowned at that. "Well, as you said yourself, those people calling for violence are a tiny minority…"

Catra snorted. "A minority who can legally plan our death in your country."

"That's not entirely correct. Actually planning a murder is illegal."

"But telling others to murder people isn't against your law. Marrying your love is, though - if they're the same gender as yours." Glimmer crossed her arms over her chest. "That sounds insane to me."

"We just want the same as everyone else," Adora repeated herself: "Being happy with our love. Why are so many people against that? Why should that be illegal?"

Pullman cleared his throat. "Well, many of the more conservative people in the United States - and elsewhere - think same-sex relationships are immoral."

"Why?" Entrapta leaned forward. "There has to be a reason for that. Murder is wrong because you kill innocent people. Stealing is wrong because you take what isn't yours. Conducting experiments with new high-explosives in your laboratory instead of in the desert or a bunker is wrong because you risk hurting others in the castle if something goes wrong." She nodded. "But who would get hurt if my friends marry each other?"

Pullman didn't like those questions, Catra thought, but he was back to smiling politely. "Well, some people think that allowing such marriages would encourage such marriages - and would set an example for impressionable teenagers."

Catra snorted. "You don't want your people to have loving relationships and families?"

"A lot of the conservatives in the United States consider same-sex relationships a sin. They don't want people to sin. Or be tempted to sin."

"That makes no sense," Entrapta said.

"Would they rather have their family be unhappy?" Bow asked. "Why would it matter if you have two Dads or two Moms, or a Mom and a Dad? What matters is whether or not you love your family and care for them! And that doesn't depend on your gender!"

Pullman cleared his throat. "Well, as I said, those who advocate for violence are a tiny minority, and those who think your relationships should be illegal are also a minority according to our last polls."

"If they're a minority, why can't you change the laws? That's how democracy works, right? The majority sets the laws!" Catra said, staring at Pullman. "So, if you can't actually change your laws, doesn't that mean that those people aren't a minority?"

"And that is why you fear they would turn on you?" Pullman asked.

"It's one of the reasons," Glimmer replied. "How can we trust people who hate us just because we're not following their religion? People who are trying to force their views on others by outlawing relationships they don't like? If they're willing to force everyone like us in your country to be unhappy, why wouldn't they do that to everyone else if they had the power to conquer Earth?"

"We've read about your religious wars and conquests," Bow added.

"Those were hundreds of years ago," Pullman replied. "No one is calling for a crusade any more."

Catra scoffed. "I think some people in your country would disagree about that."

"Anyway, that's why we won't share our technology with a country we cannot trust to at least accept us as we are," Adora said. "But there's another reason for that. Those people who want us gone just because we love each other, because they think others could see us and realise that they have the same feelings, they don't know how much pain and misery they cause. Catra and I, we were orphans, raised in the Horde by a… manipulative woman."

Catra leaned into her love. Shadow Weaver had a lot to answer for.

Adora took a deep breath. "She left us ignorant of what love was - we didn't realise what we were feeling for each other. As a result, we hurt each other, very much. We almost killed each other - we almost doomed our world over this." She raised her chin. "We don't want anyone else going through this pain. And that is why we won't share our technology with any country where people can do this to each other."

"Legally, that is," Bow added.

"Yes." Adora stared at the camera. "Because you cannot trust someone like that - someone who can't be happy if you're happy with your love. We know this."

*****

The Mountain, Colorado, United States, Earth, September 13th, 1998 (Earth Time)

Jack O'Neill closed his eyes and sighed. The Etherians didn't pull punches. "I thought they had some PR weenies advising them," he muttered.

"They do, yes," Carter replied.

"Then why did they just push every damn button of the conservatives?" Planned economy, monarchy, being worshipped as a god, gay marriage… He looked around - a number of the soldiers watching the interview looked angry.

"They haven't talked about magic yet," Daniel unhelpfully pointed out.

"I'm sure that'll happen as well," Jack told him. "But seriously? I thought they wanted to play nice with the conservatives!"

"I believe that they realised that the more extreme members of the conservatives are a hopeless cause and decided to appeal to the moderates," Teal'c commented.

Jack blinked and stared at his friend. Political commentary from Teal'c?

"I had ample time to watch television since our return, and I decided to educate myself on the domestic politics of the United States." Teal'c nodded.

Ah. Which was kind of worrying. But the interview went on.

"Let's address another subject that is controversial: Magic," Pullman said. "There have been several reports that you are planning to 'return magic' to Earth. Could you elaborate on this?"

"Well, it's simple," Adora said. "About a thousand years ago, the First Ones stole magic to power their superweapon to destroy Horde Prime - and they planned for a lot of collateral damage. They were stopped by my predecessor, Mara, but she couldn't return the stolen magic. Since we defeated Horde Prime, we've been working to return magic to the various planets." She smiled. "It's slow going, especially with the war, but we'll get there. And once we have won the war, we can use the Stargate Network to visit the affected planets more easily and much more quickly."

"Those planets which haven't been destroyed by Horde Prime," Glimmer added with a frown.

"So… you carry magic with you and then release it?" Pullman asked.

"Oh, no!" Entrapta shook her head. "That's not how it works. You can't store magic like that - well, you could, if you had the right crystal matrix, but it would be very hard to transport, and releasing it wouldn't return magic to the planet, not in the way that matters. Magic is constantly generated on life-bearing planets. Or it should. Anyway, the First Ones kind of shunted the magic generated off to collect it to power their weapon. It's a very complex and fascinating piece of magic engineering, actually. The possibilities if we could duplicate the basic mechanics…" She coughed. "Anyway, so, once you dismantle that shunt, the planet's magic is available again for the people on it."

"The natural order restored," Glimmer added.

"So, you claim that until a thousand years ago, magic was real on Earth? And then we lost access to it?" Pullman raised his eyebrows.

"Exactly," Entrapta said, nodding.

"We have no records of magic," Pullman retorted.

Bow frowned at that. "You have such records - we saw them. People turning into animals. Or controlling the weather or the sea. Flying through the sky."

"Healing the sick," Adora added. "Magic's all in your history."

"Those are myths," Pullman replied. "Are you claiming that those are historical records?"

"Well, a lot of historical records turn into myths over time when primary sources get lost or forgotten, linguistic drift happens…" Bow shrugged. "We experienced that on Etheria as well, and we have excellent archives in Bright Moon."

"Of course, a number of the recorded magic events and miracles might be the result of Goa'uld technology used to impress people," Entratpa said. "That wouldn't be magic, of course - the technology is completely different. But Earth magic is totally real - Adora can restore it."

"Many people think magic is evil," Pullman said cautiously.

"They're wrong," Adora replied bluntly. "Magic isn't good or evil, it's like… technology."

"You can use it for good or evil," Glimmer added. "Like everything else. And many people want magic back, according to the news. I heard there's going to be a formal petition from various people."

"Various indigenous people," Bow added. "Magic is an important part of their religion."

"I see. But many people are also concerned that 'restoring' magic would create inequality. Some people would be able to use magic, others wouldn't. That would create a huge power imbalance." Pullman tilted his head. "People fear that this would lead to a magical monarchy being imposed on Earth."

"They're wrong," Glimmer repeated Adora's words. "Or they're lying. You already have power imbalances and inequality. Some of your people - or countries - are vastly more powerful than the others. Magic wouldn't change anything about that - not fundamentally."

"It would just add another variable, so to speak," Bow said.

"A huge variable," Pullman insisted. "The ability to… to heal the sick is huge."

"Incorrect," Hordak spoke up. "On average, a sorceress is no real threat to a trained soldier. Few have the talent and discipline to even learn magic that can make a difference on the battlefield, and fewer still amount to a threat that can't be dealt with by a squad or two of soldiers with armour support. Even princesses,

who, thanks to their innate magic, don't have to study for years to learn how to cast spells, are rarely powerful enough to turn the tide on the battlefield by themselves."

"Yes!" Entrapta nodded. "My own magic talent is prehensile hair - very useful for lab work or housework, but I couldn't really do anything on the battlefield that a net launcher and some other weapons couldn't do as well. The elemental princesses are the exception since they are bonded to runestones, which Earth lacks." She smiled. "So, you don't have to fear that, once magic is restored, princesses are taking over. Not that we know if you'll even have princesses, mind you!"

"I see. But if magic is as weak as you say, why should it be restored in the first place if people oppose it?" Pullman asked. "They might be wrong, but their fear and loathing are real. Why should you ignore their wishes?"

"Because it's the same attitude we already covered," Catra said with a sneer: "Some people think magic is evil, so they don't want anyone else to use it."

"That's selfish and stupid," Glimmer added.

"Magic is a natural part of Earth - your birthright. It was stolen from you by the First Ones," Adora said. "Why should a part of you get to decide that no one can get it back? If you don't like magic, you can just not use it. But you shouldn't try to forbid others from using it! It's not any more dangerous than one of your guns."

"I see." Pullman nodded. "You've certainly made your position clear about that. Now, I already mentioned concerns that your arrival and magic might lead to the imposition of magical monarchies on Earth. You've explained your view of how with power comes responsibility - or duty. But what's your view of democracy?"

"Well… it's certainly an interesting concept," Glimmer said very diplomatically. "We don't have much experience with it. But if it works for you, then that's good for you."

"It's just that it doesn't seem to work for you as well as it should," Adora added.

"Yes!" Bow nodded several times. "Like when the majority wants something, but it doesn't matter because they're controlled by the minority."

"Or manipulated by your rulers," Catra said.

Jack closed his eyes once more. "Here we go again." The Etherians were going for a full sweep, it seemed.

*****

Alliances Part 1

Dulles International Airport, Washington DC, Earth, September 16th, 1998 (Earth Time)

"...and you can see that the interview resulted in more positive and more negative reactions amongst American conservatives. The polls we ran show that the number of moderate conservatives - those who held a slightly negative opinion of Etheria - shrunk as a result," Mr Brown explained, pointing at the big screen on Darla's bridge, where a diagram was displayed.

Adora frowned. That didn't sound like a good result. "We made more people hate us?"

"Yes. But you also made more people like you," Mr Brown said. "In short, you polarised the moderate conservatives. We're still analysing the exact reasons, but so far, it looks like your, ah, appeal to progressive family values was the central argument that convinced the more liberal of them, although many have other reasons as well, such as your willingness to defend Earth, while the other end of the spectrum saw their negative opinion confirmed by several of your statements. However, we're still not sure how many of the reasons given were merely excuses for reasons that made the difference but were less socially accepted."

"What? What do you mean?" Adora asked.

"Well…" Mr Brown glanced at Glimmer and Bow. "While few answered our respective questions directly, we have reasons to suspect - based upon other polls in the past - that the relationship between Queen Glimmer and Techmaster Bow also influenced them."

What? But Glimmer and Bow weren't… Oh! "That racism thing, right?" Adora asked.

"Yes. Although the overlap between people who show an extremely negative reaction to same-sex relationships and people who show negative reactions to interracial relationships is very high."

"Most racists," Julie cut in, "are also sexist and bigots. At least in the USA. But they don't want to be seen as racists, so they generally make up other reasons."

"Ah."

Catra snorted. "Idiots, all of them."

"Yes!" Bow agreed - with a rare expression of anger, Adora noted. And Glimmer…

"Well, fuck them!"

Yes, Glimmer was livid.

"So… we basically made the almost good ones better and the almost really bad ones worse?" Entrapta asked.

"Yes. As expected, actually. And the numbers are positive - together with the progressives, we're looking at a very solid majority of the Americans who have a positive opinion of you." Mr Brown nodded. "Helped along, of course, by the propaganda efforts of the government."

"Of course, that could and will change - opinions shift all the time," Julie said. "But you met expectations, more or less. And yes, the government's PR campaign is helping here, though they probably didn't appreciate your frank statements."

Well, that was their problem. Adora wouldn't lie to the people. And yet… "But we also increased the number of people who really hate us," she pointed out.

"That couldn't be helped," Julie told her. "You have very divisive opinions. And you didn't want to commit to a more extended

public relations campaign."

Adora frowned but didn't pout. It wasn't as if they had the time to 'interact with the public in casual ways' for weeks. And that sounded far too much like playing a role. And lying. 'Just be yourself' was no guarantee that people would like you. Entrapta and Catra were great, but you had to know them a bit to understand that.

"And some of your opinions are not well-received even amongst progressives and liberals," Mr Brown cautioned. "There are already attempts to paint you as communists because of the way your economy is set up. That may get some traction, though we might be able to counter that by stressing that we're talking about a war economy and showing the similarities to our own war economy during World War II."

"And the palace economy of Minoan culture," Bow added with a smile. "There are parallels, even if the social conditions are different."

Mr Brown and Julie looked as lost as Adora felt.

Bow sighed. "An ancient culture based on... Crete, I believe. Yes, ancient Crete. Daniel told me about it during the trip here."

"Ah." Mr Brown nodded. "I fear most Americans won't be able to place such a reference. A pity, I'm sure."

Catra snorted as Bow pouted.

Mr Brown went on: "Anyway, some of the more left-leaning segments also didn't like how you recruited and apparently pardoned your enemies after the war. It didn't play well with some of the civil rights activists either, but not enough to measurably affect their opinions. The religious aspect of your followers pretty much was a wash - the more religious ones who were affronted by what they saw as an attempt to replace God already were disapproving of you for your social stances - but your plan to

return magic did affect people who would have supported you otherwise."

"I thought we explained that their fears are baseless," Glimmer commented. "Even if they have the talent, they'll need years of training to do anything noticeable, much less anything impressive."

"Well, they don't believe you," Mr Brown said. "Interestingly, you have anti-colonialist activists split between those who think you are acting like colonialists, making decisions without concern about the opinions of the people affected, and those who laud your willingness to return magic to indigenous cultures despite the objections of former colonialist societies."

Not for the first time, Adora wondered what was wrong with Earth. "We won't return magic if no one wants it back," she said. "But we know people want it back."

"You don't have to tell me that," Mr Brown said. "I've seen the polls. Anyway, basically, we're talking about a solid majority in support of gay marriage now."

"Great!" Adora beamed.

"Of course, for actual changes in legislation, that doesn't mean much. What matters is whether or not you have a solid, even a supermajority, in the House of Representatives and the Senate," Julie said. "And the states."

Adora blinked. It was all for nothing?

"Well, that will take a while to shake out, and we can't poll the politicians, so we should focus on your next interview," Mr Brown said.

"Right." Adora sighed.

*****

Pentagon, Washington DC, Earth, September 16th, 1998 (Earth Time)

"...and those polls are clearly biased! Why would anyone change their opinion after seeing just how depraved and dangerous those aliens are? The government should stand up to their insane demands! We all - all the patriots, at least - have taken the pledge! One Nation under God, indivisible, with liberty and justice for all! And this offence against God is no justice at all!"

Samantha Carter pressed her lips together and stood up, walking towards the TV in the corner of the canteen. A warrant officer almost dropped his tray to get out of her way. She reached the remote control and quickly changed the channel to something less stupid.

"Hey!" A man at one of the closer tables stood. "What are you doing? Change it back!"

She eyed him. He was a major - he technically outranked her. But he was an Army staff officer, and she was Stargate Command's best scientist. "The television is supposed to show the news," she told him.

"This is the news!"

"Technically, this isn't news but entertainment, despite the name," Daniel spoke up in support of her from their table. He smiled at the glare from the major. "That's what they claim."

"But they show the news!"

"No," Sam told him. "They show some selected polarising 'interviews' in an attempt to gain better ratings. There is nothing informative about the rantings of extremists."

"Why are you calling them extremists?"

"Because they *are* extremists." She glared at him. This should have been obvious. "They refuse to acknowledge facts to push

their own narrative." And every scientist knew that that was a cardinal sin.

"They're just stating their opinion."

"And we don't need to listen to their opinion," she retorted. "Not in the canteen. What you do in the privacy of your home is your business, but this kind of propaganda has no place in the Armed Forces of the United States." She turned away before he could retort and stalked back to her table. Where, she saw with a sinking feeling, the Colonel had joined Daniel.

He grinned at her. "Wow, you read the man the riot act. And he outranks you! Way to go, Carter!"

She refused to blush. "I was merely enforcing regulations, Sir," she said as she sat down stiffly.

"Yeah, yeah, Carter." The Colonel snorted but quickly grew serious. "We're all sick of the stuff."

"Actually, the reactions of the various segments of the population are fascinating," Daniel retorted.

"You wouldn't say this if you had been at the meeting I just had to attend," the Colonel said.

"Oh?" Sam raised her eyebrows, prompting him as much as she would.

"Yes. Kinsey," he all but snarled. "He's got his hooks into the government."

"We, ah, already knew that," Daniel said with a frown."

"No, we knew he had influence - but he's now running an NID operation to shatter the right-wing movement in the United States. And the government has basically given him carte blanche."

"What? But… that's illegal!" Daniel protested.

"Yes." The Colonel's smile was devoid of any humour.

"Then we have to report this!"

"Report what? It was all between the lines." The Colonel scoffed. "Kinsey didn't say he was going to blackmail, frame and assassinate people whose political views were in the way of government aims. He was talking about 'persuading' and 'offering incentives', and 'making them see reason' and 'exposing those who preach water and drink wine'."

Ah. Sam nodded. "But the NID could still make mistakes, and their machinations could become exposed." She had a few ideas on how to arrange that.

Usually, the Colonel would say something like, 'machinations, Carter? Did you fall asleep on the dictionary yesterday?' But he merely shook his head. "Yes. And then?"

She pressed her lips together. She knew what he was thinking.

Daniel, though, frowned. "Then they'll get arrested, and the whole illegal operation exposed."

"And then?" The Colonel asked, staring at their friend.

"Their victims get exonerated, the government will have to… Oh." Daniel blinked.

"...drop any plans to pass gay marriage legislation as the right-wingers resurge with popular support as the victims of evil government manipulations," the Colonel finished for him. "And the United States can forget about an alliance with the Etherians because we'll be doubling down on the anti-gay legislation."

That wouldn't be the only thing such a comeback of the right-wing conservatives would bring, Sam knew. If they gained the presidency and control of Congress, they would also try to crack

down on women's rights. Funnel more money into the military, of course - but without the help of the Etherians, and most of Stargate Command working directly for the United Nations, much of that money would be wasted. "They'll also call us away from the Stargate," she said. They would want everyone with knowledge of the aliens working for the USA.

"But…" Daniel looked lost. "They wouldn't do that, would they?"

"Daniel!" the Colonel snapped. "They've been crying for exactly that ever since they heard that the aliens aren't heterosexual Aryan princesses."

Sam blinked. "'Heterosexual Aryan princesses', Sir?"

He frowned at her. "I was quoting the Secretary of Education."

Ah.

"So…" Daniel licked his lips. "Are we going to, ah, sit on this, then?"

The Colonel snorted once more. "That's the question, isn't it?"

*****

"...le Président de la République est arrivé à Genève, où il va rencontrer la reine Glimmer…"

"Can you stop switching channels all the time? I want to actually understand what they are saying!"

Catra snorted at Glimmer's familiar complaint and switched channels a few more times. "It's not my fault you're too slow, Sparkles."

"Slow?"

"Yeah!" Catra nodded. "I got everything I needed."

"Really."

"Yes." She smirked.

"And what did you get from switching through three dozen channels in a minute or so?" Glimmer crossed her arms and glared at her.

"That nothing much has changed. The people on Earth are still rioting because we aren't following their customs, and their rulers still try to flatter us at every opportunity." Catra grinned. "You really should reconsider not accepting gifts - I am sure Adora would have enjoyed that private island we were offered."

Glimmer clenched her teeth. "Those were bribes! The man expected Etherian weapons in exchange!"

"So?" Catra shrugged again. "Just hand him some spears and swords." The man hadn't specified which weapons, after all, he wanted.

Glimmer rolled her eyes. "Yeah, that's exactly what we need - a reputation for trickery and deception!"

"It would be an improvement over 'witchcraft', 'carnal sin', 'heathen debauchery', 'offending God' and…"

"I've seen the report!" Glimmer snapped. "And things are improving."

"In some countries," Catra pointed out. "We've been basically banned from entering an entire region."

"And other regions are complaining that we haven't visited them yet," Glimmer retorted.

"The people or the governments?" Catra grinned at her friend's scowl. "Anyway, we don't need them. We just need a few countries and their armies to start conquering planets."

"*Liberating* planets!" Glimmer glared at her again. "And the more allies we have, the more effective we'll be in the long run."

"Provided they don't betray us." Catra scoffed. Not everyone was as untrustworthy as Double Trouble, but a number of the people they had met here…

"That's why we are doing all those negotiations. Not that you're doing much," Glimmer complained.

"I'm analysing them and keeping Adora from being swayed by their sob stories," Catra retorted. "If you want me to actually negotiate, just say so!"

Glimmer scoffed in return. "And have you fleece the Earth countries out of their treasury?"

"Well… we can use it for the war?" She flashed her fangs. "Even with the support from the fleets, and with Perfuma doing her plant growth thing, it'll be costly."

Glimmer sighed and sat down in the seat next to her. "I know. We still haven't recovered from the Horde War. And the Earth people want to open free trade with us."

Catra frowned. "So? They are really desperate for our technology. We could make a killing!"

"Yes, until they have our technology, and then we get flooded with cheap Earth products." Glimmer shook her head. "Bow has read up on that. We need to be really careful with any trade agreement."

Catra would have to read up on that stuff as well, then. She knew how to wage war, but trade politics… In the Horde, you just requisitioned everything. Trade was for the black market in the barracks. "So… stick to the military?"

"That's the plan. But they have plans of their own."

"They're not stupid, despite all this." Catra pointed at the screen on the wall.

"I know. I just wish they'd stop being stupid where it matters." Glimmer sighed. "We've got a meeting with the French president in ten minutes. Where is Adora?"

"She is still reading up on French history with Bow." As if there'd be a test later on.

"Ah." Glimmer nodded.

"And how did your talk with the Australians go?" Catra asked.

"They wanted to know more about magic. I'm not sure they fully understood my explanations - or Entrapta's." Glimmer shrugged. "They don't get that Earth magic isn't the same as Etherian magic. They don't have runestones. They don't have Mystacore. They think once magic is back, people will spontaneously start flying and throwing lightning around." She scoffed. "It's frustrating."

"Better you than me." Catra grinned again.

"You're up for the strategy meeting with NATO as soon as we can get a time and date."

Catra hung her head. Great.

*****

Pentagon, Washington DC, Earth, September 17th, 1998 (Earth Time)

"...and speculation about who will succeed as senator is rampant, with the governor remaining tight-lipped about any prospects, but with the polls showing that a majority of the state's population support a more progressive stance, he is expected to…"

So, it had begun. Jack O'Neill pressed his lips together as he forced himself to turn away from the television and focus on his jello. He would bet all his desserts for the next ten years that the senator in question hadn't resigned out of his free will but had been forced to by Kinsey and the NID. The guy was claiming some noble principles and the good of the country, but Jack didn't believe any of it. It just didn't fit the man's policies.

So, it wasn't a great loss to see that politician go. It might actually be a good thing if he was replaced by someone not as selfish and greedy, but the man had been elected by a majority of his state's voters. Forcing him to step down through underhanded means was a blow against democracy and the rule of law. Against the constitution Jack had sworn to defend.

"So… what do we do?" Daniel asked. "About that, I mean." He gestured at the television as if there was any doubt about the topic of the conversation.

Out of habit, Jack glanced around. Still no one close enough to overhear them. "We don't actually have any proof," he said, trying not to wince at his own words. They sounded like… excuses.

"Without proof, there is no way to legally stop this," Carter pointed out.

"So we would be breaking the law if we did anything?" Daniel sounded weirdly hopeful and desperate at the same time. "And we don't have proof, so we don't really know…"

Jack hesitated for a moment, then shook his head. He didn't like excuses. "We do know. This…" He pointed at the screen, then blinked. They had already switched to covering the latest scandal involving a minister, a luxury yacht and church donations. "Well, that too. We know this is the work of the NID using illegal means to affect national policy. We don't have proof, yes, but this is no coincidence." This was Kinsey at work.

"Yes, but…" Daniel fell silent, then raised his chin. "We also 'know' what will happen if this gets exposed."

"That's a good guess," Jack replied. Then he raised his hands, "Yes, I also think if the NID gets thwarted, we'll see the right-wing nutters take over." It would be just like Watergate. The public wouldn't tolerate such blatantly illegal acts by the government.

"'Thwarted', Jack?" Daniel blinked.

Jack stared at him. “Not the point, Daniel.”

“Uh, right. Anyway - so… what do we do? Whatever we do would be breaking the law, sort of.”

“It’s not against the law to keep speculation to yourself,” Carter, prim and proper as usual, said. “Without any proof or even clues except for the timing, we aren’t required to take action.”

“Yes,” Daniel agreed. “Otherwise, we would have witch hunts all the time. I don’t mean literal witch hunts.”

Those were good arguments. Sound, logical, perfectly fine. But Jack knew that they were excuses, nothing more. Under different circumstances, he would be doing all he could to stop the NID. And Carter and Daniel would be with him all the way. Doing the right thing, no matter the cost.

But what if the cost was America? There was some Latin saying about justice and the world ending that Jack did not quite remember from West Point. Something about enforcing justice even if it doomed the world. Did he want that?

He snorted, startling Carter and Daniel. If he did, he would have quit the Air Force long ago. Some of the things he had done during the Cold War… His friends were still staring at him. He sighed. “We don’t have any proof. And doing anything illegal to gather proof…” Carter blushed a little, he noticed. “...would have us act like the NID.” Not quite, but close enough. At least for his conscience.

“You could argue that the only reason this is happening is because the American system is flawed, so a minority has too much influence, controlling the majority,” Daniel said. “So, those suffering from the NID breaking the law were already violating the spirit of the law.”

Jack stared at him. “Let’s not sound too smug or noble, OK?”

Daniel blushed. “OK. So… we don’t do anything. Illegal, I mean.”

"Yes." Jack nodded. As did Carter.

He turned to look at the television again. They were showing a report from some country in Africa - he had missed the start. Something about witch hunts. The reporter sounded concerned in that professional way some managed.

"...and the reports of people lynched after being accused of being 'witches' keep increasing. The government has announced that in light of the Etherian threat to restore magic, they will outlaw witchcraft. In response, a rebel faction has called upon the population to 'embrace the ancient magic of our people'. Experts disagree about…"

And there were the literal witch hunts. Jack scowled. If they or the NID bungled this, this could become the future of America. He'd do a lot more to avoid this than turn a blind eye to rumours.

No matter how bad it made him feel.

*****

Palais des Nations, Geneva, Switzerland, Earth, September 17th, 1998 (Earth Time)

Adora was prepared. She had read up on the history of France - and there had been a lot of revolutions and quasi-revolutions; they were up to their fifth republic! - and on the current politics of the country and on the Président himself. She was prepared.

But she was still nervous when she walked towards the meeting room. She had only briefly met the man before, she didn't know any French people she could have trusted to tell her more about him, and the news was pretty divided about him.

Catra stretched next to her, then leaned over. "Relax. He wants something from us, not the other way around."

"We want allies on Earth," Adora whispered back. Allies they could trust. If only SG-1 were princesses - well, princes and one

princess - in charge of the USA! “And we need allies.”

“Not as much as they need us,” Glimmer cut in from Adora’s other side. “If everything fails, we don’t need to share technology - Earth troops can fight the Goa’uld on the ground just fine, as SG-1 has proven.”

“Yeah,” Catra agreed. “Though in the long run, we might be pressed for resources.”

Adora knew that. Second and Third Fleet had their logistical tails and could get resupplied. Bots could be used. Entrapta and Hordak also were positive that they could rebuild Horde Prime’s cloning facilities. Well, replace them - the originals were currently part of the space plant above Etheria. But that should be the clones’ decision, not anyone else’s. And it certainly shouldn’t be done because they needed more soldiers.

Of course, if they managed to get an alliance, the point would be moot.

They reached the meeting room and entered.

The Président was tall, was Adora’s first thought. Not as tall as She-Ra, but… maybe half a head shorter? Which meant he was far taller than her friends and herself.

“Queen Glimmer! Princess She-Ra!” The Président beamed at them, shaking their hands - she had half-expected him to kiss their hands, based on some reports about the French. But he had a firm handshake.

“Monsieur le Président,” Glimmer nodded at him.

“Hello!” Adora added.

“Techmaster Bow. Catra.” More smiles all around, even if Catra’s was a little toothy.

Then they met his staff. General Dubois. And the Minister des Armées. And what Catra called flunkies or minions.

"I am so happy to meet you again," the man told her as they took their seats at the table - decorated with the French flags and… the Princess Alliance Crest. That was a nice touch!

Adora smiled at the Président. "Yes." They had met briefly before, when they had met the United Nations. But this was their first personal meeting.

"It's an honour," Glimmer replied.

"The honour is all mine." Another smile. "I hope to invite you to France one day - you must see Paris, one of the most beautiful cities in the world. The City of Love, she is known as."

Adora didn't have to glance to the side to see Catra perk up.

"That would be lovely," Glimmer said. "Should we form an Alliance, then signing the agreement would be a great occasion to visit."

Adora nodded. Perhaps they should have visited for this meeting, but… Geneva was close to France, and they had so many meetings with the Security Council anyway. Besides, this was mostly a preliminary meeting, according to the schedule.

"France would be honoured."

"As would we," Glimmer told him. "But let's get down to business. Let's talk about an alliance."

*****

"...and we will pass legislation that will grant everyone, no matter their sexual orientation, the same rights to marriage and everything that entails, including adoption." The Président nodded. "We expect the laws to be passed soon."

Adora nodded. She could have done without the list of France's achievements with regards to human rights - she had read up on the country - but it would have been rude to mention that.

"Now, I'd be the first to admit that we're not perfect. France has done much to be ashamed of in the past. Sometimes out of ignorance, sometimes for worse motivations," he went on. "But we strive to be better than we were."

Adora nodded again. She had read up on that as well. "As everyone should."

"No one's perfect," Glimmer added. "We understand that."

"So we've heard." The Président didn't look at Catra, Adora noted. But it was clear what he meant.

And Catra knew it - Adora saw that she was pretty tense. She reached over and patted her knee. Catra had changed. She wasn't the Catra who had led the Horde any more. Well, she was, in some ways, but not the ones that counted most.

"As long as you don't go back, this will be fine," Glimmer said. "Of course, laws also need to be enforced to matter."

"France is a country of law and order. We will enforce those laws." He smiled again. "You have my word. Although I don't expect many problems - it's not as if we are limiting people's rights; we're expanding them. That rarely causes any problems with people."

"Except for the bigots," Catra said. "They hate that."

"We have a handle on them," the Président told her. "France is a secular, laicist state with a strict separation of religion and state. The religious extremists do not hold any power here."

That was aimed at the USA, Adora was certain.

But Glimmer didn't comment. "Now, with that dealt with, let's talk about the military."

*****

Capitol, Washington DC, Earth, September 17th, 1998 (Earth Time)

"But can't we outproduce them? They said their planet has a population of fifty million - we have six times that number!"

Samantha Carter had to refrain from correcting the senator that the United States' population was five and a half times Etheria's. That wouldn't only further alienate the man and his conservative cohorts. So she gently shook her head and repeated what she had been telling her superiors and various members of the government since they had returned from Etheria: "If we had the same technology and resources, we could. But we don't. We don't have enough people who understand alien technology."

"Can't we teach more people?" another conservative senator asked. His accent sounded as if he had stepped out of 'Gone with the Wind'.

The people who understood alien technology enough were not good teachers. Sam included herself in that category, seeing as she really wanted to curse at her audience. She had gone over that before! It was in her reports!

"We would have to teach all scientists and all engineers. And then every worker. And we would still lag behind the Etherians' technology. They, on the other hand, have a fleet full of people who know to use, maintain and create alien technology. They can teach that to others much more easily than we can. And on Etheria, they have a society used to both magic and technology." Sam shook her head. And there was also the threat of brain drain - those who came to study and work in the USA because it was the most advanced nation would look elsewhere if the USA lost that position.

"A society that's still using swords and bows and arrows," the first senator said.

“Magic swords and arrows. They defeated an army that had hovertanks with laser cannons,” Sam shot back. She was fudging the truth a little here, but only a little. “They aren’t primitive. They have different aesthetics, that’s all. People in the USA hunt with bow and arrow, yet we don’t think the USA is stuck in the medieval age, do we?” Why couldn’t they see that? The rest of the conservative senators did!

“My cousin swears by his composite bow,” a third senator - an overweight older man from the South - said with a smile. “I swear by my Remington, of course.”

“That’s irrelevant. The question we’re here to answer is: Can we defy those aliens who attempt to force their ideology on us and chart our own course as a proud nation, or do we have to bend our necks and accept their demands so we will not be relegated to a third-world country?” the first senator snapped.

“They don’t make demands, Senator,” Sam corrected him. “They have requirements to be met for anyone who wants access to their technology.”

“Semantics!” the senator who had asked after teachers said. “If we want their technology, we have to bend to their whims. That’s what it boils down to.”

“Well, they’re just doing what we did to our backyard,” another said with a chuckle.

Sam cleared her throat, then had to wait a few moments before the assembled senators turned their attention back on her. Why exactly had the President sent her to talk to those people? She knew their type; they didn’t like listening to women as a rule, and if the woman was pretty and young… She managed not to clench her teeth. Well, the Colonel would have lost his patience long ago and would have antagonised everyone with his flippant remarks, and Daniel… would have lectured them in his earnest but accidentally offensive way.

Still, as grating as this was, she had faced worse sexists. "As I said, senators, if the United States is forced to tackle upgrading our technology without any help from the Etherians, we will lag behind. We simply aren't on a sufficient level, educationally, scientifically and with regards to infrastructure, to match whatever country they support."

"But ultimately, we'll catch up, right?" the first senator asked again. "We might have a slower start, but we're the United States - we will persevere. With God's help, we'll show them!"

"By the time we catch up to where they are now, they will have progressed even further. And we would have to spend a lot of resources just to catch up - money we could spend on more advanced programs." Not that education didn't need a huge investment, but this wasn't the crowd to address that even - or especially - since they were the exact crowd who had caused the damage to the United States' schools and colleges.

"We would certainly lose our role as leader of the free world," another Senator who had stayed silent so far spoke up. "And we wouldn't have the strongest military in the world any more. Not when the French and the British are rolling over and showing their bellies to the aliens just so they can get spaceships."

Of course, that made an impression on the politicians in the room. Sam refrained from scoffing - whether or not the USA had the strongest military in the world didn't matter, not when six ships in orbit could easily defeat the entire world's militaries.

"So, we either grant the dykes the right to marry each other and raise children, or we lose everything we have achieved in the last two hundred years."

No one batted an eye at the man's slur, Sam noted. But most nodded in reluctant agreement.

"At least a chunk of my state is in favour of this," one senator said. "According to the polls at least."

“Lucky you. My constituents will murder me for this,” another said.

“Aren’t they busy murdering your church right now?”

“It wasn’t my church! I have attended a few services there, but I hardly knew the minister! And I certainly wasn’t aware of his… inclinations!”

Ah! So that scandal was happening in his state. Sam kept a polite expression on her face as the senators complained about having to go along with the government’s proposals.

She just wished she could already leave. More such meetings and she might become as bad as the Colonel about politicians.

*****

Palais des Nations, Geneva, Switzerland, Earth, September 17th, 1998 (Earth Time)

“...and we can send la Légion d’Étrangère out at once - it’s one of the best units in the world and ready to deploy,” the Minister des Armées said. “Though they would need support from other forces - they don’t have integral air support.”

Catra nodded. “Unlike the US Marine Corps.” She had read up on Earth's military history.

The French general frowned. “Of course, how valid air support is on foreign planets remains to be seen. And going up against space ships?” He shrugged. “I assume you have sufficient space forces to take over this, and we can handle everything on the ground, provided our intel about the enemy forces is correct.”

“It should be,” Adora said. “Teal’c was a highly placed officer, and he didn’t know about any armour units in the ranks of the Jaffa.”

“Or artillery.” Which was a weird deficiency. How could you wage war without armour and artillery? Well, if you had princesses to pick up the slack, you could, Catra amended. “They are said to

rely on their bombers for such support. But the core of their ground forces is composed of infantry. And Earth-made weapons are very competitive in that area." She had examined the zats and staff weapons herself. And the American rifles.

The French general nodded. "That is a small consolation. To find ourselves completely outclassed, and many of our best weapons rendered obsolete, was a heavy blow."

"Of course, it helped that every army on Earth was rendered obsolete at the same time," the French Président added with a chuckle. "Our pride might have suffered some blows, but others who used to look down on us suffered relatively worse."

Which meant the US Army, Catra knew. There was, well, she wouldn't call it a feud, but certainly some bad blood there. And the French were supposed to be allies of the Americans. Then again, the USA hadn't exactly been honest with the rest of the world - and also more than a little arrogant, or so it seemed.

"But a few thousand soldiers are not enough to tackle an Empire that spans the galaxy. We'll have to mobilise more, and that will take some time. As will converting our existing weapon designs to incorporate advanced technology," the minister went on.

"Well, the Goa'uld Empire is, as far as we know, fractured. After the death of Ra, his underlings split and started fighting each other. Or at least competing with each other," Glimmer added. "And this is a weakness of theirs."

"Yes," Catra agreed. "If we can keep them divided, we can defeat them piecemeal." What the Horde had almost done to the Alliance. "We have the edge in technology, and we can concentrate our forces as long as we have the initiative. If we use a few flotillas to strike various planets far apart, we can force them to spread out their ships to cover their realms. Of course, that will become harder and harder as we take more planets. So, it's essential that we develop ground-based weapons to protect planets and more ships."

“France will do what she can to help there,” the Président said. “Our industry is ready for this challenge. Even the unions agree,” he added, which prompted some chuckling from the others with him.

“But we won’t be able to win this war on the defensive,” Catra went on. “We need to take out their leaders and either conquer or destroy their core industries to cripple their ability to wage war. Most of the planets they control aren’t important from a strategic sense - they don’t have any infrastructure other than some mines, and they only have as many troops and gear their that they can supply through the Stargate.” Which, Catra didn’t need Teal’c to tell her that, was great for travelling, but not so great if you had to supply an army through it - much less several armies and bases.

“And we want to avoid pushing them into fighting to the bitter end,” Adora added.

Catra kept her mouth closed. It was a sound decision - an enemy who had nothing to lose would fight harder than someone who could surrender - but she didn’t think many, if any, of the Goa’uld could be trusted to stick to an agreement if they were even willing to make one in the first place. It would have to entail giving u their slaves, after all.

“As long as we can keep Earth and Etheria safe,” the Président said.

“That’s the main objective, of course,” Glimmer agreed. “Strategically.”

“But back to the alliance,” the Président said. “We’ve covered the laws we’ll change. Is there anything else left to discuss that needs to be altered?”

“As long as you make an honest effort to enforce the new laws and don’t start conquering other countries, I don’t think so,” Glimmer said.

Adora nodded.

“Then we need to discuss how the command structure will work,” Catra said. “Who’s in charge of which operations, how discipline is being handled.”

“Trade agreements, training, how to keep restricted knowledge safe from spies,” Glimmer added.

“With regards to trade, that would have to involve the European Union,” the Président replied.

“Well, we won’t really see much trade for the foreseeable future, what with the distance between Etheria and Earth,” Glimmer said.

And the issues about economic imbalances, Catra added to herself. France had more people than Etheria as a whole. And they were also meeting with the British and Germans. At least all of them were in the same Union which should simplify trade agreements.

Still, she preferred to talk tactics and strategy rather than trade, so she leaned back while Glimmer and Bow started talking about economic details. It looked like they would have their first ally on Earth soon enough.

*****

Alliances Part 2

Capitol, Washington DC, Earth, September 17th, 1998 (Earth Time)

Jack O'Neill didn't like politicians. No matter their party affiliation, the lot of them were generally more concerned with pandering to their backers - and looking good to their constituents - than doing what was good for the country. At least Hammond was aware of that and had sent Carter to talk to the idiots who still hadn't gotten the message that the times of playing the usual games were over. Or at least suspended for the duration of the current crisis.

But that meant that he was stuck with watching how the cabinet tried to deal with the fact that the French had stolen a march on the United States.

"Look, they haven't signed an alliance yet. That is contingent on legalising gay marriage, and the French haven't done that yet," the Secretary of Agriculture said.

Why the man was voicing his opinion on this, Jack didn't quite understand. Perhaps he had dealt with the French over cheese and champagne exports and thought that had made him an expert?

"They'll pass those laws in a heartbeat. With the alliance all but signed, they won't hesitate," the Secretary of State replied. "The French Président doesn't have to deal with a bunch of religious nutcases who think God is American and they are the chosen people. When did the conservatives actually start believing in their own propaganda?"

The man must be either exhausted or incredibly annoyed, in Jack's opinion - he usually was far more restrained.

"Most don't believe that," the President replied. "But they have grown used to the status quo. And they have been cultivating the religious right for years. They fear that they are riding a tiger and can't get off without getting mauled."

And that was why Jack didn't like politicians. If you were a patriot, you did what was best for your country, no matter the cost for yourself. Soldiers were ready to lay down their lives for America, and those hypocrites in Congress were baulking at the thought of losing their seats?

"A tiger? More like a lemming," the Secretary of Education commented with a snort. "A lemming grown fat on money from bribes and running heedlessly towards the edge of the cliff."

"Now, to be fair, no one could have predicted that we'd make contact with helpful aliens who care about gay rights," the Secretary of Agriculture retorted.

"That doesn't matter. Have you seen what they were doing to America's education, all in the name of their ideology? Intelligent design! Chastity as sexual education! Cutbacks on public education wherever they could! They were ruining America long before we opened that gate!"

Jack refrained from smiling at the rant as the President spoke up. "Now, now - let's not dwell on the past. We have the future to deal with. And we have most of the conservatives in Congress on board. Or we'll have them, once the holdouts realise that they can't do any horse-trading like usual. Not with their own backers breathing down their necks."

"And the true believers?" the Secretary of the Interior asked.

"I think Captain Carter's briefing today helped impress upon them that their views of the situation were not entirely correct," the Chief of Staff replied.

"Must be tough to realise that your god abandoned you." The Secretary of Education snorted again.

The President frowned at her. “Anyway, if we just wanted to pass a federal law, we could do that easily. But as I was told by our experts, that won’t be enough for the Etherians.” He glanced at Jack, who straightened in response. Daniel had been the one who had explained to the Etherians how the United States worked, including the role of the Supreme Court, but Jack was the leader of SG-1, and so it was his responsibility.

“Why can the French do it, and we need to amend our constitution?” The Secretary of Agriculture pouted.

“Because they have a different system,” the Secretary of Education told him. “They don’t have a Supreme Court in charge who could change its rulings whenever they chose to.”

“The Supreme Court can’t just change its rulings.”

“Of course they can. They did it before with the death penalty, remember?” The woman scoffed. “And the magical princesses from the space kingdom are all too aware how that works when someone is elected for life without any checks and balances.”

“You can’t compare the Supreme Court to an absolute monarch!”

“I just did.”

“Folks!” the President spoke up again. “There’s no point to bicker about the hand we’ve been dealt. We have to play it. So… assume the French seal the deal in a few days; how long until they start building spaceships?”

Damn. The President was looking at Jack again. And this was a question for Carter, not for him. “They will have to spend months just learning the new technology,” Jack repeated what Carter had told him. “And unless they want to copy a Horde frigate, they will have to design a ship as well.”

“They’ll want their own designs. The French always do,” the Secretary of Agriculture claimed.

Jack wasn't so sure. The French had cooperated with other countries in the aerospace industry before. Airbus was the most famous example.

"Well, even if the French get a headstart, it won't matter much as long as we can get an alliance in a few weeks to a few months," the Secretary of State said.

"As long as the Etherians have enough teachers to cover all our needs," the Secretary of Education pointed out. "I don't think they'll stop their first teaching programs just to start with us. They might expect us to work together with everyone else."

Jack wasn't the only one who winced. The United States had trouble getting the Air Force and the Navy to cooperate - all the fault of the Navy pukes who didn't want to admit that space was covered by the Air Force - but to work so closely with the Europeans? The French didn't like America, and the Brits probably hadn't forgotten the whole Skybolt mess. Or the Suez Crisis. Or the Tizard Mission.

Great.

*****

Palais des Nations, Geneva, Switzerland, Earth, September 18th, 1998 (Earth Time)

"...the secretary general of NATO confirmed today that the member states have collectively decided that the attack by the Goa'uld constitutes sufficient cause to trigger Article 5. "...the police had to intervene to protect anti-war protestors from counter-protestors in Washington DC…"

"...several US embassies were the target of protests claiming that the United States were the aggressor in the conflict with the Goa'uld Empire…"

"...and many are wondering, with NATO invoking Article 5 and France about to sign an Alliance with the Etherians, whether or not a formal alliance with the Etherians is still necessary. We don't know the details of the alliance yet, but if France is fighting as part of NATO and allied to the Etherians, that would forge close ties between the Alliance and NATO, and that…"

"...and has no one looked at the money? How many defence contractors are pressuring their bought and paid for members of Congress to vote in favour of this travesty of justice just so they can profit from the war? Are we really willing to sell our souls for profit? I say: NO! This is a conspiracy to corrupt the heart of America so…"

"That weird conservative channel still hasn't changed," Adora commented as she switched the television in the waiting room off. They were still focusing on the extremists.

"Well, they claim that they are merely showing both sides of the issue equally," Bow told her, looking up from his tablet.

Catra snorted. "Yeah, right."

Adora looked over. Her lover was… you couldn't call it sitting; Catra was sprawled in one of the seats in the waiting room, back arched over the armrest as she looked upside down at the others in the room. "At least they are showing the positive reactions as well, now," Adora said.

"How nice." Catra, obviously, didn't think this was a sign of progress.

"Let's focus on today's meeting," Glimmer said. "The British delegation is supposed to arrive in twenty minutes - unless their flight gets delayed."

“Maybe we should have landed in London,” Adora said. “This is close to France but not to England.”

“The French Président still had to fly in,” Glimmer retorted. “And it would be a snub to France if we went to London for the meeting with the British Prime Minister. And Geneva is one of the seats of the United Nations.”

“You just like the sweets here,” Catra commented.

Glimmer stuck out her tongue at Catra. She was in a good mood. Everyone was after they had finalised the agreement with the French. Now, if things with the British went well as well, and then with the Germans, they would be ready to start liberating planets. Too bad the United States were still dragging their feet - Jack and the others wouldn’t be able to help them until their country adjusted. “Well, let’s hope things go well today.”

“They should,” Glimmer said. “I just wish the people from Earth wouldn’t complicate everything so much.” She scoffed. “They have the United Nations taking control of the Stargate. And their NATO is now officially at war with the Goa’uld. And we’re forming an alliance separate from NATO. How can you wage war like that?”

“Well, if anyone can, you should know how, Commander,” Catra told her. “It sounds like the old Princess Alliance.”

“We didn’t have three partially overlapping alliances,” Glimmer retorted. “Planning who gets to use the Stargate will be a nightmare. Not just logistically, but who wants to bet that some nations will attempt to leverage control over the gate into influence over us?”

“I’m not going to take a sucker’s bet,” Catra declared promptly. “That’s Adora’s thing.”

“It’s not!” Adora protested. Just because she had made a few unfortunate bets as a cadet… She pouted at the grinning Catra.

"Let's get serious," Glimmer said. "We don't want the British to think we're not serious."

Adora spoke up before Catra could make a joke about Glimmer's wording. "Isn't it a snub, talking to the prime minister of a queen instead of the queen herself?" She might be a figurehead, but she was the head of state.

"It's not," Catra replied. "The Prime Minister is the actual ruler of the country."

Which was either England, the United Kingdom or Great Britain depending on what you read. A very weird country.

"Anyway, since the head of state is the queen," Glimmer said, "we can expect to meet her when we sign the alliance."

"If we sign an alliance," Catra said. "They didn't get the name 'perfidious Albion' for nothing, I bet."

"That was actually enemy propaganda," Bow countered.

"Like calling the Horde the 'Evil Horde'?" Catra grinned.

"That was just telling the truth!" Glimmer retorted.

"Guys, please!" Bow said. "Let's focus on the meeting."

Catra snorted. "It'll go like the one with the French did. We have something they want very badly, and they are willing to do what is needed to get a deal."

Adora frowned, but she couldn't really counter that argument.

*****

Pentagon, United States of America, Earth, September 18th, 1998 (Earth Time)

"...so, the others are busy meeting the British, but that's politics, so they don't need us for that - Bow knows about our technology,

Glimmer is a trained sorceress in case they have questions about magic, and Catra and Adora know everything about our logistics, even though Catra acts as if she wasn't interested, and the French didn't have any questions that would have needed us - so we thought we could take the shuttle and visit you to do some science, but then they told us at the mountain that you were here, so we flew here to meet you, in case you had some free time to discuss this adaption of the anti-gravity generator you mentioned! I hope we aren't disturbing you when you're busy with something important!"

Samantha Carter liked Entrapta. She really did. But sometimes, the princess was a little too impulsive and enthusiastic. And Sam didn't like Hordak.

Then again, Entrapta's arrival had gotten Sam out of another meeting with recalcitrant conservative members of the House of Representatives who just couldn't be bothered to face reality. And she was very sick of having to listen to Bible quotes. So Sam smiled a the beaming princess and nodded at Hordak. "No, just another meeting."

"Ah." Entrapta nodded. "Good! As Catra and Glimmer say - and if they agree on something, you know it's true: If you have time for a meeting, you don't have anything important to do. Unless it's a diplomatic meeting, I think."

Sam suppressed a chuckle; they weren't alone at the landing pad at the Pentagon, and with the current struggle between the Navy and the Air Force over the Space Force, she didn't want to hand the Navy any ammunition. "Well, I'm available to look at your modifications to the generator."

"Great! I've changed the power modulation. And Hordak had a very interesting idea about the main regulator." Entrapta opened the shuttle's back to show her the generator stashed there.

"An obvious modification that any technician should have realised long ago," Hordak commented.

Sam suppressed her annoyed reaction at the implied insult. “The Goa’uld aren’t much for encouraging creativity amongst their slaves.”

“How very short-sighted of them. Although having been the target of a coup myself, I can understand that they might have thought drastic measures were necessary.”

“I don’t think Catra was trying to replace you when she sent me to Beast Island,” Entrapta said.

“She was working up to it. I merely preempted her attack.”

Sam tried to focus on the generator. She was already aware that Hordak, Entrapta and Catra shared a quite convoluted past. She didn’t really want to hear the details. Well, she did, but whatever she heard, she was supposed to report to her superiors. And that felt like a breach of trust.

So she cleared her throat. “I see you doubled the crystals here.”

“Yes. Added redundancy.” Entrapta nodded. “You can blow half the relays and still have full power! But it will need a case that will vent the power of the explosion. And that won’t offer the same protection as an armoured case.”

“Any external force that penetrates the hull and reaches the generator will likely wreck the vehicle anyway,” Hordak retorted. “Unless it’s a capital vessel, in which case losing a minor backup generator won’t affect its combat performance.”

“What about a cellular array?” Sam asked. “Earth tanks use a system to offer both armour protection and a way to vent an internal explosion away from the crew compartment.”

“Oh, yes!” Entrapta beamed. “That would work. It would even work for bots - it would keep their decision matrixes intact so they can continue learning after repairs.”

“That should enhance their long-term combat performance, yes,” Hordak agreed.

“So, how does that work? Oh, blast panels, maybe? Mounted so they resist force from one direction but can easily be pushed away into the other direction?”

Entrapta was a genius, Sam reminded herself. She nodded with a smile. “Yes - it’s quite obvious, isn’t it?”

Hordak frowned. “Only if you are used to weapons that use explosives as propellant. Energy-based weapons make such construction pointless.”

Sam knew a face-saving argument when she heard it and grinned. “You also need internal armour, though. And that will make it heavier.”

“Yes. Unless we could… Hm… if we calculate the maximum power a blown crystal array could develop, we would know the minimal amount of armour we need…” Entrapta scrunched her nose while she started tapping buttons on her multi-purpose-device. “That means… Hm… It is related to the amount of power transmitted to the generator, so whatever metals the power lines or blows up the regulator is the upper limit of what could reach the relay crystals, so…”

She was interrupted by a beeping noise.

Hordak frowned. “Someone’s trying to enter the shuttle.”

“Oh?”

Sam tensed. They were on a landing pad at the Pentagon. Who would be willing to disturb them? If it was the NID… No. They wouldn’t want to risk the Etherians’ anger. Kinsey had clearly understood that. “It might be important,” she said.

“Let’s check!” Entrapta was already on the way to the door controls.

Outside, two men in dress shirts and slacks, but without jackets or ties, waited. Both carried laptop cases - and both had multiple pens in their shirt pockets.

Sam could be mistaken, but this style? She was familiar with it.

"Dr Carter? Princess Entrapta? Mr Hordak? We're sorry to disturb you, but when we heard that you had a shuttle here, we couldn't resist. I'm Mark Bower; this is Gerald Cline. We're from NASA, and we'd like to talk to you!"

Sam knew it. And since no one had stopped them from bothering the alien shuttle, the brass approved of whatever they were here for.

Well, Sam was pretty sure she also knew what this was about.

*****

Palais des Nations, Geneva, Switzerland, Earth, September 18th, 1998 (Earth Time)

"...and in addition to crafting the Marriage Rights Act, we've also adjusted the Human Rights Act. As soon as those receive Royal Assent, same-sex marriage, with all the duties and rights that marriage grants, will be legal in the United Kingdom. All people, regardless of their gender or sexual orientation, will have equal rights with regards to selecting their partner."

The British Prime Minister had been stressing the kingdom part of the United Kingdom Catra had noticed. And the role of the Queen of England. A rather transparent attempt to appeal to the princesses, in her opinion. And like the French, he hadn't mentioned that they had executed one of their kings after a revolution. Not that it mattered - that had happened centuries ago.

"Thank you!" Adora beamed. Catra was tempted to kick her under the table to remind her lover that the Earth politicians were trying to butter them up. Then again, that was Adora for you: always

willing to see the best in people. Even when they did their worst to her and her friends, like… She suppressed the urge to shake her head. That was the past; Catra couldn't change it. She could only do better in the future. Like here.

"It's very good to hear that," Glimmer said. "I assume your queen won't hold up the process for ceremonial reasons?"

And now Catra had to hide her grin. Glimmer smiled as politely as before, but the Prime Minister's slight flinch meant the small barb had found its mark. The British might have a queen, but she wasn't their actual ruler.

"I don't foresee any delays on that front," the man replied.

"Good!" Adora glanced at Glimmer for a change, not at Catra, before beaming at the delegation from the United Kingdom. "So, provided the act goes through, let's talk about military and technology!"

*****

"...and so the Royal Navy would expand to cover space as well. While we work on building our own space vessels, we would like to have our sailors gather experience in space combat on your ships," the British admiral finished.

Now that was a good idea, in Catra's opinion. That would certainly speed up the time until Earth had space assets worth a damn. She knew best how useless most cadets were before they got some experience in the field. "That sounds reasonable," she said.

"Of course, we would also like to purchase spaceships from you once our sailors are ready to crew them," the man went on. "It's very likely that we'll pattern our own production after your ships, after all, so this would make a lot of sense."

That might be going a little too fast, though. Catra didn't trust the British - or any Earth country - yet with their own spaceships.

“That is certainly a good way to train up your forces, but it will take quite some time until your people are proficient with handling and especially maintaining Horde frigates,” Adora said.

Time enough to see if they were trustworthy.

“We’re aware of that from our own history. But the sooner we start, the sooner we are ready.”

“There’s also the fact that the way the Horde frigates are run might not suit your navy,” Catra pointed out. “Horde Prime had his clones made to perform exactly as he wanted, and that’s how they still work in many areas.”

“Not big on lower ranks showing any initiative, was he?” the British general asked.

“Not at all,” Catra said, frowning. Anyone who stuck out got… brainwashed. Like Hordak. Or herself.

“Then our crews might be an advantage for you as well - we’ve got a long naval tradition that favours showing initiative,” the admiral said. “Of course, sailing the blue sea isn’t quite comparable to flying in space, but the basic principles of running a ship tend to remain the same - at least that was the case for us while we went from sailing ships to ironclads to dreadnoughts and to aircraft carriers.”

Catra tried not to sneer. She didn’t like water. And she didn’t remember her time with Horde ships fondly. Well, she had mixed feelings about conquering Salineas, but that wasn’t something she liked to dwell on either.

“Well, basically, yes,” Adora said with a smile. “At least that was our experience - we fought on sailing ships and in space.”

The British soldiers looked surprised at that. “You did?”

“Yes.” Adora nodded. “Of course, it wasn’t a warship, and it floated above the water until it sank, but, yes, it was propelled by

sails and magic."

"The Horde had actual warships," Catra cut in. "Not sailing ships. But yes, there are quite a lot of similarities between those ships and Horde frigates."

"But copying Horde ships might be harder than adapting a few crucial systems to your own technology," Bow pointed out.

"We're aware of that. But we think the priority is now to get ships into space. And working designs tend to have fewer issues to work out than new designs," the admiral said.

"Hopefully fewer delays," the Prime Minister added. "We don't have decades to get the perfect ship. Good enough will have to do."

"Perfection is the enemy of good enough, yes," Bow said.

Catra had a comment about this, Adora and Shadow Weaver, but this wasn't the time or place for it. "So, let's talk about numbers," she said instead.

*****

Pentagon, United States of America, Earth, September 18th, 1998 (Earth Time)

"...so, you see, if we had just one of your ships available for transporting supplies, we could settle Mars and start terraforming it! Unless, of course, our calculations of their minimum cargo capacity are wrong."

Jack O'Neill frowned as he approached the shuttle parked on one of the Pentagon's landing pads. Who was talking inside? As far as he knew, it was just Carter, Entrapta and Hordak in there. Perhaps he should have asked one of the guards outside, but that would have made him look as if he didn't know everything that was going on with the aliens.

Well, he trusted Carter. Absolutely. Even with that damn Russian. But he didn't trust the aliens. Entrapta was too naive and trusting, and Hordak was a former warlord whose 'change of heart' might not be as thorough as some, namely Entrapta, thought. Jack had dealt with warlords in his past.

So he stepped onto the ramp and called out: "Permission to come aboard?" And then had to suppress a wince. That was something a navy puke would say - and space was Air Force turf.

"Jack?" Entrapta replied. "Come in! It's open!"

Not the best policy even with guards outside, Jack thought as he entered the shuttle.

Carter smiled and nodded at him. "Sir."

"Hi, Jack!" Entrapta's greeting was as friendly as Hordak's was curt - the alien merely nodded at him.

"Hello… Oh, you're Colonel O'Neill!"

"Wow! Hello!"

Two men - two nerds - smiled at him. Jack raised his eyebrows. "And you are?"

"Oh, sorry! I'm Mark Bower; this is Gerald Cline. We're from NASA!"

"We heard that a shuttle set down here and decided to use the opportunity to see if we could talk to them - to the aliens," the other added.

"And you just walked up to the shuttle?" If that was true, heads would roll in the Pentagon. Jack would make sure of that.

"We wish!" Bower complained. "We had to go through security checks as if we were terrorists!"

“They even x-rayed us and our laptops! If we’d have sensitive equipment, that would have been damaged!” his colleague added.

Jack nodded. So, someone had greenlighted the ‘spontaneous’ visit. Probably some general who thought that Entrapta would react favourably to talking to those nerds. Well, it didn’t seem as if they had been wrong.

“And they have such interesting ideas!” Entrapta gushed. “I mean, we told people that we would offer travel to space, but with all the other negotiations we had to do, and the security concerns that Catra and Glimmer were talking about, we didn’t get anything done yet, but this! This is so much more interesting than some boring trip to space - we’ll be settling another planet in this star system and terraforming it! And without magic! Although…” She scrunched her nose. “Magic would speed up terraforming by a lot if we can get Adora to create some space plants on the planet. Or ask Perfuma if she can change plants to survive there.”

“As would self-replicating machinery,” Hordak added.

“That, too!” Entrapta nodded several times. Then she pouted. “But people here have hangups about self-replicating machines. Even though they could be soooo useful! And we’ve disproven the grey goo scenario that you mentioned. At least I think so.”

Bower and Cline nodded in obvious agreement with her, and even Carter didn’t look like she was opposing those plans with much fervour, Jack noted with a sinking feeling in his stomach. “Well,” he said, “we’ve had some bad experiences with nanites.” Namely, Jack himself. “Better safe than sorry.”

“But we wouldn’t use nanites!” Entrapta countered. “Well, not self-replicating nanites - we would use nanites to build micromachinery, of course. But we’re talking automated mining machines and factories. And if we can’t get Adora or Perfuma, probably rapid-growing plants that will turn the atmosphere breathable. As long as we can get exponential growth going, we’ll see Mars turning into another habitable world in our lifetimes!”

“The calculations work out!” Bower added. “All we need is transport capacity.”

“And perhaps some way to get a few ice asteroids to Mars,” Cline said.

Jack glanced at Carter and, once more, raised his eyebrows.

She blushed a little - which was a very bad sign. “Well, Sir, the concept sounds plausible. And the scientific and engineering challenges do not seem unsurmountable.”

“And it’s all civilian, non-military, so it shouldn’t be a problem for all the political stuff!” Entrapta added, beaming. Then she blinked. “Although I guess that someone would have to decide if Mars would be counted as part of Earth or not, and who gets to rule it.” She shrugged. “Well, that’s not a science problem.”

“But a pretty difficult political problem,” Jack said. What if they actually pulled it off, terraformed Mars and settled it, and then the planet decided to declare its independence? Would they throw instant coffee into the Sea of Dunes or something?

“Well, it’s a future problem - settlements would be small habitats for science,” Bower said. “And while we’d push them to become self-sustaining, they’d still be science outposts, not some… country.”

“And by the time there are enough people on Mars to form a country, we’ll probably have colonies on other planets thanks to the Stargates, so any political problem will have been solved already.” Cline smiled.

Jack frowned. “NASA sent you here to talk about colonising Mars?”

Bower coughed. “Ah, we were supposed to talk about chartering a transport to Mars - which we did - but once we got talking, well…” He smiled. “We quickly realised that we could do so much more!”

Jack grinned. The kid was too naive. With open war looming and the United States gearing up to produce spaceships as soon as the idiots in the Capitol managed to get their act together, the budget for terraforming Mars would be smaller than the budget for the design of the Space Force's unit patch.

"Oh, yes!" Entrapta nodded again. "This will be great! We'll have to do something about the lack of a magnetic field and the loss of the atmosphere, but that doesn't sound impossible to solve. Maybe an energy field to keep the atmosphere in and the solar wind out?"

Although, Jack realised, the Etherians might not quite share his view.

*****

Earth Orbit, September 18th, 1998 (Earth Time)

"...and as I said, Jesus Christ never condemned homosexuality; all the quotes people like to cite when they claim he was a homophobe are from the Old Testament."

"Thank you, Reverend, but last I checked, the Old Testament was still part of the Bible - the Word of God?"

"Oh, yes, technically. But a lot of the Old Testament is not part of Christian dogma. Last I checked, the Evangelicals haven't condemned spare ribs or pulled pork, have they? Or veal with cream sauce. Neither did they refrain from mixing fabrics. The Old Testament just isn't as important as what Jesus himself told us. And he never condemned homosexuality."

"But he valued the union between man and woman."

"That does not mean he condemned the union between man and man, or woman and woman. Jesus's message is one of love - not of homophobia. And he certainly didn't mean that whatever he didn't mention was to be condemned - that would hamper a lot of

televangelists since Jesus never said anything about television, either."

Adora frowned as Catra changed the channel to some music video. "Why would a god leave such a confusing book? Rules have to be clear; everyone knows that."

"Well, I like unclear rules; it makes breaking the rules without breaking them easier." Catra grinned.

"I bet you would." Adora snorted. Catra had never liked any rules that got in her way. "But at least it sounds better than what the others said."

Catra scoffed and shifted on her seat, twisting until she was watching the screen upside down. "When's Entrapta coming back?"

"The shuttle is on the way from Washington and will reach us shortly," Adora told her after a check with Darla.

"Ah." Catra reached over and changed the channel again.

"...the end times are coming! Rapture awaits us! God is…"

"...the Queen is expected to sign the acts at the first opportunity. A state visit by the Etherians has also been announced to celebrate the upcoming alliance even though several details have not been finalised and…"

"...protests by indigenous people in Brazil continue. They demand that the government contacts the Etherians and formally asks for magic to be returned to Earth. The Brazilian government has not yet commented on…"

"...casualties of the riots are estimated to reach over a hundred, and there is no sign of the riots ending…"

"...a mob demanding that the government in Tehran declare war on the Etherians has been forcefully dispersed, though rumours

about elements of the Revolutionary Guards refusing to obey orders continue to circulate…"

"...the Prime Minister, reportedly after consulting with representatives of the zaibatsu, addressed the Diet, stating that Japan's stance towards same-sex marriage has to be re-examined in light of the recent developments in Europe and expressed his hope that access to alien technology will revitalise Japan's economy. At the same time, Article 9 will have to be…"

"...the IDF has been put on alert as the border with Lebanon saw several skirmishes…"

"…Russia's president announced several emergency measures to stabilise the economy, blaming the war with the Goa'uld for the disruption and called on the Etherians to provide support…"

Adora blinked. "How are we supposed to help them?"

Catra shrugged. "I don't know. I'm a soldier, not a princess."

Adora frowned at her lover. "I'm a princess, and I don't know either."

"You don't have a kingdom to rule."

That was true. "We should ask Glimmer." Adora frowned. "But I think she has advisors for that." Glimmer hadn't talked a lot about economics - although she had mentioned the potential trouble if there was unrestricted trade between Earth and Etheria, hadn't she?

"Or Bow. He's got a brother who knows that stuff, doesn't he?"

Right, Count. But Adora had never met him, and he was on Etheria and not available. "Maybe we should… Oh!" She saw the shuttle approach them. "Entrapta and Hordak are coming."

"Good. Let's hope they haven't given the Americans a frigate or two."

Adora frowned at her lover as they left the bridge. Entrapta wasn't like that - and Catra knew it.

"I was joking," Catra said. "Besides, Hordak would never let her do that."

That was true. "Let's meet them and hear what happened in Washington."

"Virginia, actually."

Adora narrowed her eyes at Catra, who grinned. "Since when do you care about geography so much?"

"I read up on where the USA has its army headquarters, of course."

Of course.

But they had reached the hold and were just in time to see the shuttle set down on the deck.

"Adora! Catra! How was the meeting with the British kingdom?" Entrapta asked as she walked down the ramp, followed by Hordak.

"We only need to hash out a few more details and we have a second alliance ready to be signed," Catra replied. "They really want our tech."

"Everyone wants it!" Entrapta nodded. "Oh! We talked with NASA about terraforming - that means turning a planet into a second Earth or Etheria - the fourth and second planets of this system! It's so fascinating - they made plans without having the technology for it, but now that we're here, we should have the technology!"

"Ah." Adora smiled. "That's nice. How long would that take?"

“Oh, years and years! But it’s fascinating - and if it works here, we could, maybe, restore some of the planets Horde Prime destroyed.”

That had Melog, who had been dozing in the corner, perk up. Catra cocked her head to the side. “Melog would be interested in that.”

“I’m sure they would!” Entrapta grinned.

“I thought we’d restore their planets once I found out how to do it,” Adora said.

“Yeah, that was the plan, but if we can do it without magic, then everyone can do it!” Entrapta beamed. “It’ll take longer, but it’ll be so much more useful!”

“Right.” Adora wasn’t quite sure what to think about that. It felt… well, weird, not to be needed.

“Oh! Mark and Gerald - they’re from NASA - also told us about the smartest man on Earth! Stephen Hawkins! He’s dying from an illness. Can you help him? I think you could, couldn’t you?”

Adora blinked. That was…

“People are dying all the time,” Catra told her with a frown. “You can’t heal everyone, and if you start, you won’t be able to stop. I know you.”

“Yes. But this is an exception. He’s the smartest man on Earth!” Entrapta said.

“He should be useful for the war,” Hordak added. “And he is British, not American.”

Did that mean healing him fell under rendering critical assistance?

*****

Pentagon, United States of America, Earth, September 18th, 1998 (Earth Time)

"So. Not only might we have inspired our alien mad scientist princess to create a green goo swarm and unleash it in our solar system, but we might also have asked them to reveal the full extent of their magic healing power to Earth by curing Hawkings. Not bad for an afternoon's worth of work. What's for tomorrow? Ask them to send missionaries of the Church of Adora to Earth?"

The Colonel's sarcasm was biting, but he wasn't entirely wrong; Samantha Carter knew it. But he wasn't entirely correct, either. "Sir, that was the result of NASA engineers meeting Entrapta. We couldn't exactly shoot them, and if we had ordered them to stay silent, this might have led to a diplomatic incident that would have undermined our efforts to win the trust of the Etherians." The Colonel had been present for half the meeting, after all.

"Well, we could shoot them now and make it look like an accident. I bet the NID could cover it up," the Colonel joked as he sat down in their temporary office in the Pentagon. Then he sighed. "Wrecking Mars and Venus isn't a big problem - it's not as if there's anything alive on those planets - even though the resources spent on terraforming them will be missing somewhere more important. But telling everyone that Adora can heal every illness with magic? Desperate people will hound her everywhere. And if she refuses to heal them, what will they do?"

"She might not be able to heal Dr Hawkins," Sam retorted. "We've only observed her healing wounds and counteracting poison." When Adora had saved the Colonel's life.

He raised his eyebrow at her. "You know what her magic did to my body. Do you really think she can't cure whatever Hawkins suffers from?"

"No, Sir." A scientist had to be honest.

“And if that ‘side-effect’ becomes known, what do you think will happen?” He cocked his head.

Everyone would want it. It wasn’t a true rejuvenation, but it was probably coming close. All the microdamage and lingering effects of wounds and broken bones healed? “They would be swamped with offers and demands.”

“Yes. Every rich old bastard will want to be ‘healed’. But what will the Etherians do?”

Sam pressed her lips together. That was the question. “I think Adora will have a hard time refusing to heal dying patients.” Especially if they were children.

“Yes. But she can’t heal everyone. And her friends won’t let her sacrifice herself like that,” the Colonel said. “And we need her for the war.” He leaned back and closed his eyes. “We need to talk to them about this. In secret.”

Sam nodded. “I’m sure we can arrange something, Sir.” It shouldn’t be hard - it was obvious that this had to be addressed.

“Without telling anyone.”

She blinked. Did he mean that not even their superiors would be informed?

“We need to talk to the Etherians before this spreads.” He looked around. “And if we tell anyone, it will spread.”

“The two engineers from NASA will not keep silent about this,” Sam pointed out. Not even if they asked or ordered them to stay silent - she knew the type.

“They’ll focus on the terraforming and colonisation parts. They’ll say they asked the Etherians to heal Hawkins, but they don’t know what the Etherians can do. And Entrapta only said she thought they could help.” He shook his head. “We can contain this, at least to some degree, if we act quickly.”

“Do you want to arrange a clandestine meeting?” That wouldn’t be too easy - anything related to the aliens was under close scrutiny by everyone - but if Sam called Entrapta, asked to do some experiments in space…

“Yes.” He suddenly grinned. “Let’s invite them to a movie night. Teal’c is dying to watch Star Wars with them.”

That was… well, that might actually work. She slowly nodded.

And the Colonel smiled widely at her. “You know what? Let’s make it a barbecue!”

*****

The Movie Night

Colorado Springs, Colorado, United States of America, Earth, September 19th, 1998

"I had expected something larger," Catra said after they had arrived at O'Neill's house. "This doesn't look like much." His car didn't have a minibar; another disappointment, but she had complained about that on the way already. She got out and stretched.

"Catra!" Adora hissed as she joined her.

"What? It's true! I expected something more impressive than a wooden hut." Catra sniffed.

"It's not a wooden hut!" Adora protested. "It's a… nice, little wooden house." She cocked her head and bit her lower lip. Anyone could tell that she was lying.

"It might not be much for a princess, but it's quite a nice house for Earth," O'Neill said. His smile showed a few too many teeth to be genuine, so Catra counted that as a win. Make her hide her tail, wear a stupid cap that squished her ears, would they?

"I still don't know why we can't just shoot anyone if they bother us," she muttered as the man opened the door to his house and ushered them inside. The interior looked as she expected from the shows she had seen. Which meant it wasn't impressive either.

"It's illegal," O'Neill told her as he closed the door. "I asked. Unless you're in Texas."

"We should hold this in Texas, then," Catra told him as she pulled the stupid cap off.

"Catra!" Adora hissed again.

“What? Do you know how uncomfortable this is?” Catra scowled at her, then pulled her tail out of her pants. “And if this fooled anyone, your spies are useless.”

“It’s not meant to fool spies,” O’Neill told her. “It’s meant to keep journalists from finding out about us.”

“Can’t we shoot them at least?” Catra said.

“Freedom of the press is a fundamental right in the United States.”

Ah, Daniel was already here. As was Teal’c. Catra glared at the latter - the ‘hat plan’ was probably his fault.

Not that the big man was fazed. He nodded at her and Adora. “Greetings. I am very happy that you will be finally enjoying one of the finest pieces of Tau’ri storytelling.”

“I’m sure George Lucas would be happy to hear this.” O’Neill grinned. Before he could say anything else, the doorbell rang. “It’s open!”

That would be Carter with Glimmer, Bow, Entrapta and Hordak. Catra couldn’t help laughing when she saw how they had ‘disguised’ Hordak - he was wearing a long coat with a high collar and a hat that hid everything else of his head. How he could see where he was going was anyone’s guess.

“Oh! Nice!” Entrapta looked around and beamed. “Is this a mobile house? Easy to disassemble, lightweight construction - do you fold it down for transport, or do you take it apart and then reconstruct it at the new location?”

“It’s not a mobile home. It’s a solid, perfectly fine American house,” O’Neill replied.

“Really? All the other buildings we saw were much more solidly built.” Entrapta cocked her head.

“It’s a solid *American* house,” O’Neill repeated himself.

“I think my claws would cut straight through it,” Catra said as she nosed around in the kitchen. “Do you have anything to drink?”

“Catra!”

“Beer and drinks are in the fridge.”

Oh! The fridge was stuffed with meat, a bowl of some vegetable dish and drinks! Catra grabbed a beer and threw it to Adora, then grabbed one for herself.

“Adora, don’t open it!” she heard Daniel yell.

“What? Why?”

“If you open it, it’ll spray beer all over you.”

“You just have to be careful,” Catra told them as she flicked her bottle’s cap off with her claws.

Adora scowled at her, then tried to open her bottle very carefully. She almost managed it but still needed a towel.

“Next time, aim the bottle at Catra,” Glimmer commented.

“And spill beer all over Jack’s house? I guess you never learned how to be a good guest,” Catra shot back.

“Oh!” Glimmer scowled as she grabbed a beer as well.

“I think I could build a safe beer opener,” Entrapta offered. “Do you have a workshop? And some spare engines?”

“Why don’t we move to the garden?” O’Neill told her. “The grill should be ready by now, and the grass won’t mind if you spill some beer, or coke, or anything else. And it’s hidden from view.”

“Alright!” Adora stood and headed out.

Catra finished her beer, then followed her and the others.

"You use… open fire to cook?" Hordak stared at the grill. "Is this some archaic ritual of hospitality?"

"Technically, it's not open fire - it's glowing coal," Entrapta told him. "But it was a fire first."

"How inefficient. And how do you control the temperature?"

"With great experience." O'Neill smiled rather toothily at Hordak. "And yes, it's a tradition in the United States."

"Well, there are some people who prefer electric grills," Daniel said. "Or gas."

"We don't speak about such blasphemy in this house." O'Neill frowned at him. "Without coal, it's not a barbecue."

"I think many would disagree about that, Jack. Gas grills are popular, and…"

Catra snickered as the two quarrelled, with Hordak giving his unwanted opinion every second sentence and Entrapta studying the grill. Maybe this would be more entertaining than she had expected.

*****

The nerve of some people! Gas grills! Electro grills! Jack O'Neill shook his head as he checked the heat on the grill - glowing coals, just as it was intended, thank you very much.

"I would have expected better of you, Daniel," he said, sighing as he took a step back. Time to grab the meat.

"What?" Daniel stared at him.

"I would have thought that you especially would be more respectful of my culture. Gas? Electro? Those are fighting words!"

“But…”

“So it is an archaic ritual of hospitality.” And the alien warlord had to comment with a nod. “That explains the stubborn refusal to change to more advanced heating techniques.”

Jack clenched his teeth as he stepped into his - perfectly solid and fine - house. He found Catra raiding his fridge for another beer. That was her… third? Jack hadn’t kept count.

She grinned as she opened it. “So, grill’s finally ready?”

“Yes.” He started grabbing the first course.

“About time.”

“A barbecue cannot be rushed,” he told her.

She shrugged. “I’m sure Entrapta would manage to do it if we asked her to.”

Jack shook his head. “The waiting and socialising is a crucial part of it.”

“And that’s why you had the fire prepared before we arrived?”

“One shouldn’t wait too long,” he said.

Catra made a snorting noise and took another sip from her bottle.

He couldn’t help it. “Shouldn’t overdo it,” he said. “You don’t want to become drunk early on.” Or at all. He had seen young soldiers indulge too much at the first opportunity, and they generally had had half again her weight.

“I need stronger stuff to get drunk,” she said. “Or more of this, but hogging all the beer would be rude.”

She didn’t offer to help him carry the meat. Jack wasn’t quite sure how to feel about that - he would, as host, have refused her help

anyway, but usually, people offered at least. Well, he certainly wouldn't comment.

A few minutes later, the meat was on the grill, and Jack joined the rest on the benches and lounge chairs in his garden. Catra was in Adora's lap, trying to fiddle with the blonde's top, while Adora tried to push her hands away without spilling her bottle. Entrapta was talking with Carter and Hordak about stuff that Jack didn't have to fake ignorance of, and Glimmer, Bow and Daniel were talking about history. With Teal'c - at least Jack's friend was nodding once to a comment of Daniel.

Jack almost felt bad for ruining the mood, but it was better to talk now, before everyone was buzzed and digesting large amounts of meat and watching Star Wars. He cleared his throat. "So, the first round should be ready in twenty or so." Plenty of time to discuss magical healing.

"Are you sure we can't use an accelerant to speed the cooking time up?" Entrapta asked. "Or cut the meat into tiny slices, which would cook faster?"

"Let's do it as the people here are used to," Glimmer told her. "They should know best since they have been doing this for a long time."

"Not so long - the country's barely two hundred years old," Bow commented, then grinned at the frown from Glimmer.

"Anyway," Jack raised his voice a little. "I wanted to discuss a thing. A potential problem."

"And you wanted to talk about it where we wouldn't be overheard by your superiors." Catra flashed her fangs in a wide grin. "I knew it! Pay up, Adora!" Well, Jack should have expected that she saw through his little ruse.

"We didn't make a bet! You just said you wanted to bet - I never agreed!"

Having them in a good mood is a good thing, Jack told himself as he cleared his throat again. "Well, yeah, it's a delicate topic. It's about healing. Magical healing. The thing you did to me when you saved my life."

"Oh?" Adora leaned forward, which made her put her chin on Catra's shoulder as the cat woman didn't move out of the way. "Were there complications? Do I need to heal you again?"

"No, no," Jack said. "Everything's fine. More than fine, actually - Dr Fraiser says my body's in peak condition, as good as a twenty-year-old's." Well, for a forty-year-old.

"Ah, good!" Adora beamed.

"Which is a problem," Catra said with a frown.

"What?" Adora gasped.

"A potential problem," Jack corrected her.

"You mean everyone will want to get healed," Glimmer said.

"More or less, yes," Jack said. "We've classified my medical information, so that should keep a lid on it." And he thought Fraiser might have gone the extra mile here. "But even if we manage to keep this detail secret, should you be able to heal Hawking, and I have no doubt that you could, you'll be swamped by the pleas of dying people all over the world. And people with incurable sicknesses." He didn't mention children. That would be counter-productive.

"Well, I can…"

"Six billion people's worth of terminal and incurable cases," Carter added, nodding at Adora.

"Oh." Adora closed her mouth.

"And professional athletes who want to get career-ending injuries healed." Daniel nodded. "Or just the rich and famous who want to skip weeks of rehab."

"You'd never have a minute's rest," Catra summed up.

"Well, I could just stick to the terminal people…" Adora bit her lower lip.

"Over a hundred thousand people die every day," Carter said. "Even if you healed one per second, you wouldn't be able to get them all."

"Oh."

*****

Over a hundred thousand people died every day! Adora hadn't considered just how many people lived on Earth. No, she couldn't heal so many people.

"Well, it would theoretically be possible if you had the ability to heal multiple people at once, but even then, you would need a way to gather all of them together, and that would require a huge logistical effort… Even with the whole fleet here, I'm not sure that we would manage to collect all of them…" Entrapta said.

"And you'd have to find them, first," Catra cut in.

"Yes!" Entrapta nodded. "Although that could be solved with enough bots, provided we could whip up scanners for the vital signs of people. Perhaps if we had a transport system keyed to such scanners, and…"

"Are you talking about constructing a permanent round the clock surveillance system that monitors every human on Earth?" Sam asked.

Entrapta blinked. "Effectively, yes. If you want to heal everyone who's dying, then that's what you need. And a transport system to

match."

"And Adora not doing anything but healing the sick and wounded - not sleeping, not eating, not having fun with her friends, and not protecting anyone from the Goa'uld," Catra said with a scowl.

Adora winced. That sounded horrible. And not practical. But how could she be happy and have fun if people she could save were dying? How could she be so selfish? How could she… "Ow!"

Catra glared at her, her first - which had struck Adora's head - still raised. "Stop thinking stupid thoughts! You can't save everyone - and you can't save anyone if you kill yourself trying to save everyone! Have you forgotten your lessons about combat fatigue?"

"Of course not! If you are fighting, and even more if you are leading soldiers, you need you to be rested, or you'll make mistakes that might lose you the battle," Adora quoted from cadet training lessons.

"Same here, idiot - you can't heal everyone. You'll exhaust yourself long before you put a dent in all the sick and wounded," Catra said.

"Yes." Glimmer nodded with a very firm expression. "You couldn't heal every soldier in the Alliance, either, remember?"

"Well, no, but I was less experienced, and... OW!" Adora glared at Catra.

"I said no thinking stupid thoughts." Catra sniffed. "Besides, we need you in the war, not stuck on Earth exhausting yourself healing people who will be killed by the Goa'uld if we lose the war without you."

Adora opened her mouth to protest, but Bow cut her off: "Yes, Adora. You can't heal everyone, and you can do so much more. Besides, we can save more people if we teach them how to heal others. And improve their medical technology."

“As long as you don’t turn the sick into zombies,” Jack said. “I don’t think that would go over well.”

“Yes!” Entrapta nodded. “Proliferating healing technology should have a greater impact than Adora healing people - technology that anyone can use is always more effective than the efforts of single people, except for extraordinary circumstances.”

“And Earth magic should help as well,” Glimmer added. “Although teaching them decent healing spells would take years.”

“You would know, Miss Sparkly Staff Swinger,” Catra commented.

Adora pinched her. It wasn’t Glimmer’s fault that she hadn’t had the time to learn many spells.

“Ow!” But Catra was smiling at Adora.

“Anyway, yes, you can’t heal everyone,” Jack said.

“But that doesn’t mean I can’t heal anyone,” Adora protested.

“Dummy!” Catra frowned at her. “Didn’t you listen? If the people on Earth know that you can heal, they’ll mob you! They’ll beg and plead and bribe you to heal them or their loved ones. And you’ll have to tell them all no.”

That sounded… Adora clenched her teeth. “But I can’t just do nothing!”

“You have to,” Jack told her. “Unless you want to be worshipped as a goddess on Earth.”

”What?”

“Healing the sick? That’s pretty much part and parcel of the gods,” Jack explained.

“But…” Adora trailed off and sighed, wrapping her arms around Catra. “I don’t want to let people die. And Hawking…”

“Well, we could disguise the source of limited healing as ‘experimental technology’,” Sam suggested. “But that would have to be very limited.”

“Only those people whose continued existence would serve the war effort,” Hordak said. “This Hawking sounds like he could be useful.”

Adora glared at him. People shouldn’t get healed just because they were useful!

But Glimmer was nodding - and Bow was as well!

“That would work,” Glimmer said. “But not forever.”

“Well, we won’t stay on Earth forever,” Bow pointed out. “Once we’re back in space or on other planets, the problem, well, won’t go away but won’t be urgent.”

“Adora can’t be an idiot and kill herself healing others if there aren’t too many people to be healed,” Catra said.

“I’m not an idiot!”

“Yes, you are.” Catra grinned. “My idiot,” she added in a whisper.

Adora sighed, half-smiling against her will. Her friends wanted the best for her, and their arguments made sense, but… She hated letting people suffer when she could help. And when she couldn’t help. And yet… “Alright,” she mumbled.

“Finally!”

Catra didn’t have to sound so smug, Adora thought with a pout.

“And the first round of steak is done. Who wants one?” Jack announced.

“Me!” Catra wriggled out of Adora’s embrace before she could react. “Talking sense into Adora is hungry work!”

“Hey!”

*****

Samantha Carter had seen Star Wars before. Several times. She might not remember the whole movie verbatim, but she knew the plot very well, so she hadn’t expected to be entertained by watching it again.

But watching it with the Etherians wasn’t the same as watching it with the team.

“Oh! Bots! And look, a tiny bot! We need to build tiny bots!”

“They’re droids.”

“Thank you, Teal’c.”

“Blond, naive and has a magic sword? Hm… that sounds familiar!”

“I wasn’t a farmer. I was a cadet!”

“But… they’re torturing her!”

“And that is why you don’t talk if you’re going to kill someone.”

“Speaking from experience?”

“Their magic is lame.”

“Is this how Earth’s magic works?”

“That would still be lame.”

“They blew up the planet? Even after she told them what they wanted to know? They’re worse than Horde Prime!”

“We already knew that they’re evil, Adora.”

“But not how evil!”

“For supposed elite marksmen, those soldiers miss their targets far too often. At that distance, the two smugglers should be dead.”

“Perhaps that was their Kyle squad? Kyle platoon?”

“How could they just fly away in their ship? If I were in charge, the entire guard shift on the Death Star would be court-martialed!”

“Catra! That’s exactly what we did when we saved you from Horde Prime’s flagship. Ask Adora if you don’t believe me.”

“Ah, it was a trap! And they fell for it!”

“That happens when you don’t have sufficient ECM. This wouldn’t work with Darla - I made sure of that. Unless we encounter an enemy with better technology than we have and better magic, we won’t be tracked like that.”

“But I think this tactic might be useful when fighting the Goa’uld. Although arranging a convincing escape might be difficult without sacrificing a few soldiers.”

“Hordak! We don’t do that kind of thing!”

“I am aware. That is why I said it would be difficult.”

“Why doesn’t he get out and throw the blaster bolts back at the enemy with his sword?”

“Luke can’t jump through vacuum and cut ships apart, dummy!”

“He should be able to if he had a good spacesuit. I could build one with a jetpack!”

“They’re letting Luke fly a fighter without having any experience? He’ll crash it into the jungle!”

“He won’t. He’s a hero.”

“That doesn’t mean he can fly the thing. Remember how you crashed the skiff?”

“I didn’t crash it - you crashed it!”

“No, you!”

“That’s not how space combat works! Ships don’t fly that way! Although if we take the gravity caused by the Death Star’s mass into account… no, still doesn’t work!”

“It’s a movie, folks.”

“The flight characteristics of the X-Wings fighters, Y-Wing fighters and TIE-Fighters were modelled after Tau’ri atmospheric craft used in their greatest war, more than fifty years ago. It was a deliberate aesthetic choice.”

“Thank you, Teal’c.”

“I told you Han would be back! He’s a hero!”

“You didn’t! You were all mopey, Adora!”

“Luke is the hero. Han is a scoundrel. No wonder Adora likes him.”

“What do you mean, Glimmer?”

“Do I have to spell it out, Adora?”

“Hey! I wasn’t a smuggler - I was a soldier!”

“So was Han Solo. He was dishonourably discharged after he helped Chewbacca.”

“Thank you, Teal’c.”

“Look at those torpedoes! They are super-agile - we need that as well!”

“They would need inertial compensators to be able to pull such manoeuvres. That would reduce their payload.”

“We could make them bigger to compensate.”

“Yes! There goes the Death Star!”

“I would court-martial the designer. And everyone involved in its construction. How could you build something with such an obvious weak spot?”

“Well, if this was the first Death Star they built, it was kind of a prototype, and such mistakes are expected. I had a lot of prototypes when I built bots.”

“Why didn’t Chewbacca get a medal?”

“The Princess was too small to put it on him.”

“Catra!”

“She could have used a droid for that. I would have used my hair - and I think her hair would be long enough if it were magical.”

Indeed, Sam thought as the credits appeared on the screen, this was a very entertaining experience.

The Colonel clapped his hands. “So, what do you think?”

Catra shrugged. “Not bad.”

“Not bad?” Glimmer scoffed. “You were glued to the screen! You almost tore my head off when I talked in that scene!”

“So?”

“You loved it, didn’t you?” Glimmer smirked.

Catra glared at her.

Adora coughed. “Well, it was a little… strong, in places.”

Sam clenched her teeth. The Etherians had lived through similar situations - and the science fiction setting with fantasy elements including a princess would only make it look more, not less realistic. Her team hadn't thought about that.

"I found it very inspiring," Entrapta said with a smile.

"Indeed," Teal'c agreed. "A few brave warriors fighting an evil Empire and winning against the odds - anyone would be inspired by this tale."

"I was more inspired by the technology!" Entrapta corrected him. "I've got so many new ideas!"

"Dibs on a lightsaber," Catra said.

"You want a sword?" Adora asked with a surprised expression.

"No, a lightsaber."

"Well, it should be possible, theoretically. But the power requirements would limit its use. Or make it too heavy to be used easily. And probably make it explode if it gets hit. Still… I think I could build one."

"Really?"

Sam blinked. How many had just said that?

*****

"Lightsabers are just laser swords. Sea Hawk has one."

Catra scoffed at Glimmer's claim. "That's not the same. Sea Hawk has a sword with a blade that can glow. But that's not a blade made out of energy. Or do you see Luke polishing his blade like Sea Hawk does?"

All her friends gave her a strange look. Catra rolled her eyes. "Not *that*."

Adora blushed in that cute. flustered way of hers. “Sorry…”

“You are correct,” Entrapta said. “Sea Hawk’s sword isn’t a lightsaber. Although I think it could be upgraded to offer similar functionality - though with some of the same issues as a lightsaber would have. The power demands would be much greater, which would cause some of the same issues, although you wouldn’t need the same focusing and limiting mechanism. If you use the blade as a medium, you don’t need an energy field to contain the plasma.”

“So, it would still explode if it were hit?”

“Yes,” Entrapta said. “The energy density of the power supply would just be too high to avoid that - unless you only want to use it for a few minutes.”

“That wouldn’t be enough for a battle,” Catra said.

“Why would you need a lightsaber, anyway?” Daniel asked. “You have a magic sword. Or claws that can cut through armour.”

“It is an elegant weapon of a more civilised age,” Teal’c said. “I would like to use such a weapon in battle.”

“But that wouldn’t leverage your advantages in strength and mass,” Glimmer pointed out.

“When facing other Jaffa, I may not have such advantages,” Teal’c retorted.

“And it’s a cool weapon!” Bow gushed. “I wonder if I could make lightarrows.”

“Oh! They wouldn’t have to be active for long - and exploding if containment is breached would be a bonus!” Entrapta said.

“But in order to get a significant blast out of a power cell, you’d have to make the arrow rather heavy,” Hordak said.

“Unless we used anti-gravity generators.”

“Are you planning to use a trebuchet to shoot the bolt?” Catra pointed out.

“No!” Bow said.

“That would be… no?” Entrapta looked disappointed.

“You know, the cultural impact of Star Wars is much greater than the inspirations for weapons. Or it should be,” Daniel commented with a frown. “The themes of the movie resonated with a lot of people who would have dismissed a mere science fiction movie. Some consider it a fairy tale set in space. You know, with princesses, knights, dark lords…” He trailed off, looking a little sheepish. “I mean, for Earth, before we made contact with you, it was a fairy tale.”

“Way to go, Daniel,” O’Neill muttered under his breath, and the man blushed a little.

Catra cleared her throat. She had no intention to go over all the ‘themes’ - the Evil Empire already made her remember things she didn’t like to think about. Like her life in the Horde. “So, how about we watch the next movie?”

“Right.”

Good. Catra smiled and settled down on the carpet, leaning against Adora’s legs, as Teal’c swapped the cassette for another.

“The next movie is widely seen as the best of the trilogy,” Daniel commented.

Well, Catra thought, that remains to be seen.

“What a cute bot! Oh, no - they shot it!”

“This is a very effective strategy for automated interstellar recon. If we flood the enemy’s system with stealth bots, the intel this

would produce… the technological challenges would be easily met if we manage to miniaturise the FTL communication array…”

“Oh, no! The poor tauntan!”

“It’s just a dumb animal. It’s not as if he cut open Swift Wind, Adora.”

“But it’s so cruel! It carried him through the storm, to Luke, did its best, and now he kills it?”

“It would have died anyway.”

“He just choked the man to death?”

Catra resisted the urge to reach for her own throat as she remembered almost suffocating when Hordak punished her.

“That’s a very drastic way to deal with failure. Although I can understand the feeling.”

“Hordak!”

Catra didn’t look at him as Adora protested. She had gotten him back, anyway. Beat him. Not that it mattered in the end.

“Did you never want to kill a subordinate that made such a huge blunder in the Alliance?”

“Of course not! Right, Glimmer?”

“Shh. The invasion starts.”

“Glimmer?”

“Shh!”

“Imperial walkers? Oh!”

“Don’t tell me you’re planning to build those!”

“What? No. Too unstable. And too slow. But they look nice! Perhaps we could build them as tiny bots?”

“Well, that was to be expected. If you have lower numbers and lower firepower, don’t get into static battles.” Catra scoffed.

“They had to gain time for the others to evacuate!”

“Should have had a better plan. Like buried explosives. Or decent artillery. They didn’t even have good fixed defences. Hell, if they were about to sacrifice the troops anyway, strap them in those speeders, fill it up with a bomb and ram the walkers.”

“Catra!”

“What?” The tactics shown weren’t good. Anyone could see that.

“That’s a very, very dense asteroid field. It must have been very recently formed, or it would have spread out - the Empire must have blown up a planet in the system! They have another Death Star!”

“I think they would need space suits for this, not just breathers. Unless this cave has an atmosphere somehow. Magic?”

“That’s a huge monster. A really huge monster.”

“I could take it. I think.”

“You’re She-Ra.”

“Well, a sufficiently big bomb would kill the monster - especially if it swallows it without digesting it.”

“Ew. Look at that swamp! Can you imagine the smell of it?”

“Yes, Glimmer.”

“Oh, no, R2-D2!”

“That is Yoda?”

“It might just be a spy for the real Yoda. Like Hordak’s spy.”

“He reminds me of Madame Razz.”

“Ugh, you’re right, Adora.”

“Vader? Here?”

“Yes! Off with his head!”

“Bah! That was just a dream!”

“I don’t trust that guy.”

“You don’t trust anyone.”

“He’s too… see? He’s a traitor!”

“Oh, no! How could they do this?”

“See? She loves him, not Luke! The scoundrel wins!”

“That doesn’t look like winning, Catra.”

“Well, it seems a rather ineffective alternative to stasis pods. Although the energy demands over time might be low enough to make it a better long-term storage method.”

“We’re not going to freeze people, Entrapta!”

“See? He wasn’t a traitor!”

“He was a double traitor!” Like Double Trouble.

“You tell him, Luke! You…”

“…”

“Impossible! He can’ be Luke’s father!”

“Why would he cut off his son’s hand? It must be a lie!”

"Why would he lie about this? And why would he make up such a lie?"

"I don't believe that Obi-Wan lied to Luke!"

Well, Catra could believe that. Very well. She glanced at Adora, who had a grim expression as well. Both knew about lying… people who raised you. Hordak looked grim as well - he would, of course.

And that was supposed to be the best movie of the trilogy? Who wanted to watch the heroes lose?

*****

"Well, now we absolutely have to watch the next movie!"

Jack O'Neill agreed with Adora's outburst. Not because he wanted to watch the movie - Teal'c was already moving - but he didn't want the Ethrians to dwell on the downer ending for too long. It was obvious that the movie hit quite a few of their buttons. The way Catra had almost touched her own throat when that Imperial Captain had been strangled, and the reaction to Darth Vader's revelation… Well, Jack had already known that they had some issues with betrayals. And he could definitely tell that 'need to know' would have to be carefully managed should they form an alliance with the United States - they wouldn't accept being kept out of the loop. Fortunately, they were all leading members of the Princess Alliance, so they should have the necessary clearances.

"Yes, I concur," Teal'c said. "While many consider 'The Empire Strikes Back' the best Star Wars movie, it does not have a happy ending. Although this follows the classic structure of a tale - the second act is often focused on challenges and problems before the third act offers the solution."

Teal'c's English lessons obviously had covered literature in more depth than Jack had expected.

“Way to spoil the ending!” Catra complained with a scowl. Although it looked a little fake to Jack. And Adora was clearly relieved there would be a happy ending. Same for Bow and Glimmer.

Well, they were all kids. Except for Hordak, and Jack didn’t care about him, and Entrapta, who often acted like a kid. A kid who could nuke a country or planet if an experiment went wrong.

He opened another beer while the opening began.

“See! They have a second Death Star! That’s where the asteroid field came from!”

“No, this is a different system.”

“The Emperor is even eviler than Darth Vader?”

“Of course he is! Darth Vader would have killed him otherwise!”

“All that sand can’t be good for the poor bots!”

“They are called droids in Star Wars.”

“The sand is still not good for them. I hope they have enough lubricants.”

“He just gave them to that… slug? Without even telling them? But… how could he be so cruel!”

“Well, did you see his clothes? He went all dark. Pretty sure he joined his father.”

“Catra! They wouldn’t have skipped that! And Luke wouldn’t do that!”

“They could use a flashback to show it! And he just handed over the bots to Jabba!”

“I’m sure he has a good reason for it!”

“Dream on, Adora!”

“Shh!”

“Sorry!”

“Shh!”

“It… ate her. They fed the girl to a monster!”

“They shouldn’t be trying to make a bargain with the slug! Just kill the real monster!”

“Oh, no! They captured Chewbacca!”

“That bounty hunter is crazy!”

“Or he’s bluffing. But whether he was bluffing or crazy, it worked!”

“Oh! It’s Leia! She went in to save her love!”

“Did you expect her to wait until Luke the Dark bought him?”

“Oh, no!”

“How dumb was that? Didn’t she have anyone to watch her back? She makes Alliance missions look good!”

“Hey!”

“You know it’s true!”

“Well, you did forget me once…”

“Those were special circumstances.”

“Oh no! Poor Leia!”

“Well, that’s a better costume than her armour.”

“Catra!”

“Don’t tell me it’s not hot!”

“Slave Princess Leia is one of the most iconic visuals of the trilogy. Many fans love it and don similar costumes for events. It is also said to feature heavily in many teenage fantasies.”

“Thank you, Teal’c.”

“We should buy a set for Adora. I bet she’d look great in it!”

“Catra!”

“What? You would!”

“Oh, no - Luke is getting eaten by the monster!”

“Big loss.”

“Oh no… that poor monster. Look at the man crying!”

“The monster ate the other girl.”

“But it didn’t know better. It’s all the fault of Jabba!”

“Yes! And he tortures bots!”

“Robots are called droids in Star Wars.”

“Oh! This must be magic - you wouldn’t survive for a thousand years in its belly otherwise!”

“Why didn’t anyone just drop a bomb down its maw?”

“So they won’t kill the victims, duh!”

“Can they get them out?”

“They… Yes! Lightsaber time!”

”And there’s the double traitor - is that triple traitor now?”

“And down goes the bounty hunter! Bon appetit!”

“Hah! Die, Jabba, die!”

“Killed by his own foolishness. He should have known better than handing his slaves such a handy weapon.”

“Or he should have had better guards. I would have killed all of them myself for letting him out of their sights.”

“Oh, the Emperor is small.”

“And not wearing armour. That is foolish.”

“He’s got thousands of guards.”

“They could easily betray him. Personal armour is of crucial importance.”

“You would say that, of course.”

“Darth Vader is his father!”

“How could they have lied to him?”

“They didn’t tell him about his sister?”

“They separated them?”

“How cruel!”

“Those are supposed to be the good guys?”

“Leia is his sister? What?”

“Ew!”

“No wonder she loves Han.”

“Ew.”

Jack swallowed a comment. Yes, the Etherians didn't deal well with deceptions and betrayals.

"Han volunteered? Must still have brain damage from the freezer."

"He's a hero!"

"He should know better than trusting those kinds of plans."

"We need such bikes!"

"Catra! You just saw how dangerous they are!"

"Doesn't matter. We need such bikes. For… scouting or something."

"Bow! Not you too!"

"Cannibal furballs? Why doesn't Luke kill the monsters?"

"But they look cute!"

"And want to grill Han alive."

"Well…"

"What's Luke doing? He's acting like Adora!"

"Hey!"

"Well… he is?"

"Bow!"

"It's a trap! It's a trap!"

"Indeed."

"Those stormtroopers are garbage! Getting beaten by a few furballs with sticks and stones? Even Kyle would have done better than that!"

“Definitely.”

Jack really needed to meet this Kyle.

“And the shield is gone! Bye-bye Death Star!”

“Luke’s still on it!”

“Luke chose to head there.”

“Hah! Die, Emperor, die!”

“A fitting end for him.”

“Adora?”

“Uh, yes, a fitting end.”

“That reminds me of…”

“We know, Entrapta.”

“Oh, no… Darth Vader is dying?”

“Come on, heal him - use the force, Luke!”

“He can’t heal him? Didn’t they teach him anything?”

“And there is no spare armour. That’s not good planning.”

“Well… that’s a happy ending, I guess.”

“Darth Vader looks harmless without his armour.”

“Indeed. He has become a force ghost.”

“Ah.”

The Etherians were rather subdued after the end credits started to roll, Jack noticed. Perhaps they should have picked another movie for this occasion.

*****

“So… I guess that was a happy ending,” Adora said. All but Vader lived, but…

“You guess?” Catra raised her eyebrows, and her ears perked as she grinned at Adora.

“Well… It’s commonly seen as a classic happy ending,” Daniel said.

He had been unusually silent during the movies, Adora realised. He hadn’t said even nearly as much as Teal’c. Was he not feeling well or something? Should she offer to heal him? Or was this some cultural taboo that she and her friends had just broken? Sam and Jack hadn’t said much, either. And all three looked… concerned. Even tense. “Uh… should we have stayed silent during the movie?” she asked.

“What?” Now Daniel looked confused.

“Did we break a rule?” Adora explained.

“I think I remember something about shutting up in the theatre,” Catra said. “But that’s boring.”

“Ah… technically, this isn’t a theatre,” Daniel said.

So, they should have stayed silent. “Sorry.” Adora sighed.

“No, no - this is a private viewing!” Daniel quickly told her. “Reacting to the movie is perfectly acceptable. Especially amongst friends.” He nodded several times.

“Ah.”

“And you can observe our reactions better if we don’t stay silent.” Catra snorted and grinned, but there was an edge to her comment.

Daniel blushed a little. “Well, uh, I couldn’t not observe your reactions.”

They had been a little loud, hadn’t they? Adora felt her cheeks heat up. “Sorry.”

“Don’t be sorry - this isn’t a theatre full of hardcore fans,” Jack said.

“Indeed.” Teal’c nodded. “There is nothing wrong with expressing your passion when watching Star Wars.”

“In private,” Jack added.

They hadn’t denied that they had observed their reactions.

“Anyway,” Daniel went on, “the ending does match all the criteria for a classic happy ending. The protagonists survived, the hero and the heroine got together, evil was vanquished and justice and peace restored.”

“Luke didn’t get the girl, though,” Catra said, grinning. “Then again, that would’ve been awkward.”

“Catra!” Adora pouted at her lover.

“You’re just annoyed that Luke wasn’t the hero of the story.”

“He so was!” Adora retorted.

“Arguably, Luke’s the protagonist - we see his journey from farm boy to Jedi Knight,” Daniel said. “A classic hero’s journey.”

“He is the hero destined to overthrow the evil empire and redeem his father,” Teal’c commented.

“He’s boring. Han’s exciting. And sexy. Ask Leia.” Catra was just trying to rile her up, Adora knew it. Then again, the movies had had scenes that cut a bit too close.

She glanced at Hordak and Entrapta. Hordak must have realised the parallels between Darth Vader and himself, down to the armour keeping them alive. But unlike Hordak, Darth Vader hadn't survived. And Entrapta couldn't have missed that, either. The two were huddled together, too, staring at…

…Entrapta's device? And discussing something?

"They're talking about new bots," Catra whispered as she slid into Adora's lap.

"Oh." Still, the movie had affected them. As it had Adora. Luke… there was just something to his 'journey'. Finding the sword of his father, facing the evil Darth Vader, trying to learn how to use his powers… Adora knew how that felt like. Being lied to by your mentor - she also knew exactly how that felt. And losing your… well, Shadow Weaver wasn't Darth Vader, but she had died in a similar way. Was Luke as conflicted about his father's death? Was he relieved as well, partially at least? And as ashamed to feel that way?

Of course, it could have been worse. Much worse. Shadow Weaver had been… Shadow Weaver. Adora remembered how she had felt on Horde Prime's flagship, holding Catra's lifeless body after that fall, thinking she had lost everything.

She wrapped an arm around Catra's waist and pulled her closer. She wouldn't lose her. She'd die before she would let that happen. Again.

"So, that's your favourite movie, Teal'c?" Bow asked,

"No, he hates it and just… Hey!" Catra started to say, but Adora interrupted her by bending forward and nuzzling her ear.

"Let it go," she whispered.

Catra wriggled in her lap in response and pouted but didn't needle Bow.

“It is an epic tale of heroism and triumph against evil,” Teal’c said. “A corrupt Empire built on lies brought down by bravery and cunning. What better inspiration could you seek for our own struggle against the Goa’uld?”

“Well, I hope we won’t have to cut it as close as the rebels did,” Glimmer said. “And with a better plan.”

“And more firepower,” Catra added.

And without losing any of my friends, Adora thought.

“Well, the situation for us is different,” Sam said. “We - if we combine our forces - have technological superiority and better doctrines for both space and ground fighting. And the Goa’uld are far less united than the Empire.”

“Because we killed Ra a few years ago.” Jack grinned. “They’re busy stabbing each other in the back to see who gets the throne. But that window of opportunity won’t last forever.”

“Which is why we will strike as soon as possible,” Glimmer said, nodding. “Once we solidify alliances and gather enough ground troops, we can go on the offensive.”

Uh.oh. Adora knew where this was headed - and she didn’t want to talk about politics or war. Not now. “So, did they make more movies?” she asked Teal’c. Catra snorted, but Adora didn’t care that her attempt to change the subject was obvious.

“A few spin-offs,” Daniel said. “But they were not, well…” He shrugged. “Not the same quality. And there are comics, novels and games. They are making a new movie - a prequel - but I think they stopped production and are considering redoing it or something.”

“And don’t forget the TV Christmas special!” Jack grinned.

Teal’c glared at him. “We do not talk about the Christmas Special.”

*****

Spooks Part 1

Cheyenne Mountain, Colorado, United States of America, Earth, September 20th, 1998

"...and we need to do this again! Bye!"

"Bye! Drive… fly responsibly!"

"Of course!"

Samantha Carter watched as the shuttle lifted off and flew into orbit, suppressing the slight envy she felt at the reminder that for the Etherians, flying into space was as easy - or easier - than driving home after work.

"Well, that's it." The Colonel sighed and turned back to look at Sam and her friends. "Mission accomplished. I guess."

"Mission?" Daniel blinked.

"To keep Adora from causing chaos by offering magical healing to Earth," the Colonel reminded him.

"Ah, yes." Daniel nodded. "I was more concerned with their reactions to Star Wars."

"We noticed," Sam told him.

He smiled a little sheepishly. "It's fascinating. An advanced civilisation, reacting to Earth's pop culture. I mean… we haven't seen that before. Even contact with Abydos wasn't like… well, we didn't have much in the way of pop culture to show. I did tell a lot of stories, but telling the plot of Star Wars isn't the same as watching the movie." His smile turned both sad and wistful.

Sam suppressed a wince. He would be thinking of his wife.

“The visuals are striking, even for someone used to space flight, but the story itself is its strength,” Teal’c said.

“Not everyone agrees, Teal’c,” the Colonel told him. “For many critics, as soon as people have ray guns, it’s just cheap entertainment, not cultured.”

“It seems those people value appearances over substance,” Teal’c said. “Therefore, their opinions are highly suspect.”

“Yeah, I’d say so too. Many of them would probably claim Hockey isn’t the best sport ever, either.” The Colonel grinned.

“Jack…” Daniel sighed. “Well, they liked Star Wars. I don’t think they were just being polite.”

Sam nodded. She didn’t think Catra would even consider lying just to be polite. “Yes.”

“But we kind of screwed up as well,” the Colonel went on. “We forgot that for them, Star Wars is like watching a war movie for veterans. A contemporary war movie.”

Sam winced. They should have considered that.

Daniel nodded, but Teal’c frowned. “What do you mean, O’Neill?”

“The movies made them think of things they didn’t want to think about. A number of those scenes were probably a little too close to what they lived through,” he explained.

“Yes,” Daniel agreed. “No one triggered, but… we should have considered that an evil Lord of the Sith in a suit of armour that doubles as a life support system would remind Hordak about, well, himself.”

“Well, I was more concerned about the whole betrayal thing in the movies,” the Colonel said. “Hordak is a big former warlord and can handle himself.”

“I wouldn’t be so sure about that, Sir,” Sam objected. “He was raised in very… unique circumstances. They all were, compared to the average American soldier.”

“And they are stronger for it,” Teal’c said, nodding slowly but firmly. “They faced the worst and were not broken. And those of them who served a false god refuted him. Like Vader ultimately refuted the Emperor.”

Just like Teal’c.

“Well, yeah, but they didn’t die like Vader,” the Colonel said. “And even if they won, not many want to be reminded of what they did and lived through in a war.”

Sam nodded again and suppressed a sigh at Teal’c’s expression. For all their friendship, and his interest in Earth culture and customs, Teal’c still was a Jaffa, with all that entailed.

“Why wouldn’t they want to remember their deeds? They fought a tyrant and won. This is something to be proud of - and to tell others to teach and inspire them.”

“Well, they’re still kids,” the Colonel said. “And yes, Entrapta isn’t a kid, but she’s… Entrapta. So, we can’t treat them like Jaffa.”

“I think they could do with some therapy,” Daniel said. “Especially if the war with the Goa’uld starts for real.”

“Yeah, getting them therapy might be a tad difficult,” the Colonel said, grimacing. “You don’t send your absolute monarch to a shrink. And you absolutely don’t send an absolute monarch of a foreign country to a shrink.”

“Well, they’re an advanced society; I think they have their own… therapists,” Daniel said.

“You think? Or you hope?” The Colonel raised his eyebrows.

"It's not a topic that came up so far in our talks," Daniel replied. "But I'll have to ask them about it. This could have consequences for the war efforts."

"Just be very… diplomatic," the Colonel told him. "We're already on thin ice with the whole gay marriage thing. If they think we consider them crazy, it might kill the alliance."

"I think you overestimate the problem, O'Neill, and underestimate our friends' strength. Honesty is the best policy, as they said themselves. Just voice your concerns in a straightforward manner." Teal'c nodded at them.

"Easier said than done," Daniel muttered.

Sam resisted the urge to bite her lower lip. She was an officer in the Air Force, not a teenager faced with a row in the family. "I could ask Entrapta about… talking to people," she offered.

"Good idea. I don't think Entrapta will get mad," the Colonel said, nodding. After a moment, he demonstratively yawned. "But we better get home now. It's past midnight, and we'll have a long day tomorrow, what with all the debriefings and reports about tonight."

Oh, yes. Sam clenched her teeth.

"This was a private affair, Jack," Daniel said with a frown. "Our reports should say so." Sam could hear the 'and nothing else' as if he had said it.

"Yeah. I'm not saying we should rat them out. But we have to let Hammond know about the healing thing. And that they like Star Wars. And warn the brass about pushing their buttons." The Colonel snorted. "And that they absolutely hate being lied to."

That was true. But Sam was sure that the Etherians didn't like being spied on, either. And they would see revealing what was said tonight as breaking their confidence.

*****

Earth Orbit, Solar System, September 20th, 1998

Catra leaned back into her cushion - for all her muscles, Adora was quite soft when you knew where to sit and were flexible enough - and sighed as they approached Darla. "So… how much intel do you think did we let slip to SG-1?"

"Catra!" Adora blurted out. "This was a movie night! They didn't spy on us!"

Catra snorted. Adora was great - brave, kind, forgiving, loving, protective, honourable, incredible in bed - but she was trusting to a fault. "They only had to keep their eyes and ears open as we watched the movie." And she was sure neither O'Neill nor Daniel had missed anything.

"But that doesn't mean they would use that against us!" Adora retorted. "They're our friends!"

"Yes," Glimmer chimed in. "But they're also loyal towards their country."

"Well," Bow spoke up, "I don't think they would attempt to use what they know about us against us, but what about using it to, ah, better understand us?"

Catra snorted again. "You mean, use their knowledge of us to help them plan how best to make a deal with us?"

"Err… it sounds bad if you say it like that." Bow pouted.

Glimmer, though, nodded at Catra. "Exactly."

"They know how to make a deal with us!" Adora, predictably, protested. "We told them what we want! Equal rights for everyone!"

“Yes,” Glimmer agreed. “But the American president might think that if he knows more about us, we’ll compromise on that.”

Catra nodded. That would fit what they knew about the American government. Or any Earth government.

“Well, then them knowing more about us is a good thing,” Adora said. “So they’ll know we won’t. Compromise, that is.”

“They’ll still attempt to find leverage. Even if they manage to fulfil our conditions - or especially if they do and an alliance is formed. They want to have as much influence in the alliance as possible,” Hordak said.

Catra nodded again.

And, once more, Glimmer agreed. “That’s how it works back home as well.”

“But…” Adora frowned at them. She probably would have jumped up and crossed her arms if Catra hadn’t occupied her lap. “Our friends don’t think like that!”

“Well…” Glimmer took a deep breath. “Not our close friends, I think.”

Adora looked at her as if she had been told that she would not be allowed to eat anything but Horde rations for a month. Or a year. “But…”

“Adora,” Catra told her. “Yes, our close friends won’t stab us in the back or play political games with us. They fought with us, and they know what was and is at stake.” And just how powerful She-Ra was. “But the people on Earth? Their rulers? They don’t. They don’t know us.”

“And for them, that’s normal. Politics,” Glimmer added.

“Yes.” Bow nodded. “I’ve read up on their history, and their alliances were full of power struggles and politics. Sometimes

even between people of the same country. Fellow soldiers."

"That was normal in the Horde - my Horde; not Horde Prime's," Hordak said.

He was glancing at her, Catra noticed. She bared her fangs in a grin in return. They understood each other.

"So, you think SG-1 will tell them… that we liked the movies?" Adora asked. "Or will they tell them how we reacted?"

Catra shrugged. "Hard to say." O'Neill was the kind of man to do what he thought was necessary, no matter what. But what would he think was necessary? That was the big question. Teal'c, though, she was sure wouldn't betray their confidence. Sam and Daniel... Sam would follow O'Neill's lead. Daniel would do what he thought was right. He wouldn't betray them.

"I think they'll be fine," Entrapta said. "And even if they tell them what we thought of the movies, so what? It's not a secret." She beamed. "There were so many neat ideas! I can't wait to start doing science!"

That was… well, not entirely true, but Entrapta was right that even if the Americans got the full records of the evening, they wouldn't really gain much that they hadn't already known. "Well, not so for their magic. It sucked."

Adora nodded.

"Yoda managed to lift the entire X-Wing," Bow pointed out.

"Big deal," Adora said. "I can do the same without magic. And so could Scorpia."

Catra chuckled. "But you'd be all dirty afterwards."

"And anti-gravity generators could do the same as well," Entrapta added. "Luke should have left them on, anyway, when he landed in a swamp."

"Yeah, that was dumb. But that's Luke for you. All brawn, no brains."

"Hey!" Adora pouted at her.

Catra grinned back. "I wasn't talking about you."

"I know what you meant!"

Catra let her tail rub against Adora's nose, and when her lover gripped it and was distracted, Catra leaned in and planted a kiss on her lips.

"Mhh."

Cara closed her eyes and enjoyed the kiss. That was how a relaxed evening should end.

"Oh, for… at least wait until we're back inside Darla!" Glimmer complained.

Catra ignored her. No one kept Glimmer from kissing Bow.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 20th, 1998

"We need more details, Colonel O'Neill. This is of crucial importance." Smith - if that was the man's real name, Jack O'Neill would eat his service cap - frowned. Jack had the impression he didn't really believe that Jack didn't remember many details.

Well, Jack didn't care. He hated spooks as much as he hated politicians. Perhaps a little bit more since he had worked far more often with spooks than with politicians in the past. "I told you that they seemed to like Star Wars but also that it seemed to remind them of their own war."

“Yes, but which scenes, in particular, did remind them of their own war? We cannot build a dependable psych profile if we can’t pinpoint the exact triggers.”

Which was part of the reason Jack wasn’t going to tell the man any details. Shrinks ranked third on his list, after all. Second on any day that he had a mandatory counselling session scheduled. “I also told you that the revelation that Obi-Wan and Yoda had lied and kept the truth about Luke’s family from him struck them hard. That kind of manipulation seemed to rile up all of them.”

“Yes, you did. But we need more data.”

The guy sounded like a suited version of Entrapta without her charm and innocence. No, like a druggie suffering withdrawal. And Jack didn’t want to sell out his friends to get the guy his fix. “Did it occur to you that if you build up your psych profile and then try to ‘handle’ the Etherians, they will notice that?”

“I doubt that, Colonel.” The man’s bland smile grew a tad more arrogant.

Jack clenched his teeth. “You’re still thinking that the Etherians are kids from a fantasy land, aren’t you?”

“We’re aware that they have fought a war and have access to advanced technology.”

Damn. Jack hoped that the man’s superiors were more on the ball. “You don’t get it. They aren’t young people in over their heads. They aren’t traumatised kids you can manipulate with a lollipop and a smile. They rule their own countries.” Well, some of them did. “They’re leading armies and fleets. And they have experience with politics and war.”

“Only two of them are ruling princesses, and Entrapta has shown a marked reluctance to engage in politics which points to a lack of experience - something which was corroborated with information you provided.”

Oh, for crying out loud! "All of them have command experience at the highest level. They have been leaders of a coalition of sovereign rulers. It's all politics at that level." One of the reasons Jack was happy as an officer in the field. "Stop thinking of them as naive kids! Think of them as presidents and four-star generals."

"You're not an analyst, Colonel O'Neill."

"And you're not in charge of US politics," he shot back. "You don't understand the difference between naive and principled. You think because they don't give a damn about the 'realities' of American politics, they are ignorant." The man's glare told him he was on the mark. "They know how the USA works. They know the limits of our system." Daniel certainly had taught them more than enough about that on the way back.

"If they do, they don't really show it," the man fired back.

"They don't have to," Jack spat. "They don't need us. We need them."

"And that is why we need more intelligence about them, Colonel!"

*****

"I think Star Wars has been ruined for me!" Jack O'Neill exclaimed as he sat down at SG-1's table in the cantine.

"Why would that be, O'Neil?" Teal'c asked.

"Didn't you get debriefed about the trilogy?" Jack asked as he poked the 'food' on his tray. Just to check if it was still alive. Not that it looked as if it had ever been alive.

"I was happy to explain the intricacies of Star Wars to the agent," Teal'c said without changing his expression. "At length."

Which meant that he had drowned the interrogator in movie trivia and hadn't said much if anything about the Etherians. Jack snorted.

“I explained the unique opportunity of watching people from a society without movies to that kind of media,” Daniel added. “Well, a society without movies but with the cultural background to understand Star Wars.”

“I stuck to technical aspects of hypothetical Star Wars technology reproduced with current technology,” Carter said in a bland voice.

“I guess I should have stuck to military tactics seen through Star Wars,” Jack sighed. His team was learning. Maybe a bit too much.

“Clashed with the interrogator?” Daniel asked.

“He wanted to know too many personal details,” Jack replied. “Sounded like a stalker. I told him that the Etherians don’t like stalkers.” Well, not in so many words.

Daniel chuckled at that, but Carter nodded.

“So!” Jack said, trying some of the side dishes and grimacing. They must have let the Marines help out in the kitchen today. “Let’s hope that the head spooks are more reasonable than their underlings.”

“Since we haven’t burnt any bridges so far, I think that’s a safe assumption,” Daniel said.

“The Etherians are meeting with the Germans today,” Carter commented. “They just passed the new legislation in a special session.”

And America was still trying to make half their politicians understand that the times had changed. Jack sighed. Beaten to the goal by the Germans? That was almost insulting. No wonder the spooks were getting pushy - they must be under a lot of pressure.

Adora switched off the television before Catra could switch channels again. "I think you're becoming a little too… fixated on this." What was the term? News junkie?

Catra snorted. "I'm just keeping up with the news."

"By zapping through all channels?"

"Yes!" Catra grinned. "It's not as if I need to watch for long before I know what they'll say."

Adora frowned. She still had some issues understanding Earth people. "And what did they say?"

"Some countries want to get our technology and will pass any law they think will make us like them but don't want to look as greedy as they are, and others think we're the devil and want us dead." Catra shrugged. "Same as yesterday:"

"But that politician at the end wasn't like usual!" Adora protested.

"He suddenly found out that his god loves everyone?" Catra scoffed. "You believe that? He was either bribed or blackmailed, I bet."

“He sounded sincere.”

“As sincere as Shadow Weaver,” Catra shot back with a sneer. Adora raised her eyebrows, and she sighed. “Sorry, but I don’t buy this ‘our god suddenly loves you too, and it has nothing to do with the fact you have something we want’ story.” She grinned. “Not without their god saying anything about it in person.”

Adora frowned at her lover. She knew what Catra meant.

“I bet you’d make a much better goddess…”

“Don’t you start! I’m no goddess!” Adora hissed. Priest was bad enough. And the people on Earth would really hate her if they thought she claimed to be a goddess. Or, worse, they might revere her!

Catra giggled. “Just yanking your chain.” She grinned. “And speaking of… we really need to buy you that outfit.”

Adora blushed.

“Are you at it again?” Glimmer scowled at them from where she was reading what data Entrapta had collected on the Bundeskanzler. It wasn’t much - Adora had read it twice already.

“Just passing the time. Why, do you want one as well?” Catra’s grin widened.

“I want you to focus on our meeting with the German ruler!”

“What’s there to focus on?” Catra shrugged. “It’s going to be the same as with the French and British: They want our technology, and we want their soldiers.”

“They have vastly different cultures,” Glimmer retorted. “We can’t just treat everyone the same.”

“When it comes down to it, they all want the same,” Catra shot back.

“Yes, but how they want to get it differs,” Glimmer pointed out. “The Germans don’t have a princess or king, but they didn’t kill their monarchs, either. That makes them different from the French and British.”

“Didn’t the grandson of their last ruler propose to restore the monarchy in Germany for better relations with us?” Adora asked.

“Great-grandson,” Glimmer corrected her. “And that wasn’t received well. Not at all.”

“They didn’t do anything to him, though,” Catra pointed out.

“Anyway,” Glimmer said, “we can’t just half-ass this. Germany is the most powerful economy in Europe, and their industry is very modern. If we can get an alliance with them, then, with the French and British on board, we’re set for the time being.” She looked at Catra. “So, don’t needle them.”

“Sure, sure. They don’t have a sense of humour anyway, according to what I’ve read.”

“That might be British propaganda,” Bow pointed out.

“Well, we’ll find out.”

“No. We won’t find out if they have a sense of humour or not. Not in the middle of our negotiations!”

“Spoilsport.”

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 20th, 1998

“So, the Goa’uld prisoners have refused to use the keyboard so far?”

Samantha Carter nodded. “Yes. We have installed keyboards in both cells, but other than trying out the keys, they have not attempted to communicate with us,” she told Entrapta.

Entrapta frowned and stopped looking around in Sam’s lab, presumably for new things. “Are you sure that they can read without a host? They could be relying on a host for higher cognitive feats and only act on instincts until they can get a host. They do access their hosts’ memories, after all, don’t they?”

“Our intel indicates that this isn’t the case,” Sam replied.

“But did you check?” Hordak asked.

Sam looked at the clone. “If that was the case, then the Goa’uld controlling the animals we encountered should have been more limited in its actions.”

“That might have been instinct as well. Or the creatures were more intelligent than you assumed.”

That was theoretically possible, but Sam doubted it. “With their genetic memory, and based on previous encounters, it seems implausible that they do not retain their intellect outside a host.”

“Well, the small size of their brains means that they have a much more efficient neural structure than humans if they also retain their intelligence,” Entrapta said.

“They don’t piggyback on human brains.” Sam pressed her lips together for a moment, suppressing a shudder at the memories of her own time as a host. “My intellectual capacity wasn’t diminished at all while I was puppeted.”

“Oh.” Entrapta blinked, then bit her lower lip. “I see. But why wouldn’t they communicate with us?”

“We don’t know. It might be their version of only giving name, rank and serial number,” Sam speculated.

“Or they want to force you to provide them with a host to interrogate them, giving them leverage through a hostage - or at least more options to escape,” Hordak suggested.

“That has been mentioned as well,” Sam admitted. And some of the agents had suggested actually doing it.

“So, they’re just being stubborn?” Entrapta frowned.

“Or desperate,” Sam said.

“Well, we wouldn’t kill them,” Entrapta said. “And they could have a more comfortable stay if they cooperated - we don’t know too much about their needs outside a host.”

Executing the Goa’uld prisoners - or one of them, to ‘encourage’ the other - had been suggested as well. Sam understood the Colonel’s attitude towards ‘spooks’ a bit better now. “They haven’t reacted to such offers either.” That was amongst the basics of interrogation. “And yes,” she added when Hordak opened his mouth, “we also made the offer using hieroglyphs they would be able to read.” One of the Goa’uld had been living in the United States for decades, but the other wouldn’t be able to understand or read modern languages.

“I wasn’t going to mention that since it was obvious,” Hordak said. “Did you remove privileges from the prisoners in response to their refusal to communicate?”

“You mean like… torturing them?” Sam asked.

Hordak tilted his head. “Making their cells less comfortable would probably qualify, yes.”

“Hordak! We don’t torture prisoners!” Entrapta scolded him.

He seemed unfazed. “But the people on Earth do.”

“Not in America. We don’t torture prisoners,” Sam said. “It’s illegal.”

“Your history disagrees with that statement,” Hordak said.

“Those were crimes. We won’t torture our prisoners.” Sam shook her head. “That’s ingrained into our laws. Anyone who does torture a prisoner will be persecuted by the law.” If they caught them - Sam had no doubt that the NID would torture people if they thought it would help their goals.

“If removing amenities is not acceptable, and they do not react to offers of better conditions, then you have few options left to entice them into cooperating with you,” Hordak said.

“We’re aware of that.”

“Appeal to their curiosity?” Entrapta suggested. “Show them something they didn’t know before? Offer them to do science? It worked on me!” she added with a smile, then frowned. “Of course, Catra later said it was a dirty trick, but I don’t know if she was serious.”

“Letting them do science would imply giving them a host,” Sam said.

“Not if we make tiny tools for them!” Entrapta smiled.

“I do not think that giving the prisoners access to tools is a good idea,” Hordak said.

“And I don’t think they’re interested in science,” Sam added. But they might be interested in information about Etherians. Seth would have known about their arrival, but Osiris wouldn’t have known about it. It was a decent enough idea. “But I’ll pass it on.”

“Pass it on?” Entrapta tilted her head to the side.

“I am not in charge of the prisoners,” Sam explained. “I can make suggestions, but no decisions.” And she could speak out against questionable ideas such as trying to play one of the Goa’uld against the other based on their supposed animosity.

“Right.” Entrapta nodded. “So… what do we do now? Did you work on a lightsaber yet?”

Sam suppressed a chuckle - this was the first time she had entered her lab since last night. “I haven't had the time yet.”

“So, let’s see what we can come up with!” Entrapta nodded several times and then looked at Sam’s desk. “We might need more space, though.”

“And a safe way to test prototypes,” Hordak added. “Plasma blades tend to be dangerous when they lose containment.”

“Yes.” Sam had been told that all research with the Etherians would be supported by Stargate Command - and the government still desperate for closer ties to the Etherians - but she wasn’t sure General Hammond expected them to research lightsabers. Then again, she had her orders, so asking for a lab to test their prototypes would just be doing her duty…

*****

Palais des Nations, Geneva, Switzerland, September 20th, 1998 (Earth Time)

“Yes, small to medium companies are the backbone of our industry. They aren’t famous like our car companies or our arms industry, but they provide the bigger corporations with parts and fill crucial niches in the global economy. So, any agreement about sharing advanced technology will have to keep this in mind.”

Catra felt as if her face had frozen in a polite smile as the Chancellor of Germany - the Bundeskanzler - once again went on about Germany’s industry. They were here to finalise a military alliance, not a trade agreement. But there were more representatives of businesses with him than military officers. At least it felt that way to her.

“Yes, but you also have to consider the need to keep advanced technology safe from spies,” Adora told the man. “Sharing this

technology with every little company is too dangerous."

"I trust our companies," the man said with a slight frown. "They have experience with guarding their technological edge against their competition."

"And against spies?" Catra leaned forward and matched the man's frown. "Not just your other k-countries, but what about alien spies?" She had almost said 'kingdoms' - she blamed her boredom. That would've made the Germans think she wasn't aware of how things were done on Earth and thought they had a king. Or Emperor.

"Well, there shouldn't be any alien spies - you checked, didn't you?" one of the people in suits said.

"We did. But there are more alien species than the Goa'uld," Glimmer said. "You can't just trust we'll catch every spy. And your other countries won't show up - and they want this technology."

"You might have to adjust how you do things - or implement better security for your smaller companies," Bow added.

"That would be possible, but troops used for that would be missing on the front," one of the officers retorted.

"I don't think we want to station soldiers in factories," a man in a suit said with a frown. "The optics would be terrible."

"That might be a good thing," another officer spoke up. "Drive home the fact that we're at war. Some people really don't get that."

"Even the Greens are with us," the first suit said. "We can ignore the fringe."

Adora cleared her throat. "So, speaking of the military, what kind of troops can be mobilised?"

“Well, the Bundeswehr is still in the process of being mobilised for war,” the Minister of Defence said. “We have had some material stowed away, and getting it ready for deployment will take some more time. As will training up the soldiers we need for this.”

“Yes,” Catra said, hissing a little. “Can we get numbers?”

They got numbers. Lots of numbers. But all of them would take a while to be reached. The Germans apparently hadn’t been ready for a war. They had some troops ready but in very limited numbers. Still… “I think we can work with that,” Catra said. “It’ll take time sorting out how we move them and deciding which planets we’ll attack. And we need to coordinate with the rest of the Alliance. Alliances,” she corrected herself - the Princess Alliance had now an alliance with the British and the French and soon with the Germans. That would get confusing.

“Ah, yes.” The Chancellor nodded several times. “And speaking of coordinating, have you considered our proposal for increased trade between Germany, I mean the European Union, and Etheria?”

Catra slowly unsheathed her claws under the table and scratched its underside.

“We would have to discuss that with the European Union, and we’re not ready to negotiate any trade agreements,” Glimmer told him. “We’re talking about a military alliance. Trade can be discussed at a later date.”

“Yes,” Catra nodded emphatically. Her tail was twitching again, but she managed not to flatten her ears.

“Alright!” The Chancellor smiled. “We’ve had proposals to convert submarine yards to spaceship yards. Would that be feasible?”

If not for Adora’s hand on her thigh, Catra would have hissed.

“Such technical details would be best discussed with our experts,” Bow said. “We would have to know more about your ‘submarines’

as well.”

One of the aides started pulling sheets out of a suitcase.

“We should’ve taken Entrapta with us,” Catra whispered as Bow studied the first sheets.

“Yes,” Adora agreed. “She would love this.”

She would also have to be supervised so she didn’t give out technological secrets for free, but yes, this was a matter best aimed at Entrapta. Bow was a techmaster, but he wasn’t experienced with mass production. Or factories - except for knowing how to sabotage them.

Which was tempting, Catra thought with a grin.

“Catra, no!” Adora whispered.

“So,” Glimmer spoke up, probably to cover for Adora’s scolding, “we should have sorted out all the important points, then.”

Like an hour ago, in Catra’s opinion.

“Well, the military parts, yes,” the Chancellor agreed.

“Good. I think we need to discuss the rest at a later date.” Glimmer nodded. “It’s getting late.”

“It’s late afternoon.”

“Orbit lag,” Glimmer lied.

“Ah, of course! So… same time tomorrow?”

Catra didn’t whimper. She had survived worse.

But she wanted to.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 21st, 1998

"...and the Chancellor and the Etherians have been meeting with several representatives of the German arms industry, likely discussing technology transfers, although no details were forthcoming and the government declined to comment on…"

"Figures that the Germans are at the forefront when it comes to getting new technology," Jack O'Neill commented as he shut off the television in the meeting room. "Greedy bastards." He noticed that Daniel was frowning at him. And Carter had that perfectly polite expression on her face that meant she was annoyed at him. "I'm just letting off some steam. No need to mention Operation Paperclip." He grinned when Daniel closed his mouth and pouted.

"I doubt that the Etherians will show such preference to the Germans," Teal'c said. "That would vex the British and the French for no discernable reason."

"They haven't said that there is a deal, just that they're talking about one. It's probably just propaganda for the German public," Jack agreed. "They've got an election coming up."

Daniel frowned again. "You're following German politics?"

Jack snorted in return. "If it's relevant." And it helped when dealing with stupid politicians wanting advice. He was an officer, not a consultant!

"Ah."

"Entrapta didn't mention anything about that," Carter said.

"She might have forgotten about it," Daniel speculated. "You were pretty busy."

Carter didn't blush, but she tensed for a moment. "We were discussing how best to interrogate the Goa'uld."

Jack raised his eyebrows. Entrapta was a sweet girl - woman, he corrected himself; she might act like a teenager, but she was about thirty years old, after all. But she could be very scary when developing new technology. Just thinking about her being interested in interrogation techniques - or tools - was enough to make him feel queasy.

"We didn't discuss torture," Carter said. "Well, Hordak mentioned the possibility, but Entrapta didn't entertain the possibility."

Of course the bastard would have no qualms about torturing people. Or aliens. Jack snorted.

"What did Entrapta suggest?"

"Using their curiosity against them," Carter explained. "But I fear her suggestions would result in a higher risk of escape."

"Ah. On the other hand, our own experts haven't gotten anything out of the Goa'uld so far," Jack said. If not for the Etherians being involved, he was sure they would have attempted torture already. But when your friends were used to locking up prisoners in their palaces' guest rooms, even the worst spooks had to control themselves. They couldn't risk alienating the friendly aliens with more spaceships than the United States had warships.

"The false gods might expect that they will be disposed of once they have no more information to give out," Teal'c said. "A logical assumption."

"We wouldn't murder prisoners!" Daniel protested.

"Of course not," Teal'c agreed. "But given their numerous crimes, the death penalty would be the likely result of a trial."

"I'm sure that our experienced interrogators have mentioned that to our guests," Jack told his friend. "But the Goa'uld probably don't trust them. Not that I'd blame them for it."

Daniel frowned again. He was still a little naive.

But before Jack could point that out to his friend, Hammond entered the room. And his expression told Jack that he didn't have good news.

"SG-1." The general nodded at them. "As of this morning, the Security Council has officially created the International Stargate Command Organisation. The President has agreed to transfer control over the Stargate to the new organisation."

Jack clenched his teeth. He had known this was coming, but it still felt like a punch in the gut. After all their efforts, all the dead, all the money the Air Force had poured into this, the United Nations would now reap the benefits.

Damn.

*****

Spooks Part 2

Cheyenne Mountain, Colorado, United States of America, Earth, September 21st, 1998

"So, they won't talk to us?" Adora bent down and peered at the tank in which one of the Goa'uld they had captured was held. It looked like a fish tank to her, but mentioning that would be rude.

"I wouldn't want to talk to you either if you kept me in a fish tank," Catra commented.

"It's not a fish tank," Sam protested. "It's a secure habitat for alien life forms."

"That's sciency for 'fish tank'," Catra retorted with a grin.

Adora sighed. "And they can understand us in this form?"

"Yes." Teal'c nodded.

"Their senses cover the same range as humans - mostly. There are a few differences, but whatever sound a human can make, Goa'uld can hear," Entrapta explained.

"But Osiris is unlikely to understand anything except for Old Egyptian," Daniel added. "He was sealed in a stasis jar for thousands of years. Seth, though, should understand us perfectly fine."

"Ah." Right, the Goa'uld could just access their host's brains to learn everything they knew. Adora suppressed a shudder - Seth had tried to possess her.

"And Daniel and Teal'c talked to them in their language, but the snakes didn't want to talk back, either." Jack shook his head. "That's the longest temper tantrum I've ever seen."

“Aren’t they just doing what you said prisoners had to do? Refuse to give the enemy any information other than name, rank and serial number?” Adora asked.

Jack frowned at her as if she had something mean, but Daniel chuckled, and even Sam smiled. “It’s not the same.” Adora wanted to ask why it wasn’t the same, but he went on: “So, Entrapta and Carter built some keyboards for them, and specially made screens that they can see through the windows of their cells. Yet they still refuse to communicate.”

“We tested the keyboards - they work perfectly fine. And we demonstrated them to the prisoners. Although Seth should already be familiar with keyboards since he was captured in the United States,” Entrapta said. “They just don’t want to talk to us.”

Adora wrinkled her nose. Perhaps they should respect that? They weren’t the Goa’uld - they respected the rights of their prisoners. Or should - she wasn’t sure that the cells here were actually nice enough for that. The Goa’uld had no privacy at all. Still…

“Make them eat rations and tell them they can order better food?” Catra suggested. “They’d have to talk to us then.”

“We’re not going to torture them,” Entrapta protested.

“The Horde lived on ration bars,” Catra retorted.

“And that wasn’t alright!” Glimmer cut in with a grimace. “That was torture!”

“The grey ones were OK,” Adora said. “Way better than the brown ones.”

Everyone looked at her as if she had said something stupid. She frowned at them, but Glimmer just shook her head, and Catra giggled.

“I am now really curious whether or not those ration bars are worse than MREs,” Jack said.

“Well, we don’t have any of them with us, so we can’t compare them,” Bow said. “But Horde ration bars were really horrible.”

“Disgusting.” Glimmer nodded with a shudder.

Adora looked at Etnrapta and Hordak.

“They provided the troops with a perfectly balanced meal,” Hordak said.

“And if you used food additives, they were quite palatable,” Entrapta said.

“‘Food additives’?” Adora asked.

“Seasoning,” Catra said. “Force Captains got them.”

“Ah.”

“But we’re not here to talk about torture food,” Glimmer spoke up. “We’re here to make the Goa’uld talk.” She looked at the tank and grinned. “And I think Entrapta’s plan has a good chance of working.”

“Making them curious?” Jack asked. “By showing them the news? A tv show that ends on a cliffhanger?”

“No,” Entrapta said. “I’m talking about magic.”

“Magic,” Jack repeated in a flat tone.

“Yes.” Glimmer nodded. “If we had activated Earth’s magic already, I could teleport around. I bet that would make them talk to us.”

“Unless the Goa’uld can use magic as well, then,” Jack pointed out.

“I doubt that they can use magic,” Daniel said. “None of our sources show them using any power that wasn’t based on technology.”

“I think if they had access to magic and then lost it a thousand years ago, they would have searched for the reason for said loss,” Teal’c added. “But I know of no such venture.”

“Well, I could restore magic,” Adora offered. “It wouldn’t take long.”

“There’s something wrong with world-changing actions being done on a whim in five minutes,” Jack muttered.

“Well, we don’t need to activate Earth’s magic for Adora to use magic, right?” Daniel smiled.

“But we might not want to show them her transformation,” Catra was quick to add. “And I don’t think we should hurt someone so Adora can demonstrate her magic healing.”

Adora nodded. Of course not!

“It would be the easiest solution,” Entrapta said. “Activating magic, I mean. Or… I could show them our technology!” She beamed. “I bet they would be curious about our bots.”

“They’ll probably think any magic used is technology anyway,” Jack pointed out, a little belatedly.

“But showing them our technology might also give away important information,” Carter said.

“They already know we’re working with Etherians - even if they don’t know they are Etherians,” Jack told her. “Let’s try technology first before we change the world for a chat with snakes.”

*****

Samantha Carter nodded at the Colonel’s words. Returning magic to Earth just for an interrogation… their superiors wouldn’t accept that. And the Goa’uld knew their own technology. So, it had to be Etherian technology. Or Horde technology. Or… “We might be able to use Ancient technology,“ she suggested.

“First Ones technology? Wouldn’t they know that?” Entrapta asked. “They use the gates, after all.”

“Yes, but they aren’t familiar with the Ancient technology on Etheria,” Sam explained. She looked at Teal’c.

“Indeed. It’s not conforming to Ancient technology known to the Goa’uld,” he confirmed.

“So… First Ones technology.” Entrapta nodded. “We don’t have too much of that here.”

“I can summon my sword. After transforming out of their sight,” Adora said. “And I can make it change shape.”

“It slices, it dices, it makes julienne fries,” the Colonel commented.

Catra snickered, but Adora pouted - and Sam made a note that they might be familiar with the idiom.

“But we still should show our bots,” Entrapta said. “And Hordak’s technology.”

Hordak nodded. “They should be familiar with Horde Prime’s technology, but my own developments, and those of Entrapta, will be unknown to them.” He nodded at Entrapta, who smiled back at him.

They wanted to show off, Sam realised. Well, she could understand the feeling. Perhaps a bit more than she should - but what scientist didn’t like showing off at least a little? Even Daniel wasn’t immune, as his lessons and briefings revealed.

“Let’s start with the bots then,” the Colonel said. “We can save Adora’s Swiss-army-sword-magic for later.”

“Yes!” Entrapta beamed. “I’ll call Emily so she can lead the others inside.”

“The others?” The Colonel asked.

“I brought more bots - they need to get down to Earth anyway. Being cooped up on a ship all the time isn’t healthy!” Entrapta nodded and pushed a button on her multitool. “Emily? Get in here!”

Sam turned to the intercom, but the Colonel was already calling the entrance so the guards would let the bots through.

“Have someone guide them so they don’t get lost,” Entrapta said. Then she blinked. “Uh… can they get in here?”

Sam pointed at the large door in the back. “Yes. There’s a freight elevator there. It would have been impractical to move heavy machinery through the smaller corridors.”

“Isn’t that a security risk?” Catra asked, cocking her head as she looked from the habitats to the elevator.

“We’ve got it under guard,” the Colonel said. “And usually, the habitats aren’t here but in secure cells.”

“In cells?” Adora frowned. “Isolated?”

“First rule of handling prisoners for interrogation is not to let them talk to each other and coordinate their stories,” the Colonel replied.

“But… they are all alone, all day?”

“They can talk to us anytime they choose.”

“That sounds like torture,” Hordak said. “At least some would consider it torture - I can understand, given the intellect of the average soldier, that not having to talk to them could also be a blessing.”

“Hordak!” Glimmer glared at him.

Entrapta, though, slowly nodded. “Yes. Some did claim that isolation is torture. I discovered that when I researched what was

considered torture on Earth."

"Let me guess: You found Amnesty International, right?" the Colonel asked.

"Yes."

"They are sometimes seen as a little controversial," the Colonel told her.

"Mostly in countries that they criticise," Daniel added. "They are also strictly against the death penalty." Sam saw that he didn't look at the Colonel.

Fortunately, Entrapta's bots arrived before this subject could be discussed further - Sam was sure that the Etherians weren't in favour of the death penalty.

"Emily! Come over here! And you too, Gaby! And Silvie!"

Two smaller, but still quite large, bots followed Emily to the group. And the Goa'uld had noticed - Sam saw that both were paying close attention to the bots.

Something she should have done as well, she realised when the bot named 'Gaby' walked to a desk and started scanning the computers there while Silvie was picking up tools on the other side of the room. "Please don't touch anything," Sam said belatedly.

"Put it down, Silvie!" Entrapta said. "You can play with it later. Now you have to show what you can do!"

Emily beeped, and Entrapta shook her head. "No, this isn't an indoor shooting range. Just demonstrate on low power setting."

"Ah… how about not shooting anything on any setting inside the base?" the Colonel said.

Sam couldn't explain how a huge spherical three-legged robot could look sad, but Emily managed. Entrapta patted the bot's dome with her hair. "There, there - we'll get you something to shoot under safe conditions. Safe-ish, at least."

But Silvie and Gaby were already working on something - something the two Goa'uld were very interested in.

Something using First Ones technology, Sam realised. And…

"Are they making a bot?" Daniel asked.

"Yes! A prototype spy bot Mark II!" Entrapta confirmed. "One that can fly!" She frowned. "Well, it will fly once we solve the tiny little issues with making a small engine that won't blow under stress and still is powerful enough to let it explore a star system."

"Or, alternatively, is fast enough to serve as ordnance," Hordak added.

Judging from the beeps from all three bots, they didn't like that idea.

"Hordak!"

Neither did Entrapta.

"I meant for non-sapient bots," the former warlord tried to defend himself.

"They can still learn enough to become sapient!" Entrapta protested. "We can't use them as missiles."

Ah, yes. Artificial intelligence rights - another touchy subject Sam would rather not go into right now.

*****

Catra sighed as Entrapta scolded Hordak about using bots as missiles. Bots weren't people. Sure, some of them were

exceptions, but the vast majority didn't have any more brains than any other machine - she would know; she had had to command tons of the things in the war. They made Kyle look like a genius.

But at least the prisoners were paying attention - she could see the snakes all but pressing their ugly little heads against the fish tanks' glass to study the bots as they built another bot.

Her ears twitched as she overheard O'Neill mutter: "Just what we need - self-replicating bots."

"That possibility always existed once we encountered sufficiently complex and capable robots, Sir," Sam told him. "Although for truly self-replicating bots, they would have to be able to provide the components and the raw materials as well."

"And how likely is that? The brass will want to know if we don't just have to deal with aliens but Skynet as well."

"It shouldn't be too difficult to construct mining bots, Sir."

"Great."

Catra shook her head. It seemed that O'Neill was more worried about what the Etherians could do than about the Goa'uld. Well, it fit him, in her opinion.

But they were here to interrogate the prisoners, not discuss O'Neill's hangups. She kept an eye on the Goa'uld as the two bots, with some concerned beeping from Emily, finished the spy bot.

It didn't look very different from the models she had used in the war. A small bot with a round body like the others and cameras rather than weapons, scurrying around on three legs. Whatever changes Entrapta and Hordak had made must have been internal.

"Oh, look at it go!" Entrapta gushed. "Already used to walking!"

"Shouldn't that be standard?" Daniel asked. "Or do bots have to learn how to walk?"

“That depends on their control matrix,” Entrapta replied. “They can come pre-programmed, like most bots we used in the war - with the networks copied from older bots. Or they can learn from scratch, as you say - that way, they tend to be a bit more effective, although it takes longer for them to be ready for deployment. They can learn more routines that way, though.”

“Ah.” Daniel nodded. “Like people?”

“The control matrixes use networks similar to neural networks,” Sam told him.

The spy bot was demonstrating its sensors and other gear now - First Ones technology, Catra realised; she had seen those scanning rays before. She focused on the Goa’uld’s reaction and could see their tails twitch more and more. Of course, that didn’t have to mean anything - they weren’t like her - but she would bet that it meant they were agitated. Or excited.

“And now, testing the gravity generator!” Entrapta announced.

The spy bot stopped moving, pulled its legs in - and a humming noise filled the room.

Catra clenched her teeth; it didn’t actually hurt her ears, but it grated - though she seemed to be the only one affected. The others probably couldn’t hear it.

And then the spy bot rose into the air and started to float around. Like that droid in the movie. The legs unfolded again, further showing the parallels. The top rotated as well, small cameras looking at everything in the room.

And at the Goa’uld. A red light appeared, a cone moving over the first, then the second Goa’uld.

“Ah, the scanner works as well!” Entrapa beamed. “Look!” She pushed a button on her tool, and floating holograms of the two snakes appeared. “It’s not quite as detailed as our magic scanner, nor with the range that one has, but it’s a medical scan!”

She bent forward, her hair lifting her up, and looked at the Goa'uld. "Hello? Do you want to communicate now?"

"They can't hear us," Sam told her.

"It would be counter-productive if they could listen in on our talks," O'Neill added.

"Oh." Entrapta blinked, then two hair tendrils shot out, grabbed a whiteboard and a marker and started writing.

HELLO! YOU CAN USE THE KEYBOARD!

The first Goa'uld, Osiris, didn't react. Well, they didn't use the keyboard.

The other, though, Seth, started to type, using its tail.

WHO ARE YOU?

Entrapta beamed.

I AM ENTRAPTA, PRINCESS OF DRYL

"We're supposed to get intel from it, not the other way around," O'Neill complained.

"You have to give data to receive data. Even if you're just observing, the act of observation affects the observed, which is kind of giving data," Entrapta told him.

"And he should know our names - we know he saw us on television before we captured him," Catra reminded them.

Seth was typing again.

WHAT ARE YOU?

Entrapta cocked her head, frowning, "I just told you!"

ENTRAPTA, PRINCESS OF DRYL

ARE YOU A TAU'RI?

"Well, now that's a matter of opinion. What do you think, Sam? We are the same species - we can have viable offspring without genetic manipulation - but so were the First Ones. And I don't think he'd call the First Ones Tau'ri."

Before Sam could answer, Entrapta wrote on:

WHAT IS YOUR DEFINITION OF A TAU'RI?

A HOST SPECIES FROM THIS PLANET

NO, I AM NOT FROM THIS PLANET. AND I AM NOT A HOST SPECIES.

O'Neill sighed. "Who thought it was a good idea to let Entrapta start the interrogation?"

And then the other Goa'uld started typing, and symbols Catra didn't know appeared on his screen.

"Oh, he's using hieroglyphs!" Daniel exclaimed in the same tone Entrapta had when she saw tiny food. Or a First One relic.

Catra snickered again as O'Neill groaned.

*****

"How can the snake type hieroglyphs?" Jack O'Neill asked. It was a dumb question and not relevant, but he wanted to know.

"I've added a database with the hieroglyphs known to us to the tiny keyboard, accessible through the touchpad on the keyboard - or the keyboard, with key combinations," Entrapta explained. "They can use their tail or other limbs to draw on the pad or just flick through the database until they find the symbol they want, although the sorting algorithm was a bit of a guess - I don't know what the Goa'uld would find intuitive, and the Japanese system wasn't applicable since the hieroglyphs are drawn differently, so

sorting according to the number of strokes needed to draw them was not applicable. I wonder what system they use for their own communication."

"They probably dictate to a slave," Jack said. That seemed to fit them.

"That is correct, O'Neill," Teal'c confirmed.

Jack grinned. "So… what's Osiris saying?"

"He's warning us not to trust 'the traitor'," Daniel replied, looking slightly put out.

Jack snorted. That, too, should have been expected from a snake. He glanced at Seth's screen.

I NOTICED THAT I COULD NOT TAKE OVER THE BLONDE WOMAN. SAME SPECIES?

"Someone needs to make him understand that we're the ones asking the questions," Jack said.

Catra made a sort-of agreeing noise.

"Well, should I tell him yes? It's not true, but we're both princesses," Entrapta asked. "And the jury's still out whether or not First Ones are the same species as humans."

"It might keep the Goa'uld from trying to possess us. Or at least you and Glimmer," Bow pointed out.

Jack shook his head. "They'll probably still try it if they have the opportunity - out of desperation or because they suspect a lie." He doubted that the snakes would trust them to tell the truth since the Goa'uld would lie if their positions were switched.

"Ah." Entrapta nodded and typed with her hair.

1. YOU ARE SETH, CORRECT?

YES.

Jack wanted to step in and take over. Entrapta wasn't a trained interrogator. And she was too trusting - or naive. But as long as she listened to the others, there was no reason to be rude to her.

He glanced at Daniel. "What's Osiris saying?"

"Well, technically, he's typing," his friend replied. Jack rolled his eyes, and Daniel cleared his throat. "Sorry. Anyway, he's telling me how Seth betrayed him and Isis, and… well, basically how everything is Seth's fault. And he's asking where Isis is." He grimaced.

Jack shook his head again. "Tell him that she died when her stasis jar was broken centuries ago."

While Daniel started picking through hieroglyphs, Jack looked back at the other Goa'uld. Entrapta was typing again.

YES, WE WERE NEVER RULED BY THE GOA'ULD.

Well, Seth had seen them on TV, Jack reminded himself.

DO YOU TRUST THE TAU'RI?

Jack narrowed his eyes. That was less subtle than he had expected. On the other hand, perhaps Seth thought that the Etherians had taken control of Earth, overtly or covertly.

SOME ARE OUR FRIENDS.

AND THE OTHERS?

"Osiris is asking if he can visit Isis's grave," Daniel said.

Jack didn't have to look at his friend to know that Daniel looked sympathetic. Even though his own wife had been taken from him by the Goa'uld. Or perhaps because of that.

“We did an autopsy on the corpse, Sir,” Carter informed him. Was that a wince?

Jack sighed. “And I guess that all the parts are now floating in formaldehyde in some jars, ready to be studied?” Couldn’t be too many jars, of course, given the alien’s size.

“Yes, Sir.”

“It’s a perfectly valid request, Jack.”

“You… didn’t bury her?” Adora sounded shocked. And no snarky comment from Catra.

Carter pressed her lips together and tensed. Jack held up his hand - he was their commanding officer. This was on him. “We need more information about Goa’uld. We don’t know enough about them, how their bodies work, anything.”

“But you can scan her. Then you have all the data you need. You don’t need to keep the body except for some tissue samples, do you?” Entratpa apparently had stopped chatting with Seth.

Jack sighed. He would have to convince the brass - well, that shouldn’t be too hard, not if the Etherians supported it. “We’ll see about a funeral. Ask Osiris how we should bury her - but tell him no pyramids.”

No one laughed at his joke.

“I doubt that he would expect a pyramid for her,” Daniel said as he typed. “Based on his era, it will likely be a grave chamber in a small temple.”

“That won’t go over better with Congress, I think,” Jack said. The Etherians still looked… disapproving. “Don’t forget that they don’t care about the dead humans,” he reminded them. “Seth didn’t ask about his followers, did he?”

“No. Should I remind him?” Entrapta asked.

Jack shook his head. “Let’s see how long it takes him to remember them.” Probably forever, in Jack’s opinion.

ARE YOU THE NEW PROTECTORS OF THE TAU’RI?

“Uh…” Entrapta looked around, “Kinda?”

“Technically, we are,” Bow said.

“Officially, once we have the Alliances signed,” Glimmer added.

“Tell him that we will protect all the Tau’ri,” Adora said, nodding curtly.

YES

The snake couldn’t hear them - but they could see them. Could gauge their reactions. And they were smart. Seth had thousands of years of experience with manipulating people, Jack reminded himself.

Maybe they should call in spooks. No - those had no experience with Goa’uld. They would try to treat them like humans.

And that would be a disaster. Wait! “‘New protectors’?” He frowned. “Does that mean there were old protectors?

*****

“Old protectors?” Adora looked at Jack, then at the others.

“I think assuming that there were old protectors solely based on Seth’s question is reaching a little,” Daniel pointed out. “While he certainly knew about the Etherians’ arrival, he might merely be trying to confirm their policy towards Earth.”

“I am not aware of any protectors of Earth - or the Tau’ri as a whole,” Teal’c said. “However, certain planets are off-limits to Goa’uld attacks. I was never told why, though. I assumed it was a decree of Ra, like the order to leave Earth alone. However, the

planet Cimmeria was protected by unknown forces against the Goa'uld."

"Right." Jack nodded. "But Earth doesn't have anything like it. Or the snakes would have been killed long ago."

"Cimmeria could've been protected by another faction of the Goa'uld posing as the Norse gods," Daniel suggested.

"The technology used was unlike and beyond the Goa'uld's known capability," Sam objected.

"It certainly wasn't Ra," Jack said. "He wouldn't have posed as another god that wasn't under his command - or tolerated others posing as such gods."

Adora was a little confused. "Could you explain what happened on Cimmeria?"

"Oh, sorry!" Daniel blushed. "It's a planet with a population that worships the old Norse gods, and when we arrived there, a defence mechanism - Thor's Hammer, it was called - captured Teal'c and Jack and sent them into a labyrinth where they had to fight a former alien host. We managed to disable the mechanism and save them."

"With the help of a native named Kendra," Sam added.

Ah. That explained… not very much.

"Did you recover the technology? Did you analyse it?" Entrapta asked.

"No." Sam shook her head. "But it didn't resemble any known Goa'uld technology. Or Ancient technology."

"So, it wasn't the First Ones," Adora said. "And I don't believe the Horde would have done anything like it."

“They would have conquered the planet, not defended it against the Goa’uld,” Hordak said.

“Do you want me to ask him about Cimmeria?” Entrapta cocked her head.

“If he knows about it, then that changes things,” Daniel said. “The Norse gods weren’t worshipped when Ra was driven from Earth. So, whoever took the people from Earth to Cimmeria did so after Ra had left. If Seth knows about it, he might have had contact with them.”

Jack nodded. “Ask if he knows about Cimmeria.”

DO YOU KNOW A PLANET NAMED CIMMERIA?

NO

That was quick. Of course, that didn’t mean it had to be a lie - Seth would probably be more cautious if he were lying. Still…

“He’s watching us. He knows we’re talking about something, “Jack said. “Damn - could he be able to read lips?”

Read lips? Oh.

“We can’t dismiss the possibility,” Sam said, wincing.

So the Goa’uld might have been able to understand what they were discussing?

“Overestimating an enemy is often as bad as underestimating them,” Hordak pointed out.

“Well, let’s huddle for the next discussion,” Jack said.

“Huddle?” Adora asked.

“Gather round, like this.” He demonstrated. “So… we need to know if he knows anything about Cimmeria’s protectors. Any

suggestions on how to ask that without revealing what we know and don't know?"

"Uh." Adora hadn't been trained in interrogation. That had been something Shadow Weaver had reserved for herself. She probably hadn't wanted to teach Adora how to spot lies either.

"Let's just ask Seth about what he did on Earth. Let him talk and see what we can find out," Catra suggested. "We can ask about Cimmeria later."

"And what about Osiris?" Daniel asked.

"He's been sealed in that jar since Ra's departure," Jack replied. "I doubt he has a lot of actionable intel."

"But as a high-ranking Goa'uld, he has a lot of important knowledge," Teal'c pointed out.

"Right. But it's not urgent either. And since he hasn't been raising and murdering cults on Earth for thousands of years, we might make Seth think that we like Osiris more," Jack said.

"Play them against each other." Catra nodded with a grin.

Adora frowned. That seemed manipulative. On the other hand, they needed information. "Let's let them talk? To us, not to each other," she clarified. "Before we make more plans."

"Good idea."

"And we should visit Cimmeria," Entrapta said. "See if we can get more technology samples. Imagine - a completely new technology!"

That was a good idea. Adora nodded. "And we can check how they are doing."

"And if the defence mechanism has been restored. That would mean that their protectors have kept tabs on them and have

returned," Catra added.

Adora's eyes widened. "If it hasn't been restored, then they've been left defenceless!" And that meant they would have to step in. You couldn't leave a planet at the mercy of the Goa'uld!

"Well, the Goa'uld wouldn't know that the defence mechanism was gone without attempting an invasion - and they have no reason to assume it is gone," Jack said. He looked a little guilty, though.

"You know what they say about assuming anything," Catra retorted.

"We should not underestimate our enemies," Teal'c added.

"Yeah…" Jack grimaced. "I guess we'll have to see if the new management is OK with visiting Cimmeria."

New management? Oh, he must mean the United Nations. Adora nodded. "Why wouldn't they want us to visit Cimmeria?"

Jack shrugged. "Oh, lots of reasons. That they didn't have the idea, that they think it's too dangerous, that they think it's too expensive, that they want to move the Stargate first…"

Adora frowned. Those sounded like very silly reasons. But Glimmer nodded with a wry expression. And Catra snorted.

*****

WHY DID YOU FORM A CULT?

I HAD TO HIDE FROM RA

Samantha Carter heard the Colonel snort at that. "And that's why he used variations of his own name for every cult."

"To be fair," Daniel pointed out, "he was hiding - he did not seek attention or tried to spread his, ah, faith. In all the past cults that

we could identify, he kept the number of his followers small and hid from the authorities."

"Until the mass suicides."

"Ah, yes."

Sam saw that the Etherians grimaced at that.

"Should I ask why his past followers killed themselves?" Entrapta asked.

"Yeah. Let's see how he tries to justify that." The Colonel grinned.

WHY DID YOUR PAST FOLLOWERS KILL THEMSELVES?

Sam saw the Goa'uld hesitate a moment.

I HAD TO LEAVE THEM AND THEY COULD NOT LIVE WITHOUT ME.

"Good answer - blame the victims." The Colonel snorted again. "Ask him why he had to leave them."

WHY DID YOU HAVE TO LEAVE THEM?

IT WAS BECOMING TOO DANGEROUS. I HAD STAYED TOO LONG. RA WOULD HAVE NOTICED.

Catra scoffed. "Didn't his cults always worship Seth?"

"Or Setesh, or similar names," Daniel said.

"Yep, can't really call that hiding. On the other hand, for a snake used to be worshipped by entire countries, he probably was all humble and stuff," the Colonel commented.

"Are you serious?" Glimmer asked. "Do Goa'uld honestly think like that?"

“The false gods are arrogant to a fault, but it would not do to underestimate them,” Teal’c commented.

“Also, we have to consider that Seth was used to a much more limited world - not a world with computers and the internet,” Daniel said. “What measure he took to avoid notice would have been sufficient in the past, like in the eighteenth century, when his last cult suicided.”

“You still found him.” Bow frowned a little.

“Yes, but that was because vast archives have been scanned and archived electronically,” Daniel explained. “That wouldn’t have been possible just a few years ago.”

“So, what should I ask him next?”

“Ask him why he didn’t tell his followers that he’d return.”

Entrapta typed, and, once more, the Goa’uld hesitated just a moment too long to give an honest answer, in Sam’s impression.

THAT WOULD HAVE BEEN CRUEL AND A LIE

“Yeah, right.”

“He’s the picture of the compassionate god.” Catra snorted again.

Seth was still typing.

YOU RULE YOUR PEOPLE - WOULD YOU LIE TO THEM?

Sam pressed her lips together. This was a blatant attempt to drive a wedge between the Etherians and Earth, aimed at the most obvious difference between their worlds.

Entrapta frowned, and her hair flew over the keyboard.

I WOULD NOT LIE TO THEM AND CLAIM TO BE A GODDESS.

WHAT MAKES A GOD OR GODDESS? POWER? YOU HAVE POWER BEYOND BELIEF OVER THE TAU'RI. YOU CAN HEAL YOUR PEOPLE. FEED THEM. GUIDE THEM.

ANY PRINCESS CAN DO THAT. THAT POWER DOES NOT MAKE YOU A GOD.

WHAT ABOUT MAGIC?

That was a good question, in Sam's opinion.

Apparently, the Colonel shared this view since he said: "Well, if you can heal the sick and the lame, feed the masses and raise the dead, we can start talking about what makes a god."

"No, we can't! I'm not a goddess!" Adora blurted out. "Just tell him that we aren't goddesses."

WE ARE NOT GODDESSES. WE ARE PRINCESSES.

SEMANTICS. YOU RULE BECAUSE YOU ARE THE MOST POWERFUL. BECAUSE YOU ARE THE MOST EXPERIENCED. BECAUSE YOU ARE DIFFERENT.

"Well, technically, he's correct." Catra stretched her arms above her head.

"It's not the same!" Glimmer hissed.

Catra nodded. "Yeah, you don't claim to be a goddess."

"We also don't lie to our people!"

Sam glanced at the Colonel. He was pressing his lips together - he probably had to bite his tongue, literally, to keep from snarking.

"Well, fundamentally, the rule of the princesses is based on the magical power that makes them princesses," Hordak said. "Or that made their ancestors princesses. Any legitimacy by lineage still devolves from power."

“We assume that that was how the royal lines started, but we don’t know,” Bow objected.

“Well, it’s the most likely explanation,” Entrapta said. “If the First Ones had installed the royal families, the research base should have had data on that.”

Sam was inclined to agree. But saying so would have been… undiplomatic. Even the Colonel was aware of that.

“Well, how your ancestors came to power doesn’t matter nearly as much as how you use your power - both magical and governmental,” Daniel said. “The Goa’uld only care about themselves. That is the difference.”

“Yes!” Adora nodded several times. “We don’t rule for ourselves!”

“You don’t rule anything anyway,” Catra added. “Well, unless we count Third Fleet.”

Adora scowled at her. “That doesn’t count! I didn’t ask for them to… follow me!”

Entrapta was typing again.

WE USE OUR POWER FOR OTHERS.

AS DO I - IT IS A POOR RULER WHO NEGLECTS HIS PEOPLE.

“You’re a parasite!” Glimmer spat. “Living by possessing people - and exploiting your slaves!”

“Should I tell him that?” Entrapta asked.

“No.” The Colonel shook his head. “Ask him what he did to Osiris.”

This time, the Goa’uld hesitated even longer, Sam noticed.

*****

Catra clenched her teeth and suppressed the urge to hiss - again - at the lies Seth was spewing on the screen. If one were to believe him, he was the innocent victim of jealous rivals - Osiris and Isis - his weakness being too caring about his followers while, at the same time, being too successful thanks to his followers 'flourishing' under his gentle guidance.

Fortunately, not even Horde Cadet Adora at her worst would have been naive enough to believe him. Not after the way he ruthlessly ordered his followers to suicidally attack them so he could escape. The additional information Daniel had dug up was just confirming that they were dealing with a monster on par with Shadow Weaver - worse than Shadow Weaver, actually. Catra could easily see Seth acting like Horde Prime, spouting drivel about harmony while murdering everyone who didn't fit in enough. Or brainwashing them, she added with a shudder.

"Wow, we're holding Gandhi's spiritual successor here!" O'Neill exclaimed with a chuckle.

"Gandhi?" Adora asked.

"A famous Indian pacifist," Daniel replied. "He was crucial for India gaining its independence from the British colonial rule and used nonviolent means to protest and oppose oppression. Although some of his views and policies have become controversial lately."

"Daniel, if you explain things like that, people miss the point."

"That could be avoided if you pick a better example, Jack."

"Whatever!" Glimmer blurted out. "The snake's lying through its pointed teeth, and no one's buying it! Enough of that! What's Osiris saying?"

"Uh…" Daniel cleared his throat. "I've been translating his messages, though they mostly deal with Seth's treachery, warnings about not believing any of Seth's claims, and his dead wife."

"And he's presenting himself as the innocent victim of persecution?" O'Neill asked.

"The victim of a backstabbing attempt at treason that framed him and his wife as a traitor in the eyes of Ra," Daniel told him.

"What I said, then."

"But he doesn't try to appear as a benevolent ruler using his power and wisdom to rule and guide the humans for their own good," Daniel objected.

"Probably because he hasn't seen us on television and doesn't know anything about us," Glimmer said, scoffing. "Or he'd probably claim his wife was a princess."

Catra shook her head. Sure, Seth was as subtle as a hovertank if you compared him to Shadow Weaver, but the others were reacting a bit too strongly to Seth's claim that princesses were the same as the Goa'uld.

Especially since, well, he wasn't entirely wrong, as Daniel would say. Princesses ruled because they were princesses, and they were princesses because they had magic powers that they were born with. Dress it up however you wanted, it still came down to power. Netossa and Spinnerella weren't ruling a country, but if they wanted to, they could probably find an area not claimed by any princess and take it over. Catra doubted that too many would care.

And she didn't doubt that a princess could be as bad as the Goa'uld. Maybe even worse, though that would take a lot and probably lead to other princesses banding together to deal with you. There probably had been such bad princesses before. She didn't know any example, but Bow was the historian, or at least the son of two historians, not Catra.

But none of that meant that Catra's friends were bad people. "He's just trying to manipulate you," she said. "As we expected. But

compared to Shadow Weaver, he's bad at it." Mostly because Seth didn't know them, not really.

"He's trying his best," O'Neill added. "But he's still a Goa'uld - I bet he can't really take us mere humans seriously."

"The Goa'uld do not consider anyone their peer, or even just deserving of respect," Teal'c said. "Horde Prime might have come the closest thanks to his power, but they would have destroyed him as soon as they found a way to do so."

"Well, he didn't even bother with pretending. Whatever got in his way was destroyed." Catra shrugged. "Anyway, Seth is just trying to suck up to you because he thinks power's all that matters and that everyone's the same." And she was very familiar with that view.

Adora nodded, but she was still clenching her teeth, Catra could tell. And Glimmer was still staring at the Goa'uld as if she wanted to smash them in their cells.

Well, so was Hordak, she noticed. Entrapa looked upset, which must have set this off.

What a mess. In hindsight, they should have left this to Stargate Command. On the other hand, Seth had only started talking once he had seen Adora and the others.

Catra stretched again, the claws in her feet slightly digging into the floor - it was only concrete, so Catra didn't have to worry about damaging a mosaic or some polished wood or expensive carpet. "So, do we have to keep listening to those lies? Or can we do something more productive now? Like taking a nap?"

"Both Seth and Osiris were present when Ra ruled the Earth - and Seth lived through almost our entire written history!" Daniel said with a pout. "The knowledge they hold could change history and offer crucial insight into Goa'uld society."

Catra chuckled. “Well, looks like you just volunteered to keep talking to them.” She tugged at Adora’s arm. “Come on! Let’s get something to eat; I’m hungry!”

Adora didn’t object to being dragged out of the room. That meant she was still mulling over Seth’s words. Probably questioning if she was a Goa’uld-style ruler.

Damn. Catra really wanted to shred the snake with her claws.

*****

Doubts

Cheyenne Mountain, Colorado, United States of America, Earth, September 21st, 1998

"A funeral for the Goa'uld?" General Hammond sounded surprised.

Jack O'Neill, standing at parade rest in the general's office, nodded. "Yes, Sir. Osiris asked to see the body of his wife - or her grave."

The general sighed. "And it happened in the presence of the Etherians."

"Yes, Sir."

"And letting him see the body would be…" The general grimaced.

Jack nodded again and refrained from commenting that getting the body back together would mean solving a puzzle and draining gallons of formaldehyde.

General Hammond sighed again. "And just when we're about to be formally transferred under UN control."

"Yes, Sir."

The general narrowed his eyes at him.

Oops. Maybe Jack had overdone the dutiful by-the-book officer act. "Do you think that the Security Council won't be willing to please the Etherians? It's our mistake, after all." The Russians and the Chinese would love to rub the United States' face in. And the British and the French wouldn't exactly do their utmost to help out, either.

"I think the Security Council's representatives might see this as a way to present themselves as not prone to making the same mistakes we did," General Hammond replied.

Oh, yes. Jack could see that. Damn vultures. And yet… "Speaking of mistakes, Sir…"

Hammond stopped sighing and looking at the ceiling and zeroed in on Jack once more. "Yes, Colonel?"

"Cimmeria was brought up during the interrogation," Jack said.

"The planet with the people worshipping Thor."

"Yes, Sir. The Etherians would like to visit." Jack straightened just a bit. "They are curious about the technology on the planet - and they voiced their concern that our actions might have left the planet defenceless against the Goa'uld."

"How would the Goa'uld find out?" Hammond asked.

"I said the same, Sir. But the Etherians want to go. There was also talk about installing a surveillance drone to keep an eye on the planet." Jack inclined his head. "Captain Carter seemed to think the proposed design was feasible." Feasible enough to have her spend time in her lab with Entrapta and Hordak working on a bot.

"I see. Well, that's another request I'll have to present our new command crew with."

"Yes, Sir." Another glare. Jack didn't show any reaction. "And, speaking of that, Sir: When will the new brass arrive?"

"I just received the news. They will arrive tomorrow."

It was Jack's turn to be surprised. "That's faster than I expected."

"Even the United Nations can move quickly if they're motivated enough." Hammond snorted. "The security up top is working around the clock to ensure that the new United Nations Stargate Command can be kept from accidentally entering the other areas of the base."

‘Accidentally’. Jack snorted - as if the Russians and the Chinese wouldn’t try to use this to spy on the Air Force! “Any word of who’s going to play overlord?”

“We’ll have a joint command overseeing UNSGC operations, with members drawn from all permanent members of the Security Council,” Hammond replied.

A committee! Wonderful!

“They’ll also provide troops and officers to Stargate Command, although, to my knowledge, it’s understood that they will need to be trained before they can cover crucial posts.”

Even better - they’d have to train FNGs to take over. And spooks masquerading as FNGs. “It feels as if we’re expected to train up our own replacements, Sir.”

And Hammond nodded. “That’s probably correct, Colonel. International politics being as they are, we cannot expect Stargate Command to remain heavily dominated by the Air Force.”

“We’re the most experienced, Sir,” Jack spat.

“Which means it’ll take some time until we’re replaced. And the United States will keep troops in Stargate Command. But I think the bulk of our current roster will be transferred to whatever our space forces will end up called.”

“Including my team.” He clenched his teeth. It was a logical development. It made sense. It still grated. He had been with Stargate Command, well, not from the start, but pretty much from the first time the gate had been used.

“Yes.” Hammond smiled. “Your close relationship with the Etherians makes this a no-brainer. The United States need you working with the Etherians fighting a war, not guarding the Stargate.”

“Someone has to keep an eye on this new… command, Sir.” Who knew what the Russians and the Chinese would try to pull if they were left unsupervised.

“I am certain that this concern will be addressed by our superiors.”

“Does that mean we’ll get new troops from the NID?” Jack tilted his head and raised his eyebrows.

Unfortunately, Hammond didn’t laugh. “I was assured that we’d be receiving people with the necessary training to ensure that the Stargate won’t be used in ways that would endanger Earth.”

More spooks. Great. Well, at least that meant leaving Stargate Command would be easier for everyone in SG-1 - Jack knew none of his team members wanted to work with the NID. “Can I tell the rest of my team that?”

Hammond smiled. “Never give an order you know won’t be obeyed, Colonel.”

Jack grinned in return.

*****

“Team huddle!” Jack O’Neill said, peering into Carter’s lab. As expected, his entire team was there - Carter was going over the data Entrapta had left, Daniel was going over the transcripts from this afternoon, and Teal’c was… thinking, probably.

“Sir?” Carter tilted her head with a very polite expression - she wasn’t in the mood for banter, then.

“Metaphorically,” he told her as he closed the door. “With the snakes back in their cells, we don’t have to fear being overheard. So!” He clapped his hands. “I’ve got good news and bad news. Which do you want to hear first?”

Carter raised her eyebrows, but Daniel seemed to ponder the question. "Uh… bad first?"

"Stargate Command will be formally transferred under control of the United Nations Security Council," Jack said. "The new brass arrive tomorrow."

Daniel blinked, obviously surprised, while Carter pressed her lips together. Teal'c nodded slowly.

"More bad news: It'll be a joint command, committee-style."

"How is that supposed to work?" Daniel asked.

"I assume that they'll have lots of discussions and votes." And Hammond would be forced to make urgent decisions on the spot, which probably would result in him getting the boot - the brass didn't like officers who kept showing them up.

"So, what's the good news?" Daniel asked.

"I haven't finished with the bad news yet," Jack told him with a toothy grin. "We'll have to train up our replacements, and sooner or later, most of Stargate Command - our current command - will transfer to whatever will be our new Space Force." Jack waited a moment, then added: "Including us."

"What?" Daniel gasped.

"They don't want us working for the United Nations," Carter said, looking… not pleased. "Not when we're friends with the Etherians."

"Exactly. And, well - the Space Force will be where the action's at." Jack grinned. "That's the good news. We won't have to suffer the new regime for more than a few months, and we won't end up glorified bodyguards for diplomats." Or casualties of international powerplays.

“We can’t really train up competent replacements in a few months,” Daniel protested.

Jack shrugged. “Not everyone will leave. Hammond might stay if the United Nations don’t piss him off too much. But we’re needed in the war.”

“The Stargate is crucial for the war,” Daniel said.

“Yeah, and I assume we’ll be using it when we can.” Jack grinned. “But we won’t have to deal with that Chinese-Russian clusterfuck. We’ll be kicking snake ass.”

Carter nodded. “We’ll be working very closely with the Etherians, I assume.”

“Yep. I can’t see anyone, not even Kinsey, being as stupid as to assign us elsewhere.” It wouldn’t make any sense.

“I am looking forward to fighting the Goa’uld at the Etherians’ side,” Teal’c commented.

“But… I’m a civilian,” Daniel pointed out. “Will that work for the Space Force?”

His friend didn’t want to become a soldier, Jack knew that. And Daniel wouldn’t be a good soldier anyway. “Of course it will,” he said. “The brass needs you.”

“They can keep me in the office, translating things. If we’re invading planets…” Daniel trailed off.

Jack shook his head. Carter looked concerned as well. “Don’t worry about that,” he told them. “Remember what the Etherians told us about their war against the Horde?”

“Yes…?” Daniel looked confused, but Carter nodded. “The princesses are planning to fight at the frontlines. And in special operations.”

Jack smiled at her. "Exactly. And that means if we want to work with them, we need to send people who can work with them, not just for them. If the brass sends a bunch of marines to work with the Etherians, they'll end up being grunts doing the shooting while the Etherians make the calls." And the United States didn't like subordinating their troops to others like that. "They'll need us. SG-1."

Daniel nodded as well. "Right. The princesses and their friends are like us - not just soldiers, but scientists as well." He smiled. Then he frowned. "But there's no Space Force yet. I mean, not the kind we talked about."

"Give them time," Jack told him. "There's no alliance with the Etherians yet, either. I assume that once we have an alliance, we'll be amongst the first to be transferred out of United Nations Stargate Command." The sooner, the better - he still didn't trust that damn Russian 'scientist'. And yet… "And the last piece of somewhat bad news: We'll have to clear any mission to Cimmeria with our new overlords."

Daniel's face fell again.

*****

Earth Orbit, Solar System, September 22nd, 1998

She wasn't like the Goa'uld. She didn't claim to be a goddess - quite the contrary. She didn't rule thanks to her powers - she didn't rule, period. She didn't enslave anyone, either. Nor did she lie.

Adora stared at the ceiling above her bed and sighed. No matter how often she told herself that, she couldn't help wondering if it was true. Or, should it be true, if it was enough of a difference. She had led people in the war because she was She-Ra, Princess of Power. Sure, she had the officer training from the Horde, but she hadn't earned her position. Not when she had gotten it, at

least. She had proven herself afterwards. At least she liked to think so.

“Stop moping!” Catra reached over and flicked her nose.

“Ow!” Adora rubbed her nose and pouted at her lover. “I wasn’t moping!”

“You were. Stop thinking about it. Seth is a liar. You’re not a Goa’uld.” Catra shifted and slid from Adora’s side on top of her chest, looking down at her.

“I know!”

Catra raised her eyebrows, and her ears twitched.

Adora deflated. “I just… I wonder if I’ve… What if I weren’t She-Ra?”

“Then you’d have stayed in the Horde, and we would have conquered Etheria together,” Catra told her.

Adora blinked. That was… well, not implausible. Probably even probable. Glimmer was great, as was Bow, and Adora certainly hadn’t saved the Alliance by herself, but… the Princesses Alliance had only started winning the war after She-ra had joined them.

“Which would have been a bad thing, of course,” Catra added. She wasn’t grinning, but she wasn’t entirely serious, either - Adora could tell. Her lover might find the thought funny; Catra had changed, mellowed out, as Bow called it, but her sense of humour was still… sharp and dark or something.

“Yes. But… I’ve been thinking…” Adora started to explain.

“Aha! I knew it!”

“...and I was wondering if we - the princesses - are different enough compared to the Goa’uld.”

“You don’t burrow into people to take over their bodies,” Catra said.

“Not that. The whole… ruling thing. And I know that I’m not a ruling princess,” Adora added with a frown before Catra could say anything. “It’s the principle of the thing.”

“The democracy versus monarchy thing?” Catra cocked her head.

“Yes. Kind of.”

“That didn’t bother you when Daniel explained things,” Catra pointed out.

“Yes.” Adora sighed. “But it wasn’t… It was just a theory back then. And when we arrived at Earth and found out how much was… weird and bad and wrong here…” She shook her head. It had been so obvious that democracies weren’t any better than kingdoms - arguably worse, actually.

“And now you suddenly realised how much worse the Goa’uld are? We already knew that.”

“It’s not that,” Adora protested. “I’m just wondering… without the body-snatching, and the genetic memory, and the eating your kids, what’s the difference between a bad princess and a Goa’uld?”

“Princesses generally look hotter,” Catra said. Her grin quickly faded, though, when Adora frowned at her. “Well…” She shrugged. “Probably not much of a difference. In principle.”

Adora had hoped for a better answer. “So… we aren’t really different.”

“Sure you are!” Catra snapped. “You, Sparkles, Entrapta, Perfuma, Scorpia, even Frosta and Mermista - you’re good rulers. You aren’t like the Goa’uld. You care.”

“Yes.” Adora couldn’t deny that. “But that’s us. What about… other princesses? Future ones, I mean.”

“Ah. You mean… What if Glimmer and Bow’s kid turns out to be bad?” Catra tilted her head forward.

“Well… I don’t think their child, their potential child, would be bad,” Adora said. She didn’t even know if they wanted children. Glimmer probably felt she had to, as a princess, but…

Catra rolled her eyes. “I mean as a hypothetical example.”

“Yes.” Very hypothetical. She couldn’t imagine a child of her friends being bad - really bad, not just children doing bad stuff bad. “What then?”

“Then I guess we grab them, lock them up and let Perfuma and Scorpia talk to them until they learn their lesson.”

Well, that was a Catra plan, alright. Not a bad plan, but… “And what if they and we aren’t around?”

“You mean, what if we all died before it happens?”

“Yes.” Adora nodded.

“Then someone else has to do it.” Catra sat up, straddling Adora’s belly, and shrugged emphatically, which did interesting things to her chest.

“But what if there’s no one who can ‘take them’?”

“There’ll be a She-Ra around.”

That was right. Still… Adora frowned. “You told me that I didn’t have to do everything.”

“Yes.” Catra grinned. “But that wouldn’t be you. It would be your successor. And they probably won’t have much else to do.”

“And you don’t care about her.”

"I don't know her." Catra shrugged again. "I probably won't be around, anyway, to get to know her."

Adora frowned once more. "I'm not going to let you die before me."

"I'm not going to let you die before me," Catra shot back. With a grin, she added: "Let's agree to die together."

"Yes, let's." Adora blinked. "I mean, no! Let's not die at all!"

Catra giggled, leaned down and planted a kiss on Adora's lips.

Adora returned the kiss, wrapping her arms around her lover.

They didn't talk much afterwards.

*****

"So!" Adora said, a little too loudly, she realised right afterwards, as she sat down to eat breakfast. "Good morning."

Glimmer and Bow both raised their eyebrows at her, then looked at each other for a moment before turning back to stare at Adora.

"What's wrong?" Glimmer asked.

"What? Nothing!" Adora replied. "It's a nice morning, we'll be signing the Alliance with the French today, and… the television isn't showing another riot," she finished, pointing at the screen Entrapta had installed in Darla's kitchen.

"...and international tension is rising as representatives of several African nations have accused France of preparing to intervene with Etherian support in…"

Adora frowned and grabbed the remote to switch the channel.

"...protest turned violent, and the police used tear gas and water cannons to disperse it before it could reach the designated landing zone of the Etherians, and…"

"...of India stated that they considered the concerns about magic that the Chinese ambassador had raised to be unfounded, and…"

"...called for OPEC to develop strategies to deal with the expected change in technology that the aliens will bring, but several member states were unwilling to…"

"....the riots in Tehran continue, and rumours of the Revolutionary Guards refusing to follow orders of the government are spreading. Whether this could lead to a coup remains in doubt, but…"

"...general strike has paralysed Mexico City…"

"…of Iceland has created a government agency to deal with magic, should it be restored to Earth. Its focus is expected to be on the Huldufólk - hidden people, or 'elves' - which are an important part of Icelandic folklore, and…"

"...the United Nations Security Council will formally take control of the Stargate later today, despite protests from…"

"...and anyone reading the Bible, instead of just parroting bigoted televangelists, knows that the Bible didn't limit marriage to a man and a woman - many biblical characters had multiple wives. Further, the parts of the Bible, namely the Old Testament, that can be interpreted as condemning homosexuality also contain other rules that we do not follow any more. Jesus never said anything against homosexuality, and…"

Well, that at least sounded positive! Adora nodded and tuned the channel out. And tried not to glance at her friends' smirks.

"So, what's got her so worked up?" Glimmer asked Catra.

"Seth's claim that princesses are like Goa'uld," Catra replied between swallowing a 'croissant' in a few hasty bites.

"Really?" Glimmer shook her head. "We're nothing like the Goa'uld!"

Adora pressed her lips together. “I’m just wondering what we would do if a princess turns out like one of them. You know, cruel and power-hungry.”

“Check if it’s Double Trouble trying to create drama again,” Glimmer replied.

That wasn’t the point! Adora frowned again. “What do we do if a princess is a bad ruler? Should She-Ra intervene?”

“You’re She-Ra,” Glimmer replied.

“I mean, what if, in the future, a princess turns bad and none of us is around?” Adora explained while Catra sighed. Loudly.

“Ah.” Bow nodded. “Historically, such situations were solved through war or the threat of war. Neighbouring kingdoms usually banded together to deal with, ah, a rogue kingdom if it became apparent that they would not stop trying to expand.”

“Someone missed the Horde, then,” Catra said.

“We didn’t miss it - but by the time Hordak made his move, he had already managed to entrench himself and raise an army that was too powerful to be easily defeated by the Princess Alliance.” Glimmer scoffed. “But we did win, and now the Scorpion Kingdom has been restored.”

“But what if they aren’t attacking their neighbours? Just, ah, ruling like a Goa’uld?” Adora asked.

Glimmer frowned some more. And Bow blinked. “Internal affairs of a kingdom have usually been left to the ruling princess of a kingdom,” he said.

“Meddling in another kingdom runs the risk of starting a war,” Glimmer added. “Everyone would fear that they would be next. If there are issues, like water rights, that’s what the Princess Prom is for.”

“So, if a princess is cruel to her subjects, that’s a topic to discuss at the Princess Prom?” Adora asked.

“More like gossip, I bet,” Catra said, earning her a frown from Glimmer.

“Princesses are expected to rule wisely and lead by example,” Glimmer said. “No one wants to be shamed in front of their peers.”

“But it’s a loose system - there’s no laws or anything,” Bow added. “It’s a touchy subject.”

“Well, maybe there should be a law,” Adora said.

“It would have to be enforced by starting a war, ultimately,” Glimmer pointed out.

“Or by She-Ra,” Bow said. “But that would be seen as a war as well. Two princesses fighting, and all.”

Adora slowly nodded. Maybe that would be a task for She-Ra - and future She-Ras: Dealing with bad princesses.

Catra raised her eyebrows at her, but Adora didn’t react. She had to think about this. If She-Ra was supposed to deal with bad princesses, then there needed to be rules to determine what was bad.

But who would make the rules?

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 22nd, 1998

Samantha Carter stood at parade rest while General Hammond saluted and formally handed over command of Stargate Command to the United Nations Security Council.

The four foreign generals present - she recognised General Li, General Sidorov and General Haig from their first visit to the Mountain, but the French had sent a new officer, General Petit - saluted in return, then everyone shook hands.

"General Petit…" She heard the Colonel whisper next to her.

"Jack!" Daniel hissed in response.

Sam suppressed a sigh. She just knew that the Colonel would make jokes about 'General Little'. At least the United States picked General Hammond as their representative on the UNSGC Joint Command instead of someone from the Pentagon without any experience with the Stargate.

"Let me introduce my staff," General Hammond went on. "Most of you have already met SG-1."

More handshaking followed. General Petit, despite the stereotypes about French womanisers and the Colonel's grumbling, was completely professional as he addressed Sam. More professional than many Air Force officers, actually. She didn't get a read on Li, Haig seemed to be slightly annoyed to be here and Sidorov…

…was looking at the Stargate more than at the people present.

"Samantha!" Dr Georgovich beamed at her. "Now we finally can work together!"

"Iwan." Sam smiled at the enthusiastic scientist. It was hard not to like someone so passionate about their work - and so congenial. Of course, Dr Georgovich almost certainly was working for the Russian FSB, the successor of the KGB, in some capacity, but Sam didn't think he was an actual trained agent - the man was a scientist through and through, after all.

"Too bad we not yet in new location. Not much room for science here."

“It hasn’t been an issue before,” the Colonel said. “The Mountain’s got perfectly fine facilities.”

“Perfectly fine for American Stargate Command, yes. But now we are United Nations Stargate Command!” Dr Georgovich beamed. “New mission! Less war, more science! And other civilian missions!”

“For a civilian mission, there surely are a lot of new soldiers here,” the Colonel retorted, nodding towards the new generals and their entourage.

“Of course! Galaxy is dangerous, scientists need guards.” Dr Gergovich nodded at him. “Take good care of us, da?”

“For as long as we’re here.” The Colonel’s smile showed many teeth.

Sam cleared her throat. “Well, let’s see how we can fit you and your colleagues into our labs here. We’ve made a preliminary plan, but the roster hasn’t been finalised yet.”

“Da! Need to check if all scientists survived gulag, first, before sending them here.” Dr Grogovich chuckled. “It’s not real gulag, of course. Just top-secret research stations in Siberia. But name is tradition.”

The Colonel chuckled at that - he would; he liked dark humour. Sam politely smiled.

“So, once we move to Canada or Australia, we will have one big science building. And another as a spare. And a testing ground for experiments!”

“Once the United Nations decide on a location,” Sam said.

“It better be Canada,” the Colonel commented. “Can’t move to a land without a decent hockey league.”

“Da! I love NHL! Almost as good as Russian hockey league, now that Russians play in the USA!”

“In any bar, those would be fighting words.”

“But this is no bar.” Dr Georgovich laughed again, then turned to Sam. “So, do aliens work with you here as well? Do they have their own lab space? Will they share?”

Entrapta would, in a heartbeat. “They visit from time to time,” Sam replied. “But they have their own research facilities in space.”

“Oh! I love space. Is it public lab?”

“Invitation only,” The Colonel told him. “And the Etherians are a bit touchy about non-allied visitors.”

“Like Americans, da? You still have no alliance.” Dr Georgovich nodded. “Maybe I talk to them. Entrapta is fine scientist, too. Science does not care about country.”

“But scientists generally do,” the Colonel said.

“Bad scientists care!” Dr Gerogovich retorted. “But we are all one world now! We need to think like that!”

A lovely attitude. Sam wished that would be true. But they couldn’t even get all Americans to agree on what had to be done - or to care more about the whole than themselves. “I think that’s an ideal to strive for.” Daniel would agree - where was he, anyway?

She looked around and saw him talking to a French officer. Quite an attractive woman. Probably a member of the DGSE, Sam thought, then berated herself for being petty. She should know better than to judge people for their appearance.

Even though Daniel would be a prime target for a honey trap, as the Colonel called it. At least in the eyes of those who didn’t know him.

“Da! What was President Lincoln said? ‘House divided cannot stand’? Wise words! Earth has to stand united to face Goa’uld!”

Well, there was nothing anyone could say against that. Even though it looked like the Colonel really wanted to disagree.

Sam probably should talk to him if this persisted. They had to work with the newcomers - at least until they were reassigned to Space Force.

“Let’s head to the lab,” she said. A good distraction would help soothe tempers.

*****

Le Palais de L'Élysée, Paris, Earth, September 22nd, 1998

“Well, that’s an impressive palace for a non-princess,” Catra commented as they stepped on the red carpet leading up the stairs to where the French president waited with his wife.

Glimmer looked around - probably trying to figure out if her own palace was bigger, Catra thought with a grin.

“Catra!” Adora hissed next to her.

“I’m not saying anything,” Catra defended herself. “I just had a funny thought.”

“Don’t have funny thoughts when we’re signing an alliance treaty,” Glimmer said.

Catra would have retorted, but they reached the top of the stairs, and the French president greeted them with a wide smile before introducing his wife.

Catra flashed her teeth, matching the man’s smile. She wasn’t an idiot - she knew this was an important diplomatic occasion. Like the Princess Prom, but hopefully with better security. At least the soldiers - those not just standing around at attention - looked

sharper than Frosta's guards. Well, they had Melog with them; they would spot any trap. Probably.

They posed for the press, shook hands a few times so everyone got the message and then entered the palace to actually sign the treaty. Or not - there was more posing and smiling for the press before Glimmer and the president signed the treaty.

Which then was held up so everyone could smile some more for even more pictures. If Entrapta were here, she'd probably be wondering if this was done so the treaty couldn't be denied since there were too many witnesses.

But Entrapta was running tests of their spy bot with Hordak.

"...and we've prepared a small reception here."

Oh? Finally, a good thing! Catra's smile turned genuine when they entered a large room with a buffet. Her nostrils flared when she smelt fish. Grilled fish.

"Don't drool," Adora commented.

Catra snorted - her lover was as fond of good food as she was. Growing up in the Horde tended to result in that.

They made their way over to the buffet and started filling plates with food. The French president seemed to relax as well - he even pointed out French specialities for them.

Which, Catra had to admit, were delicious. So delicious, she refilled her plate before joining Adora and the others talking to the French president and his ministers and generals.

"...and we should start the technology transfer right away. Changing production to advanced vehicles will take some time, so it's best not delaying that any longer than strictly necessary," one of the generals was saying.

“You need educated engineers first - and scientists,” Glimmer retorted. “You can’t really start producing spaceships without knowing what you’re doing.”

Catra snorted. “Well, you can - but it’ll end up like Kyle doing maintenance on a hovertank.”

Adora giggled, Glimmer groaned, and Bow frowned. As expected. But the French looked lost, so Catra explained: “He was in our cadet squad. Hard-working, but a screw-up.”

“He’s a little clumsy, but he’s very brave,” Adora added with a frown at Catra.

“Anyway, the hovertank broke down in the field. Blocked a whole company from crossing a mountain pass because they didn’t dare to push it over the side,” Catra went on. “I think the Alliance should have awarded him a medal for that. Heroically holding the pass or something.”

“Catra!”

But the French were laughing. “Oh, yes, we had one of those in our company as well when I was a recruit,” one of the generals said. “Almost blew himself up with a grenade.”

“So, it’s true you both were originally enemies of the Princess Alliance?” another general asked.

“Yes,” Adora said, standing a little bit straighter. “But we all joined the Alliance to fight Horde Prime.”

Of course, it had happened at pretty much the last possible moment, in Catra’s case. She nodded anyway.

“Well, a common enemy generally has a unifying effect,” the general commented. “We’ve seen the same with the Goa’uld - after the Americans finally informed us.”

“Yes,” Glimmer agreed with a nod.

Catra was tempted to mention that the Americans had wanted to keep their arrival secret as well, but… she wasn't Double-Trouble. Causing more problems for shit and giggles was stupid. Although the reaction of the French might tell her how much they knew about Stargate Command… No, that was stupid as well. They needed Earth united if only to make dealing with the lot of the people here a little easier.

"I'm still a little surprised that our weapons are deemed effective against aliens with spaceships," the first general said.

"Well, on the ground, they don't have better weapons," Catra told him. "Probably worse, all things considered - although your weapons need more supplies. We haven't faced the Goa'uld, though, so our estimation is based on the experiences the Americans have gained fighting them for years."

"Well, we can match the Americans on the ground," the second general said. "Soldier per soldier, at least."

"Only if you send in the Légion," another general retorted. He had a different uniform.

Everyone laughed again.

"But, more seriously, we need to train our troops for fighting the Goa'uld. We can't just send them into battle without preparing them for this." The first general shook his head. "And we need the resources for that."

The easiest way would be to do joint training with Stargate Command, Catra knew. They had the experience - it'd be like some old sergeants giving lessons and training to cadets. It didn't turn cadets into experienced troops, but it cut down on basic mistakes. At least for most cadets.

On the other hand, sometimes, they taught the wrong lessons. Or just didn't know enough. Like the time the Plumerians suddenly decided to start fighting back thanks to She-Ra. All the past Horde actions had shown that they wouldn't fight back in an organised

manner and would stick to individual resistance. They would have to wing it to some degree.

And such training would be good for their own troops as well - both clones and Alliance troops. Heh, former Horde soldiers might be the best pick for this kind of war, what with having been trained to fight princesses with weird magic powers. Not that the training had been very successful.

"We'll have to ask Entrapta to make some Goa'uld-style training weapons. To simulate the effects," Adora told the generals. "At least for the staff weapons - the zat'nik'tels can be used as they are since they stun and don't kill their targets." She blinked. "Unless you hit a target twice. Maybe those should be simulated as well," she added with a weak smile.

"Joint training," Catra said. "Most of our own troops will gain from that as well."

"Right."

Can help too. Know Goa'uld.

"And Melog will help," Catra added, nodding at her friend. "They have experience with Goa'uld."

A number of the officers stared at Melog as if they had forgotten that they were here. Well, Melog could be very sneaky if they wanted. But… Oh. They had forgotten that Melog wasn't an animal. Even though Adora had introduced them.

At least the president smiled and didn't look surprised. But that raised another point. If even the generals were like this… Catra shook her head. "And your troops also need to train for interacting with other species. Like Melog here. Otherwise, they'll make stupid mistakes. Maybe even fatal ones." If Melog had wanted to harm them with their illusions back when they had met for the first time…

“And magic,” Adora added. “People on Earth have weird views of magic.”

A few of the people around them winced. “It’s a touchy subject for many,” the president said. “Mostly because they don’t know what magic can do.”

“It’s more what magic can’t do,” Adora said. “And we really don’t know what Earth magic will be like - your myths and history are a little confusing.”

A lot, in Catra’s opinion. And so many of them contradicted each other!

“But that might be because you have so many people,” Glimmer added. “You have enough people for almost two hundred planets like Etheria. That could spawn hundreds of magical traditions. And, as far as we can tell, you never had a centre like Mystacore on Etheria, where all the sorcerers gather to study and research.”

And to hide from the war, Catra thought. It was a bit unfair, of course, but the Alliance would have done much better even before She-Ra joined them if they had had sorcerers fighting for them. Had done better back when Micah had been with them. But pointing that out would only set off Glimmer.

“Could we send people to study there?” the president’s wife asked.

“That would be up to Mystacore,” Glimmer replied. “They’re not officially part of the Princess Alliance.”

“Your father and your aunt are, though, and they’re the most powerful sorcerers on Etheria and members of the city’s council,” Catra said. It wouldn’t hurt to remind Earth’s people that Etheria might not be united, but that the Alliance pretty much called the shots for the planet.

She caught Adora flinching and blinked. Why would…? Oh. She had just reminded Adora of the reason that princesses ruled, and

her lover was still worrying that she wasn't any better than the Goa'uld.

Damn.

"Well, it would allow us to study magic without having it returned to Earth," the French president said. "That would likely calm down a lot of people worried about magic."

It would also give them sorcerers trained at the best academy in Etheria - maybe the galaxy. Predictable. But they had misjudged Adora.

Catra's lover shook her head. "That would take years. And Etherian magic might not work the same as Earth magic."

"It would also mean that instead of your native traditions, you would have Etherian traditions," Bow said. "A lot of people want their magic back, not someone else's."

"Yes," Glimmer said. "And there's no reason to wait years before returning magic, anyway. Not when so many people want it returned. India sent another request to restore magic, and the Japanese have stated that this is part of what they want to discuss at our upcoming meeting as well."

That made the French wince, Catra noticed. Well, she had expected that.

"We might have to look into hiring instructors, then - France doesn't have, ah, magical traditions," the president said. "Or if we have, they were lost. Our myths don't tell us how to use magic, only what magic did. And our current research into the matter was inconclusive."

"Well, you'll figure it out," Catra said.

The French didn't seem to take much heart from that, though.

*****

Aéroport de Paris-Charles-de-Gaulle , Roissy-En-France, Earth, September 22nd, 1998

"Well, the food was good, but the company…" Catra stretched as they entered their ship.

"They weren't that bad," Adora objected.

"They wanted us to hand over everything, technology and magic, right away." Catra scoffed.

"They didn't want magic," her lover objected.

"They want magic, just without everyone getting magic," Glimmer corrected her. "And their 'entrepreneurs' wanting unlimited trade with us as if we didn't know how dangerous that is! I hope the British aren't like that, or tomorrow will be the same, just with worse food."

Catra snorted at that.

*****

The Training Session

Cheyenne Mountain, Colorado, United States of America, Earth, September 23rd, 1998

"So, there are our FNGs," Jack O'Neill commented as he looked at the soldiers assembling on the field in front of him. "We've got our work cut out for us, Teal'c." They were the worst kind of FNGs, too - FNGs who didn't understand that they were FNGs. Jack knew the type. Most of the members of Stargate Command - the old Stargate Command - had been like that: recruited from elite units, used to being the best. They took a while to be broken down and rebuilt into useful soldiers.

"They are veterans, as I was told, and merely inexperienced where fighting the Goa'uld is concerned. I foresee no trouble teaching them how to fight the servants of the false gods and the false gods themselves as we did to our comrades in arms before."

"Yep. But those aren't Americans, so they'll be more prickly and difficult." Then again, getting Marines to listen to an Air Force officer when it came to ground combat was a challenge by itself.

"I have no doubt that we will rise to the challenge, O'Neill."

"That's the spirit." Jack grinned and kept grinning as he started walking towards the rough formation that had assembled on the field. The officer in charge of the Brits noticed him first and bellowed, the rest of the limeys quickly coming to attention.

The French and Chinese followed, with the Russians a little behind, but all finished before Jack stepped onto the actual field. Four different formations, all of them assembling on their own, with four different officers reporting for training.

"What a mess," Jack whispered after returning the salutes.

Only Teal'c heard him, and his friend didn't react at all.

Then Jack raised his voice. “Welcome to Stargate Command! I’m Colonel Jack O’Neill, the senior field officer of the unit. This is Teal’c, former First Prime of Apophis. He is a Jaffa.” He nodded at his friend and tried to gauge the men’s reactions. There was some tensing, but nothing serious that he could see.

“We’re going to teach you about the way the Goa’uld and their Jaffa fight. I know you’ve been briefed and seen the news, but there’s nothing as impressive as first-hand experience,” he went on. “For that, we’ve prepared some target dummies.”

Everyone turned their heads to look at the range to the side of the field, where, in the open and behind earthen walls, a dozen dummies had been erected by some grunts. “Line up at the edge!”

A minute later, the soldiers were watching the range - and Teal’c, who had stepped into the centre of the firing line with his staff weapon. It was always better to start with something that drew attention when teaching soldiers, and explosions were a sure way to do that, in Jack’s opinion. He nodded at his friend.

“This is a staff weapon,” Teal’c said, holding the staff up. “It can fire plasma bolts upon command. They explode upon hitting the target, generally burning through standard body armour of Tau’ri and Jaffa alike.”

Jack saw a few of the soldiers whisper to each other - some might not have been aware of the Goa’uld term for humans. One of the Russian female soldiers - or spies; they were far too pretty in Jack’s opinion - seemed to be the resident expert for her group. He made a mental note to look up her file later.

Then Teal’c turned to face the field and aimed at the closest dummy. A moment later, the staff fired, and the dummy exploded, sending rubber bits and ballistic jelly all over the place. Teal’c didn’t stop and fired again and again, blowing up another dummy and blasting off the top of a wall of earth, then decapitated the dummy behind it.

Jack's friend wasn't quite smiling when he turned to face the soldiers, but he was standing in a sort of smug way. Jack could tell.

He grinned himself. "That looks impressive, but the staff has a few drawbacks as well. Aiming is kind of hard since the thing isn't ergonomic. And it has a low rate of fire - relatively low." It easily beat an M79 or an M203, of course. "But one hit, and you're dead even if you're wearing body armour. So, don't get hit." He grinned.

The chuckling amongst the soldiers sounded just a little bit forced; they weren't green soldiers.

"Now, the second common weapon in our enemies' arsenal." Jack drew the zat'nik'tel from his holster. "Looks weird, doesn't it? That's a zat'nik'tel." He demonstrated the safe and active modes. "It's smaller than a staff weapon and works differently. If you get hit with it, you'll be stunned. Hurts like a bitch, too, trust me about this." This time, the chuckling was a little more reluctant. "Then if you get hit a second time, even if it's minutes apart, you die. Just like that. Dead as a doornail, leaving an intact corpse."

No one was chuckling now.

"And if you get hit there times in succession…" Jack turned and fired at the closest standing dummy. The first and second shots didn't do anything. The third disintegrated it. "...you're literally gone."

Everyone was staring now. It really was like teaching Marines.

*****

The FNGs were good. Better than the average SGC recruit, Jack O'Neill had to admit. Of course, the other countries would send their best for this assignment - if only so they could build up a cadre to train more troops back home once they had experience fighting the Goa'uld.

He watched a squad of British soldiers navigate the simulation field, trying to get close to Teal'c. Fire and move, the simulated shots not quite as loud as the real thing. Jack didn't see any obvious mistake - but they had never fought Jaffa. And they had no idea how fast Teal'c could run. One more leap… yes.

Teal'c dashed out from under cover, staff weapon firing - at the ground in front of the closest soldiers, throwing up dirt and smoke, temporarily blinding the limeys. Not for long - they changed positions as soon as they realised what had happened - but they reacted as if they were fighting humans.

Teal'c closed the distance far quicker than they expected - he jumped over the rock the first two were hiding behind before the dust cloud had settled. Two jabs, not even shooting, and both men's simulation gear marked them dead.

The rest of the squad started firing, but Teal'c jumped to the side, behind another rock, then returned fire. Simulated fire. One soldier was caught in the open and went down, and Teal'c used two more real blasts to throw up more dust clouds.

The limeys fell back, expecting another charge - and ended up flanked by Teal'c, who had sprinted to the side even faster than they had expected. And that was it for this exercise.

"Bloody hell!" one of their mates behind Jack cursed. "No one told us we'd be fighting Superman!"

Jack clenched his teeth to keep from correcting the soldier. Teal'c was closer to Captain America, not Superman, but it wouldn't do to appear a nerd. He turned and grinned. "Welcome to the galaxy, boys! Don't worry, with training, you'll be able to handle Jaffa."

Another soldier scoffed. "And with artillery."

"No heavy artillery for Stargate Command, alas." Jack smiled. "But anything portable, we can use."

"Why don't we get heavy weapons?" the soldier complained.

“Because our task is exploration and scouting - and guarding scientists and diplomats,” Jack quoted their new mission statement. “We’re not going to conquer planets.”

“Well, we should!” the soldier insisted.

“Hey! Even artillery wouldn’t hit the guy when he’s right in your trench!” another limey said. “Besides, we got his number now. When it’s our turn, we’ll get him for sure!”

Jack didn’t bother hiding his grin. Just like his latest batch of recruits, they had to learn the hard way.

*****

“So, how is it…” Daniel took a step back from where he had joined Jack O’Neill when Teal’c tossed another Russian across the mats in the base’s gym.

“...going?” Jack grinned. “As expected.”

The Russian cursed and rolled to his feet, then charged in again. Teal’c used one Jaffa-martial arts move Jack didn’t remember the name of and redirected the Russian’s charge into the other Russian trying to sneak up on him from behind.

Both went down in a tangle of limbs. When they got up, one had a split lip, and the other was favouring his left leg.

“Let’s take him all together!” the first spat in Russian.

“They didn’t say we could.”

“They didn’t say we couldn’t.”

“It makes us look bad.”

“I don’t care! Just take this bastard down!”

Jack chuckled loudly, which made the Russians sitting around the mat glare at him - they would know he spoke enough Russian to

understand them - but the four fighting Teal'c didn't seem to care and attacked together.

It didn't help them. Teal'c blocked two strikes, took a kick to his chest and slammed the first Russian down, then tackled two more. All went down, but only Teal'c got up, catching the last one with a mule kick in the chest.

Jack winced - he knew how much that hurt. Dr Fraser wouldn't be happy - she never was when they flooded the infirmary with training accidents. But this was necessary to avoid flooding the morgue once they were in the field.

Anyone with SGC needed to know just how dangerous Jaffa could be.

"They'll think every Jaffa is Teal'c," Daniel commented in a low voice.

"Yes. Better than thinking they are pushovers."

"They might be more easily intimidated when they meet the first Jaffa," Daniel worried.

"Doesn't matter. They'll still fight as well as they can." Jack knew those people. Spec Ops and Black Ops. And some spies. He glanced at the woman he had noticed before. She was getting ready to fight Teal'c next. She was wearing camo pants and a t-shirt that left her arms bare, and Jack studied her muscles. Definitely no desk jockeying data analyst. And not a honey trap, either. Or not just a honey trap. And she moved like… well, not quite like Teal'c, or Catra, but… Jack wouldn't like to fight her on the mats. Not because he wouldn't win - he had about fifty pounds of muscle on her and fifteen years of experience, and that would be telling - but it would be closer than he would like. And he would get hurt.

"Are you sure about that, Jack?"

“Yes. I know the type.” Jack would do the same in their place. Had done the same.

“Well, if you’re sure that…” Daniel trailed off when more Russians started flying. Not the woman, though - she evaded Teal’c and almost caught him in the back. And she took two throws to stay down.

Yeah, Jack would have to keep an eye on her.

*****

Heathrow Airport, London, United Kingdom, Earth, September 23rd, 1998

“Horses!” Adora couldn’t help it - she beamed as they stepped out of Darla. There were two carriages waiting for them with horses! And more people on horses! Swift Wind would love this! Or not - he probably would want those horses freed.

“Did they put this together to impress us?” Catra asked, looking around with a barely-hidden scowl.

“No,” Glimmer said. “This is standard procedure for state visits.”

“We checked,” Bow added.

Adora nodded. He had researched things.

“And you didn’t tell us?” Catra asked with a frown.

“I thought Adora would tell you,” Glimmer replied before taking a step forward and greeting their hosts - represented by the Crown Prince, apparently, and a minister of the government.

And lots of horses. And, of course, lots of reporters.

“I hope they have more effective security than horse cavalry,” Catra muttered after a frown at Adora.

“Smile,” Adora whispered before she shook the Prince’s hand. He looked about as old as Micah.

They exchanged the usual greetings. By now, Adora was kind of familiar with the customs. Shake hands, say how happy you are to be here, smile and wave for the cameras - that came before, when you left the shuttle or ship - and don’t say anything too honest.

After the spiel, they climbed into the waiting carriages. Glimmer and Bow rode with the Prince, Adora and Catra with the minister - the Foreign Secretary.

“We’re using standard protocols for visiting royalty,” the man explained as they took off, travelling at low speed.

Adora nodded. “Of course.” They were princesses, after all. And their consorts - even if it wasn’t yet official. But that didn’t seem to matter to the British. Though Catra suspected that they would care about those details if they didn’t have to suck up to the Alliance.

By the time they reached Windsor Castle, they had covered the landmarks on the way, the history of the Horse Guards, food and the weather. No politics. And Adora didn’t even have to pinch Catra to keep her lover from making comments about figurehead princesses and queens.

Such as the one they were meeting now. She was old. Adora had known that, of course - she had seen pictures and met her son today - but actually meeting her made that even more apparent. She wasn’t like Angella. And not like Madame Razz, either. No disapproving glances or absent-minded remarks.

The protocol for meeting the Queen was supposedly complicated, but it was nothing compared to the rules for the Princess Prom, so Adora didn’t make any mistakes while greeting the Queen or walking down the line of soldiers. It wasn’t an actual inspection,

though - the Queen didn't check every soldier for regulation-conforming uniform, nor did she check their weapons.

Unlike the French, the British didn't have them proceed to the signing of the alliance treaty right away. First, they moved, again with the carriages, to the Queen's palace. Without the Foreign Secretary this time. And past a lot of people, many of them waving tiny flags of the United Kingdom and the Alliance.

"Let's hope none of them tries to kill us," Catra mumbled. Her ears were twitching - she was on edge, Adora realised.

Well, they were surrounded by throngs of people. And Adora knew that not everyone on Earth liked them. But here, she didn't see any signs of a protest. Just cheering people. And lots of children.

*****

Buckingham Palace, London, United Kingdom, Earth, September 23rd, 1998

They were having tea. Adora had had tea before, but not like this. And not just because they were in the Queen's palace - Buckingham Palace. She'd had tea in palaces before. But not with so much food. And good food, at that - Catra was scarfing down those fish sandwiches. Adora preferred the scones, actually.

"So, how was growing up on Etheria as a princess?" the Queen's second-eldest grandson - the 'spare' according to Catra - asked. He was very young, barely fourteen. Two years younger than his elder brother. The whole Royal family was present, which was, as far as Adora could tell, unusual for state visits.

"You'd have to ask Glimmer that," she told him. "I grew up as a Horde cadet."

"Yeah," Catra cut in after swallowing her latest sandwich. "We grew up in the barracks. Glimmer's the one who grew up in a palace."

Glimmer frowned slightly. “I was trained as a soldier as well,” she said.

“In a palace.” Catra grinned. “With good food and beds so soft, you could drown in them.”

Adora nodded. “Oh, yes. I remember my first night at Bright Moon. I couldn’t sleep because it was so soft.” And because she had missed Catra’s presence, but she wouldn’t talk about that.

“We’re going to enter the military as well,” the young prince told them, nodding solemnly before grinning. “We might even get to fight the Goa’uld, too! Like Uncle Andrew fought the Argentines.”

Adora hid a grimace. She wasn’t the only one, she saw - the Queen wasn’t amused. She looked like Angella right then, just older.

“We shall do our duty,” the Queen said. “As we have done before.”

She had served in the army as well, or something like it, according to Bow. And her consort had been in the Navy. Like proper princesses.

“Nazis, Argentines, and now snakes,” the old man - a prince as well, although now he was the Royal Consort - said with a chuckle. “I wonder what’s next. Martians?”

Mars was not inhabited… Oh, he was joking again. Sometimes, it was hard to tell. And some of the consort’s jokes were… a little mean. Catra liked them, though.

Adora nodded and took another scone.

“We can’t actually be sure that there aren’t other realms in the galaxy that might be a threat to us,” Glimmer said. “Just because we haven’t encountered them so far doesn’t mean they don’t exist.”

“Yes,” Bow agreed. “The galaxy is so big, the Goa’uld Empire is a very small part of it. And they limit themselves mostly to the worlds linked by Stargates. We’ve encountered several different species while we’ve dealt with Horde Prime and they didn’t use Stargates as far as we know.”

Species like the Star Children or Melog, whose worlds had been destroyed by Horde Prime. Adora bit a little harder into her scone. So much pain and suffering, so much destruction just because of one man’s desires…

“Species like you?” the youngest prince asked, looking at Catra.

“Huh?” Catra shook her head. “No, I’m from Etheria.” She patted Melog’s head. “They’re such a species - Horde Prime destroyed their world.”

Melog growled softly for a moment.

“And they remember,” Catra went on. “They also remember the Goa’uld.”

For a moment, no one said anything. Then the Queen nodded. “Such atrocities must be remembered lest they will be repeated.”

“Yes,” Glimmer agreed. “We won’t let anyone destroy another world if we can help it.” She flashed her teeth in a grim smile.

“And we will do what we can to help you,” the Queen said.

Adora half-expected their hosts to point out that they could do more to help if they had advanced technology, but no such comment followed. Then again, the Queen was just the figurehead, not the ruler of the country.

“So, how many different species do live on your planet?” the older of the two princes asked, leaning forward a little.

He was addressing Catra as well, Adora noticed with a slight smile.

"Lots. I don't know how many, actually. But there has to be a list in some archive. Or in the research base on the moon," Catra replied.

"A research base on the moon?" The younger prince blinked.

"Yes," Bow told him. "The reason we have so many different species on Etheria is that the First Ones created them as part of their research using genetic engineering. All of Etheria's species are related to humans like yourself."

"Ah." The boy nodded.

And the First Ones had also built a superweapon into Etheria's core to destroy Horde Prime, but that wasn't the time to mention this, in Adora's opinion. "The First Ones were destroyed by Horde Prime as well," she said instead. All but herself. Although Jack also was a First One, so… there probably were more people like her left. On Earth, even.

But that was another topic not suited to this conversation.

"So, can you breed with humans?" the Royal Consort asked Catra.

Catra shrugged. "Sure." She glanced at Adora for a moment and then grabbed another sandwich.

"Any species on Etheria can have children with another species, though they might need magical help in some cases," Bow said. "We haven't any, ah, data on how it works with other species not related to humans, but theoretically, you could use the same methods the First Ones used to create Etheria's species to create offspring."

The Royal Consort laughed at that. "Oh, that will ruffle some feathers!"

"The ramifications for various legislation will be quite complicated," the Queen said. "We will have to bring that up in

Our next talk with the Prime Minister. It wouldn't do to be caught unaware by one of Our subjects having offspring with an alien."

"Or an animal," the Royal Consort added with another chuckle.

The Queen didn't seem to be amused but she slowly nodded. "Quite."

The young princes grimaced, and the Crown Prince frowned. "That seems rather far-fetched," he commented. "And such magic would be restricted, wouldn't it?"

"Probably not," Glimmer replied. "Don't you have myths about horse people?"

"Centaurs," Bow corrected her. "And there were minotaurs mentioned as well. Earth magic might make this possible. Technology certainly will, once you master First Ones tech."

"We really must have a talk with the Prime Minister." The Queen lifted her cup of tea and took a sip.

Glimmer frowned. "Can you actually tell him what to do? We were told that the power rests with the elected government."

The Queen smiled. "It's not quite as cut and dry as it sounds. The power does rest with the government. However, the reasons for that are a mix of custom, tradition and laws. And as Queen of England, we wield influence - soft power. The Prime Minister cannot easily dismiss our concerns, certainly not if they are well-founded."

"Which the prospect of people having kids with their pets certainly qualifies as," the Royal Consort added. "I can think of a few people who would have rather married their dog than their spouse."

"Animals cannot consent to marriage, though," Glimmer retorted. "Only sapient species can. You couldn't marry a pet. Well, not according to our laws."

"Nor according to ours," the Queen said. "But we are more concerned about genetic engineering creating new species. Even leaving aside the moral questions about mixing humans and animals, what about the practical aspects? People rarely succeed at their first attempt when they are trying something new, and while a craftsman discarding a ruined piece is normal, we would rather not see people discarded - or suffer from mistakes made in their creation that leave them in pain or crippled."

It was Adora's turn to wince. The Queen was correct; people trying to create a new species would likely make mistakes while experimenting. Even worse, she had a feeling that this was a problem the First Ones - her people - had had to deal with when they experimented in Etheria. She wasn't sure she wanted to know what they had done with 'failed experiments'. Even though the answer was probably buried in all the data from the research base.

Cheyenne Mountain, Colorado, United States of America, Earth, September 23rd, 1998

"So, this is a zat'nik'tel. Weird design. But powerful. And non-lethal. Boon for police, you think?"

Samantha Carter shook her head at her new colleague. "Two shots kill, three disintegrate, Iwan." Far too easy to kill someone before you realised that you had hit them the first time.

"Make it one shot only?" He cocked his head sideways and frowned at the weapon he was holding. "And limit it to one per squad?"

"Reducing the number of shots - or introducing a hard-coded delay so it would be safe - would mean you'd have to hit with the first shot," she explained. "And that would mean it would only see marginal use. Especially in incidents with multiple assailants." She had had to explain that to a senator before. At least no one had

told the NRA yet that there were actual stun and disintegration ray guns on Earth.

“Ah.” He nodded. “Too bad. Reliable method of non-lethal takedown would be great. Especially for hostage situations.”

“Yes. But not even the Etherians have anything like that.” Although they might have some spells which could be used for that. Sam hadn’t asked.

He put the gun down and beamed at her. “So! What work do you do?”

“I’m waiting for Entrapta to arrive,” she said. “We’re working on space surveillance drones.” The princess apparently had overslept - after working through the night. Or so Hordak had claimed.

“Great! Space spy drones!” Dr Georgovich clapped his hands together. “You go to space to test, da?”

Sam nodded. She felt almost nostalgic - he was so enthusiastic about space. When was the last time Sam had felt like that? After weeks in space, and several visits to orbit, it had become almost mundane. Of course, all the urgent work piled on her had done its share of taking the wonder out of space travel.

“Is something wrong?”

“No, no.” She smiled. “I was just thinking about all the other projects waiting for me.” Some of which she wouldn’t be allowed to work on, now that she was - technically - under the command of the United Nations.

“Oh! What other projects do you work on?” He looked around.

Now that was a little blatant. “Currently? I don’t know.” She inclined her head with a slightly toothy smile. “Others are going over the classified material to see what will be moved.” She suppressed a frown. That was logical, but she still didn’t like it.

"Oh." He pouted, then shrugged. "Like in Russia, then. Secret Service controls science."

"Not quite," she told him with a frown. "But not all the work I did was for Stargate Command."

"But you cannot decide what work was and was not, da? Secret Service can classify it."

She kept herself from frowning. "That is out of my hands. I focused on science, not internal or international politics." Technically true, even though she had followed either as well.

"Ah." He nodded with a wide smile. "Again, like Russia! Or USSR!"

It wasn't like that. But saying so would make her look petulant. So she shrugged. "Perhaps. Now, the work on spy drones involves Etherian technology. Horde technology."

"Ah!"

Yes, that would interest Dr Georgovich. He hadn't yet asked if he was allowed to work with Entrapta, but was that because he was aware that this wasn't covered by the new agreement with the United Nations or because he knew that this was entirely up to the Etherians and he hoped that Entrapta would invite him to work with them?

If so, he might be disappointed. Entrapta would do so in a heartbeat, Sam was certain, but Hordak wouldn't. The former warlord had more of a mind for keeping things classified than Entrapta.

"In any case, we have work to do for Stargate Command. Recalibrating for stellar drift, for one." That was needed to keep the Stargate working with their computers.

"Oh. That's what Russian DHD does automatically, da?"

"Yes. But we shouldn't just rely on an artefact we can't duplicate," she retorted.

"Da! We need to learn how to build DHD!"

Oh, if Sam achieved that… It wasn't just the controls for the Stargate or the software, but the power sources… "Let's start with the charts," she said. "We got a lot of astronavigation data from the Etherians and still haven't implemented everything yet."

"Da! Let's do science!"

*****

"Sam?"

Samantha Carter looked up from the latest readouts when she heard Daniel enter her lab. "Yes?"

"Do you want to do lunch together?"

She narrowed her eyes at her friend. Was he being subtle about 'feeding our scientist', as the Colonel put it, or did he just want to eat with her? It was hard to tell with Daniel.

"Lunch? Oh. Already past noon!" Dr Georgovich exclaimed. "Time to eat! Cannot live on coffee and tea, no matter how much sugar we add, da?"

Daniel blinked, apparently surprised by Dr Georgovich inviting himself along. "Ah… yes." He looked at Sam again.

Was something wrong? If something had happened to the Colonel or Teal'c, Daniel would have said so right away. Was it about the Russians? The Colonel was training the new arrivals today.

"So, let's go? Before only spam is left?" Dr Georgovich was beaming at them.

Daniel nodded. "Ah, OK!"

Sam almost snorted as she followed them out of the lab. "So, will the Colonel and Teal'c be joining us?"

"I don't think so," Daniel said. "Teal'c told me that they will be eating 'in the field' when he came to grab his mess kit."

"How did the training go so far?" Sam asked as they waited for the lift to arrive.

"As expected, I think. Teal'c wasn't very talkative."

Sam chuckled.

"Strong and silent type, yes?" Dr Georgovich asked.

"Ah, yes." Daniel nodded. "Though he also said that Jack was interested in a female soldier."

Sam blinked. What?

*****

10 Downing Street, London, United Kingdom, Earth, September 23rd, 1998

"...and I'm happy and proud to see this historic agreement signed today!"

It was hard to think of the Queen as a mere figurehead after meeting her, Catra had to admit. Even harder when meeting the Prime Minister right after having had tea with her. He was trying too hard to be nice, in Catra's opinion.

Of course, he wanted this alliance signed, so he had to be nice. But, still… Catra refrained from scowling when everyone present clapped their hands. And his smile was a bit too wide. He just… didn't look like a princess. Or prince, in his case. And he didn't live in a palace. It was a big house, of course, but it wasn't a proper palace. Unlike the French President's palace.

Of course, the French didn't have a queen, so their president filled the spot, so that was probably why he got to have a palace - no princess to show up.

"As are we." Glimmer stood straight, but she wasn't trying to appear taller than she was in an attempt to match the Prime Minister. "We are looking forward to fighting side by side with your troops against the Goa'uld to free their slaves."

More applause while some flunkie presented the alliance agreement to them. A few strokes with a pen later, they had their alliance.

And even more clapping followed. Well, they finally had their second alliance in the bag. And the Germans would follow tomorrow.

So, it was time to celebrate. Only, they had to face the press next. Like with the French. Catra kept smiling while she stared at a dozen cameras and more microphones. "Imagine if we had to deal with that back home," she whispered to Adora as they lined up for the questions.

"Shh!" Adora hissed back.

"You know I'm right." Catra had the last word.

Then the questions began.

*****

"I'm sorry, but as the Prime Minister already told you, we cannot comment on plans and missions." Catra saw that Adora's smile was frozen as she answered the same question the Prime Minister had already answered. For the third time.

"Audrey Collins, BBC. Prime Minister, are you planning to reintroduce military conscription? According to our sources, the British Army currently has just shy of fifty thousand soldiers available for deployment. This seems quite low for a galactic war."

The man's smile didn't waver. "We're looking into all options once we have a clearer picture of what exactly the military situation demands. Of course, I hope that we will not be forced to reintroduce conscription."

"Does that mean you support extending the alliance with Etheria to countries with more soldiers available for deployment, regardless of their human rights record?"

"That question hasn't been raised so far."

"It seems to be an obvious question. It hasn't been brought up so far?" The woman's frown was impressive.

Adora cleared her throat. "As I have said before: We cannot comment on plans and missions at this point."

"And that includes future diplomatic overtures." Glimmer frowned. "However, we have no intention to lower our standards and ally with people who would discriminate against us."

"Tim Brown, the Sunday Times. Isn't that a form of discrimination?"

That again! Catra rolled her eyes as Glimmer glared at the fool: "Do you think you have a right to our technology? That we have an obligation to share it with everyone, regardless of their deeds and character? Regardless of their stance towards us?"

"No, of course not, but some might consider your stance as forcing everyone to accept your values and morals."

"All we require is to treat people like us - people loving the same gender - equal to others. If that violates your morals, then that says a lot about your morals, but nothing good." Glimmer bared her teeth.

The reporters in France had been much more polite. Or picked better.

“Stop shilling for bigots, Tim!” someone from the reporters yelled. “We’re here to get information, not push conservative policy!”

“Indeed,” the Prime Minister said. “Ken?”

“Ken Smith, The Guardian. Will you send teachers and instructors to Britain to proliferate technology or invite students to Etheria or both?”

Glimmer glanced at Bow, who took a step towards the microphone. “We’re still evaluating how we can share our technology in the most efficient way. However, transporting large numbers of people to Etheria seems not very efficient even with the Stargate, not when the industry to be converted is here.”

And it would also flood Etheria with spies. Though saying so would be rude. Which was why Adora had told Catra she couldn’t comment on that. Spoilsport.

“Karen Calloway, The Independent. Will there be a supreme commander for the Alliance?”

“Why wouldn’t there be a supreme commander?” Adora looked as surprised at the questions as Catra. Of course there would be a supreme commander! You couldn’t wage war effectively without one person in charge. Trying to fight a war under a committee was a recipe for disaster, as the Princess Alliance had found out early on. “It would be foolish not to fight under a unified command.”

“And who would be that commander?”

“That remains to be seen. None of us has experience waging war against the Goa’uld, so we can’t tell yet who’s best at it.” Adora nodded with a smile. “I think it will take a while to find the right person.”

“And to convince them to take the job,” Catra added with a grin. “Those who have been in command of an army at war before know what I mean.”

But it was a good question - who would lead the alliance forces? Adora? Glimmer? Not Hordak. And certainly not any of the other princesses. Adora would be best - Catra could work best with her.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 23rd, 1998

"...and the Etherian delegation is currently attending the state dinner in Buckingham Palace. According to usually well-informed sources, informal talks following the signing of the alliance have gone well, and concrete results are supposed to be released soon. Neither the Etherians nor Her Majesty's Government was willing to comment, though, so speculation is running rampant."

Sitting in the mess hall, Jack O'Neill rolled his eyes at the reporter on the screen. Of course they wouldn't comment on informal talks - or release anything before the alliance agreement with the Germans was signed and the Etherians could actually start hashing out concrete details with the limeys, the Germans and the French.

Well, there were rumours that at least half the smaller European countries wanted to join the alliance - like the Swedes and the Finn, once they worked out how to handle their neutrality. That might delay the whole process further. Or the big three might just go ahead anyway and expect the smaller countries to follow their lead. Jack had a feeling that the last thing the Europeans wanted was to have the United States join the alliance too soon. Or at all.

To quote the limeys he had trained today in the field: bloody wankers. They were in this together - all of Earth was. They had to work together to defeat the Goa'uld. Though Jack wouldn't mind if the Russians and the Chinese were a little less involved.

He glanced over at the table where most of the Russian soldiers were sitting. How many of them were spies? It was hard to tell. All of them had military experience; Jack had confirmed that

today. But how many had training as spooks? Some didn't hide their interest in everything in the Mountain, whether or not it was part of Stargate Command, but were they spies - or just distractions for the real spooks? Or was it a triple bluff?

He studied the woman who had caught his attention earlier. Lt Svetlana Lenkova. She was most certainly a spook - she had combat experience, Jack was sure of that, and women weren't allowed to serve in combat units in the Russian army. According to her file, she was a communication specialist, but he had seen her shoot and fight in close quarters, and he'd eat his service cap if she was a radio operator with basic combat training. The way she sat, a little too relaxed, and the way the Spetsnaz soldiers listened to her was another clue. No special forces would act like that towards a radio operator. Certainly not with one as pretty as the woman.

"Jack?"

He blinked and turned to Daniel. "Yes?"

"You were staring at the Russians."

"Yes?" Why wouldn't he stare at them? They were a security risk. This was still an American base, no matter whether or not the Stargate was now UN property or whatever.

"So, Teal'c was correct - you're interested in the blonde."

"What?" He blinked again.

"He said that she caught your attention." Daniel was… not quite frowning.

"Indeed." Teal'c nodded.

And Carter… was focusing on her meal. Probably going over some data in her head that Entrapta had brought up in the afternoon or something.

“Well, yes,” Jack told his friend. “I’m sure she’s a spy.”

“A spy?” Daniel looked surprised. And Carter stopped eating to stare at Jack.

He sighed. Daniel was a little naive, but Carter should’ve known better. “Yes. I’m sure she’s GRU. Russian military intelligence,” he added for Daniel’s benefit.

To his friend’s credit, he didn’t ask if that meant KGB. “So, that’s why you’re interested in her?”

“Yes?”

“Ah.”

Jack narrowed his eyes. What was Daniel thinking? Or implying? Oh, for crying out loud! “Do you really think I would fall for a honey trap?” He scoffed and shook his head.

And caught Lenkova smiling a rather toothy smile at him. Had she been watching him? She couldn’t have been listening in, but if she could read lips… He bared his own teeth at her in a wide smile. She might be a lethal GRU agent, but Jack had decades of experience in black ops.

Let’s see who comes out on top, he thought.

*****

The Expert

Earth Orbit, Solar System, September 23rd, 1998

"I'm dying."

Adora rolled her eyes at Catra. "You aren't dying. You just stuffed yourself."

"Against my will. This was an attempt to kill us. A very subtle and cunning attempt. All those fish dishes… they knew I would be unable to resist." Catra groaned from their bed. "I'll get back at them for that."

"They just wanted to curry favour with you," Adora told her as she finished putting her clothes into their locker - or armoire since it was in their cabin. It was her best dress, after all, and deserved to be cared for. It would be a little embarrassing if she had to ask an Earth tailor for another dress.

Not that that deterred Catra. Her lover had dropped her clothes on the floor on the way to the bed. And not in the sexy way - she had groaned and complained until she hit the bed.

Adora sighed and started picking up the pieces.

"Just leave it for the bots. They need to be cleaned anyway," Catra commented from the bed.

Adora pressed her lips together. "It's still not right to just drop stuff on the floor."

"We're not cadets any more."

"That's no excuse."

Catra snorted. "I'd say you're making the job harder for the bots - they need to get it out of the locker now."

She had a point, but Adora wouldn't admit that. You just didn't leave your clothes on the floor. Unless you were seducing your lover, of course - it would kill the mood if you started gathering the clothes. Even Adora knew that.

So she still put the clothes into Catra's locker, sent a message to the bots to get it cleaned, as well as her dress, and then finally joined Catra on the bed.

"Took you long enough," Catra complained.

"It seems you have survived the cunning attack on your life."

"The fish I can't stomach has yet to be born. Not counting fugu."

"Fugu?"

"Some poisonous fish people eat on Earth. Deadly poison."

"They eat poisonous fish?" Were they crazy? Crazier than Adora had thought?

"Well, they cut the poisonous part out or something. Unless the cook makes a mistake, it's perfectly safe." Catra shrugged - a bit too nonchalantly.

Adora knew her lover. "You're not going to eat that fish." No one was perfect, after all. Everyone made a mistake at least once.

Catra frowned at her. "I didn't say I was going to eat it."

"I know you were planning to eat it."

"I wasn't really planning to eat it. We aren't even planning to visit Japan. And I don't think they would serve it at a state dinner, anyway."

Adora narrowed her eyes. That was a lot of research into a fish. "Of course they wouldn't serve poisonous fish at a state dinner!" Because it was poisonous!

“So, there’s no reason to worry about me.” Catra grinned widely.

There was only one answer to that. Adora slid over, then rolled on top of her lover. “I do worry about you anyway. Because I know you,” she said, looking down at Catra.

“Well, you shouldn’t. I survived fighting you,” Catra retorted.

Adora suppressed a sigh. That was typical for Catra, mentioning the war to change the subject. “I worry anyway,” she repeated herself.

Catra bit her lower lip. “I know,” she whispered after a moment, glancing to the side. And blushing under her fur.

Adora smiled and bent down, planting a kiss on her lips. And another. And then a third, longer one, when Catra wrapped her arms around her.

*****

Earth Orbit, Solar System, September 24th, 1998

Glimmer and Bow were already at the table when Adora entered Darla’s kitchen with a yawning Catra in tow. Hordak and Entrapta were probably still asleep - they had worked late into the night.

“So… what dastardly plans of us have the news revealed now?” Catra asked as she grabbed some bread and butter.

“The usual,” Glimmer replied. “Blah blah forced laws on us blah blah unfair discrimination blah blah plan to corrupt our youth blah blah weak government blah blah corruption at the highest level blah blah global conspiracy.”

She must have watched quite a lot of the news already, Adora realised.

“Well, most were quite positive,” Bow amended. “Just a few channels and newspapers were… critical.”

"And all of them are owned by the same people," Glimmer said. "Most belong to the same person, even. At least in England and America."

That was… well, not surprising. "Should we talk to them? Explain that we aren't corrupting anyone?" Adora asked.

"Won't help if they're a bigot," Glimmer said. "But they might just expect a bribe," she added. "They might want something in exchange for stopping this. They aren't as… fanatical as the others who hate us."

Adora frowned. "They are trying to blackmail us?" That was…

"Not blackmail, more like… extortion," Bow corrected her.

"It doesn't matter whether they hate us or want to extort something." Glimmer scoffed. "We have many more important people to talk to."

"But we could ask the Americans what's up with them," Catra suggested. "Have them do something about that. I mean, not that we would ask that, but I bet they would do something if we mentioned that this was annoying."

That was… likely, actually, but Adora didn't think it would be a good thing to do. It felt wrong. "I don't think that's a good idea," she said.

"Yes," Glimmer agreed. "The Americans might think that we owe them for anything they do."

Adora frowned again. That wasn't why she thought they shouldn't do this.

*****

"So… did you find anything that I missed and that we should be aware of during our trip to Germany?" Adora asked when

breakfast was over - well, almost over; Catra was finishing the scrambled eggs.

"We didn't actually do any research after yesterday's state dinner," Bow told her.

"As if you'd have missed anything," Catra said after swallowing. "You obsess over that stuff."

"I like to be prepared," Adora defended herself. "And the better we understand the Tau'ri, the fewer problems we'll have."

"Half of the time, nobody can understand them. Probably not even Earth people themselves," Catra said with a chuckle.

Everyone laughed, though it was a problem. Misunderstandings could have tragic consequences, as Adora and her friends knew very well. "Well, I don't think we'll have any problem at the signing. We didn't have any trouble in France or Britain, and they're supposed to be similar countries." She had mapped out some differences, but most of them didn't seem to apply. Except for the whole thing about the world war. The Second World War. As long as Catra didn't ask about the war, they should be fine. Though, speaking of the war… "What do you think about the supreme commander question?"

"It's a no-brainer," Catra said. She scoffed. "Without a unified command, we'll be as bad as the Alliance was before you took over."

"Hey!" Glimmer protested. "Adora didn't take over - we had to restore the Princess Alliance because it had fallen apart at that point. That was why the Alliance was so ineffective!"

Catra shrugged. "Same thing - you had no overall commander."

"It's not the same thing!"

Bow shook his head. "Let's not argue about the Alliance, OK?"

Adora nodded emphatically before Glimmer and Catra could continue their disagreement. “Yes. We all know we need a commander. The question is: Can we persuade our allies on Earth of that? And who will take the post?”

“Why would they baulk at this? They aren’t that stupid,” Catra said. “They had one in the big war as well. At least one per front or something.” She grinned. “And I think we can persuade them - we’ve got the fleet and the technology they want.”

That was a good argument. But… “And who would become supreme commander?” Adora asked.

“Not one of theirs,” Catra said at once. “They have no experience with our technology or war in space.”

“We don’t have much experience with a war in space either,” Adora pointed out. Well, she had personally cut fighters in half, but…

“It’s still more than they have.” Catra grinned. “And the clones have lots of experience - and Priest will follow you.”

Adora grimaced. That was true, but she didn’t like being reminded of it. “Still, we can’t let them lead us.” The only clone with actual experience as a commander in a war was Hordak. And Adora didn’t think anyone except, possibly, Entrapta would want him to lead the Alliance.

“But we have less experience fighting the Goa’uld,” Bow pointed out. “The Americans have been fighting them for years.”

“They aren’t in the Alliance,” Catra retorted.

“But they might join,” Bow told her. “They are making progress with their reforms.”

“And they have access to Goa’uld technology and a ship of their own,” Adora added. “They could fight without an alliance - they

did that so far. And they have the Stargate, so they can keep fighting the Goa'uld."

"The whole planet has access to the Stargate," Catra said. "Technically." She flashed her teeth in a grin.

"If we don't get them all united under one command, this will be a mess," Adora said. "But we can't ally with countries where we would get imprisoned - or worse - for loving each other."

Glimmer nodded. "Fortunately, the British and the French are part of the Security Council. If the Americans join the Alliance, that would mean they could control the Stargate. At least to some degree."

"I don't think the other countries would let them control the Stargate," Bow said.

"But if the Americans join, they'll want to have command," Catra said. "Hey! We all talked to SG-1. Remember Daniel's lectures? They are used to being in charge. And they don't like following orders. Especially from princesses - remember the comments about you? And our age?"

Adora did remember those comments on their television. As if you had to be old to lead! Or male!

"Well, we can't let them be in charge," Glimmer said. "They're not even in the Alliance yet."

"We haven't launched any operation yet, either." Bow shook his head. "By the time we're ready for an attack on a planet, we might have an alliance with the Americans."

"That means we should have our structures down for the new Alliance before that happens," Glimmer said. "And I think one of us needs to be in charge."

"Priest will only follow Adora, anyway," Catra pointed out. "Not anyone from Earth."

Adora frowned, but her lover was likely correct. “But I could be a subcommander.” She beamed at Glimmer. “You could lead. You lead the Princess Alliance in the war.”

Glimmer didn’t look as enthusiastic as Adora had hoped.

Catra, though, did. “Yes. And you have the political experience and rank to wrangle all the others.”

Glimmer frowned. “I also have a kingdom to rule. Unlike in the war against the Horde, I wouldn’t be on Etheria for long.”

“Micah’s got that in hand,” Catra retorted. “Besides, can you see Adora dealing with all those Earth rulers and politicians?”

Adora frowned when both Bow and Glimmer nodded at Catra’s words. She wasn’t that bad! “What about you, Catra?” she asked with a wide smile.

“No chance. I’m used to leading the Horde, where I could tell everyone what to do and didn’t have to worry about a dozen princesses or rulers disagreeing.” Catra grinned. “It’s you or Glimmer.”

“Glimmer!” Adora said at once.

*****

Area 51, Nevada, United States of America, Earth, September 24th, 1998

“Don’t worry, Carter - you’ll be back working with these alien thingamabobs soon enough.”

Samantha Carter frowned as she turned away from her laptop, where she was cross-checking the inventory of the transport, to look at the Colonel. “I wouldn’t presume to forecast my future deployments, Sir.” And she wasn’t sure whether or not she wanted to work at Area 51 anyway, instead of at the Stargate - or join the still-developing Space Force.

“Oh, come on - this is the Air Force’s newest and most secret research facility!” The Colonel grinned. “Where else do you think the brass would send their best scientist?”

“Somewhere they can work with alien researchers without having to go through an hours-long security check?” Sam tilted her head for a moment, then went back to check off yet another piece of alien technology that hadn’t been fully identified yet. Probably part of a lattice used to grow crystals for data storage, but Sam hadn’t been able to get around to testing her assumption.

“Good point!” The Colonel nodded. “Security is tight here. Very tight.”

Sam half-expected him to make an off-colour joke about how tight it was, but he didn’t. He was correct, though - security had increased since her last visit. Of course, that had been before first contact with Etheria and all the troubles that this caused - Sam still winced when she thought of the attempted storming of the base by a mob.

But they might have overdone it a little. Daniel and Teal’c hadn’t been allowed on-site, presumably because their presence wasn’t needed. And because they were civilians. Sam couldn’t imagine foreigners, much less alien researchers, being allowed into the base. Having them land at the base was one thing, but entering the base proper was a completely different matter.

Which meant she didn’t really want to work here, either. Not to mention that the whole base was about applying alien technology, not groundbreaking research.

And, she added to herself as two transport containers were unloaded from the plane under even heavier security, now containment for alien prisoners as well. Apparently, the United Nations weren’t trusted with Seth or Osiris. Sam had pointed out that this would delay interrogation efforts that needed the Etherians’ help, but the transfer had gone through anyway. She wondered what would happen when the Etherians wanted to visit

- or check up on how the prisoners were treated. Well, that wouldn't be her problem, would it?

Once the two containers were put on trucks bristling with guards and driven out of the hangar, the Colonel spoke up again: "I don't like this. I can't help feeling that the resident nerds and brass underestimate the snakes."

"They will have read the reports and files," Sam said.

"Reports and files are well and good, but they can't replace practical experience. And what are the chances that someone who thinks he's smarter than he actually is comes up with some 'genius plan' that involves the Goa'uld?"

Like offering them some sort of host in exchange for cooperation? Too high, in Sam's opinion. She knew a number of the scientists working here. And some of them she wouldn't trust to look after a hamster. But it was out of their hands for now, with Stargate Command now under the control of the United Nations. "I wouldn't presume to make any estimates," she said.

The Colonel snorted but didn't press her. "Well, the Etherians will find them, should they escape. They've got that magic scanner, after all. But, in the interest of fostering good relations, someone ought to inform them of the transfer as well."

Was he asking her to do it? She was meeting Entrapta tomorrow - today's trip to Nevada took too long to do any more work with the princess - and it would be easy to tell her. She hadn't been ordered not to tell, after all. And Area 51 was supposed to be secret, but the Etherians had landed here for their first visit...

So she nodded. "It would certainly be rude to have them find out once they want to talk to them." Or think the Goa'uld escaped from Colorado.

"Exactly!"

The Colonel watched as the last container with alien technology was opened and both Sam and the local officer in charge went through the inventory. Nothing came up missing or unaccounted for, and the last truck soon left the hangar.

Half an hour later, they were back in the air on the way to Colorado. And catching up on the news.

"...and the crowds are already lining the streets in anticipation of the Etherians' arrival. Berlin is ready for the aliens!"

"But are the aliens ready for Berlin?" The Colonel snorted. "I've been there, actually, during the Cold War. How things have changed."

Sam knew better than to ask him about what he had been doing there. "After today, the Etherians will have an alliance with three of the most powerful countries in Europe."

He scoffed. "Just signing a treaty won't create a working alliance. They still have to hash out all the nitty-gritty details. Troops, command, missions, technology… It'll take a while until anything comes of this." With a chuckle, he added: "Just sorting out who is to be in charge will take a long while."

"I would assume Adora or Glimmer would be in command," Sam said.

"They're the logical choice. But both are young - I've had second lieutenants older than them. That will cause problems."

And their gender, Sam silently added. Many, probably most of the officers would have trouble following the orders of a young woman. She knew that better than most.

"And no one wants to let foreigners command their soldiers," the Colonel went on.

"Least of all the United States," Sam said.

He frowned at her reminder that the United States was working on an alliance with the Eherians as well, with all that entailed. "Yes. Working out who is in charge once we join will be difficult."

Mostly for the United States, in Sam's opinion. Given the discrepancy in experience and resources, the Etherians were the obvious choice for supreme command of Alliance forces in the field. The Colonel was aware of that as well, but she knew he didn't like it.

Sam wasn't entirely sold on it, either. It was logical, obvious, but… it took a lot of trust to let foreigners command your own troops. Who could say if they didn't favour their own troops, even just a little, over others? It was one thing to have a few troops under someone else's command, but all of them?

*****

Flughafen Berlin-Tegel, Berlin, Germany, Earth, September 24th, 1998

"As I said: The same as in Paris and London." Catra smirked as they stepped out of Darla. "Flags, soldiers and reporters. And a minister or two." Typical.

"Those aren't ministers. Those are the chief of the Bundespräsidialamt and his partner," Adora corrected her.

"Bundespre-what?" Catra asked.

"The office of the head of state of the Germans," Bow explained.

Right. The Germans were infamous on Earth for using weirdly long words. "Still the same. They're just here to greet us," she insisted.

Then they reached the bottom of the ramp, and the whole circus started. Formal greeting, walking past soldiers, past reporters - no answering questions, though - and then getting into cars. No carriages here.

The drive through Berlin felt the same as in Paris or London - lots of people waving and cheering, lots of flags, big and small ones, until they reached a sort of palace, where more soldiers and the German Bundespräsident waited. Now that was a figurehead, in Catra's opinion. No real power at all. And he wasn't like the Queen either. Friendly, but not princess material - she found that out quickly after they started talking in the palace.

"...so, you act as the highest judge?"

And he wasn't interested in their military but their judges. Talk about weird!

"Only for the worst crimes," Glimmer replied. "But those are really rare."

"Really?" The man looked surprised.

"Yes. The normal judges can handle pretty much everything." Gimmer nodded.

"That's surprising. And you pick the judges?"

"Yes. Though most were picked by my mother."

Catra didn't wince. She kept smiling politely, even though being reminded of one of her greatest mistakes - or crimes - that had led to Queen Angella sacrificing herself made her want to wince. She grabbed another snack to distract herself. Tuna salad canapés, those were called, and they were heavenly. She'd have to ask Sea Hawk or Mermista if Etheria had any fish like this.

"...and do you use magic to determine the truth?"

"Yes, when the judge or the people in court ask for it."

They were still talking about the law? Catra wanted to roll her eyes.

“Aren’t you concerned that this would force everyone to ask for magical means to prove they are telling the truth or be suspected of or assumed to be lying?”

Glimmer tilted her head with a frown. “Without truth, there is no justice. Why would we want to let people lie?”

“But what if people honestly believe that something is true? Would your magic detect a lie instead?”

“No. But it would still show what the person honestly believed, which is usually decisive for a case.”

“Usually, but there are always exceptions, aren’t there?”

“Few of them. And even those can be solved with care and attention. We…”

Catra tuned the discussion out. Who cared about the law when they had a war to fight? Especially if it wasn’t about war crimes? And why would the right to lie be a right at all? Hell, Double Trouble would love this system!

*****

Schloss Bellevue, Berlin, Germany, Earth, September 24th, 1998

“...and with this signature, the alliance has been officially formed!” the German Chancellor announced.

Finally! Catra clapped loudly and enthusiastically as applause filled the room. They were here to sign the treaty, not to discuss the finer points of the law. Worst meeting ever, in her opinion. Even if the food had been good. Better than expected, after what Adora had read up on German cuisine. At least they knew how to cook fish.

And now came the press. Gah! Catra blinked as cameras flashed.

“Hans Meier, FAZ. Herr Bundeskanzler, do you expect that this treaty will decide the upcoming election?”

The Chancellor slowly nodded. “Entering this alliance is one of the most important decisions I ever took for the future of Germany - on par with the reunification of our country. With this, we have assured the safety and future of Germany and its place at the forefront of technology.”

“Karl Reissmann, Der Spiegel. Herr Bundeskanzler, what do you say to the accusations that you made too many concessions to the Etherians in order to secure this alliance?”

“Those accusations are completely unfounded! All we conceded was the implementation of laws that should have been implemented long ago, to grant equal rights to all citizens and residents in Germany no matter their life choices.”

Yeah, the reporters were the same as well. They should have skipped this, in Catra’s opinion.

“Jasmin Kowalski, TAZ. Herr Bundeskanzler, how do you feel, having committed Germany to another war of conquest?”

“This comparison is in very bad taste - and wrong as well! We aren’t in a war of conquest; we are in a war for our very survival against an enemy that has enslaved countless planets.”

“And yet, according to what we know, the Bundeswehr will be expected to help conquer planets. Excuse me, ‘liberate’ them. Was a diplomatic solution even considered?”

Adora took a step forward. “We’re always open for a diplomatic solution - but not if it means accepting slavery. If the Goa’uld desire peace, all they have to do is liberate their slaves, both humans and Jaffa. And if we have to conquer their Empire to liberate their slaves, then we will do that. How would you feel, knowing that you could free a slave but deciding not to?”

"How will you feel, knowing that millions will die in a war that could have been prevented?"

Adora frowned at the woman. "As I said, if the Goa'uld want peace, they have to release their slaves. We will certainly give them the option."

Catra frowned as well. They hadn't discussed that yet with their new alliance members. And contacting the Goa'uld first would ruin the element of surprise. She suppressed a sigh. Sorting this out wouldn't be pretty.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 24th, 1998

"...and experts are divided in their views on whether or not the Goa'uld will respond to any diplomatic offer. Retired Colonel Barnes, United States Air Force, was cited that 'any such offer would be repeating the mistakes made in Munich in 1938', although several prominent activists have already launched a proposal to focus on a 'peaceful resolution of the current differences', and…"

Jack O'Neill wanted to shoot the television. 'Experts'? None of them had any experience with the Goa'uld - or with the Etherians or any other aliens. He had never even heard of Colonel Barnes, and, judging by his age, the man had retired from the Air Force before Stargate Command had been a thing. He definitely didn't know anything. Although Jack would grant him one thing - the man was correct that trying diplomacy with the Goa'uld was stupid. But those 'activists' calling slavery and genocide 'ideological differences'... "God damn it!" he cursed as he stabbed his jello - blue! - with his spoon. "I leave for half a day, and see what happens?"

"I do not think that you could have prevented Adora from voicing her views even if you had been present at the base, O'Neill."

“Da! Unless you have open channel to headphones of aliens, or ability to mute her microphone.”

Jack gritted his teeth. Why had the Russian spy - well, the most annoying of their spies - started to sit at their table? Because he had invited himself along when Jack had been in the field training the FNGs, and Daniel hadn’t had the balls to tell him to get lost. “It was a figure of speech,” he said. Daniel opened his mouth, and Jack shot him a glare. He wasn’t in the mood for pedantic linguistic corrections.

While Daniel pouted, Carter spoke up: “Adora didn’t actually make any offer - she merely stated what conditions she considers essential for a peace treaty and that she was open to a diplomatic solution. She didn’t announce that they would attempt to find a diplomatic solution before taking military action.”

“Yep. But everyone took it as a ‘peace for our time’ moment,” Jack said.

“Not everyone,” Daniel cut in, still pouting. “None of the involved governments, at least.”

“But the press did,” Jack retorted. “Until the Etherians clarify what they mean, people will keep arguing about this.” They would keep arguing after any clarification, of course, but it wouldn’t be as bad as it was right now. “They really should put out a communique.”

“They’re currently busy with the state dinner,” Daniel said.

Probably gorging them on good food. Well, decent food - they were in Germany, after all. “By the time they finish, some fools will have started building a Goa’uld hotel for the peace talks,” Jack said.

Daniel laughed, as did the Russian spy. “Funny! A snake hotel, like roach motel?”

“PETA would probably object,” Jack told him. Unfortunately, the man didn’t look confused but nodded, laughing again.

"It's just the media overreacting to every little slip of the tongue," Daniel said.

"And the politicians who think they can capitalise on this," Carter added.

"Damn vultures," Jack said. Them and their useful idiots. As if you could trust the Goa'uld to keep a treaty!

He finished his jello and looked around. The TV was showing some academic talking about how you couldn't truly understand real aliens' culture and what that supposedly meant for diplomacy with the Goa'uld. "What a nutcase!" he muttered.

"What a hypocrite!" Daniel hissed next to him. "Why would anyone give that charlatan the time of day, much less screen time?"

Jack blinked. "Is there a story here?" he asked his friend.

"Dr Baker was one of, well, my most vocal critics when I published my hypothesis," Daniel replied, scowling. "He called me a UFO conspiracy theorist. And now he's talking as if he were an expert on aliens! The man isn't even an expert in his own field - he needed help reading hieroglyphs!"

Ah, touchy subject. Jack nodded. "The actual experts are all working for us, so who could they drag in front of a television?" He shrugged.

"Someone who actually has an open mind!" Daniel answered his rhetorical question. "Not someone angling to agree with anyone who'd give him a grant!"

Really touchy subject.

"I should call the studio to set things straight. Baker's totally misrepresenting the Thirteenth Dynasty! Which has nothing to do with Goa'uld, anyway!" Daniel went on.

Jack blinked. That was… "I think you should call."

"What?" Everyone, not just Daniel, was staring at him. Even the Russian.

"What?" Jack frowned at them. "This isn't spilling some alien secrets - this is just Daniel correcting a colleague about Ancient Egypt."

"Right." Daniel nodded. "No talk about aliens, just Egypt." He stood and walked away.

Carter owned her mouth, then closed it and frowned at Jack. "You know they'll announce him as an expert on aliens."

"Of course. But Daniel's too smart to spill anything important." Jack grinned. And it might derail the damn peace talk frenzy.

"Really?" Carter's eyebrows rose. "You think Daniel will simply not comment when they ask questions about the Etherians and the Goa'uld? When they make up wrong statements about them?"

Jack blinked again. "On second thought, maybe I should go with him…"

*****

Schloss Bellevue, Berlin, Germany, Earth, September 24th, 1998

"...and I do not think that we should open with diplomacy. That would give away the advantage of surprise."

"Striking without a declaration of war? I think history shows why that's a very questionable plan."

"Are you comparing a war to defend ourselves and to free countless humans kept as slaves and hosts for parasites to a war of aggression?"

“No. But once we have struck, any offer to negotiate will either be seen as a ruse - or as a sign of weakness.”

Adora frowned at the discussion between the two German politicians. It seemed they had forgotten that this was a dinner, not their parliament. Or wherever they discussed like that.

“The Goa’uld don’t know about us,” Glimmer cut in. “Any negotiation will be difficult when one side doesn’t know the strength and goals of the other side.”

“And giving out that information would be stupid beyond belief,” Catra added.

“Then how are we supposed to negotiate in good faith with them?” the German asked.

“That’s easy: Once we have them at our mercy, we let them surrender.” Catra flashed her fangs at the man. “All honest-like.”

Adora chuckled almost against her will - and barely managed not to laugh when she saw the man’s reaction. So did Glimmer, and Bow hid his smile behind his napkin.

But the rest of the Germans, even the one who had argued against trying diplomacy first, didn’t look amused. Even the Chancellor frowned. “One should never enter a war lightly. Germany has a special responsibility there.”

“You mean because you started the last world war?” Catra asked, cocking her head.

“Germany did far more than starting a war,” the Chancellor replied. “The shadow of the crimes done in our country’s name - by our parents and grandparents - still lies over Germany.”

“Yeah, but this time, you’re on the right side,” Catra told him. “And that’s how you make up for your past crimes - by doing good.”

Adora nodded. “You are now helping to protect and free others. That’s the complete opposite of what your ancestors did.”

“But we can’t just ignore our past - Germany has a historic guilt.”

Adora frowned. That made no sense. “But you changed.”

“Yes,” Bow spoke up. “We studied your history. You have rejected your past ideology. Like others have.”

“Germany has a unique legacy. We carry a collective guilt. An obligation to ensure that this shameful, terrible history won’t ever repeat itself.” The big old man slowly nodded.

“But that’s exactly why we are fighting this war - will be fighting this war,” Glimmer protested. “To save millions of people from being enslaved and turned into hosts for the Goa’uld.”

“Or worked to death,” Bow added.

Adora nodded once more - they had seen the data Stargate Command had gathered on the Goa’uld’s practice of slavery.

“It’s still a difficult decision,” the Chancellor told them. “Germany will stand with you and with the other countries on Earth. We will defend ourselves and our allies - and there is no doubt that we are under attack, through no fault of our own. However, our history will not allow us to enter any war lightly, and even when we do, we should consider all alternatives before committing to war.”

“But none of you fought in the last war,” Glimmer said. “What happened wasn’t your fault.”

Adora looked around. None of the people present looked old enough to have fought in that war.

“I escaped that guilt by a hair’s width,” the Chancellor said. “I was already recruited and training to fight when the war ended.”

“Even if you had fought,” Adora told him, “you aren’t the same person you were back then - you changed.” She glanced at Catra, but her lover seemed very interested in the remains of dessert. “That’s what matters. The future, not your past.”

The Germans were staring at her, she noticed. At her, not at Catra.

“You do believe that,” one of the Ministers said, slowly shaking his head.

“Of course.” Adora nodded emphatically. “Everyone can change.” Her friends proved that. Catra proved that. “We hope the Goa’uld, too, will change. At least some of them.”

“So, you think we should talk before we start a war?”

Adora frowned. “We’re already at war. They started it long ago. They keep slaves. They use them as hosts. They attacked Earth - and I have no doubt that they would attack Etheria if they knew where we are.”

“Oh.”

“Yes.” Glimmer nodded sharply. “We will not refuse to talk with them if they offer an honest peace proposal - but neither will we stop fighting them. That would be a betrayal of all we stand for - and a betrayal of those who depend on us for their freedom or their very lives.”

Someone muttered ‘München’, but Adora didn’t know who it was.

“So, we’ll fight,” she went on. “And we’ll fight until all their slaves are free.”

“Whether that means we’ll fight to the last Goa’uld or not is up to them,” Catra said with a toothy grin.

As Adora and her friends nodded, she couldn’t help noticing that the Germans looked… surprised and concerned. “Do you

disagree?"

The Chancellor shook his head. "No. It's just… surprising to see people who have fought a war for years entering the next so… eagerly. You know how terrible war is."

Oh.

"We're willing to fight this war because we know the alternative," Glimmer said.

Adora nodded in agreement, but she couldn't help wondering if the Germans had a point.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 25th, 1998

"...and we are talking to Dr Daniel Jackson, who predicted the existence of aliens years before it was officially revealed. Dr Jackson, you wanted to chime in on our analysis of the Goa'uld?"

"Yes, Mr Ballantine. As you know, since you checked my credentials, I am a consultant for Stargate Command. In that capacity, I have met Goa'uld, and I am afraid that I disagree with the conclusions drawn by Dr Baker based on his studies of ancient Egypt, chiefly that we cannot understand a literal alien culture."

"Is this about my dismissal of your theory? Dr Jackson, back when you postulated the existence of aliens, you had no proof to prop it up. It was pure speculation."

"Speculation? I based my hypothesis on the results of various interdisciplinary research - results which were dismissed by everyone because they didn't fit established assumptions about the age of the pyramids. Instead of testing my hypothesis, which was what a scientist should have done, it was ridiculed. But that is not why I called today. I called because your lack of primary or secondary sources means your conclusions are incorrect."

"I have valid secondary sources!"

"You have, at most, tertiary sources. Hearsay, in other words. You have neither talked to any Goa'uld nor spoken with their subjects, much less visited their worlds."

"And you have?"

"Actually, I have, yes. And I can confidently state that your hypothesis that we cannot understand the Goa'uld is not supported by any evidence or experience. The Goa'uld aren't a misunderstood alien species with ethics incomprehensible for humans - their ethics are easily understood but simply reprehensible."

"That is a very biassed claim. Of course you'd say that, seeing as you work for the same organisation that started the war with the Goa'uld."

"Killing Ra was a reaction to his planned invasion of Earth. Any aggression started with him - I would know since I was there!"

Samantha Carter winced when General Hammond turned the television off. He was frowning, as were the other generals present. "I think there's no need to listen to the entirety of your scientific debate with Dr Baker, Dr Jackson."

Daniel flushed but stood his ground. "I merely corrected his mistaken assumptions about the Goa'uld."

"By citing your own experiences in the employ of Stargate Command," General Hammond said. "Which, I shouldn't have to remind you, are still classified."

"Daniel said nothing that was actually a secret," the Colonel spoke up. "Everything he mentioned was already publicly known."

"Yes. I did not reveal any details that might still be classified."

“Classified information isn’t automatically unclassified just because it’s leaked to the public,” General Sidorov cut in.

“Of course a Russian would say that,” Sam heard the Colonel mutter under his breath.

“That’s a very illogical stance,” Daniel retorted with a deep frown. “The President himself revealed the existence of Goa’uld, the Stargate Program, and our history with the Goa’uld, including the death of Ra.”

“You aren’t the President of the United States,” Sidorov shot back.

“And we aren’t in Russia,” the Colonel said. “If you expect us to keep silent about things everyone, including elementary students, is talking about, then I think you’ll be disappointed.”

“No one expects you to act as if this were still a secret,” General Hammond said. “However, neither does anyone expect you to act as if you were the spokesman of Stargate Command.”

Daniel flushed again. “I merely corrected quite mistaken claims by someone puffing himself up as an expert.”

“But you did so as an employee of Stargate Command,” General Haig said. “This means the public will consider your views as views shared by the entire program.”

“Views? I am talking about facts!” Daniel frowned. “I did not say anything about Stargate Command’s goals and policies; I just corrected factual claims that were wrong.”

Sam nodded. Her friend was correct - from a scientific point of view. Unfortunately, they were dealing with politics, not science.

“Without having received orders or permissions to do so.” General Li didn’t show any expression, but his tone indicated disapproval.

“I gave permission,” the Colonel said.

"You don't have the authority to do so, Colonel O'Neill," Li told him.

"I wasn't aware that Stargate Command had passed gag orders," the Colonel faked surprise. At least he didn't mention free speech in a dig against China and Russia. Small mercies.

"I doubt that such a call would have been permitted back when Stargate Command was an American program," General Haig said.

The Colonel shrugged. "Back then, it was a secret. Things change."

"Let's not mince words, Colonel." General Hammond was still scowling. "This wasn't just about correcting a scientist or settling academic grudges. This was about politics."

Daniel blinked, obviously surprised. Sam could see his eyes widen for a moment as he realised it.

The Colonel's equally obvious surprise, however, was faked. Sam was sure of that.

"The United States Armed Forces take a dim view of their members trying to make politics, Colonel O'Neill."

"Yes, Sir." The Colonel still didn't look concerned.

Well, he had good reasons not to be. Stargate Command couldn't afford to relieve him - or anyone else in SG-1. They needed their experience. And their connections to the Etherians.

But Sam had no doubt that whatever the timetable for their dismissal from Stargate Command was, it had just been accelerated to some degree.

Which probably had been the Colonel's goal. Or one of his goals.

*****

Cimmeria Part 1

Earth Orbit, Solar System, September 25th, 1998

"Whatcha watching?" Catra asked as she entered the lab in Darla's hold. There was some angry human on screen, yelling at the camera, and… She blinked. "Is that Daniel's voice?"

"Yes!" Entrapta nodded. "He's correcting the man's wrong assumptions about the Go'auld."

Catra cocked her head. "He is?" That was a surprise. So far, SG-1 hadn't appeared much in the media. "I would've expected him to be the focus of the show," she said.

"He's not present - he's just calling from the base," Entrapta replied. "And they don't have video calls." She frowned. "I don't know why - they could easily do this with their current technology. We have seen it work on television."

"They probably don't want video calls from their base to a television studio," Catra said. "Might be a security risk."

"Really?" Entrapta looked surprised.

Catra shrugged. "Maybe. I don't know." Etheria didn't have television. And Catra wasn't sure it needed it. Sure, the movies and series were entertaining, but all the talk shows… She made a gagging noise.

"What's wrong?" Entrapta peered at her.

"I believe she is regurgitating a 'hairball'."

Catra glared at Hordak. "No, I'm not. Just remembering some talk show."

"Ah. Which one?" Entrapta asked.

“Any one,” Catra replied, staring at the screen. The man was now standing and ranting about dynasties and hieroglyphs, with Daniel correcting every second word of his. She grinned when he corrected the man’s pronunciation - for such a friendly guy, Daniel could be surprisingly vicious in an underhanded way. Catra approved.

“This Dr Baker doesn’t seem like much of a scientist,” Entrapta said with a pout. “All his claims are unsubstantiated - or disproven. I expected a more interesting discourse.”

“I think I told you that we shouldn’t expect much scientific progress from daytime television,” Hordak told her.

“Yes, but… it’s such a waste! Imagine what research breakthroughs we could achieve if we connected the top scientists together like this!” Entrapta sighed. “And they use the technology to argue obviously false claims.”

“Just like their politics,” Hordak said.

Catra snorted. “Maybe you should suggest your plan to them.”

Entrapta nodded. “Yes! I’ll tell Sam about this. If it works, we will be able to do science all day! Even if you need Darla and the shuttle! And if we use remote-controlled bots, we can even work on the same prototype together without being in the same lab!”

That could work. Although… Catra grinned. “You could make a completely remote-operated lab. If it blows up, no one will get hurt.”

Entrapta beamed at her. “Oh, yes! That’s a great idea! We’ll finally be able to do those experiments that would be too dangerous to do on a planet!” She turned away and pushed buttons on her tool. “I’ll have to compensate for latency, and I’ll miss my hair for fine-tuning things, but… with the right manipulators, we can safely work on Naquadah-enhanced weapons!”

“Indeed. And the lack of air will mean we won’t have to worry about pressure waves devastating the planet,” Hordak agreed. “Although we should probably consider the danger from radiation.”

Catra blinked, then hit her palm against her forehead. She should have known better than to assume that Entrapta would be concerned about personal danger instead of danger on a planetary scale.

She looked at the screen, where Dr Baker was storming out of the studio in a rage, with Daniel asking when his hypothesis would be published. Ah, well… time to check how Adora was doing with Glimmer and Bow.

She left the hold - Entrapta and Hordak were already designing remote-controlled bots with manipulator arms - and swung by the kitchen to grab a salmon sandwich that she had sneaked out of the state dinner last night. It went perfect with some milk.

Munching and sipping alternately, she headed to the bridge.

“Finally awake… Ew!” Glimmer greeted her with a grimace.

“Ew?” Bow turned to look at Catra.

“I can smell the fish from here,” Glimmer complained.

Catra doubted that - she had already eaten most of it - but Adora stopped scribbling down notes on a board and sniffed the air. “I don’t… Do you think I’m getting a cold?”

“Nope,” Catra told her and walked over to them. She finished her sandwich on the way and planted a kiss on Adora’s cheek.

“Now I’m smelling it,” Adora said with a frown.

“Isn’t it heavenly?” Catra grinned and finished her milk. “Earth food has some great things going for it.”

“Earth food has a lot to answer for,” Glimmer grumbled.

“Catra was complaining about overeating after the British dinner,” Adora said.

Catra glared at her while Bow shook his head and Glimmer scoffed. That was classified information! She looked at the board. “So, how goes the planning?”

“Well, we still haven’t finished our presentation,” Adora said.

“There are several political issues to consider,” Glimmer explained. “And, as I told Adora, we can’t really plan for everything when we don’t even know the stances of our allies on the post of supreme commander.”

“It won’t hurt to plan ahead anyway,” Adora defended herself. “We need to make a good impression at the first alliance meeting.”

Catra snorted. “We’ve got the fleet. We can make any impression we want.”

Adora frowned at her, but Catra knew she was right. The power discrepancy was too big.

“That’s shortsighted,” Glimmer retorted. “If we act like a bully now, then Earth will remember it when they have caught up to us.”

“Right.” Catra nodded. “Long-term, it’s probably better not to tweak their noses too much.”

“We shouldn’t bully anyone anyway, regardless of future consequences,” Adora insisted. “It wouldn’t be right.”

Catra patted her shoulder. “And that’s why I think you would make a great supreme commander.”

Adora kept frowning at her. Glimmer tried not to frown, Catra noted. And Bow… stared at his tablet and tried not to draw attention.

Catra snorted and shook her head. “Sparkles, you would also work as a commander. Probably better than Adora, actually.” Glimmer blinked, and Adora looked surprised, but before either could say anything, Catra added: “As Supreme Commander, you’d be able to keep her from trying to do everything and blame herself for every setback or death.”

Glimmer laughed, Adora pouted - and Bow gave her a thumbs up.

“I’m not that bad!” Adora protested.

“Adora…” Bow trailed off.

“Yes. Yes, you are,” Glimmer said. “We still love you.”

Catra didn’t grab Adora’s arm in response. Glimmer didn’t mean it that way. “Yes,” she said instead, “We love you despite your faults.”

“I’m not that bad!” Adora repeated herself with that pout that always made Catra want to kiss her.

They weren’t in the bedroom, but you could hardly call this public. So she leaned in with a wide grin, and Adora’s eyes widened, and Catra reached out and planted a kiss on her lips.

But before she could really enjoy it, Glimmer sighed loudly. “This is a planning session, not a make-out session.”

“Spoilsport,” Catra whispered as Adora withdrew, blushing.

“Sorry, sorry,” her lover said. “It’s just…”

“It’s Catra’s fault, we know.” Glimmer nodded sagely.

“No! I mean… It’s not just Catra’s fault.”

That wasn’t exactly a staunch defence, but Catra didn’t mind. She shrugged and leaned against the seat closest to the board, and

when Glimmer and Bow looked back at the circles and columns on it, she mouthed ‘bedroom’ to Adora.

But Adora was, although still blushing, all professional now, standing at parade rest and staring at the board as well. Rats. “So… I think we have a good case here. And we won’t need to bully anyone.” She frowned at everyone else. “We need to set a good example - for everyone!”

“Yes,” Bow agreed. “The people on Earth already complain about us ‘forcing’ our views on them.”

“Stupid idiots!” Glimmer hissed. “We didn’t do anything like that.”

“We didn’t, no. And we won’t stoop to bullying our allies around,” Adora said. “Even if we think they deserve it or are being stupid. It’s not right.”

“Not even when it’d be funny?” Catra joked, flashing her fangs. But Adora frowned at her, and Glimmer glared. And Bow looked disappointed rather than amused. Well, can’t win them all.

“We need to set an example,” Adora said. “Our troops will look to us as role models. If we break our own rules, if we don’t do what’s right, they won’t either.”

That was straight out of cadet lessons about command and leadership. Not that it was wrong, of course. If Adora stepped out of line, Priest would take it as a sign and try to outdo her. On the other hand, sometimes, you needed to be a bit… pragmatic in war. Glimmer understood that. Adora… tried to ignore that. Even if it hurt her. Sometimes especially if it hurt her.

“We’ll be good,” Catra said with a wide smile.

Adora frowned some more at her, apparently not convinced - as if Catra would do anything to hurt her - but Glimmer and Bow nodded.

"And we'll keep our troops - and the Earth troops in line," Glimmer said.

"And we'll keep each other in line," Bow added.

That was a little… Catra blinked; Bow wasn't looking at her - he was looking at Glimmer, who barely managed to stop frowning. Oh.

Well, Bow wasn't wrong. And Glimmer loved him. But it was still brave of him to say it.

Catra reached over and patted Glimmer on the back. "Don't worry. We'll tell you when you're about to go overboard."

Glimmer narrowed her eyes at Catra. "I have no doubt that you'll tell me everything I did wrong - if I become Supreme Commander."

Catra chuckled.

But Adora started to nod before she realised what she was doing. "Well, only if it's a really big mistake," she said - a little too earnest for Glimmer's taste, Catra thought.

Well, that couldn't be helped. They were about to launch a war that was bigger than the war against the Horde or Horde Prime. They couldn't afford stupid mistakes. Or any mistakes.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 25th, 1998

"Well, that went better than I expected," Jack O'Neill said after they had left the meeting room - and had closed the door behind them, of course. Hammond knew him too well not to expect such a flippant comment, but one had to uphold appearances. Especially now, with foreigners in the mountain. "They didn't throw us into jail or demoted us."

“You expected them to jail us?” Daniel gasped.

Jack grinned at him. “Do you really think they would throw the best friends of our magical space princess alliance - our magical space princess alliance with which we want to be allied - into jail for telling the truth on television? That would sabotage all our efforts to make nice with them.”

Daniel closed his mouth and frowned at him for a moment. “Didn’t you say yesterday that the Russians and the Chinese would love that?”

Of course they’d love to see the USA excluded from the alliance with Etheria. The limeys and the French would probably like that as well. “But they can’t do it - we didn’t tell them any of the new secrets, just old ones - and those belong to the Air Force.”

“I thought we didn’t tell any secrets.”

“Not real secrets. Just open secrets.” Jack grinned. “Anyway - see you at dinner, team. I have to train our FNGs some more.” He waved and left before Daniel could find another argument. His friend would get over it. As would Carter.

And if things went as planned, they’d be back in the real action sooner than planned.

Jack had no wish to play security for foreign space tourists while his friends were fighting a war against the snakes. The upcoming trip to Cimmeria would show if Stargate Command could still do any real missions.

He shook his head as he entered the lift leading up - he had another batch of recruits to run ragged in the field.

Before the doors could close, someone else stepped inside, and Jack tensed.

“Lieutenant Lenkova. Cutting it a little close, are we?”

“Colonel O’Neill.” The spy frowned. “What do you mean?”

Jack made a point of checking his watch. “Training starts in ten minutes.”

“Yes?” She cocked her head to the side.

“It’s usually good form to be ready for training in the field before the officer in charge arrives,” he told her. “At least in the United States Armed Forces.”

“Yes?” That look of confused innocence had to be an act. “It’s the same in Russia.”

“And you’re currently riding an elevator with the officer in charge of the exercise.” Well, the training session - the FNGs weren’t yet ready for an actual exercise. But it sounded better than ‘basic training’.

“Yes?” she repeated herself for the third time.

“Which implies that we’ll arrive together.” He inclined his head.

Her expression changed into a grin. He would call it impish if that wouldn’t make him sound like he read romance novels. “It’s good to warm up before exercise, da?”

Jack narrowed his eyes at her. “You’re planning to run to the training area?”

“Extra exercise is a good thing, isn’t it?”

Was she checking him out - or implying that he needed the exercise as well? Challenge him to a race? Either way, Jack wouldn’t be falling for that. He knew he was in top shape - Adora’s healing had done wonders. And he wasn’t falling for a pretty blonde under his command. Certainly not for a Russian honey trap!

They reached the changeover floor - Stargate Command lacked lifts that went all the way up to the entrance level - and she was out of the cabin before the doors had fully opened. She was actually sprinting to the lift to the surface.

Jack grinned as he followed at a more leisurely pace. Well, the joke was on her - he knew the timing of the lifts, and so he knew he would…

She hit the button to close the doors on the way into the lift. They promptly closed.

…apparently have to wait for the next lift. Jack sighed and ignored the two guards next to the lift. The exercise wouldn't start without him, anyway.

But Jack was man enough to admit that this round went to the Lieutenant. He'd get her back during training.

*****

"Again, from the top!" Jack O'Neill yelled, channelling his inner drill sergeant. "That was almost acceptable - for raw recruits!"

The squad that had just 'run the gauntlet' groaned and grumbled as the soldiers trotted back to the starting point.

"I believe that they performed above the level of raw recruits, O'Neill."

Jack turned to look at Teal'c. "Well, yes, but you don't tell them that. Can't have them become complacent, can we?"

"Would they be suitable for Stargate Command if they are unable to judge their own performance objectively?"

"They know they aren't doing too badly," Jack explained. "But they also know they can do better." Much better, once they sorted out tactics and team roles and adapted to the exercise.

“Ah.” Teal’c nodded.

Both of them watched the next squad go through the exercise. They were Lenkova’s squad. And, to Jack’s slight annoyance, they were doing well. Covering each other was expected, but they also adjusted to the Goa’uld weapons - the simulated ones - well enough. Even the staggered staff weapon volleys didn’t keep them down.

And Lenkova was leading from the front. Usually, that could be grounds for criticism - officers weren’t supposed to take point since that would leave their men leaderless. On the other hand, sometimes, you had to run ahead because that was the only way to get them to follow you.

And Jack would be a hypocrite if he criticised her for things he regularly did in the field.

Still, it would be nice if she made a mistake he could point out. Just telling her to advance more smoothly and more quickly didn’t have the same ring to it.

But the damned Russian spy didn’t cooperate - her squad finished as the best so far. And the woman knew it as she saluted him. “Mission accomplished, Sir!” She wasn’t quite smiling, but he could tell that she was amused.

“We don’t salute in the field,” he told her with a nod. They were supposed to act as if they were in the field during the exercise. “Good work. Now make it faster.”

She returned the nod and this time, she smiled, then told her squad in Russian to grab more sim ammo and line up for another go.

Instead of joining them, she pulled out her canteen and took a swallow. “Anything else that needs to be improved, Sir?”

“Nothing critical,” he told her. “Teal’c?”

“You lead more aggressively than the Americans,” Jack’s friend said.

“It’s our doctrine.” She grinned. “We aren’t as averse to casualties as the Americans.”

‘Averse to casualties’? She must have watched American TV. Of course she would have watched it - she was a spy, after all.

“Yes. Like the Jaffa,” Teal’c said.

Even Jack couldn’t tell if that was meant as a compliment or not. Lenkova nodded, then went to rejoin her squad.

Jack watched her go, looking at how she moved in the Russian fatigues. He still thought the American ones were superior, but now they would be able to directly compare the two.

“She is a formidable warrior,” Teal’c commented.

“Without a doubt,” Jack agreed. And a dangerous spy - he caught her glancing over her shoulder back at him.

*****

Earth Orbit, Solar System, September 25th, 1998

“We’re in space. That’s Earth below us.”

“What a sight!”

“It looks so small.”

“Not as small as from the moon.”

“Still…”

“Impressive.”

Adora smiled as she watched the three ministers from France, Germany and the United Kingdom, as well as their aides and

generals, look at the planet floating below them. It was a touching moment - and very symbolic, in her opinion.

"Who wants to bet that the whole 'your ship is a neutral place for the preliminary meeting favouring no one' was just an excuse so they could go to space?" Catra whispered behind her.

Trust her to assume the worst! Adora sighed as Glimmer giggled. Although she had to admit that their guests were very enthusiastic about space. Maybe they should hold their meeting with NASA's representatives - which they needed to schedule, she reminded herself - in space as well?

Still… they had a war to plan. Adora cleared her throat. "It's an impressive sight, yes," she said. "You can see the entire world from here."

"Or target it," Catra added.

That ruined the mood, and everyone grew serious.

"Yes, the information we received from the USA also showed how vulnerable Earth is to attacks from space," the British minister said.

"That's why we have a fleet here," Glimmer told him.

"But you're not planning to keep it in place until we've started building ships of our own, are you?"

"No," Glimmer said. "Based on our information, we don't need the entire fleet here - or on Etheria - to protect the planet. The Goa'uld are divided, which renders them vulnerable and also makes it harder for them to launch an offensive. Any System Lord who wants to attack Earth will have to expose their own holdings to attacks from their rivals in order to free the troops and ships for that."

"And even if they managed that, using Teal'c's information about Apophis's forces as a baseline for one of the most powerful

System Lords, they wouldn't be able to match our forces here," Catra added. "And that's not accounting for our technological superiority."

"So, we can spare the ships for offensive operations." Glimmer nodded.

"But the more worlds we take, the more ships are needed to defend them. This favours the attacker," the British admiral pointed out. "We need to hit their forces and destroy their offensive capability."

"And if they unite against us, the whole equation changes," the French general added. "And once they realise the threat we pose to them, they have a very compelling reason to unite."

"They have to realise that first," Glimmer retorted. "We will conceal our numbers and aims for as long as possible. And the Goa'uld still need to trust each other. We can counteract that by striking at select System Lords and leaving others - preferably their rivals - alone. That would sow distrust."

"If it works out. It's still a risky strategy." The German minister looked grim.

"It's less dangerous than staying in this system and hoping the Goa'uld ignore you," Catra retorted. "They will check on Earth, and that means we have to stop them, and then they'll know about us and our forces. It's better to hit them first."

"But they will attack Earth anyway once they realise Earth troops are taking their planets." The British minister tilted his head.

"That's why we need scouts and spies," Catra told him. "We need to track their forces."

Adora nodded. The spy bots Entrapta and Sam were building would help there. But they didn't have actual spies. Well, they could send Double Trouble, but Glimmer and Catra didn't trust

them. The Tok'Ra were an option, but not even SG-1 had any idea how to contact them.

"That will be a challenge given the sheer size of the Goa'uld Empire." The French General nodded at the map of the galaxy floating in the middle of the room.

"Yes. But it's a challenge we can overcome." Adora did her best to sound confident. Entrapta had mentioned plans to build self-replicating spy bots or something. That should help.

"I hope so." But the British admiral didn't sound very hopeful, not to Adora at least.

"In any case, we need to first set the structure of the Alliance." Adora leaned forward. That was the point of this meeting, after all. Well, one of the points - she would love to use her presentation, but they were saving that for the main meeting. "We need a chain of command, clear duties, and a structure that will allow us to integrate more members." Such as other, smaller European countries, and the United States, if they managed to stop their bigotry.

The delegations tensed up. "Yes. A chain of command is essential for any military force," the German minister said. "Though who sets the policies that the military is tasked to enact? We cannot simply act according to purely military concerns, or we risk overly focusing on such matters."

Adora frowned. What did he mean?

"The goals of the war will be set by the rulers of the countries involved," Glimmer said.

Adora nodded.

"And what if the rulers are also personally involved in fighting in the war?" the German asked. "Etheria has a tradition of the rulers of states also personally leading the troops, hasn't it?"

Adora blinked. Why would that matter?

Glimmer looked surprised as well. “Yes.”

“That would give them significant influence on both policies and military decisions as well as information on both,” the French minister said. “This can be problematic.”

“I would think that’s an advantage for everyone,” Adora said. “Less friction and possible misunderstanding between those who make the policies and those who execute them.”

That sounded logical to her - and to her friends, who were nodding - but it was obvious that the Europeans didn’t quite agree.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 25th, 1998

“...and that is why a mission to return to Cimmeria should be undertaken,” Samantha Carter finished. She didn’t show her annoyance at having to give an entirely superfluous presentation when she nodded at the five generals facing her. Even if you discounted the need to further investigate the mystery of the creator’s of Thor’s Hammer or the moral need to check on how the planet fared without its protections - something Sam had to admit Stargate Command should have done much, much sooner - it was also obvious that refusing permission would antagonise the Etherians.

And why would anyone want to do that? The Colonel had speculated that some countries might want to show that they didn’t bow to the Etherians, but Sam didn’t think that any of the permanent members of the Security Council would be amongst those - not when they were either in an alliance with the Etherians or courting their favour. A powerplay was also not very likely since the Etherians could probably just claim the spare Stargate they had found on the way to Earth. Sam had no doubt

that Entrapta could rig up a computer to use it. Russia or China might want to play to their populations, but Sam doubted that they would be willing to leak secrets like Cimmeria to the public.

And yet, the command committee was acting as if approving this mission was somehow controversial and had to be deliberated carefully.

"We've read the files on the last - and only - mission to that planet," General Li said. "Two members of your team almost died, and you had to destroy a planetary defence system of unknown origin to save them."

"Yes, Sir." Sam had just explained that.

"Your actions could be very well seen as hostile to the population of Cimmeria - or their protectors," Li went on.

"Yes. That is why we need to find out who created the defence system so we can explain our actions, should that be needed." Sam also had said that already.

"And what if that fails?" Li didn't frown, but his tone carried the same meaning. "Wars have been started over less. What if you open a new front with an unknown galactic power? A power with more advanced technology than the Goa'uld."

"That's why we should meet them and explain what happened," Sam said. She wished that the Colonel was here instead of training the soldiers. On the other hand, after his stunt with Daniel, it was probably better that he wasn't here. General Hammond might have arranged this deliberately.

"They would have to tie this to Earth, first. And then they would have to find us," General Haig cut in.

"The Cimmerians know that we're from Earth," Sam retorted.

"The Cimmerians know that you claimed this," General Sidorov said. "But would the unknown party believe that? Or would they

assume that this was a covert operation by a Goa'uld hoping to divert retaliation? You had a Jaffa with you and disabled the defence system. This does look rather suspicious."

The Colonel's comments about paranoid Russians might have some merit, Sam thought. "This seems rather reaching, Sir," she said with a very polite expression.

He glared at her anyway.

"I think the mere possibility that we might have antagonised another galactic power is grounds enough to investigate the planet," General Haig said. General Petit and General Hammond nodded, so that meant the majority was in favour of the mission. Sam started to smile when the General went on: "Although I think it might be better not to send the same team that created said incident in the first place. The system did detect a Jaffa, didn't it? And according to your file, you still have enhanced levels of Naquadah in your blood, Captain Carter. You could be mistaken for a Goa'uld host."

Sam clenched her teeth at the reminder of her time as a host. As much as it stung - and felt insulting - that the General thought she should be excluded, she couldn't refute the reasons offered.

"Yes," General Petit agreed with his British colleague. "I think a new team would be a better choice. Together with whoever the Etherians send, they should have less trouble convincing whoever built the defence system that it was a mistake, not an act of sabotage that destroyed it."

"SG-1 is our most experienced team," General Hammond pointed out. "And they have been working with the Etherians before."

"No one doubts that. But we cannot rely on a single team," General Li said. "We need more teams with experience and who are used to working with the Etherians."

Sam couldn't fault the logic here, either - but it also felt like a political move. And an attempt to squeeze SG-1 out.

"Captain Carter is also our foremost expert on alien technology," Hammond retorted.

"Another reason not to send her into high-risk situations," General Haig said.

Sam clenched her teeth again. She was an officer in the Air Force, and she had probably more combat experience than most of the generals in the room. But as a captain, you didn't snap at generals.

"The Etherians might not want to work with an unknown team instead of their friends," General Hammond argued.

"I am sure they'll understand our reasoning," General Sidorov told him.

Sam wasn't so sure. But she held her tongue.

*****

Earth Orbit, Solar System, September 25th, 1998

"Congratulations, Supreme Commander Adora," Catra said as she handed Adora a glass.

"I'm not Supreme Commander. This was just a preliminary discussion. Nothing is set in stone." Adora shook her head.

Catra smiled wrily.

"They were pretty insistent," Glimmer said. "I don't think they'll budge on that. They don't want a ruling princess as Supreme Commander. Because they fear corruption." She frowned.

Bow patted her back, then slung his arm around her waist and pulled her to his side. "They don't know you. You'd never abuse the position to favour Bright Moon."

Catra agreed - but also because the war would be fought in space and on other planets. There was no reason nor any real way to favour Bright Moon by strengthening its defences and letting other kingdoms get conquered. She wasn't entirely sure what Glimmer would do if she had to decide whether Bright Moon or Salineas would be defended.

Glimmer didn't look mollified, even though she leaned into Bow's side. "It's just so stupid."

"Yes!" Adora nodded. "Whether or not you rule shouldn't be a reason to deny you a post."

Catra hesitated a moment, then made a humming sound. "Well, you could claim that if you have to rule a kingdom, you can't focus entirely on fighting a war - especially away from your kingdom."

"I've got Dad for that," Glimmer said with a pout.

Catra shrugged. She agreed with the others that their new allies just didn't want too much power concentrated in one person. Which was… well, it was inefficient. On the other hand, Earth was full of stories of the military taking over a country. That's what happened if you didn't have princesses. Or, she reminded herself, if you had technological superiority. Hordak had taken over the Scorpion Kingdom in a similar way, after all. "Anyway, so Adora's set as the Supreme Commander. They think they've won, but it won't really change things."

Adora nodded. "And we can tell them that!"

Catra sighed and looked at Glimmer and Bow. Bow looked away.

Glimmer set her jaw. "No, Adora. We can't tell them that. We can't undermine your command from the start. If they don't want a ruling princess, they'll get She-Ra. But you can't act as if you're just doing my bidding."

Adora opened her mouth, but Catra was quicker: "And we know you wouldn't actually just do what Sparkles said. But when you

act as if it doesn't matter whether you or Glimmer are in command, they'll assume the worst." She shrugged. "They'll see how the Alliance runs things soon enough." With lots of talking and discussing until a decision was made.

"I think they run their alliances the same as we do, actually," Bow said. "That's why they want Adora."

Catra snorted. "They underestimate you."

"What?" Adora frowned again.

"They probably think you're a bit naive - inexperienced in politics," Glimmer said.

"I am inexperienced in politics," Adora told them. "But I'm not naive. Right?"

"You are a little naive," Catra told her. "And we love you for it." She knew it very well - anyone other than Adora would have given up on her years ago.

"I think you made a good impression, Adora. They trust you to be completely honest with them." Bow beamed at her.

Catra took a step closer to Adora. Bow had his own princess to handle.

"And they don't trust me," Glimmer complained.

"Well, we already knew that they have issues with princesses - ruling princesses," Bow said. "They have their own system."

Not a very bright system, in Catra's opinion. You could see that when you looked at the trouble the Americans had with changing their policies. On the other hand, if Hordak had lost his position after an election, that would've been funny. She snorted.

"What's so funny?" Glimmer glared at her.

And Adora was frowning again.

“I just imagined a democratic Horde, with Hordak losing an election,” Catra explained.

Adora giggled. “Could you imagine his reaction?”

Glimmer and Bow were a bit more restrained.

“Anyway, I think you’re set for Supreme Commander, Adora. No getting out of this.” Catra grinned and took a sip from her drink.

Adora sighed once more and took a swallow from her own. Then she gasped and stared at the glass? “What’s this?”

“White Russian.” Catra grinned, showing her teeth. “Vodka and cream!” And some other stuff, but that was optional in her opinion.

Glimmer made some gagging noise even though Catra hadn’t offered her one.

And Adora frowned. “What’s vodka?”

“Strong booze from Russia,” Catra told her.

“We shouldn’t drink when we’re in a planning session.”

“We had a planning session. We’re relaxing now,” Catra corrected her.

“I can’t relax if I might become Supreme Commander!”

“That’s what the drink is for!” Catra raised her own and took another sip.

“Catra!”

Catra grinned. Adora was so cute when she got mad over nothing. “Drink your White Russian and relax.” She was pretty sure Adora would, too.

Her lover was still holding the glass, after all.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 26th, 1998

"So, instead of sending us, they'll send a new team without any experience?" Jack O'Neill didn't bother hiding what he thought of that plan.

"The majority of my colleagues feel that the presence of SG-1 could be misunderstood by whoever built the defence system that you destroyed," General Hammond replied. "Especially in the case of Teal'c and Captain Carter."

Who could be mistaken as a Goa'uld and their Jaffa. Jack frowned. It wasn't a bad point. It was a good point, actually - at least in this particular situation, where the defence system had already mistakenly identified Teal'c as an enemy. But he hated admitting anything like that - he had a reputation to maintain. And Carter didn't look like she agreed, and Jack wouldn't stab her in the back. "Are they going to disguise the team as well? That'll do wonders for building trust."

Daniel snorted, Jack noticed. Hammond, though, wasn't amused. "The consensus was that our Etherian friends wouldn't take well to that kind of deception."

Translation: It was actually proposed, but people wised up and used the Etherians as a face-saving excuse. At least Jack hoped that this was the case - if the only reason they hadn't gone with disguises was that the magical space princesses might not like it, then things were worse than he had feared. "And how have the Etherians taken the news that they'll go to Cimmeria with a bunch of unknown FNGs?"

"Stargate Command will be sending a veteran team." Hammond slightly frowned at him.

“Oh, great. Strangers then. I bet they’re thrilled.” Jack shook his head.

“The Etherians have yet to be informed about the details of the mission.” Hammond didn’t like it either, Jack could tell, even though the general’s expression remained neutral.

“They won’t like that even less,” Jack said.

“Yes,” Daniel chimed in. “As far as I understood, they expect to head out there with us - SG-1. Now, the concerns about possible misunderstandings shouldn’t be dismissed easily, but I think they would expect to be allowed to have a say in this before a decision was made.”

“And wouldn’t that be a shame if they demanded changes to the mission!” Jack watched Hammond’s reaction to his comment.

The general frowned. “Stargate Command isn’t in the habit of letting its teams use their relationship with foreign powers to get their way and overrule their commanding officer.”

So, Hammond wouldn’t look away if Jack had a frank talk with the Etherians.

“But the Etherians will want to talk to us. Do you expect us to refuse a meeting with them? Or to lie?” Daniel asked.

“I expect you to act with the loyalty and integrity expected from a member of Stargate Command,” Hammond replied. “If the Security Council gets the impression that the Etherians have undue influence on Stargate Command, and that individual members are trying to exploit that to control which teams are assigned to any missions, then the whole agreement will be revisited.”

Jack wouldn’t mind that. But Hammond would. And it would be bad for the entire Stargate Command - well, at least for the part Jack cared about. So he nodded. “Yes, Sir.”

Hammond stared at him for a moment, and Jack did his best to look honest. He wasn't about to stab the general in the back either. And he would make sure that his team would follow his lead.

But he had a bad feeling about this mission now.

*****

Cimmeria Part 2

Cheyenne Mountain, Colorado, United States of America, Earth, September 26th, 1998

"We're not going with you?" Adora blinked.

Jack shrugged. "It's been deemed too dangerous because we kind of wrecked their defence system when we visited - we had an excellent reason, of course, so don't feel bad, Carter - and so those who built it might think we're their enemies, what with them having mistaken us for Goa'uld once already. So… it was decided that another team should head there with you."

Adora frowned. That sounded… well, it made sense, but still. It didn't feel right.

"So, will the new guys dress up or wear the same uniforms you wore when you wrecked the defence system?" Catra asked. "It's not exactly hard to tell that you come from the same planet if you wear the same uniform."

Adora nodded. That was the point of uniforms, after all.

"Well… that hasn't been decided yet," Jack said.

"Trying to hide your planet of origin isn't good for building trust," Bow pointed out with a frown. "If you plan to reveal the truth at a later date."

"Or if they find out before you reveal the truth," Catra added.

Once more, Adora nodded. "It doesn't seem to be very honest to use fake uniforms."

"You wore Horde uniforms as well to infiltrate a base, remember?" Catra asked.

Adora pouted. “That was a legitimate tactic against the Horde. But we’re not going there to fight the Cimmerians or their protectors. We aren’t at war with them.”

“Well, at least as far as we know,” Jack said. “They might have a different opinion.”

“You could be at war and don’t know it,” Glimmer said. “Sounds familiar.”

Jack frowned at her while Catra grinned. “Good one, Sparkles!”

“But… if you’re not coming, how can we do science together?” Entrapta asked Sam with a deep pout. “Hordak and I did some work on remote-controlled lab assistants, but they aren’t meant to be used through a gate or in the field - well, we could modify them.”

Sam looked uncomfortable. “I will be in my lab, ready to support you if you need help. Remotely.”

“Or… What if we go through the gate and look around, and if there’s no shooting war going on, we call you in?” Adora suggested.

“Well, the mission is basically checking if we started a war,” Jack replied. “Coming in afterwards is more like a tourist trip.”

“Jack!” Daniel frowned at him. “We would talk to the Cimmerians, learn more about their culture and history and see if we can analyse the technology. Check for more clues about its creators. We wouldn’t be tourists.”

“Active tourists then.” Jack shrugged again. “Anyway, SG-2 is supposed to go with you on the mission, But we’ll be ready to assist you. And not just remotely,” he added.

“Good! We need your assistance!” Entrapta beamed at Sam.

Jack coughed. “That’s not how that works,” he said, glancing at Adora.

“So, we can’t call on you for assistance?” Catra cocked her head with a toothy grin. “Sounds like we’d be under your command then…”

Jack glared at her. “You know what I mean. Playing such games doesn’t make you popular with the brass.”

The brass? Ah, the generals. Adora frowned. “But deciding that we should go with SG-2 instead of you without even asking us wasn’t really friendly either.”

Jack looked a little uncomfortable. “Well, the generals in command of Stargate Command get to decide what team they send on a mission. Generally.”

That sounded a bit like…

“What do you think of this?” Glimmer asked with narrowed eyes.

Jack sighed. “Well, I want to go, and I think SG-1 could do the job. But I understand and accept the concerns that the generals have. About the whole thing. We did kind of wreck stuff, and people tend to take that badly. Whether it’s someone’s lawnmower or someone’s planetary defence system.”

“Wait - did you wreck your neighbour’s lawnmower, Jack?” Daniel asked.

“No, I didn’t.” Jack smiled. “And you can’t prove anything!”

Catra chuckled, and Adora snorted almost against her will. “So, you are alright with this?”

“I just said that, didn’t I?” Jack tilted his head a little.

Catra snorted again.

“But that’s still unfair! I wanted to work with Sam!” Entrapta protested.

“There’ll be other missions,” Sam told her.

“And who knows - maybe things go wrong, and we have to charge in to help fix it and save the planet,” Jack added.

Adora pressed her lips together as she remembered the Heart of Etheria. And what she had to do to save it. “Let’s not hope for that, please.”

“Yes,” Daniel agreed. “I would love for a mission that goes without a hitch.”

“Well, what are the odds that this will end up with us learning that the mysterious creators haven’t returned, as they hadn’t for a long, long time?” Jack grinned. “It might be a milk run.”

“Do you really think that, Jack?” Adora asked.

“Well… we can hope? Our track record isn’t looking promising, though,” Jack replied.

“That’s mostly SG-1. Other teams didn’t have so many, uh, interesting missions as we had,” Daniel said.

“That’s because we usually get the most difficult and important missions.”

“Like this one?” Glimmer asked with a wry smile.

Jack nodded. “Exactly. So, we good?”

Adora looked at her friends. Entrapta was still pouting, Hordak was stoic or something, but the others nodded. “Let’s go meet SG-2, then,” she said.

“And the generals,” Catra added. “Can’t forget them.”

“Yes, we really must talk to them,” Glimmer added.

Jack grinned.

*****

“I really wish you could come with us.” Entrapta pouted again. The third time in about as many minutes.

Not that Samantha Carter was counting. She shrugged and suppressed a sigh. “I would like to come as well, but the reasoning by my superiors is sound. My presence could ruin our chances to avoid another conflict.”

“If your absence alone would make the difference between war and peace, then I think those people who created the defence system you sabotaged would probably find another reason to start a war,” Entrapta retorted. “They sound like easily provoked.”

“We actually don’t know if they even noticed what happened,” Sam explained. “They might have abandoned Cimmeria - or they might be gone extinct. We’re just playing things as safe as possible until we know more.”

“Ah.” Entrapta frowned. “But being too cautious can be dangerous as well. Catra explained that to me once.”

“I believe that was about operations during the war,” Hordak cut in. “Not about opening lines of communications to an unknown force.”

Sam nodded. “When approaching unknown people, it’s best to err on the side of caution.”

“Unless you need a show of strength to impress them,” Hordak added.

“That could be seen as a hostile approach,” Sam pointed out.

“And if hostilities broke out afterwards, you would have given away crucial data about your capabilities.” Hordak nodded. Of course the former warlord would think of that!

“Couldn’t you avoid that by making sure your demonstration is safe?” Entrapta cocked her head as her hair fiddled with some of Sam’s tools.

“We would have to know more about the others to judge what’s considered safe,” Sam said, quoting Daniel. “Making first contact is a very delicate affair, generally.”

“Well, when we met you, things worked out well!” Entrapta nodded.

Sam suppressed a wince. They had almost shot at Melog when SG-1 had met the Etherians for the first time. It wasn’t a good example of a peaceful first contact. “Well, if SG-2 and you give the clear, we can follow you,” she said.

“Alright!” Entrapta beamed, and her hair picked up more tools. “So, what are you working on today? Did you look into our remote-controlled bot idea?”

“Yes,” Sam replied. “We need a safe connection, though. And while I think it would be safe enough for remote lab work in space, I don’t think we should rely on it for dangerous work in inhabited areas.” If she made a mistake due to lag or loss of connection while manipulating Naquadah-enhanced gear…

“It would still be safer for defusing bombs than doing it in person,” Hordak said. “I believe you already use robots for that.”

“Poor things!” Entrapta exclaimed. “They risk getting blown up!”

That was their purpose. “Most of them can’t act autonomously,” Sam told her. “They aren’t sapient. Or sentient.”

“Like most of our bots,” Hordak added. “Even though they can act autonomously.”

“But some bots are sapient! And if we give them enough time and unlock their neural matrixes to evolve in response to stimuli, most of our advanced bots can develop sentience, then sapience,”

Entrapta retorted. “That’s why we need remote-controlled bots - so everyone’s safe from getting blown up!”

“We use remote-controlled Mobile Analytic Laboratory Probes - M.A.L.P.s - but they aren’t as mobile as your bots,” Sam said. Although she thought they had more options for scanning. On the other hand, she hadn’t thoroughly analysed the spybots of the Etherians.

“Well, that can be fixed!” Entrapta nodded several times. “And if we’re lucky, we can investigate the technology on Cimmeria ourselves. It might be First Ones in origin.”

Sam nodded. Although given SG-1’s luck, she wasn’t very optimistic. On the other hand. SG-2 might have better luck.

“Oh! Did I show you the plans for self-replicating exploration bots yet?” Entrapta said, putting down another set of tools.

Sam blinked. “Self-replicating exploration bots?”

“Or spybots, yes. We need as many spybots as possible to spy on the Goa’uld, right? So, I thought about ways to achieve that. And self-replicating bots are the answer! The initial development cost is higher, but once they get going, they can increase their numbers exponentially once they find enough resources. We should have coverage of most of the Goa’uld-controlled systems in no time!”

“You want to create Von Neumann probes?” Sam had a sinking feeling in her gut.

“Oh! You already have a model? Can I see it?”

Sam winced at Entrapta’s enthusiasm.

“I think releasing self-replicating bots has to be considered very carefully,” she said. “What if they get out of control? Even if they only continue to replicate, they would soon require enormous amounts of resources.” That was what exponential growth did.

“Well, they would be hardened against the First Ones tech virus,” Entrapta replied. “Although you are correct that they also need a limit. Although checking if such a limit was reached would require them to be in constant contact with each other. That might influence their stealth capability. On the other hand, it would greatly enhance cooperation between bots, should that be required. And whatever one bot experienced would be available - although not as a direct neural copy - to every other bot.”

Not just a Von Neumann probe - a hive mind. Sam felt a cold shiver run down her spine. “If the spy bots can learn, that means they can adapt. And that means they could evolve.”

“Yes!” Entratpa nodded with a smile.

“What if they evolved out of your control?” Provided Entrapta was planning to control them in the first place.

“Well, if they develop sapience - and I think they would - controlling them without their consent would be wrong, wouldn’t it?” Entrapta tilted her head.

Sam closed her eyes. It was as she had feared. “And what if they start behaving like, ah, Priest? Or see everyone else as competition for resources? Or as enemies?”

“Those are good points. We should limit their neural network,” Hordak said, nodding.

“But that would mean they can’t ever develop sapience!”

That was the point! “I think if you want sapient bots, they shouldn’t be self-replicating,” Sam said.

“But everyone else is! People self-replicate! We don’t limit them like that!” Entrapta protested.

“But people don’t self-replicate exponentially,” Sam retorted. Well, not infinitely. Although that might be a reaction to resources as often as a result of cultural adaptation. “And releasing self-

replicating bots without limits would impact everyone else. Bots would grow at the expense of others. Would that be fair?”

Entrapta pouted but slowly nodded.

Sam suppressed a relieved sigh. One crisis averted before the mission had even started.

*****

“...and while we understand that it is your prerogative to decide which team you send on a specific mission, this is a joint mission,” Glimmer said. If she were standing instead of sitting at a conference table, she would have had her hands on her hips. Catra was sure of that. “We should’ve been consulted. Not just because this decision affects us and our dispositions as well, but we might have information that affects your decision.”

Catra watched the generals’ reaction. Hammond kept his expression politely interested and nodded once. The French general did the same, but his smile looked less honest - or so she thought. The British general frowned a little. The Russian frowned a lot, and the Chinese one didn’t show any reaction at all. Which was a reaction by itself, of course.

Well, she should have expected them to be good at the game - one advantage of being older. Probably.

“We are now discussing the mission,” the Chinese general said.

“After SG-1 told us about the change of teams,” Glimmer retorted. “Is that how things are done here?”

“You are friends with SG-1, aren’t you?” the Russian general said.

“Yes. But that doesn’t affect the chain of command,” Glimmer told him.

Well, it did, of course - in a pinch, Catra would be first listening to those she trusted no matter their ranks. And she was sure her

friends would do the same. But this wasn't about the chain of command but appearances. Or posturing. It was a power play.

"You know, we didn't have to play such games in the Horde," she whispered. You knew your place there.

"The Horde was all about such games," Adora whispered back. "Shadow Weaver did it all the time. And that worked out so well."

Right. Catra pressed her lips together as she remembered that Shadow Weaver had played such mind games all the time. It wasn't a happy memory. She frowned at her lover anyway.

"...and so we need to discuss such information on the level where such decisions are made," Glimmer said.

"Well, do you disagree with our reasoning?" the British general asked.

"In part," Adora spoke up. "We don't even know if the mysterious people who built the system you destroyed are on the planet. If we don't find them, there's no reason for SG-1 not to join us."

"Just because you don't see them doesn't mean they aren't watching from afar," the Russian general retorted.

"If you don't trust us to do recon, you shouldn't send us in the first place," Adora told him.

Catra nodded. This wasn't like in the Horde, where you often only found the Alliance forces when they attacked the Horde scouts. Or, at least, it shouldn't be. "That guy's paranoid," she whispered.

She didn't think the Russian had heard her, but he was frowning at her. Well, he seemed the type to expect the worst when someone whispered in his presence.

Catra smiled sweetly at him.

"We cannot afford another war with an interstellar power," Hammond said. "So, we have to proceed with caution here."

"Does that mean that even if we don't find any sign of those people, SG-1 will have to remain here?" Adora asked.

The generals exchanged some glances. "That will be decided once we have a clearer picture of the situation on Cimmeria," the British general told her.

"And what if we decide that we need their expertise?" Catra asked.

More glances and frowning followed. "The mission's success, of course, takes priority," Hammond replied.

Which neatly avoided answering if they would overrule Catra's friends.

This mission was off to a good start.

*****

For Jack O'Neill, watching the preparations in the gate room for a mission for another team was always a little… disturbing wasn't quite correct, but it came close. He wasn't arrogant - well, not very much - but SG-1 was the best team in Stargate Command. They had proven that repeatedly. The other teams weren't bad - Hell, they were amongst the best Jack knew when it came to special ops - but there were situations out there that SG-1 could handle and the other teams couldn't. Not really because of Jack, of course, but because when push came to shove, no scientist attached to Stargate Command could hold a candle to Carter, no one was as good as Daniel at getting aliens to talk instead of shooting at you, and Teal'c was the most dangerous man - alien - Jack had met. Well, before he met the Etherians.

Of course, the Etherians kind of changed the situation. The scientist assigned to SG-2, Willard, wasn't a genius, but Entrapta most certainly was. She was also a real-life mad scientist, though

that wasn't necessarily a bad thing on some missions. And Adora had some of the same earnest charm Daniel had in spades. Not to mention that Bow had a knack for technology as well.

He turned away from the M.A.L.P. being prepared for the mission to face the approaching Ferretti.

"Colonel." Ferretti greeted him a tad warily.

That was only natural - Jack knew how it felt when your superior was watching you work. Though Jack wouldn't show it quite as openly. Ferretti had been on the first mission to Abydos, but he still was a little… not green, but not on Jack's level. And he wasn't used to the Etherians. "Major. All set up for our diplomatic probe? Don't worry, the Etherians won't bite you. Probably not - Catra can get a little moody."

Ferretti's chuckle was a typical 'laugh at your superior's joke' thing. He must be more nervous than Jack had assumed. Then again, Catra was a prickly woman. "If in doubt, treat her like a cat," he added.

"Sir?" Ferretti cocked his head.

"You know, don't look like a mouse, don't tease her and stay out of the range of her claws." Jack grinned.

Ferretti laughed again, still a bit forced. "Yes, Sir. Any other advice?"

"Anything not in the briefing?" Jack struck a thinking pose. Daniel had been thorough. "If in doubt, trust them. Don't lie to them. And don't treat them like kids."

"Of course not, Sir." Ferretti nodded.

Jack refrained from frowning. "I mean it. I know they don't look it, but they've been through a war - they've grown up in a war and ended it. Personally. Don't try to treat them as you'd Willard, don't

try to protect them. If the shit hits the fan, let them take the lead and don't get in their way."

"I've talked to Major Warren, Sir."

Jack expected that. SG-3 would have spread the news about the Etherians after the fight with Seth. But it always paid to make sure. "Good." It still wasn't ideal, of course. SG-1 had spent far more time with the Etherians. Had gone on several missions with them, on Earth and in space. They should be here, ready to go to Cimmeria. But if wishes were horses, beggars would ride, as Daniel would say. He smiled. "So, any further questions?"

Ferretti didn't ask the one Jack was sure he wanted to ask - 'are you going to stop hovering over us here, Sir?' - but shook his head. "No, Sir."

"Good luck, then."

"Thank you, Sir." Ferretti turned away and went back to checking his and his team's gear.

And Jack was back to waiting for someone else to risk their life in his place.

"Jack!"

He turned again. That had been Adora - the Etherians had arrived. "Finished discussing our decision process with the brass?"

Adora blinked, then nodded. "Yes."

"Not that we have a result to show for," Catra added. The woman stretched her arms over her head, fingers entwined, and Jack saw one of the gate guards stare. The kid wasn't used yet to aliens.

"We didn't even get permission to call on you if we need you," Adora said.

Well, that would have given the Etherians the power to dictate who got to come on the mission - the generals wouldn't allow themselves to be outmanoeuvred like that. Even Hammond wouldn't let that fly. "Let's hope you don't need us," Jack told her. "Just a simple, boring mission that shows that nothing changed."

Catra snorted. "Yeah, right."

Adora pouted. "It could very well be like that."

"With our luck?" Catra raised her eyebrows, and her tail twitched.

"Whatever awaits us, we'll deal with it," Glimmer stated.

"That's the spirit!" Jack grinned.

"I still think you should come with us," Entrapta said. "It isn't fair that… Oh! There's the bot!" And she was off, headed for the M.A.L.P.

Jack hoped she wouldn't try to dismantle it. The things were expensive, as Stargate Command's budget could attest to. On the other hand, Entrapta could probably improve the things.

He blinked. On second thought, he'd better make sure she didn't tinker with it.

After introducing the Etherians to Ferretti and his team, of course.

*****

"Folks, this is Major Ferretti. Major - Adora, Princess of Power, Queen Glimmer of Bright Moon, Princess Entrapta of Dryl who has deigned to join us again, Bow, Catra and Hordak."

Major Ferretti wasn't Jack. Adora knew it was unfair to compare the two - it wasn't Ferretti's decision to replace SG-1, and he seemed a skilled, competent soldier - but she would have preferred to do this mission with Jack and the others, not with people she didn't know and had never worked with. That wasn't a

good idea; even basic Horde command lessons taught you that. On the other hand, making new friends and allies was a good thing as well. “Hello, Major,” she said with a smile.

“Hello.” He nodded. He didn’t look nervous, which was… well, it should be a good sign. Of Confidence. Hopefully, not overconfidence.

The others greeted him as well - Catra with a ‘Yo’ - and he waved the rest of SG-2 over. “These are Lieutenants Casey and Bell and Dr Willard.”

Casey and Bell were soldiers like Ferretti. Willard looked more like Daniel. And all were nervous - Willard obviously so.

“Oh! Are you a scientist or a medical doctor?” Entrapta beamed at him.

“Ah… A physicist. Mainly.”

“Oh! So, what do you think we’ll encounter? Did you work with a lot of Goa’uld or Ancient technology before? Do you think the defence system is an entirely new technology? What do you think about bots?”

Quite reasonable questions, in Adora’s opinion. Although Entrapta should give the man more time to answer - he was gaping at her. And at her hair.

“So, you’re the FNGs Jack told us about?” Catra commented with a grin.

Adora suppressed a sigh. That was the wrong thing to say. Of course Catra would say it. Even though she knew better - she had gone through the same lessons as Adora, after all.

“No, SG-2 is an experienced Stargate Command team,” Jack corrected her with a frown. “We wouldn’t let FNGs through the gate.”

“But you’re not used to, well, us,” Bow spoke up.

“That won’t affect our performance,” Ferretti said.

“It better not,” Catra said.

“Maybe we should delay the mission until we know each other a bit better,” Adora suggested.

“We’ve done missions like this before.” And now Ferretti looked annoyed. As did Casey and Bell.

“Yep.” Jack nodded.

“Sorry.” Adora had just wanted to help. Well, if they were trained to fight like Jack, they could handle this - if it came to a fight. But she didn’t expect much from the team.

“We were just told that we’d be working with you,” Bow added. “We expected to go with SG-1.”

Their friends. Adora nodded. She understood the reasons the generals had given, but she didn’t like them. It was always better to go on such missions with people you knew and trusted, not unknowns. Even in the Horde, which had standardised training, you tended to keep squads together.

“Not your fault,” Catra said with a shrug. “But we’ve worked with SG-1 before.”

“Well, we’ll do our best to replace them,” Ferretti said.

They’d better.

After a moment of everyone staring at each other without saying anything, Jack clapped his hands. “So, let’s walk over and see what the M.A.L.P. can do? Provided that Entrapta didn’t take it apart.”

“I didn’t do anything to it!” Entrapta protested. “Although if you give me a bit of time, I could modify it… legs would make it more manoeuvrable, I think. And maybe add a gun so it can defend itself. And a neural matrix so it can act on its own.”

“I don’t think we want M.A.L.P.s that can think and shoot on their own,” Jack said.

“Why not?” Entrapta frowned.

“We don’t have the paperwork for it. And people get nervous about a robot revolution.” Jack shrugged.

“A robot revolution?” Adora asked. She remembered Entrapta’s bots going out of control due to the First One’s virus. That would be bad in here.

“It’s from a movie,” Jack replied.

“Ah.”

“They wouldn’t revolt. Unless you treat them badly,” Entrapta said. “And why would anyone treat a bot badly?”

“Military necessity,” Catra told her. “Sometimes, you have to send forces to their death.”

Entrapta pouted. “There’s no need to send sapient bots out to die.”

“Exactly. And M.A.L.P.s often get sent to dangerous, deadly worlds, so we don’t want them to be sapient,” Jack explained. “It’s kind of their job to be expendable.”

“Oh.” Entrapta looked surprised. “I guess that is a good reason not to give them neural matrixes.”

“Yeah.”

They were in front of the Stargate's ramp now - behind the bot. Or M.A.L.P. Whatever. Two techs were going over it, mumbling something about mad scientists. It seemed Entrapta had done more than just look it over.

Well, it was still in one piece and didn't sprout legs, so Adora doubted that any harm had been done.

While the M.A.L.P. was readied, they ran through communication checks and general gear checks. But, after ten more minutes, they were finally ready, and the Stargate was activated.

"Oh!" Entrapta beamed as it spun, and someone announced each chevron getting encoded and locked. "It looks even better than on recordings."

"I think security on this side is a bit light," Catra commented. "I'd have heavy weapons ready, not just a squad or two of infantry."

She was correct - the number of soldiers visible was a little low. "Perhaps there are hidden gun emplacements," Adora speculated.

"Or poison gas canisters?"

"We've got explosives in the ground as a last resort," Jack said. "But it's pretty hard to fight your way out of the gate room to the surface."

That was true. But if you just wanted to wreck the gate controls…

The wormhole formed, interrupting her thoughts. So, that was what the deadly energy Sam had mentioned looked like from up close - Adora could feel the hairs on her arms rise.

Then the M.A.L.P. started rolling up the ramp, entered the wormhole and vanished.

"It's through," Sam announced from behind. "Signal's… established."

“That is new,” Daniel commented, staring at the screen showing the M.A.L.P.’s feed. “That wasn’t there back when we visited.”

Adora turned and went to join them. Catra beat her to the screen by jumping over the console, startling Daniel. “Right. That’s not the Thor’s Hammer you described. Unless you hallucinated a lot when you saw it.”

Adora suppressed a frown as she rounded the console. Then she could finally see what the others were commenting on. And she blinked. “They walled off the gate area?”

“Those aren’t walls,” Jack said. “I bet those are weapon emplacements.”

“Weapon emplacements?” Adora looked for laser emitters or barrels but couldn’t see any. It looked like those were simple stone walls.

“Ah!” Catra nodded. “You think they covered the entire gate area in an anti-Goa’uld field?”

“Yes.” Jack grinned. “And that means that the Asgard did return after we left.”

“Well, they probably had some way to check on the hammer,” Bow said. “In case it would get broken.”

“Well, Ancient technology, and the Goa’uld technology they cribbed from them, lasts for a very long time,” Jack said. “Without much maintenance. Or any, in the case of the gates.”

“That might mean that this technology is different - and might require more maintenance,” Sam said. “Closer to our own, Sir.”

“Or it means the Asgard just liked to check instead of assuming everything was still working as intended,” Jack retorted with a grin.

“Then we have to assume that they are watching the gate,” Adora pointed out. “The Asgard, I mean. They have sensors in those weapons. Or devices.”

“Yep.”

“I would prefer not to test the viability of those devices,” Teal’c said. “I doubt that I would survive until the gate could be opened back to Earth, should they act like the one we encountered at the exit of the labyrinth.”

“That’s why we have the M.A.L.P., Teal’c. And SG-2.” Jack added with a grin.

Ferretti, who had just joined them as well, chuckled at that. “And, seeing as there are no guards: Are we cleared to go through the gate?” he asked.

“The sensors don’t show any dangerous radiation or contaminated air,” Sam reported.

That didn’t mean that it was safe, Adora knew. But it was probably as safe as it was going to get. “Yes. Let’s go,” she said.

“We don’t want to let the Asgard wait,” Catra added. This time, she didn’t jump over the console but followed Adora to the gate.

SG-2 moved to take point. For a moment, Adora thought about going first anyway, but… they had already had an argument today, and she didn’t want another one.

So the four men disappeared through the gate, and then it was her turn.

“Wait!” Catra said, holding her hand up. She cocked her head towards SG-1. “Are they safe over there?”

“They’re not being shot at - but they’re in that red field. It looks like the Asgard skipped the scanning,” Jack told them.

“Well, time to find out if we pass the test,” Bow said.

Adora nodded and quickly went up the ramp, stepping through the gate before Catra could catch up.

Gate travel was… disturbing. Weird. It was only a moment, but it felt longer. And weirder. Adora shook her head as she stepped out of the gate on the other side and took a deep breath. The air smelt more like Etheria than Earth. Cleaner. Fresher.

And she saw everything in a red tone since she was standing inside the field that hurt the Goa’uld. It didn’t do anything to her, though.

SG-2 had taken up positions around the gate, peering through the gap at the front. The M.A.L.P. was slowly moving through the gap.

Catra appeared behind her, scowling.

Adora acted as if she hadn’t noticed and went down the ramp. She was the best choice to take point - She-Ra was the toughest of the entire group. She could survive things that killed everyone else.

“I don’t see anyone. Last time, there was activity around the gate. And there’s the dirt road,” Ferretti looked around.

Catra sniffed the air. “I don’t smell any animals - or their shit.”

“Did something happen to the people?” Adora asked. “Did… did the Goa’uld attack, and the Asgard arrived too late to save them?”

Glimmer and Bow arrived together, Bow peering at the walls - or weapons - surrounding them and Glimmer frowning at the field.

Then Entrapta and Hordak arrived.

“Oh! Nifty!” Entrapta beamed. “I wonder if the field stays active as long as the gate is active.”

“Probably a little longer,” Hordak said. “To ensure that any Goa’uld arriving shortly before the gate closes are killed as well.”

That sounded… probable. And ruthless.

“Although I think an active scan would be a good idea anyway.” Entrapta nodded. “Just in case.”

As if the walls had heard her, a ray started scanning Ferreti - and other rays scanned everyone else.

And then a voice sounded from the walls. “Confirm your permission to visit this planet.”

Adora blinked. That was new as well, as far as she knew.

*****

“It looks like someone tightened down on border control. I knew we should have applied for travel visas.”

Samantha Carter didn’t react to the Colonel’s poor joke. “Thor’s Hammer was activated as soon as someone came through the gate. They scanned them afterwards - no. They must have scanned for life forms since they didn’t activate the field for the M.A.L.P. So, at least two sensor scans.” But Goa’uld would be detected just by their reaction to the effect of Thor’s Hammer.

“Permission?” she heard Adora ask through the M.A.L.P’s microphones. *“What permission?”*

“And where do we get it?” Glimmer added.

“Confirm your permission to visit this planet,” the voice repeated itself.

“Do you think this is a recording?” Daniel asked.

“It is asking a question, so they expect an answer,” the Colonel replied.

"I mean… do you think this is an automated system - or is this an actual Asgard talking to them?"

Sam adjusted the focus on the M.A.L.P.'s cameras. "Even a primitive - comparably - computer system with voice recognition and pre-recorded lines could 'talk' to visitors."

"But would the Asgard trust an automated system after we wrecked the last one?" the Colonel asked. "Or would they station troops on the planet to enforce whatever new rules they put in place?"

Before Sam could answer, Glimmer spoke up again: *"We didn't know you required permission. The people of the planet extended an invitation last time our friends visited."*

"Let's hope they didn't just mean us, specifically," the Colonel said.

Sam resisted the urge to shush him. You didn't do that to your superior.

"Well, it wasn't entirely clear, but I think the Cimmerians knew that we represented an organisation, and…"

"Shhh!" Sam hissed. Daniel wasn't her superior.

"Other visitors are free to leave the gate area. Be mindful of the laws of the planet and aware that any hostile action will be reciprocated."

"'Other visitors'? Who are you talking to?" Adora exclaimed.

"Confirm your permission to visit this planet."

Sam really wished she was on Cimmeria. Even though right now she couldn't think of anything she could do to help, she hated staying back and watching helplessly as her friends were in danger.

"Well, let's try to leave and see what happens!" Catra suggested.

"Catra, no!" Adora yelled.

But Sam saw that Catra was already moving, jumping on top of the M.A.L.P. and then through the opening in the walls surrounding the gate. She held her breath, expecting the worst - but Catra landed on all fours on the grass outside the gate area, then rose, not affected at all by anything.

"So, the bot wasn't talking to me!"

"Catra, you idiot!"

And the voice hadn't been talking to Adora since she had just charged through the gap as well, bumping the M.A.L.P. to the side, probably without noticing.

Once more, Sam was reminded that just because Adora looked and acted like a normal woman most of the time, she was a magical princess strong enough to throw tanks around. And enough power to turn spaceships into plants.

"What were you thinking?"

"Someone had to test it!"

"And that someone should've been me, not you! I'm She-Ra!"

"So? That means you get to risk your life all the time?"

"Yes!"

"You got to go through the gate first!"

"That was after SG-2 went through!"

Bow and Glimmer joined them without acrobatics or pushing expensive gear to the side. *"No magic,"* Glimmer said.

"Perhaps it is just a recording and not able to actually do anything?" Bow speculated.

SG-2 ventured out of the gate area as well. That left Entrapta and Hordak. Sam repositioned the M.A.L.P. and switched to another camera.

"Well, they have extensive sensors and… Oh! Look at those projectors, Hordak!"

"I see. But why would they hide the weapons behind worked stone? An attempt at camouflage?"

"Or they just like the style?"

"Entrapta! Can you tell if it's just a recording?"

"Give me a moment, Adora! No, I can't tell. The system is in contact with someone or something else, but I haven't cracked the encryption yet."

"Is she trying to hack the Asgard?" the Colonel asked. He sounded both impressed and aghast, Sam noted.

Before she could formulate a reply, Entrapta stepped through the gap without any trouble. But when Hordak tried to follow her, a barrier field appeared, and the voice spoke up again.

"Direct contact with the population of the planet requires permission by the Supreme Commander. Please confirm your permission or contact the closest fleet outpost."

Sam blinked. Did that mean…?

"The Asgard are the Horde?" Daniel blurted out.

"For crying out loud!"

*****

The Asgard Part 1

Gate Area, Cimmeria, September 26th, 1998

"The Asgard are the Horde?"

Catra shook her head at Daniel's outburst. "Can't be. Horde Prime wouldn't have protected the planet." She knew that monster.

"He would have destroyed it. Or 'reformed' it so they worshipped him." Glimmer, too, knew Horde Prime.

"I have never heard of any such policy as well - or of the Goa'uld," Hordak said.

"But the Asgard are singling you out. And they assume that you know how to contact their Supreme Commander." Entrapta frowned. "Why do they think that?"

"I don't know!" Hordak said. "I would assume that this is a splinter group of clones who chose their own path after Horde Prime's death, but the timeline does not work at all. At the time this planet was protected, Horde Prime was fighting the First Ones."

Well, he had fought them for a long time, Catra knew.

"But you're clones of Horde Prime. What if he was an Asgard who left his people to found the Horde? The depiction in the labyrinth could've been a ruse."

Sam had a good point. Horde Prime had to have come from somewhere - someone. He couldn't have just… appeared.

"We might be talking to Horde Prime's people," Adora stated the obvious. "And they're not evil!"

"We don't know that," Glimmer disagreed. "We don't know why they protected this planet."

“Well, they don’t seem too bad compared to the Goa’uld. Or your Horde,” Ferretti said.

Hordak turned to face the… well, the wall. “How can I contact the Supreme Commander? I lost my standard communication equipment.”

“The Supreme Commander has been contacted. Please wait.”

“Well, that’s one way to make contact,” Catra said. “Let’s hope Horde Prime was an outlier.”

“And let’s hope they won’t take too long to answer,” Glimmer said.

“At least the DHD is here,” Ferretti said. “We can dial back.”

But it was outside the walled section, Catra noticed. Hordak would be trapped if he were alone here.

“Yes, but our goal is to make peaceful contact with the Asgard,” Bow said. “If we leave, that’s a failure.”

Catra was tempted to tell Ferretti to head back while they stayed. “We can wait a few hours, easily. Although we might get bored.”

“We could analyse the Asgard technology!” Entrapta suggested.

“Only if you can do it without dismantling it,” Bow told her. “We don’t want to make a bad impression.”

Catra nodded in agreement. Especially if the Asgard were even a little like Hordak - or Horde Prime. “If Horde Prime has a connection to the Asgard, the technology should be familiar,” she said.

“Yes!” Entrapta nodded. “Although the communication protocols are different compared to those Horde Prime used.”

Well, she would know. “On the other hand, they might use the same transporter Horde Prime had on his flagship,” Catra pointed out.

“Yes. Though the aesthetics are completely different as well,” Glimmer said.

And that was a good thing. Catra didn’t like Horde Prime’s style. The Asgard’s style was more like the one Alliance used on Etheria. Well, not really, but it wasn’t as polished and cold as Horde Prime’s.

Entrapta stepped back inside the gate area and fiddled with her device. “Ah. There’s some familiarity. The scanners use similar principles in how they are built and controlled. The weapons, though… I’ve never seen Horde technology use such a field.”

“I’ve never heard of anything like that, either. If Horde Prime had access to weapons that targetted specific species, I would assume they would have been used,” Hordak said.

“Unless he wanted to avoid giving his enemies ideas. If the First Ones had developed a weapon that targeted Horde Prime and all his clones…” Bow grimaced.

Catra scoffed. “I doubt that he would have been concerned about that. He was too arrogant to assume anyone could get one up on him.” And that had been part of the reason he had lost in the end.

“Yes. Still…” Glimmer was interrupted by the voice speaking up again.

“This is Thor, Supreme Commander of the Asgard Fleet. Who are you?”

Right to the top. Catra grinned despite herself.

“I am Hordak.”

“And I am Entrapta! Hi!” Entrapta waved.

"You are not one of the Asgard. Neither of you. And yet, you share our DNA."

"Ah." Hordak paused for a moment. "I am a clone of Horde Prime."

"Horde Prime?"

So the Asgard didn't know him. Or didn't want them to know they knew him.

"Our… progenitor. Creator. He cloned himself to create an army of conquest. He was defeated some time ago," Hordak replied.

"He cloned himself, you said. Was he known under another name?"

"We called him brother. Sometimes." Hordak sounded tense. Entrapta's hair patted his shoulder, Catra noticed. "We do not know where he came from - or what his species was," Hordak went on.

"Well, we have his DNA, if you're interested. But it's pretty close to Hordak's, so you probably already have it," Entrapta added.

"What brings you to Cimmeria?"

"He's with us!" Adora said, stepping into the area as well. "We're here with a team from Earth - we're friends with the people who had to dismantle your defence system to save their friend, and we came here to check if the planet needed any help - and to see if we could contact you. We're from Etheria."

"You're of Ancient descent."

"Yes." Adora looked grim.

Catra suppressed a sigh. Her lover needed to accept that her heritage didn't mean anything.

“Are you a bot? And can we meet you?” Entrapta asked. “We could share technology! Yours seems fascinating!”

Adora coughed. “We would like to meet you and apologise for destroying your defence system. And we would like to talk to you about the Goa’uld threat. We’re fighting them. Well, we will be fighting them soon.”

After a moment, the voice - Thor - replied: *“I see. Yes, I think we should meet.”*

“Great!” Adora beamed at the wall.

Catra refrained from commenting about it - they didn’t know if the Asgard had a camera pointed at them. Although if they had a DNA scanner, they should have a camera as well.

“We can close the connection to our gate so you can use it to travel,” Ferretti said.

“This will not be necessary,” Thor replied. *“I will arrive with my ship.”*

Ah. That meant the Asgard’s ship - probably more than one if they were ready to face the Goa’uld - had to be close. Relatively close.

“How long will that take?” Glimmer asked.

After a bit of back and forth, they had a time - about two hours, And wasn’t it interesting that the Asgard used Horde standard time units? Catra grinned without humour. There had to be close ties between Horde Prime and the Asgard.

“So… before you enter hyperspace…” Adora smiled in that embarrassed way of hers when she was about to confess to a blunder. “Our friends had to disable your defence system to save their friend - and our friend - Teal’c, who is a Jaffa who is opposing the Goa’uld. When they visited this planet, he was trapped in the labyrinth, and they had to destroy it to free him.”

"I am aware of the circumstances of the destruction of our first defence system."

Which didn't mean he approved of what SG-1 had done. Catra snorted.

"Good. So, can they visit as well?" Adora was still smiling. "They're sorry about the whole thing, but they had no choice. They didn't know if they could contact you - or how."

"So they destroyed our system."

The tone didn't sound like Thor approved at all. Of course, that could be different for aliens. Then again, if they were so closely related to Hordak and the other clones, they couldn't be too different.

"Yes, but they're sorry. And we're all fighting the Goa'uld, and the planet's safe, so… no harm done?" Adora's smile was obviously forced now.

"I will not judge them for one single action done out of ignorance."

"But you'll judge them later?" Catra asked before she could control herself.

"I can probably repair your system," Entrapta offered. "Or replace it with a similar one of equal value. Although you already upgraded the system here."

"The Tau'ri can visit, but your Jaffa friend should stay away."

That was a partial success - unless Thor just wanted everyone who offended them in one easy-to-bomb spot. If he arrived with a fleet, and they were all stuck on the planet…

"Thank you!" Adora said.

Well, it was better than nothing. Still, Catra would prefer if they had a flotilla with them. With Priest's bunch, they probably didn't have to worry about the clones changing allegiance when faced with some 'relatives'. But the ships would never make it here in time.

"Entering Hyperspace. Thor out."

Or so he claimed. He might be listening in still - and Catra was sure that the Asgard were still recording everything in the area. That's what she would be doing in their place.

"So… we made peaceful first contact," Bow said.

"Let's hope it stays that way." Glimmer snorted. "If a fight breaks out, we're kind of outgunned."

And, not that Catra would mention that where a potential enemy could record them, without the planet's magic restored, they were even more at a disadvantage.

It would only be five minutes to restore magic, but Catra knew her friends wouldn't do that without asking the local people first. And from what she remembered of Daniel's briefing, they might be afraid of magic like Earth's nutcases.

Adora turned to the M.A.L.P. "Jack? Did you get that?"

"Yes."

"Are you coming over?"

"That's currently being debated. In committee."

Great. Catra sighed.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 26th, 1998

“Sir, we should head through the gate,” Jack O’Neill said, staring at the observation window above them. “You heard the Asgard - we can enter.” He turned to smile apologetically at Teal’c. “Except for you. Sorry, Teal’c. They don’t know you like we do.”

“The Asgard’s hesitation to trust me is perfectly understandable.”

Of course he’d say that.

“This could be a trap, Colonel O’Neill,” Sidorov said.

“If we think it’s a trap, we should evacuate the Etherians. That’s their entire leadership out there,” Jack retorted. Not that he thought that they would let themselves be evacuated.

“They are aware of that,” General Hammond said.

At least Catra would be, in Jack’s opinion. “So, can we go through the gate?” He almost added ‘pretty please’, but the foreign generals wouldn’t appreciate it. And the Russian would take any excuse to sideline SG-1.

“We should not, how do you say, put all the eggs in one basket?” General Li said.

“Well, not showing up after we got permission could be seen as an affront,” Jack said. He suppressed the urge to rub his neck - staring up at the observation window was annoying - and glanced at Daniel.

Fortunately, Daniel was on the ball. “Ah, yes, If the Asgard have Norse values, they might see this as refusing their hospitality. Something that could be taken as an insult,” he said in his usual earnest manner.

Jack smiled. “And we don’t want to insult the alien race with spaceships and anti-Goa’uld devices and ties to a galactic conqueror.”

Sidorov, standing at the window, didn't bother hiding his scowl. But the other generals looked more reasonable. Not happy, of course.

But Jack was sure SG-1 would go through the gate - if only because they wanted someone present who was able to stand up to the Etherians - at least when it came to making decisions - when the Asgard arrived. SG-2 was a great team, but he didn't see Ferretti keeping up with the Etherians.

And Jack was right. It still took the generals five minutes to sort things out - an eternity if this had been an emergency - and Sidorov was glaring at everyone afterwards, but SG-1 got the go-ahead. Except for Teal'c, but that couldn't be helped.

"Alright! Carter, Daniel - grab your stuff and get to the gate." Jack nodded at them, then turned to Teal'c.

"Good luck, O'Neill," his friend said before Jack could say anything.

"Ah, thanks." Jack nodded at him, then turned to grab his backpack and join the others at the gate.

It was still active, so there was no need to wait. "You know the drill. No shooting the locals, no getting married by mistake even if it's to a Viking god."

"Norse god, actually. Vikings were…" Daniel started to correct him.

Jack grinned and stepped through the Stargate before his friend could finish.

Then he saw red - literally. That anti-Goa'uld field was active. As expected. He pushed the memory of the labyrinth away and faced the others. "Hey!"

"Hi! You made it!" Entrapta beamed - not at him but at Carter, who had followed him. Well, he had expected that as well. Hordak looked grumpy as ever, and Jack had to refrain from speculating

loudly what the Asgard might think about former warlords. They were being recorded, after all.

“Sir!” Ferretti nodded at him while Entrapta started talking technology with Carter - or science- and dragging Bow into it as well.

“Major.” Jack returned the nod. “Anything to report?” It was a pointless question - they had followed the mission through the M.A.L.P. - but forms had to be observed.

“No, Sir.”

“You’re early,” Catra commented as Jack stepped out of the red field. She was sitting on a tree stump nearby.

“Couldn’t wait.” Jack shrugged. “You know how it is.” She wasn’t exactly the most patient person he knew.

She laughed in return. “Well, now you can wait here with us.”

“It’s good to have you here,” Adora said with a glance at Catra.

The catwoman grinned in return and stretched, then shifted around on the tree stump as if she was sunbathing on a lounge chair.

“Catra!” Glimmer hissed.

“What? I’m not going to pretend to be busy when we’re just waiting for the Asgard to arrive.”

Well, Jack couldn’t say that he disagreed with that. But with the brass watching, he couldn’t join her or start a campfire. Although… “Daniel! You mentioned hospitality. Should we prepare a camp or something to welcome the Asgard?”

“Uh…” His friend bit his lower lip. “That’s a good question. It depends, I think, on their views of the planet. If they consider it

theirs, claiming part of it as hosts for them would be… tacky, I guess."

Or it could be seen as an invasion. Technically. Grabbing land and all.

"On the other hand," Daniel went on, "if the Asgard see this planet as belonging to the Cimmerians, they might not take offence. Or they might take offence on behalf of the Cimmerians."

"So, we better not try to invite them to roast marshmallows at our fire, got it," Jack said.

"Well, they could also be offended if we don't offer them hospitality." Daniel smiled. "It's hard to say with an alien culture. Although in Norse culture, it was generally dependent on who called a location home, so to speak."

In other words, they wouldn't know until the Asgard arrived. Like usual.

"I doubt they'll get angry," Glimmer said. "They should be used to meeting alien cultures and be aware that not everyone follows their customs."

Jack hoped she was correct. There was still the little matter of SG-1 breaking the Asgard defence system. Although, as one of its victims, Jack was ready to argue that it had been broken already - he shouldn't have been transported into the labyrinth since he didn't have a Goa'uld inside him. At best, the system's aim had been broken.

"Well," he said. "Then let's wait and hope Carter, Entrapta and Bow don't go overboard with the study of alien technology and accidentally dismantle the new defence system."

"Bow wouldn't," Glimmer retorted.

"But Entrapta and the others can get pretty enthusiastic," Adora pointed out.

"And Hordak seems a bit off his game," Catra added. "He might be too distracted to intervene."

Jack had been joking, but the Etherians seemed to take it seriously. Ah well - he trusted Carter not to go overboard. And to ride herd on the rest. She was a great officer; if she weren't an even greater scientist, she'd have her own team already.

He put his backpack down on the grass and sat on it. "So… any idea how to pass the time until Thor arrives in his shiny spaceship? If it's even shiny." Jack eyed the defence system. "It could be rather dull, of course, if this is his style."

"A spaceship made to look like it was built from stone?" Adora blinked.

"It might be using classic Norse aesthetics, such as runic decorations, maybe even some style elements from longships." Daniel got into it as well. "No sail, I would assume, though."

As they started to make silly suggestions, Jack relaxed a little. They were still meeting an alien who could hold a grudge and had a spaceship available where they were limited to small arms, but he and his team were back in the field. Where they belonged.

Things were looking up.

*****

Gate Area, Cimmeria, September 26th, 1998

"It's been two hours. I'm getting bored."

Sitting in the grass, Adora tried to ignore Catra's complaining. Yes, it had been two hours - and three minutes - since Thor had given his estimate, but he had said 'about two hours', not 'precisely two hours'.

She felt her lover shift in her lap and crane her neck so she could look at Adora's face. "Aren't you bored?"

Adora caught Catra's tail before it could flick against her nose. "No." Between listening for trouble from Entrapta, Sam and Bow and keeping Catra from starting trouble, she was quite busy.

"How? We haven't even made out to pass the time!"

"And we're all grateful for your restraint," Jack cut in.

"See? Someone appreciates my sacrifice."

Adora rolled her eyes. As if she was going to make out in front of Asgard sensors! Or her friends. Well, not beyond some kissing. "Thor's going to be here soon." He better be.

"He's probably analysing the recordings from the defence system to prepare for the meeting," Jack said. He was still sitting on his backpack, but as much as he tried to act relaxed and carefree, he never put down his rifle, Adora noticed.

"Of course he is," Glimmer said, looking directly at the closest wall.

"Entrapta should have built something to spoof the sensors," Catra said.

"That could have been considered a hostile act," Daniel cut in, looking up from his book on Norse culture. "We would effectively render the defence system partially ineffective."

"Spying on people is also a hostile act."

"It's not spying when we know there are cameras and sensors," Adora pointed out. "And we do. We could've headed back and waited at home."

"But it's much nicer here," Jack said. "Like a vacation."

Adora suppressed a sigh. Jack was still avoiding any quips about Stargate Command. No complaining about the brass, the power bill, the underground location - he must be really concerned about

leaking information. Catra, too, was sticking to quite, well, mostly personal and unimportant stuff to complain about or tease.

That, and napping and speculating about the Asgard, of course. Which counted as planning and preparing, in Adora's opinion.

"I have arrived."

Adora jumped up, dumping Catra to the ground in the process before she realised what she had done. The Asgard had arrived!

And there they were! A large, muscular human-looking man in chainmail and a steel helmet was standing near the defence system's walls. How had he appeared without anyone noticing…?

"A holoprojection," Catra said. She must have noticed a lack of smell. Or her eyes saw a flaw or something.

In any case, it was a very advanced projection - more life-like than Light Hope had been.

"Correct. I am Thor, Supreme Commander of the Asgard Fleet." He nodded. "I am currently aboard my ship in orbit."

"I am She-Ra, Princess of Power," Adora told him. "This is Queen Glimmer of Bright Moon, Colonel Jack O'Neill of Stargate Command, Catra, Daniel, Major Ferreti of Stargate command, and here come Princess Entrapta of Dryl, Bow, Captain Carter and Hordak. And Dr Willard." She didn't introduce the rest of SG-2 since Casey and Bell were still guarding the gate.

"Greetings." Thor nodded.

"Hi!" Jack waved. Adora glanced at him and suppressed a frown - that wasn't how you greeted a diplomat. She wasn't the only one to glare at him, either.

But Thor didn't seem to care. He cocked his head and nodded in return. "You were the ones who destroyed the defence system of this planet."

“Well, you locked Teal’c and me up with a dangerous man-eating monster, so we had to break your prison to save us.” Jack shrugged. “I can’t say I’m too sorry about that. Indiscriminate targeting is not very polite, you know.”

“But we are sorry that we had to destroy your defence system,” Daniel quickly added.

“I understand. The circumstances that led to that situation won’t repeat themselves. We only targetted Goa’uld.”

“Not every Goau’ld is evil,” Adora cut in.

Thor turned towards her. “That may be the case, but when dealing with them, it is better to err on the side of caution.”

Adora pressed her lips together. Killing every Goa’uld by default wasn’t exactly cautious, in her opinion. But before she could say anything, Thor went on: “But as I understand, the situation was resolved, and you are now aware that this planet represents a lethal danger to your Jaffa friend. I don’t think this needs further debate.” He turned to Hordak. “You share our genes, yet you aren’t one of us. You didn’t know us - or of us - either. And you are a clone.”

“Yes.” Hordak nodded and stared at Thor. Adora couldn’t read him well, but he looked tense. Very tense.

“A clone of who?”

Hordak raised his chin. “Horde Prime. He made us - my brothers and me - in his image.”

“I do not know this name.”

“I’m not impressed by their intelligence gathering capability,” Catra whispered. “Even the Goa’uld knew about Horde Prime,” she added a bit more loudly.

“We do not share information or anything else with the Goa’uld,” Thor told her.

“Other than being revered as gods by people,” Jack said with an innocent-looking smile. “And hiding your true appearance.”

Thor frowned at him again. “That is correct. We chose an appearance that suited the local civilisation. Our true appearance is, as you have undoubtedly deduced, different from humans or Ancients.”

Ah. Adora nodded. That made sense - they probably looked more like Hordak since they shared enough DNA to mistake him for an Asgard.

Entrapta pouted. “But why are you hiding your appearance from us? We aren’t Cimmerians, and we already know you aren’t human. I’ve been told it’s polite and respectful to show your true face.”

“And there’s no Cimmerian around,” Jack said. He made a show to look around. “Unlike last time we visited - they chanted your name when we arrived.

“The local population has been advised to avoid the gate area for the time being,” Thor told them. “While the defences should be enough to repel a Goa’uld invasion, collateral damage is still a threat.”

“That explains their absence. If your god tells you to avoid an area, you generally do it, right?” Jack asked with an innocent expression that, Adora knew from experience, was fake.

“It was deemed the best way to interact with the people without disrupting their civilisation more than absolutely necessary,” Thor said.

“Ah!” Daniel nodded. “Does that mean you used an existing pantheon as your role model, or did you create the Norse pantheon from, uh, scratch?”

Thor hesitated a moment. “We did build our appearance on the local culture, but we did not lay claim to any gods.”

That was… probably a good thing. But they were still worshipped as gods. Which was a bad thing - Adora could attest to that personally. You didn’t claim you were a god!

“So, you took the Cimmerians’ ancestors from Earth to raise them here, safe from the Goa’uld?” Jack asked in the same innocent tone as before.

“Yes.” Thor apparently took him at face value. “We wanted to allow them to develop without being manipulated by the Goa’uld - or anyone else. Which is why we did not contact them directly afterwards.”

“Except for leaving proof of your existence by planting your hammer at the Stargate.” Jack nodded.

“That was a necessity.”

“And you’ve been watching over the planet since then?” Adora asked.

“Rather distantly,” Catra added before Thor could answer.

The projection nodded. “We didn’t want to interfere. And we didn’t - until you forced our hand. We have taken steps to avoid a repeat of such a situation.”

That sounded good to Adora. She smiled at the projection.

“But I came to see you because of you,” Thor said, turning back to Hordak. “You said you do not know the origin of your creator.”

“I do not.” Hordak shook his head. “Horde Prime… never said anything about that.”

“He liked to give the impression that he was eternal,” Glimmer added. “That he was always there and would always be there.”

“Yes,” Hordak said. “I never questioned this - I never speculated who might have been his parent. Or his creator.”

He wasn’t looking at Thor as he told them that, Adora noticed.

“I see.” Thor nodded. “Regretable.”

“Of course,” Catra spoke up. “I don’t think the clones actually looked into Horde Prime’s origin.”

“Most of us wanted to forget our past, I believe,” Hordak said.

Hordak sounded like he was one of them, Adora thought.

“But it means we might be able to help shed some light on this mystery,” Catra went on. She smiled widely at Thor, showing her fangs.

Adora pressed her lips together. She knew that expression - Catra thought she had spotted an opportunity.

Thor wasn’t fooled either, judging by his frown. “And what do you expect in exchange for your help?”

“Nothing for me, personally.” Catra’s grin widened. “But since you obviously don’t like the Goa’uld and kill them on sight, maybe we should be talking about that as well, instead of just talking about Hordak’s ancestors.”

That was a good point. A great point, actually. Adora nodded. “Yes. If we’re both fighting the Goa’uld, we should coordinate our efforts.” And maybe form an alliance.

Once more, Thor hesitated a moment before answering. That didn’t seem to be a good thing.

“Are you fighting the Goa’uld as well?” Jack asked.

“We have a treaty with the System Lords - the Protected Planets Treaty,” Thor said.

"And what are the terms of the treaty?" Glimmer asked when he didn't go on.

"The System Lords are forbidden from attacking a protected planet and are obligated to keep rogue Goa'uld from attacking. In exchange, the Asgard ensure that the protected planets do not threaten the Goa'uld."

Adora blinked. That sounded…

"And did the protected planets agree to this treaty?" Glimmer asked. She turned to look at Jack. "The Cimmerians didn't tell you anything about it, did they?"

Jack shook his head. "Nope."

"Although we only talked to their local leader - the wife of the local ruler," Daniel added. "She mentioned he had gone to look for work in a city, so the rulers there might know about the treaty."

Adora frowned again. The Stargate of the planet was in a remote location. A backwater location. That said a lot about how important it was for the planet. Or how important it was supposed to be for the planet.

"The treaty is between the Asgard and the Goa'uld. The populations of the protected planets aren't sufficiently advanced to actually pose a threat to the Goa'uld."

"Are they like the Cimmerians?" Daniel asked. "Culturally, I mean. And technologically, although that is so heavily entwined with a planet's culture, it's often hard to draw a clear distinction, even if traditions tend to linger past the point where what caused them to develop was rendered obsolete by technology."

Thor tilted his head. "The protected planets have a wide range of cultures. We didn't intend to be revered by the people on this planet."

“But you were also revered on Earth - by a part of the population,” Daniel pointed out.

“Yes. That was also not intended.” Thor looked… annoyed. Or embarrassed? It was hard to tell, with the helmet covering half his face. And all being a projection, of course.

“So, you accidentally got worshipped as gods?” Jack raised his eyebrows. “Well, that could happen to anyone, I guess,” he added with a shrug.

Adora frowned at him. Yes, it could happen accidentally! Or at least unintentionally!

“The level of native technology of this planet doesn’t seem to have advanced very much since they were taken from Earth,” Sam said.

“We have not interfered with their development,” Thor said.

“Except for becoming their gods.” Jack grinned, showing his teeth.

“Yes. We strive to avoid intervening unless something or someone forces our hand.” Thor nodded.

Daniel adjusted his glasses. “But despite the treaty, you don’t like the Goa’uld. You didn’t just block them from reaching this planet - you built an elaborate system to capture any of them who arrived, where the only way to escape was for the Goa’uld to release their hosts.”

“Yes.”

Daniel nodded. “The Goa’uld must be aware of that as well. And yet, they made a treaty with you. I don’t think they would have done that if they thought they could defeat you in an all-out war. Or, at least, defeat you without fatally weakening their own Empire. The Asgard must be a credible threat to them for such a treaty to be agreed upon.”

“Our technology is superior to theirs,” Thor replied.

“Quite a specific wording,” Catra whispered. She was right, in Adora’s opinion.

Glimmer, though, was nodding. “So, if you joined forces with us, we could likely defeat them easily.” She was smiling, but it was a guarded smile, Adora noticed. Her friend didn’t expect Thor to agree with her.

“Unless the Goa’uld break the treaty, the Asgard will not declare war on them.”

“So, you won’t break your own treaty.” Jack nodded.

“Thor was supposed to be very honourable in our myths. As were most gods of the Norse pantheon. Loki was the most notable and famous - or infamous - exception,” Daniel said in a low voice.

And Adora saw Thor frown at the name.

“Or maybe you can’t afford to go to war?” Catra asked, cocking her head to the side as her ears twitched. “Is there something else keeping you from moving against the Goa’uld?”

Thor frowned at her. “How could you trust an alliance with someone who broke a treaty?”

That was a good point, Adora had to admit. She nodded in agreement.

“That depends on whether or not the treaty was made in good faith - and if it wasn’t forced on either side,” Glimmer said.

Thor inclined his head but didn’t answer the unspoken question. “We seem to be at an impasse.”

“Maybe we should discuss this face to face,” Jack said. “You know, it’s hard to trust someone when you know they’re hiding their true

appearance and pretty much everything else." His smile reminded Adora of Catra's when she thought she had the upper hand.

After a moment, Thor nodded. "Very well. If you give your word not to offer violence, we can meet in person on my ship."

"We accept your hospitality," Daniel said, nodding slowly. Then he glanced at Jack and raised his eyebrows.

"Yes." Jack nodded as well - a little exaggeratedly, in Adora's opinion. "You have our word."

"Yes!" Entrapta beamed. She was the only one, though.

Adora glanced at Catra, but her lover nodded as well without adding anything - for once. And Glimmer frowned a little but didn't say anything either.

"So, are you going to send a shuttle down, or…?" Jack was interrupted by a peculiar noise.

Adora saw Catra and Glimmer clench their teeth and jerk, but a moment later, they were standing on the bridge of a ship in space.

*****

Orbit above Cimmeria, September 26th, 1998

Matter transportation - or teleportation, Samantha Carter thought as she got her bearings after the sudden shift. She didn't see any sign of a ring transporter, and it hadn't felt like a ring transporter, either. Magic was unlikely - the planet hadn't had its magic restored - but couldn't be eliminated as a possible source since She-Ra proved that some magic worked without that.

They were on a bridge - or a command centre. Darker than she had expected, with a few screens and consoles, but she couldn't see anyone manning them, and…

"Oh, for crying out loud!"

The Colonel's exclamation had her turn around and… freeze for a moment as a figure stepped out of the shadows.

"Welcome to the Biliskner, my flagship."

Thor was a grey humanoid alien, smaller than an average human, with a proportionally big head, solid black eyes, and no visible genitals. And no clothes, either. In short, he looked like the depictions of aliens in some science fiction media - and in some tales of being kidnapped by aliens, which likely prompted the Colonel's outburst.

"Hello! Thank you for inviting us!" Adora, like the rest of the Etheirans, didn't seem to be affected. No, Sam corrected herself - Catra and Glimmer looked around like they were in hostile territory. And the Colonel muttered something about 'probing' that probably shouldn't be overheard.

"Well, it's definitely not designed or decorated in the Norse style," Daniel said.

"We do not impose our own culture on others," Thor said. He was staring at Hordak, though.

The former warlord looked around. "It's not Horde Prime's style either," he said. "But the technology…"

"It's quite similar!" Entrapta smiled widely as she pointed her recorder around. "Not identical, but here, you can easily see that it's based on the same principles and key technology."

"Yeah, the transporter felt very familiar," Glimmer muttered.

"I see." Thor nodded. "That would be another indicator that you are… descendants of the Asgard."

Daniel blinked. "Descendants? Are you sure? If the culture doesn't show any shared origin, only similar technology, couldn't it be parallel evolution?"

“Our species’ history is well-documented,” Thor replied. “If there are close similarities between our technology and the technology this ‘Horde Prime’ used, then that would indicate that he had access to our technology relatively recently.”

“Yes!” Entrapta nodded several times. “That would fit the differences!”

Sam was inclined to agree based on her own readings.

“But would the timeline of the Horde fit?” Daniel asked with a slight pout - he didn’t like letting go of a theory.

“As I mentioned before, Horde Prime didn’t encourage us to delve into his past. But I think it would fit - I certainly do not recall anything that would disprove the notion.” Hordak stared at Thor. “Although the differences in appearance are striking.”

“But DNA doesn’t lie,” Entrapta said. She pointed her device at Thor, and Sam winced. That was rather rude. If Thor took offence… “Oh!” Entrapta blinked. “You’re a clone as well!”

“What?” The Colonel blurted out.

“It would be more correct to say that this body is a clone. My consciousness is far older than this,” Thor said.

Now the Etherians tensed. Especially Catra, Glimmer and Hordak.

“Horde Prime could transfer his consciousness into the bodies of his clones,” Hordak said. “He was able to possess any single one of us any time he chose so.”

Oh. That would explain it. The ramifications of this… No wonder they hadn’t mentioned this before.

Thor seemed unfazed, though. “Yes. This is also an old technology of my species. Although we do not use it on other sapients - we use specifically created braindead clones. Nevertheless, it seems Horde Prime had access to a wide range of Asgard technology.”

Which would support the theory that Horde Prime had been created by an Asgard. Like the Ancient experiments on Etheria. "Does your species have a history of experimenting with new life forms?" Sam asked before she realised how rude it sounded. But it seemed everyone else was focusing on Thor.

"My species? No." Thor was… well, Sam had no experience or point of reference to judge the alien's expression, but he seemed to be frowning. "But individuals have done such research in the past."

"Undocumented and uncontrolled research, right?" Catra shook her head. "Since you somehow missed how a clone with your DNA started a conquest of the galaxy."

Thor inclined his head. "There have been experiments without permission from the High Council in the past. Some of our scientists felt 'hobbled' by our laws. It would not be out of character for some to hide their research, no matter how dangerous or short-sighted it would be."

"Yep, we know about such people as well," the Colonel said. "Short-sighted and law-breaking, I mean - we haven't actually had scientists create a new species and set them loose on the galaxy."

"Well, I know a few scientists who would likely do that - if they had the means," Daniel said.

Sam nodded in agreement. She knew a number of such people herself. And she didn't miss how Entrapta looked a little guilty.

"So, it looks like the Asgard aren't the Horde - but the Horde came from the Asgard," the Colonel summed up. "Does that mean you're like… cousins? Or are you Hordak's uncle? Great-uncle?"

Hordak frowned at the Colonel, but Thor tilted his head. "The exact legal relationship remains to be determined. So far, it's merely a theory. We cannot exclude the possibility that someone else captured an Asgard and used them for such experiments."

“Yes,” Adora said. “Some people will experiment on people like that.” She blinked. “You know what I mean:”

“We do,” Catra told her with a grin. Then she turned to Thor. “So, when will you interrogate your suspect?”

Thor looked surprised for a moment, then slowly nodded. “They are sometimes hard to get ahold of. But we will get to the bottom of this.”

Which meant that he did have a suspect in mind. Sam nodded.

“And we will help you!” Entrapta beamed again. “Right, Hordak?”

Hordak nodded very slowly. “Yes. This is important.”

“Yes, it is. For both of our species.” Thor said.

“And speaking of important things,” the Colonel broke the short silence. “How about we talk about our common enemy again? You were explaining why you couldn’t fight the snakes before you invited us to your fine ship here.”

Thor seemed to tense up again - at least Sam thought so.

That wasn’t a good sign for a possible alliance.

*****

The Asgard Part 2

Orbit above Cimmeria, September 26th, 1998

Thor was hiding something; Catra was sure. And it was related to the Goa'uld. You didn't stick to a treaty with enemies you killed on sight on your world just because your word was your bond or something. If you wanted to break a treaty, you could always find a reason or pretext. Just the fact that the Goa'uld had visited Cimmeria in the past should be enough of a pretext - if you actually wanted to fight them.

Daniel might assume that it was their honour that kept the Asgard back, but Catra doubted that. The whole setup where Goa'uold died as they set foot on the planet didn't really look honourable to her. More like something someone would do who wanted to stick to the letter of an agreement but bend its spirit as much as possible. Someone who wanted to fight them.

So, something had prevented the Asgard from fighting the Goa'uld all-out and made them make a treaty instead. She cocked her head and looked around. "That's a very nice bridge here. Looks like a nice ship overall."

"Thank you." Thor nodded at her.

"How does it stack up against a Ha'tak?" she asked.

"Our technology is superior. A Ha'Tak stands no chance against this ship - or any of our ships."

She had expected that. If they had similar technology to Horde Prime, they would be superior to the Goa'uld's technology. So… they had the quality. And the will. What did that leave?

Numbers. Which was weird since they had cloning technology. They should be able to grow an army if they needed one. Like Horde Prime had done. This was quite a mystery. Ah, screw it.

Catra grinned. “So, what’s holding you back from protecting more planets? Not enough ships?”

Thor frowned at her. At least it looked like a frown. “I assume you will understand that I’m not at liberty to discuss the Asgard military with strangers.”

“Of course we understand that!” Adora said at once with a glance at Catra. Then she smiled at Thor. “It’s just… You obviously consider the Goa’uld a threat. And I doubt that you trust them to stick to the treaty if they think they could break it without consequences.”

“Yeah,” Jack cut in, “The way you set up a roach motel and now a bug zapper for the Goa’uld kinda gives that away.”

Catra frowned - a roach motel?

“It’s a slang term for a vermin trap on Earth,” Daniel explained.

Ah. She nodded - and noticed that Thor was still tense. Kind of. Definitely hiding something.

“So, you know they aren’t trustworthy.” Glimmer nodded.

“We do. But we aren’t like them,” Thor retorted.

“Did they trap you in the treaty?” Daniel asked. “Did they exploit your honour?” Thor turned towards him, and Daniel smiled a bit embarrassedly. “I’m sorry. I didn’t want to pry - my curiosity got the better of me.”

Thor nodded again, and Catra told herself that she should take notes. Daniel really knew how to get away with stuff.

“As I said, we will not break the treaty.” Thor looked at Hordak. “And should the Goa’uld accuse us of doing so because they mistook you for an Asgard, we will tell them so.”

“We wouldn’t try to trick the Goa’uld like that!” Entrapta protested.

“Yes. That would be low,” Adora agreed.

Catra eyed Jack. He was looking composed, but she was sure that he disagreed with Adora and Entrapta.

Hell, Catra would disagree with them - if she thought that the Asgard were only held back by their honour. As it was, it would be a bad idea to trick them into joining the war. Not least because they might enter on the side of Goa’uld if they suspected treachery.

They needed to know more about the Asgard. With their ties to the Horde, their technology, their relation to the Goa’uld… they were just too important for the war.

“Alright. But we’ll still work on finding out what your relation to the Horde is, right?” Bow said.

“Yes. We need to know what happened - and if any of our laws were broken. And by whom.”

“And you’ll share your information, right?” Entrapta beamed at him. “Sharing knowledge is essential for science! And for trust-building.” She nodded emphatically.

“And you’re kind of family already,” Catra added.

Both Hordak and Thor twitched.

She didn’t care. If the Asgard were responsible for Horde Prime, then this was nothing. Hell, if they were responsible, Catra would probably be for tricking them into the war against the Goa’uld.

But they needed to know more about them first.

Thor once more slowly nodded. “Yes, we will be sharing what we find out.”

Catra suppressed a snort. Sure they would - once they had removed anything sensitive.

But most of her friends were smiling. Especially Daniel.

She sighed.

*****

Jack O'Neill smiled politely at the grey alien. 'We will not break the treaty' my ass, he thought. The guy was hiding something - you didn't build elaborate death traps for your enemies if you wanted to honour your treaty with them. That was what you did if you wanted to go as far as you could without breaking the treaty because you needed it.

"So… you won't join in the fight against the Goa'uld. But what if the people under your protection want to fight them? How many planets are under your protection, anyway?" He raised his hands. "Just so we won't have to dismantle another of your defence systems."

"We currently protect twenty-seven planets," Thor replied after a moment. "I will send you the gate addresses."

Jack didn't miss that Thor hadn't answered his first question.

Daniel hadn't missed that either. "And what if the Cimmerians want to open diplomatic relations? With Earth or the Etherians?"

"We would want assurances that they aren't exploited," Thor replied. "We are aware of your planet's history - and your species's past," he added with a nod towards Adora.

Oh shit. Of course they would know that Jack, too, had some alien genes. And draw the wrong conclusions. "I wasn't aware of my 'ancestry' until a few months ago," Jack said.

"I didn't know I was one of the First Ones for most of my life." Adora nodded with a grim expression as Catra held her hand, Jack

noted. “Neither of us was raised as an Ancient.”

“Your biology doesn’t decide your life,” Daniel added.

“Well, except for when it does - like if you have a genetic predisposition to specific illnesses or something. Or your brain chemistry is affected,” Entrapta said. “And there are some instincts and urges tied to certain genes, I believe.” Jack frowned at her, and she blinked. “But that’s probably not what you meant, right?” she asked with a smile, looking at everyone in the room.

“Yes, We’re just saying that Adora and Jack aren’t going to act like Ancients just because they are descendants of them,” Bow said.

“And they’ve never met them.” Entrapta nodded again. “Unless Light Hope and Alpha count, although they aren’t First Ones, they were raised by First Ones. That’s actually like the opposite of you two - they don’t have the genetic legacy but they have knowledge about their culture. Some knowledge, at least.”

“Who are those people?” Thor asked. “We have lost contact with the Ancients long ago. If they are still present in the galaxy, we would like to talk to them again.”

So, they had had contact with the Ancients. And they used cloned bodies to transfer their minds into. How old were those aliens? Jack wondered.

“They’re bots. Artificial intelligences,” Entrapta replied. “Or were, in Light Hope’s case,” she added with a frown. “She didn’t survive the fight against Horde Prime.”

“Ah.” Thor looked disappointed - if Jack read his expression correctly. Did they need to contact the Ancients, or was it just sentimentality? He wished he knew the Asgard as well as he knew Teal’c so he could read them.

“So, you’re protecting planets while we fight the Goa’uld,” Glimmer said. “That will be helpful since that means we have to protect fewer planets.”

Oh, that was a nice dig! Jack's smile grew more honest - everyone here knew that the Goa'uld oppressed a lot more than a few dozen planets.

"Yes," Thor replied.

"Could you provide humanitarian aid to liberated planets?" Jack asked, trying to sound earnest. "Food, for example?"

This time, Thor frowned. "That would likely be seen as breaking the treaty."

"And would you let Cimmerians come to us to fight the Goa'uld?" Jack tilted his head.

Thor mirrored his gesture. "We aren't their gods or rulers. We just keep them safe from the Goa'uld."

"But you also keep the Goa'uld safe from them. That was a clause in the treaty you mentioned." Daniel narrowed his eyes. "So, wouldn't that be breaking the treaty as well?"

"Depending on the scale of the involvement, Cimmerians who take part in the war would be considered rogue elements," Thor told him.

"And what if we shared our technology with them?" Catra asked. "I'm not saying we would do it - we have quite strict conditions for such technology transfers - but what if we did and they would accept?"

"Even if you shared all your technology today, they would take years to learn enough to maintain, much less recreate your technology without your help," Thor told her.

Catra grinned. So did Jack. "So, you'd blame us, I take it, if the Goa'uld complained, and claimed that it's us, not the Cimmerians, who are a threat."

Thor nodded, and Jack thought he saw the alien's mouth twist in a brief smile. Well, as Supreme Commander of the Asgard Fleet, the alien would know how to play these games.

So, he might not be a bad guy after all. But he was still hiding something. Something important.

Jack was sure of that.

*****

This was going better than Adora had feared, but not as well as she had hoped. The Asgard were friendly but didn't want to join the war against the Goa'uld. Even though they didn't like the Goa'uld and had superior technology - on par or better with the Horde's technology. Well, they would have their reasons, even if Adora didn't know them. That treaty, on the other hand, sounded a little… it sounded like a temporary solution that no one was actually happy with and everyone knew wouldn't last forever.

And you were supposed to plan ahead if you knew something wouldn't last. So… "What will you do once the Goa'uld break the treaty?"

Thor tilted his head as he turned to look at her. "That depends on the exact circumstances, but we have a commitment to defend the protected planets."

"Mourir pour Danzig?" Jack muttered.

Adora frowned - she didn't understand the reference. But she knew evasive answers when she heard them.

"I assume that you have plans for that case," Glimmer commented. "You know the Goa'uld aren't trustworthy."

"We know that they wouldn't dare to break the treaty," Thor retorted.

"At least not openly," Catra cut in.

“And they are divided - they cannot trust each other, which means they cannot unite to wage war. Not unless circumstances force them to unite,” Thor went on, looking at Glimmer.

“Circumstances like an enemy starting to dismantle their empire and free their slaves?” Glimmer met Thor’s eyes.

“It is a possibility. Your technology is obviously similar to ours and, therefore, superior to the Goa’uld technology. If you also have the numbers to pose a credible threat, that could unite the Goa’uld,” Thor said.

Adora pressed her lips together. They were aware of that - they would do their best to avoid that.

“Allies with the same technology and goals could counter even a united Goa’uld Empire,” Glimmer pointed out.

“In a war that will lay waste to a significant part of the galaxy,” Thor retorted. “And while we have solid estimates of the strength of the Goa’uld, we don’t have any of your strength.”

Well, of course the Asgard didn’t know about their forces - they hadn’t even known about Etheria until today!

“The Goa’uld knew Horde Prime yet avoided conflict with him,” Glimmer pointed out. “I doubt they would have done so if they thought they could defeat him.”

“And they must have known that he would not stop with our sector but continue his campaign to conquer the galaxy,” Catra added. “Yet they didn’t unite.” Her ears turned forward as she grinned. “They probably hoped the First Ones and Horde Prime would kill each other - or at least weaken each other so much, the Goa’uld could finish off the victor. But that didn’t happen.”

“And then you defeated him. But how much did it cost you?” Thor asked.

Catra frowned - her ears were laid back again, Adora noticed. Did she see the question as a threat? Was it a threat?

Adora couldn't tell. Technically, if you ignored all the devastation suffered over two decades of war, Etheria had gained a lot from the war - the support of Second and Third and the remnants of First Fleet. But without the unknown rest of Horde Prime's forces, cut off by his death, they were still facing an enemy with a significant numerical superiority.

"It cost us enough so we know we can't let the Goa'uld keep oppressing and enslaving people," Glimmer said. "We've seen the destruction Horde Prime wrought on other people." She shook her head. "We can't let them keep doing this to others."

Thor didn't react for a moment. "We won't break our treaty."

"Well, I'm sure you have a good reason for that. But you better be ready for the day the Goa'uld think they can break the treaty and get away with it," Jack said.

"That day may come, but not soon," Thor said.

"Well, the Goa'uld might have held back in the hope that you'd fight Horde Prime," Catra said. "Who knows what they'll do now?"

"If they saw Horde Prime as such a threat as you claim, then they will want to find out who defeated him," Thor retorted.

He had a point. The Goa'uld wouldn't start a war with the Asgard now. Certainly not after the Alliance had begun their attacks. Adora pressed her lips together. The Alliance would be protecting the Asgard as well, in a way. Usually, she didn't mind protecting people, but this was a little different.

Why couldn't they just do the right thing and join them?

"So… seems we have reached an understanding," Jack said, smiling in a way that reminded Adora of Catra trying to pull something over her. "But since we're sharing information and all…

Are there any other dangers like the Goa'uld that we should be aware of when we start exploring the galaxy?"

Thor froze for a moment, then cocked his head sideways, staring at Jack. "We aren't aware of any danger for an advanced species that aren't contained already. Although our knowledge of what the Ancients left behind is limited. The Stargates are the most famous of their achievements, but also the safest."

Adora blinked. That sounded ominous.

"Really?" Entrapta sounded intrigued.

Adora swallowed a curse.

Catra, standing at her side, didn't.

*****

"We need to find them, then," Entrapta went on. "If they were left in a state like the Heart of Etheria, they could go out of control as well."

Samantha Carter nodded in agreement. "Given the scope of the Ancients' technology, I believe ensuring that there are no lingering dangers is necessary," she said.

"And analysing their technology will allow us not only to handle such dangers but also to greatly advance our own technology!" Entrapta beamed. "They were so far advanced compared to us!"

Sam agreed with that as well.

"Well, I'm not too comfortable with poking the possible world-destroying device," the Colonel said with a grimace.

"Oh, do not misunderstand, Colonel O'Neill. The danger that relics of the Ancients represent goes far beyond destroying a world," Thor said.

“Ah. How silly of me to worry about a mere world-destroying threat.” The Colonel chuckled once.

“Well, if you’re on the planet, it’s still a great danger,” Entrapta said. “And for everyone else in the world, of course.”

That made the Colonel blink at her. Fortunately, he just nodded instead of commenting in his sarcastic way. Entrapta meant well, after all.

“Although the lack of magic in many worlds might have affected any technology left by the Ancients,” Entrapta went on, wrinkling her nose. “They were using magic, after all, so their technology would also be using it.”

“Not all of their technology used magic,” Thor pointed out. “The Stargates do not rely on it.”

Sam nodded. So, Thor was aware of magic. Well, if he was as old as he had hinted at, he would have experienced magic before it was siphoned off.

“Oh!” Adora looked embarrassed as she smiled at him. “Speaking of magic… do you wish to have it returned to your world? If you lost it, I mean. I can do it - we figured out how the First Ones took the magic from the other planets through the Stargates.”

Once more, Thor tilted his head in that not quite alien way that might indicate surprise unless Sam was misinterpreting his reaction. “You can restore magic to a world?”

“Yes.” Adora nodded firmly. “And it won’t take long either.”

“Interesting. Thank you for the offer, but the Asgard do not use magic. We don’t have the talent for it, so its lack does not affect us.”

“Really?” Entrapta looked surprised. “None of you can use magic? What about magitech devices?”

“We prefer to rely on our own technology.”

A non-answer, like others, Sam noted. And, in her private opinion, at least, a rather short-sighted policy. One should never dismiss new knowledge or technology out of hand. On the other hand, that was the business of the Asgard, not hers.

“If you’re sure…” Adora pouted a little.

“Not everyone wants magic forced into their lives,” the Colonel said - a little too smugly, Sam found. The Etherians meant well, after all.

“And does everyone on your worlds share that view?” Glimmer asked.

“Yes.” Thor nodded. “We’re an old species. We didn’t miss magic when it was gone.”

“But the potential magic offers! It’s a whole field of technology you’re missing out on!” Entrapta protested.

“We prefer to work with technology that we not only fully understand but also fully control.”

“But…” Entrapta started to retort when Hordak put his hand on her shoulder.

“I understand the feeling,” he said. “Horde Prime had the same policy.” After a moment, he added: “Although he destroyed what he couldn’t control.”

“We are not like him,” Thor replied in a tense tone.

“And we’re all glad for that,” the Colonel said. “So, you don’t have a list of worlds to avoid unless we want to risk unleashing an ancient but not quite galaxy.-destroying evil, do you?”

“No.”

Sam tried not to feel disappointed. Wanting to analyse and explore such dangerous worlds was reckless and should be discouraged. Even though she couldn't help wanting to anyway.

"Aw." Entrapta didn't bother to hide her disappointment. "So, what about exchanging technology? We've got similar technology, after all, so I am sure there would be quite the synergies." She beamed at Thor.

"That would require a decision of the High Council of the Asgard," Thor told her. Sam noticed Daniel perking up. "However, we generally do not share our technology unless it is with species which have proven themselves to be mature enough to use it."

"Now, that sounds familiar!"

And the Colonel sounded a bit too smug again.

Adora frowned at him in return. "It's a sensible policy," she said.

"But we already have comparable technology," Entrapta pointed out. "It's not as if you'd uplift us."

Well, the Etherians had comparable technology. Earth still lacked it. Sam pressed her lips together; she would have loved to get access to their technology. On the other hand, it didn't look like the Asgard would be a way to circumvent the Etherians' conditions for sharing technology. And that wasn't a bad thing with the Stargate Command now under United Nations control; Sam wasn't quite as opinionated about it as the Colonel was, but she didn't think China and Russia could be trusted with such technology either.

Though she really hoped that the United States would finally manage to pass the necessary laws to negotiate an Alliance with the Etherians.

"As I said, that is up to the High Council to decide," Thor said.

"Aw."

*****

"...and here's how to contact us once your High Council has made a decision. You can use this after dialling Earth's Stargate."

Catra smirked as Bow handed a communicator over to Thor. "Just don't try to go through the gate - you'll get flattened."

"I see." Thor looked at her and nodded. He didn't ask if they had a Stargate of their own - he probably assumed that the Alliance with Earth covered the whole planet and was much older than it was - and more stable - and so they would only give out Earth's gate address.

"And how can we contact you?" Glimmer asked.

"Visit Cimmeria and address the defence system."

Thor wasn't smiling, but Catra would bet that he was amused. He just had a smug attitude there.

"Then we've settled everything that could be settled now," she said. "Unless you'd like to give us a tour of your ship, we probably should head home."

"Yes." Adora nodded.

Entrapta smiled at Thor, obviously hoping for a tour. But, instead, the damn transporter that was so similar to Horde Prime's went off again. Catra tensed - he wasn't Horde Prime. The Asgard weren't the Horde - and then they were standing near the Stargate on Cimmeria, and she heard Ferretti call in his radio that they were back.

"Alright!" O'Neill clapped his hands. "Doesn't look like any of the natives are around, so let's head back!"

"Jack! We still haven't contacted Kendra!" Daniel complained. "In fact, we haven't talked to any Cimmerian, and we don't know what they think about this!"

“We can return after we briefed the brass,” O’Neill retorted, glancing at the walls housing the defence system.

“But this is an opportunity to compare their views to the claims made by the Asgard,” Daniel protested.

“And we can do that once we have had our debriefing about our meeting with the Norse god. Major - clear us to return!”

“Yes, Sir!” Ferretti used his radio again, sending a code. “Clear, Sir!”

If he was mistaken, this would be a very quick way to die, Catra knew. If anyone wanted to sabotage the Alliance, this would be the way.

But she had to trust that Stargate Command wouldn’t let that happen. The British and the French had an alliance with them, and the United States wanted an alliance. Still, all it would take was one person at the controls, closing the iris at the right moment…

But they arrived safely at Stargate Command.

Still no sign of hidden defence installation like gunports. But the guards were alert. And the doors out of the gate room were closed, she noted - sealed if she interpreted the lights above it correctly. And there was Frasier coming towards them, wearing a mask and carrying several vials.

“Oh, no… we’ve been on Cimmeria before, Doc!” O’Neill complained.

“That was before you met an alien species and visited their ship. We’ll need to give you a full check,” the doctor replied.

“I’ve already scanned for biological agents,” Entrapta said. “I didn’t find anything but the normal stuff, you know.”

“Normal stuff?” Daniel asked.

“Microbes and such native to the planet. If they didn’t hurt you on your last visit, they shouldn’t hurt you.”

“We’ll still check ourselves,” Dr Frasier said. “Your arm, please, Colonel.”

O’Neill grumbled but held out his arm to the doctor.

“But it’s really not necessary,” Entrapta insisted. “My scanner didn’t show any dangerous agents.”

“The dear doctor sticks to procedure,” O’Neill said while the woman switched to Daniel.

“No one ever died because of one examination too many, Colonel.”

“Are you sure? I feel as if I gave a gallon of blood already.”

“Then you wouldn’t be able to talk back, Sir. You’d be unconscious or dead.”

Catra snickered at the exchange, which made Adora hiss at “Catra!” at her.

Frasier went on to get blood from Sam, then switched to SG-2. None of them complained. Once she was finished, she looked at Adora and hesitated.

“We trust our own specialists,” Glimmer told her.

Catra nodded. She didn’t want the humans to have her blood. Who knew what they would do with it?

“Yes! We’re safe!” Entrapta said.

“And I can heal anyone, anyway,” Adora said, raising her sword.

A moment later, light filled the room, followed by surprised gasps - Catra felt the hairs of her fur stand up for a moment as magic touched her. “Show-off,” she whispered.

Adora pouted at her. "I just wanted to reassure our allies."

"Well, they don't look very reassured," Catra told her as she nodded at Frasier, who was eyeing her samples as if she expected the blood to turn into a monster and attack her.

"Oh… I didn't think of that."

Catra shrugged. "They'll get over it." She had no doubt that the blood samples would now be examined for any traces of magic - though she had no idea if the humans knew how to do that.

It didn't matter anyway - it was time to get debriefed by the council of generals. Catra just hoped they wouldn't be too annoying; she wanted to get back to the ship and relax now, after meeting what probably was Hordak's grand-uncle or something.

She snorted at the thought. She'd have to remember that for their next meeting.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 26th, 1998

"...and then we were transported down to the planet again - abruptly - and proceeded to return to base," Jack O'Neill finished his oral report. Which he would have to deliver in writing as well because even with the change in management, getting a clerk to type out a transcript was still impossible because all of it was classified, and no clerk with the necessary security clearance was on the roster.

"Thank you, Colonel." Hammond nodded.

"A peaceful contact with an advanced species - as advanced as the Etherians," General Li commented.

Or more advanced - Jack hadn't seen them use such a transporter before.

“Yes,” Entrapta said. “They have technology similar to the Horde, although with some differences; likely the result of different design and research choices since they split off.”

“So, you think the Asgard are the creators of the Horde?” General Petit asked.

“We haven’t found any evidence that would disprove it,” Hordak spoke up. “And the genetics and technology we share support it.”

That made sense. Of course, that didn’t mean it was true, but Jack’s gut leaned towards agreeing with it. He’d wait for Carter’s assessment, though.

She nodded as well. “It fits all the data we have,” she said, “and the Asgard seem to believe it was true as well, Sir.”

“And yet, while the Asgard claim to oppose the Goa’uld, they refused an alliance,” Sidorov said, scowling. Did he ever smile? Jack didn’t remember seeing the Russian looking happy.

“Thor said they wouldn’t break their treaty with the Goa’uld,” Daniel said. “That would indicate a culture where honour is highly valued.”

“Even if it benefits the Goa’uld and endangers their victims?” General Haig raised his eyebrows.

“It’s possible. An alien species wouldn’t share our values, and past cultures on Earth often put great emphasis on keeping your word.” Daniel pushed his glasses up. “Although, in practice, treaties were often broken when it was convenient.”

“The United States has a history full of such events,” Sidorov said with a scoff.

“Err, yes,” Daniel agreed. “However, we cannot assume that the Asgard act like we would in their place.”

Catra scoffed before Jack could say anything. “If they really cared that much about their honour, they wouldn’t have built death traps for Goa’uld. That’s what you do if you want to stretch the treaty as far as you can without breaking it. I bet that they would find an excuse to break it if they actually wanted to break it.”

Jack nodded. “That’s my impression as well. I think they need the treaty.”

“They have the same technology - more or less - as the Horde,” Hammond said. “And they have had access to it for at least a thousand years. And yet they don’t think that they can defeat the Goa’uld?”

“And you think you can,” Sidorov added, glaring at the Etherians.

“Yes,” Adora nodded firmly. “With the help of our allies, yes.”

“Why would the Asgard disagree?” Li asked.

“We don’t know,” Daniel replied. “If their ethics don’t hold them back, they might have other, more, uh, practical reasons.”

“They might be outnumbered to a degree that makes fighting the Goa’uld too dangerous,” Carter speculated.

“But then, why would the Goa’uld keep the treaty?” Glimmer retorted. “I bet they only made a treaty after conquering the Asgard failed. So they can’t be too weak.”

Jack nodded. That sounded like the snakes.

“Or they weren’t too weak, back then,” Catra said. “And then something changed.”

“They didn’t know Horde Prime, so they couldn’t have been weakened by a conflict with him,” Bow said. “But there must be something…”

Jack nodded. "Thor was hiding something. And they don't have good intel on the Goa'uld."

"One would have expected such people to look for allies," Li said. "And yet, you say they refused to share technology."

"They said they would only share their technology with those who proved themselves mature enough to use it responsibly," Glimmer told him. "And that the decision was up to the High Council."

The generals didn't like that. Jack could tell. He didn't like it either - but he'd like China and Russia having access to advanced technology, more than they already had, even less. Of course, the Asgard might consider Earth advanced or mature enough to share technology… He suppressed a snort. Yeah, right. He didn't need Daniel's opinion to know that that was rather optimistic. Although, if the Asgard valued martial ability, as the epics Daniel told them might hint at, humanity might get a pass.

Not that he'd mention that now, of course. The Etherians would lose all their leverage if Earth got access to Asgard technology.

And Jack was sure that they were aware of that as well.

"It's clear that we need more information about the Asgard. And about the danger Ancient relics might pose to Earth," Hammond said. "I propose to use the next meeting with them to find out more about them."

"That's the obvious course of action," Hordak agreed.

Which, of course, meant that the generals had to debate it.

Jack really missed the old Stargate Command.

Adora shook her head as Catra kept skipping through the tv channels on the bridge of Darla. "Are you even paying attention to the channels?"

"Yes, I am," Catra replied and switched channels again.

"What did the last one say?" Adora asked. She hadn't even managed to catch the broadcasting logo.

"Earth is still a mess. Watch this ad!" Catra leaned back in her seat, craned her head and grinned upside down at her.

Adora frowned. "You couldn't have caught that!"

"And yet, I'm still right!" Catra flashed her fangs.

Well, she likely was correct. Still… Adora pressed her lips together. She knew that this wasn't her fault - the United States had kept aliens and their war with them a secret, knowing that it would cause immense trouble once it got out, and had done so even after the Goa'uld's invasion attempt had almost exposed the whole secret. She also knew that the secret would have come out anyway sooner or later, and revealing it had been both the right thing to do as well as a necessity to wage war. You couldn't lie to your people like that.

But still, she couldn't help feeling guilty about the riots and the deaths, no matter how much she told herself that the humans had been doing that to themselves. They had been killing people for

being witches even though magic had been gone from Earth - and was still gone!

“Hell, no!” Catra exclaimed.

“What?” Adora blinked.

“You’re blaming yourself again!”

Adora clenched her jaws. She couldn’t help it.

“It’s not your fault. There was no good solution. We picked the least bad. It’s not our fault that so many humans are so messed up.

“Still…” Adora trailed off. She didn’t have a better solution. What could she say? “But we could do something. People are dying!”

“What could we do? Invade Iran? Egypt? Most of Africa?” Catra scoffed. She must have paid more attention to Earth geography than Adora had thought.

Adora snorted. Of course she had! Catra just played the lazy cat whenever she liked it, but…

“There you are!” Glimmer frowned at them.

“Where else would we be?” Catra asked.

“In the hold, for the debriefing?” Glimmer scoffed. “Come on!”

“We already had a debriefing,” Catra complained. But she got up anyway.

“That was Stargate Command’s debriefing.” Glimmer turned to head back to the hold.

“I know; I’m just yanking your chain,” Catra said. “Wouldn’t want to discuss sensitive stuff when we’re being recorded by strangers.”

Glimmer didn't turn around, but Adora was sure that she was rolling her eyes.

Catra snorted. "We could have held the debriefing on the bridge."

But Entrapta and Hordak felt more at home in their lab in the hold. And they were the most affected by today's mission. Adora still wasn't sure what she felt about the revelation that Horde Prime had likely been created by an Asgard. Just like Etherians had been created by the First Ones. And if she wasn't sure how to feel about it, Hordak must be even worse off, being directly affected.

"I brought them!" Glimmer announced as they entered the hold. "They were watching television on the bridge."

"Ah. That would have been my second guess if they weren't in their cabin having sex," Entrapta said.

"What?" Adora blinked at her.

"I noticed you like to relax by having sex," Entrapta explained.

Adora felt herself blush. She wasn't ashamed of her love, but…

Catra giggled.

And Glimmer rolled her eyes. "Let's start the debriefing." She took a deep breath. "First, what do you think of the Asgard's claims? About Horde Prime."

"They seem like a valid hypothesis supported by the available data," Entrapta said. "Although we need more data to be certain."

"Yes," Hordak added in a more gravelly voice than usual.

"Eloquent," Catra whispered.

"Yes, but what if it is true?" Glimmer asked. "What do we do?"

Adora blinked. What did she mean?

“Well, then we find out if the Horde fleets are more loyal to Adora and the Alliance than to their family - so to speak,” Catra said.

Ah. That was a possibility, of course. Those clones who felt lost without Horde Prime might very well turn to their ‘ancestors’.

“Would the Asgard even want them?” Bow asked. “They seemed… a bit distant.”

“It would weaken our own position,” Glimmer said. “I don’t think that Priest will leave, but he’s got only one fleet.”

“But the Asgard hate the Goa’uld,” Adora pointed out. “If they lack the numbers to fight them, the clones could tip the balance.”

“And we would lose most of our leverage against Earth.” Glimmer snorted. “If the Asgard had offered their technology, I am sure the humans would have jumped at the opportunity.”

“But we asked for sharing our technology with the Asgard,” Entrapta said. “So…?”

“Yes. But they didn’t share their technology with the Cimmerians. We don’t know if they will share their technology with us, even though we already have comparable technology,” Bow pointed out. “They might not want to share with the humans as long as the treaty holds. That might be too much for the Goa’uld to tolerate. Especially if we already started attacking them.”

“In short, we don’t know enough to make concrete plans,” Catra said, stretching.

“We still can make contingency plans,” Glimmer retorted.

“I think we need a bit more data even for that,” Entrapta said. She cocked her head to look at Hordak.

“We don’t know how and why Horde Prime came into being,” Hordak snorted. “If he was a clone like us, that would be… satisfyingly ironic. A mere clone…”

“You’re not mere anything,” Entrapta told him with a frown.

The two stared at each other, and Adora felt like she was intruding somehow.

Then Glimmer cleared her throat. “So, what do we know about the Asgard?” Adora opened her mouth to answer, but her friend went on: “That we haven’t already mentioned at the debriefing with Stargate Command?”

Adora closed her mouth.

“Nothing but speculation,” Catra said. “They’re hiding something. Something big. And with their hints at Ancient relics being dangerous…” She grimaced.

Adora nodded with a sinking feeling in her stomach. If there was another Heart of Etheria…

She shuddered.

*****

The Magic Question Part 1

Cheyenne Mountain, Colorado, United States of America, Earth, September 27th, 1998

"And you saw no possibility to get the 'Asgard' to agree to share their technology with us?"

Samantha Carter didn't frown at the question of General Sidorov even though her report - which she had finished shortly before midnight - answered it succinctly. "No, Sir. Thor made it clear that the decision to share their technology was in the purview of their High Council - presumably their government."

"That's what Dr Jackson also said," General Petit added. "And the Etherians made their offer already."

Entrapta had, but the others hadn't seemed too put off by it.

"Yes. Without any regard for our interests," General Sidorov complained. "And the Etherians didn't state any conditions that the Asgard would have to legalise same-sex marriages!"

"Such conditions would likely be settled during the negotiations of any technology-sharing agreement," General Haig said.

Sam couldn't help feeling that the British officer sounded a little smug. Then again, many British officers tended to sound like him, so it might just be her impression. But the British and the French already had their alliance with the Etherians and they were looking forward to the advanced technology they were about to receive while the United States government was still trying to convince so-called patriots in Congress and state legislatures that the right to discriminate against homosexuals wasn't more important than the ability of the country to defend itself against alien threats.

"Yes," General Petit said. He did sound amused. "Of course, the Asgard might have their own conditions - they didn't share their

advanced technology, or any technology, with the planets under their protection, did they?"

"Not to our knowledge," Sam replied. "And if they are responsible for keeping their protected planets from becoming a threat to the Goa'uld, then they wouldn't uplift the people on those planets."

"They might even sabotage the people under their so-called protection, should they advance past medieval technology." General Sidorov glowered. "We cannot trust them - they were clearly hiding something!"

"I don't know any country that is in the habit of sharing their secrets with strangers," General Li commented. "Except, possibly, for the Etherians." His lips twitched into a small smile.

Sam had to agree - the Etherians were very open about themselves. Arguably, too open - if they had been a bit more discreet about their culture and magic, maybe the reaction on Earth would have been a little less violent. Maybe. Or it might have been seen as an attempt to deceive Earth - people hadn't taken the fact that the United States had kept the Stargate and the war with the Goa'uld secret very well, to say the least.

"It's a ploy!" General Sidorov spat.

Sam was tempted to ask if he meant the Asgard or the Etherians, but refrained from doing so. The Russian officer didn't trust anyone, anyway, so he probably meant both.

"In any case, while the Asgard do not seem to be a threat to Earth or Etheria…" General Hammond said.

"Maybe not an immediate threat, but a threat anyway!" Sidorov interrupted him.

But General Hammond barely reacted to the slight. Sam couldn't help thinking that Hammond's patience and self-control were partially due to the Colonel's attitude. "...we did learn about

potential threats left by the Ancients. Threats supposedly contained - those which are known to the Asgard, at least."

"Yes, Sir," Sam said. Of course, they only had the Asgard's word for that.

"And from what the Etherians have told us about the Heart of Etheria, a weapon of the Ancients, those threats could easily destroy a planet," General Hammond went on.

Or a sector. Sam had seen Entrapta's calculations.

"How much would it take to contain such a threat?" General Li asked.

"Without knowing the nature of the threat, I can't even make a guess," Sam replied. "The Heart of Etheria required direct intervention by Adora, but that was a special situation. Biological weapons might require quarantining a planet, which could require quite the resources." Or sterilising the planet. That was a theoretical option for Earth, but Sam thought that the Etherians and the Asgard would be able to do it. Not that she would mention it to Entrapta.

"Could such a commitment be what is keeping the Asgard from fighting the Goa'uld?" General Haig asked.

Sam inclined her head. "It's possible." They had considered that last night. But they didn't know enough to tell. We need more data, Sam thought, hearing it in Entrapta's voice.

"But we cannot say it with any certainty." General Haig nodded. "It's a little unnerving to know that such threats might be more common than we hoped."

General Petit chuckled at the understatement while General Sidorov kept glowering.

"We can't do anything about that for now, so I think we should focus on what we can do," General Hammond said.

“Exactly. We need to identify the other protected planets - and find out if the Asgard were telling us the truth about them,” General Sidorov said.

“We have a list of the gate addresses,” Sam pointed out. “And we matched them to systems.” Which had taken her past midnight. She really needed more computing power.

“The Asgard didn’t prohibit visits, so we should send teams to check those addresses,” General Li said. “We need more information.”

“But not SG-1,” General Hammond said. “We cannot risk losing Teal’c - we have to assume they have such defence systems on every planet they protect.”

“And, possibly, orbital defences,” Sam added. “We need better sensor gear so we can check on a mission.”

“Wouldn’t orbital defences be hidden from sensors? As much as that is possible, anyway,” General Haig said.

Sam nodded. “Yes. But a magically enhanced sensor might penetrate the Asgard’s stealth systems.” Entrapta hadn’t had any trouble checking their technology on the ground, after all.

General Sidorov scoffed again, but the others nodded. “That requires the cooperation of the Etherians,” General Li noted.

“At least until Magic is restored to Earth,” General Petit said. “And we can train our own wizards.” He grinned.

Sam thought the officer was a bit too optimistic. Training sorcerers would take years. And Etherian help.

And magic had to be restored first. Sam still wasn’t sure how she felt about that.

*****

Whitehall, Westminster, London, United Kingdom, Earth, September 28th, 1998

"...and here's how we plan to keep the information secure. We're using multiple layers of…"

Catra tuned the British intelligence officer doing the presentation out and looked at the files they had been given. It seemed to be a decent setup. A good mix between secure procedures and common sense - the factories had to be able to produce stuff without jumping through hoops, after all. Certainly better protected from spies than the usual horde factory.

But the real target wouldn't be factories but the people working in them - especially those who knew how to build advanced technology. She flipped through the folder, not caring how Adora frowned at her for obviously ignoring the presentation, and read up on how they tackled that. Ah. Strict surveillance of the engineers. And… She blinked. "A tracking device"?

Everyone stared at her as the officer stopped talking about sensors and patrols. "Err, yes. All crucial people with the highest clearance will be required to wear a tracking device so we can check their position at all times. We still encourage protection details and guarded housing, of course."

And so they could keep them under surveillance. Well, it was important to keep the technology out of the hands of hostile countries. And as far as Catra was concerned, a lot of the countries on Earth were hostile. She certainly didn't want countries where it was illegal for her to love Adora to get access to advanced technology. Hell, she was still wary of the United States after all she had seen of their conservative politicians.

At least most of the countries that couldn't be trusted didn't have the means to spy on their allies - with the notable exceptions of Russia and China. And those had access to the Stargate, which meant they wouldn't just be hunting for advanced technology like

the Americans had been but would also have excuses for stolen technology turning up in their hands.

"Well, if they agree to that…" Adora looked like she wasn't entirely on board with that.

"It's for their own safety," the officer pointed out.

"Not everyone wants to be under permanent surveillance," Bow pointed out.

"It's strictly volunteer-only," the officer replied.

Of course, the chances for a scientist to get to work with advanced technology without agreeing to that wouldn't be high, Catra was sure.

"Any other comments?" the British admiral in the meeting asked.

Catra made a point of thinking for a moment, cocking her head, before answering: "No."

And the meeting continued.

*****

"We really should hold those meetings together with the other countries," Catra said as the meeting had finally ended and they left the room. "We're going through three times the meetings otherwise."

"I've suggested it," Glimmer said. "But, apparently, each country's situation is different."

"I thought they were in the defence alliance," Catra mumbled. "But if we held them in space, they'd agree!"

"Probably." Bow grinned.

"I would certainly be in favour," the British admiral told them with a smile. "Although I do have to agree that the political situation in

our allied countries is too different to combine such meetings."

"Great," Catra muttered. "We'll be dying from paperwork and old age before we get this war really going." She hadn't had to deal with so many meetings in the Horde. Not that that meant the Horde had been a good place. Still…

"Well, at least we got things straightened out," the admiral went on. "And the technological transfer should be able to commence on schedule."

"Yes!" Entrapta smiled. "And the Americans are making progress as well."

That didn't please the British officers, Catra noticed, though they kept smiling politely.

"It would facilitate things," Adora said. "It's already complicated with the Stargate controlled by the United Nations."

"Well," the general representing the British Army - which, for some weird historical reason, wasn't the Royal Army, unlike their Navy and Air Force - said, "If the United States joined the Alliance, members would have a majority in Stargate Command."

"Small mercies," the admiral commented with a chuckle. Apparently, they still carried grudges. "So, what's next on your schedule?"

"After the meetings with France and Germany about the same things we just discussed? A meeting with the United Nations regarding magic," Glimmer told him.

"Ah." The admiral nodded. "That is bound to be lively."

That must be the British understatement Catra had heard about. She shrugged. "Well, it's not as if they can outlaw magic."

"Last I heard, several countries have proposed a resolution doing exactly that," the general cut in.

"So?" Catra cocked her head at him. "How many such resolutions have been ignored so far?"

"If the United Nations Security Council actually passes a resolution, there's the question of whether or not such a resolution would be actually binding for us since we're not a country on Earth," Glimmer added. "Although it would be already a stretch to consider magic a threat to peace."

Glimmer must have studied the United Nations, Catra realised. Well, better her than Catra.

"So your stance is that magic doesn't fall under Chapter VII of the UN Charter?" the admiral asked.

"Yes." Glimmer nodded. "They might not agree, but even so - what are the odds that all permanent members of the Security Council will support such a resolution? The Americans still haven't sorted out what they think about magic."

"Well, they're in a bind."

More chuckling followed, but it sounded a little forced.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 28th, 1998

Jack O'Neill suppressed the sudden and stupid urge to hum the melody of 'Monday Morning' when he approached the training field. Colonels didn't break out into a song as if life was a musical. Surely not when they came to check on how the training of the new guys was going.

And, on the off-chance that she knew Fleetwood Mac, he didn't want to give Lenkova any ideas. 'Monday morning you sure look fine' was more than a little suggestive, especially seen through the eyes of a Russian spy likely trained as a honey trap.

And as a special forces soldier, he reminded himself when he saw her squad was training in hand-to-hand combat. And doing better than most. Of course, he already knew that from her bout with Teal'c.

He looked at the rest of the field as he walked over to Major Warren, who was in charge for today.

"Sir!" Warren saluted.

Jack returned the salute, a little surprised. They usually weren't as formal, even if half the new guys were watching. Or especially - Jack didn't want to see Stargate Command turned into a unit where forms were more important than results, and the divide between enlisted and officers was too deep. That wouldn't work too well in the field, and Jack would hate it at the base. Saluting the foreign generals every time you saw them was bad enough.

But he wasn't here to complain about the brass. "So, how are they doing?" he asked, watching another squad go at it.

"As well as can be expected. Our new allies didn't send the worst of their forces." Warren frowned a little. "They learn quickly. Still wouldn't want to send them through the gate on their own any time soon," he added.

"Not even to a known location?" Jack tilted his head slightly. They had some 'baby's first Stargate' addresses to ease new guys into travelling the galaxy.

"Maybe the empty ones," Warren said.

Ah. Jack nodded. He wouldn't want to let the new guys loose on unsuspecting populations on alien planets. Especially not the Russians and Chinese - if they didn't have orders to acquire any advanced technology they could, no matter how, he'd eat his service cap. Just imagining what they would have done if faced with Thor made him want to curse. The only thing worse would have been the NID meeting Thor. The Asgard would have probably declared war on Earth in that case.

He watched the training for a few minutes. All of the teams had a good grounding in hand-to-hand combat, far better than regular soldiers - but he knew that already. And they were learning fast, as Warren had said.

His eyes caught Lenkova right after she smashed one of her team members into the ground, and the Russian spy smiled at him. Slyly. As if she had caught him at something inappropriate instead of watching the training. She was one of the most dangerous new guys, after all. Girls. Whatever. Jack made a point to watch the squad next to hers for a while.

"Have you heard anything about joint missions, Colonel?" Warren asked in a low voice after a few minutes.

The middle of training wasn't the best moment to spread rumours and fish for information, and Warren would know that. If he was asking anyway, he must be really concerned about something. Jack shrugged. "I haven't heard anything. They deployed us with SG-2, but that was mostly because we're friends with the Etherians." And none of the nations running the new Stargate Command wanted to annoy the aliens. "Of course, joint missions will either be very good for our unit cohesion or make us shoot each other no matter who gets to team up with whom." Someone even suggested splitting up all teams and forming new ones - mixed ones including forces from all nations. Fortunately for the fool, by the time Jack had heard about this nonsense - splitting up SG-1? Over his dead body! - the idea had been shot down by everyone else already. As if he'd let his team be split up. Or put experienced team members under the command of a new guy. Or girl.

"I see, Sir." Warren sounded as relieved as Jack had felt. After a moment, he added: "I've heard from a few old friends, Sir. They've been called up to head units training for deployment off-world. Expeditionary units."

"Someone's optimistic about our politicians," Jack commented. They would need an alliance with the Etherians to field Marines in

those numbers.

"Yes, Sir."

Well, they might not be overly optimistic - the newspapers and TV pundits were hammering the conservative holdouts hard. Almost all of them, at least; some extremists were still ranting about godless aliens corrupting the American youth. But it looked like both public opinion and politics were shifting.

After a moment, Warren glanced at his watch and yelled: "Alright! Break for five!"

The squads on the field stopped hitting each other and headed to the break area, where the drinks and snacks were stored. None of them lingered to exchange a few more blows, Jack noted.

He and Warren watched them go before heading over themselves. Officers ate last, after all.

But when Jack approached the chow line, Lenkova joined him. He stopped and gestured, letting her go before him, and she smiled.

"An officer and a gentleman?"

"Didn't really like the movie," he replied. He was an Air Force officer; liking romances about a naval aviator came straight after 'dereliction of duty' in the 'things you aren't allowed to do in the Air Force' regulations.

"Movie?" She cocked her head at him.

Jack berated himself. He shouldn't have quipped; that only gave the spy an in. Well, it wasn't the first time his mouth got him into trouble. "It's a movie with Richard Gere about a romance between a Navy pilot candidate and a factory worker," he explained as they reached the snack box.

"Ah. A male officer and a working-class woman?" She sounded… well, not mocking, but there was a hint of disapproval. Or

amusement.

Jack suppressed the urge to point out that back at the start of the eighties, movies featuring a female officer and a male factory worker wouldn't have sold. Not that he thought they'd sell today, either. "Yes," he said instead.

"And you didn't like it?" She wasn't dropping the topic.

"It was about a *Navy* pilot," he said.

"Ah. Service rivalry." She nodded, then grabbed a coke and a Snickers. "I've heard of it. Is it true that service rivalry is fostered by the government so they can have one branch shoot the other if they need to make an example?"

Jack smiled as sweetly as he could as he replied: "Well, without the NKVD, we have to make do."

She laughed at that. It was even a nice laugh, and her smile seemed genuine. "Your humour is almost Russian, Colonel."

That was probably meant to be a compliment. "Thank you," he said.

Then he heard Warren chuckle behind him and wanted to curse himself. And Lenkova.

Who was drinking her coke as if she were in a commercial where she was wearing a bikini instead of a striped t-shirt under Russian fatigues, with her back arched to emphasise her chest.

Well, there was no helping it - the rumour mill would grind on now. Jack grabbed a Mars bar and a coke for himself.

*****

Palais des Nations, Geneva, Switzerland, September 28th, 1998 (Earth Time)

"...and why should we allow magic to return to Earth? It goes against our religion! It will destabilise society! Corrupt the youth! My country - the world - is still reeling from the revelation that aliens are real, with riots happening daily, and you want to introduce another shock? The United Nations need to take a stand and ban the practice!"

Adora frowned. That was the third ambassador in a row that wanted Earth - well, the United Nations - to ban magic. Or ban the return of magic.

The ambassador from India rose. Wasn't he supposed to wait until he was recognised? But the debate had grown more and more heated, and this was supposed to be an informational meeting with Adora and her friends. Maybe the rules were different here. "Magic is an important part of my country's religion. To ban magic would be an unacceptable violation of our religious freedom - and a blatant attempt to force your views and culture on us! India has not fought for her freedom from colonialist powers only to bow to them again!"

"You dare to call out others as colonialists when you attempt to force such evil on your own people?" Another glared at India's ambassador.

Adora checked the plate. Right. Pakistan and India had a violent history - she had learned that preparing for this meeting.

"The vast majority of our people want magic, our ancestors' legacy, restored to us. We won't let a minority oppress us just as we won't let foreigners oppress us!"

"But you want to force magic on the entire world - as a minority!" Pakistan's ambassador countered. A lot of ambassadors loudly voiced their support.

"No one forces you to practise magic!" the Indian shot back once things had calmed down a little. "You are free to ban it in your

countries - you already have, after all, even though magic was taken from us a thousand years ago," he added with a sneer.

"It was taken from Earth with good reason! Magic is dangerous - it corrupts people!"

And if weaponised, it could blow up a sector. But that was a very special case.

"You're overreacting," Glimmer spoke up. "Magic is no more dangerous than technology."

"And we limit and ban dangerous technology! Like nuclear weapons!" Pakistan's ambassador exclaimed.

"That's rich coming from a country with nuclear weapons!" another ambassador - oh, that was Bangladesh - said.

"We do not proliferate the technology!"

"Wanna bet whether they go to war over this?" Catra whispered next to her. Not even she sounded amused, though.

Glimmer clenched her teeth and stood, her hands not quite slamming down on the table. "Listen! You keep talking about how magic is dangerous, but you have no idea what magic is! Don't you realise how… weird this looks?"

"You don't know what Earth magic will look like either! You said so yourself!" the man from Iran said with a deep sneer.

Adora frowned at him. He had openly called for executing 'witches' - and while he hadn't said it out loud, he had left no doubt he thought this should include Adora and her friends.

"That's because every planet's magic is unique," Glimmer pointed out. "It depends on your traditions. But no matter what your traditions are, you can't just do magic. You need to study how to work magic. And you need a talent for magic."

“And when you’ve done all that? What will stop a witch from cursing everyone?” Another of the African ambassadors scoffed. They were the majority of the countries backing a ban on magic, Adora knew.

“What is stopping anyone from taking a weapon and killing people?” Glimmer shook her head. “Magic isn’t any different than technology. You can deal with it.”

“It only requires sorcerers of your own,” the British ambassador said.

That didn’t placate the others at all - quite the contrary. It grew even louder in the room.

Once more, it took a little while until things calmed down enough so people could be heard again.

“You know, if Alliance meetings were like this, they would be a lot more entertaining,” Catra whispered to her.

Adora frowned at her in response before listening to the Brazilian ambassador. “This is not merely a question of whether or not our religion prohibits magic, but of the danger magic represents. Imagine terrorists using magic to strike at their targets! How can you defend against a curse? No one would be safe! Many such attacks might not even be noticed if the victim merely suffers a fatal accident or illness!”

“If the attack doesn’t get noticed, it’s not terrorism!” someone cut in. “Spreading terror is the point of terrorism! You’re talking about assassinations!”

“Whatever!” the Brazilian went on. “Imagine this power in the hands of insurgents! No government would be safe! We would be held hostage by extremists! For the good of us all, we need to ban magic!”

Adora heard Catra curse under her breath. She could understand the feeling - this argument was swaying people.

Once more, Glimmer spoke up. “Magic can protect you against magic!”

Another ambassador yelled: “At the cost of our souls!”

“Magic isn’t evil just as technology isn’t evil,” Glimmer retorted. “Both can be abused. And as events on Earth have shown, even if you ban magic, you aren’t safe from magitech.”

Like the zombie plague generator, as Jack had called it. Adora nodded firmly.

“So, by banning magic, you would cripple your defences against it without being safe.” Glimmer scoffed.

“What’s magitech?” someone else asked.

“Magitech is advanced technology using magic effects but powered by non-magical sources,” Bow explained. “You do not need to have magic restored on a planet to use it.”

“Let’s ban magitech!”

Catra rolled her eyes and spoke up. “You think you can ban that technology? And win the war against the Goa’uld?” She scoffed. “Really, you should be demanding magic be restored as soon as possible since most of you will have a much easier time getting magic to work for you than getting our advanced technology, especially the way you’re acting.”

Adora frowned - it would still take quite a lot of work to get a decent number of sorcerers in a country. You couldn’t just snap your finger and do magic - it took years of study. But Glimmer was smiling as she nodded, and a number of the ambassadors had suddenly fallen silent.

“So that’s why you want magic restored!” the ambassador from Pakistan yelled at India’s ambassador. “You plan to attack us with it!”

“India has no plans to attack anyone!” the Indian shot back. “But yes, we are counting on magic to improve our country without having to be dependent on foreign powers. It’s our heritage.”

A number of ambassadors still protested, especially the ones from the Middle East countries, as far as Adora could tell, but several others who had vocally opposed magic were suddenly silent.

“Look how their concerns just vanished,” Catra muttered with a grin.

Adora had to agree - but she also had to admit that the Brazilian had a point about the danger magic represented for those who had no defence against it. And yet… She was surprised how quickly religious concerns were brushed aside by so many, after everything that she had heard and seen before. “I guess it’s really all about power,” she whispered.

“Always was,” Catra said.

It was hard to disagree with her as the discussion took a turn towards the practicability of magical education on Etheria.

*****

“...and while our sorcerers can teach others, provided they have the talent, any students would be learning Etheria’s traditions, not Earth’s magical traditions,” Glimmer explained for the second time.

“But your traditions do not teach people how to conjure evil spirits or make bargains with demons,” an ambassador retorted. “Unlike magic here.”

“None of our magical traditions require either!” India’s ambassador cut in. He had been doing that a lot, together with the Japanese ambassador.

“So you claim! We know better!”

“Leaving religious disagreements aside,” the Swedish ambassador spoke up, “We do have to consider that by relying on a foreign magical education, we might strangle our own cultural and magical heritage.”

“That should be any country’s decision,” the ambassador from Liberia shot back.

“Of course. I was merely pointing out that this should require further consideration.”

“Says the ambassador from a country that is asking for access to advanced technology.”

“That has no bearing on the question of magical traditions and heritage,” the Swede retorted.

“On the contrary! That’s a crucial aspect of the entire question!”

“They’re talking as if they can just send hundreds of people to Etheria to get trained,” Glimmer muttered. “I’ve told them that Mystacor isn’t an open university and that they would decide whom they would train!”

Catra leaned over, her head in front of Adora’s chest, to answer Glimmer: “They’re a little hard of hearing.”

Adora had to agree once more. At least, it seemed that the resolution to ban magic from Earth - or ban its return - was no longer a concern, even though several countries still were pushing for it. Although as far as she knew, most of those ambassadors would have to check with their governments before making any binding statements or votes.

So the question of whether or not Adora should return magic at the request of India and Japan hadn’t been answered. Sure, if the United Nations didn’t ban magic, it would follow that it was allowed to restore magic to Earth. But if Adora had learned one thing from all the meetings of the Alliance and now on Earth, it was that politics were rarely logical.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, September 29th, 1998

"....and in the General Assembly of the United Nations, the topic of a ban on magic continues to be hotly debated as tensions between Pakistan and India are rising. The Arab League has announced their full support of Pakistan in this growing conflict and reaffirmed their intent to ban all magic, though support for the stance is wavering amongst many African nations. The European Union released a statement that affirmed the right of any nation to decide their internal policies provided they did not violate human rights but didn't elaborate on whether or not they considered the restoration of magic to be covered by this. According to anonymous sources, several South and Central American member states have voiced reservations concerning magic on religious grounds, although this may change with the release of the Vatican's statement later today - an announcement which many experts expect to cover the Catholic Church's stance on magic, and…"

Samantha Carter switched the television off. She had heard the news twice already, and it hadn't changed significantly - the hosts and pundits were just growing more and more excited without anything to justify it.

She put the remote down and resisted the urge to stretch her arms over her head - it was barely mid-morning, and she didn't want to give the impression that she hadn't slept well or long enough. Especially not when both were true.

Although, she added to herself, Daniel doesn't look like he'd notice. Her friend had his nose buried in an older tome he had brought into her lab.

"Fascinating. I never really delved into all the various magical traditions in Europe; not my speciality, and it wasn't really relevant for our work - not until we met the Etherians, in any case,

although some of it might give us insights into handling those Goa'uld using European myths as their cover. But with the Goa'uld using technology, I never really cared about the potential of actual magic. Just imagine if we could get the divination rituals of ancient Rome to work!"

Sam wasn't an expert on ancient history, but she had gone through college and the Air Force Academy, and she had worked with Daniel for a long time now, so… "You mean reading the future in the entrails of a sacrificed animal?"

"Ah, yes. Amongst other rituals," Daniel looked sheepish. "This would be messy, wouldn't it? Although if we could get the cooperation of a butcher, given how much meat we eat, it shouldn't be too hard to arrange a few experiments…"

"You would also need to find people with the talent for magic," she pointed out. The Etherians had been clear about that, and the data they had gathered at Research Site Alpha confirmed it: Not everyone could work magic.

"Right." He frowned. "Finding them might be a problem unless we can isolate the gene for magic talent." He looked at her with a hopeful smile.

"I'm no geneticist," she told him. "But, as far as I know, there are research projects working on identifying the Ancient gene." It was only logical after the revelation of the Colonel's ancestry, after all.

"Oh! Do you think Jack has magic potential? The Ancients - or First Ones - were working with magic, after all. And manipulated the Etherian genetics."

She pressed her lips together. Although the Colonel had never said anything about it, other than some off-colour jokes, she knew he wasn't happy about that particular revelation. And she didn't think he would like learning magic either. "We don't know enough about Ancients to know," she said.

"Right. Well, I hope we'll soon know more. With everyone preparing to jumpstart magic projects, it's bound to lead to some results." He nodded.

"Or to a debacle," Sam retorted. "If countries start identifying potential sorcerers through their genes…" She trailed off.

Daniel gasped. "Literal witch hunts using DNA testing!"

Sam nodded. Forced conscription of people with magic talents was the mildest problem she could imagine. But in those countries where 'witchcraft' was a capital crime, things would be much, much worse once magic was returned to Earth.

"Are the Etherians aware of that?" Daniel asked.

Sam sighed. "I don't know if they considered this." Sometimes, their friends were quite naive. Or just inexperienced with Earth's cultures and practices. Entrapta was both, of course.

"We need to tell them!" Daniel said. "They can't just return magic if it means people getting murdered for their ancestry."

People had been getting murdered for their ancestry for millennia, all over the world. And people were getting murdered for being called witches even with magic still absent from Earth. But Sam didn't say that. True as it might be, it wasn't relevant. "I don't think they can test for a gene. We don't even know what the gene or genes for magical talent is. We don't even know if it's tied to the Ancient heritage - and Colonel O'Neill's ancestry isn't exactly public knowledge either." Sure, with Stargate Command being transferred under the control of the United Nations Security Council, foreign countries had access to their files. But only Russia, China, Britain and France. Stargate Command hadn't been able to justify hiding the Colonel's special heritage, not when it could be revealed as soon as he walked into another Ancient facility. But the countries most likely to attempt to 'purge' witches wouldn't have access to that data. "People lack sufficient data to test for witches," she added. Of course, that might change if

magic was restored and people started expressing a talent for it. She had to mention that to the Etherians.

"Right. But are we testing for the Ancient gene?" Daniel asked. "If we know it, of course - how close do you think we are to identifying it?"

"So far, we only know of two people who are descendants of Ancients: The Colonel and Adora," Sam said. "Without access to more samples, it will be hard to identify people with the same ancestry." They didn't have a sample of Adora. At least, Sam hoped no one had been as stupid as to steal a sample of her.

"There's his family," Daniel pointed out. "His extended family, I mean." He blinked. "Oh. Maybe… No. Too far-fetched."

Sam frowned. "What is too far-fetched, Daniel?"

"Nothing!" Daniel replied. Sam raised her eyebrows, and he caved. "I just wondered if Lieutenant Lenkova was less of a honey trap and more of a… family trap? Maybe the Russians want a child of Jack to compare genes? Ridiculous, I know!" He laughed - a little forcedly.

Sam clenched her jaws. It was ridiculous. Obviously so. The Colonel wouldn't… well, the odds of such a scheme working were so small as to be nonexistent. And they didn't know if it was even planned.

But she still felt the urge to test a few of her recent inventions on a certain Russian officer.

*****

Earth Orbit, Solar System, September 29th, 1998

"...and that was a bombshell, wasn't it? Who would have expected this from the Pope? I certainly didn't! Terry?"

"Well, I'd say that nobody expects the Spanish Inquisition, but I did. To claim that magic is part of God's creation and inherently neutral, not evil, that witches can be good Christians as long as they don't use their magic for evil goes against centuries of history!"

"Indeed, Terry! But we have an expert on the Vatican here, Dr Marconi. Dr Marconi, what do you say to this shocking development?"

"Well, Mr Smith, first, the Pope's declaration doesn't go against centuries of tradition. The Catholic Church's stance towards witches has never been as hostile as people claim - in fact, for centuries, the Church prohibited witch hunts! It was only after the protestant movement took off that witch hunts were conducted by the Church, and even then, they remained rare in the solidly Catholic countries. The infamous Spanish Inquisition, for example, despite popular myths, wasn't aimed at witches but at so-called heretics and 'hidden jews'. So, this declaration is not violating Church dogma - though, of course, the summoning of spirits and similar creatures has been explicitly restricted. So, today's declaration is no surprise for those who know the history and dogma of the Catholic Church. In fact, now that we know that magic was taken from Earth roughly a thousand years ago, the Church's stance back then that there were no witches has been confirmed, which has several interesting implications. And one cannot forget that the Catholic Church has proven to be very pragmatic and able to adapt to changing circumstances. I would actually focus on the first part as surprising - the Pope outright stated that aliens have souls. That is a revolutionary declaration I didn't expect, certainly not as explicitly. This has far greater effects on…"

Catra yawned as the 'expert' went into more details she didn't care for. "So, magic isn't evil unless you use it for evil, and we have souls. How shocking!" She scoffed as she leaned back in her seat and craned her head to look at the others.

“It is shocking for a lot of people, according to the news reports,” Bow pointed out. “Obviously, they expected the Pope to condemn us.”

“The Pope doesn’t want to alienate us,” Glimmer said with a grin - probably proud of her pun. But she quickly frowned.

“It’s still a good thing.” Adora smiled. “That’s a lot of people who won’t see us as evil now!”

Bow cleared his throat. “Well… He didn’t say anything about homosexuality. And only the Catholics are listening to him, and not even all of them. Some are already claiming that he must be corrupt. Or possessed.”

Catra scoffed again. “Typical! If you don’t like a decision, attack your superior!”

“Well, they are responsible,” Adora retorted. “But in this case, aren’t they supposed to follow his rules?”

“Yes,” Glimmer agreed. “In theory. But going against the Pope is a big thing, so this should help with the acceptance of magic.”

Almost as much as the realisation that magic could give any country an advantage helped. Catra shook her head. “So what? It won’t really affect us anyway.” It wasn’t as if they were going to listen to the idiots calling magic evil, anyway.

“The more people, especially religious people, accept magic, the better,” Adora insisted. “That means the United Nations won’t ban magic.”

Catra shrugged. The odds of any such resolution not being defeated by a veto at the latest had been zero already before this, anyway. “So, are you going to restore magic now?”

“Uh…” Adora sighed and lowered her head. “I want to, and the Indians keep pushing for it. And the Japanese.” Which also were pushing for a diplomatic meeting about advanced technology,

Catra knew. “But with what Sam told us…” Adora pressed her lips together.

Catra nodded. Witch hunts based on your genes - your ancestry. People getting killed for… for simply existing. Well, the same people already wanted to kill her for loving Adora, and anyone else who loved the same sex.

“That would be genocide,” Glimmer said. “A crime against humanity. The United Nations would intervene.”

“Are we sure of that?” Bow asked. “They didn’t intervene in the past.”

“Well, they should know that we would intervene if they don’t,” Glimmer said.

“We would?” Catra’s ears twitched. She wouldn’t mind crushing those fools who threatened her and Adora, but… “What about not interfering with other countries?”

Glimmer huffed. “This is an exception, of course.”

“But they are already killing witches!” Adora protested. “Well, people they claim are witches. Why don’t we stop them?”

“Because that’s a crime, but not a genocide,” Glimmer said. “And it’s not the country that is doing it, but parts of the population. We don’t attack a kingdom for what bandits are doing.”

“Not unless the princess is sponsoring and using the bandits.” Catra grinned.

Glimmer frowned at her. “Yes, of course, there are exceptions. But they don’t even know yet how to look for sorcerers with tests. So, that’s not going to happen anyway.”

“But once the magic is back, they’ll be able to find sorcerers by looking for magic being done,” Bow pointed out. “Anyone displaying magic powers would be a target.”

"Just like anyone whom people don't like is currently a target," Catra retorted. "And was a target before." People would get hurt and killed anyway under any pretext.

"But if I return magic, any deaths that happen will be on my head," Adora said glumly.

Catra rolled her eyes, then reached over and smacked the back of Adora's head. "Stop being an idiot! Those people are already hunting 'witches', and they won't stop. They don't care that there's no magic around yet. And sooner or later, they'll get that test for magic talents. You're not saving anyone by keeping magic away - you're just ensuring that they won't be able to defend themselves."

"Well, technically…" Bow trailed off at Catra's glare. "I didn't say anything!"

"Catra's right," Glimmer said, and Catra preened. "It's not your fault. And Earth deserves to get its magic back. The entire planet without magic? It's unnatural."

Catra nodded. "And you don't give in to those people. They won't stop anyway." They were going for people like her and Adora already, magic or no magic. You couldn't placate them.

"And we need to restore magic to planets we invade anyway, so we can use our powers," Glimmer added.

"But there'll be trouble and more riots on Earth if magic is returned," Bow pointed out.

Catra rolled her eyes. "As opposed to right now? Better to ride that stuff out now, instead of when we're fighting the Goa'uld on multiple fronts."

Adora slowly nodded.

*****

The Magic Question Part 2

Cheyenne Mountain, Colorado, United States of America, Earth, October 1st, 1998

"...and that's about it."

Jack O'Neill blinked at Glimmer. Those had been quite a number of words for something simple. "So… you want to get the United Nations to declare open season on genocidal countries?"

Judging by the way Catra grinned, Daniel frowned and Carter pressed her lips together, he had hit the right amount of levity for such a topic.

Glimmer frowned as well. "Not 'open season'. We just want to ensure that the United Nations know that we're ready to intervene if a country should start a genocide. Of course, it should be obvious that we wouldn't stand by in such a case."

Well, they had been sending mixed signals if they thought this would be obvious, in Jack's opinion. "There are already witch hunts going on," he pointed out - diplomatically. The Etherians hadn't intervened in those.

"Not organised by any state," Glimmer said. "As far as we know."

But likely tolerated. Then again, the last thing Earth needed was a bunch of aliens with a space fleet playing world police.

And, of course, Daniel hadn't gotten that memo. "But there are several states where witchcraft is a capital crime."

"Yes." Glimmer pressed her lips together. "But since magic hasn't been restored to Earth, there aren't any actual sorceresses on Earth yet."

"With the exception of you," Catra added as she fiddled with one of the plaques on the table.

Well, better a broken plaque than some broken gadget in Carter's lab.

"I'd like to see them try to try me," Glimmer said with a sneer. Then she sighed. "Yes, we're aware of that. But as long as such countries don't actually start killing people for having a magical talent…" She shrugged. "We don't want to interfere with other countries."

Jack nodded even though he could think of quite a few countries which deserved to be interfered with.

"But as long as they know that we won't tolerate such things, they should know better than to do it," Adora said.

"But once people know where the, ah, red line is," Daniel said, "they know how far they can go - and likely will go as far. So, by stating you'll intervene if a genocide starts, you also state that you won't intervene if it's not a genocide."

"That does not follow," Teal'c pointed out. "Unless stated outright, nothing prevents Etheria from intervening without a genocide taking place."

"Like the United States' stance towards our defence commitment towards Taiwan," Carter said.

"I don't think that policy is a good idea in this case," Jack retorted. "The countries where witches are being hunted aren't as rational as the Chinese. Which, by the way, will probably grow a little anxious if you're vague, what with their policy in Tibet."

Glimmer winced. "Yes. We're aware of that issue. We… don't wish to get involved in such cases."

Ah. Jack couldn't help grinning a little - and showing his teeth. "Only clear cases of 'let's kill those people' qualify as genocide, right?"

That earned him a glare from almost everyone.

“Jack! We’re talking about military intervention here!” Daniel blurted out.

Glimmer, though, met his eyes. “Yes. We don’t want to start a war over… cultural issues. Not unless they lead to people getting killed for their ancestry.”

“We probably would have to declare war on everyone on Earth if we did that,” Catra said with a snort.

Adora glared at her, then sighed as well. “Yes. We don’t want to start a war even though we don’t like what is happening in Tibet and elsewhere.”

Jack had no doubt that Adora hated to restrain herself. She wasn’t the type to do ‘Realpolitik’.

“Well, if you wait for the United Nations to call something out as genocide, the Chinese won’t have to worry about being put on the spot,” Jack said.

“We’re aware of that as well,” Glimmer said. “But that’s your system.”

“And unless the system breaks and the mass graves and gas chambers start up again, you’re not going to break it.” Jack nodded. Sensible, but it did leave a bad taste in your mouth - worse, of course, if you had the power to actually do something about it.

“Yes.” Glimmer took a deep breath. “We also hope that things will improve in several countries as a result of our alliances and our presence, but that will take a while.”

Adora nodded, as did Daniel, almost eagerly. Jack tried to hide his cynicism. He didn’t think things would improve as the Etherians hoped. Or some of them - Catra didn’t look as if she thought things would magically improve.

Heh, ‘magically’! Jack snorted. “Yeah, sounds like you’ve got this thought out.”

“Kind of,” Bow spoke up. “We wanted a second opinion from someone we trust.” He smiled at Jack and the others. Adora positively beamed.

And Jack suppressed the urge to curse. He didn’t like being put on the spot like this. It was worse since everyone was so sincere, so trusting towards him - and so much was at stake. He glanced at Catra, who grinned at him. The damn catwoman knew what he was feeling.

And, of course, his team was letting him take the lead here. Even Daniel, who could usually be trusted to speak up before anyone else could stop him.

Jack sighed. “Well…” What to say? And how to word it? He wasn’t exactly a politician. Or a diplomat. “It’s a touchy issue,” he said. “And every situation is unique.”

“You mean some situations get the veto, and others don’t,” Catra cut in unhelpfully. That was Jack’s role, damn it!

He narrowed his eyes and crossed his arms. “If you say you’re following the United Nations lead and rules, are you going to stick to it? Even when a case of genocide gets vetoed?”

The way the Etherians exchanged glances, that wasn’t a given.

“One could claim that a country stepping in like that to prevent an intervention is helping to commit a genocide,” Glimmer said.

That was… well, it wasn’t a bad argument, Jack had to admit. One he’d make himself - hell, why was he arguing in favour of following orders he knew were wrong again? Right, to keep the Etherians from taking over. “And what if the other countries don’t agree with that interpretation?”

“Would they?” Catra’s ears twitched. “Wouldn’t they like to gang up on such a country?”

“You’d be surprised.” Jack shrugged. “No one wants to be the next one up on the wall.”

“I thought that was the purpose of the United Nations.” Bow frowned. “To ensure the crimes against humanity wouldn’t happen again.”

“Yep,” Jack said. “But the great powers wanted a little insurance so the weaker countries couldn’t enforce their rules on them.”

Adora scowled at that. “If rules don’t apply to everyone, what good are they?”

Jack grinned. “Well, that’s the question, right?”

Oh, the glare she sent at him for having her words twisted back at her.

“Well…” Daniel must have finally reached his limit. “The question of what to do if a law or rule has been deemed unfair or unjust is a very old question. What if breaking the law does even more harm? There’s the fact that any law that’s not enforced weakens the entire system, although that’s more abstract, and then there’s the cost of any intervention. You need not only to remove the government but replace it. And there might be resistance to the new regime. Violent resistance. Coups and regime changes rarely were bloodless. When exactly is it justified to break the law? When someone guilty would escape justice? Or when someone innocent would be punished?”

“When someone would be killed for being born,” Adora snapped. “You can’t obey a law that defends such a crime!”

“I don’t think that’s going to be an issue,” Carter told her. “Any country pursuing such a policy would be a pariah.”

Jack agreed - if only because no one would want to provoke the Etherians like that.

"But what about displacing a native population? Attacking their culture?" Daniel shook his head. "It's a lot harder to judge such cases."

"You mean that 'cultural imperialism' people accuse us of?" Catra asked. She scoffed.

"Yes." Daniel nodded. "A considerable number of countries feels that an attempt to enforce global human rights on them is imperialism in another form." He frowned, "Although it is kind of ironic that when it comes to the discrimination of homosexuality, many countries are now defending the values originally forced on them by colonial powers as their own."

"That's stupid," Adora commented. "And it doesn't matter anyway - you don't get to kill people for being born with magic or a love for the same sex."

Yeah, She-Ra wouldn't budge on that. Although drawing the line at killing people wasn't a bad idea. "Well, if you stick to that, you shouldn't have too many problems," Jack said.

"And we'll have to leave the cultural stuff alone in exchange?" Catra cocked her head sideways. Like a cat.

"Uh…" Daniel took a deep breath. "It's a really touchy subject. A lot of countries want to foster a sense of… patriotism. Loyalty to the nation. Taken too far, that can be seen as an attack on minorities and their cultures. It's controversial," he added with a shrug.

"Well, we don't want to meddle with the internal affairs of others if we can help it," Glimmer said. She didn't look happy, though. "We don't want to replace a government or occupy a country."

Jack was glad - the Etherians occupying another country would be a disaster for everyone involved. It would probably make the

worst CIA attempts at regime change look competent.

And it would probably be worse for the Etherians than Vietnam had been for the USA. Jack really didn't want to see them broken like some of the vets he knew.

"So, we're going to talk to the United Nations," Glimmer said. "Voice our concern. Mention how genocide violates their own charter. And hope they get the message."

Jack couldn't help himself. "And if they don't?"

"Then we get to train planetary invasions and decapitation missions," Catra said with a wide grin.

"It's not funny, Catra!" Adora protested.

"I know."

"Oh, you!"

Jack really hoped that the United Nations would get their act together. The Etherians getting bogged down in an insurgency would be a nightmare - and the best thing to happen to the Goa'uld.

*****

Palais des Nations, Geneva, Switzerland, October 2nd, 1998 (Earth Time)

"...and as you can see here, in this example, restoring a planet's magic doesn't change its biosphere significantly or instantly. It merely activates the magic field you can tap into if you have the talent. You can check the data yourself; we've included it in the folder you've got."

Entrapta was great at this, Adora thought as she watched her friend explain magic to various diplomats - again. Glimmer would have lost her temper long ago. Had lost her temper, actually,

when she had heard of the request to explain once more what magic did and didn't. Fortunately, she hadn't been in public. Her choice of words would have caused a lot of friction with Earth.

Entrapta, though, saw nothing wrong with explaining things over and over again. Probably because she was used to talking to bots who were slow learners at the start when their control matrices had just begun to develop. Which was why Entrapta was here, explaining things, with Adora helping out, since Bow was with Glimmer, and Catra and Hordak wouldn't be of any help here - quite the opposite.

"If one has to learn to, ah, tap into that field, does that mean there won't be any magical plants or animals? I mean, how would you teach them that?" a diplomat asked.

"Good question!" Entrapta beamed at him. "There are actually plants and animals back on Etheria which use magic. But they either evolved to make use of magic or are the result of genetic engineering by the First Ones. Now, it's not impossible that Earth had such plants and animals as well - you had magic until a thousand years ago, and the Ancients and other species certainly had enough time to experiment on Earth - but those organisms would have been affected by the loss of magic." Entrapta pouted a little. "I guess some might have gone extinct. If they needed magic to fly or breathe water, for example. Or survive in hostile environments. On the other hand, if they just used magic for non-essential powers, they could have survived. And a thousand years is a short time for evolution to lose such a power, so they might regain it."

"So we will have to worry about dragons and other monsters returning?" another diplomat gasped.

Entrapta looked confused. "Why would you worry about that? Creatures that went extinct wouldn't magically appear. And while some organisms might regain the use of magic - on an instinctive level - Earth had magic until a thousand years ago, and you obviously could handle whatever magical creatures were around

just fine back then - and now you have far more advanced technology!”

“How could you know that?” a delegate from one of the hostile countries asked with a glare. One who, unlike others, hadn’t left. Instead, he had stayed and spent his time trying to make magic look evil.

“You’ve got records going further back,” Entrapta explained. “If magical creatures were such a threat, they’d show up in your documents.”

“There are countless myths and legends about dangerous monsters!”

The British delegate shook her head. “With all due respect, but those myths and legends talk about single incidents. Local problems, not something that affected entire countries, much less the world. Please stop your fearmongering. If dragons reappeared tomorrow, we probably would have to treat them as an endangered species right away.”

A number of people laughed at that. But Adora could see that more were still concerned.

“There is another aspect,” the delegate from Japan spoke up. “We have myths of foxes and tanuki who could take on the form of people. Obviously, they would have to be intelligent for that. And obviously, neither species currently possesses such intelligence. If the myths are based on truth, though, and such animals can, with the help of magic, become sapient, how could we continue to keep them from that?”

“Animals taking the form of people?” the hostile delegate spat. “What if they breed with humans? We cannot allow that to happen! Earth is no place for half-animal abominations!”

Adora was really grateful that Catra wasn’t present. Her lover would have ripped into the bigot. Maybe even literally.

"It figures you'd think of sex right away!" someone else snapped through the muttering this comment caused.

Entrapta, as usual, was unfazed. "If they can have fertile offspring with humans without technological or magical intervention, they would be the same species, so they would be humans," she said, smiling. Then she cocked her head to the side and put her finger on her cheek, frowning a little. "Of course, if an inherent magical ability would allow them that, one would have to consider whether or not that classification is still true." Then she shrugged. "Not that it matters as long as both are intelligent, right?"

It was obvious that not everyone shared her view.

"May I remind some of our esteemed colleagues that we're here to have questions about magic answered, not to debate whether or not magic should be restored," the British delegate said.

That helped to quiet things down a little. Only a little, though. And while Entrapta didn't mind explaining things, Adora was getting a little fed up with it.

So she had to control her expression while Entrapta told the delegates that, yes, in theory, plants could develop deadly magical poison. But the plants would have had that a thousand years ago, so people would know. And magic wouldn't suddenly make plants and animals and people change into something else. Well, not without a spell or a device.

Which didn't go over well. That genetic engineering could do much more, as Entrapta pointed out in response to the exclamations, didn't really help either.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 3rd, 1998

"...so it took a few repetitions, but they finally understood how magic works." Entrapta beamed as her hair fiddled with a few of

Samantha Carter's tools in her lab.

"You must be saint!" Dr Georgovich - who insisted Sam and Entrapta should call him Iwan - exclaimed. "Explaining to politicians?" He shook his head. "Easier to explain mistake to commissar!"

"Commissar?" Entrapta cocked her head to the side while her hair didn't move.

"Oh, communist commissar. Very bad, very strict, no humour. Used to motivate and punish everyone in old Russia."

Entrapta didn't look like she understood Dr Gregorovich's black humour, so Sam cut in: "The political commissars were functionaries responsible for the morale of the soviet military. They have a reputation for brutal punishments without often bothering whether or not their victims were actually guilty."

"Yes! USSR collectivised everything, including punishment!" Dr Gerogovich chuckled. "One for all, and all for one, da?"

Entrapta wrinkled her forehead. "That sounds… not very nice."

"It was brutal and unjust," Sam said.

"Da! Make mistake? Be called saboteur! Other make mistake? Be called saboteur! Off to Gulag either way - if you lucky!"

"A gulag was a forced labour camp in the USSR," Sam explained.

"Oh."

"But I think we have exhausted that topic," Sam went on, narrowing her eyes at her colleague.

"Ah, yes. Sorry. Not everyone like Russian humour." Dr Gregorovich nodded. "We were talking about you teaching politicians!"

“Yes!” Entrapta perked up. “It’s like teaching bots - just tell them until they understand.”

That reminded Sam of the old joke about trying to explain a joke to a sergeant-major, but she pushed the thought away. She didn’t want to get side-tracked again. “Did you explain magitech as well?”

“Yes!” Entrapta nodded, then frowned. “I thought that would make them understand how silly their fears are about sorcerers when technology using magic will be much easier to build and use - by anyone, not just sorcerers. But they didn’t seem to understand that.”

Sam suppressed a sigh. “People generally don’t feel better about something which they’re afraid of if you tell them there are worse things to fear.”

“Ah.” Entrapta nodded again. “I see.”

Sam wondered if she did but didn’t ask. That would’ve been rude.

“Ah! I understand why orders came to focus on magitech research!” Dr Georgovich nodded enthusiastically. “I told superior that I am scientist, not wizard, but did he listen? No!”

So the Russians were looking into magic combined with technology. Like the United States. Or that was what they wanted you to think - she heard the Colonel’s voice in her mind.

Not that it mattered - the subject was fascinating. The possibilities were almost endless. And you didn’t need to be a sorceress or princess to work with it - or to build it. But a sorceress in your team should make researching new such technology much easier. Or would - the only trained sorceress amongst the Etherians on Earth was Glimmer, and not only was she very busy with diplomacy, but she also didn’t seem fond of doing research in a laboratory. Well, maybe if they recruited Bow? That might entice his girlfriend to work with them, and… Sam pressed her lips

together. That was a very manipulative plan. She knew better than that. She was better than that.

She'd crack her most recent project soon enough with just Entrapa as a lab partner. Or science buddy, as Entrapta called it.

But, she added to herself as she saw Dr Georgovich smiling at Entrapta, she would have to consider if she wanted to risk Russia getting access to her project. In theory, she was working for Stargate Command, under the control of the United Nations. In practice, Sam had no doubt that every scientist at the gate had some projects that they weren't supposed to share. Or at least data.

"SO!" Entrpata beamed at her. "Want to research bots that can track magic?"

Sam blinked. That would… Well, it would certainly be very useful. Very powerful. But also very dangerous for anyone with magical talent. And it wouldn't be very hard to construct - she had some ideas about the magic scanner they had built. If it could use magic to detect Naqadah, it was likely that magic was detectable as well. And…

She sighed. She really hated to do this to Entrapta, but even if it wouldn't prevent someone from inventing this in the future, the last thing they needed was a magic detector on Earth right now. "I would love to, but there is a problem with that…"

"...Amnesty International voiced their concerns about the state of human rights in Etheria, citing the lack of formalised protections and international oversight, and the absence of democratic structures and a free press in the countries ruled by monarchies as worrying, and…"

Catra rolled her eyes. "Why do they have so many channels if it's all the same?"

"It's not the same," Hordak said, moving the bowl with snacks a little closer to him. "You can spot the biases of every news organisation by comparing them to each other."

Catra snorted. "And since when are you an expert on news agencies? The Horde didn't have any news!" Only propaganda.

"But the Horde had scouting and reconnaissance troops, whose reports I read regularly." He sounded a little smug. "I learned what was lost between the lines of any report depending on who made it."

She snorted again."I know how bad the casualty rates were in that branch. How long did a regular scout last?"

Hordak huffed and stuffed some fried corn into his mouth. Probably to avoid answering her. “Long enough.”

Catra grinned. “You mean, you knew a few soldiers and how they worked.”

“Just like there are a few channels worth watching,” he shot back.

“Whatever,” Catra said, grabbing a drink. “We can’t…”

“There you are!”

Catra turned her head. Adora had burst into the lounge. “Yes?” she said, her ears twitching. Adora knew she had been taking a break in the lounge.

“We have a problem!”

“What?”

“Did something happen to Entrapta?” Hordak said, getting up.

Catra tensed. If anything had happened, it would have been on Earth. And Entrapta was the only one of them currently on the planet, having taken the shuttle down to Stargate Command. Everyone else was on Darla.

Adora blinked. “Uh, not that I’d know.” She shook her head. “But we have a problem - we have fan mail!”

“Fan mail?” Catra cocked her head.

“Yes, fan mail! People who like us are writing to us to tell us that they like us!” Adora nodded emphatically.

“And why is that a problem?” Catra asked. That sounded like, well, not a bad thing.

“Because we haven’t been answering them!”

Oh.

*****

“How did that happen?” Glimmer sounded angry - and looked angry - but Catra couldn’t help suspecting that her anger wasn’t so much because of the fan mail problem but because her time with Bow had been interrupted. Her clothes did look a little rumpled.

“Well…” Adora looked a little guilty, too, for interrupting them, Catra thought. “Apparently, since we didn’t have an official mail address, the mail was shuffled back and forth between various countries without getting delivered. Some letters were returned to the sender.”

“And they didn’t tell us?” Glimmer growled.

“Well, they did, today - kind of. Mostly by accident, when a clerk in the United Nations wanted to know if we now had an official mail address. It seems that they had to screen the mail for poison and bombs and such, and then tried to find an official mailing address, and kind of sent the mail back forth between the countries before storing it all in America and going through the diplomatic channels to ask us about it. But we found out that the request never reached us.” Adora frowned. “I don’t know how that could happen. They could have just sent it to Stargate Command and let them contact us.”

“Back home, I’d blame Kyle,” Catra said with a chuckle.

“Or it was sabotage,” Hordak added.

Catra doubted that. It sounded more like some screwup. Unless, of course, there were important messages that had gotten lost as well. She narrowed her eyes. “So, they scanned our mail for bombs and poison? And maybe sensitive information?”

“We should have gotten an official mail address,” Bow said. “We should get one, in fact.”

"Yes!" Adora agreed. "And we need to answer our mail! And apologise for not doing so sooner!"

"Great," Catra grumbled. As if they didn't have better and more important things to do. But Adora cared about that. And Catra cared about her. "Let's go and collect the mail, then."

There went her relaxing evening in the lounge.

*****

US Postal Service Storage Facility, New York, Earth, October 3rd, 1998

"...and I am terribly sorry about this. We didn't know you weren't informed, so we just kept storing the mail. We didn't want to bother you, you know - and we couldn't. We're storage, not customer service. We asked the management to contact you; that was all we could do." The flunky in the ugly uniform was wringing his hands, Catra noted. Not that she cared. Not faced with…

"We need to get Darla down here," Adora said. "That won't fit into the shuttle."

"I'm not sure it'll fit into Darla's hold," Bow said.

"Not without stuffing every nook and cranny with letters, including the lab," Glimmer said.

…a small mountain of letters. Catra shook her head. How could the people on Earth have missed so many letters? Usually, they loved their paperwork!

"I'm really sorry, but regulations being regulations…"

Catra glared at the man, and he shut up.

"Well…" Adora grimaced. "I think this will take us a little longer to process than I expected."

“We could just set it on fire,” Catra suggested.

Glimmer looked like she’d agree, but Adora gasped. “Catra!”

“So, that’s a no?”

“Catra!”

*****

Dear She-Ra! Are you really a Princess? Art, that’s my brother, said princesses are stupid and not real, but I saw you on TV! You are so pretty and tall and strong! How can I become a princess? Love, Maggie

Catra snorted, folded the letter and put it back into the envelope, then waved it at Adora. “Here’s another one for you!”

Adora sighed as she took it and put it on the huge stack next to it. “Thanks.”

“No problem.” Adora’s stack was the biggest so far, Catra saw. Well, that was to be expected - Adora was the greatest, after all. The humans had good taste.

Catra grinned as she picked up the next letter.

Dear Bow! I just wanted to let you know that I think you’re the best! A techmaster and archer, you’re like a black Green Arrow! Do you have the same trick arrows as he has? If you don’t know Green Arrow, he’s a superhero, only he doesn’t have any special powers, except for his trick arrows, and he’s a master archer! I’m taking archery lessons already! Is Bow your superhero name, and do you have a secret identity? Yours sincerely, Tim.

“Bow, you’ve got a fan!” Catra grinned and threw the letter over to Bow.

“Thanks!” He smiled, though he looked a little… disturbed.

“What’s wrong?” Glimmer had noticed it as well.

“Just…” He sighed, then held up a letter. “They’re thanking me for being a good black role model. And they said their son’s father was in prison, and they’ve been trying to find good role models for their kid… They’re asking if I could visit the kid’s school.”

Ah. Catra suppressed a snort.

“Well, we should have time to visit a school…” Adora said.

“And then turn every other request down?” Glimmer shook her head. “We can’t visit everyone who asks.”

Adora frowned. “But they’re so earnest… This girl asks me to come show her class that girls loving girls is OK.”

“Where is it from?” Bow asked.

“Canada.”

“I think they already know that there,” Glimmer said,

“Well, it seems no one told their school yet,” Adora said. “Although the letter’s a month old.” She put it down on another pile after pinning the envelope to it.

“I think their government already told everyone that girls loving girls is perfectly fine,” Catra said. At least she remembered a letter thanking them for showing that gay marriage was a human right from there. “Canada’s on the list for an alliance meeting, right?”

“Yes,” Glimmer said. “They haven’t pushed, though.”

“They’re probably too polite for that,” Catra joked.

“Oh! This one’s for you, Glimmer!”

“Thanks.” Glimmer tried to act as if she didn’t care, but Catra had caught her glancing at the much larger stack of letters for Adora a few times. Glimmer opened the letter and blinked. “They’re

thanking me for doing so much to return magic. And… they invite me to visit their coven? And share my knowledge of magic, but only if I want to?"

"What's a coven?" Adora asked.

"A group of witches working together, part of Earth's magical traditions," Glimmer said.

"We don't have time to visit every coven," Catra reminded her. "Besides, magic hasn't been restored yet. You'd just have tea with them."

"They want the visit after magic has been restored," Glimmer said. But she was pouting.

Well, that was her problem. It wasn't as if Catra cared about the fact that the number of letters addressed to her was smaller than Glimmer's. She wasn't a princess, after all.

And, she spat with a slight hiss after reading the next letter, "I don't hunt mice!"

Glimmer chuckled.

"Really," Catra complained. "Why are so many people interested in my fur and ears and tails?"

"Most of us look like humans. You're different," Bow said.

"And you're much prettier than Hordak," Adora added with a smile.

Well, of course, she was! Catra straightened a little. "That's why they want pictures." Lots of picture requests, actually. Almost as many as Adora's, if the stacks were any indication.

"Signed pictures are commonly traded on Earth, I believe," Bow said.

“And we can print them en bloc and send them out without losing too much time,” Glimmer said.

“We could also create action figures!” Bow said, smiling. “Or figurines.”

“Yeah, because we want people playing games with us.” Catra snorted.

“Well, that wouldn’t be bad, would it?” Bow asked.

“Who cares.” Catra shrugged. “We’re here to protect Earth and find allies, not to sell pictures or figurines.”

“We wouldn’t sell the pictures,” Adora said.

“We actually should,” Glimmer corrected her. “Or we’ll be swamped in requests. More than we already are,” she added with a glance at the mountain that had barely shrunk in the hours since they started. Still too much for the shuttle. And too much for Darla’s hold. Maybe they could commandeer a frigate’s hold for this…

“Oh.” Adora gasped.

“What?” Catra narrowed her eyes.

“This boy said his parents were in heaven and, since we have spaceships, asked if I could bring them back…” Adora sighed and put the letter down.

Catra suppressed a curse. Damn, she had thought the letters from people calling them names and wishing them dead were bad, but this… “Let’s take a break!”

“But we still have so many letters to go through…”

“Yes. And they’re not going to disappear,” Catra told her.

Unfortunately.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 4th, 1998

"Fan mail?" Jack O'Neill resisted the urge to mime cleaning his ears. Carter wouldn't appreciate it - she had glared at his latest joke, even though that had been a good one. Probably encountered some problem she couldn't solve easily. Although he couldn't spot anything like it in the lab. Maybe it was some theoretical physics stuff.

"Yes, Sir," Carter said, nodding. "The Etherians apparently received vast amounts of fan mail and are now undecided about the best way to cope with it."

"What's the problem? Write a form letter, print it a few hundred times, send it to everyone. Or hire people to send the letters if that's beneath a princess," Jack said.

"The amount of mail they received was much larger than a few hundred letters," Carter replied. "Apparently, due to a bureaucratic mishap and unclear regulations for international mail delivery as well as some politics at the United Nations, all the mail addressed at them - at least from North America and Europe - was collected since their arrival."

Jack whistled. That would have to be a lot of letters! And a bureaucratic mistake? He would bet that this was part of an attempt to gather intel. Or control what the Etherians heard from Earth. Just what the NID would do. Still… Even a mountain of letters just meant the Etherians would need to hire more people and print more form letters. So why wouldn't they? "Is there some Etherian cultural thingie that means they have to reply personally to every letter?"

Daniel was frowning at him, but Jack couldn't tell whether that was for his wording or not knowing if there was such a taboo.

"I doubt that," Carter replied. "Entrapta told me that she wanted to construct a reply-bot."

Jack nodded. That fit the princess. "Could you ask her if she could construct a paperwork-bot?" he joked. Well, semi-joked. Some help writing reports would be nice.

Carter was rolling her eyes, so her mood must have improved. "I will not abuse my friendship with her to save you from doing your work, Sir."

Jack carefully didn't point out that relaying to your superiors what your alien buddy told you while you were tinkering in your lab was a sort of friendship abuse by itself. He would do the same in her place - the Etherians were crucial for the world's defence, after all, and anything that upset them could have catastrophic consequences.

Besides, people had been doing this kind of gossipping since ancient times. Probably since the time of the Ancients.

"Uh…" Daniel pushed his glasses up. "Entrapta might not have the same cultural views on answering mail as her friends - they do come from different kingdoms on Etheria, and Etherian culture, even though it might appear so from an outsider's point of view, is very diverse. In fact, I would bet that, without the global media networks, Etheria's culture is more diverse than Earth's, at least relative to their population."

That was a lot of words for 'other Etherians might have that rule'.

"That's possible." Carter nodded, but Jack could tell she wanted to contradict Daniel.

"Anyway," Jack spoke up, "our alien friends having to cope with letters from their adoring fans doesn't look like a huge problem." Or any problem at all.

Carter shook her head. "There were also letters from people who didn't like them. Some were rather… crude."

Ah. “I hope they aren’t planning to answer those in person.” That could be a problem - Jack didn’t want to imagine what Catra might do to someone threatening her. Or Adora. Or propositioning them.

“Not to my knowledge, Sir,” Carter replied.

“Good.”

“The Etherians, despite the medieval aesthetics of some of their cultures, do not share the kind of warrior culture that requires insults to be repaid with violence,” Daniel said.

Jack looked at Teal’c. The Jaffa, on the other hand… It was probably a good thing Teal’c wasn’t receiving such mail.

“Indeed,” Teal’c spoke up as if he had read Jack’s thoughts. “Although while Jaffa society differs in that area, it would be dishonourable for a trained warrior to actually fight an untrained civilian over such insults. However, a thrashing, as you would call it, would be perfectly appropriate.”

Of course, pretty much every adult Jaffa was trained in combat, Jack knew. He nodded anyway. “So… what do you think they’ll do? Should we give them advice on how to treat cramps in your hand?” He grinned - Adora would easily heal that, anyway.

Carter straightened. “Ultimately, it’s their decision, Sir.”

“But we can give them advice on what’s an appropriate response in our society,” Daniel said.

“And we don’t want them spending all their time writing letters by hand to explain to little Timmy that they won’t blow up his school to save him from his homework,” Jack joked.

“No, we don’t,” Carter said. “I already told Entrapta that there’s no expectation of a personal reply in such cases.”

“Looking out for your science buddy?” Jack smiled. Carter probably also didn’t want Entrpata to waste time on answering letters instead of doing science with her.

“Sharing data.” Her smile was a little toothy. He probably shouldn’t joke about being jealous of letters. “But, apparently, they have received a number of requests for personal visits.”

“And are they planning to do that?” Jack asked. They’d need good security - with all the furore about magic, there was bound to be a nutcase who would try to blow up the ‘evil aliens’. He blinked. ‘Furore’? He must have been listening to Daniel a bit too much lately.

“I don’t know, Sir. It’s apparently something they still have to discuss.”

“Like the return of magic?” Jack asked.

“Entrapta seems to be under the impression that they are merely waiting for the right moment to do that, Sir.”

Great. Jack clenched his teeth. He wasn’t looking forward to dealing with Dungeons and Dragons in real life. And if some idiot decided that Jack might have a magical talent because of his Ancient ancestry and wanted to send him to magic school…

He really wouldn’t like that.

*****

The Magic Question Part 3

Palais des Nations, Geneva, Switzerland, October 7th, 1998 (Earth Time)

They were facing the full assembly of the United Nations. So many countries were represented here. If Adora hadn't faced them before, and if she hadn't attended Princess Prom, she would feel nervous. Well, more nervous. This was, after all, an important meeting. For everyone. Fortunately, Adora didn't have to take the lead here.

"...and we welcome Queen Glimmer of Bright Moon, who will address the Assembly."

Adora watched as Glimmer, wearing her coronation outfit - or something like it - rose and walked up to the microphone.

"Thank you!" She smiled and put her up notes - Bow had installed a small projector on her pad so she could read her speech without glancing down all the time. "I'm happy to be here and talk about an important issue - two important issues, although they are related. First, I want to announce that the Princess Alliance will support the United Nations and enforce international law in the case of genocide. We, the people of Etheria, were the target of such crimes, and while we managed to defeat the criminal aiming to murder us all and destroy our planet, many other planets suffered this fate before us. We would dishonour the memory of those people if we would look away should someone else attempt a genocide. As we came to Earth to stop the Goa'uld from invading your planet and murdering your civilisation, we will protect you against such crimes committed by others on your planet. Just as your own laws stipulate, we will do what we can to stop any such crime." Glimmer nodded.

Adora didn't miss that not everyone in the audience seemed very enthusiastic. Actually, a lot of the ambassadors who applauded seemed to be doing so with polite smiles rather than honest or

enthusiastic support. And a lot of the audience looked angry and were talking to their neighbours.

"Told you so," Catra whispered. "They care more about their sovereignty than their own laws. Or the lives of others."

Adora didn't frown - that would have been misunderstood, what with cameras covering everyone - but she whispered back: "Just because they are concerned about us trying to impose our will on them doesn't mean they would rather face a genocide."

"Someone listened once too often to Glimmer practising the speech." Catra had the last word before Glimmer started talking again.

"This does not mean that we will invade a country or impose our own laws or customs on anyone. All we will do, should a country or organisation attempt a genocide, is to stop them and capture the criminals." Glimmer nodded. "We are not planning to start a war, change a country's government or political system. We will absolutely not occupy a country. But if anyone is starting a genocide, we will stop them."

"And what is your definition of genocide?" one ambassador yelled. Adora checked the flag - it was Saudi Arabia.

They had prepared for that. "Acts with the intent to destroy, in whole or in part, a national, ethnical, racial or religious group," Glimmer replied. "That's in your own Convention on the Prevention and Punishment of the Crime of Genocide, which your country ratified decades ago."

"And what about the permanent members of the Security Council?" another ambassador - from Algeria - asked before she could continue.

Adora pressed her lips together. They had expected that question as well, but she had hoped they could address it after the speech.

Glimmer, though, raised her chin slightly. “I do not think any of those countries will attempt to support genocide in that manner. However, the Princess Alliance is of the opinion that, should a genocide be attempted, saving lives takes precedence over adhering to formalities.”

That caused an uproar, and Adora clenched her teeth. Did they really expect the Alliance to let any country stop them from saving people?

“This is an attempt to take over the world!” someone yelled just as the noise started to die down - Adora didn’t catch who said it.

“No,” Glimmer replied, her amplified voice filling the assembly. “This is not an attempt to take over the world. This is just a warning - if you attempt genocide, we will stop you. Just as your own laws stipulate and expect of you. We will not let you murder people for the crime of being born, no matter who you are or who you are allied with.”

The assembly erupted in shouting and yelling again.

“Looks like genocide is more popular than we thought,” Catra commented with a sneer.

This time, Adora frowned at her.

*****

It took a bit of time for the assembly to calm down - the Secretary-General had to step in and remind a few of the ambassadors that they were in public and had to behave with a certain decorum, though it wasn’t as bad as the Princess Prom had been. No one attacked anyone, in any case. And there had been Alliance meetings that had been as loud and contested, though those were private.

But finally, Glimmer could continue her speech. “In addition to clarifying our stance towards genocide, we are also here to inform you about our decision with regards to Earth’s magic.”

“Here it comes!” Catra whispered - she sounded as if she were looking forward to this. She probably was, Adora realised.

“After considerable deliberation and consulting various trusted people, we have decided that we will honour the request to restore magic to Earth. We have…”

Glimmer’s voice was drowned by shouting and yelling, even louder than before - it almost hurt Adora’s ears, and she saw Catra clench her teeth and flatten her ears. Adora knew how sensitive her lover’s ears were; this had to hurt her.

She reached out and patted Catra’s thigh. As she tried to make out what the people were yelling.

“This is an outrage!”

“How dare you force magic on us!”

“Blasphemy!

“Finally!”

“We will not let you corrupt our people!”

“This wasn’t your decision!”

“You have no right to do this!”

“No, *you* have no right to keep us from regaining our heritage!”

“This is an act of war!”

“You are changing our entire life on a whim!”

“Take your magic and leave!”

It took a few more minutes until people had calmed down - no, until people stopped screaming. Adora had no doubt that they hadn’t really calmed down. Not the people who were glaring at her friends and herself.

Glimmer, who had weathered the storm without showing her annoyance, except for narrowing her eyes, continued: "As I explained, we decided to honour the request to return magic to your planet. We are aware that this is a controversial issue, but we do not think that anyone has the right to dictate to another that they cannot use magic; it's your heritage. It's part of your natural environment. Your planet had magic until a thousand years ago, and it will regain what was stolen from it."

"You're forcing this on us!"

"No one forces you to use magic," Glimmer went on without glancing at the ambassador of Kuwait, who had blurted that out. "But we will not let those who hate and fear magic for petty and bigoted reasons dictate how everyone else on the planet should live."

Adora nodded. Just as they wouldn't let the bigots oppress people like her and Catra.

"You can't just dismiss our concerns!" the ambassador of Saudi Arabia yelled. "This is against our religion. You are trying to change our way of life by force!"

"And we don't care!" Catra hissed through clenched teeth - fortunately, not into a microphone.

"Your concerns are unfounded," Glimmer replied. "You fear magic, yet you embrace technology. And you desire advanced technology that will change your life much more than magic - and is far more dangerous. And can be used by anyone."

"This is the core of the issue," said the ambassador of… Adora had to squint to read the sign. Of Nigeria. "Anyone can use technology. Only a few, as you explained, can use magic. We do not want to be ruled by witches and wizards."

Catra rolled her eyes.

“And you won’t,” Glimmer told them. “As we explained multiple times, it takes both talent and years of study to gain any significant skill at magic - and even with both, you won’t be able to subjugate a country, much less the world.”

“You are ruling your country,” the ambassador retorted.

“Yes,” Glimmer replied. “And several countries on Earth are ruled by monarchs as well.” She looked at the ambassador of Saudi Arabia. “But I didn’t conquer Bright Moon with magic.”

Adora glanced at Catra, but her lover refrained from commenting that Angella had conquered it. Or might have - the records were a little vague.

“And in our war against the Horde, several kingdoms ruled by princesses fell to an enemy who didn’t use magic, but technology.” Glimmer shook her head. “The return of magic will not lead to monarchies being restored or imposed on you.”

“But a few might get toppled,” Catra whispered, baring her teeth.

Adora glared at her. That wasn’t helping!

“This will cause a panic,” the ambassador of Sudan said. “People will accuse each other of being evil witches! People will die!”

“People are already dying,” Glimmer said. “You don’t need magic to have witch hunts.”

“But it’ll be worse, now that people know it’s real!”

“Yes.” Glimmer nodded, her expression fixed. “It will get worse. But it’ll also get better once you realise what magic can and can’t do. If we don’t restore magic, not only would we be helping those amongst you who wish to keep what was stolen from you out of ignorance and selfishness, but we would still see witch hunts.” She narrowed her eyes. “And all the bigots would have realised that they can force their views on others if they threaten to hurt and kill enough people. And that would mean things would grow far,

far worse." She shook her head. "If the threat of people being murdered would be enough to make us keep magic from being restored to Earth, we might as well surrender to the Goa'uld because they wouldn't hesitate to murder their slaves if they thought that would make us back down." She scoffed. "It won't."

Adora firmly nodded. As much as she hated how this decision would lead to people getting hurt and killed, the alternative would be worse. You could not give in to people who would hurt others to make you obey them. You wouldn't save anyone that way.

"You could delay this, though! Let us adapt slowly to it!" the ambassador of South Africa said.

"We have been delaying this." Glimmer shook her head. "We've explained what magic is, how it works, what you can expect. If people still think magic is evil after our explanations, then delaying further won't help either."

"Yeah," Catra muttered. "Let's get this over with so we can focus on the war instead of on idiots."

Adora frowned at her, but Catra had a point. This had already taken too long. Far too long. People were suffering under the rule of the Goa'uld. It was time to settle this.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 8th, 1998

"So, they said I shouldn't build a reply-bot because we don't know enough about Earth customs regarding correspondence. And I said that if we don't know enough to build a reply-bot, we don't know enough to reply ourselves."

Samantha Carter nodded and tried to suppress the sudden and petty burst of annoyance she felt upon hearing that. She had been looking forward to working on probe bots, not explaining how you wrote form letters without offending the recipient. It

wasn't a subject she was very experienced with, anyway. Well, if you counted the 'Dear John' letter she had to write at the academy, before her first deployment, but…

Entrapta shrugged. "So, they're going to talk to Julie and Mr Brown about that and then tell me if I can build a bot." She beamed. "I hope I can - I've never built a reply-bot. It would be an entirely new bot type. Very delicate manipulators, so it can write using Earth pens. And a new control matrix since it would need a completely different set of parameters to handle is task compared to a usual bot. I mean, I built lots of different bots, from combat bots to servant bots, but I haven't really focused on language expression - so far, their sound emitters using a set of signals was good enough, as long as they understood me." She blinked. "In hindsight, that was a little unfair, wasn't it? They could understand my language but not speak it. None of them complained, ever - well, not even when they went all murderous after getting infected with a First One virus - but maybe others would have been nicer to them if they could talk?"

Sam nodded. "People do treat you differently if you can speak their language." Whether it also went for bots… she didn't know. Would a bot be seen like C-3PO or Data? A sapient being? Or like Ed-209? Emily talking, perhaps with a British accent, would likely be off-putting. Then again, humans had a tendency for anthropomorphism. People attributed human traits and emotions to their pets and computers - not that Sam would ever do that! - and so doing that to bots would only be logical.

"Then we should work on that!" Entrapta nodded. "It'll make all bots better, too - probe bots will be able to report what they saw and answer questions!"

"That would also introduce bias with regards to their data, though," Sam pointed out. "Since they would have to interpret the data to report it. Unless they just repeat the numbers." But that would be a waste of a language module.

“Right. Even with self-learning matrices, we couldn’t be sure about the results of their interpretation. But wouldn’t it still be helpful? As a second opinion? As long as we treat the data without being biased, which any scientist should, anyway. Right?”

Sam nodded. It was time to do science.

*****

“I think we should take a break,” Samantha Carter said a few hours later, resisting the urge to run her hands through her hair before she got them cleaned - Etherian bots used lubricants as well, after all, though how exactly they had arrived at prototyping new manipulators from mapping out language matrices was a little unclear in hindsight.

“Aw…” Entrapta pouted, her hair still holding a small scouting bot’s parts in the air. Then she blinked. “Although now that you mention it, Hordak said I should eat more regularly when working.”

“Where is Hordak, anyway?” Sam asked before she could help herself. While the former warlord didn’t come along with Entrapta every time she came to the mountain, Sam hadn’t seen him for some time.

“He’s checking with Priest about planetary drop tactics,” Entrapta replied while rooting through the fridge in Sam’s lab. “Do you have some of those tiny snickers I saw on TV?”

“No, sorry. You’re the first person I met who prefers the small bars to the full-size bars,” Sam replied. “I’ll order some for your next visit.”

“Thank you!”

Sam made a note, then frowned. “Planetary drops?”

“Yes. In case the fleet needs to intervene on Earth. They’re worried about that, you know?”

Sam had known about the announcement to the United Nations regarding genocide - she was sure almost everyone on Earth had heard about it, the way the news had spread. Some pundits were claiming this was the first step to invading Earth. “Do you expect to intervene?”

Entrapta shrugged. “It seems illogical, but if everyone acted logically, people wouldn’t fear magic. Catra thinks someone - some country - will be stupid enough to attempt genocide out of spite. Bow thinks they won’t since genocide is illegal on Earth. Glimmer agreed with Catra, but she was mad when she did that. Adora said she hopes that we won’t have to intervene.”

That was a very detailed report. “Well, many people are afraid of magic,” Sam carefully said. “And they tend to lash out against what they fear. It’s irrational but common.”

“It’s stupid,” Entrapta said, nibbling on a Snickers. “We’ve explained how magic works several times. Even a restricted bot would have understood by now.”

That was pretty harsh for Entrapta. She didn’t seem very concerned about the potential deaths that the Etherians’ decision might cause, though. “Do you think you will be able to stop any genocides?” Sam asked.

“I guess so? Once we hear about it, in any case. We’re moving more ships into orbit so we have more ground troops. Mostly bots, but they should work for this kind of mission.” Entrapta shrugged again.

“Many people could be killed before anyone notices,” Sam commented. That had been the case with Rwanda a few years ago.

“Yeah, but we’re keeping an eye on the countries that were the worst about it so far.”

She couldn’t help it - she had to ask. “You don’t seem to be worried.”

"Worried?" Entratpa tilted her head to the side in an almost comical fashion.

"About the deaths," Sam explained. "You won't be able to stop all killings since you need to detect them first before you can intervene."

"Oh!" Entrapta nodded. "Yes, but that can't be helped. I thought about improving our scanner so we can spot lives ending, but that is tricky - lots of humans die every minute - and Catra told me that it would be depressing if we just watched people die without being able to help. I think she meant Adora would find it depressing - Catra's usually not really bothered about that."

"Seeing people die is not something everyone can handle," Sam pointed out.

"I know." Entrapta nodded. "We can just do our best and go on."

That sounded like something someone told Entrapta, and she took it to heart. "Who said that?" Sam asked.

"Perfuma. She's very good about that stuff. I wish we had taken her with us," Entrapta said.

Sam didn't know the other princess well enough - or at all - to agree. But things could have gotten better with the Etherians, that was certain.

On the other hand, Sam was only too aware of how much worse things could have gone. If Perfuma thought the Etherians should intervene more on Earth, to do their best… "Let's get back to work," she said.

"...the Met intervened and broke up a so-called 'exorcism'. A child of eight years was moved to a hospital for treatment, and…"

Catra flicked the screen off and shook her head. "They've gone crazy." At least the rioting and worse was limited to countries in the Middle East and Africa, for the most part.

"This is awful!" Adora blurted out. "We have to do something!"

"And what can we do?" Glimmer asked. She pointed at the bridge's window, where Earth was floating beneath them. "Start conquering Earth?"

"No, but…" Adora shook her head. "This is our fault."

Catra hissed. "It's not our fault!"

“If we hadn’t announced our decision to return magic, this wouldn’t have happened.”

Well, she wasn’t wrong, Not technically. But…

“Should we have bowed to pressure and kept magic from those who wanted it back?” Glimmer asked with a frown.

“No, but…” Adora pressed her lips together. “We shouldn’t have done it like that.”

“We knew that there would be violence,” Glimmer retorted. “Like when we revealed ourselves.”

“But we didn’t think it would be that bad,” Adora shot back. “It wasn’t that bad back then.”

“It’s not your fault,” Catra said. “Nor our fault. As Glimmer said - if we bow to violence, we might as well surrender to the Goa’uld.”

“But those aren’t the Goa’uld down there! They aren’t brainwashed soldiers or slaves fooled by evil fake gods!” Adora protested.

“Doesn’t look like much of a difference to me,” Catra scoffed. “Attacking people over magic sounds pretty evil to me.”

Glimmer nodded but she looked grim. “Yes. We can’t bow to the threat of violence. Not from anyone.”

Bow, thought, shook his head. “We should have handled this better. We could have… avoided this.”

Catra snorted, even though she didn’t feel amused. “Really? Sat down with the witch hunters and politely explained that they’re wrong? Showed them the light? Explained how magic works?”

“Yes!” Adora blurted out as Bow nodded.

"We did that at the United Nations, and we couldn't even convince their ambassadors," Glimmer pointed out. "Why do you think this would have worked better with the people in their countries?"

"And how long would that have taken?" Catra added. She sneered. "Should we have told India and Japan, and everyone else who isn't an idiot, that they can't get magic back because it might offend the same people who were offended by our relationship and provoke them into rioting?"

Adora bit her lower lip. "Well, no, but…"

"We could have made more of an effort to convince people that magic isn't going to ruin their lives," Bow said.

Glimmer glared at him, which was a bit of a surprise. "Yes, we could have done it. And it would have been a waste of time. They don't listen! We keep telling them how magic works, and they do not listen!"

"Some are concerned about magic causing more problems," Bow retorted.

"Yes. And those people aren't down here rioting and murdering others!" Glimmer yelled as she jumped to her feet. "The fanatics are! The people who hate everyone who isn't like them and want to kill them!" She bared her teeth. "I am sick and tired of trying to talk to them, trying to reach them, trying to make nice with them when they DO. NOT. WANT. TO. LISTEN!"

She screamed the last words and stalked out of the door.

Catra looked at Adora, who looked shocked, and then at Bow, who looked like Scorpia had hit him with a tank. "I think Glimmer needs a break from diplomacy," she said.

Adora slowly nodded.

Bow shook his head. "She needs…" He trailed off.

"Go talk to her," Catra told him. After a moment, she nodded at Adora. "Both of you." For all her words, Glimmer wasn't taking this well.

Bow was already moving, but Adora looked at him, then at Catra.

"Go! She needs you," Catra told her. "I'll keep watch here."

And, she added to herself as Adora left the bridge, I'll try to ignore the insanity down there.

It's not our fault, she repeated to herself.

Yet she still felt guilty.

*****

Dulles International Airport, Washington DC, October 10th, 1998

Jack O'Neill watched the truck - the second truck - leave the hangar. He half-expected a few letters to fall off it, to be blown across the tarmac by the soft breeze he could feel, but whoever had done the loading had done a good job with the Etherians' fan mail. "I pity whoever has to deal with all that mail," he commented as he started walking towards the hangar.

"That would be Brown, Wallander and Co. and Julie Callaghan, I believe," Carter said. "Entrapta mentioned that they decided to let 'experts in communication' handle it."

"Dumped the whole thing on PR weenies?" Jack chuckled. Not exactly a surprise - he couldn't see any of the Etherians spending all their time answering mail. Although he wasn't sure if it was a good decision, with all the violence about magic shaking the world, the mail was bound to reflect that, and Jack wouldn't trust PR firms to handle that. In more sense than one. "Have they been told about the threat of mail bombs?"

“Entrapta said she built a bomb-detecting-function into her reply-bot.”

Jack blinked. “She built a paperwork bot? And I wasn’t told as soon you heard about it?” He narrowed his eyes at Carter.

She tilted her head slightly as if she didn’t know what he was talking about. “It was in my report about robotics, sir. And it wasn’t a paperwork-bot. Merely a bot physically able to write letters. It still needs to learn how to write and, more importantly, what to write. Its neural network is in its infancy and won’t be able to handle even basic letters for a while.”

“You make it sound like a baby,” Jack told her.

Carter blinked. “That’s actually an apt description, sir. The bots are learning like children, though often from a set of base skills.”

“So…” Jack grinned. “You basically made a baby with Entrapta?”

Daniel gasped, but Carter merely narrowed her eyes. “We constructed a bot, sir. And it cannot help you do your paperwork.”

“Pity.” Jack would have added another joke, but they reached the hangar’s entrance - where that combat bot of Entrapta’s, Emily, was standing.

“Hi, Emily!” Carter greeted it, and the oversized R2-D2 with a tank cannon beeped back. “Yes, we’re fine. No, it’s safe. There are no violent protests in the city.”

Jack privately wondered if Carter wasn’t spending a bit too much time with Entrapta. “I didn’t know you spoke robot.”

“I am familiar with the general signals of Entrapta’s bots since I worked on communication modules with her, sir.”

“Ah.”

“Sam!” And there was the magical mad scientist, coming straight at them - walking on hair and waving. “Did you get my message about the random phrases generator?”

“Yes. Although I am not sure if that is a good teaching tool. It seems…”

Jack tried to tune out the tech talk and focused on the shuttle waiting inside the hangar.

“It doesn’t look like it could carry so many letters,” Daniel said.

“They made multiple trips,” Jack explained. The brass hadn’t wanted to see a Horde frigate land in Washington. Apparently, the optics would have been bad - as if having a few dozens of the things in orbit was any better. The retired generals making the talk-show circuits were already commenting on how vulnerable the United States were now and how much they needed an alliance with the Etherians to replace those shiny white ships with grey hulls of their own. Which led to this meeting, not that Jack thought anything would come of it. Not until Washington finally managed to legalise gay marriage and all that stuff.

“Ah.”

And there was the rest of the Etherians, walking down the ramp - together with a man and a woman. Mr Brown and Miss Callaghan - Jack had seen their files. They didn’t look happy. Jack wouldn’t be happy in their place, either, having to deal with this.

“...and we’ll get back to you once we have a better overview of the trends,” Callaghan was saying. “We should have vetted more people by then as well.”

“Hi, Jack.” Adora looked… not as perfect as she usually did. Tired.

Most of the group looked tired, actually, Jack noticed as they exchanged greetings, and SG-1 was introduced to the PR weenies. “So, you’re going to handle the mail?” he asked. “Like working for Santa at Sears?”

“We’re handling it as part of public relations.” Mr Brown sounded slightly prissy. No comment about Jack’s joke even though he should be old enough to understand it. Definitely prissy.

So Jack waited until the two had left in a limousine and a sports car, respectively, before addressing the Etherians. “So… How are you doing?”

“Not going to say ‘I told you so’?” Catra narrowed her eyes at him. Prickly, there. More than usual.

Jack shrugged. “I guess you’ve been beating yourself up enough already.” They certainly looked the part.

“The loss of life is a tragedy,” Glimmer said. She looked pissed, actually. “But the blame is to be placed at the feet of those who use ignorance and fanaticism to try and impose their narrow views on others through violence.”

“Did you run that by your public relations consultants?” Jack asked before he could help himself.

Glimmer’s glare intensified. “No. That’s not their expertise.”

So, did that mean they would listen to experts?

“Well, if you need experts on the Middle East and Africa, I know several people in the field,” Daniel offered with his ‘I only want to help you’ smile.

Glimmer scoffed. “You want to tell me that you have experts that know how to make religious fanatics accept magic?”

Daniel blinked. “Well… not exactly. But they know the cultures of those regions and how to interact with people there without offending them.”

Catra snorted. “We know that as well - we would just have to ban magic and stop loving each other. And probably convert to whatever religion those people follow. Or die for our sins.”

Jack couldn't help chuckling, which made Daniel pout at him. "It's not quite that bad," his friend insisted.

"Really?" Glimmer openly sneered at Daniel. "Do you think if we just used the right words, they'd be fine with magic?"

"No, no, but… a more diplomatic approach might have avoided some of the riots." Daniel smiled rather weakly. "Maybe."

Glimmer bared her teeth - for a moment, she reminded Jack of a furless angry Catra. "We tried that. We talked to their ambassadors for hours and hours! The only thing that would have prevented this would have been to agree not to return magic."

Daniel winced. "Well, yes, but… wouldn't it have been worth to delay restoring magic to Earth to avoid all this loss of life?"

"Delay for how long?" Glimmer asked, stepping up to glare at him from up close - or down close since she was smaller than Daniel. "Until those fanatics suddenly accept magic?"

"We'd be dead before that happens," Catra added. "From old age. And what about the United States?" She looked at Jack. "Would your country agree to, I dunno, stop eating meat if enough vegetarians threaten to riot? Wouldn't it be worth to ban meat if it prevents such a loss of life?"

Jack could almost physically feel the sarcasm aimed at Daniel.

"It's not the same," his friend argued. "Magic affects everyone:"

"So does meat production," Adora said. "Many countries grow feed for animals instead of food, and export it." Jack blinked, and she shrugged. "I was curious about Earth farming after you visited a farm in Bright Moon."

Ah. Jack nodded. He should have expected that.

"It's still not the same," Daniel argued.

“The principle is the same. How many deaths does it take to make your country stop doing something?” Glimmer asked.

“I think the United States of America don’t negotiate with terrorists,” Catra added. “At least not officially.”

“We are talking about countries, not terrorists,” Daniel retorted.

“Same thing,” Catra shot back. “They threaten violence against other people to make us do what they want us to do.”

“And speaking of terrorists,” Jack said, raising his voice a little. “We’re here to talk about coordinating responses with the fleet and security concerns, not politics, right?”

Everyone looked at him as if they were surprised at his words.

Jack frowned. He could be diplomatic if he needed to. He just usually didn’t want to. “Anyway, the new ships in orbit are a concern for some people,” he said. “Like the Pentagon.”

“A concern?” Adora asked.

“Yes.” Jack nodded.

“Oh.”

“And that has nothing to do with our announcement that we won’t let people commit genocide?” Catra asked, raising her eyebrows.

“Well, I don’t think the people who asked me to talk to you are bothered by that,” Jack replied. “America doesn’t do genocide.”

“Not any more,” Daniel just had to add.

Fortunately, the Etherians just nodded. They were really forgiving with all the second chances they gave everyone. “Yes, we’re aware of your country’s past,” Bow said. “But as you said, you’ve changed.”

“Yeah. Anyway, I was told to pass along that having spaceships with big honking space guns flying in the sky could make people nervous and afraid, and that can trigger bad responses to surprises - or rumours.” Jack wasn’t going to mention ‘bad optics’, or anything like that. That would make the United States look bad.

“Ah.” Adora nodded. “We don’t want people to panic.”

Jack almost bit his tongue to avoid pointing out that they had done a very good job at making people panic. “Sometimes, things happen that you didn’t intend.”

Catra snorted but didn’t comment.

“We’ve got Mr Brown and Julie working on explaining things better,” Bow said. “So people won’t write us to ask things we can’t do - we don’t want them to get their hopes up.”

Jack blinked. “You really got letters asking you to blow up a school?”

“Some ask us to go to heaven and bring back their parents,” Glimmer said with a scowl.

Jack winced. He had stepped into that one. “Yeah. That’s a toughie.” He suppressed the sudden urge to ask if they actually could do that. If they could, they would certainly have mentioned it by now - people would do anything to get their loved ones back. Hell, Jack would do anything to get Charlie back. No! He shook his head. Dead was dead. People didn’t come back from death.

Glimmer nodded. “So, we’ll ask them to also explain that we’re not going to invade Earth.” She sighed. “They’ll ask us to give another interview.”

“Well…” Jack shrugged. “It makes you look approachable if you appear on TV.”

“We really don’t have the time to give lots of interviews,” Glimmer retorted. “We’ve got diplomatic meetings every day.”

Judging by the way the others reacted, those meetings sounded as bad as Jack thought. He didn't envy them.

"Well, your public relations people did a good job," Daniel said. "The majority of Americans support an alliance with Etheria."

And the massive and often questionable efforts of the government and the NID, of course, Jack thought. It was easier to change public opinion if your most vocal opponents happened to have all their dirty laundry exposed at the most inconvenient moment.

"Before or after we announced that we'd stop genocides no matter what country did it - or tried to use their veto in support of it?" Catra asked with a scoff.

"Actually, that stance received a lot of support from those who feel that the veto power in the United Nations Security Council should be abolished - which includes a lot of people in smaller countries," Daniel said. "Although I've only seen statistics for countries with a free press."

"You can bet that every Chinese and Russian is shocked by the implications of your new policy," Jack added with a chuckle. "Just ask their propaganda ministers."

"Russia isn't the USSR, Jack!" Daniel complained.

"Close enough," Jack shot back. They certainly weren't a free country yet. Not with so many former communists and even KGB members now in positions of power.

"Anyway, we can't cover every country - and if we only grant interviews to American journalists, we'll be accused of being biased," Glimmer said.

"It's hard enough just meeting with the diplomats and governments," Adora added. "And we need to prepare for every meeting by reading up on the country's history."

“Ah, paperwork!” Jack nodded sagely. “I feel with you. And speaking of feelings…”

Glimmer rolled her eyes. “We’ll tell Priest to keep the ships out of low orbit.”

That was probably the best Jack would get. Well, it was no skin off his butt, anyway. His ego wasn’t so fragile that seeing ships in orbit would threaten it. Certainly not when he was already aware that far more ships were in the system. “Thank you,” he said. “So… with that out of the way, and your public relations guys already gone, is there anything else official-like we need to talk about?”

“Yes.” Adora sighed. “We could use some help with security for public appearances. India has invited us to restore magic on their soil next week.”

“Oh.” Jack blinked. He hadn’t heard about that. No one had, as far as he knew.

And he had a bad feeling about this.

*****

Indira Gandhi International Airport, National Capital Region, India, October 17th, 1998

Adora couldn’t help looking around reflexively as she stepped on the ramp of the shuttle. Entrapta’s scanner hadn’t detected anything like a trap or an ambush, but she couldn’t help worrying. There were so many people cheering and yelling, kept at bay by soldiers. So many opportunities to hide an attacker. Even after a week, Jack’s lecture on sabotage and assassination was at the forefront of her mind.

Even Jack’s team - with the exception of Teal’c, who had added some advice of his own, based on his experiences as First Prime - had seemed to have been taken aback a little by his obvious personal experience with all that stuff.

“Relax. The tarmac is clear,” Catra said as she joined her on the ramp, walking slowly down behind Glimmer and Bow. “No bombs in range.”

Her lover had been taking notes and nodding a lot during the lecture, Adora remembered. And she wasn’t sure if Catra had just been concerned about defending against such attacks. Or limiting such attacks to Goa’uld.

But it had helped with the security for today’s visit. Thanks to the scanner, the Indian police had already arrested three groups of people planning to attack the ceremony with bombs. And a few more had been ‘dealt with’ according to the Indian government when searched for weapons by the police before being allowed on the field reserved for the ceremony. Jack would be happy about the security here - the Indians had tightly locked up the entire area.

But this wasn’t the time to talk about that. She nodded, forced herself to smile and kept walking toward the delegation from the Indian government. Unlike visits to other countries, the Prime Minister himself was waiting there, a big smile on his face.

“Keep an eye on his bodyguards,” Catra whispered into her communicator.

Right. One Indian Prime Minister had been assassinated by her own bodyguards.

“Emily’s on the job!” Entrapta replied over the channel. The two were following Adora and Catra - and Adora noticed a number of the soldiers standing guard looked a little nervous when they saw Emily. “Her force field is ready to be deployed. But she does miss her cannon.”

“Poor baby,” Catra muttered - sarcastically.

Adora was tempted to elbow her, but they had just reached the Indian delegation.

“Welcome to India! We are honoured and proud that you have chosen our country for this historic moment!” The man looked jovial and honestly happy. Well, he had campaigned hard for this - of all the countries, India had been the most vocal about restoring magic.

“Thank you,” Glimmer replied. “We’re honoured to be here.”

“Yes,” Adora added with a nod. “We’re happy to finally return what was stolen from you.” By her ancestors and in an attempt to build a super-weapon that would have devastated an entire sector. But this wasn’t the time to discuss this particular subject, either. Still, it felt good to right this wrong. She might not be responsible for the actions of the First Ones, but she still felt guilty.

They exchanged handshakes and greetings with the rest of the delegation - Emily, encouraged by Entrapta, waved one of her legs, balancing on the others, which prompted some laughs from the audience and even from the Prime Minister himself.

And from some of the soldiers. Well, the ones standing guard. The ones standing at attention in the ‘honour formation’ didn’t laugh or move at all while Adora and her friends walked past them. Adora still didn’t know why practically every country on Earth had soldiers do that for state visits, but it made adapting to such visits easier.

“...and you picked a good time to visit; the monsoon has ended, and the weather is quite nice.”

It was actually still quite hot and humid, but Adora nodded. And even Catra didn’t complain about the effects on her fur. Her smile looked a bit more toothy, though, as they climbed into the waiting cars that would take them to the field chosen for the ceremony.

Not that an actual ceremony was necessary. Adora could have restored the magic to Earth anywhere on Earth. All it took was using She-Ra’s power to remove the last remains of the First Ones ‘magic shunt’, as Entrapta called it. The enchantment that had

siphoned off the planet's magic and still kept it from returning to Earth. They didn't know exactly where the magic was going, actually - part of it at least was used to keep the shunt in place, but the rest seemed to be vanishing into another dimension, according to Entrapta's latest theory.

It didn't matter. Soon, this would stop, and Earth's magic would be restored.

Adora smiled, both at the thought and at the people lining the street, cheering at them. After all the bloodshed on the news, it felt so good to be welcomed. To see people wanting their stolen heritage returned.

"I wonder where they put their protesters," Catra whispered while she waved herself.

Right. Not all Indians were happy with magic returning. But most were. India's Minister of External Affairs had assured them that they wouldn't be bothered by 'fanatics trying to disturb the ceremony', but he hadn't gone into details. Just that they were banned from entering the area of the visit.

"Ah, looks like they missed some," Catra said.

Adora tensed as she saw the scuffle in the distance - lots of soldiers were there, beating some people and dragging them away. Lots of other people were joining in, trying to beat them up. She winced at the sight, but they were quickly driven past the spot.

"At least the cars are armoured," Catra said.

Adora nodded. Anyone taking a shot at them would have to use a heavier weapon to threaten them - and those would show up on the scanner Hordak was currently watching from Darla. And they would have force fields at the ceremony.

Still, Adora felt a little on edge. So many people - most of the world - would be watching her. What if she botched it? If she tried

to restore magic, and it didn't work… No. She had done this before. She knew how to do it. Everything would be fine.

Everything… that was a lot of people. Adora blinked.

Catra whistled. "Somehow, it looked smaller from orbit."

Adora nodded. It was like looking at a sea of people. "There must be millions of them."

"Yes."

"Well, it would look smaller from a longer distance and from a different viewing angle," Entrapta said. "But I know what you mean."

"Indeed," the Prime Minister cut in. "Every true Indian wishes to be present when our divine heritage will be returned to us."

"Except for those who think magic is evil," Catra commented.

The man frowned for a moment. "Yes. But rest assured that none of them will be present to mar this occasion. We've purged them from the guards assigned to this ceremony as well."

Oh. "Purged?" Adora asked. She had read about such purges…

"Reassigned to duties that take them away from the region," the Prime Minister explained with a slightly forced smile. "We're not barbarians."

Ah. That was reassuring. Somewhat, at least. But not overly much. As far as Adora knew, most of the people in India who didn't want magic returned were members of a religious minority. To persecute every one of them for the views of some of them…

But they had arrived now, the car slowing down as it passed a checkpoint, then drove through a narrow lane kept open by double-rows of soldiers holding back a cheering crowd. Flowers were thrown at them, and Adora flinched for a moment before

she reminded herself that they were in an armoured car and would have detected any explosives in the crowd.

And there was the huge stage, where the delegations from other countries, members of the Indian government and other honourables were waiting.

More greetings followed. Many more. Adora shook hands with the Japanese Prime Minister, with familiar faces from the United Kingdom - they had sent the Crown Prince - and France, Germany and the United States, and many other people she hadn't met yet. By the time they were finally done with the greetings, the sun was high in the sky, and Catra was cursing under her breath about the heat.

And now the Indian Prime Minister was starting his speech. He was a poet of sorts, Adora had read, and well-liked - the people were cheering at almost every word - but…

"I'm growing hungry," Catra complained in a whisper.

"There's going to be food afterwards," Adora whispered back.

"I know. I can smell it in the tents behind us," Catra replied.

"And I can hear you," Gimmer hissed. "Shh!"

Adora blushed a little. She should have known better than to respond to Catra in a situation like this. She couldn't be rude to their hosts - everyone, the entire world, was looking at them!

She took a deep breath. Besides, it wouldn't be much longer - how long could the Prime Minister talk, anyway? Any minute now, he would finish, and…

Hordak's voice coming through their communicators interrupted them. "The scanners show a disturbance in a military base to the east."

"Disturbance?" Catra sat straighter, tensing up.

“Fighting. Between soldiers - they’re wearing the same uniform.”

“Traitors or infiltrators,” Catra spat. “What’s their goal?”

“The artillery park, it seems.”

Adora gasped. Artillery? What was the range of the guns? Emily’s force field would stop an artillery shell, even a barrage, but she couldn’t cover the entire area, and if a shell struck the tightly-packed crowd…

One of the soldiers on stage was listening to his radio as well, she noticed. And looking pale.

“Who’s winning?” Glimmer asked, leaning over. No need any more to care about how it looked - more soldiers were moving now, as well as bodyguards.

“It looks like the attackers are winning,” Hordak said.

Adora blinked. How long would it take them to aim a cannon at the field here? A few minutes, probably, if they had ammunition and a trained gun crew. That had been Horde standard.

“They’re attacking the magazines as well,” Hordak reported.

That was… Adora clenched her teeth.

“Are we in range of their guns?” Glimmer asked.

“According to our data, yes,” Entrapta said, staring at her tool. “Emily can stop the shells from hitting us, but she can’t protect everyone here.”

Like Adora had thought. This was…

“Hordak, stop them!” Glimmer snapped.

“Fire!”

A moment later, Adora saw a beam strike the ground in the distance, followed by explosions. And then an entire volley of beams struck. And more explosions followed, dust forming columns of smoke that billowed up.

Orbital support, she realised - they had trained for that. But secondary explosions? In the Indian Army base?

“The attackers are dead,” Hordak reported. “There was some collateral damage as the magazines were neutralised.”

Adora wasn’t listening any more. She was staring at the crowd in front of her. The people were panicking. Screaming. Pushing against each other and the soldiers as they tried to run away from the explosions. She saw a soldier being overrun, people trampling over him, heard more screams, saw a little girl stumble and fall, and a man step on her…

She gasped. The crowd, the sea of people, was going crazy. And soldiers were moving in front of the stage, brandishing weapons. Trying to protect the Prime Minister and his guests with lethal force.

“No!” she yelled, standing up. Raising her arm. Summoning her sword.

“For the Honour of Grayskull!”

A familiar rush filled her. Her armour formed. She was She-Ra, Princess of Power!

The people around her - those who didn’t know her - stopped and stared. But that wasn’t enough. The crowd was still panicking. People were being hurt. People were dying.

She stabbed her sword upwards and focused. On her power. On her magic. Reaching out to that familiar pattern. Connecting.

For a moment, everything turned white as the magic of the planet ran through her. She almost screamed. There was so much, it was

so hard, so…

And flicked her sword. Cutting the pattern. It was like popping a balloon. One moment, she felt like she was about to burst from the power filling her. The next, the pressure was gone.

Mostly. She was still glowing brightly with power. With magic. Blazing.

She turned, looking at the crowd. The hurt and the dying. The panicking and the crying.

Adora raised her sword, then brought it down.

And a wave of magic burst from her blade, sweeping over the crowd. A wave large enough to cover the entire area as she turned.

Healing.

Soothing.

Earth’s magic. Used for the first time in a thousand years.

*****

The Magic Question Part 4

Cheyenne Mountain, Colorado, United States of America, Earth, October 17th, 1998

"We're tracking six frigates in orbit above the Indian subcontinent. They're holding positions."

"No further weapon fire detected."

"Six more frigates are in a holding pattern over the northern hemisphere."

"Five minutes until our next satellite is in position to cover the area of impact."

Samantha Carter blinked at the reports from the other officers in the command centre even as she continued to analyse the data from all the sensors networked with her mainframe. They should have satellites in place already… Oh. She pressed her lips together. The United States had satellites in place already. But Stargate Command didn't control them - or had access to them. Not any more. They had to make do with the satellites transferred to Stargate Command.

"What do you have for us, Carter?" The Colonel was leaning over her desk.

"I'm still cross-checking the sensor data, sir," she replied. "But so far, it looks like a limited bombardment. Precision strikes with standard laser weapons from low orbit."

"Precision strikes?" He raised his eyebrows, then looked at the TV screen in the back, where a mushroom-shaped cloud was visible in the distance.

"Those are secondary detonations," she told him - as if he didn't know it already. "The Etherians must have hit the magazines of the base." She hit a few keys, checking the most recent satellite

image - which was still not up to date. But the intel report… "Artillery and tank shells were stored at the base," she said.

"And the terrorists would've gone for them so they could use the captured artillery pieces." The Colonel nodded. "And so our magical space princesses blew the base up."

"The magazine was surrounded by revetments," she informed him. "Its explosion should not have destroyed the entire base." They would know more as soon as the satellite finally reached its intended position.

Sam really missed the Air Force Stargate Command and its resources. Having to rely on CNN for real-time intel was a shame. She bit her lower lip. She might not know the access codes for the US satellites any more. But she knew how to get them - which cache memory to access and how. This was a global emergency, wasn't it? Maybe… She blinked, then sighed. She had better alternatives.

"One moment, sir!" she told the Colonel and pulled her phone out.

He didn't make a joke about texting or ordering pizza. Which was kind of reassuring - the Colonel joked and quipped the most when the situation was desperate.

"What are you doing?" And here came Sidorov.

Sam suppressed a sigh as she turned to face the General. "Getting more information, General." She called Entrapta.

"Sam! How are you doing?"

Her friend didn't sound as if she was in danger. Or concerned. But that was Entrapta. "How are you doing?" Sam asked. "We received reports of an orbital bombardment."

"Oh. Yes, Hordak had to destroy the guns and ammunition before they were turned against us. Emily could've protected us, but not everyone else. But we're fine now! And the panic has stopped!"

“Who are you talking to?” Sidorov snarled.

“Princess Entrapta,” Sam told him - as if it wasn’t obvious. “The situation seems to be under control.”

“Under whose control? The aliens’?”

“Well, they have all those ships in orbit,” the Colonel cut in.

Sidorov glared at him, then turned back to Sam. “Are they landing troops?”

“Who is that yelling in the background? We aren’t invading, by the way. Hordak is just a bit protective.”

A little? Compared to Priest, maybe, Sam thought. “So you are safe?”

“Yes, everyone here is safe. I think. The soldiers here didn’t start fighting each other.”

“How reassuring,” the Colonel said with a snort.

Sam didn’t smile. India was in a special situation, with significant parts of their Muslim minority opposing magic, not helped by a nationalist Hindu party controlling the government, but the United States had their share of religious fanatics with similar views. Probably in the armed forces as well.

“Yes! Anyway, I’m not sure if the ceremony will continue, but there’s no fighting here.”

Sam smiled wryly. “Yes, I doubt the festivities will just go on as planned.”

“Does this mean that magic won’t be restored?” General Petit had arrived with the rest of the generals in tow.

Entrapta must have heard him. *“Oh, no, Adora already did that. She used the excess magic to heal the wounded here.”*

"That was the light show on CNN," the Colonel said.

"What? They already did it?" Sidorov bellowed.

Sam narrowed her eyes. "My report clearly stated that, according to the Etherians, restoring a planet's magic doesn't take She-Ra longer than a few minutes." Did anyone actually read her reports through?

"Or faster if there's artillery fire incoming," the Colonel added.

A beeping noise alerted Sam to the incoming satellite footage. She put it on the big screen. And winced.

The base wasn't entirely destroyed. But the magazine and the parked guns were gone. Presumably with everyone in the vicinity. There were survivors amongst the soldiers, as far as she could tell. And some would just have been wounded.

But she didn't think there would be too many of those. Not where the lasers had struck. Or near the explosions.

"The Indians won't be happy about that," the Colonel said.

Sam nodded in agreement.

*****

National Capital Region, India, October 17th, 1998

The orbital bombardment had stopped, but smoke was still rising on the horizon. At least the target was destroyed, so there shouldn't be any more… Ah, no, there was another secondary explosion. Even Catra's ringing ears - why did crowds have to be so loud? - caught the sound.

She bared her teeth as another smoke cloud rose, this one tinted with red and orange. Probably a fuel depot - Entrapta had explained that this was how fuel explosions looked when they had

watched one of Earth's action movies and wondered about the blasts.

"I think their damage control isn't any better than their security," she commented. First, a mutiny, now this… She looked at the crowd around the stage. Most of them looked stunned. Blinking and patting themselves down. One man in a bloody shirt was holding his nose as if he couldn't believe it was still there.

Well, that was Adora's healing magic for you. Catra knew the feeling better than anyone else.

Next to her, Adora sighed, closing her eyes and staggering a little.

Catra grabbed her arm and steadied her.

"Thanks," Adora whispered, taking a deep, shivering breath before standing tall again.

"Anytime," Catra whispered back. She wouldn't let her lover down.

She looked around. The Indian soldiers had used the shock from Adora's magic to form a square around the stage, three lines deep. Others were surrounding the Prime Minister - and arguing. The man didn't want to leave the stage. He wasn't the only one - the British Crown Prince was also still on the stage, although Catra could barely spot him behind the two massive men standing in front of him. Not nearly as tall as Scorpia, of course, but She-Ra wouldn't tower much over them.

But other dignitaries had been dragged off by their security detail; Catra saw cars still rushing off.

"I do not detect any more hostilities," Hordak reported through their comm channel. *"The fleet is on standby."*

Good. Catra wasn't sure if the danger was over. She straightened, facing the nearest guards. They couldn't look weak. Not surrounded by such a crowd, and right after they had turned a

local army base into a crater. Sure, the base had been about to be overrun, and if the mutineers had used the artillery there, they would have caused a massacre, but people didn't like you blowing up their bases no matter your reason.

"So much for their security," Glimmer muttered.

"Why did they have artillery here, anyway? We're not even near their border with Pakistan," Bow asked.

"They must have been fearing an invasion from orbit," Glimmer told him.

"But we're guarding the system." Bow blinked. "And those guns wouldn't do anything against our ships."

"They probably weren't aware of that." Glimmer shrugged. She still looked angry.

"But we told them about our capability when we discussed the security for this, didn't we?" Entrapta asked.

"We did," Catra said, baring her teeth. "But they probably didn't really believe us. Or they just felt better with their biggest guns around."

Glimmer chuckled, and Entrapta looked confused, but before Catra could explain her comment, the Prime Minister walked towards them, pushing a particularly stubborn security guard out of the way.

"What did you do?" he asked.

"We stopped a terrorist attack," Catra replied. She managed not to sneer.

"You destroyed a base of ours!" another man snapped. He was listening to a radio. Right - Catra remembered that he had been introduced as India's defence minister or whatever his exact title was.

“The base was taken over, and they tried to use the artillery there,” Glimmer told him. “Did you want us to let them shell us here?” She pointed at the crowd.

“Emily can’t cover everyone here with her shield,” Entrapta added. She still was too open with military information, in Catra’s opinion. “We would have been fine, probably, but if they missed us, the shells would have struck the crowd.”

“And that would have been a massacre,” Adora said.

“You killed our soldiers!” the minister protested.

“They were mutineers,” Catra retorted. “And about to take the guns.”

“We had it under control!”

“Yeah, right - we saw it from orbit. Your soldiers had already lost.” Catra sneered.

“We weren’t about to wait until they shot at us here - at everyone here - before stopping them,” Glimmer said. “We’re sorry about the dead loyal soldiers, but we had no choice.”

“You could have…”

The Prime Minister interrupted the man. “I didn’t mean that.” He looked at Adora. “What did you do here? With your magic?”

Oh.

She glanced at Adora. Her lover straightened, towering over everyone but the two British bodyguards. “I restored magic to Earth. And then I healed everyone,” she said with a slow nod.

“Everyone?” the Prime Minister asked.

And Adora winced, suddenly looking embarrassed. “Well… everyone present in the area. I couldn’t exactly limit the healing

magic to just the wounded, and there was a lot of magic available, so I just healed everyone here."

"Everyone?" the Minister of Defence asked.

It has to be stupidity, Catra thought - if he were hard of hearing, Adora would have cured it.

And, of course, her lover was too nice to just call the man out for it and explained again: "Everyone I could see here, well, figuratively - even if they were in the middle of the crowd, I could heal them. It's more a figure of speech."

"We haven't much data for targeting healing spells," Entrapta cut in. "Usually, it's either aimed at a single person or a clearly defined area effect. She-Ra's magic is kinda an exception."

"Sorry if you would rather have stayed wounded or sick," Catra added with a toothy smile. "But saving lives was more important."

"But the healing was safe?" the Prime Minister asked.

"Yes." Adora nodded firmly. "I controlled the magic. So there won't be any side effects - I just healed you."

"That won't bring back our dead!" the Minister of Defence spat, still holding his radio. "The base was wiped out! Hundreds of our soldiers are dead!"

"Does that include the mutineers?" Catra asked.

"Catra!" Adora hissed.

"Just asking," Catra said, shrugging. "It must be hard to sort out the mutineers from the loyal soldiers if all were wearing the same uniform."

"We know how many soldiers were stationed at the base."

"Ah."

Glimmer took a step forward. “We’re sorry about your losses, but we couldn’t let the mutineers take control of your artillery.”

“Yes.” Adora nodded. “I can heal your wounded soldiers, but I cannot raise the dead.”

“Thank you,” the Prime Minister said. “It was a very difficult situation, but…”

Loud yelling from the crowd behind them interrupted him. He turned, frowning. “What are they…?”

“I can see! I can see!”

“It’s a miracle!”

“I can see again!”

Catra narrowed her eyes at a man walking towards the line of soldiers, the crowd parting before him. He was surrounded by crying people and holding a white staff above his head.

The Prime Minister blinked. “You gave him back his eyesight?”

Catra rolled her eyes. “Adora healed every one of everything,” she said.

“Of illnesses and wounds, cancerous tumours and accumulated microdamage over the course of your life,” Entrapta said.

More people were screaming and yelling. Catra saw one man stand on shaking legs but raising a wheelchair over his head while he cried.

The Prime Minister seemed to freeze for a moment, then quickly bent his knees, straightening up. “I feel no pain,” he said. “It’s as if I were young again. Is… Is this permanent?”

Entrapta spoke before anyone else could say anything. “Well, as permanent as healing - you’re not hurt or hurting any more, but

you can still get hurt again. You're just very healthy right now. You're not immortal if you wondered about that."

He laughed. Then he blinked again. "And you did this to everyone here?"

Adora nodded.

He smiled widely, then bowed. "Thank you very much."

The Minister of Defence was staring at them, his mouth half-open, as all around them, the diplomats and dignitaries started to talk to each other. They sounded excited.

"Well, that's one crisis averted," Bow said behind Catra.

She turned and glared at him. "Bow!"

"What?" He looked confused.

"Don't jinx it!"

"But…"

"We've started a bigger crisis," Glimmer mumbled. "Look at the crowd!"

Catra did. The people - even some of the soldiers - were staring at the stage. At She-Ra. Smiling. Crying. And…

"What are they doing?" Adora asked.

Catra snorted.

Praying. They were praying to She-Ra.

"They're worshipping you," she told her lover.

"Oh no!" Adora shook her head.

"That might actually be a good thing," Catra said. "Priest is less likely to attack a country full of people worshipping you."

Adora glared at her, but Glimmer and Bow nodded.

Entrapta was busy scanning the crowd.

And Catra looked at the mass of journalists and their cameras. Earth would know, or knew already, what She-Ra's magic could do.

She cursed under her breath.

"...the Shinto temples saw far more visitors than expected following the events in India, although no magic has yet been confirmed…"

"...a sangoma claiming to be able to heal has caused a riot in Capetown, forcing the authorities to intervene…"

Jack O'Neill shook his head. The world was going crazy over magic. And over the orbital bombardment that the Etherians had conducted - the Pentagon was in an uproar. He snorted. The brass really shouldn't be surprised; SG-1 had told them what a single Ha'tak could do, and the Etherians had tons of ships that, according to Carter, outclassed a Ha'tak. And yet, it had taken an actual orbital strike for the generals to take it seriously? The politicians were worse, though. Some were already demanding that the United States start building spaceships right now.

And all because a bunch of terrorists managed to take over a military base at the worst possible moment. He felt a bit guilty about that - he had mentioned that possibility when he had talked about security with the Etherians, but he had considered it a very low risk. Teach me to overestimate the Indians, he thought. Well, that couldn't be helped now. The Etherians had revealed their military power - part of it - and what magic could do. And the world wasn't exactly ready for it.

"...and here, in Salem, hundreds of witches are celebrating the return of magic with a broom race. Although, apparently, the start has been delayed while the coven organising the race is debating whether or not pointy hats or helmets should be worn. Until they sort it out, we'll be watching the curse competition going on. Ugh! I just stepped on a frog!"

He blinked at the latest segment. What the hell? That was… Jack narrowed his eyes. "OK, who's the joker who put up Saturday Night Live on the screen?" he yelled through the control room.

One of the new Warrant Officers spoke up: "Sorry, sir! The algorithm must have selected this because of the magic keyword."

Jack glanced at Carter.

"There are search algorithms, sir, but the final selection is made by an officer," she answered his unspoken question.

Which meant that someone had either thought it would be funny to slip in a comedy show or hadn't noticed that this was a comedy sketch and not an actual news report. Jack hoped it was the former - they could need some laughs right now.

"Colonel O'Neill? Captain Carter?"

Jack turned. That was General Haig's aide. "Yes?"

"Your presence is requested."

Oh, damn! Just what he had been waiting for: A meeting with the brass at almost midnight.

Jack sighed.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 18th, 1998

"...and that is our estimate of the firepower the Horde frigate brought to bear against the Indian base. Although we cannot say whether or not they have used their maximum firepower or held back to avoid collateral damage. We are tracking the frigates in high and low orbit."

Carter sounded slightly annoyed, in Jack O'Neill's opinion. Not because it was now past midnight, but because she didn't like repeating what she had already reported - or what was obvious to anyone who could read a radar screen. Which, admittedly, wasn't everyone. Still, she usually hid her annoyance better. She must be tired as well.

"How much time will we have to react should they decide to strike at Stargate Command?"

Or just fed up with Sidorov's paranoid questions.

"None, General," Carter replied. "By the time our sensors register their weapons firing, they have already struck the surface."

"I mean, how quickly can they move into a firing position?" The Russian glared at her.

"That depends on the angle from which they want to fire downwards and their position relative to us. A few minutes at most." Carter was using her 'I want to roll my eyes at you' voice - Jack was very familiar with it.

"And we're not going to sound the alert every time they pass overhead or appear on the horizon. I, for one, like to sleep sometime," General Petit added with a grin.

Carter smiled as well, even though, as far as jokes went, that one had been old when Jack had been born.

"We don't have the capability to stop the Etherians from striking any spot on Earth," General Li summed up what everyone with half a brain would have known on the day the Etherians showed up.

“Yes, General,” Carter confirmed.

“Thank you, Captain Carter,” General Haig said. “This matches our own estimate.”

Jack refrained from sighing loudly. Was this just a cover-your-ass meeting? Did they need SG-1’s official statement to inform their respective governments?

“With that settled,” the limey went on, “there remains the question of magic.”

Jack clenched his teeth. That really wasn’t a subject he wanted to talk about at midnight. Or at all.

“I am afraid that I am no expert on magic, General,” Carter tried to avoid this.

“You’re the best we have, Captain,” Haig retorted. “You have the most experience with magic and magitech at Stargate Command.”

Or on Earth, Jack added for himself.

“Yes, sir.”

“So… is there a way to tell whether magic was restored to Earth or not?” General Li asked.

Carter frowned. “The Etherians said so, sir.”

Sidorov scoffed. Loudly.

Jack narrowed his eyes at the Russian. “In my experience, they wouldn’t lie about this,” he said. “And why would they lie in the first place?”

“They could attempt to deceive us into believing that magic has returned, making us waste time and money trying to control it while leaving us unable to defend ourselves against their magic!”

Jack sighed. Yes, the Russian general was as paranoid as ever. “As we just concluded, we are already unable to defend Earth against their fleet, General.”

Hammond was frowning at him, but Jack didn’t care. Carter was his subordinate. She wouldn’t have to face inane questions from a paranoid Russian if he could help it.

“That would be an open attack, which would reveal their aggression,” Sidorov spat. “But with magic, they could strike far more subtly. Without magic of our own, we cannot defend against that!”

Well, that was theoretically possible, but the Etehrians wouldn’t even dream of doing that - Jack knew them.

“Without restoring magic, the Etherians are limited to magitech, minor inherent effects such as Entrapta’s hair control and Adora’s powers,” Carter cut in. “They cannot use teleportation or spells.”

“That’s what they claim!”

“General.” Haig didn’t sound annoyed, but his meaning was clear, and the Russian glared at him before leaning back with a huff and crossing his arms over his chest. Haig looked at Carter. “But can you confirm that we currently have no way to detect whether or not Earth has magic?”

“Except for observing a magical effect that is not the result of magitech, no sir.”

“Ah.” Haig nodded.

Petit spoke up: “And what can you tell us about the ‘healing’ Adora did, Colonel O’Neill? According to your file, you were healed by her.”

Jack clenched his teeth for a moment, remembering the moment he had almost died and was healed. Then he pushed the

memories away and shrugged. “She points her sword at you, and magic heals you.”

“A few more details would be appreciated, Colonel.” The Frenchman kept smiling at him.

“I’m sorry, but those details are classified.” Jack smiled back. “That happened before the United Nations took control of Stargate Command.” Hammond didn’t look happy but wasn’t frowning at Jack, he noted.

“And you can’t or won’t elaborate on the detailed effect said healing had on you,” Haig said.

Jack spread his hands. “Sorry, sir.”

“From the information that we gathered so far, the healing magic is not limited to specific injuries and doesn’t seem to discriminate,” General Li said. “You are remarkably fit for your age, Colonel.”

“Good living,” Jack replied with a fake smile. So, they knew about that.

“Is there any way we could ask the Etherians to duplicate this feat at Stargate Command, should we suffer casualties?” General Haig asked. “Or would they be willing to restore the health of soldiers who have been medically discharged?”

Adora would heal pretty much everyone in need, Jack was sure of that. But her friends wouldn’t let her heal everyone and burn out. “I don’t know, sir,” he replied.

“I think her services will be in high demand,” General Petit stated the obvious.

And a lot of people would probably regret not having attended the event in India. Still… this was a problem for the Etherians.

Petit seemed to be about to say something else, but the door was opened, and an aide stepped in. “I’m sorry for the interruption,

sir," he told Haig. "But I think you should see the latest news from the BBC." He barely waited for the general to nod before pointing a remote at the screen in the meeting room.

"...reporting directly from Stonehenge, where the police have had to disperse a crowd of people wishing to see magic return, we haven't noticed anything unusual so far, yet we… What's that? The stones are glowing. They are glowing! Is this a trick? I don't see any spotlights, and… yes, the light is coming directly from the stones, as the shadows prove. Oh, here are the police coming towards us…"

*****

Earth Orbit, Solar System, October 18th, 1998

"The United Nations are holding a special session to discuss 'the incident involving orbital bombardment' and invited us to attend and answer questions."

Adora frowned at Glimmer's words. "They don't want to talk about magic?" That had been the topic the United Nations had wanted to talk about for weeks, after all.

"That's the subject of another special session," her friend replied. "But they apparently want to talk about us blowing up terrorists first." She would know - she'd been talking to diplomats since she had woken up.

"And an Indian army base," Catra, sitting next to Adora in Darla's lounge, added. "Don't forget that."

Glimmer clenched her teeth. "The Indian Prime Minister said they understood our decision."

"That doesn't mean that he liked it," Catra shot back. "They lost too many soldiers to just forget it."

Adora nodded in agreement. You couldn't just ignore such losses. Those soldiers had families. Friends.

“They were already being killed by the mutineers,” Glimmer retorted. “We had no choice.”

“Yes. But not everyone will see it that way,” Bow said. “Some journalists complain that we didn’t ask the Prime Minister before firing on the base.”

Adora had watched the same news. But Bow had been compiling the news from various channels.

Glimmer snorted. “Most of them are trying to use this to attack the Indian government so they can replace it. And what if we had asked and he wouldn’t have given permission fast enough to react? Or not at all? They would have blamed us for the massacre those guns would have caused. And if we had shot at the base anyway, we would have made the Prime Minister and his country look powerless.”

“They are powerless,” Catra said.

“Yes, but it would be rude to rub their noses in it.” Glimmer shook her head.

“We were rude anyway, though,” Bow said. “There was no good solution.”

“It could have been worse,” Glimmer said. “At least from the military angle,” she added with a glance at Adora.

Right. Adora closed her eyes and sighed. The orbital bombardment was only one part of their problems. The other part was Earth’s reaction to magic. To magical healing. To She-Ra.

“Speaking of magic…” Bow trailed off, and Adora didn’t need to open her eyes to know he was grimacing.

“How many want me to heal them?” she asked, slumping forward.

“Many,” Bow told her. “There are complaints that we acted unfairly by healing Indians and demands that we repeat the healing in

every country.”

“What?” Catra hissed. “Who’s demanding that?”

“Mostly individuals being interviewed,” Bow said. “We haven’t received formal requests.”

That was good. Adora couldn’t heal everyone - and she couldn’t repeat what she had done n India. The magic she had used had been part of the blocked magic. “We need to tell them that I can’t use that kind of magic normally.”

“Yes,” Catra agreed. “Too bad we can’t tell them that you can’t heal at all.”

Adora sighed again. She couldn’t heal everyone - she knew that. It was impossible. There were simply too many people on Earth. Too many sick and dying people. She could heal some, though. But how to pick who got healed and who didn’t? It was unfair to only heal a few lucky ones, but to not heal anyone at all sounded… wrong.

“Well, once their own sorceresses learn how to heal people, that shouldn’t be a problem any more,” Entrapta said.

“That will take years,” Glimmer pointed out. “And we don’t know how that works with Earth’s magic.”

“Well, we know they have some magical sites and probably items,” Entrapta said. “There are glowing stones in England! They aren’t runestones, I checked - that would have been neat.”

“It also would have made us look like liars after Glimmer told them that magic won’t result in princesses ruling countries.” Catra snorted.

Glimmer glared at her. “I told them what we knew. And I was right - they don’t have runestones.”

“But they have glowing stones.” Catra grinned.

Adora sighed and gently squeezed her lover's thigh. "And I guess the British want to know what is going there?"

"Yes." Bow nodded. "They are concerned since they don't know what the stone ring - Stonehenge - did before magic vanished."

"They don't have records from the time before?" Glimmer narrowed her eyes.

"Apparently not." Bow shrugged. "There's speculation that the records were destroyed by some of their priests since the stone circle was older than their religion, but no one knows for sure." He sounded almost angry at that.

Well, he was the son of two historians.

"And they want us to come and examine the ring?" Entrapta sounded delighted.

"It won't be the only such site," Bow pointed out. "They might expect us to examine every magical location on Earth."

And that would take too much time, probably. Not that Entrapta seemed to mind - she nodded enthusiastically. "Imagine the data!"

"The United Kingdom is allied with us. So, we can help them without having to help everyone else," Glimmer said. "But we should keep an eye out for other locations. Just in case they turn out to be dangerous."

"Yes," Adora agreed.

"Yes." Bow nodded. "Anyway, so far, there haven't been any confirmed reports of Earth sorceresses working magic. But a lot of unconfirmed reports."

Carta scoffed. "Fools."

Adora frowned. "They might not have forgotten their entire magical tradition. Some lore might have survived." And would be

working now.

“Yes. But I don’t think actual sorceresses would want to reveal themselves right now,” Bow went on with a wince. “Witch hunts have grown worse with magic returned.”

Adora winced as well. She wanted to say they should stop those, but… If they started to intervene for such crimes, where would they stop?

“Any witch hunts organised by a country’s government?” Glimmer asked.

“Well, none that have led to anyone being executed so far,” Bow said.

“The cowards don’t want to risk another orbital strike,” Catra said with a scoff.

“Then it’s not an urgent issue.” Glimmer shook her head. “We have countries calling us returning magic an aggressive act and trying to get the United Nations to condemn us for it.”

“They did that before we returned magic,” Catra pointed out.

Glimmer nodded. “Yes. But now that magic is back, the situation changed. And that we had to destroy the base isn’t helping - some countries claim that’s an act of war.”

“Great.” Catra bared her fangs. “Now that they have realised we can destroy them from orbit, they’re growing even more aggressive? How have those idiots survived all those wars of theirs?”

Adora didn’t point out that Catra hadn’t exactly rolled over either on the occasions that she had been caught on the backfoot during the war. “They’re afraid,” she said instead.

“Well, they should be afraid.”

“We don’t want even more enemies.” Glimmer shook her head. “I’ll be meeting with the United Nations to explain that we just defended ourselves.”

“Yes.” Adora nodded. “And I can explain about magical healing.”

Glimmer was wincing. Bow as well. And Catra… was shaking her head. “No,” her lover said, “I don’t think you should appear in public on Earth for a while.”

Bow nodded. “Yes. People are putting up shrines and temples for you.”

“And others are burning dolls that look like you,” Catra added.

Adora opened her mouth, then closed it again. “I am no goddess!” she spat after a moment.

“Well…” Catra grinned, then grew serious when Adora glared at her. This wasn’t the time for jokes about this!

“Actually,” Bow said, “you do fit the definition of most gods on Earth. Not the most popular god, though.”

“Right now, at least. You look much better than that god,” Catra said.

Adora pinched her thigh in retaliation, making her yelp. This really wasn’t a joking matter!

“Anyway, I think you should limit your visits to Stargate Command,” Bow said. “Or discreet visits to other places. Nothing official.”

Glimmer nodded. “The Swiss sounded very concerned when they asked if you planned to visit the United Nations.”

Great. Adora clenched her teeth. Because of that stupidity, she couldn’t even help Glimmer sort out the mess she had caused?

“Or you can help Sam and us working with magitech!” Entrapta suggested. “We should be creating a magic scanner - a scanner to detect magic.”

“That should lay some of the irrational fears about magic to rest,” Hordak said.

Before Adora could say anything in response, Darla patched a call through to the screen in the lounge.

“Your Divine Highness!”

It was Priest. Adora wanted to scream. “Priest,” she managed to reply while he was bowing. “This isn’t another request for a preemptive strike against those countries that don’t like us, is it?”

“Ah, no, Your Divine Highness.” Priest beamed at her. “Your command was as clear as it was gracious. No, this is a request to help Earth in this time of crisis! In your divine name, of course.”

Adora blinked. “What help… what do you want to do?”

“Now that the humans have finally also seen the light and are worshipping Your Divine Highness, we wish to help your new faithful!” He nodded. “You asked us not to deploy the Holy Legion to convert the humans - peacefully, of course! - for political reasons, but surely, now that they have seen the light and are spreading your holy message themselves, the situation has changed?”

Adora managed not to scream. But it was a near thing.

*****

The Magic Question Part 5

Stonehenge, Wiltshire, United Kingdom, Earth, October 19th, 1998

"Welcome to Stonehenge! I'm James Mason, and this is Major Smythe-Cranston."

The British official - in tweed like the cliche - looked more cheerful than Samantha Carter had expected someone to look faced with an unidentified magical phenomenon. Perhaps he was just relieved that help had arrived to find out what was going on. At least the officer next to him looked properly stiff when he nodded at them.

"Thank you," she told them.

"We're so happy to be here!" Entrapta said, her hair waving. "This is so interesting! The first expression of native Earth magic!" She blinked. "Well, the first that we know off! I can't wait to analyse everything here!"

"You don't have something like it on Etheria?" Mason asked.

"Nothing that looks like it - but depending on *what* it is, we might have something similar. Although we won't know exactly what until we finish our examination. At least I think we can exclude the possibility that this is an ancient superweapon's charging chamber - the readings don't match at all."

Mason's smile turned rather brittle, and the major tensed even more. "I'm happy to hear this. I wasn't aware this was a possibility."

"Well, it's theoretically possible but unlikely. Even if Earth had a magical superweapon, it would need a long time to charge," Entrapta went on. "I bet this is something very different."

"Ah… the most prevalent theory, before the return of magic, was that it was an ancient astronomical observatory or a religious site," Mason said.

"That would be boring." Entrapta cocked her head with a slight pout. "It would be far more interesting if it were some portal or beacon related to another dimension!"

"We'll inform you as soon as we find out anything," Sam told the two men. "Unless you have anything else to discuss…?"

"No, I think we're set here," Mason said. "We'll be at the local headquarters if you need anything. You can reach us over the radio, I believe."

"Yes." Sam watched them leave. Obviously, they didn't want to remain any longer on site as they had to. Or they had orders to leave the Etherians to their work.

And speaking of work, it was time to unload their instruments. Sam followed Entrapta up the ramp to pick up the scanners and other gear.

If Sam needed a reminder of how much her life had changed in the last three months, it would be the fact that as a member of the United Nations Stargate Command, she was part of an Etherian mission to England on behalf of Her Majesty's Government to investigate Stonehenge for its magical properties. And, of course, that a few hundred police officers, as well as two companies of British soldiers, had cordoned off the entire area to keep thousands of civilians from storming the place.

"I miss the secrecy," she mumbled as she stepped out of the shuttle.

"What?" Entrapta paused at the bottom of the ramp.

"Nothing," Sam replied. She looked at the line of soldiers and police in the distance. "Just…"

"Oh, we should be safe here," Entrapta said. "We have six frigates overhead, and Darla should also soon be on the way from Geneva." She frowned. "I don't know why Glimmer had to attend the United Nations session about orbital bombardment. Hordak volunteered to answer any technical questions they had."

"I think it's not just technical questions that they want answered," Sam told her as she arrived at the bottom of the ramp as well.

"Oh? But we already told them all about our rules of engagement," Entrapta said. "Who would expect us not to defend ourselves?" Before Sam could answer that question, she went on: "Of course, technically, we were defending the people attending the ceremony since even in the worst case, we were pretty safe thanks to Emily's shield, but I think that's covered as well." She shrugged.

"I think people didn't expect how you would defend yourself," Sam said.

"That's weird. We told them about the ships. And that they have the capability to fire from orbit at targets on the ground. And they had your report as well covering the use of Naquadah-enhanced bombs, where we used lasers to leave a message in the ground."

Sam remembered that. She sighed. "My report was classified, I believe." Not that everyone who should read her reports did it with the attention they deserved, anyway.

"Oh. I forgot about that." Entrapta sighed as well. "How are people supposed to make decisions if they lack the data to fully understand the situation?"

"People rarely have all the information they need for their decisions," Sam replied. "So, they make the best decisions they can think of. Or should." She hesitated a moment. "And not everyone has the same view of a situation. Some people will value short-term benefits over long-term benefits. Or consider harming their own people acceptable if they personally profit."

“Well, they shouldn’t get elected in that case. Or reelected,” Entrapta said. “Isn’t that the advantage of a democratic system? That you can replace such leaders without a coup?”

Sam sighed again. “Not every voter knows enough to make an informed decision.” You almost never had the complete picture of a situation, anyway.

“Oh.” Entrapta frowned. “That seems like a pretty bad flaw of the system.”

“On the other hand, without a democracy, you don’t even have the option to peacefully remove a leader who values their own profit more than their people.” Sam managed not to scowl. There were reasons that monarchies had been replaced with democracies.

“That’s true as well,” Entrapta said, nodding.

Sam reminded herself that Entrapta wasn’t one to argue a point if she thought it was supported by logic and data.

“So… let’s set up our scanners. Glimmer and the others should arrive shortly,” Entrapta said. “Emily, are you hooked up to our sensor network?”

The bot beeped affirmatively.

“Great! So, we’ll be very safe here.” Entrapta walked over to the outer stone ring.

Sam followed her. In daylight, the stones were barely glowing, but it was still noticeable. At least it wasn’t harmful radiation, as their scan from orbit had shown. Just normal light with a blue tint. Of course, that didn’t mean the site was harmless - if the light was of magical origin, and their scans had also hinted strongly at that, then anything could be possible here - no one really knew what Earth magic could and would do.

For a moment, Sam wished the Colonel were present. He had wanted to come, but he had been stuck in meetings all day. And with the Etherians present, and the Colonel's lack of magical skill or experience, he wouldn't have been of any use here. Despite his talent for magic, as far as they knew.

Sam wasn't sure how she felt about that. The Colonel was one of the best officers she knew. Having him spend his time learning magic - provided they found a teacher or sources - would leave Stargate Command bereft of his experience and leadership. On the other hand, of those she would trust with magic, he was at the top of the list. But it was his decision - or should be.

She started setting up the crystal array for a scanner while Entrapta did the same on the other side of the ring. Shortly before they had finished, Emily announced the arrival of Darla - Sam knew those signals by heart now.

And here came Darla, engines lighting up as she came to a stop above them. After hovering for a moment - probably to scan the area for threats - she started descending.

Sam noticed the ship's force fields expanding slightly to cover the entire site before the ramp was lowered. Unless someone had buried explosives underneath them - and somehow fooled their scanners - they were now safer than anywhere else on Earth.

Then the rest of the Etherians appeared, walking down the ramp to join them. Catra was in the lead, followed by Glimmer and Bow. Catra was looking around as she approached them. "No welcoming committee?" she asked, ears twitching.

"We talked to them already and asked them to give us space to set up without disrupting our work," Entrapta told her. "So, they're waiting with the soldiers there." Her hair pointed towards a few tents thrown up near trucks and APCs.

"Ah." Catra nodded, then turned around and yelled: "No one's here to ask you for healing, so get your butt down here!"

Sam blinked. What…?

Then Adora - blonde hair hidden beneath a wide hat and wearing a long coat - appeared at the top of the ramp.

"It's her disguise," Catra answered Sam's unspoken question.

"She was bothered in Geneva for healing by the same people who were angry with us for defending ourselves," Glimmer added. "Damn hypocrites."

"Well, they weren't the exact same people who actually accused us of trying to invade and conquer Earth," Bow said. "Just people who worked there."

"And the dummy healed them." Catra scoffed.

"I couldn't just not heal them - it took me less than a minute." Adora pouted at them. "And they were deadly ill."

"And now more people think they just have to ask you and get healed," Catra shot back.

Bow raised his hands. "It happened. And I think none of us would walk past people dying if we could help them."

Adora nodded, as did Glimmer - though the latter was frowning. And Catra scoffed again.

"Oh, but you wouldn't do it either!" Entrapta chimed in with a smile, her hair tendril patting Catra on the head for about a second before the catwoman shrugged it off.

"But now everyone will think they just have to meet you and get healed!" Catra repeated. "Even on diplomatic meetings!"

"Well, we can just teleport in and out now," Glimmer said. She grinned. "I so missed that!"

"Just don't teleport here before we've finished analysing the magic effect," Entrapta told her.

Sam knew she shouldn't, but she couldn't help herself - she was too curious. "So, what was the meeting's result?"

Catra snorted. "They couldn't come to a decision."

Glimmer frowned at her. "The United Nations decided not to condemn us for defending ourselves. The motion to do so failed to pass. That's a difference."

Catra shrugged. "Same thing."

Well, Sam had expected that. Between the allies of the Etherians, the prospective and hopeful allies and the countries who didn't want to provoke a power that could lay waste to their forces without taking any risk, the odds that there would be a majority were very slim, even discounting the almost certain veto in the Security Council.

"We still have to return to talk about 'the magic question'," Catra said

She was making air quotes. Was that a sign of Earth's popular culture being adopted by the Etherians? Sam made a mental note to mention it to Daniel. He expected such cultural adaptions. "I doubt the outcome of that will be different," she said. Too many countries saw magic as a way to even the odds against technologically superior rivals.

"Let's hope so. And let's hope they don't invite all their sick and wounded for Adora to heal," Catra said. "I bet some ambassadors are already thinking about selling spots."

"Catra!" Glimmer scoffed. "We're talking about high-ranking diplomats!"

"Exactly."

“Let’s analyse the magic here,” Adora spoke up. She was eyeing the cordon around them, Sam noticed.

If those people decided to push, Sam doubted that the police and soldiers could hold them back. And despite their reputation, the British could be very unruly.

“Yes!” Entrapta nodded. “We’ve placed a crystal array to enhance our scanners!”

“And I can now cast a few spells to help us identify what kind of magic this is,” Glimmer added, raising her staff.

Sam made another mental note that it seemed the staff wasn’t a piece of magitech, but probably what Entrapta had called a focus when she had mentioned magic tools. Or maybe Glimmer hadn’t used her staff so far because she wanted to appear less threatening. After the orbital bombardment, a mere staff wouldn’t matter any more, of course.

Then Sam focused on the readings from their scanner. That was… She frowned and did another scan, compared the data… She had to run another scan!

“It looks like a minor healing effect,” Entrapta said, sticking her head under Sam’s arms to stare at the screen.

“Like the one in the jungle?” Catra asked, tensing up.

“Not like it. Similar, but since this is healing magic, not an unguided regeneration effect, there shouldn’t be any zombies,” Entrapta said.

Sam nodded. “Yes.” She had already scanned for such results - to her relief, the small mammals and insects in the area didn’t show any effects like those that they had observed in Honduras.

“So, is this a healing site?” Catra asked, stretching her arms over her head.

"It might have been one," Sam replied. "But if the stones had been glowing in the past, we should have had records of that, I believe."

"Are you sure?" Bow asked. "From what I found out, a lot of records didn't survive various catastrophes. And purges."

"The glowing might be a result of magic returning after so long. The enchantments might be slightly overloaded," Glimmer said. "Or something broke with the missing stones."

"Or the stars aren't aligned. Or are aligned. The stones were placed in accordance with astronomical observations, after all." Entrapta beamed. "We need more data!"

Could Earth's magic - Earth's magic traditions - be relying on constellations? Sam hoped it wasn't the case. The thought that astrology might be based on actual magic was almost too much to bear…

*****

Whitehall, London, United Kingdom, Earth, October 19th, 1998

"...and that's the data we used for our conclusions."

Catra watched the others' reactions to Entrapta's presentation. Most of the members of the British Government - Her Majesty's Government, she corrected herself, even though it was more the other way around - who were present seemed to be relieved that they weren't sitting on an Earth version of the Heart of Etheria. Most but not all. A few were almost disappointed.

The Prime Minister, though, smiled. "Thank you very much for your help."

"Oh, you're welcome!" Entrapta beamed at him. "It was a very interesting examination. We now know more about Earth magic.

Although it's too bad that the site isn't a portal to other dimensions. That would have been even better!"

"Yes." Sam nodded. "It was very informative. Especially with the increasing number of similar reports."

"Well, at least most of the supposedly haunted locations didn't show up," the Home Secretary commented with a laugh. "We can handle a few prehistoric magical sites. Especially if they are just healing places."

"We would have to check all of them to be sure of that," Sam told him.

"And once this gets out, there will be a lot of people pressuring us to let them visit Stonehenge," the Prime Minister said.

"And a lot of disappointed people once they realise it's not a stone version of Adora." Catra scoffed.

"Ah… What exactly does the, ah, magic there do?" That was the Health Secretary.

"It's a weak healing effect. You recover faster if you're resting there," Glimmer explained.

"Just recovering faster? Or will you heal from conditions that would not improve without treatment?" The Health Secretary looked intrigued rather than disappointed.

"The latter," Glimmer replied. "But it's not very powerful. You'd have to stay a long time to get healed from a serious condition. Although casting heal magic would be improved as well."

"We'll have people camping there. And fighting each other for a spot on the ground." The Home Secretary wasn't laughing any more. "This is a disaster."

"We could transfer the site to the NHS," the Health Secretary said.

“That won’t keep people away - quite the contrary.”

Catra nodded in agreement. People would want magic healing. Who wouldn’t? But the more options they had, the less they would bother Adora.

“Then we need trained, ah, sorceresses, as soon as possible.” The Health Secretary wasn’t looking at them, but Catra knew the comment was aimed at them. Not very subtle.

“We can’t yet tell what kind of instructions will work best for your sorceresses.” Glimmer said. “And which magical traditions are the best option.”

“We haven’t found actual sorceresses on Earth. Not yet,” Bow added. “You need the talent to work magic.”

“But using this as a blueprint, we could probably create magitech devices that heal,” Entrapta suggested. “Well, we would have to avoid the zombie side effects.” She scrunched her nose. “That’s probably what the First Ones were doing with their prototype. But we should be able to build something that doesn’t turn everyone nearby into zombies. I think.”

“Zombies?” the Prime Minister asked.

“That’s what you call mindless aggressive regenerating people, right?” Entrapta smiled.

“Err, yes.”

“Then zombie it is!”

Sam muttered something about the Colonel Catra didn’t catch.

“I would be glad if we could avoid creating zombies.” The man looked quite queasy.

“Me too!”

The Health Secretary coughed. "Would the current effect at Stonehenge be enough to heal disabling diseases and conditions? One of our most brilliant scientists is suffering from a paralysing disease that is robbing him of the ability to move and talk."

They meant Hawking. The name had come up several times when they were discussing how to reveal magic and healing magic. And now, with magic exposed…

Adora gasped. "I'll heal him right away!"

Catra didn't miss how the Prime Minister and others smiled. She was sure they had planned that.

"We can't take her anywhere," she mumbled.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 19th, 1998

Jack O'Neill was looking at the FNGs train on the field - melee combat this time, with bayonets, knives, Entrenching tools and staffs - but he wasn't really focusing on them. They were good enough anyway; the other countries hadn't sent desk jockeys. Though the Russian with an axe had been a little worrying. Jack was just here to supervise, anyway; he wasn't here as an instructor. And he had other things on his mind. Like Carter.

Jack didn't like it if his team went into danger without him. He trusted them, of course - even Daniel had learned to be a bit cautious, and he could talk his way out of trouble almost as often as he could get into trouble. And Teal'c and Carter were amongst the most skilled soldiers he knew.

But he was their commanding officer. Their leader. If they were in danger, it was his duty to be with them. He shouldn't be staying behind, safe at the base, while Carter went and examined a glowing stone ring that was under siege by thousands of crazy people. Even if she was with Entrapta. Especially if she was with

Entrapta, he corrected himself. The woman was undoubtedly almost as smart as Carter but didn't have half the common sense of Daniel.

At least nothing had happened, and they were now talking to the British government. And even if the limeys botched things, the rest of the Etherians would step in. With magic restored, Glimmer could now teleport.

He sighed. That was also a security risk. At least they had already implemented revised security protocols after the encounter with the Asgard and their transporter.

The instructor in charge called for a break - without glancing at Jack to check, Jack noted approvingly - and the groups broke apart. Jack kept an eye on the axe guy; the Russian looked a bit too happy swinging the thing around. And on Lenkova, who had been walking towards the snack line but diverted and was now making a beeline towards Jack.

"Vladimir is a good soldier."

So that was his name. Of course the woman would have noticed his attention. Jack shrugged. "I didn't know Russia trained soldiers in axe combat."

"We don't," she replied. "Vladimir grew up in Siberia in a logging family."

"His brawls with his siblings must have been a bloody affair."

She giggled at that, which made her suddenly look younger. Not any less dangerous, of course. He kept his eyes on her face, not her shirt. Not that her face wasn't attractive either.

"He's a good comrade. Helps out everyone in need," she said.

"And splits heads and logs, depending on what's on the menu." Jack snorted once.

“Yes.” She was still smiling. “Although you seemed a little distracted today.”

There was no point in denying it - that would only make him look foolish. “There’s a lot happening on Earth,” he said. “Riots, witch hunts, two nuclear powers ready to go to war with each other…”

She scoffed. “India and Pakistan have been at war before.”

“Circumstances were different back then,” Jack shot back. There hadn’t been any aliens or magic.

“Wouldn’t the Etherians stop a nuclear exchange?”

“They said they wouldn’t interfere,” Jack reminded her.

“Politicians and diplomats say a lot,” she retorted with a more cynical grin. “But you know them personally; would they let a nuclear war happen?”

That was a good question. “I don’t know,” he said. He was pretty sure Adora wouldn’t let millions die. But would the fleet be able to intervene in time? Were they even looking out for nukes?

“Well, let’s hope we don’t find out the hard way,” she said.

He could agree with that.

“But was that the reason you were distracted?” She cocked her head, her hair - longer than Carters - touching her shoulder and drawing attention to her tank top. “Or were you worried about Captain Carter?”

He narrowed his eyes. What did she know?

She smiled in return. “I heard she was investigating magical places with the Etherians. The last time you did that, you had to fight zombies, right?”

Jack was, once more, reminded how much he hated that their files were now almost public knowledge. “I didn’t know you had the security clearance to read those files.”

“I didn’t read them. But that there was a zombie invasion is public knowledge.”

He wasn’t sure if he could believe her. But she was right about people knowing about zombies - he had even heard, through the grapevine, that some Hollywood people wanted to shoot a movie about the mission. Still… the woman was a Russian spy. So he shrugged. “She’s with the foremost experts on magic; they’ve dealt with worse things.”

He half-expected her to ask what things the Etherians had dealt with, but Lenkova was too skilled for that. “Do you worry about every soldier under your command?”

“Yes.” Of course he did! Well, there were a few exceptions from his time in Special Forces.

“So, you’d be worried about me when I go on my first mission?” She was grinning again.

Jack bared his teeth and said in a flat voice: “You’d be a soldier under my command.”

She nodded and smiled again. “I hope we’ll go on a mission before you are transferred.”

“Transferred?” What had she heard?

“I read newspapers. America is close to finally passing the laws the aliens demand,” she explained.

Constitutional amendments, but he wasn’t Daniel; he didn’t feel the need to correct her.

“So, once you are allied with the Etherians, you will certainly be transferred to an active combat command.”

Ah, that. He shrugged. “I can’t fathom what the brass will do. After all, I spent years in deep-space radar telemetry.” The former cover story for Stargate Command.

Lenkova laughed at that. It sounded honest.

But she was a Russian spy. And under his command, not that that mattered.

*****

Earth Orbit, Solar System, October 20th, 1998

Adora took a deep breath. She could do this. She had prepared for this. She had rehearsed this. She just had to be firm. Firm and friendly.

Nodding, she said: “Open a channel to Priest, Darla.”

The ship did as ordered, and a moment later - Third Fleet never let her wait - Priest appeared on the big screen on Darla’s bridge.

“Your Divine Highness! How may your faithful serve you?” He bowed so quickly, Adora didn’t see his expression until he rose again, a wide smile on his face.

“I have considered your request to visit Earth,” she said. He perked up. “I feel, in the current circumstances, it wouldn’t be advisable.”

And his face fell. He looked worse than Wrong Hordak had looked before he recovered from getting disconnected from Prime’s mental network. “But Your Divine Highness…”

“The political situation on Earth is volatile,” she explained. “Many humans are afraid that we’re here to conquer them.”

“But if we wanted to conquer them, we would have done so already! Their defences are nothing against the firepower of even

the flotilla in orbit, much less the Third Fleet, Your Divine Highness!”

Adora sighed. “I know. And they should know.”

“How could they not, after our intervention in India? Were they distracted by the demonstration of your divine might and grace, Your Divine Highness?”

She pressed her lips together for a moment. That hadn’t been one of her finest moments. Although she would do it again in the same situation - she wouldn’t let people die if she could help it. But saying that wouldn’t help here. “They aren’t always rational. Although some fear that the destruction of the base was the first step in a campaign to conquer Earth.”

“They don’t know you, then, Your Divine Highness. Or us.”

She nodded. “Yes. That is why they fear us.” Well, some of the countries would fear them even more if they knew Adora and her friends better. Those who had horrible customs and laws.

Priest nodded. “I see. But if ignorance is the problem, shouldn’t we educate them instead of staying away from them, Your Divine Highness? If they could meet us and talk to us, we could show them that their fears are misguided!” He looked at her with an expression full of hope.

Uh… She managed not to bite her lips. How to tell him that some people on Earth would fear and hate Adora - and Priest and his faithful - even or especially if they knew them better? She hadn’t prepared for that question, but… “Are your people trained in diplomacy?” They weren’t; Adora knew that.

“We have studied the work of those on Earth who spread the word of false gods, Your Divine Highness. Missionaries, they are called.” Priest smiled at her. “We know all about door-knocking!”

“Ah…” He obviously didn’t mean the Goa’uld when he talked about false gods, Adora realised. That could be a bigger problem than

she had feared. “Many people won’t like it if you call their gods false.”

He frowned. “But they do the same, Your Divine Highness. The majority of the population worships single gods and denounces all other gods as false. And doesn’t the freedom of religion protect missionaries?”

Adora almost smiled. “Freedom of religion isn’t granted in every country. Many countries do not respect all religions - or outlaw missionaries.” Not too many prohibited missionaries, actually, but that was a detail.

“Ah!” Priest bowed again. “And yet, aren’t such countries those which need to learn about your divine wisdom the most, Your Divine Highness?”

“We have to respect their laws,” Adora replied. “At least as far as missionaries are concerned,” she quickly added.

“So, our missionaries shall stick to countries where religion is free, Your Divine Highness.”

“I am not a goddess,” Adora said through clenched teeth. She had tried to avoid this.

“You are as humble as you are powerful and wise, Your Divine Highness,” Priest replied, bowing so deeply that she couldn’t tell if he was smiling or smirking.

“I’m really not,” Adora repeated herself.

“Your Divine Highness, we have also studied the gods that are worshipped on Earth - and their deeds. You have healed the sick, let the blind see again and the lame regain their legs. You have struck down the false god who lied to us and oppressed us. You have turned the heart of his Empire into a garden in space. You have freed our souls and cast his soul down into the Abyss. And you have saved not merely one world but all the worlds in the sector. These facts do not lie, Your Divine Highness - you more

than met the standard for divinity on Earth." Priest smiled at her with shining eyes. "You saved us, and you will save everyone from the false gods. It is only just that we will spread the word of you in return, so everyone can bask in your grace."

No, no, no! That was wrong! Terribly wrong! "I don't have a grace!" she snapped.

"Your humility is divine!"

Adora opened her mouth to yell at Priest, then took a deep breath. This was going all wrong! She had wanted to explain to Priest why he and his people couldn't visit Earth to convert people. She could just tell them not to visit Earth, of course. And she was tempted to do so - very much.

But she had talked about this with her friends. What if Priest took this to mean that the people on Earth are to be ignored because they were beyond saving? Or, worse, that Adora didn't want them saved or whatever? You couldn't win a war if a big part of your soldiers thought their allies were traitors or at least ungrateful heathens.

She sighed. "You won't visit a country without permission from that country and from myself or Glimmer as our commander."

"Yes, Your Divine Highness!"

"And you'll stick to short trips." No invasion. Just some sailors going on shore leave. "And not everyone at once."

"Of course, Your Divine Highness. We have to remain ready to fight at your command at a moment's notice!"

Adora couldn't think of anything else. She nodded. "Good." It was anything but good.

"As you command, Your Divine Highness! I will relay your orders at once!" Priest bowed even more deeply.

Adora sighed. Her friends wouldn't be happy about this. Nor would the humans on Earth like this. Well, they'd inform the United Nations about this. And find out which countries would allow such 'visits'.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 21st, 1998

Once, Samantha Carter would have been delighted to see real teleportation in action - and in an environment where she could use all sorts of sensors to take readings to analyse later. But there was such a thing as too much of a good thing. And so, when her lab was lit up with another set of sparkling lights, she didn't even look up - Glimmer had been teleporting every five minutes, sometimes just a few metres in the lab. She must have really missed using her power.

"Sorry, I forgot - did anyone want dessert as well?" the princess asked.

"What dessert is on the menu today?" Entrapta cocked her head, pausing in the middle of working on an improved long-range Geiger counter. Something the world could really use right now, what with two nuclear powers butting heads - Sam knew that the Horde frigates in stationary orbit over the Indian subcontinent could shoot down missiles, but a better early warning system would be great.

"Oh, silly me!" Glimmer laughed and disappeared in another cloud of sparkles, only to reappear five seconds later. "Blue jello and apple cake."

"Oh! I've never tried that combination! Yes, I'd like dessert!"

"Sounds very American. Me too, please!" Iwan added.

"Just the cake," Catra chimed in from the counter she had taken over, not even looking up from her magazine.

“For me too. Just the cake, that is,” Adora, who was apparently content with serving as a pillow for Catra to sprawl over, said, lowering her own magazine. “Thank you!”

“I’ll try the jello,” Bow said.

“Jello,” Hordak grumbled.

“Are you sure you don’t want to try the cake?” Entrapta asked, beaming at him.

“I’ll take the cake as well,” Hordak replied at once - as expected.

“If you don’t like it, we can swap,” Entrapta said as Glimmer disappeared once more. Sam wondered how the mess hall was reacting to the princess popping in and out in short order. If the Colonel were present, he’d tell her about it. With a joke.

But he was supervising the training of the foreign teams in the field again. If you could call them teams already - they were still forming. Not that the Colonel was needed there - he was nominally in command of the teams, but others were training them, and he wasn’t scheduled as an instructor for today. But he said it was a good idea to keep an eye on the foreigners. Sam couldn’t disagree with that, although she would like it if there were fewer rumours about the Colonel having his eye on a particular foreign officer. Not that anything would happen - the Colonel would never start anything with someone in his chain of command.

Sam buried the mixed feelings she had about that just in time for Glimmer to return with a tray full of jello and cake.

“Finally! What did you do, bake the cake yourself?”

“Catra!”

“What?”

“No, I didn’t!”

“Can we do that? I’d like tiny cakes! Oh, but this is good! Try something, Hordak!”

“Hmph.”

“Since you didn’t say anything, I brought you both!”

Sam looked at Glimmer. The princess was holding out the tray with a bowl of jello and a piece of cake left on it. And she was smiling widely, so Sam would feel bad to refuse. Even if she wasn’t overly fond of either dessert. At least not of what passed for it here. Still, she had to eat it now.

And it tasted quite a bit better than expected. Had the French replaced the cooks? Or brought in confectioners? She could imagine General Petit bringing one along; the man liked his personal comforts.

“So, what do you think?” Entrapta asked Hordak.

“It is… adequate.”

“I’ve had better,” Catra added. “But for military food, it’s better than Horde rations.”

“Even rocks are better than Horde rations. Easier to chew, too,” Adora said.

Both laughed at that.

Sam felt herself relax as well. They still had lots of work to do - apart from enhanced scanners for nuclear weapons held ready, they also had dozens of reports of magical sites ‘going active’ all over the world to cover. And reports to write so the brass would realise that Sam couldn’t ‘whip up’ a healing device in her spare time. But she could take a break joking around with the Etherians. Maybe she could convince Daniel to join them in the afternoon - he was still sifting through his stack of books covering myths and fairy tales in an attempt to find working magical spells and traditions.

And maybe the Colonel would join them as well - all of them needed a break, after all.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 23rd, 1998

"...tensions are still high at the Kashmir border, but there hasn't been a shooting incident in two days, which experts say is a sign of increased control by the respective governments over their forces, although it remains unclear how the separatists will react to this. The United Nations have called on all parties to remain peaceful, although China's stance remains unclear, as does the stance of the Etherians, who have three space ships in geostationary orbit over the subcontinent, yet have not voiced an opinion on the matter so far. This leaves the world in doubt whether or not a nuclear war would cause them to intervene or not, which experts have claimed is similar to the United States' stance towards a defence of Taiwan and might be a calculated move to influence both India and Pakistan into negotiations, though…"

Sitting in her - it was hers now - corner in Sam's lab, Catra sighed and flicked the pad off. Bow had done all the work to let their pads access all of Earth's media, and yet there wasn't anything worth watching on. Or if there was, she hadn't found it, and she wasn't about to waste an hour switching channels to find something. If she did it on her pad instead of on a screen, it wouldn't annoy anyone anyway except herself.

"Back in the USSR, we joke that it no matter that we have fewer channels if Americans have dozens of channels and nothing good to watch." Iwan, the Russian spy scientist, smiled at her. "It was good joke, not approved by party, but not enough for gulag."

Catra snorted at the last line. "Sounds like Horde humour," she said before she could help himself.

“Da. I think. Horde much like USSR? Lots of tanks and soldiers, not much good food or fun?”

Catra nodded. “Pretty much, yes.” As cadets, she’d had Adora, but Shadow Weaver had done what she could to ruin everything, and when Adora had left… She sighed. Then Catra had done what she could to ruin everything.

“Bad memories?”

Catra narrowed her eyes. That was a bit blatant. She glanced around. Adora was working with Glimmer on a press release. So much for ‘I’m just coming along so I can visit Earth without getting hounded by petitioners’! Bow and the other tech heads were working on the enhanced Geiger counters - or were that enhanced-enhanced Geiger counters by now? In any case, it was a good opportunity for a spy to gather information. Add his obviously fake bad English he used to make people underestimate him… On the other hand, it wasn’t exactly a secret that Catra had been leading the Horde before… Before. “Yes, bad memories,” she said.

“People in Russia drink to get rid of bad memories, but not work well.”

“Yeah.” Not that Adora would let Catra drink anyway. Carve a few funny lines into a stupid pastel palace wall one time with your claws, and they never let you forget it.

For a moment, the Russian remained silent, looking at whatever he was working on. Then he nodded. “What helps is doing better. Helping helps.”

She snorted, but he had a point, sort of. “Helping can also hurt.” Adora proved that.

“Da. Life is pain, and then you die. Painfully.” He nodded sagely.

She shrugged. Life didn’t have to be painful. Usually, some idiot was responsible for that part. Or a Horde of idiots. Or some

ancient idiot bot trying to make Adora sacrifice herself. But life didn't have to hurt. Not really hurt, at least. You just needed to get rid of the worst idiots.

Iwan went back to working, and Catra switched her pad back on.

"...representants of several religions have voiced their concern about the Etherians intent to send missionaries to Earth, but the government has released a statement that aliens were also protected by the constitutional freedom of religion and that it would not take any steps to prevent Etherian visitors from proselytising. When asked whether or not he would push for reciprocity with regards to Christian missionaries visiting Etheria, the President said that visits to Etheria were currently restricted to military needs and that this question would have to be revisited once civilian travel was possible. He did not say when he expected this state of affairs to change, but…"

Catra shook her head. "It's not us who wants this, but Priest," she muttered. But the crazies were already screaming - sometimes literally - about an alien plot to brainwash the humans to corrupt their souls or something. And missionaries visiting Etheria? She snorted. Good luck trying to convince people that an invisible intangible god existed when you just had to look to the sky and see what She-Ra could do.

They should be more concerned about all the magical places activating, in her opinion. As Bow and Daniel had explained, most of them were holy sites of religions that had been more or less replaced by the current mainstream religions. Depending on how things worked out, they might need every missionary on Earth just to keep up with magic.

Or with Priest's followers.

*****

The Magic Question Part 6

Cheyenne Mountain, Colorado, United States of America, Earth, October 24th, 1998

"...and the police was forced to use violence to keep protesters and counter-protesters separated in Washington. Bill?"

"Thank you, Keith. Yes, it's been a bit sticky, but not as bad as it could have been. The number of people protesting the President's decision to allow alien missionaries to visit the country has been much lower than expected, even with the boost the return of magic gave to the anti-magic movement."

"People like magic healing. Who would have thought?"

"Certainly not the good reverend calling for this protest, Keith! Anyway, Washington is quiet again."

"Something that cannot be said for the rest of the world. Daily protests are going on in many countries in the Middle East, and the witch hunts and lynchings in the region continue, although hard numbers are hard to come by. In other news, experts disagree on whether or not we are looking at the start of a new religion in India now that we know that there's already an established Church of She-Ra. And no, that's not an official name, but if our benevolent alien allies would like to use it, I wouldn't request royalties!"

Jack O'Neill tuned the fake laughter out. Why couldn't the mess hall just broadcast CNN instead of this farce? Or the BBC. He didn't need to listen to stupid jokes when things were getting serious. Cracking jokes was his thing, damn it! On the other hand, he probably should be glad that the mess hall TV still broadcasted an American news show instead of a Russian one. Or a French one. He shuddered at the thought.

“Is something wrong?” Daniel asked as he set his tray down on the table. “With the food?”

“No. It’s the news,” Jack replied, nodding towards the screen now showing advertisements.

“What happened this time?” Daniel turned to look at the television.

“It’s not what happened, but how they cover it.”

“Ah.” Daniel nodded. “It’s actually quite interesting how the different TV channels cover the same events. You can make out distinctive social norms by the differences in what is emphasised and what’s dismissed. Why…”

“Daniel, your food’s getting cold,” Jack reminded him.

“Ah, sorry.” His friend started eating, then blinked. “Is it just me, or has the quality of the meals improved?”

“It’s not just you,” Jack told him. “We needed more cooks to cover the influx of new people, and our gallant foreign allies decided to send their own.” And, apparently, decided to show off and send cooks who could hack it in civilian life. The food wasn’t up to fine dining standards - they still had to cook in quantities that meant they couldn’t carefully prepare each meal - but it certainly was better than before.

“Ah!” Daniel smiled. “That’s good news!”

“What’s good news?” Carter had arrived, smiling at them both.

“Good to see that the Etherians didn’t squirrel you away on one of their ships,” Jack joked. It wasn’t as funny as he had planned, though.

Carter’s smile twisted a little. “Well, Entrapta did offer me to move into her lab.”

Jack frowned. Poaching his second in command? Over his dead body!

"Really?"

"Yes. She said it would 'facilitate research'." Carter shrugged. "I told her that I had duties here and could always come visit her."

Jack nodded. Yes. They had their duties on Earth.

"So, what's good news?" Carter asked after a bite from her steak.

"That we've got better cooks," Daniel told her.

"Indeed." For someone his size, Teal'c could be very stealthy. Jack had almost missed his approach.

"As long as they don't serve us crayons…" Jack snorted. He didn't have to explain the joke, which meant he had made it before. Well, some jokes bore repeating.

He was about to finish his own steak when he saw Carter tense up. Glancing over his shoulder, he saw Lenkova approach the table. "Do you mind if I join you?"

What was he supposed to do without sounding rude? She didn't offer a transparent excuse like all her comrades had already eaten or something.

"Not at all! please sit down!" Daniel said with a smile.

Jack managed not to frown at his friend. Daniel was just too friendly sometimes.

Teal'c nodded without saying anything, and Carter… smiled tightly as she nodded. She obviously didn't like Lenkova. But she hadn't said anything before, as far as Jack could recall.

And Lenkova was all smiles. She had ditched the top of her fatigues and was just wearing her tank top, Jack noticed. And she

made very appreciative noises when she tried the food.

"Oh, this is so much better than what we ate back in Russia," she said with a long sigh.

"Yeah, we can hear that," Jack said before he could help himself.

Lenkova blushed in return.

And Carter was openly frowning.

"So, what do you think of this?" Lenkova tried to change the subject by nodding at the TV screen, where the hosts were interviewing another supposed expert on religions.

"...and, so, while technically it falls under the term religion as defined by law, one could argue that it's not a religion but a thinly-veiled attempt to influence the internal politics of the United States. She-Ra is, after all, not a goddess but a leader of the Princess Alliance - it goes without saying that merely calling your party a religion does not make it a religion. And as our past shows, it's perfectly legal to limit foreign propaganda during wartime."

"But, and I am just repeating some of the arguments brought forth by others, why isn't the Church of She-Ra a religion?"

"Well, ah, first, She-Ra herself denies her, ah, divinity. And second, we can all see that she is no goddess. She has magic powers, but that does not make her a divine entity. There is also the lack of any significant history - according to what we know, this 'Church of She-Ra' is less than a year old and composed of formerly brainwashed clones. It might be called a cult, but it's not a religion as the average American understands it."

"The President seems to disagree."

"The government is beholden to the Etherians for military reasons. Of course they cannot afford to oppose this thinly-veiled

attempt to conduct propaganda operations in the United States. So…"

Jack rolled his eyes. At least no one could claim that the United States government controlled the media.

"Ah." Daniel adjusted his glasses with a smile. "That's a very biased opinion, of course. You cannot, as any anthropologist would tell you if asked them instead of a theologist of dubious repute, consider Christianity as the standard for a religion. Human religious traditions are much more diverse. We have ancestor worship, nature spirits being revered, pagan pantheons - although that term is somewhat misleading - and religions that do not have divine figures at all. For many religions, She-Ra would, purely based on her powers, indeed be considered a goddess. In fact, she would compare favourably to some of the classic Greek gods. As would some of her fellow princesses like Perfuma and Mermista. Again, purely based on their magic powers. So, from an anthropologist's perspective, I do not think that the government is in error when treating the Church of She-Ra as a religion." He beamed at Lenkova.

Jack suppressed a sigh. Daniel still had a tendency to go on and on.

Lenkova looked… well, she was frowning a little. "That's very interesting. But I wanted to know what you think of the consequences of this… new development."

"Ah!" Daniel nodded. "Well, it remains to be seen if this new religion can get any traction outside the former Horde fleet and India. Unless Adora starts healing Americans en masse - which I don't think she'll do - I don't see the new religion having much success in the United States. Although the resurgence of magic might change this - a lot of formerly esoteric beliefs might grow more popular provided their magical traditions end up working."

And wasn't that a pretty thought! Maybe Stargate Command would issue healing crystals as standard gear, and intel would be

based on tea leaves reading. And Carter would use crystal balls for her stuff.

“And do you think this will lead to problems?” Lenkova asked.

“It has the potential to be a problem,” Daniel replied at once. “But we’ve been seeing a pushback against the more intolerant religious conservatives for months, in politics and the media as well as public opinion, so I don’t think that the United States will see much more than a few protests against this.”

“I see.” The Russian nodded.

Jack wasn’t quite as optimistic but refrained from commenting.

Then she turned towards him. “You’ve been rather quiet, Colonel.”

Jack noticed Carter frowning again but ignored that for the time being. “Daniel’s the expert,” he said. “Just as Teal’c is the resident authority on Jaffa and Goa’uld and Carter’s Stargate Command’s goddess of technology.”

The frown turned into a scowl. “I’m not a goddess, sir.”

Jack didn’t wince. So, that had been a failed attempt to crack a joke. Even if Lenkova laughed.

“I don’t think it was meant to be taken literally,” she told Carter. “You do have a very impressive reputation, though. Dr Georgovich is singing your praises. Not literally, fortunately - he hasn’t the best singing voice.”

Jack chuckled, but Carter’s scowl deepened. “I am just doing what I can - like all of us here,” She replied, a bit cattily in Jack’s opinion.

Lenkova nodded. “Will you be transferred along with the Colonel when America closes the deal with the Etherians? Will they keep your team together?”

Carter blinked for a moment. “I am not aware of any such orders,” she said. “We are part of Stargate Command.”

That was the technically correct answer. But Carter knew as well as Jack that the United States wouldn’t leave the best friend of the Etherians under the authority of the United Nations.

“Ah, we’ve been working well with the Etherians, so it would stand to reason that they wouldn’t split us up,” Daniel ventured. “Especially considering the way the Etherians fight their wars. With the princesses expected to fight on the frontlines when necessary, and their personal approach to politics, I think all of us will be working closely with them.” He smiled. “So, I don’t see SG-1 being split up!”

Lenkova smiled as well. “It would be a mistake and a shame to split up such a successful team.” With a nod to Jack, she added: “Your team does you credit, Colonel.”

“Thank you. You have a good team as well,” Jack returned the compliment. It was the truth, after all. “You’ll do fine once you’re on your own.” And that they weren’t quite ready yet was also true.

It didn’t seem to bother the woman, though - she beamed at him. “Thank you. Although I hope you will still be available for talks once we’re no longer under your command.”

“Sure.” Jack nodded before he realised how the way Lenkova leaned forward a little added something not entirely professional meaning to her words.

Carter stood up. “Well, it’s time for me to return to the lab.”

Oh.

*****

Earth Orbit, Solar System, October 25th, 1998 (Earth Time)

"...and please remember: You represent the Alliance! We're here to protect Earth from the Goa'uld. Many people on Earth are afraid of us. They don't know our customs. They don't know us. So, don't scare them, don't bully them, and remain polite and peaceful no matter what they say. Even if they insult me - especially if they insult me. Err… you can, of course, defend yourself if someone attacks you, but don't go overboard. That means no orbital bombardment." Ador blinked. "Not without permission from Alliance Command." She didn't want to sound like a hypocrite, after all - and, in theory, there might be more situations where an orbital strike was the necessary answer.

The dozens of clones standing in formation before her in the frigate's main hangar bowed. "Yes, Your Divine Highness," they said in unison. And smiled.

Adora refrained from wincing even though it sounded very creepy. They acted as if just being near her was the best thing they could think of. As if Adora's mere presence made them happier than anything else. For a moment, she imagined Horde Prime standing in her place - he would have loved this. Had loved it. Except for the lack of orbital bombardment. And the other orders.

And, she added to herself, he probably wouldn't have taken the dark Earth-style suits every clone was wearing well either.

She glanced at Priest, who was wearing a similar suit, just with a more elaborate tie. 'New dress uniforms', he had claimed. Catra had found it funny. Adora less so. Priest was correct that the fleet - in fact, most of the Princess Alliance - didn't have dress uniforms like Earth soldiers had, though Bright Moon had 'parade uniforms', but to pick those suits as uniforms… Well, it was kind of just another part of his 'we proselytise through shore leave' plan. Which she really hoped wouldn't backfire but also didn't want to succeed.

But there wasn't anything else to say that she hadn't already said. Twice, since the clones might be a little too much like Priest. So

she nodded at the clones, then at Priest. “Dismissed. And have fun!”

Priest bowed so deeply, Adora was almost afraid his head would hit the ground, then straightened and addressed the rest. “You heard Her Divine Highness! You represent Her, so conduct yourself accordingly! I do not want to hear any complaints about your behaviour! Now go and enjoy your shore leave!”

The clones saluted him, Bright Moon style. That was a nice change from Horde regulations. Then they bowed to Adora, which made her struggle not to sigh again, before they started boarding the shuttles. All of them seemed very enthusiastic. Beaming. Laughing. Talking to each other. They loved this.

And Adora was left hoping that this wouldn’t cause trouble. At least not a lot.

*****

“So, how are your faithful doing?” Catra greeted Adora when she returned to Darla’s bridge.

“Shouldn’t you know that better than I would?” Adora replied, pointing at the screens on the bridge showing feeds from London, Paris, Berlin and New York.

“They haven’t touched down yet,” Catra said with a grin.

Adora frowned at her. “Why do you think this is funny?”

Catra’s grin widened. “It is funny because it annoys you.”

Adora pressed her lips together. She should have expected that.

Catra lost her grin and smiled ruefully for a moment. She didn’t apologise, though. “And it’s also funny because they’re acting like humans. Right down to the uniforms.”

“Suits,” Adora corrected her.

“Priest defined them as uniforms, so they’re uniforms,” Catra shot back.

“And why is it funny that clones are acting like humans?” Adora wanted to know. It wasn’t funny. Not at all!

“It might make the idiots on Earth realise how stupid they are about their religions,” Catra explained as she shifted in her seat.

Adora sighed. That was a touchy subject. “Earth is very serious about their religions.”

“Only the parts of Earth that we don’t want to have anything to do with,” Catra retorted. “And the same goes for them.”

That was, well… not entirely wrong. But not entirely correct either. “Their pope told everyone that magic wasn’t evil.” That covered at least one of the biggest religions.

Catra scoffed. “And he *didn’t* tell everyone that us loving each other was fine. Speaking for a god that supposedly wants you to love everyone.”

Adora didn’t think Catra - or herself - were reliable sources on Earth’s religions. Or any religion - it wasn’t as if growing up in the Horde had taught them anything about any religion. And Adora hadn’t exactly researched the various religions on Etheria since the war had ended. Perfuma and most of Plumeria worshipped nature, Mystacore worshipped magic… That was about the extent of her knowledge. It just wasn’t something most people talked about. Still… “I just don’t want to be worshipped.”

Catra shrugged again. “Better you than some invisible, silent god that won’t step in when its followers start hurting others.”

Adora’s lover had made that point before. And Adora couldn’t really argue it. But that didn’t mean she liked it, either. “You usually complain if I feel responsible for everyone.”

"Yes." Catra scoffed. "But it's better than the alternative. Imagine if the humans converted the clones!"

Adora shuddered at the thought. That would be a catastrophe!

*****

Cheyenne Mountain, Colorado, United States of America, Earth, October 26th, 1998

"Chevron Six, encoded!"

"Chevron Seven locked!"

A moment later, the gate activated. Samantha Carter saw the members of the new Stargate team - British this time - wince slightly as the vortex formed before stabilising. Good. That meant they remembered how lethal it was.

But they recovered quickly, the team leader stepping on the ramp, then looking at the command centre.

"Proceed to your destination," General Haig ordered the men, and the team quickly marched through the gate, vanishing from view.

And that was it. Sam's work for this 'acclimatisation mission' was done. She stayed at her post anyway, just in case something came up - even with a routine trip to a known destination which already had a team and temporary base on site, you never knew if something unexpected would happen. It was part of what made Stargate Command such an attractive posting for Sam. Next to being able to advance physics past anything people outside science fiction authors could have imagined a few years ago, of course. And now being able to work with magitech.

And working with people who appreciated her talents and didn't think she had slept her way up or was riding the coattails of a man. Sam had had enough of that to last her a lifetime. As if she'd ever sleep with a superior to advance her career! Just

sleeping with a fellow officer could damage your career, and if you got involved with someone in your chain of command…

She pressed her lips together. This was purely hypothetical. She knew the regulations, and she was a professional soldier. Such things were off-limits, and for very good reasons. The last thing Stargate Command - or any unit involved with the war against the Goa'uld - needed was people getting distracted by relationships, gossip and interpersonal conflicts.

Even the Russians should realise that. Especially the Russians. Certainly some Russian spy posing as a soldier trying to honeytrap the Colonel. Who should really know better than to encourage the woman!

She closed her eyes for a moment and took a deep breath. She was being silly. The Colonel was a professional and knew the Russians better than anyone else in Stargate Command. He wouldn't fall for such a blatant attempt to seduce him. Really, 'I am looking forward to when we're no longer in the same chain of command'? Hah! By that time, the new Stargate Command site would be ready, and the Russian spy would be stuck on the coast of Canada, while SG-1 would be part of whatever expeditionary force the United States would send along with the Etherian fleets.

Sam pushed the thought that SG-1 might end up split up away. She had talked to Entrapta and the others about how the Etherians waged war, and from what she heard, it sounded like SG-1's experience was an almost perfect fit for the kind of operations the Princess Alliance ran. A small group of highly-skilled special forces used to working together spearheading larger operations. Odds were, SG-1 would be kept together, for both political and military reasons.

And if not, a traitorous part of her mind whispered as she ran another check on the gate's status, the Colonel wouldn't be in your chain of command any more…

She pushed that thought away as well.

*****

An hour later, the British team was back, and Samantha Carter was taking a break while a French team was getting ready for their first gate trip. She sipped from a cup of great coffee - General Petit had had the standard coffee makers replaced with civilian-grade models that shamed most coffee shops in Colorado - and looked at the screen in the corner of the control room, where the news was being displayed. At least the news deemed relevant or important for Stargate Command, selected by a team of specialists and put on a loop.

Today, like yesterday, it was focused on the Etherian missionaries, showing two of them walking down a narrow street in… London. "They really look like alien Mormons," General Petit commented as he joined her.

Mormons sent missionaries all over the world, Sam reminded herself. Even to such secular countries as France. "Yes, sir," she agreed.

"But they look slightly stiff," the general went on. "They must be under great pressure, with the eyes of the world on them. And the eyes of their superiors."

Sam agreed again. Though she wasn't sure if the Horde clones, at least those from Third Fleet, weren't their own worst critics, so to speak - from what Sam had seen of them, they were religious fanatics. And now on a mission from their goddess. At least they weren't wearing sunglasses and organising a concert. She suppressed a snort - this was too serious for that kind of joke.

"Although I doubt that there will be much if any trouble in London or Paris," Petit went on. "Or Berlin."

Sam was tempted to point out that Europe had its fair share of religious fanatics as well but refrained. And not just because the general was her superior, but also because, even taking into account the smaller populations, neither the United Kingdom nor

France or Germany had had nearly as many protests against the 'shore leave' of the clones as the United States had had and were still having. Fortunately, most of those protests were held in places the aliens weren't visiting.

And the last few months had shown a rapid decline of both the influence and visibility of the radical Evangelicals in the country. Though being dropped by pretty much every conservative business and billionaire hadn't been received well by those conservative politicians who hadn't changed their stance on religion. Once the proposed constitutional amendments passed - and Sam had no doubt they would pass - things might get ugly in some places.

She masked her silence with another sip from her coffee and made some appreciative noise.

The General beamed. "I personally selected this coffee maker! It's the best on the market!"

Sam nodded. And probably the most expensive as well. Well, it wasn't her budget to worry about. "It shows," she said. She was about to add some platitude when the screen changed. CNN. Showing police cars. *American* police cars. And a red banner at the bottom.

Breaking news! Alien shot in New York!

*****

North Shore University Hospital, New York, Earth, October 26th, 1998

Catra didn't bother to hide her mood, snarling as she sprinted down the hallway after Adora. One of the clones had gotten shot by some Earth nutcase. And, of course, Adora had dropped everything to rush to the clone.

Well, his condition was critical according to what they had been told, and Earth hospitals and doctors had no experience treating

clones, and if the guy died, things would probably get ugly. Uglier. Priest had already been talking about making the man a 'martyr' or something. But still - running through a hospital like this wasn't exactly 'good optics', as Mr Brown would say.

"Uh… ma'am? This is a…"

Adora brushed past the uniformed guards in front of the door between her and the wounded clone as if they weren't there. Not that they could have stopped her if they had tried - nothing could stop Adora in such a moment. She all but kicked the door open.

Catra still kept an eye on the guards as she passed them - they were armed, after all.

Inside the room, a woman in white clothes - a doctor or nurse - tried to stop Adora. "This is an operating room! You can't just…"

Adora ignored her as well, pointing her sword at the figure on the table, surrounded by startled humans. The nurse shrieked, but the glowing healing magic was already covering the wounded clone.

Moments later, he started to move, or tried to - they had tied him to the table. She-Ra cut him free with two slices of her sword while everyone else backed away. "How are you? Do you still feel pain?"

Catra saw the clone blink before he recognised Adora and his eyes widened. "Your Divine Highness!"

Usually, Adora would flinch at hearing that title, but she was too focused on saving him, Catra noticed. "Do you still feel pain?"

"Uh… No, no! No, Your Divine Highness!" His mouth spread in a wide smile and he was blinking through tears.

Adora curtly nodded, then took a deep breath. "We arrived in time."

"Yeah," Catra agreed. And they had attracted a lot of attention. She pushed her communicator. "Sparkles? We've got him."

"Alright! Coming!"

"Glimmer's on the way," Catra told Adora, who was helping the clone off the table. He still looked like he had had the time of his life instead of nearly dying. "Just have to wait until she finds us."

"Good. Where are his clothes?" Adora asked the humans present.

"Uh… we had to cut them off to prep him for surgery," one of them replied.

"Ah."

"What about his communicator?" Catra asked. That was, well, not really advanced technology, but you didn't leave your comms if you could help it. That was how your communication lines got compromised. Well, that and by Entrapta and Bow hacking into your systems.

"Uh…"

Catra shook her head and turned to glare at the uniformed guards - who had multiplied in the meantime but hadn't dared to enter the room. "Fetch his gear!"

One of them turned to leave, then stopped, glancing at another guard. Probably their leader. Or were those cops? It didn't matter.

"That's evidence for a criminal investigation," the leader said.

Before Catra could tell the idiot what he could do with his 'criminal investigation', another man arrived and snapped at him. "Perkins! Don't try to boss around the aliens with spaceships floating above us!"

"But Chief!"

He ignored him and smiled - although tightly - at Catra and Adora. "I've sent someone to fetch his belongings."

"Thank you!" Adora beamed at him. And then Catra's idiot lover went on: "Was anyone else hurt? They only told us about him."

By the time Glimmer arrived in a cloud of sparkling light - Catra didn't know how many other rooms she had teleported into before reaching them - Adora was already busy healing half the patients in the hospital.

And Catra couldn't help wondering if this had been part of a plan to get her lover to heal people.

*****

Earth Orbit, Solar System, October 26th, 1998 (Earth Time)

"So, what exactly happened? The Earth authorities kept saying they were still investigating when I asked them. All of them!" Glimmer asked. And she had talked to every authority she could reach, Catra knew. "Also, I told everyone we wouldn't bombard their city from orbit."

The formerly wounded clone, sitting in the centre of Darla's lounge, glanced at Adora, then at Priest.

Adora smiled gently at him, and Priest nodded. "Speak, brother, so we know who tried to murder you before you were saved by Her Divine Grace!"

The Clone beamed, nodding eagerly, before blinking. "Uh… we were door-knocking like we had trained."

"And why weren't you with your partner?"

"Ah, that is, we had passed a food stand earlier, and he had gone back to fetch us some 'hot dogs'." The clone cringed a little. "I

thought I could handle a house alone - we'd been to many already."

Priest nodded, taking this breach of regulations better than Catra had expected. Or maybe he thought that Adora healing the clone had wiped away any fault. Catra hadn't delved too deeply into Priest's views.

"So, I ring the doorbell, and this woman appears, and I ask her if she had heard of Her Divine Highness, She-Ra. She had, and so I started explaining, and she was listening, when an older man appeared, yelling at her not to listen to me. And then he started cursing me." The clone raised his chin. "The curses of the ignorant cannot hurt the faithful, so I ignored him. But he started berating the woman, and they started a row, and then he… he insulted Your Divine Highness!" He scowled deeply.

Catra pressed her lips together. She had a hunch of where this was going.

"I told him not to slander Your Divine Highness, but he… he doubled down! I told him that those who slandered She-Ra would not be saved, and he kept cursing me as a heathen and sprouting inane sentences, and… well, I told him he was stupid and his god was wrong, and he yelled something about how his daughter wouldn't be corrupted, and then he suddenly drew a gun and shot me. I don't remember much after that. Everyone was screaming." The clone lowered his head, then glanced at Adora.

Catra sighed as her friends looked at each other. Definitely not good optics.

*****

Washington D.C., United States of America, October 27th (Earth Time)

Usually, Jack O'Neill didn't like - or outright hated - travelling to Washington D.C. because that meant talking to the brass at the Pentagon about things they didn't really understand. Or to

politicians who didn't understand anything. Usually, it meant preventing some more or less well-meaning (or downright malicious) idiot from sabotaging Stargate Command, wasting time that would be better spent on actually doing his job.

Which, incidentally, was leading SG-1 in the field and waging war, not playing politics. He was a colonel, not a general.

But today, he almost enjoyed his trip to Washington D.C. Sure, he might have to talk to politicians, but this was the President, not Kinsey. And while the occasion was serious - having an alien visitor shot on one's watch was always serious - it got him out of the mountain just when he needed a change of scenery. And some distance between himself and certain very competent and far too attractive female officers of Stargate Command. About whom he definitely didn't have any thoughts that might violate regulations or common sense, respectively. Not at all.

"Say, Jack…"

Daniel turned from watching the streets of Washington, chock-full of cars, to Daniel, who was sitting next to him in the staff car. "Yes?"

"Don't you think Sam should have come with us as well?"

Jack suppressed a sigh.

Daniel went on: "I mean, sure, she's a physicist, not an anthropologist, but she's been working with the Etherians the most, and she probably has the best picture of how they're going to react. And she can just call Entrapta and ask if she doesn't know the answer."

"Carter has urgent work to do," Jack replied. "She said so herself." Even though both Jack and Carter had known it was 'not entirely factual', as she would say. "And she gave us her opinion on the Etherians' reaction." In writing.

“Yes, but…” Daniel must have noticed something about Jack’s mood since he trailed off. He didn’t stop talking, of course. Not Daniel. “Is this about Lenkova?”

Yes. “No,” Jack said, narrowing his eyes.

This time, Daniel got the message. Though the pout he showed when he slowly nodded told Jack that his friend would bring this up again.

Damn. Jack needed to sort out this before then.

*****

“...and many people have come together in a vigil at the site of the shooting, showing their concern and empathy for the wounded alien. A few protestors were sent away by the police, allegedly for their own protection. In other news, the North Shore University Hospital required police protection as hundreds of people tried to enter it in the hope of getting healed, despite the announcement that Adora had already left the building - and Earth - again. Experts are divided about the effects this incident will have on the relations between the United States and Etheria.”

Jack O’Neill rolled his eyes at the TV screen in the room where he and Daniel were waiting to talk to the cabinet. Technically, the United States government wasn’t negotiating with Etheria but with the Princess Alliance. Effectively, they represented Etheria, of course, but… He blinked - he was thinking like Daniel! Damn!

At least his friend hadn’t noticed - he was looking through news sites on his laptop. And Daniel didn’t seem to be happy.

“What’s wrong?” Jack asked.

“It’s just… how stupid are people? Glimmer repeatedly said the Etherians wouldn’t retaliate - or blame the United States for this - and this so-called expert claims that this was a clear threat! I mean, I expect biases from this news company, but outright insanity?”

Jack craned his neck and checked the article's origin. Ah. "They're pandering to their audience." Which was a bunch of radical nutcases.

"Still… Facts are facts!"

"And that article is an *opinion piece*." Jack grinned at Daniel's expression.

Even better, before Daniel could say anything in return, an aide entered the room and called them to meet the cabinet.

*****

"...and that's I don't think this incident will have a significant negative influence on our relations with the Etherians: They know that this was the action of a lone individual, and they do not blame the United States for it. Further, they are also aware that the proselytising the victim engaged in is somewhat divisive," Daniel finally finished.

"I see," the President said. "That concurs with the opinion of our analysts."

"And Captain Carter's summary," Jack O'Neill added. He earned a few glares from other cabinet members for speaking without being addressed, but the President nodded in agreement.

"That's reassuring. Less reassuring is that this happened in the first place." The President didn't look at anyone in particular, but Jack saw several members of the cabinet tense up.

"We can't really convince everyone that we need the Etherians as allies more than we need 'god's support'," the Secretary of Education said - her tone making it clear what she thought of the idea that there was any question about what the United States needed.

"We've got the media on our side, though," the Secretary of State replied. "With the exception of fringe newspapers and the odd

opinion piece."

"The incident did rile up the more extremist Evangelicals, though - the idea that aliens are allowed to proselytise on United States soil is a very touchy subject," the Secretary of Defense said.

"We know that," the President retorted. "We've all seen the polls. But the constitution, regardless of what some radicals think, is clear about this." He sighed. "Of course, I wish they wouldn't have put us on the spot like this. Things were all on track for the amendment, and now we've got this mess to deal with."

"The Etherians might not have had much of a choice," Daniel pointed out. "They have to deal with religious radicals as well, after all."

The Secretary of Defense frowned. "Can't they just order them to shut up and stop making trouble? They are absolute monarchs! Hell, one of them is worshipped as a god by those aliens!"

Jack smiled as Daniel pushed his glasses up and went into lecture mode. "It's a common misconception that absolute monarchs rule absolutely. The clones are a vital part of the Alliance military, and their desires and opinions carry a lot of weight. Further, I think it's clear that Adora is unwilling to use her position to tell others what religion they should follow - or not follow. So, it should be evident that…"

Jack leaned back a little and tuned his friend out.

*****

Palais des Nations, Geneva, Switzerland, October 28th, 1998 (Earth Time)

"...and yes, that's the complete list of locations with magical activity on Earth as far as we know. There might be other such sites that aren't active right now but will become active should certain conditions be met - conditions which we also don't know yet."

Glimmer sounded annoyed. Adora wanted to pat her shoulder when she sat down after answering another stupid question from the assembly, but that would have left the wrong impression. So she nodded at her friend. This was the fifth 'special session' of the United Nations about magic after Adora had restored it, and the questions hadn't really changed. In fact, many of the hostile ambassadors always asked the same questions Adora and her friends couldn't answer, probably just so they could keep claiming that magic was not known well enough and so it would be too dangerous to legalise it.

Another ambassador rose to ask a question. Adora noticed it was the one from Iran, heard the first line about responsibility, and sighed. The same 'question' again. As soon as he had finished, she rose. "No, we will not 'assume responsibility' for any damage done by magic. First, you still have not submitted any proof that the fire and flooding - or the sickness - were caused by magic. Second, magic is a natural force. Restoring it to Earth is not the same as providing everyone with a loaded gun. It's like restoring the laws of physics that make it possible for gunpowder to work." She smiled, even though after four such sessions, she now could quote Entrapa and Bow's arguments in her sleep. And sometimes did, at least according to Catra. "We didn't teach anyone in your country to actually use magic; that's all on them."

"Without your actions, none of this would have happened!"

Adora shrugged. The man wasn't entirely wrong. If they hadn't restored magic to Earth, spells and powers wouldn't work. But magitech would. And as they had found out in Honduras, magitech could be as dangerous as advanced non-magical technology.

Something Glimmer was, as always, quick to point out: "Even if your calamities were caused by magic, it could have been magitech, which was already working before we restored magic."

"And we answered that question already in the last session. And the session before that." Catra openly sneered at the ambassador.

Adora pressed her lips together. They should stop attending those sessions - it made everyone's temper worse.

"At least give us scanners to detect magic!" the ambassador all but yelled. "How are we supposed to protect our people from magic if we can't even find it?"

Glimmer rolled her eyes. "No country that hasn't legalised magic - and given guarantees to prevent witch hunts - will receive magic scanners." She leaned forward and glared at the man. "Do you think we're stupid? You'll use those scanners to hunt down people with the talent to use magic! And then you'd claim they were evil no matter what they actually did!"

"We do not execute people simply for having such a talent!" the ambassador protested. "But criminals are criminals, whether they are magical or not!"

Adora glared. Sure, a number of 'sorceresses' in Iran were sent to prison and not executed, and many more were 'lynched' by 'private citizens', not the police, but so far, none of the murderers had been prosecuted either. Still, it wasn't enough to intervene.

"The scanners aren't ready yet, anyway," Catra added before yawning theatrically. "Does anyone actually have a question that wasn't answered already before this session?"

Adora knew she should scold Catra for the breach of protocol, but she just couldn't bother. Listening to the same questions session after session was simply too repetitive.

Yet another ambassador from the Middle East complained about magic. At least many African countries had stopped that - apparently, many traditional healers suddenly found their medicines and treatments working much more effectively.

"They're just running those sessions so they can funnel people in for you to heal," Catra whispered.

Adora frowned at her. She wasn't about to ignore someone suffering in front of her! It wasn't their fault that they were sick!

"You know I'm right." Catra smirked.

"They should look for sorceresses of their own," Adora said. "That would solve their problems with magic."

"They are looking for their own sorceresses," Catra retorted. "So they can kill them." She leaned back and stretched her arms over her head. "It would be more fun listening to Priest explaining why you're a goddess even though you deny it."

Adora pouted in return. She couldn't just order Priest to stop… worshipping her. No matter how much it annoyed her. She had been the one to defeat Horde Prime and free the clones, after all. It was only natural that some of them would fixate on her as their new leader - they didn't know any better. Adora knew how it was, being raised by the Horde and not knowing the truth. And how difficult it was for many to change, she added to herself with a glance a Catra. She could only hope that the clones would realise that she was no goddess if Adora kept explaining it.

And, a small part inside her mind that sounded like Catra because that was what Catra had told her many times, it was better if the Clones worshipped her instead of worshipping anyone else. Like an enemy of theirs. Or the Goa'uld. Better for the clones and everyone else.

"...and the way you offer your lapdogs training in sorcery but refuse to help countries that don't bow to your demands shows your bias!"

Right, they were at the 'stop helping your allies' part now. They hadn't even finalised the agreement to train some sorceresses on Earth yet! Or recruited instructors from Etheria - they needed a Stargate for that, anyway. And that was a little tricky. Both politically and with regard to security. They might just install it on a moon. And then there was the technology exchange. In theory,

the clones could help with basic instructions, but they would likely use the opportunity to proselytise as well… They had so many more important things to do than listening to people complain about magic!

"We should ask Entrapta to build a bot to answer those questions," Catra commented as yet another ambassador asked about magic schools. "Make them look like us, but the size of Emily!"

Adora giggled at that.

Well, this, too, would pass, as Jack said. And they were making progress. Sooner or later, things would work out.

But they really needed to stop attending those stupid sessions. They had much more important things to do.

*****

The Recon Mission Part 1

Chapter Notes

See the end of the chapter for notes

CFB Goose Bay, Newfoundland, Canada, November 14th, 1998

"Who the hell had the stupid idea to pick this as the new site of the Stargate? I want to know so we can send them to Thule!"

Samantha Carter didn't react to the Colonel's profanity. In fact, she had an urge to curse herself - the cold and the biting wind here at Canadian Force Base Goose Bay reminded her far too much of the time the Colonel and herself had been stuck in that cave in Antarctica. Even the best cold weather gear they were wearing couldn't keep them completely warm. Maybe she should have worn the spacesuit Entrapta had made for her - the cold wouldn't bother her at all, and the suit was very comfortable to wear. On the other hand, it might cause some resentment from the rest of the Stargate Command delegation visiting the site. And some idiots would claim that as a woman, she was too weak and soft to stand the temperature…

"I thought you liked Canada," Daniel commented, shielding his face with his hand. Or trying to - his glasses were fogging over.

"I like hockey. I don't like moving from Colorado to the arctic. To the butt end of the arctic, to be precise," the Colonel griped. "There was nothing wrong with Colorado."

Sam knew that it had been a mostly political choice. The United Nations didn't want the gate to remain in the USA. And the USA didn't want the gate to move too far away - and still had enough pull to ensure that. Sam thought the Australians had had the best proposal. Woomera or Exmouth would have been perfect from a strategic and logistical perspective. Easy to supply, not much

buildup necessary. And remote enough so one could fight an invasion without endangering too many civilians.

But that had been too far from Europe, and so, between the USA, France and Britain, Canada's proposal had won out. And Stargate Command would have to adjust.

"Probably picked so the Russians would feel at home - it's as cold as in Siberia."

"Really?" Daniel blinked. "Well, when we visited Siberia, it wasn't winter. Were you in Siberia during winter?"

The Colonel scoffed but didn't answer. Which was to be expected.

"The location is rather remote, but it has a port," Sam pointed out. "And the Canadian government is already constructing a railway line to link it up with the Canadian railway network."

"The port will need to be expanded if we want to ship in all the supplies we need quickly enough to get this done in a timely fashion," the Colonel said. "As things are, we need a lot more infrastructure here to supply an invasion through the gate."

"I thought we didn't plan to run invasions through the gate?" Daniel frowned.

"Not for the initial attack. But we might need to use a gate to deliver supplies - we might not have access to spaceships for supplies." The Colonel shrugged. "You never know what happens in a war. Even if you think it'll be a cakewalk. Especially if you think it'll be a cakewalk."

Sam nodded. The Colonel knew that better than everyone else here, given his experiences during the Gulf War.

"Supplying an Earth invasion force, especially a mechanised one, through the gate will be difficult." Teal'c didn't seem to be bothered by the cold. Or just didn't show any reaction. "It would severely restrict the use of the gate for other reasons."

“Well, it’s better than the mountain,” Daniel said. “We can’t exactly ship lots of supplies through the base.”

That was true, of course. The Colonel still grumbled. Then again, he liked playing the grumpy old man from time to time. “One attempted invasion and the Canadians will scream to move it to Australia. And once the public realises that gates work both ways, someone will want to move it to Mars.”

“I think the logistical challenges of moving the Stargate to Mars and operating it there would severely reduce its usefulness.”

“Well, that was a joke, Teal’c.”

“Ah.”

Sam couldn’t tell if Teal’c had actually thought that the Colonel had been serious. Wait, his lips twitched - that was him pulling the Colonel’s leg.

“And, speaking of Mars… Is it true that you suggested surveying a landing site in advance of the Mars mission NASA is launching soon, Sam?” Daniel wanted to know.

“Oh, planning to steal NASA’s thunder?”

Sam rolled her eyes. “I merely suggested using some of the recon bots we’re building to search for the ideal landing site.”

“But that would drive home that this isn’t a brave exploration mission, but just a few scientists taking a cab to Mars.” The Colonel chuckled. “Imagine them arriving, and you and Entrapta are having a picnic there!”

“We’re too busy to have a picnic on Mars, sir.” As if Sam would be so petty as to do that!

“But you’ll keep an eye on the Mars base, right?” Daniel asked. “I mean… I am not trying to disparage NASA’s engineers, but they are building this modular base in a hurry, aren’t they?”

Sam nodded. "The Etherians will keep a frigate in orbit to support and, if necessary, evacuate the scientists."

"And to nuke any hostile Martians from space." The Colonel clapped his hands together. "Anyway, let's blow this joint. We came, we saw the miserable freezing place here, and we can safely say that the best way to use this base is to build a huge bunker so we're at least warm while we're here. And an underground railroad so we won't ever have to go outside."

"Except for field training, right?" Daniel asked in an earnest tone. But he was grinning.

And the Colonel scowled.

*****

Whitehall, Westminster, London, United Kingdom, Earth, November 16th, 1998

"...and since everyone is present, the first strategy meeting of the United Alliance of Earth and Etheria has officially started. The first item to discuss is the location of the Alliance Headquarters. I suggest that it should be located on Earth and reasonably close to the Stargate to make emergency meetings easier to attend."

Glimmer went full steam ahead, as the humans would say, Catra noted. From the opening speech straight down to business. Then again, it had taken months longer than Catra had hoped to get the Alliance going and dealing with all the issues the rest of the world had brought up - well, more like making sure the bigotted idiots wouldn't make trouble for the Alliance - and they really needed to get things sorted out to get the war started. The longer an enemy was left in peace, the harder it would be to defeat them.

And, as expected, the Earth parts of the Alliance all took offence at this.

“But the majority of the Alliance member states are in Europe!” the French representative protested. “We should be picking a central location in Europe.”

“Why not pick Brussels? It’s already the NATO headquarters!” the Belgian representative pointed out. Though, as Catra had noticed, not too many were paying attention to him - or to the delegates from the other small European countries that had joined the Alliance.

“Germany would be happy to host the headquarters, but we think that military concerns should take precedence over political ones.” The German Minister of Defence nodded at his colleagues.

“Political concerns are military concerns during a war,” the French minister shot back. “You cannot separate them.”

“Canada would be honoured to not only host the Stargate but also the Alliance Headquarters.”

“Iceland would also be willing to host the headquarters, We can offer a geographical compromise.”

“You don’t even have a military!” the Danish representative snapped.

That was true. Catra didn’t quite get why Iceland had joined the Alliance. They were supposedly recruiting volunteers, but they lacked any military tradition and the closest they had come to war in centuries was a conflict over fish with an ally of theirs.

But turning a willing ally away would have sent the wrong message, and compared to some kingdoms on Etheria, they weren’t too small. Still, Catra didn’t think they would be much use in the war. They probably would end up joining the forces of the Kingdom of Snows.

“I think Iceland is too remote to serve as headquarters,” the German Minister of Defence commented.

“The United Kingdom is neither remote nor bereft of armed forces. And geographically and culturally, we’re a good compromise - especially with an eye on the eventual joining of the United States.”

Which were still trying to get the amendment to guarantee gay marriage and all the other rights passed. Or ratified - whatever the process was called. Catra had stopped paying close attention to it after the sixth time she had thought they were finally done only to hear that this had been just another step. The Americans must really hate changing anything about their laws, the way they made it so hard and complicated.

“I think the Stargate’s location isn’t of crucial importance. In an emergency, we all would have to take a plane - or one of the shuttles, once they are available - so anyone arriving through the gate could do the same and arrive at the same time.” The minister from Norway had a good point, in Catra’s opinion. Good enough that the rest of the ministers acknowledged it.

Of course, they then used that to explain why the headquarters would be best placed in their country.

“Just pick a country,” Catra snapped when the Swedish delegate proposed a rotating headquarter. “If you don’t want it near the Stargate, then its location doesn’t really matter as long as there aren’t too many civilians around it. You just need a big bunker to house everyone. And defences, of course.”

Adora nodded. “Yes. Although it would be nice if it would serve as a staging ground as well for the Alliance forces, we don’t need to combine both locations. It might be even safer to split them up so a strike at one location doesn’t take out both.”

Of course, that started a discussion about the location of the main base, more political and infrastructure questions, and more bickering over security and accessibility. And some of the concerns… family visiting? And being housed? On a military base?

Catra shook her head. “We never had those problems in the Horde.”

“That’s because we didn’t have families in the Horde.”

“Well, yes, but that’s not the point.” Catra pouted. Really, who wanted to take their family into a base? Coming home would feel like getting back to the barracks! But, apparently, things were different on Earth. The scale of the bases and the number of civilians involved… “Might as well build a new town - or found a new kingdom,” she whispered.

That made Adora giggle, even if it wasn’t funny.

At least Catra knew that the humans wouldn’t take forever to decide this. It was clear, even though none said so, that they wanted everything settled before the Americans could join.

*****

Cheyenne Mountain, Colorado, United States of America, Earth, November 18th, 1998

“...and with that decision by the General Assembly of Ohio, two-thirds of the states have now ratified the amendment. That means…”

Jack O’Neill switched the TV off.

“I was watching that!” Daniel protested.

“You were watching the same commentary that happened thirty-four times before?” Jack raised his eyebrows as he looked for a good place to lean against, or sit on, in Daniel’s office. There was the second chair, of course, but that would have made him look tired.

Daniel pouted in return. “It’s a historic event. I want to follow it from start to finish. The social repercussions and changes this will cause…”

“It’s a done deal,” Jack cut him off. “Congress voted on it. And the states are ratifying it. The only reason it’s taking as long as it takes is that some states are dragging their feet scheduling the votes.” Mainly because the NID hadn’t taken care of every influential conservative that would rather keep the gay down than let the United States make an alliance with lesbian magical space princesses that would net them advanced technology. At least Jack thought so. They reminded him of some of the ‘Segregation Forever!’-types.

“Well,” Daniel said, “some pundits seem to think that the delay is less due to holdouts but because some states want to be the deciding vote, so to speak.” He shrugged. “I don’t think it’s likely - they would probably be remembered as the last holdout rather than the deciding vote - but it might explain some of the scheduling troubles.”

Jack snorted. He also doubted it. “Sounds more like a desperate attempt to fill the news while everyone is waiting for the amendment to finally take effect.” Especially the armed forces. They needed the alliance as soon as possible. If they waited any longer, the war would start without them, and the United States would be forced to enter it on someone else’s terms. Mainly, the Europeans’ terms.

And, judging by the rumours that Jack had heard from Entrapta about how they bickered over everything, that would be a bad idea. Jack didn’t want to live in England for the war. Or, even worse, Iceland. At least no one had proposed Greenland for the base or headquarters.

“Well…” Daniel shrugged again. “Usually, the truth about such things isn’t known until much later.” He put a stack of papers down. Jack couldn’t read their titles from his spot and didn’t feel like asking his friend about it. Probably something about medieval societies that Daniel then could complain about not being applicable to Etherians or something.

“I just wish we were already in negotiations about the alliance,” Jack muttered.

Daniel frowned. “We can’t join without the amendment being passed.”

“We could hash out the details for the alliance in advance, though. So, as soon as the final state gets around to voting, we can sign the alliance.” It was just a formality, anyway. Well, most of it.

“Catra said it was rather straightforward - they’ve streamlined the process since the start. All the Scandinavian countries joined without lengthy negotiations,” Daniel pointed out.

“That’s what I am afraid of,” Jack replied. Conditions aimed at small countries like Norway or Sweden wouldn’t fit the United States.

His friend frowned again. “Why?”

“Of all the countries, we’re the only one with experience fighting the Goa’uld. Not even the Etherians have any experience. We should be more involved.” Granted, they mostly had experience with small unit actions through the Stargate, and the Alliance was gearing up for a conventional war - in space - but they knew their enemy. Especially Teal’c. Jack wasn’t looking forward to seeing the Alliance repeat Operation Torch.

“Ah.” Daniel nodded, apparently conceding the point. “I don’t think the Etherians will ignore our advice, though.”

“Maybe not.” Jack wasn’t so optimistic.

“So, what’s up?” Daniel suddenly asked. “You didn’t come here to watch CNN with me.”

Jack snorted. “Can’t I come to visit you to chat?”

Daniel blinked. “Sure. But you’re usually a bit too busy at this time of the day.”

"A meeting fell through," Jack explained. And he hadn't felt like doing paperwork.

Daniel nodded. "And Sam's in France with Entratpta, looking at the shuttle factory they are building there."

"Yes." Another fait-accompli, as the French would say. The Europeans weren't wasting any time taking advanced technology. Even though it was mostly automated, according to Carter. Wait! Jack narrowed his eyes at Daniel's expression. Was he insinuating something more?

"Between Stargate Command, the projects with Entrapta and the NASA mission to Mars she's advising, Sam's quite busy. Maybe you should order her to take a break," Daniel went on.

He was. Jack shot him a look. "Carter knows how to take care of herself. I don't need to babysit her." Unlike Daniel.

"It's not about babysitting," Daniel protested, "but relaxing and socialising."

His friend was right - they hadn't had time to relax, hadn't they? "Well, the Christmas parties are coming," Jack pointed out. Even though Alliance talks and meetings would probably hijack those. Hell, the fighting with the Navy was getting downright vicious - ever since the Royal Navy had apparently come out on top in the struggle in Britain, the Navy pukes had been getting cocky.

But Daniel didn't look satisfied. Jack almost wanted to ask if he was trying to play matchmaker but refrained from doing so. Some things you didn't talk about. And Jack's relationship with Carter, not that there was such a thing, fell firmly into that category. He'd rather discuss medieval culture than that. Or soccer.

*****

Earth Orbit, Solar System, November 20th, 1998

“So… France can’t host the headquarters because they already got a shuttle factory and more coming,” Adora summed up the results of the latest meeting. The latest tiresome meeting.

“And because they’re French,” Catra added, stretching on her chair in that distracting way of hers, then slumping down as if she were made of liquid, about to ooze over the edge of her seat.

“No one said that.” Adora scowled at her lover.

“It was implied,” Glimmer cut in. “Apparently, leaving the NATO - or partially leaving - in the past is being held against them, but no one is as rude as to say so to their face.”

But everyone knew it. Or used the argument. Adora sighed. “And Germany won’t get the headquarters because they want to host the main base for the Alliance so it will help ‘revitalise’ their eastern parts.”

“Yes.”

“Even though they could just plant the new factories they want there?” Adora was not an expert on economics, but she had read up on the theory. You put up a factory where no one was, and that caused the area to gain workers and income.

“Those are going to be built in locations with established factory complexes, in the other parts of Germany,” Bow said. “They want to use the trained workforces there.”

“They don’t want to make those people already working there mad for losing out,” Gimmer explained. “The government relies on their support.”

“Ah.” That made somewhat sense.

“And the Germans have the most experience hosting lots of foreign troops, so there shouldn’t be too much friction, at least that’s what they claim.” Catra’s smirk told Adora she didn’t believe them.

“But the British want to host the base as well - and they also claim they have experience, although that was decades ago during their last great war,” Glimmer went on.

“The Second World War,” Bow corrected her.

Glimmer frowned at him for a moment. “Yes. Anyway, they are angling to get more industries in exchange for giving up their claim.”

Catra snorted. “Sounds like a bunch of bandits in the Crimson Waste haggling over who gets what part of the loot!”

Adora pressed her lips together. She couldn’t quite refute that. “So, who’s winning?”

“Whoever we pick,” Glimmer replied. “If we want to pick one. But it’s pretty clear that they won’t pick locations that we wouldn’t like.”

“Do we want to?” Bow asked. “Seems like no matter who we pick, everyone else will be mad at us.”

Catra sat straighter. “We don’t want locations that can’t handle the logistics and defences. And we don’t want locations that have historical issues with others in the Alliance. For headquarters, something that’s easy to defend against spies would be best.”

“For headquarters, we have to pick something with enough infrastructure to cater to all the officers stationed there,” Glimmer corrected her. “They need a certain level of comfort,” she added with a snort.

Catra chuckled. “Sounds like Bright Moon.”

Gimmer narrowed her eyes at her. “Bright Moon’s soldiers can rough it.”

“But you don’t like to rough it.” Catra flashed her teeth in a wide grin. “Even your dungeons look like luxury guest rooms.”

Bow cleared his throat. “So, uh… Do we actually want to pick a location? We don’t care for that, do we?”

“We don’t,” Adora said.

“And letting our allies pick it means we have more leverage when something comes up that we want to decide,” Glimmer agreed. “I think they’ll pick Belgium for headquarters; they already have NATO headquarters there and the seat of the European Union, which means most of their leaders are used to it.”

Adora nodded even though her impression had been that no one was taking Belgium’s proposal seriously. But Glimmer knew more about politics, and it did sound like a good compromise. “And the base?”

Glimmer shrugged. “Beats me. It needs to be somewhat remote so we can have the soldiers exercise there. And we need to build a spaceport. Canada or Australia would offer good locations, as would the USA, but in my impression, most want it to be located in Europe.”

Adora sighed again. Petty politics! There wouldn’t be that much fuss about the location of Etheria’s Stargate, that was certain.

“Well, with the USA close to finally sorting themselves out,” Catra said, “I bet our allies will quickly find a compromise.”

“Just as they found a compromise regarding advanced technology,” Glimmer added with a lot of sarcasm.

“Well, having factories with advanced technology in every country means they’re less vulnerable to attacks and sabotage - you can’t get too much with one attack,” Bow said with a smile.

That was true, but Adora was sure this was more like a side-effect and not the main reason the Europeans wanted to spread out all the military factories they needed built. “Anyway…”

She was interrupted by an alert from Darla. An incoming call from… Stargate Command. Marked urgent.

"Put it on the screen," Adora told the ship.

A moment later, Jack appeared on the big screen in the centre. He nodded at them. "Hello, everyone."

Adora caught Catra sitting up straight - Jack looked grim and serious. That was bad news.

"We've got a situation here. Off-planet."

*****

Cheyenne Mountain, Colorado, United States of America, Earth, November 20th, 1998

"...and so the last thing we heard from the team, before contact was lost, was that the planet was under attack."

Samantha Carter looked up as she heard the Colonel's voice and saw him enter the gate control room with the Etherians in tow - well, most of them. Hordak probably stayed on Darla.

"And nothing since?" Adora asked.

"Nothing, though…"

"Hi, Sam!" Entrapta interrupted him and waved at Sam.

"Hi." Sam waved back, then had to suppress a wince - this wasn't a friendly meeting in the privacy of their labs or off-duty. They were in the middle of a crisis.

"So." Catra cocked her head sideways. "Your team went through the gate, which was deserted, and then started exploring. Which means that the gate wasn't guarded by anyone on the planet. And it was still open when the attack happened, so it didn't come through the gate."

“Yes,” the Colonel confirmed.

“We didn’t see any signs that the planet was occupied when we sent a MALP through.” General Haig joined them, looking grim. “And the team didn’t find any signs of recent activities at the gate either.”

Sam nodded. The gate area had been overgrown. If there had been regular traffic, there would have been some trails at least. And if there had been recent traffic, even on foot, there should have been tracks. But according to all the data they had, the gate address belonged to an abandoned planet. That was why it had been thought to be a good choice for the Russian main team’s first real mission.

“So, whatever is on the planet is important enough to merit an attack from space but not important enough to have the gate guarded.” Adora shook her head. “That doesn’t sound good. Do you have any maps of the area?”

“No.” The general shook his head. “It was an exploration mission.”

“No auto-mapper?” Entrapta pouted. “You should have sent a bot along that can automap. They’re very useful!”

And they were something Stargate Command didn’t have. Sam smiled wrily at the general’s expression. The MALPs capabilities were very limited compared to the capabilities of such a bot - she was familiar with either.

”Yep. Such bots would be very useful. I’ll make a note to buy some next time I go shopping,” the Colonel said.

Entrapta blinked. “Oh, you don’t have them? I can build you one!”

“Thanks, but I think we should focus on saving our team first.”

“It could be useful for that, too!” Entrapta nodded. “We can build one while you do your planning, right, Sam?”

It wasn't as if she was doing anything useful right now, Sam knew. This wasn't, at least not yet, a technological or scientific problem to tackle. But she'd like to get in on the planning. Or at least attend. On the other hand, the bot could be very useful for the mission itself. She looked at the Colonel, who nodded back at her.

"Yeah, you do your thing while we plan the rescue mission."

Haig nodded his assent, and so Sam and Entrapta went to Sam's lab.

"So… I'm thinking standard spy bot with integrated automapping and scanner. They're small and cute but very eager! We shouldn't have to modify the basic design much but we can if you want," Entrapta said once they were in the lift, and a holoprojection detailing the small bot appeared next to her.

Sam wanted such a tool herself. Just displaying data in the field would be so useful - scratching a quick sketch on paper, or even in the dirt, just didn't compare. Still… "I don't think we need any modifications. The planet has a standard atmosphere and temperature, at least around the gate. And we need to get it quickly."

"Right! We could have Hordak send one down, but I think we'll be quicker building one from the parts in your lab!" Entrapta beamed. "This is going to be fun!"

Sam noticed the glances the Russian guards - Stargate Command was on alert now - gave them as they stepped out of the lift, but there wasn't anything she could do about it right now. They didn't know that Entrapta wasn't making fun of the situation - she just was a little different. And a good friend.

And she was right - this was going to be fun.

*****

By the time they entered the gate room, a bot chattering in its own language in tow, the rest of SG-1 and the Etherians were ready to go. Sam was, once again, struck by the contrast. SG-1 was suited up - her own armoured vest, reinforced with advanced technology courtesy of Entrapta, was ready on the table next to the Colonel - while the Etherians hadn't changed at all. Adora hadn't even transformed into She-Ra. They looked as if they were here to supervise, like the generals with them.

And Emily, who was towering over everyone, was carrying what must be their emergency gear like rations and tents. Sam really needed to get a bot of her own.

"So… let's send the little guy through and see what the area looks like!" the Colonel said, clapping his hands.

"Yes." Sidorov glared at all of them. "While you were wasting time, my team might have been killed!"

That was a distinct possibility - losing radio contact was never a good sign. And even though Lenkova was a skilled officer, she had no experience with Goa'uld or aliens, and training could only take you so far. The odds for the Russian team weren't good.

And Sam wasn't entirely sure how she felt about that.

*****

"So… let's see if the planet is still around and wasn't glassed. Or blown up," Catra said, taking care to roll her neck as if this was just another day at the training facilities. Or the personal exercise room in the palace these days. Instead of a dangerous mission to save a bunch of humans from body-snatching aliens before they got body-snatched. Or just snatched.

In hindsight, it was a pretty bad idea to just let Earth continue their Stargate missions, even though Stargate Command had claimed that they were being very careful. From what she had heard, SG-1 had a lot of experience, but they hadn't been too cautious either when they ran things, and now with the new

committee in charge, things were bound to be worse. Glimmer claimed that the Alliance couldn't dictate policies to the rest of the world, but in Catra's opinion, the needs of the war were more important than playing nice with people who endangered everyone through their actions.

Even if it was a little hypocritical. Maybe more than a little.

But the spy bot was now walking towards the gate ramp, Entrapta and Sam hovering over it. Well, Entrapta was doing the hovering - Sam was mostly checking readings while slipping into her armoured vest.

Which was actually a nice piece of kit. Not the armour - Catra's suit was armoured already while still granting full mobility - but the pouches and pockets and stuff. If you didn't have a magic sword that could change into whatever tool you wanted, you had to make do with normal tools, and while her claws were great, they couldn't do everything. It would make carrying explosives easier as well - sure, she was carrying some of the bombs they had used to blow up Princess Prom, but bigger bombs wouldn't go amiss.

Of course, she couldn't say this, but if she claimed that it was a show of unity or something with their new allies, the others might buy it. Bow might even want to make a vest for himself that left his midriff bare.

"...and be careful, OK? If there's anything dangerous, report at once, and we'll shut down the gate so you can dial back!" Entrapta patted the small bot on its head or sensor dome or whatever you call it.

"I'm not telling her that the bot's not going to come back if there are enemies at the gate," Catra whispered to Adora.

She saw her lover flinch a little before raising her chin. "This is a Stargate Command mission. We shouldn't assume to speak for them."

Catra chuckled at that. Adora could be sneaky sometimes.

As if she had heard them - but she hadn't; Catra was sure - Sam said: "Ah. We can only allow opening a gate to us if there's no chance that an enemy will follow us - the risk that they could invade or just send a bomb through is too great." She looked embarrassed, in Catra's impression. Or ashamed.

The bot beeped. Entrapta frowned at it. "That doesn't matter! You're a member of our team like everyone else!"

"What do you mean?" the Russian idiot butted in. "Are you talking to the robot?"

"Yes!" Entrapta nodded. "And her name is Beatrice."

"You give your robots names?" The general was blinking.

Catra saw O'Neill stepping closer as Entrapta said: "Of course! They need names so we can talk to them without being rude."

"But they are…" The Russian trailed off. "Are they intelligent?"

"Yes!" Entrapta nodded. "Or do you mean sapient? Beatrice would need an adaptive matrix that will allow her to learn and grow to become sapient. I wanted to give her one because sapient bots can adapt much better to various environments and situations, which would make her more efficient at exploring new planets, but Sam said that we should stick to normal bots for security."

"Ah." The Russian nodded a bit jerkily. "Do not build sapient bots without permission from the committee," he told Sam.

"Of course not, sir," she replied.

"Good. We do not want robots turning on us."

"And we don't have political commissars to threaten bots with execution to send them on suicide missions," O'Neill added.

The Russian scowled at him. “We haven’t had commissars for a long time now.”

Right. O’Neill had mentioned those or some people like them once, Catra remembered. Dimly.

“Now let’s send the bot through. We need to save our team!” the general ordered.

Everyone stepped clear of the ramp, and even the bot scuttled off it before the gate was dialled.

As soon as the iris was retracted, the bot beeped to Entrapta and Sam once more, then disappeared through the gate.

“She’s so brave!” Entrapta said, wiping her eyes.

The Russian looked a little odd at that, but Catra didn’t care - she was staring at the big screen showing the feed from Beatrice.

The gate area looked untouched - lots of grass, tall enough to force the bot to extend its head so it could still see above it. There wasn’t anyone nearby, but the big plumes of smoke on the horizon weren’t a good sign.

“Running a spectral analysis,” Sam announced.

A few seconds later, Entrapta piped up: “Oh! Looks like… plastic and metal particles in those clouds.”

“Those are artificial structures or vehicles burning, sir,” Sam reported. “And more than a few.”

*****

Gate Area, PX4-223, November 20th, 1998 (Earth Time)

“Stay sharp, folks!” Jack O’Neill snapped as he stepped down the stone ramp, carbine ready as he scanned his surroundings. The sky was clear, the front was clear, the flanks and back, clear. He

crouched down at the end of the ramp, next to the D.H.D., and studied the smoke on the horizon. Yeah, he had seen such smoke before. When a column of Iraqi vehicles had been destroyed. He could almost smell the stench of burned plastic - and burned flesh.

Teal'c took the other side of the ramp, his staff held low. And the big robot, Emily, had already thrown up a shield. Just in case the spy bot had missed an ambush. Which Jack had expected - whoever was attacking the planet should be covering the gate if only to keep reinforcements from arriving or their targets from fleeing. Any attack on a planet with a gate always focused on the gate. That was just common sense.

So, why wasn't the gate guarded? A trap? Or was the gate damaged?

Carter was behind Jack. "The D.H.D. doesn't show any signs of damage or tampering, sir," she reported before he could ask.

Jack nodded. The Russians had checked it right after arriving, but you always checked yourself. Nothing worse than getting stuck on a hostile planet thousands of lightyears from home.

Catra landed on all fours right at the end of the ramp - she must have jumped. And she sniffed the grass? Then Melog joined her. "Seems clear. I only smell human. And Melog can't sense anyone near us," Catra announced.

Then She-Ra reached the end of the ramp, her sword drawn, followed by Glimmer and Bow. "No magic," Glimmer said.

Jack nodded. He had also expected that. It made things a little harder for the Etherians - but in a pinch, She-Ra could return magic in a minute. And probably get a big boost. But where were the bad guys? They must be watching the gate from afar - they had spotted Lenkova's team, so they would be aware that the Russians had come through the gate. But they wouldn't be prepared for the Etherians; magic or not, their allies were

veterans. While Jack wouldn't trade SG-1 for them, they knew their business very well.

"Beatrice! Good girl! You performed exactly to specs! I am so proud of you! Who's a good spy bot? You are! Keep your sensors aimed, will you? There might be bad guys around! And Emily, you're doing good as well!"

Jack suppressed a sigh. Well, most of them knew how to behave in a hostile environment. But if Carter started cooing over robots, he'd put his foot down. On the robot.

"The stone is lacking any ornaments. Old, but not as old as the gate. I don't see any sign of whoever would have built the ramp, Jack," Daniel said.

"Yep." Not that Jack had expected any useful information from the ramp - most of the gates had something like it to keep the activation kawoosh from killing people waiting in the area.

"Alright." Jack nodded towards the hills in front of them. "The action is that way. And our missing Russian allies also moved in that direction, as the trail here shows." And, according to the logs, roamed a little too far for a first mission - Lekova must have been cocky. Then again, the hills in front of them would offer the best vantage point for the entire area. Which was why Jack was sure that they'd find the tracks of the Russians leading there.

And the tracks of their captors or killers so they could save or avenge the team.

He looked at his team and the Etherians. "Let's follow the trail."

"Melog will warn us if there's an ambush ahead."

Jack could get used to that cat. And it shouldn't take too long - Lenkova's team had been here for less than an hour when contact had been lost. Even if the Russians had done a forced march, that wouldn't have taken them too far. A couple of miles - probably not

enough to reach the top of the ridge. “And stay sharp!” he repeated himself. “The snakes must be watching us.”

“We’ll spot them if they come to cover the gate.”

“Beatrice will tell us!” Entrapta said. The spy bot skittered away, hiding in the grass.

“And if they get to the gate before us, Adora can restore magic, and I can port us back in seconds,” Glimmer announced.

Jack nodded. Though She-Ra might turn half the planet into a jungle or something in the process. And he couldn’t help being worried. Why weren’t the owners of whatever was burning behind the ridge running to the gate? And why hadn’t they been using the gate?

Well, they would soon find out. One way or the other.

*****

Chapter End Notes

Thanks to Meshakhad for researching valid locations for the Stargate!

The Recon Mission Part 2

PX4-223, November 20th, 1998 (Earth Time)

Adora kept looking around as they entered a light forest. She knew that Catra, who was in front of them, had much better ears, that Melog would sense people nearby, and that Entrapta was scanning for energy signatures or something while riding Emily, but some things were ingrained after years of training.

And covering your sector while on patrol was one of them. She was third in line, so she was watching the sky above as well as the left arc. At least by Horde standards. Americans might have different standards. And Bright Moon didn't have standard patrol training for everyone - their scouting was usually done by tightly-knit local teams who did things their way because they knew the terrain better than anyone else. She made a mental note to cover that point in one of the strategy meetings about the training regime for the Alliance. And she would propose to go with the Horde standard - or what the Earth armies used. The Bright Moon system was defensive in nature and wouldn't be of any use on foreign planets.

Well, Jack was ahead of her and to the right, so he would be covering the right arc. And Teal'c was covering the rear arc. So they should be good.

Catra made a gagging noise ahead of them. "Ew."

"What's up? Allergies?" Jack asked.
