“They should worry about fixing their economy,” Catra retorted. She wasn’t an expert, far from it, but she had read about the situation, and while none of the experts agreed with each other about everything, especially whether or not the ‘bubble’, as they called it, from the build-up for the war was a good thing in the long run, all were agreeing that Earth’s economy was facing trouble.

Glimmer shrugged. “I don’t think that the people who want to visit Etheria from Earth in the middle of a war have the right priorities.”

“Yeah.”

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, October 26th, 1999

“...and that’s the typical community formed by the human slaves of the Goa’uld. However, as I said before, this is just a general model; actual societies will vary greatly depending on the individual Goa’uld and even on individual planets. Any concrete interaction with them will have to be based on detailed information gathered on location. Although there are similarities, especially with regard to religion. Are there any questions?”

It was a good thing, Jack O’Neill thought as he watched Daniel’s lesson from the back of the classroom, that the Hollywood cliches were wrong about special forces. His friend’s lecture would have been fit for a university course. At least in his opinion. But, as with Stargate Command, the Alliance got the cream of the crop for

their special forces, so the soldiers present, all of them officers, would have been able to follow the lesson. Or should have.

One, a British officer, Lieutenant Clarke, raised his hand. "So, we are supposed to observe any community covertly before making contact?"

"Ideally, yes." Daniel smiled. "Although sometimes, that isn't possible. Or there's an emergency that forces us to make contact. We've had a few of those in the past."

Clarke didn't seem to be convinced. "You stressed that honesty and trust were crucial for opening good relations with such societies. Observing them from hiding doesn't seem to be conducive to either."

Daniel sighed. "Yes. But some of those societies are, well, thoroughly indoctrinated, and they might react violently to us contacting them. It is essential to spot such dangers beforehand. Fortunately, just knowing which god they worship usually provides us with enough information to recognise such dangers."

Usually.

"And your lecture will teach us how to spot such dangers?" The slight French accent of the next officer, Capitain Colbert, didn't hide his scepticism.

"That's the goal, yes." Daniel nodded. "Of course, we can't cover everything a university course would, but we'll cover all known Goa'uld gods."

"False gods," Lieutenant Mills, former Green Beret, muttered.

Daniel frowned at the comment. "Yes, we call them false gods. But remember: These people have been raised to worship their Goa'uld overlords as gods. This is a core part of their identity. If you think you'll be able to convince them that their religion is built on lies and that they are exploited by false gods with a few speeches, you would be mistaken."

Colbert snorted. “If that worked, the Vatican would be a museum.”

Half the room snickered, though several of the officers present looked annoyed or even offended. Jack frowned and memorised their names. If they took offence at such comments, they might not have the right mindset to deal with people who honestly worshipped pagan gods. Or, he added with a silent snort, work with clones who worshipped She-Ra.

Daniel, though, nodded. “That’s a very good example, actually. Don’t think of those people as the victims of a scam who only need to be told the truth to accept it. Think of them as deeply devout Christians or Muslims. They will not convert easily - or at all - no matter how good you think your arguments are.”

“But they’re worshipping snakes! Parasites!” Mills protested. “We can prove that - we can show them their gods are fake!”

Jack added his name to his list.

“Are they?” Daniel cocked his head and looked at Mills. “What’s your definition of a god, Lieutenant?”

Mills opened his mouth, then closed it. “I know what’s not a god,” he said. “And a Goa’uld isn’t a god.”

Daniel nodded. “Those people have a different view. Yes, they are slaves, toiling in often cruel conditions for their overlords, but many, if not most of them, have seen their gods, and seen them demonstrate what they consider divine powers. If they worship a smart Goa’uld, they have even seen people getting healed by their ‘gods’ or receiving ‘blessings’ and gifts. And they haven’t heard of any alternatives - sometimes, they don’t even know there are other Goa’uld, though that’s rarer. In order to subvert them, you will have to move very carefully and find those of them open to turn against their gods. Those willing to blame their gods for their suffering. Those who have lost family or lovers to the whims of their overlords, those who won’t simply accept the gods’ words as

true but question them." He sighed. "And for that, the Goa'uld's cruelty works for us. There are many people ruled by them who will accept an alternative to living under a cruel god."

Most of the officers nodded, Jack noted.

"But there are also many who will cling to their faith no matter how much they suffer under the Goa'uld. They think they will be rewarded in the afterlife for it. Those people will attack you in order to prove their loyalty and faith - or they'll try to trick and betray you. Never forget that you are trying to turn people against who they think is their god and has power over their very souls."

"Well, no one ever said our mission would be easy," Burke commented with a shrug.

Most of the room nodded along.

Jack recognised the bravado. He'd say the same in Burke's place. And had done so, back when he was doing similar missions behind the enemy lines, sometimes literally. Burke was a veteran. And he had fought zombies. He could back that attitude up. Few of the others had experience with aliens or magic. But they were veterans as well, Jack reminded himself.

And they were his responsibility. He was in charge of the entire Alliance Special Operations Command. As a brigadier-general. If not for Adora and Glimmer making it absolutely clear to the brass that this wouldn't bar Jack from the field, he would have refused. Probably - the thought of the same people who sent him on missions back in the Cold War now being in charge of those soldiers here made him ill.

Which was why he had called on Daniel to give this lecture instead of wasting his time with academics. He wouldn't send his people out into the galaxy unless they had the best gear and training for their job. It wasn't Stargate Command, but that was no reason to have laxer standards.

*****

“This felt like my first time in front of students as an assistant back at university,” Daniel said once the soldiers had filed out and Jack O’Neill had joined him at the front - after making another note of who had been startled by his presence; soldiers in this business needed to be aware of their surroundings at all times.

“Oh?” Jack tilted his head to the side. “I would have thought this bunch was more disciplined.”

“What? Yes, they were, but what I meant was having you watching from the back, like my professor then.”

“Ah.” Jack grinned. “Well, I had to ensure you wouldn’t scare them off.”

Daniel snorted. “Every anecdote from our missions I told them just made them more eager.”

“That’s because they thought you were exaggerating.”

His friend blinked. “What?”

Jack shrugged. “You’re an academic. A civilian.” Technically - Daniel had more combat experience than most of the soldiers in the Alliance. “They’re the big bad special forces. The best of the best of the best,” he added in a fake imitation of a gung-ho drill sergeant. “Of course, what you think is scary couldn’t be really scary.”

“I didn’t say it was scary!” Daniel protested.

“That’s even worse. What doesn’t scare the bookworm polishing his glasses while lecturing them can’t possibly scare them, can it? It’s the same with Jaffa; until Teal’c personally demonstrates just what he can do, the soldiers still think this is going to be a reenactment of Zulu, with them as the British soldiers.”

“That should make them more cautious. The British forces were defeated decisively at the Battle of Isandlwana,” Daniel said with a slight pout.

Jack laughed. “They’re thinking of Rorke’s Drift and the movie. Anyway. Thank you for doing this. And not, you know, holing up in an ivory tower and rewriting every book about ancient history. Or taking over Harward or something.” He wasn’t a scientist, but he had been keeping an eye on the various attempts to poach Daniel. Some deans were playing downright dirty. Of course, Jack knew that as long as Sha’re was still in the hands of the Goa’uld, his friend wouldn’t even think of leaving for the university circuit, but still…

Daniel chuckled. “I’ve already sent the papers I wrote during our time at Stargate Command to get published. If I want to write a book, I can base it on that. Though I guess some of my esteemed colleagues will try to beat me to the punch, probably using my material. But none of them have my first-hand experience. They might still spot something I’ve missed, of course, as they go over all the exhibits and samples in their collections and reexamine them in light of their new knowledge. We’ve been focusing on Egypt, but the Babylonian connection seems promising as well, given what we know about the Goa’uld.”

Once they hit Babylonia, it was high time to change the subject. Jack nodded. “Yeah, sure. And speaking of Babylonia, did you have time to go over the list of linguists I’ve mailed you?”

“I did, but I am not really the best person to judge their ability to go on field missions,” Daniel said. “All of them should be skilled enough to handle the linguist work, though.”

“And that’s all I need. I’ve got people sorting out the rest,” Jack said. As a general, he had a lot of people for everything, but some things Jack couldn’t leave to anyone but those he’d trust with his life. “And what’s your impression of your temporary students here?”

“Do you mean academically?” Daniel asked.

“I mean whatever comes to mind.”

"Ah. Well, they grasped the core concept, but I can't tell yet if they'll apply it."

Jack nodded. They'd better, or they'd be sorry. Or dead. If they were lucky.

"They understood what I was telling them, but…" Daniel winced a little.

"Yes?" Jack tilted his head at him.

"Some might not have the attitude to work with people who have been worshipping the Goa'uld for all their lives," Daniel said. "I mean, they aren't nearly as bad as the missionaries we had to deal with, of course. Just..." He shrugged. "A bit too sure of their own beliefs."

"I noticed," Jack said. "I'll look into it." Fortunately, he only had to deal with special forces. He didn't envy the poor bastards in Alliance High Command who had to deal with the whole mess. Proselytising wasn't allowed, but as Priest had pointed out, they couldn't prohibit soldiers from talking about their beliefs if asked. Not if they wanted to deal honestly with the liberated slaves and aliens.

He checked his watch. "So, we've got twenty minutes before your course on alien cultures. Want to get some coffee? We can call Teal'c as well."

Daniel nodded. "As long as we go to the canteen and not to your office."

"My coffee maker is great," Jack protested. He had gone to some lengths to have the coffee maker from Stargate Command get officially 'lost in transit' during the move to the new gate location. "You never complained back in the Mountain."

"Jack! We're in Europe! They've got real coffee here!"

"We're in Germany. That's beer country, not coffee country."

“We’ve got French and Italian forces training here,” Daniel shot back. “And they’d mutiny if they had to deal with your coffee.”

“Hey! At least my coffee doesn’t cost more than a Happy Meal,” Jack shot back.

“And that’s how it tastes.” Daniel grinned and turned to leave the room before Jack could think of a good comeback.

Well, he’d get even later.

*****

Research Station Alpha, The First Moon of Enchantment, October 26th, 1999 (Earth Time)

“...and now we’ll see if it works or not!”

“It will work - our projections are flawless and have been verified through testing. We are merely awaiting confirmation of our results.”

“That’s what I said, Loki! You can’t be sure until you test it!”

“If your research is sound - and ours is - and your calculations are correct - and mine are - then you already know the outcome of an experiment. This is just to reassure those who lack the knowledge and intellect to understand science.”

“Models and projections are not a replacement for testing and experiments. Any true scientist would know that.”

“That seems a little harsh, Hordak. Dependable models can and should save time and effort, speeding up any research project. We would never have advanced as far as we did if we had tested everything with experiments.”

They hadn’t tested everything? Adora winced at Morrison’s comment. She wasn’t an expert - though she wasn’t an idiot either! - but when it came to genetic engineering, everything

should be tested thoroughly before you experimented on people. You shouldn't experiment on people, period, she corrected herself. "You didn't test everything?" she asked, glancing at Haken, who was in a tube getting scanned. Maybe she should summon her sword in case he required emergency healing…

"We did test every big step, just not every little step or toe-tip," Entrapta replied. "So, this is as safe as it can be before live testing! Which we are doing now!"

"Though I have to point out that not using multiple test subjects, including a control group, is less than ideal." Alpha had appeared next to them.

"We already know what happens if a Jaffa doesn't have a Prim'ta," Hordak said. "They die."

"Was that tested? Or merely modelled?" Loki cocked his head.

That sounded like a snide comment… Yes, everyone else was frowning, pouting, glaring or sighing at Loki, Adora saw.

"Loki! We already have experimental data showing what happens to Jaffa without a Prim'ta!" Entrapta scolded him. "They lose their immune system. Haken is proof of that."

"And we are sure that, unless stopped by outside intervention, this will lead to his death. Just as we know that this synthetic replacement will work." Loki lifted his chin.

"We'll see!" Hordak spat. He seemed annoyed enough to hope it wouldn't work, in Adora's opinion.

She looked at Mermista, who was sitting at a table in the back, either doing paperwork or watching something on her tablet - she was wearing the headphones Bow had designed. Probably an Earth TV show, the way she snickered and didn't pay attention to the discussion in front of her.

Well, one way to find out.

Adora left the scientists bickering and walked over to her friend. Who was, as she could see with a glance, watching an Earth show Adora didn't know. Probably a crime show, based on her friend's tastes. "Mermista?"

"Huh?" Mermista blinked, then quickly paused the show and turned to face Adora. "Yes? Do you need to go to the bathroom and need me to watch the gang again?"

"What? No!" Adora shook her head. "I was just wondering…" She leaned over and lowered her voice. "Are they always like that?"

"Hm?" Mermista glanced at the others, then nodded. "Ugh, yes."

Adora winced. Maybe she should have done some shifts as their supervisor herself, but she had been so busy leading the Alliance…

"Is that all?" Mermista asked.

Adora frowned. "Is something wrong?"

"No, I just want to finish this episode before you finish your tests."

"Ah, OK." Adora nodded.

Mermista was back to watching her show before Adora had turned away.

Maybe we should have been a bit more cautious with importing Earth media, Adora thought. Though that wouldn't have stopped Mermista, of course - as a princess, she had access to Earth media anyway. And Bow wouldn't have kept his 'emulator' that allowed tablets to show Earth shows secret, either. Maybe…

"OK, here comes the data!" Entrapta interrupted her thoughts. "And it looks good! No sign of any diseases taking hold."

That was good! Adora smiled. This was working, then! Haken's life wouldn't depend on her any more!

“Alright. Standing by for stress testing. First sample: Various bacteria,” Hordak announced.

Stress testing? Adora blinked.

“Hit him!” Entrapta beamed and turned to Adora. “Oh, better keep ready, in case we overestimated Jaffa resilience. Even with a working immune system, some of the stress tests might overwhelm him.”

“What?”

“They won’t,” Loki snapped. “Our models are correct.”

“What are you doing?” Adora asked.

“Exposing him to various pathogens so we can see how his immune system reacts,” Entrapta explained. “Basically, all the most common pathogens we know!”

“Ah…”

Adora hastily summoned her sword. Thorough testing also had some drawbacks, it seemed.

*****

Alliance Headquarters, Brussels, Belgium, October 26th, 1999

“...and all the data checked out, as you’d say: The Synthetic Symbiote is a success!” Entrapta beamed from where she sat on Samantha Carter’s desk, hair tendrils rearranging a few files and one sample from an asteroid that might be a good source of rare ore while she kicked the air with her feet. “Haken showed no degradation of his immune response at all. Adora didn’t even have to heal him when we used viruses that would overwhelm human immune systems. We didn’t test biological weapons, though.”

Sam froze for a moment. That was… Priorities, she reminded herself. "Did Alpha suggest that?" It would fit the artificial intelligence.

"Yes." Entrapta nodded. "She argued that with Adora there, they could get data on how the Jaffa would react to various agents without significant risks of an outbreak."

Of course, Alpha would! Sam pressed her lips together. "Did Loki support this?"

"Well… he didn't say so, but he had a lot of questions about which agents should be used. And he didn't press us to go straight to researching the cure for his species, so… yes? Maybe?"

Definitely, Sam mentally corrected her friend. Well, as long as none went along with Alpha's suggestions… "So, the synthetic symbiont does fully replace the Prim'ta."

"Yes! The Jaffa won't need to use Goa'uld children for their immune systems any more!"

That was a very Entrapta take on the way the Goa'uld ensured loyalty from their Jaffa. Or a very Etherian one. "I see."

"So, we've started production on the symbionts. And now that we know it works on Jaffa, we can start testing them on humans."

Sam suppressed a wince. She knew that this would be coming. Morrison had talked about it several times during the research. Goa'uld enhanced the immune system of their hosts - among other improvements. A synthetic symbiont that replaced the immune system of a Jaffa might also enhance a human's immune system. They had focused on replacing the Prim'tas, but with that problem solved, the next step was obvious.

And it was also almost certain that they would succeed. Jaffa were an off-shot of humans, genetically altered to serve the Goa'uld as warriors. But they weren't too far removed - it was questionable if

they were a different species or a subspecies. And the Goa'uld themselves were able to adapt to a wide range of hosts.

And that raised a lot of rather difficult ethical questions. "Before we start human testing, I think we need to discuss this with our friends."

"Right. Adora said so as well. Kinda." Entrapta nodded. "We have to be sure it won't harm people."

That was only part of the problem. "There's also the question about the consequences of such symbionts working on humans," Sam said.

"Huh?"

"Enhancing humans is a delicate issue." And that was putting it mildly.

"Why? It's a straight improvement! If the synthetic symbiont can be adapted - and that should be easy according to our projections - then it will make people much healthier! It can defeat most diseases without any magical healing needed. Or any medical treatment. People won't get sick in the first place and with a symbiont, they will heal up much faster after accidents," Entrapta said. "Your healthcare system will be able to save a ton of money!"

Which meant a lot of people would be out of work as well. On the other hand, they would need every doctor and nurse they could get for the war. "The thought of implanting a symbiont into your body might not appeal to everyone." Sam shuddered at the thought herself, remembering Jolinar.

"But why? It's so beneficial! And much cheaper than most of your medical procedures - we checked!" Entrapta shook her head. "That makes no sense."

"People aren't always logical," Sam told her friend. Not even Sam herself.

“Well, they don’t have to get a symbiont, then. Although, that means they will require more expensive treatment when they get sick or have an accident. Or they get wounded in the war. That’s not really fair either, is it?”

Sam slowly nodded. It wasn’t fair. But neither was forcing people to get a symbiont. And she knew the pressure to get one would be great. Especially in the United States with its sham of a public healthcare system. But many people wouldn’t want an alien symbiont. Certainly not one based on the Goa’uld.

And almost every medical corporation would fight against this. Not because of the ethical questions, of course, but because most of their research would be obsolete if symbionts were widely accepted and available. They had already made rumblings about magical healing before they had realised that healers required extensive training - more than doctors - to be effective. This would be magnitudes worse and threaten to bankrupt them all. They would fight this tooth and nail. Even though such symbionts would be able to save many people modern medicine couldn’t save. So, desperate people would fight to get such symbionts, especially if why couldn’t get magical healing.

And as the Alliance’s chief scientific officer who had been involved with this research practically from the start, Sam would be in the middle of this mess.

She almost wished for a crisis to give her an excuse to avoid this.

*****

The Symbionts Part 1

Bright Moon, Etheria, October 28th, 1999 (Earth Time)

"...and that's it. The synthetic symbiont should be a straight enhancement to people's immune systems. Once we have tested it, of course - but we have designed it, and we don't expect too many problems. It will be a great boon to healthcare, both on Etheria and on Earth, I think!"

Catra suppressed a wince at Entrapta's enthusiastic presentation. Adora had told her about this, so she wasn't surprised.

Unlike some of the others in the meeting room.

"You want to put those snakes into us?" Spinnerella looked shocked..

"Well, yes?" Entrapta cocked her head. "They're perfectly safe. Or will be when we finish testing them. We don't know yet if we need to make some adjustments and modifications."

"You made artificial Goa'uld?" Frosta asked with wide eyes.

"Not really? Well, we used Goa'uld DNA as a base - we had to, well, we could have chosen not to, but since the Jaffa were altered to require Goa'uld larvae for their immune system once they reach puberty, replacing the Prim'ta was far quicker and easier than trying to reverse the genetic alterations done to the Jaffa. Which would actually be a better solution, removing the need for a symbiont altogether, but I was told that this would also kinda change their species, so we shouldn't do that until they ask for it. It's still the obvious solution, so I think they'll see that. Anyway, we could have used something else as a base, but that would have been just extra steps we'd have to do. It's not as if we altered a Goa'uld, anyway - we just took key gene sequences from them and added them to the DNA of an artificially created species. That way, we didn't experiment on people!" Entrapta beamed.

Unfortunately, the rest of the princesses didn't seem to appreciate her reasoning.

"It's…" Spinnerella shook her head. "I don't want a snake inside me. Synthetic or not." Netossa held her hand, Catra saw.

"I don't want one inside me, either," Mermista said with a scowl.

"But why not? You'd never be sick again. Well, not unless you were targeted with a biological weapon, and even in that case, your odds of surviving it would be much better with a symbiont," Entrapta replied.

"We have healers for that," Mermista shot back.

"But they can't cover everyone," Entrapta pointed out. "Not even Adora can heal everyone."

Catra nodded. Though the idiot certainly would try if she let her.

"But this symbiont can be grown in large numbers - we have to, since there are millions, probably billions of Jaffa who need one - and then distributed, saving countless people!" Entrapta beamed at the others.

"Good for them. I'll stick with a healer," Frosta said.

Entrapta frowned and tilted her head to the side. "That sounds a bit selfish, I think."

"So? Better be a bit selfish than have a snake wrapped around your spine." Frosta snorted.

"It would actually sit next to - or in - your liver," Entrapta said. "At least in humans, since they don't have a pouch for the Prim'ta. It would also work at the spine, but it's easier to implant it in the liver, and it has an easier time dealing with blood-based illnesses."

"And it's safe?" Scorpia asked.

“We won’t distribute it until we’re completely sure it’s perfectly safe!” Entrapta smiled at her.

Scorpia glanced at Perfuma. The princess slowly nodded. “Well, many creatures live in a symbiotic relationship with others. Plants and animals alike.”

“Yes!” Entrapta nodded emphatically. “All of us have symbiotic organisms in our bodies.”

“What?” Frosta blurted out. She wasn’t the only one looking a bit queasy, Catra noted.

“Yes. Our gut microbiota. Or gut flora,” Entrapta explained. “Bacteria, archaea, fungi and viruses that live in the digestive tract of our bodies. We have tons of them! It’s perfectly natural.”

“There’s nothing natural about an artificial snake in our guts!” Mermista snapped.

“It does sound rather… artificial,” Micah added with a wince.

“It’s a synthetic life form,” Entrapta told him. “But that’s not really different from us - we were artificially created as well. Most of us, at least. Though, technically, our ancestors were artificially created and then reproduced naturally. Still, the origin is the same.”

“That’s… not the point,” Glimmer, who had been oddly silent until now, said. “The idea of, ah, inserting a symbiont into your body is not as easy to accept as you think it is.”

“But why? It has so many benefits and no drawbacks! There’s absolutely no reason not to get a symbiont - once we have adapted and tested it, of course!” Entrapta said. “You’ll live longer and better, too.”

“What?” Catra hadn’t heard about that.

“It prolongs your life?”

"Well, since you're not going to be sick any more, you'll have much fewer health issues," Entrapta explained. "But since a Goa'uld host lives much longer than their average species, we expect that the symbiont will have a similar, though probably lesser, effect. Although we're optimistic that we can duplicate the full effect with a bit of work. Jaffa also live longer than humans, despite being so similar to their parent species, so that's another data point in favour of that theory."

Catra looked around in the sudden silence.

"I still don't want a snake inside me," Frosta muttered with a scowl.

But the others were rethinking the whole thing. Catra could tell.

It was one thing not to get sick anymore. With Adora around, none of them would have to worry about that. But to live longer? Maybe double your average lifespan?

This changed things.

And she couldn't help but wonder how this would be received on Earth.

They would have to be careful when telling the others the news.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, October 29th, 1999

"Los! Los! Das geht schneller! Los! Gleich kracht es hier!"

Jack O'Neill glanced at a platoon of German infantry rushing into a mock-up of a landing shuttle as he walked towards his office. Their training instructor was screaming himself hoarse as the soldiers simulated an emergency embarking.

"Meier! Sie sind auf eine Mine getreten! Ihr Bein ist weg und sie bluten!"

One of the soldiers stopped and dropped to the ground, screaming and holding his perfectly fine leg as he simulated an injury as ordered. Quite convincingly, even.

That soldier has a future in acting, Jack thought as two others grabbed the man and dragged him inside the mock-up, with a third grabbing the soldier's rifle. An HK G36, Jack noted, remembering the short-lived campaign by various corporations and politicians to standardise the small arms of the Alliance. It had been quietly buried by the treasuries when someone had run the numbers for replacing every existing assault rifle in NATO's arsenal. They were already spending enough to get everyone armour-piercing ammunition - which was standardised.

He grinned as he walked past the mock-up. Last he heard, Colt, Heckler&Koch etc. were now lobbying the Etherians, trying to sell them their rifles. Better them than I, he thought.

Alliance Special Operations Command had more leeway, anyway - they could pretty much use what small arms they wanted. Especially with so many different countries to pick gear from. Jack was still partial to the M4 carbine, but if one of his soldiers wanted to lug around a G3 or FAL, that was no skin of his butt. They just couldn't complain about the weight, of course. It wasn't as if he could order them to use standardised weapons, not with some of the Etherian soldiers in his command carrying bows and arrows! Granted, they were mostly shooting trick and magic arrows, but Jack still made sure they were trained on firearms as well.

To think they had fought tanks and spaceships with that! Jack could only hope the rest of his soldiers didn't get any weird ideas. Bow - or Glimmer - had been clear that they couldn't supply everyone with such arrows.

Jack nodded at the two guards at the gate to his own little corner of the main Alliance base on Earth. "Campbell. Isa."

Both saluted - one in the British style, the other in Etherian - Scorpion Kingdom - style. Some of Jack's old drill instructors would have coronaries seeing that. Well, most of them would have lost their temper seeing women in combat, much less special forces. At least until they'd have seen Isa carrying a heavy blaster - like an M2 machine gun - as her personal weapon. Or picking up a Humvee and carrying it into a landing shuttle.

Finding a uniform in her size had been nigh impossible, of course, but the quartermaster had managed after Jack had insisted. Everyone wearing the same uniform was important - it was difficult enough to mould all those different people into a unit. They still weren't quite there yet, Jack knew. That would only happen once they had fought together. But they were as ready as they could be.

He entered his office. "Morning, Brown."

"Good morning, sir!" His aide looked up, nodded briefly, and went back to sorting through reports and other paperwork.

Jack had an aide now. That took some getting used to. "Anything urgent?" he asked as he grabbed his mail.

"No, sir." Brown paused. "Another request for the stealth shuttle from General Naird, sir."

Jack groaned.

"I've sent him the usual reply, sir."

"Good!" Some day, Naird would have to accept that it was Jack's *personal* shuttle. Personally gifted to him by Her Royal Highness Princess Entrapta of Dryl. Technically, it was on loan to the Alliance by Jack.

Naird knew that but still tried his 'the Air Force is in command of all space-going vessels stationed on a planet' routine. The man was just jealous that Jack had a personal stealth shuttle, and he didn't even have a normal shuttle and had to make do with

borrowing one from the Air Force's roster when he wanted to take a trip.

He nodded at Brown again and stepped into his office. The coffee maker - which made perfectly fine coffee no matter what Daniel claimed - was already running. Brown knew Jack's routine by now. He was no Carter - or Daniel - but he'd do as an aide.

Jack filled a cup and switched his computer on. While the machine started up, he took a sip and used the remote to quickly check CNN on the TV in the corner. As a general, he had to stay informed, after all. And no one could tell him off, anyway.

"...and the United Nations Commission on Human Rights was, once again, harshly criticised by several member states for its allegedly - I quote - 'blatant bias against any country that isn't under control by aliens'. These accusations follow in the wake of the commission's latest report about human rights violations in China's western provinces. China's government has refuted the report in its entirety, claiming it was a fabrication for political gains, and announced that it would veto any motion based on the report. This despite the commission's report also claiming that China had taken steps to improve its prisons and judicial systems, allegedly in response to the Etherian Intervention in Iran. The Chinese government didn't comment on the situation in North Korea, and…"

Jack finished his coffee and sighed. Nothing new on that front. He hoped it stayed that way. If North Korea destabilised, things would get messy. And Taiwan's attempts to get into the Alliance weren't helping either. Explaining that mess to the Etherians must have driven a few members of the state department into early retirement.

Well, neither was his problem. His problem was getting his troops ready for the coming offensive. No matter what planet they would strike, Jack was sure that his soldiers would be the first to fight.

Or at least the second, right after the princesses.

*****

Alliance Headquarters, Brussels, Belgium, October 30th, 1999

"...and so, to make asteroid mining cost-effective would require more dedicated spacecraft, mainly for transport, and trained personnel and special gear to do the actual extraction. Even so, it would only be competitive for rare earths unless and until orbital infrastructure to handle large-scale mining is being built, coupled with transportation that can ferry entire asteroids to said infrastructure." The scientist doing the presentation - Dr Wallander - nodded as he finished his exposition.

Before Adora could even thank the man, the American Secretary of Defense spoke up: "Pushing entire asteroids towards Earth? One mistake, and we're done for!"

Wallander shook his head. "The orbital guard flotilla can handle even a large asteroid. With the distances involved, any failure to decelerate that would put Earth at risk would be obvious long before it gets close to Earth. In extremis, a single frigate can break up any asteroid into pieces small enough to burn up on atmospheric entry."

"Do you know how many voters will think of Armageddon when they hear 'asteroids flying towards Earth'?"

Wallander frowned. "Do you mean the movie? That was very inaccurate, from a scientific point of view, and…"

"Scientific accuracy doesn't mean anything to the voters!" the American snapped.

"And that's your problem," Catra muttered next to Adora.

Adora cleared her throat. "We're not here to discuss American elections." They were more than a year away, anyway. "We're here to discuss how to ensure that the Alliance will continue to be

supplied with the raw materials we need for our military production. Asteroid mining is a possible solution."

"We can cover the needs with existing production on Earth," the German Verteidigungsminister cut in.

"So far," his British counterpart retorted. "As we ramp up production, we'll run into shortages."

"And mining puts a terrible burden on nature," Perfuma cut in. "It threatens to contaminate your supply of food and water."

That was exaggerated, as far as Adora knew. At least in Europe. But it was a concern that couldn't be ignored.

"And we have to consider the future - no ore deposit will last forever, and creating an entire fleet of spaceships takes a lot of resources." The British Minister nodded.

"And using space mining will see some return of investment for our space infrastructure," the French Minister added.

"Making our orbital defence stations dual-use will mean they're still legitimate military targets," the German objected.

"The Goa'uld don't care about your laws of war." Catra rolled her eyes. "Besides, we already have asteroid mining facilities for the spy bot network."

"Not in the Solar System," Dr Wallander said. "And automated systems are not flexible enough to mine efficiently as demand changes. They work for your automated drone production facilities, but that's not an option for us here."

It wouldn't be diplomatic to mention that they had moved the spy bot factories to nearby systems to avoid complaints about 'stealing the Solar System's resources' and 'exploitation in the tradition of colonialism' from the United Nations. Even though they were doing this to protect Earth. So Adora nodded. "Make a study about the projected costs for either solution and how long it

would take to implement either." They could decide which variant to implement, if any, when they had that information. "And since we're talking about space infrastructure, what's the status of the fleet transports?" She looked at Catra.

Her lover rolled her eyes again; they had gone over this before the meeting, but appearances and forms had to be kept, like at a Princess Prom. "They're on schedule. And the first block should be entering service in a few weeks, depending on how their shakedown cruises go. In an emergency, we could already call upon them."

"They're ahead of our own projects," the Norwegian Minister commented.

The American Secretary of Defense bristled at that. "You can't compare transports being built in automated factories using existing designs with creating an entire industry to build warships from scratch!"

It would be very undiplomatic to mention that just using Horde frigates would have worked as well - that was what the Princess Alliance was doing, after all. Etheria's Home Fleet - or Fourth Fleet, depending on who you asked - was using frigates built by Second Fleet's supply train but crewed by Etherians who were being trained by clones. Not even Salineas's shipyards were switching to spaceships any time soon. As Mermista had put it, she'd rather do that after the war when it could be done right, and with thousands of Salinean sailors with experience in space to help, than rush it with 'half-baked designs and untrained workers'.

But Earth didn't do things like that. They wanted to build their own ships. Which was fine but would take longer. And complicate the supply issues for the Alliance, of course. At least they would soon have the transport and supply capacity for multiple ground divisions - pretty much the entire expeditionary force that was, at least nominally, ready for operations right now.

And, speaking of soldiers… Adora cleared her throat again. "There's another issue we need to discuss. We have had a breakthrough in our research to produce synthetic symbionts. As soon as we have sufficient production, we can supply replacement symbionts to all our Jaffa prisoners and then extend that to other Jaffa."

"Let's hope we'll get enough defectors to join our side," the Secretary of Defence muttered. "We've spent enough on that project."

Mostly Etheria, actually, Adora knew that. And it wasn't as if they had paid actual money for using Research Station Alpha. But every day Entrapta, Hordak and the others were working there, they weren't working on other projects, and that was an opportunity cost which had to be accounted for - at least according to the Alliance budget commission.

She took a deep breath before continuing. "There's an additional benefit from the research," she said. "According to our preliminary research, the synthetic symbionts would be able to provide substantial benefits to humans as well, namely, greatly enhancing their immune system and, potentially, significantly prolonging their lifespans."

For a moment, the meeting room was dead silent. Then everyone seemed to speak up at once.

*****

Alliance Headquarters, Brussels, Belgium, October 31st, 1999

"I am a physicist, sir. Not a geneticist," Samantha Carter repeated herself for what felt like the tenth time today. Why did people think she was an expert on everything? Granted, she had dealt with a wide range of scientific challenges at Stargate Command, but usually in emergencies.

“Major Carter, please don’t play coy. You were involved in the entire project from the start - from before the start. We need your assessment of this recent development.” The Secretary of Defense leaned forward, putting both elbows on the table in the small meeting room.

Sam could clearly hear the emphasis on ‘recent’ the man used. “I was focused on security, administrative and technical tasks.” That was technically true. “Dr Morrison was a lead researcher. I am sure his report covers whatever you need to know.”

“Dr Morrison’s report covers biological issues. What we need are hard numbers about production. How quickly can those synthetic things be manufactured? And at what cost? You built those robot factories with Princess Entrapta.”

Sam pressed her lips together for a moment. “The synthetic symbionts are organic lifeforms, sir. They need to be grown in cloning tanks. They can’t be built on assembly lines by automated systems.” It was a bit more complicated than that, with bioreactors needed for various products to feed the cloning tanks, and automation was certainly an important part, but she doubted the man would understand the process.

The man made a dismissive gesture with his hand. “Yes, yes, I know that. What I - what we, the government - don’t know yet is: How much does it cost to build enough of those things to supply the American population, and how long will it take?”

Sam raised her eyebrows. “The *American* population?”

“They’re our responsibility. We swore an oath, Major.” The Secretary narrowed his eyes.

“Production facilities are already being set up on Etheria.” She knew better than to respond to the implied rebuke.

“For the symbionts for the Jaffa. Not the symbionts for humans. Those are still being researched, aren’t they?” The man looked at her as if he suddenly suspected a cover-up.

“They are being tested, yes,” she said. “We don’t know yet if the design will have to be altered. Potential long-term effects have to be thoroughly examined.”

“People are already asking why months of research - almost a year - were spent on ways to benefit our enemies instead of us.”

What? By ‘people’ he must mean his colleagues. The symbionts were classified. And those with the clearance would know better than to ask such questions! She met the man’s eyes with a glare of her own. “The project was ordered by Alliance Command, in accordance with our general strategy against the Goa’uld.” They needed those symbionts to turn the Jaffa. And to keep prisoners alive.

“I know that. But people wonder if we should have changed our goals once the potential of the symbionts became obvious.”

“The research team focused on the task they were given,” Sam replied to the unspoken accusation. “And on the other crucial genetic research. The potential applications for humans were only discovered once the project had entered the final testing phase.”

The Secretary of Defense snorted at that but didn’t push the issue. Though Sam was sure he wouldn’t show such restraint if she wasn’t friends with Entrapta and the other princesses. “We need those projections. This is one of the most important issues for our government - for the world. If this leaks - when this leaks - to the public, there will be riots in the streets and worse if we don’t have answers and a plan. Hell, there’ll be riots anyway.”

Sam was aware of that, of course. Some people would be horrified at the idea. And some would suspect everyone who got a symbiont as a potential traitor. Or someone who had sold their soul. But many would be clamouring for a symbiont. “We’re still building the production facilities for the symbionts meant for the Jaffa. Once they are up and running, we have a baseline and can project numbers for the variant for humans and Etherians. But we were planning to produce a million symbionts in the first year, and

scaling up those numbers by two or three magnitudes, which would be needed just to cover the potential short-term demand in the Alliance, is a challenge." To say the least. The effort to produce a million Jaffa-symbionts was already straining the resources of Etheria, and that was with Perfuma delivering any organic base materials for basically free.

"The alternative is civil unrest of a scale we can't imagine. And the complete collapse of the healthcare industry. All that in the middle of a war in space." He leaned forward even more. "We need those numbers, Major! We need to know what it will cost, and how long it'll take, so we know what we can do to deal with this."

Sam had some doubts about the man's priorities, but he wasn't wrong. "I'll get on it, sir." That would delay other projects, but she wasn't looking forward to more troubleshooting for the Constellation-II project anyway. "We should…"

The Secretary of Defense's mobile phone went off, interrupting her. He took the call, turning away from her.

"Yes?"

"I'm in the middle of… What?" He paused. "WHAT?"

His head whipped around, and he stared at Sam again. "Someone leaked it to the media! CNN is going to run a report on this!"

Sam felt her stomach drop. That wasn't good. Not at all.

*****

Earth Orbit, Solar System, October 31st, 1999 (Earth Time)

"...and we're waiting for the United States Government to comment on the claim that Alliance scientists have found a way to extend the human lifespan by at least a hundred years, in perfect health, by using alien technology. A press conference has been

announced but has been delayed for 'technical reasons', so speculation is running rampant."

"Thank you, Bob. Now, this was leaked by an anonymous source. Can this information be trusted? It sounds fantastical - almost too good to be true. We've got an expert on the matter here. Professor Smith, as one of the foremost experts in this particular field, what do you think?"

"Well, thank you for having me here. Some time ago, I would have said this sounded too good to be true due to my research into anti-ageing treatments. However, this was before we met the Etherians and, most importantly, before the return of magic. Nowadays, after analysing the various people who were healed by Princess She-Ra, the consensus amongst my colleagues is that, with magical means, curing any disability is possible, which should result in extending human lifespan by several decades at the least."

"That's short of the hundred years we were told was the baseline, Professor."

"Exactly. And that's peculiar, isn't it? I would have expected a more conservative number. Now, this might just be a bit of hyperbole, or it might be indicative of more than merely healing ailments. We have not even begun to delve into what magical healing can do, but we know that at least some individuals lived for centuries on Etheria."

"That would be a very long time indeed."

"Yes. However, we don't know yet what it takes to achieve that. Magical talent is not common, as we know by now, and such treatments might be beyond the power of the vast majority of sorceresses, even Etherian ones."

"You mean, only She-Ra could do this, Professor?"

"That might be the case, yes."

Catra muttered a curse and muted the screen. “And here I was looking forward to Halloween.” Those bastards just had to ruin her and Adora’s day. The one day of the year she could have gone out without a disguise and be mistaken for someone wearing a catgirl - or Catra - costume with Adora, and those idiots had to ruin it!

“We can still go to the party at Alliance Headquarters,” Bow said. “Although we probably have to talk about this with the Council first.”

Catra scoffed. “Talk to the same people who leaked this? So they can leak more information?”

“We don’t know who leaked it,” Bow retorted.

“So we have to find the leak first.” That would be difficult, with so many suspects. They had informed all the governments in the Alliance, after all. And those would have discussed it internally, looked for more angles and information… “We need to revamp how we handle such information,” she said.

“Yes,” Glimmer agreed. “We can’t fight a war if everything gets leaked. We cannot count on being secure from infiltrators forever - certainly not once we start occupying more planets.”

“And we need to tell everyone about the symbionts,” Adora spoke up. Catra saw that she had raised her chin slightly - she wouldn’t budge on that. “We can’t have people think I can make them immortal!”

Catra nodded. They would hound her forever. People were already speculating about eternal youth.

“The Council won’t like it,” Glimmer said. “But that’s their problem. We won’t lie for them if they can’t control their media.”

More like wouldn’t control them, Catra thought. “So… let’s meet the press?”

“We need to inform our allies first,” Glimmer said.

"Yes," Bow agreed.

Catra snorted. "We could probably skip the press release then - someone will leak it again."

Glimmer chuckled, but Adora and Bow didn't seem to think it was funny.

"We won't," Adora said. "We'll do this properly and tell people the truth."

*****

Alliance Headquarters, Brussels, Belgium, October 31st, 1999

"...and we're working on adapting those symbionts to humans and other life forms. Based on the effects on Jaffa, which we tested, we expect a significant boost to the immune system, which should render a host mostly immune to most diseases and enhance their regeneration after suffering an injury. The effects on the lifespan beyond that are not yet clear but might be similar to the effects on the hosts of Goa'uld."

Catra saw Adora smile at the various reporters staring at her in the room.

"It's not magic. And you don't need a sorceress to use it. Any surgeon should be able to implant the symbiont easily and safely. But, as I said, we're still working on adapting the symbiont, so it'll take a while until it's available. We will ensure that it is perfectly safe, and that requires a lot of testing. Any questions?"

Catra's ears twitched, and she winced as the murmuring that had started during the news conference quickly grew painfully loud, some of the reporters jumping up from their seats and waving microphones, recorders and notepads around as they tried to shout over each other.

"When will this be available?"

“How long has this been in the pipeline?”

“How can you tell if this is safe?”

“Are you using Goa’uld for this?”

“Wo will receive those symbionts first?”

Yeah, this was going about as well as she had expected.

*****

Jack O’Neill took another sip from his glass and frowned. This Halloween party sucked. And not because they were in Europe, where Halloween wasn’t a thing. No, everyone here was either talking about the symbionts or watching the news about the symbionts. And a lot of people were too busy to attend in the first place.

Including Carter, who had apparently been ordered to prepare a briefing about the symbionts for the government. And Daniel, who was busy working on a paper about the consequences for society if people suddenly had a lifespan twice as long as before or something. He hadn’t even been ordered to do it - no, Jack’s friend had *volunteered* because he thought this couldn’t wait.

Jack had tried to get them to attend the party anyway, but both had turned them down. And he couldn’t exactly order them to attend since they - technically - weren’t in his chain of command any more. Well, they would be temporarily assigned to Special Operations Command for any operations, but they were not officially part of Jack’s command.

And no, Jack wasn’t thinking about what that might mean for certain regulations. Absolutely not.

“The differences between this event and last year’s Halloween party at Stargate Command are subtle but distinct, I believe.”

Well, at least one of Jack's friends had made the party. "What do you mean, Teal'c?" Jack asked as he turned.

"The selection of the dishes is more varied," Teal'c said, holding a plate loaded with finger food. "Healthier as well, I think. At least some of the fare," he added, eyeing his plate.

"That's because this is the Alliance Headquarters, not a base." Jack snorted. "The soldiers here are mostly paper pushers, so if they ate like soldiers in the field, they'd grow too fat to walk in no time."

Teal'c tilted his head to the side and raised an eyebrow. "I was told it is the result of so many soldiers from countries with vastly different culinary traditions working together."

Jack snorted again. "Well, that's the official explanation. Of course, they wouldn't admit that they are skipping P.T."

Teal'c's eyebrow remained where it was - he wasn't buying it. Well, can't win them all. Jack grinned. "But the variety is nice. As long as you stay away from the various Nordic dishes." The catering had included some truly *nasty* examples.

"I have yet to discover an inedible meal," Teal'c said. "Most were pleasantly spicy."

"Right." Jack shrugged. "And, speaking of stomachs… Are you going to get a replacement for Junior?"

Teal'c calmly finished a small pastry - something French, or maybe Belgian, Jack thought - before replying: "My Prim'ta has a few years left before it matures. I would not wish to deprive others who might need the synthetic symbionts more urgently of them merely for my convenience."

"Well, we don't exactly have an army of Jaffa lining up for a new baby snake," Jack said. "I am sure we can spare one for you." And get rid of the Goa'uld in his friend's belly before it matured and killing it became… morally dubious. And probably illegal.

"I believe that this might change once news of those synthetic symbionts spreads to those Jaffa who are currently trapped serving the false gods since becoming Shol'va would doom them to die."

"Yeah, 'freedom or death' sounds a lot better than 'freedom and death'," Jack said. Should he mention Teal'c's family? That was kind of a sore spot.

"Master Bra'tac should know more Jaffa who would be willing to defect now that their circumstances are bound to change."

Jack narrowed his eyes. That was a not-so-subtle - for Teal'c - request to contact his friend's old mentor. "I guess we should go and contact him, then." Now that they actually had those synthetic symbionts as an incentive, that should outweigh the concerns about secrecy that the Alliance brass kept bringing up to block such a mission.

"Indeed."

"Well, let's see where our Supreme Commander is currently hiding," Jack said, looking around. "Did you see her anywhere?" Adora and her friends were attending the party, after their original plans had fallen through thanks to CNN, but they might have decided to risk going out in public anyway - this party sucked, after all.

"Not after the first round of introductions," Teal'c replied. "However, I believe I know where they can be found."

Hm? What was Teal'c looking at? Jack turned his head. The buffet? Yes. And the right wing of the buffet, where the seafood was. Ah! He grinned. "Yeah, let's check our bait. If our furry friend is still around, she'll bite sooner or later." And since Catra wouldn't leave Adora's side for any length of time if she could help it, if they found Catra, they'd find Adora as well.

*****

The Alliance Headquarters Halloween party is disappointing, Adora thought. She had expected a party more like the New Year's Eve Party at Stargate Command, where everyone had a good time. Sure, there had been a few incidents, but nothing really serious, and people had fun even though there was some 'networking', or what you called it. Here, though, it felt more like Princess Prom, just without the fun parts. Everyone seemed to be working on something, trying to gather support for this and that - and as the Supreme Commander of the Alliance, everyone wanted to talk to her.

That the news about the synthetic symbionts had been revealed today didn't help, of course. On the contrary.

All in all, this wasn't a fun costume party, like in the TV shows, but just another work meeting, just with drinks and better food. And Adora already had had all the meetings and work she could stand today.

Not that hiding in a side room - marked 'defunct - keep out' thanks to Catra doing something to the maintenance records that Adora didn't want to know more about - was fun, either. But it was a room with a view of Brussels, and at night, and from afar, the city looked very pretty.

"So, you're really going to stay here?"

Adora turned to smile, if a bit tiredly, at Glimmer. "I don't think it's a good idea for Catra and me to go out today."

"You'd be in disguise - in costume," Glimmer said. "Like us." She had changed into a 'Batgirl' costume herself, though she had left the cowl with the red wig off for now. Bow was going as 'Robin'. "We still have the Wonder Woman and Cheetah costumes…"

Adora frowned at her friend. "We're not going to dye Catra's fur." Really! Catra would claw them!

Glimmer grinned a bit sheepishly. "It would wash out. And it would be the perfect disguise for her!"

“Too perfect,” Adora retorted. People would quickly realise that the fur wasn’t a costume.

“Still better than her plans.” Glimmer snorted. “Going as herself? Please!”

“Refuge in audacity?” Adora offered with a weak smile. It wasn’t a good plan, in her opinion, but it might have worked well enough as long as Catra wore a suit covering most of her fur. But not now that the symbiont news had spread and everyone was focused on them. And on Adora specifically. At least there were no riots in Brussels. So far.

The door opened - that would be Catra, returning from her third ‘food run’. Or ‘fishing expedition’. Adora turned, then blinked.

“So, this is where you were hiding.” Jack looked around as Teal’c closed the door behind them.

“They were waiting at the buffet,” Catra said, scowling as she put a large plate of food on the table.

“And you walked into their ambush?” Glimmer shook her head with a sigh. “You’re slipping.”

“I didn’t think they would insist on following me,” Catra retorted. “I guess I could have tried to lose them…”

“No!” Adora snapped. “So, are you also hiding?” she asked, grabbing a small sandwich from the plate. Not a salmon one, of course - everyone knew better than trying to get between Catra and those.

“Not exactly.” Jack smiled. He was up to something, Adora realised. “But something came up, and we wanted to talk to you about it.”

Catra groaned through a mouth stuffed with a Nordic fish dish.

“And it couldn’t have waited until tomorrow?” Glimmer asked, narrowing her eyes.

Jack’s smile grew a bit wider. “It probably could, but the party sucks, and it doesn’t look as if you’ve got anything better to do if you’re hiding in here…”

He wasn’t entirely wrong - at least as far as Adora was concerned.

Catra, though, snorted. “Wait until we tell Daniel and Sam that you’d rather work than party. And we had plans - we were going to break in the table as soon as Glimmer and Bow left.”

Adora gasped at her - fortunately, she hadn’t been drinking at the moment. “Catra!”

“What? It’s true.”

“That’s…” Adora pressed her lips together as she felt her cheeks heat up. She raised her chin and turned to Jack and Teal’c. “So, what do you want to talk about?” she asked as professionally as she could.

“Ah, it’s about Teal’c’s family and friends amongst the Jaffa,” Jack said. “Now that we have replacements for the baby snakes, we should revisit them.”

“The circumstances regarding them have changed, I believe,” Teal’c added.

Adora nodded at once. “Of course!” As if they’d keep their friend from his family and friends if he wanted to see them!

*****

The Symbionts Part 2

Alliance Headquarters, Brussels, Belgium, November 1st, 1999

The screen showed a dark sky with a lot of stars. Judging from the relative lack of light pollution, the camera was in the countryside, not in a city. Samantha Carter knew that already from the file, but confirmation was always good.

The quality wasn't the best - it was a little grainy. Not a high-end camera. Something else that she knew already. But it was better than most security cameras. She could see glowing lights in the sky as the camera turned around and focused on them.

"Oh! What's that?"

"Fireworks! Pretty!"

"Fireworks? Out here?"

"Those aren't fireworks!"

"They're coming closer!"

"Planes?"

"Shuttles! Must be alien shuttles!

"Oh! Aliens, here?"

The sound quality was… not very good either. But the excited voices of a family of four - as shown in the earlier parts of the recording - were clearly audible.

"Those are… Dear Lord!"

The camera shook as the lights grew larger, more defined - and then spectral forms flew above it, low enough so the camera could

pick up barking over the screams from the family, shortly before the camera showed the ground, then trees, as the man holding it must have ducked. He would have been too late to avoid the flying objects, Sam knew, if they had been coming for him.

But they hadn't come for him. The camera swung back and forth until it caught the back of the spectral forms flying through the sky. Wolves or dogs, Sam noted. *Hounds*, she added a moment later. A dozen of them. *Exactly* a dozen.

"What were they, Dad?"

"I don't know, dear."

"Flying dogs? Like Swift Wind?"

"I don't think so, dear."

No, not like Swift Wind. Sam shook her head as she stopped the recording on her screen. She hadn't noticed anything new this time. Nothing useful.

She opened the stills taken from the recording. The best showed a large wolf or dog's form, lined in glowing red-orange colours, racing through the sky, its legs moving as if it were running over a field.

"That's not an Etherian creature," Glimmer said behind her. "Not anyone I recognise, at least."

"It's not Swift Wind," Adora added.

"We already know that," Catra said. "Swift Wind has wings. And he doesn't glow like that."

"Well, he could if you used some glowing paint," Bow pointed out. He cocked his head. "Although the silhouettes are wrong.

"There aren't any wings, and the movements don't match those of winged flight," Sam said. She had run the recording through a few

simulations to compare the movements to those of Swift Wind during his appearance at Disney World a few months ago.

“Do we have recordings of the attack?” Glimmer asked.

“No. Just the reports from eyewitnesses,” Sam said. If they had such recordings, she would have shown them already.

“And those reports match these images?” Adora asked.

“Yes.” Sam nodded. “Red or orange glowing spectral dogs, attacking a small house in Wales and burning it down. The resident, Father Julian Gardner, was found dead in the remains by the fire brigade.”

“Ah.”

“Did he burn to death?” Catra asked.

“The autopsy hasn’t finished yet,” Sam said. “But the pictures we got…” A click of her mouse opened another series of pictures on the big screen.

“Ew!”

“That’s…”

“Looks like they tore out his throat. It reminds me of the remains of some of the scouting parties we lost in the Whispering Woods.”

“Catra!”

“What?”

“Preliminary examinations support this assumption,” Sam said. “The body was found in the middle of the living room, and the witnesses claim that he would have had enough time to escape through the door after the creatures left before the fire consumed the house.”

“See?”

“That’s not the point!”

“Anyway,” Glimmer spoke over Adora and Catra’s bickering, “Those weren’t Etherian creatures. I’ve never heard of anything like them.”

Sam nodded. She had deemed that unlikely in the first place - they had extensive security on both sides of the Stargate to prevent unauthorised access. A must, with magic, Goa’uld and shapeshifters present. The chance that such creatures had snuck through was very low.

But if they hadn’t travelled to Earth from Etheria, they would have had to come from another planet, which was equally unlikely. Or they had originated on Earth. Sam pressed her lips together. She would have preferred it if the creatures had come through the Stargate, despite what that would have said about their security.

“So, since it’s not from Etheria…” Catra trailed off.

Sam sighed as Daniel, who must have bitten his tongue to not speak up while their friends had watched the recording, eagerly nodded. “I’ve done a bit of research. I’m no expert, of course, but the date, the pictures, the location and the accounts of the witnesses all fit my conclusion.” He pushed a key on his laptop, and a set of pictures appeared on the screen to the side. A mix of illustrations and paintings of various styles, mostly medieval. “Yesterday was Halloween. A celebration based on the old Samhain, of Celtic origin - well, that’s a simplified version; the popular perception of what’s supposed to be ‘Celtic’ is slightly outdated, and nowadays, we have...”

Sam cleared her throat.

“Ah, sorry!” Daniel smiled a little sheepishly at her. “Anyway, Samhain was said to have mystic - or magical significance in folklore. And the pictures and descriptions we saw match the myth of the Cŵn Annwn, also called the Hell Hounds.” He pushed his glasses up. “It’s just a hypothesis for now, but I believe this is

an example of a major magic feat achieved by following Earth traditions. Magical traditions. I think someone successfully called up or summoned the Wild Hunt."

*****

Alliance Headquarters, Brussels, Belgium, November 2nd, 1999

"...and reports from Ireland confirm similar incidents, although none of them fatal. In Dublin, several witnesses described 'a leprechaun prancing in the street'. Footage from security cameras seems to support those reports."

The picture of the news anchor was replaced by a grainy, black-and-white recording of a small, tiny creature with an oversized hat flitting past the pavement. Too small to be a human child.

Catra shook her head as the news anchorman reappeared.

"Authorities are still trying to determine if the Giant's Causeway has been altered, as some experts claim. What has been confirmed is that the Stone of Destiny on the Hill of Tara has been glowing since the night of Halloween - or Samhain. So far, neither the British nor Irish governments have commented on repeated requests for further information, though anonymous sources from both countries maintain that there is definite proof of several magical incidents, and we…"

Catra changed the channel.

"...and while the United Nations are debating how to deal with potentially lethal magic incidents, protestors are assembling in front of the Palais des Nations in Geneva, Switzerland, and the Headquarters of the United Nations in New York. The police are trying to separate those demanding harsh measures against practitioners of magic and those defending magic as part of their religion, but several clashes have already been observed, leading to at least two wounded people in New York. This comes on the heels of the tense protests for and against the so-called 'synthetic

symbiont' the Alliance High Command has developed, which are expected to fundamentally alter healthcare as we know it should they be approved for treatment, and…"

Catra changed the channel again. An overweight, angry man appeared, speaking into a microphone someone else was holding.

"Weren't we told that the magic on Earth would be safe? Weak? Harmless? And now, a good, God-fearing man - a priest tending to his flock! - was murdered by fell sorcery! Burned to death in his home! How many more people who will not bow to godless aliens will suffer his fate? How many more curses will be cast at other men of the cloth? How much longer until we will finally heed what the Bible tells us? Thou shalt not suffer a witch to live! That is God's will and…"

Catra rolled her eyes and muttered a cure as she changed the channel again.

"...and in light of the events on Halloween, one wonders if we should not rethink our stance towards the Middle-Eastern countries' controversial policies towards sorceresses. While a blanket criminalisation of all magic is clearly too much, harsh punishments for dangerous sorcery seem an adequate response to this new danger, and…"

Was everyone going crazy? Catra hissed. "So, that's their angle! One death - which hasn't even been confirmed yet as a magical murder - and they're asking for witch hunts."

"You know how Earth media work," Glimmer commented - though Catra could tell that she was angry as well. "They always do that when something happens. Our allies could really do with better control over their news services."

"Good luck with that." Catra snorted. Their allies had been very clear about 'freedom of the press'. She glanced at Sam and Daniel.

“Well, it’s a really delicate problem,” Daniel said. “Our past experiences have left a lasting impression - the ability to control the media can be horribly abused, and…”

“Yes, yes!” Catra made a dismissive gesture with her hand. “We know.”

“Yes.” Glimmer nodded. “So, since control over the media is out, what can you do about this?” She pointed at the screen, which had turned dark.

“About the magic issue? Or the symbionts?” Daniel asked.

“Both,” Glimmer told him.

“There is not much we can do about the symbionts,” Sam said. “We’re still working on actually adapting them to humans, and we can’t tell how long that will take - and how much longer building facilities for mass production will take.”

“It’s up to the various governments how to handle this,” Daniel added.

Catra snorted again. “You think we will let anyone monopolise the symbionts?”

“I wouldn’t presume to make such an assumption.” Daniel wasn’t very good at acting innocently.

“We’re not going to do that, but we also won’t get dragged into that mess,” Glimmer said. “Not if we can help it.” Her expression clearly showed that she was sure they could help it.

Catra agreed. The Alliance wouldn’t work out if single countries could hoard symbionts. Or keep their people from using them if they wanted to.

“Yes.” Sam nodded. “But despite the hysteria and hyperbole, the media raised a good question: How could anyone send the Wild Hunt after someone? Magic of that power is supposed to be too

difficult for a beginner. At least, according to what we have been told." 'By you' remained unsaid but clearly understood.

Catra looked at Glimmer. She was the expert here.

Her friend sighed. "Yes, and I stand by that. But we also said that we don't know how Earth's magic would express itself. It could be that this - sending out such creatures - is how this planet's magic works. You certainly have enough legends and myths about magical creatures helping and harming people."

Daniel leaned forward with an eager expression. "You mean that Earth's native magical traditions might be rooted in summoning and controlling - through various means - different, ah, spirits? Almost every culture has myths about otherworldly creatures and how to interact with them. Djinns, kami, angels, demons, spirits, ghosts and various other mythical creatures. But would those be created by whoever calls on them, or is the magic calling upon existing creatures?"

"That's a good question," Glimmer said. "We don't know - yet. Etheria doesn't really have such traditions."

Daniel looked even more excited about the research they would have to do.

Sam, though, looked concerned.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, November 3rd, 1999

Everyone has gone nuts, Jack O'Neill thought as he saw the new 'security measures' taken at the Base: Lookouts to spot magical attacks. "So much for listening to the experts…" he muttered as he stepped through the gate to his part of the base.

"It's supposed to be just until we get other means of detecting such threats, sir," Jones, standing guard - with binocs - said.

Jack stopped and turned to look at Jones. He was a Navy Puke, former SEAL, but other than that, he was a good soldier. "And if we spot a 'Wild Hunt' approaching, what do we do?" Jack asked.

"Alert the base, sir!"

"And then?"

Jones grinned. "Pray?"

Jack snorted. "I'm pretty sure the priest prayed. Didn't save him."

"Well, sir, if the rumours about him are true…" Jones trailed off with a shrug.

Jack suppressed a sigh. It hadn't taken the media long to dig up rumours about child abuse and cover-ups. Some people were already talking about 'divine vengeance' having been visited upon the man.

"We can pray to She-Ra for protection," the other guard, Kelly, spoke up. He had a perfectly straight expression - Jack couldn't tell if the man was serious or joking. And he was SAS, which meant his sense of humour was British, further complicating matters.

But Jack wasn't touching that landmine today. "We're actually getting Etherian sorceresses assigned to the base for our protection." Amongst them Castaspella, though she was coming for research into Earth's magical traditions, now that they seemed to be emerging.

"Really, sir?" Kelly perked up.

"The Alliance isn't going to leave our main base vulnerable to any witch with a grudge," Jack said.

"Why would witches attack us, sir?" Kelly asked.

“Who knows what someone summoning the Wild Hunt thinks?” Jack shrugged. “They might think we threaten their gods or the world or something.”

“You think they worship the snakes, sir?” Jones looked concerned now.

“I doubt that,” Jack replied. Although, truth to be told, he couldn’t be sure. Stranger things had happened. Not that he would tell his troops that. “Magic and snakes don’t mix.”

That seemed to reassure the two soldiers. Jack was about to turn around and continue towards his office when Kelly spoke up again, “Uh, sir… we’ve heard another rumour. A mite concerning.”

“Yes?” Jack tilted his head - he needed his coffee. It was too early for this.

“Some people claim that we’re going to get the snake symbionts, whether we want them or not,” Jones said.

Oh, for…! Jack had to nip that in the bud. “We don’t have any symbionts yet - they’re still working on the things,” he said. “And once we have them - we don’t know when that will be the case - no one will be forced to get one. It’ll be strictly volunteer-only. If we even get any in the first place. Last I heard, demand is going to be high in the civilian market.” And amongst the rich and powerful, of course.

Despite the concern the two soldiers had voiced, that didn’t seem to please them either. “If those things are safe, they could be very useful for us,” Kelly said. “Especially for missions behind the enemy lines, without the possibility of medevacs.”

Jones nodded. “And we wouldn’t have to worry about alien bugs.” He shuddered - probably remembering the ‘here’s why you don’t eat or drink anything on an alien planet without our permission’ lecture Dr Fraser had given Jack’s soldiers at his request.

"We're aware of that," Jack told them. "But we're not going to force anyone to put a symbiont into their body." Even if some idiots were thinking about it, according to Adora. As a 'cost-saving measure', even! If that spread to the civilians, if someone suggested that people on welfare would have to get a symbiont so they wouldn't generate more costs…

He pushed the thought away and nodded at the guards. "So, don't worry about that, OK? One way or the other, we won't let you down." Jack would make sure of that.

"We know, sir." Kelly smiled, as did Jones.

That's one of the best things about the Alliance, Jack thought as he resumed walking to his office. With the princesses fighting on the frontlines, the politicians wouldn't be able to screw the soldiers over.

It was a small consolation, though. Between the symbionts and the new magic threat, things were bound to be messy for a while. And there was only so much Jack could do about either. He had to trust that his friends had things in hand. More or less.

He had work to do. Soldiers to train. Officers to pick. And the mission to contact Teal'c's mentor and family to prepare. His friend was counting on him, and Jack wouldn't let him down either.

*****

Alliance Headquarters, Brussels, Belgium, November 4th, 1999

"...and this is Chulak, Teal'c's home planet. We've got spy bots covering the system since it belongs to Apophis, who is kind of one of our main enemies since he has already attacked Earth once. Twice if you count his visit through the Stargate."

Adora nodded at Entrapta's exposition and looked at the holoprojection slowly rotating behind her friend. It was a smaller

planet than Etheria or Earth. Shorter daylight cycles, as Entrapta had told them.

"...and that's the Capital, named City of Chulak." Entrapta's hair tendrils pointed at a spot on the planet's main continent. Another tendril pushed a few keys on the computer next to her, and the screen behind her changed to show aerial pictures of the city.

Built on a hill but without fortifications, Adora noted. At least no visible fortifications, though a ground attack would have to fight through narrow streets and dense buildings, where the Jaffa would have the advantage as long as they had civilians to hide behind so you couldn't shell or bomb their positions. With stealth shuttles, you could drop troops directly on the palace - the temple - but you'd still have to root out the warriors in the city…

"These are the last known locations of Teal'c's family and Bra'tac," Entrapta went on as her hair whirled, highlighting more spots on the planet. "However, aerial surveillance showed both locations as deserted - or abandoned. Unfortunately, our spy bots aren't built for atmospheric entry since their main task is to system and orbital reconnaissance, so we don't have any more detailed information."

Adora pressed her lips together. That didn't look good.

"If Apophis had captured Bra'tac, he would have announced that to show his strength," Teal'c said. "There would have been a public execution or similar demonstration of the false god's power."

"Yeah, that's his style," Jack commented.

"And your family?" Glimmer asked.

"I believe that, should Apophis intend to use them as leverage against me, he would have announced the fact that he has them so I would hear of them," Teal'c replied. "However, since they have denounced me, they should be safe from retaliation."

“Unless he wants to turn you into a spy,” Catra said, “and doesn’t want us to know that he’s holding your family as hostages.”

“He would have to be able to contact Teal’c covertly for that,” Jack retorted. “That’s not easy - we aren’t exactly on speaking terms with him, and we don’t frequent the same places. Well, when we do, we tend to blow them up,” he added with a grin.

“He could still attempt to use them against you,” Catra pointed out. “Or just keep them prisoner in case there’s an opportunity to use them.”

Teal’c inclined his head.

“Well, we’ll have to find out where they are,” Daniel said with obviously forced optimism. “We did it once already.”

“Apophis’s hold on Chulak is not as tight as on other planets,” Teal’c said. “He conquered it from Chronos, but he never invested too much in the world.”

Adora could see that on the screen. Chulak’s Stargate was standing in the open, without visible fortifications or guards.

“Chulak isn’t part of Apophis’s core worlds,” Sam said.

Adora nodded. The System Lords usually focused on a few worlds, developed and well-defended. And many of the remaining worlds under their control only had token Jaffa garrisons - sometimes not even that - and few settlements that provided raw materials or agricultural produce to the core worlds. And recruits for their armies and slaves for their factories, farms and mines.

“So… do we sneak through the Stargate, or do we fly there?” Daniel asked. “We’ve used the Stargate before, and it doesn’t look as if they changed anything.” He peered at the pictures on the screen.

“Or that’s what he wants us to think,” Catra muttered with a frown. “It’s the best spot for a trap. He has to have surveillance

on it, at least."

"The false gods often rely on their faithful to report to them," Teal'c said. "Or, rather, they used to - we cannot rely on them remaining so complacent. Not with the tensions between them running high."

"Yeah. Apophis is the kind of snake to pull something like that," Jack said. "But can he do that on every world?"

"Can we risk it?" Catra cocked her head to the side.

"He would still have to spot us to trigger what trap he might have laid." Jack grinned. "We've got a good record for sneaking through Stargates."

And a ship would take weeks to reach the world. They could send a flotilla, with Third Fleet's flagship, so they would be able to use the Stargate to travel there, but that was still a bit tricky - and too close to an invasion. And you didn't launch an invasion without more intel about the planet.

"So we try to sneak in?" Glimmer asked.

Jack nodded. "Yes. Like old times," he added with a grin.

Stargate Command had been running such missions, Adora knew. But they had also often been running into trouble on such trips. Still, it was feasible - and Jack had been training his command for such operations for months now. They needed some real experience.

She nodded. "Yes. But we'll use spy bots first. On the ground as well."

"Yes!" Entrapta beamed. "We can use our new stealth bots for that! The Goa'uld shouldn't be able to detect them!"

"But we'll need a cover for the gate activation. The gate opening without anyone coming through would look suspicious - and make

the Goa'uld suspect that we have such stealth assets," Sam added.

"I think between us and the Tok'ra, we can come up with a cover," Catra said. "They've been running such missions for a long time."

Adora nodded again. "Then it's settled."

*****

Alliance Headquarters, Brussels, Belgium, November 5th, 1999

"Sam. Entrapta."

Anise wasn't happy. Samantha Carter would have been able to tell even if she hadn't received advance notice of her friend's visit in a rather clipped tone. Usually, the Tok'ra scientist was looking around curiously when she entered Sam's lab - or the spacelab - and generally was smiling when she greeted her friends.

Today, she was… 'not quite frowning' would fit it best, Sam decided. "Hello, Anise."

"Hi!" Entrapta, of course, was smiling widely. "How are you doing? How is your research into the portable stealth device going?"

Anise blinked, then sighed with a slightly rueful smile before straightening. "I was forced to pause my research in order to deal with a new development that greatly concerns the High Council: Your research into synthetic symbionts."

Yes, as Sam had expected.

Entrapta frowned, looking puzzled. "But you knew about that from the start - it was hardly a new development."

"I am talking about the symbionts you are planning to create for humans."

“Oh?” Sam’s friend cocked her head to the side. “Is this about recruiting hosts?” She turned to look at Sam. “We talked about that, right?”

“Yes.” Sam nodded.

“So, you are aware of the effects your research will have on my people?” Anise asked.

“Kinda. But not really.” Entrapta shrugged. “I mean, you only take volunteers as hosts, yes?”

“Of course!”

“But anyone who only wanted a host so they could get healed from an illness or live longer wouldn’t really be volunteering, would they?” Entrapta asked in a guileless tone. “That seems more like a technically-but-not-really voluntary decision - they certainly have a choice, but if one of the choices is so much worse than the other, it’s not really a choice. At least, I think so. You could kinda argue that just having the choice is good enough, but that’s not really true, is it?”

Anise was taken aback. Sam had expected that as well. She felt a little ashamed for letting Entrapta take the lead, so to speak, but while the argument about choices was certainly sound - from an ethical point of view - Sam would have felt a little hypocritical making it herself. Maybe more than a little. She wasn’t a ruthless follower of the idea that the ends justified the means, far from it, but Sam didn’t know what she would be willing to do if humanity’s existence was on the line.

“That’s… true,” Anise said before pressing her lips together for a moment. “But,” she rallied, “sometimes - quite often, actually, as I know - a host would have volunteered without any other incentive anyway if they had known in advance what the bond was like.” Her eyes flashed, and Freya spoke: “Yes. It is hard to describe the feeling to those who haven’t experienced it. “She glanced at Sam

and added: “Or those who have only experienced it in the most extreme circumstances.”

Sam clenched her teeth as she remembered her ‘experience’ with Jolinar.

“But being a host to your partner…” Freya smiled, her eyes looking past Entrapta and Sam. “I would not miss it for the world. You are one half of something greater, something more intimate than you can imagine without living it.”

Oh, Sam could imagine it very well. She had lived through it. To have no secrets left, to feel your most private thoughts, your entire mind, laid open to a stranger… She suppressed a shudder.

“See?” Entrapta beamed. “Our synthetic symbionts won’t really change anything - you’ll still get volunteers.”

Freya’s eyes flashed again, and Anise didn’t look like she shared Entrapta’s optimism. “It is already hard to convince potential hosts that we are nothing like the Goa’uld. This will not make it any easier.”

“Really?” Entrpata pouted a little, “I would have thought that having more people with symbionts would make it more accepted - and not as scary. Some people really fear having a symbiont, even though the benefits are obvious.”

Sam and Anise shared a brief look. “I guess we’ll see,” Sam said, though she didn’t think Entrapta was correct. “But better public relations might improve your chances to find willing hosts significantly.”

“Oh, yes! We can introduce you to Mr Brown and Julie! They’re great at this - they helped us out a lot. People were scared of us as well, can you imagine?”

And they still are, Sam thought. Just not as many as before. Though the recent magical incidents might have changed that again. She didn’t say that, though.

Anise still looked sceptical. "I will have to discuss this with the High Council. I was sent here mainly to get facts about this new… development. I cannot make decisions for my people."

"Oh! Yes, you'll need our data!" Entrapta turned around, hair flying over the keyboard of Sam's secondary computer. "We haven't made too much progress yet - but we found that the base symbiont design should be able to work for both humans and Jaffa, though we'll have to make some changes to allow it to adapt to a human immune system without the Jaffa modifications. You'd think it would be easier to have it work with an actual immune system, but it's not quite as easy since the human immune system wasn't designed for a symbiont."

It's a very good thing, Sam thought, that this is an Etherian research project.

Her superiors, especially her government, would not be happy at all about such data being shared so easily.

Oh.

She closed her eyes for a moment. Some of them - like the Secretary of Defense - who were counting on getting a symbiont themselves to extend their lives might even see sharing data about symbionts with aliens as a threat to their own safety. Like giving out medical data about potential vulnerabilities for biological warfare or whatever else they could come up with.

Well, that was their problem. No one would be forcing them to get a symbiont. In fact, it might be a good thing if this would make some of them hesitate at least a little.

*****

Alliance Headquarters, Brussels, Belgium, November 6th, 1999

"...and amidst unconfirmed reports of magical assaults across Europe, and dangerous 'cryptids' sightings across the world, the

Alliance blindly focuses on the war against the Goa'uld - aliens that have supposedly been forced off Earth by our ancient ancestors with swords and spears yet should be seen as a dire threat to our world! How much longer will this travesty be allowed to go on while people…"

Catra rolled her eyes and muted the channel. You were supposed to keep tabs on your enemies, but she could only stomach watching American media so far. "So much for the Freedom of the Press," she muttered as she leaned back in her seat in the meeting room. A few more minutes until the meeting would begin. "Freedom to lie, more likely."

"That's just a nutcase they interviewed," Adora pointed out, finishing the soda she had grabbed on the way. "The news doesn't actually say that."

Catra shrugged. "If they put him on air, they spread his lies. It works out the same." She glanced at the screen. The politician on air had been replaced by another person being interviewed - if you could call asking them for a quote an interview.

"Not exactly," Daniel objected. "Showing such interviews and contrasting them with facts exposes the claims of those people as false and undermines their reputation and following."

"Really?" Catra scoffed and pressed unmute on the remote on the table.

"...and now the perfidy of the aliens has been exposed! Fell sorcery has been revealed as the evil that it always was! They have deceived those with weak hearts, fooled them with false promises, to lure them astray and corrupt them with magic and false gods! But there is only one saviour, and we know his words as true! It's only by following him that we shall be saved - and he told us to reject both false gods and magic! Thou shalt not suffer a witch to live! He helped our ancestors to drive away alien invaders, and he will help us to do the same if only we have faith! Do not…"

She raised her eyebrows as she muted the television again.

Daniel winced for a moment. "Well, most people will be repelled by such rhetoric."

"And how many people will believe it?" Catra scoffed again. "It's not as if everyone cares about facts in the first place." Some of those lunatics were calling Adora the 'anti-Christ'!

Daniel frowned at that. "We - the Alliance - have been examining those claims and reports. We haven't found any confirmed sightings of such 'cryptids' after Halloween. And most of the magical assaults were rather questionable, to say the least. It seems comparable to the kind of mass hysteria that we saw happen in the past, such as the reports of Japanese attacks on the West Coast following Pearl Harbour in World War II that turned out to be imaginary." He perked up. "But that passed, and this will pass as well."

Catra didn't think it would. Those people were clinging to their delusions no matter the facts. They knew that the only one who could be their 'anti-Christ' was actually a Goa'uld, Sokar, yet refused to consider the implications of that.

"Let's hope so," Adora said with a deep frown.

"It is difficult to make people change their faith even with clear evidence that they are worshipping false gods unworthy of devotion," Teal'c spoke up. "But we shall persevere."

The door opened, and O'Neill stepped inside, followed by Sam and Entrapta. "Sorry for being late," he said with a grin. "We had to get more coffee for Daniel."

"What?" Daniel frowned at him. "I didn't… you don't have any coffee!" he added with a pout.

"It was so good, we drank it on the way." O'Neill shrugged.

"Our shuttle was late," Sam clarified with a slight sigh that Catra's ears picked up.

"Hey! That wasn't my fault!" O'Neill protested. "I was at the spacelab on time. I recall a pair of scientists taking their time boarding their ride."

"We had to finish an experiment," Entrapta explained as she sat down at the table. "Are Glimmer and Bow not coming?"

"Something came up at Bright Moon," Catra said. "So, Sparkles has to smooth ruffled feathers or something, and Bow stayed with her so she won't lose her temper and teleport some idiot into the sea or something."

"Catra!" Adora scolded her. "Micah called for Glimmer to settle an issue between Bright Moon and the Crimson Waste," she told the others. "Anyway, it won't affect our planning session. Entrapta, Sam, you have the latest intel from the spy bots?"

"Oh, yes!" Entrapta nodded and used a tool to project a picture on the wall behind her. "We've mapped the entire planet in greater detail now - it took a while since they have Death Gliders patrolling the orbitals, so the bots had to avoid them, but it wasn't too difficult since there are just a few patrols, not enough to completely cover the planet. You just have to be careful - we could sneak a stealth shuttle through without a problem, according to their search patterns. And speaking of stealth, we have the stealth bots ready for the Stargate. All we need now is the Tok'ra's cover. And Anise said she'd get us that, even though they're probably still unhappy about the symbionts. But as soon as we have a cover for the gate activation, we can send the bots through and look for an ambush."

And once that was dealt with, they could go through themselves. Catra grinned, flashing her fangs. It had been a bit too long since their last time in the field. This should be good.

*****

Gate Area, PZ-1151, November 8th, 1999 (Earth Time)

Jack O'Neill stepped around one of the new stealth bots hovering to the side of the Stargate without the stealth mode engaged on his way to where Carter and Entrapta had set up their computers in one of the new Alliance Standard Mobile Buildings around the D.H.D. - the soldiers were still trying to come up with a decent nickname for the things. Jack was partial to 'Asbies', but generals didn't get to decide that, alas.

Two of the large combat bots - the improved versions capable of anti-air work - were standing guards on each side of the building, with another next to the shield generator in the back. Between those three, the nine others forming a perimeter around the gate and the twelve more standing ready to be deployed, even a few squadrons of Death Gliders would not last long should they get in range. At least according to testing - the bots hadn't seen combat yet.

But the platoon of Jack's 'Snake Hunters' waiting to the side of the Stargate included a few Stinger teams, just in case. And Isa with her blaster cannon.

And there was Emily, standing guard in front of the building. The bot beeped a greeting at Jack, her definitely not-standard blaster cannon and other things Jack was pretty sure he hadn't seen before pointed at the gate.

He nodded back and entered the building.

"There's Jack!" Entrapta called out from where she was standing behind a computer console next to the D.H.D. with Carter. "We're about ready here!"

He looked at Carter, who nodded. "The temporary field base is operational, sir."

A big name for a building and a few fences, but technically correct. Though Jack felt a sudden bout of nostalgia for Stargate Command. Just a bit, though.

“We’re only waiting for your troops,” Catra added. She was sitting - or lounging - on a seat in the back, next to the main screen.

“We’re ready as well,” Jack said. “We were waiting for you,” he added with a grin.

“Sure you were.” Catra smirked.

Adora cleared her throat. “With the temporary field base operational and the forces ready… Start the mission.”

“Yes!” Entrapta turned, and her hair fanned out, flying over the keyboards.

“Dialing to Chulak,” Carter reported as she turned the D.H.D.

The main screen in front of her changed from showing the various parts of the base’s perimeter to the view from the stealth bot, just in time to catch the wormhole stabilising.

“Go, Stealth Bot-7!” Entrapta called out.

Jack could see the bot vanish from sight on the cameras watching it before he focused on the feed from the bot. There, the wormhole grew larger as the bot flew over, then was interrupted for a moment as it entered the gate.

And then they were looking at the deserted area around Chulak’s Stargate.

“Scanning… scanning…” Entrapta reported.

Various numbers and data flickered over the side screens, too fast for Jack to catch them.

“No sign of any bombs,” Carter announced. “Or any high-power device in the area. Trace amounts of Naquadah are at expected levels. Biological and chemical scans continue.”

“Oh! There’s a Naquada device buried in the sand! Take a closer scan!”

The picture zoomed in, then switched to a sort of x-ray view of a…

“It’s a broken zat.” Entrapta sounded disappointed. “No power left in its cell.”

“No sign of a chemical or biological agent,” Carter reported.

“Good. So, the gate area should be safe,” Adora said.

“Relatively safe,” Catra said. “Someone’s bound to be watching for new arrivals. Even on a backwater planet like this.”

“Catra!” Adora frowned at her. “It’s Teal’c’s home!”

“I am not offended, Commander Adora,” Teal’c said. “Chulak is a rather neglected part of Apophis’s realm. Although…” He tilted his head and stared at the feed from the bot. “Those tracks there seem unusual.”

“Tracks? Where?” Entrapta asked.

But Teal’c was right. There was something. Jack took a closer look at the picture on the screen. “Fly closer to the area near the bush there,” he said. “And zoom in.”

They did. It looked like a typical dirt road linking the Stargate with the planetary capital, but the grass to both sides of it…”

“A formation marched through there. Recently,” Teal’c stated. “Four warriors wide.”

If Teal’c said so, it was true. And four warriors wide… that meant a lot of Jaffa.

“That’s unusual,” Catra commented.

“Indeed.”

“We have no records from orbital surveillance of such a troop movement,” Carter reported. “But our coverage has been spotty until a few days ago.”

“Well, did they arrive - or did they leave?” Jack asked.

“I would have to take a closer look in person to tell,” Teal’c said. “Your technology is superb, Entrapta, Sam Carter, Bow, but certain things can’t be done remotely.”

“Well, folks, time to don our disguises,” Jack said. “And look like smugglers.”

Catra snorted as she got up from her seat. “They’re just cloaks. Ratty cloaks.”

“Exactly!” Jack grinned.

“Most of the people plying that trade in the false god’s realms do dress like that,” Teal’c said. “We will not stand out - at least from a distance.”

“And it’s a cover the Tok’ra have used a lot,” Glimmer said.

“Let’s hope the Goa’uld haven’t wised up, then,” Catra said.

“Well, we’ll find out,” Jack said with a little more confidence than he felt. They had enough firepower waiting here to deal with pretty much everything that Apophis was supposed to have on Chulak and then some, and their spy bots hadn’t detected anything from orbit, but… a planet was damn large, and Apophis wasn’t stupid. Still, between the bots - each with the firepower of a main battle tank - Jack’s platoon of the best of his command and She-Ra and her friends, they should be able to outfight any Jaffa infantry force long enough to retreat through the gate. As long as they didn’t have dozens of Death Gliders or a few Al’keshs. And none of their surveillance had showed such forces. If they were hidden on Chulak… well, they should have enough warning to retreat anyway.

He slipped his own cloak on, adjusting it so he could get his carbine out without getting it tangled up. It felt more than a bit like being back on a covert op in certain African regions.

As he and the others approached the Stargate, he saw his platoon get up as well - and pull their own cloaks on. Eager for their first mission, but they'd have to wait for the clear from Jack. Smugglers didn't come in platoon-sized groups.

Jack nodded at them, then went up the ramp and stepped through the Stargate. General or not, he led from the front.

A moment that felt longer than it was later, he was on Chulak. He glanced around, hand on his gun, as the rest arrived, but there was nothing nearby.

Or so it seemed.

Teal'c went straight to the tracks he had spotted, kneeling down. "They went through the gate," he said. "And they came from the capital."

"So… more recruits for Apophis's army?" Daniel speculated. "Marched off to join his main focus?"

That was one possible explanation. And it would fit the rest of their information - mainly the lack of any footage of those troops.

"I do not think so."

Jack turned to look at Teal'c. His friend had sounded… not nearly as stoic as usual in such situations. Almost tense, actually.

Teal'c was holding up a broken necklace which must have been half-buried in the sand, judging by the amount of dirt on it. And he was staring at it with such an intense expression…

"This was Drey'auc's."

*****

The Symbionts Part 3

Gate Area, Chulak, November 8th, 1999 (Earth Time)

"I gave this to Drey'auc on the day we wed."

Adora bit her lower lip as Teal'c carefully brushed dirt from the broken necklace. If this was his wife's…

"Could she have lost it here when she was travelling? Or meeting someone?" Glimmer asked.

"She would not have had any reason to go to the Chappa'ai," he went on. "Not as an outcast. And it was half-buried under a sandal footprint. Not a boot."

"So, she dropped it? As a warning for you?" Catra asked.

Teal'c slowly nodded. "I believe so."

Adora could tell that Catra didn't agree - her lover had that guilty expression she usually had when she wanted to say something but didn't because it might hurt - but it could be true.

"Ah… But no one should have expected our arrival, should they?" Daniel said, cocking his head.

"If she - and Rya'c - were taken by Apophis's forces, then she would have known it was because of me," Teal'c said. "This would have been one of the ways available to her to leave a notice for me. Or for Master Bra'tac," he added after a moment, "to pass on to me."

Catra shrugged. "Either way, we now know that she was taken through the gate. Or that we are supposed to think that."

"Or that Apophis wants us to know," Jack said. "Can't really use hostages if no one knows you have them."

“Whatever may be the truth, we have to find out more about what happened,” Teal’c said. “Master Bra’tac would know more. Even as Shol’va, some of his former students respect him.”

Unless he was taken as well. Or killed. But Adora didn’t say that. She nodded instead. “Then let’s find him!” That was what they had come to Chulak for, anyway.

“Yeah, let’s find a master warrior who just went into hiding on his home planet after the enemy army captured friends of his,” Catra muttered. “Piece of cake.”

Adora frowned at her. “I’m sure we’ll manage.”

“Well, we can scan for Goa’uld larvae,” Entrapta said. “It’s going to be a bit difficult, what with so many Jaffa on the planet, but if he’s hiding from most of them, we should be able to narrow things down. It will take a while, though.” She pushed a button on the scanner, looked at it and added: “A long while, actually.”

“If we do not find Master Bra’tac, I am certain that he will find us,” Teal’c said. “In fact, I would not be surprised if he has already found us.”

“Really?” Glimmer looked sceptical and looked around. “We’re covering the entire area with our scanners.”

But Teal’c wasn’t looking at their surroundings. He was looking at the hills - or the mountains - in the distance.

“You think he’s watching us through a telescope,” Jack said.

Teal’c nodded.

“Since it passively uses visible light and doesn’t require a power supply, it wouldn’t show up on any scanner,” Sam said.

“But the resolution… you’d have to have a huge telescope to have a decent resolution,” Entrapta retorted. “That should show up on our scanners.”

“Master Bra’tac would not need more than a glimpse of us to draw his conclusions,” Teal’c said, still looking at the hills. “He will not approach us here, though.”

“I can teleport us there,” Glimmer said. “If we activate Chulak’s magic.”

“We’re not activating magic on a planet under Goa’uld control just because you’re too lazy to walk,” Catra snapped.

“It’s not about walking!” Glimmer protested. “But we can’t waste time.”

“And we can’t let the other Jaffa who are undoubtedly watching us see us teleport away anyway,” Jack added. “That would alert them.”

“Yes.” Adora nodded at Entrapta. “Tell the others to close the Stargate and stand by - we’re going to walk. Like smugglers.”

“Alright!”

Behind them, the gate disappeared, and Adora’s comm lit up with a few alerts as it switched to the Spy Bots in orbit, connecting to their network to maintain contact with PZ-1151. The lag would be annoying, but shouldn’t be crippling. And far less suspicious than keeping a Stargate open.

They left one bot in stealth mode to watch the gate and marched off towards the hills in the distance. Teal’c had picked their destination.

Halfway to the hills, Teal’c suddenly stopped.

“Teal’c?” Jack asked.

“I saw a short glint ahead of us. A piece of metal must have caught the light from the sun. Or a mirror.”

“Or a scope,” Catra muttered. “Could be an ambush.”

“There’s nothing on our orbital surveillance, but it’s a little spotty in orbit, and the area is forested,” Entrapta said. “Though there’s a single larva there, probably,” she added after a moment. “I need a bit more time to scan the area in detail.”

“Master Bra’tac chooses his hiding spots well.”

“If you’re sure…” Jack trailed off as Adora spotted another glint in the distance.

Teal’c inclined his head. “Indeed.”

“Yes, that’s a larva according to the scanner. So, a Jaffa,” Entrapta said, peering through her goggles. “I’m trying to vector in a spy bot in orbit so we get better coverage, but there’s a Death Glider in the way.”

“Let’s just continue,” Adora said. She trusted Teal’c. If he said this was Bra’tac, then they could go on.

“Yeah, let’s. I’m not fond of standing around in the open on an enemy planet,” Jack agreed. “Or an enemy anything.”

“We’re looking like smugglers,” Catra said. “Don’t tell me I’m squishing my ears flat and wrapping my tail around myself for nothing.”

Adora looked at her, raising her eyebrows. Sure, it wasn’t too comfortable, but it wasn’t as if it was hurting her - Catra’s ears could take a lot of squishing, and her tail was very flexible, as they had proven often enough. Not that this was the time to think about that!

But it also wasn’t the time to complain. They weren’t on a march in cadet training. And it hadn’t been the time to complain then, either!

“We should get some stealth transports that can fit through a Stargate,” Glimmer said as if she had read Adora’s mind and

wanted to disagree on principle. But she was walking - and Catra followed suit. As expected.

"We'll have to find a way to reduce the stealth generator even further," Entrapta said. "So far, we haven't managed that - the best of our designs was a shuttle that could use a stealth generator and barely fit the Stargate but, well, couldn't really do anything else. Like transporting people. Upscaling a stealth bot ran into the same issue, just from the other direction, so to speak. People just need so much space and life support and everything! Anise is working on a portable stealth generator using a different technology, but… she hasn't had any luck in making a generator that hasn't lethal side effects yet. But she's working on it."

Uh. Adora grimaced.

"You know what? I am just fine walking!" Bow said.

"Me too!" Daniel agreed, nodding eagerly. "A bit of walking won't kill us."

Both started to walk a little faster. As did everyone else.

*****

They reached the hills half an hour later. That would have been quite a good time for their squad back in cadet training. Not quite a forced march, but faster than regular infantry - Horde or Earth.

And next to the trail they had been following was the man they were looking for, waiting for them under a tree with a dense canopy, next to a large rock that would shield him from the plains and the Stargate.

"Master Bra'tac." Teal'c nodded at him

"Teal'c. O'Neill. Carter. Jackson." Bra'tac nodded at them, then looked at Adora and her friends. "And new friends."

“Yes.” Teal’c turned a little. “They are new friends - and mighty allies. Master Bra’tac, this is She-Ra, Princess of Power. Queen Glimmer of Bright Moon. Princess Entrapta of Dryl. Techmaster Bow of Bright Moon. Catra.”

“Of nothing,” Catra added with a smirk as she pushed her hood back and shook her head, her ears twitching.

“A Sekhmet?” Bra’tac tilted his head like Teal’c often did before frowning slightly. “No, not quite, I believe - but I have only seen pictures, and that had been a hundred years ago.”

“No, I’m not a Sekhmet,” Catra said, rolling her eyes. “You’re not the first to make this mistake.” She flashed her fangs in a grin.

“Catra’s from Etheria, the result of genetic engineering by the First Ones - which you know as the Ancients or the Gate Builders, I believe,” Entrapta spoke up. “Like me and Glimmer.” She demonstrated her power, her hair fanning out and holding various tools. “And Bow probably has some ancestor who was experimented on as well if we look at the time that has passed since then and the average human generation and tendency to intermarry, even if that genetic ancestry hasn’t expressed itself through magic powers. Glimmer can’t demonstrate her own magic power since it relies on more magic in the world than my own, which doesn’t need nearly as much, so what energy my body can spare is enough, and we haven’t restored the planet’s magic yet because doing so would kinda draw a lot of attention which would be a bad thing, probably, but Adora can demonstrate her own magic, just in case you won’t believe us - many seem to have forgotten about magic being real since it was taken from the sector a thousand years ago.”

Jack sighed and closed his eyes for a moment, probably complaining about secrecy, but Bra’tac blinked, his own eyebrows raising, as Adora noticed. He turned to look at Teal’c.

“Entrapta speaks the truth,” Teal’c said. “I have personally witnessed their powers and seen the proof of their claims.”

“I see. And you’re fighting the false gods.”

“Yes,” Adora said.

“A lot of things have changed on Earth since our last meeting,” Jack said, smiling a bit wrily. “We’ve formed an alliance against the Goa’uld, and we’re preparing to go to war - well, technically, we’re already at war, but the Goa’uld don’t know yet.”

Bra’tac looked at them. “I have not heard of Etheria so far, but you must be mighty indeed if you plan to openly battle the false gods.”

That was a question more than a comment. Though Adora could understand that Bra’tac would be sceptical of their claims. It was a lot to take in.

“We’ve defeated Horde Prime,” Catra said.

Bra’tac’s eyes widened. “I know that name. The Goa’uld did not wish to fight him. And you defeated him.”

Adora sighed. Catra made it sound as if they had more power than Horde Prime had had. “It’s a bit complicated,” she said.

“Etheria has technology on par with the Gate Builders,” Teal’c said. “And many of Horde Prime’s surviving ships and soldiers now fight for them. On Earth, a great army is gathering, preparing to liberate the slaves of the false gods.” He took a step forward. “And they have found a way to free us for good from the hold of the Goa’uld. They found a way to replace Prim’tas. No longer will we have to choose between freedom and life. We came to Chulak to inform you.”

Bra’tac looked almost shocked, then smiled. “That’s the best news I’ve heard in my long life, my friend. And yet, I have to tell you ill news in return,” he added, his expression turning sombre.

Teal’c nodded. “I’ve found Drey’auc’s necklace at the Stargate.”

"Your wife and your son were taken by the Serpent Guard," Bra'tac said. "I am sorry."

*****

Eastern Hills, Chulak, November 8th, 1999 (Earth Time)

"You could not have done anything, my friend."

"I could have. If I had heard about it beforehand, I could have warned them. Taken them to safety. But I have few friends left in the Serpent Guards, and none of them are on Chulak."

You have contacts in Apophis's forces? Of course, you do, Samantha Carter thought. Bra'tac had shown that on Klorel's ship. Teal'c wasn't the only Jaffa Bra'tac had taught to question the Goa'uld, just the most prominent and arguably most successful rebel.

"Even the most skilled Warrior is beholden to the whims of chance. You taught me that."

Bra'tac nodded with a faint smile. "I did. We cannot change what happened."

"But we can attempt to remedy it."

Sam almost expected the Colonel to make a sarcastic comment about philosophy lessons, but he held his tongue.

"They were taken to Saqqara, that much I was able to discern," Bra'Tac said after the briefest pause.

That was Apophis's home world. P2Z-275. Sam pressed her lips together - blurting out Stargate Command's designation might prompt some teasing remark from the Colonel, and this wasn't the time for that.

"So, we have to go there and free them," Daniel said. He looked uncharacteristically eager, Sam noted. Oh. Of course, he would -

Sha’re was likely on Saqqara as well. And if she wasn’t, information about her location would likely be available in Apophis’s capital. Daniel saw an opportunity to save his wife and Teal’c’s family.

Sam hated it, and herself a little for saying it, but she had to. “Apophis’s home world will be heavily guarded. We don’t have spy bot coverage there. Any attempt at infiltration will be very difficult without sufficient intel.” And dangerous. Very dangerous.

“What about an invasion?” Daniel asked. “A decapitation strike? Saqqara is a core part of Apophis’s realm, one of the worlds supplying his forces. If we could take it out, he would be greatly weakened. The other System Lords would turn on him.”

“We would have to hold it.” Teal’c shook his head slightly. “That would most likely reveal the Alliance to the Goauld at large. Even if we decided to merely destroy the arms factories on the planet before leaving, witnesses would remain. I do not believe that the Alliance currently has the resources to launch a false flag operation of that scale. And if our existence becomes known to the System Lords, they will close ranks.”

“Yeah.” The Colonel looked grim. “We would need a fleet of Ha’taks to take on Apophis’s home fleet without revealing ourselves.”

“We could develop a form of camouflage technology that would allow a frigate to mimic a Ha’tak, maybe,” Entrapta suggested. “Using holoprojection and stealth technology to fool sensors, it might be possible, though the differences in weapon technology would be a challenge to mask. The weapon placements are different, as are the flight profiles.”

“It would probably be easier to construct Ha’taks - or facsimiles with our technology,” Sam said. And that would be far too inefficient when they were still struggling to build their own shops on Earth. But a system that allowed their ships to pose as Ha’taks would be useful as well. It would allow them to close in with

enemy ships and installations, at the least, before dropping the facade. Although whether or not such advantages were worth the resources needed to develop those systems was questionable… Sam shook her head. She could run a feasibility study another time.

"You think you have the forces to take and hold Apophis's homeworld?" Bra'tac once more tilted his head.

"Yes," She-Ra replied. "But we don't have the numbers to defend every world we liberate against a Goa'uld fleet and keep doing it until everyone's saved. We need to destroy the Goa'uld's fleets before we can start freeing all their enslaved worlds to keep them from massing their forces for retaliatory strikes."

"Or use a few worlds as bait to lure those fleets into battles where we can destroy them," Catra added. "Hunting down all of their ships and fleets would be a pain."

"I see." Bra'tac nodded.

"But that will take a long time," Daniel said. "Teal'c's family needs help now. And Sha're…" He trailed off, pressing his lips together.

"Without the Spy Bot Network, we need other ways to get intel," Glimmer said. "Originally, we came to spread the news about the symbionts. Can those be used to convince more people to turn against Apophis so they would supply us with information?"

Bra'tac slowly tilted his head. "If they work, yes. But they would have to be demonstrated - even those who question the false gods will not easily turn to sabotage, much less open rebellion. If I had a few examples…"

"We are ramping up production," Entrapta said. "So, we don't have too many yet - but we're working on that, don't worry! Once the factories are running, we'll do what we can to cover everyone! But we have a few with us - Sam expected this! Well, we have them at the temporary base camp."

Sam nodded. “We can move back there and demonstrate their use.” And replace your own Prim’ta, she silently added. She didn’t know how old Bra’tac’s symbiont was, but she was certain that before making any promises to his friends, he would test the symbionts himself. But unlike certain politicians, he wouldn’t do it for selfish reasons but to ensure if anyone got hurt, it would be him and not others.

“Yes, let’s retreat off-planet for now,” the Colonel said.

“But…” Daniel closed his mouth with a glance at Teal’c.

“It is the wisest course of action, for now,” Teal’c said. “We need more information to plan our next move. We might have to appeal to the Tok’ra for their support.”

“The Tok’ra?” Bra’tac’s eyebrows rose again. “You are in contact with them?”

“We’re allies,” the Colonel said. “Kind of. It’s complicated.”

“It’s not. We *are* allies. And friends. They are just stuck in their spy ways,” Adora retorted.

“As I said, it’s complicated.”

“I see. I think.” Bra’tac nodded.

*****

Gate Area, PZ-1151, November 8th, 1999 (Earth Time)

“So… here’s our Temporary Healing Station. Or Temporary Medical Station, depending on whether you have a healer available or not. Since we have Adora with us, it’s a Healing Station. Which actually means that whatever station she visits turns into a Healing Station, I think.” Entrapta frowned a little. “That seems a bit weird. Logical, but weird even for the militaries of Earth and their traditions.”

Catra snorted. The Earth military did love their abbreviations and definitions. They had their uses, of course, but sometimes, they took it too far. A bit of flexibility was often better for running an army, in her experience. A lesson she had, fortunately, in hindsight, learned late.

"Only staff permanently assigned to a station counts for the designation," Sam told her.

"Ah. That makes more sense. Anyway, we can test the symbiont - well, demonstrate it; we already tested it - in there," Entrapta told Bra'tac. "The station isn't currently busy treating wounded since we didn't fight, and there were no accidents."

"Is this standard of care for your wounded?" Bra'tac asked, looking around as they entered the station.

"It depends on the missions," O'Neill explained. "If we establish a field base, even a temporary one like this, then yes, it will have a medical centre. But we wouldn't do this on planets we don't control or are about to conquer."

"Liberate," Glimmer corrected him. "We aren't going to conquer any planets. We're going to liberate them from the Goa'uld."

Catra snorted again. The Princess Alliance sometimes was a little too concerned with semantics as well. To defeat the Goa'uld, the Alliance would have to take a lot of worlds and base troops on them - to protect them from a counter-attack, but also to fight whatever loyalist remnants were left on the world. The differences between that and outright conquest would be minimal until the planet was ready to fend for itself, and that would take a long time with most undeveloped worlds.

Glimmer was frowning at her, Catra noticed. She snorted again and shrugged. "We're not going to form an Empire. But we're not going to liberate a planet and then leave it for anyone else to conquer or raid."

"We're from the Alliance, and we're here to help," O'Neill added.

"Yes!" Adora must have missed that he was sarcastic and nodded eagerly. "We're here to help the Goa'uld's victims - all of them!"

Daniel opened his mouth, then closed it, scowling at O'Neill.

"Anyway," Entrapta spoke up again, her hair pointing at a reinforced small tank in the corner with a guard bot hovering next to it. "There are two dozen synthetic symbionts. Pick one, and we can implant it in you right away! It works just like a Goa'uld larva for your immune system, and that's all it does. And it will last for decades - we don't know exactly how long it will last, only that it will be at least a few decades. It's kind of hard to test that any faster, so we have to extrapolate from other data."

The old Jaffa walked over and peered at the armoured glass. He was almost a hundred and forty years old, according to Teal'c. Older than anyone Catra knew, except for Angella. And Horde Prime. What would it be like, to be that old? she wondered.

"They do look differently from Prim'tas."

"Yes. We had to stick to a similar form so they could interface with your immune system, but a lot of the other parts were unnecessary, so we cut them - well, figuratively. We didn't actually cut pieces from a Goa'uld larva. It's all genetic engineering!"

"I would cut countless Prim'tas to free even one of my people," Bra'tac said.

Daniel nodded quite fiercely, to Catra's surprise.

"Well, we don't have to do that," Adora said.

But they would have to deal with every Prim'ta that they replaced. And Catra had a feeling that their former hosts would want to dispose of them. Permanently. She understood that. Very well. It had taken everything not to smash Horde Prime's chip as soon as it had been removed, back when… She pressed her lips together.

“Anyway, we can replace your larva any time you’re ready!” Entrapta said. “It’s very easy since you have a pouch made for that - it would be a bit harder if we had to do surgery, but only a bit.”

Bra’tac looked at Teal’c. “You have not yet replaced your Prim’ta.”

“I thought a demonstration might be necessary for some who might doubt it,” Teal’c replied. “But I am ready to replace it as well.”

“Bye-bye, Junior,” Catra heard O’Neill mutter. “And good riddance.”

“Then we shall do so,” Bra’tac announced.

“Great!” Entrapta cheered. “We can do it simultaneously!”

The actual procedure was… well, not really a procedure. Teal’c and Bra’tac sat down on one of the surgical tables, Entrapta and Sam each grabbed a synthetic symbiont from the tank, and then the two Jaffa pulled their belly pouch open, reached inside and pulled the Prim’tas out before putting the synthetic symbionts in.

For some reason, most of the Earth people in the room looked a little taken aback, though. Or grossed out.

“Alright! Let’s use our scanner to check…” Entrapta said, hair tendrils pointing two scanners from the station’s stock at the two Jaffa. “Looks good. No signs of any collapse… data matches our baselines from testing… You’re good!” She beamed at Teal’cand Bra’tac.

“We’re free,” Bra’tac said.

“Indeed.” Teal’c nodded.

The two exchanged a glance and a nod, and then Catra heard a squishing noise, followed by the sound of Goa’uld blood and body parts dripping on the floor.

“Ew!”

“Gross!”

“That was…”

“Was that necessary?”

“That’s not sanitary, I think, for a medical station. We’ll have to sterilise the area thoroughly.”

Catra shook her head. What had her friends expected that Teal’c and Bra’tac would do, once free? She’d done the same - well, she would have shredded it with her claws, but the result would have been the same.

*****

Well, I should have expected that, Jack O’Neill thought as Teal’c and Bra’tac washed their hands while a small bot started to clean and disinfect the mess on the floor. If you were forced to carry a larva of your worst enemy inside you on pain of death for years - decades - then killing it as soon as you could was a natural impulse. It probably also felt cathartic, not that he’d ever use the word aloud - Jack had a reputation to keep.

He glanced at the others. Carter had that expression on her face, lips pressed together, trying not to scowl, that showed she disapproved but wouldn’t say anything because she didn’t disapprove too much. Or understood the reasons. And Daniel… didn’t look like he disapproved at all. He would be thinking of his wife. Though for a guy like him not to react to this… Jack made a mental note to keep an eye on that. Daniel was usually the voice of restraint and mercy, and if he wasn’t, you had to watch out.

The Etherians, unsurprisingly, were openly appalled - with the equally unsurprising exception of Catra. Although Jack wasn’t quite sure if Entrapta was appalled at the killing or the unhygienic way it had happened.

“Was that necessary?” Adora repeated herself when Teal’c and Bra’tac finished cleaning up - well, mostly; there were a few Goa’uld blood spots left on their clothes.

Bra’tac tilted his head - was that where Teal’c got it from? - and nodded. “It was more merciful than letting them die from exposure.”

“We could have put the larvae into a tank,” Bow said.

“To what purpose? So it can grow into a Goa’uld, and we have to kill it then?” Bra’tac shook his head.

“We don’t kill prisoners!” Adora snapped.

Jack caught Bra’tac glancing at Teal’c for confirmation.

“Indeed. Yet, larvae are not prisoners,” Teal’c added. “They would have to mature for that.”

“They carry the genetic memory of their Goa’uld parent - although to what degree varies - but as far as we know, they are not sapient yet and cannot access it,” Carter said. She looked uncomfortable, though.

“But they will if you let them grow up,” Daniel added with a scowl. “They will look for hosts to possess - we know that - and fight us.”

“They might join the Tok’ra,” Adora retorted.

“Those who join the Tok’ra do so after their experiences under their Goa’uld lords,” Teal’c said. “And a very scant few of the Goa’uld ever overcome their genetic memory.”

“How can you fight a war if you intend to breed your enemies?” Bra’tac asked.

“That’s not the point,” Glimmer said.

“What else would you do with them?” Daniel asked. “Incubate them to keep them in habitats? Do you know how many larvae a single Goa’uld queen produces? And you know they require sapient hosts to be mentally healthy. Do you want larvae to mature, just to live like that?”

The Etherians obviously didn’t like it, but they didn’t have an answer to that. Jack nodded. Daniel always knew how to ask the hard questions.

“Well… we could try to find a way to fix them so they won’t be diminished if they lack a sapient host?” Entrapta suggested. “It should be possible with genetic engineering.”

And Entrapta always knew how to make an awkward situation even worse by opening a huge can of worms. Almost literally, in this case.

“Entrapta! We can’t just ‘fix’ an entire species!” Glimmer said.

“Why not? We’re working on finding a way to fix the Asgard’s issues. This seems to be the same problem. Sameish.”

“We can’t just fix a species against their will,” Glimmer corrected herself. “I mean, we shouldn’t.”

“So we should kill them instead?” Entrapta asked.

“Yes,” Bra’tac said.

“Indeed.”

“No!” Adora shook her head. “But we can’t make that decision for them. That would be wrong.”

“But we have to think about how to handle the Goa’uld if we win the war,” Catra spoke up. “What do we do with them?”

“Let the Tok’ra decide?” Bow suggested.

“They do not consider themselves Goa’uld,” Carter pointed out.

“Yes, Anise was very clear about that.” Entrapta nodded emphatically. “So, if we shouldn’t decide the fate of another species, then the Tok’ra shouldn’t either, right?”

“Just pick a planet with lots of swamps and water and drop all of them into it, then seal it off?” Catra shrugged.

“As far as we know, they did evolve in such circumstances,” Daniel added. “If they had not managed to possess sapient hosts, they would still be restricted to their home planet. Banishing them back to that planet would merely let nature run its course.”

Jack didn’t think things worked like that, but he didn’t have a better suggestion. Not that he needed one. “That’s all fine and dandy, but we haven’t won the war yet. We have not yet begun to fight, so to speak.”

Daniel frowned at him for mangling and misusing the famous quote, but the others nodded.

“That still leaves us with the problem of how to handle larvae,” Glimmer said. “Every Jaffa we free from the Goa’uld’s hold on them will have one.”

“And every Jaffa will kill it to free themselves,” Bra’tac said. “Are you planning to deny them this?”

“One could argue that we don’t have the right to deprive them of exacting justice according to their customs,” Daniel said.

“The Alliance doesn’t kill prisoners,” Adora retorted. “And we won’t look away while prisoners are killed by others.”

“But are larvae prisoners?” Entrapta asked. “If they aren’t sapient, they can’t really be prisoners.” She nodded. “We need data! We’ll have to test if they are sapient or not!”

Jack saw Carter nod at that and suppressed a groan. He had a feeling that this would further complicate things. "Yeah, good, you do that. But first, let's focus on saving Teal'c's family."

Everyone agreed to that, at least. Not that Jack had expected anything else. It was what SG-1 and their friends did, after all.

*****

Alliance Headquarters, Brussels, Belgium, November 8th, 1999

"You want to attack Apophis's homeworld?" General Naird sounded shocked, Adora found. For the highest-ranking American officer in the Alliance Command Council, he seemed to be a bit… easily startled.

"No, we want to rescue Teal'c's family," she explained - again.

"By attacking Apophis's homeworld," Naird repeated himself.

"We're not planning to attack Saqqara," Catra said. "We're going to sneak in, get Drey'auc and Rya'c and leave. Preferably without anyone noticing anything, but if we have to fight our way free, well…" She shrugged.

"What happens happens," Jack added with a grin. "General."

Naird ground his teeth. "I've read the reports from Stargate Command. Your team regularly turned exploration missions into combat missions, *General*!"

"That wasn't our fault," Jack retorted.

"I'm not some rear-echelon paper-pusher - I know a bullshit excuse when I see one, and your reports were full of them!" Naird snarled. "This council agreed that keeping the Alliance a secret is our current strategic priority. Such a mission would jeopardise that!"

“It’s true that this seems to be a slightly risky operation,” Admiral Brown-Emerson said, running a finger over his moustache. “But we have to consider the reward of a successful mission.”

Naird frowned. “As far as I know, both Teal’c’s wife and son are considered outcasts in Jaffa society. The odds that they are privy to classified, actionable intel are low. And I doubt that the targets of opportunity General O’Neill is undoubtedly planning to hit will be worth the risk, either.”

Adora glared at him. That wasn’t how you judged the risks! Teal’c had done so much for the Alliance, risked and sacrificed so much, they owed him this!

“It’s not about the intel we can gather - or the factories we might be able to sabotage - it’s also about weakening Apophis’s hold on his systems,” Glimmer spoke up. “If we can save Drey’auc and Rya’c, everyone will know he cannot even control his homeworld. The loss of face alone will weaken him and encourage defectors and infighting - and attacks from other System Lords.”

“And reveal the Alliance!” Naird objected.

“No, it won’t,” Adora told him. “The Goa’uld will assume that this was just another mission by SG-1. We won’t be recognisable as either Horde or Etherians.” Even though the Goa’uld couldn’t really be aware of Etheria anyway since it had been hidden in Despondo for a thousand years.

“And we have done this before,” Jack added with a smirk. “Not to brag, but we got a reputation amongst the snakes.”

Naird rolled his eyes, then looked at Catra. “Then the Goa’uld should know that Earth doesn’t have… catpeople.”

Adora’s lover snorted. “They’ll think I’m an alien SG-1 picked up somewhere. Maybe a Sekhmet - people keep mistaking me for one.”

“I agree. This would fit Stargate Command’s past exploits,” Admiral Brown-Emerson said.

“But there is a risk of one or more members of the team getting captured,” General Durand pointed out.

“We won’t leave anyone behind,” Adora said, narrowing her eyes. Never again.

“You can’t promise that,” Naird objected.

“Yes, I can.” She looked at him until he pouted.

“It could still go wrong…”

“If the worst happens, what would they do?” Admiral Brown-Emerson asked. “Even if they suspect or assume that Earth has found allies, they wouldn’t know who or where to look for them - except for Earth. And if the Goa’uld rally and attack the Solar System in force, then that would be the perfect opportunity to destroy a significant part of their fleet with our superior forces. Strategically, that would be a very favourable outcome.”

“You’re just hoping for another Trafalgar!” Naird muttered.

“This Council agreed that destroying the enemy’s Naval assets is a necessary step for the liberation of their worlds,” the British admiral replied in a bland tone.

Jack still snickered, of course.

“In any case,” Adora pointed out, “as this is a recon mission, I can authorise it. Which I did.” As Supreme Commander of the Alliance.

They wouldn’t leave Teal’c’s family in Apophis’s hands. Or Sha’re, if she was on Saqqara.

All they needed was the Tok’ra’s help.

*****

Alliance Headquarters, Brussels, Belgium, November 8th, 1999

"You ask for our help to infiltrate Saqqara, Apophis's homeworld."

Anise didn't sound amused, Samantha Carter thought. Although she also sounded surprised, but Sam wasn't sure about that - she was a scientist, not a diplomat. The only reason this discussion was happening in the first place was that Sam and Entrapta were friends with Anise, and this was how Etherian princesses did things. But Sam wasn't a princess, either. This really should be handled by others. Probably not the Colonel, though.

"Yes!" Entrapta nodded. "We need to save Teal'c's family and Daniel's wife. And our data indicates that they are currently on Saqqara - at least the former. We're not quite sure about Sha're, but we should be able to find information about her location on Saqqara as well, I think."

"You might also find death on Saqqara. Or worse." Anise shook her head. "Apophis's court is there, as are his most loyal and effective guards."

"We're aware of the danger," Sam said. It had been pointed out *ad nauseam*, as Daniel had complained, by some members of the Command Council.

"I doubt that." Her friend scoffed. "You have no experience with infiltrating a stronghold of a System Lord, much less their court. Your success against Ra was due to his arrogance and mere chance that he visited Abydos."

Sam suppressed a wince. She couldn't really disagree with that assessment. But she hadn't been on that mission. "Stargate Command achieved more undercover missions." Like the one to Chulak two years ago. And they did blow up two of Apophis's Ha'taks to save Earth, though they had been lucky that time as well.

Anise frowned. “Missions born from desperation that succeeded due to chance do not equal actual experience with this sort of undercover work. There are few amongst the Tok’ra I would call experienced and qualified for such a mission, and it wouldn’t include me.”

“But you do have such people,” Entrapta said, still smiling. “The data you have on Apophis couldn’t be collected without someone on Saqqara.”

Anise frowned, even though that was common knowledge, and the Tok’ra had never denied it. “Yes, we do. And each time they contact us to pass on intel, they risk their lives and years of preparation and sacrifices. You are asking us to risk all that - and the chance of finding crucial information in the future - for what?”

“To save our friends’ families, of course,” Entrapta earnestly replied as if that was enough of a reason. But then, for the Etherians, it was.

Sam smiled wryly at Anise’s expression. It had probably been a rhetorical question.

“And does that justify the risks?”

“Yes.” Entrapta nodded firmly. “No one left behind. Unless they’re dead - but we’ll make sure that they’re dead even if they look dead. That once happened to me, you know? We were infiltrating a Horde base, and I got cut off, and it looked as if I was killed, so the others left. I had managed to escape into an air duct, though, and later met Catra and Scorpia, and then Hordak, so it turned out for the best!” She beamed at them.

Sam didn’t quite agree with that assessment, but it was none of her business. “Both the Etherians and SG-1 have experience with infiltrating enemy strongholds,” she said instead.

“What you told me about your missions doesn’t fill me with confidence about what you learned from those experiences,” Anise retorted. But she was smiling, at least a little.

Sam wasn't a diplomat, but this was a good sign. "We do not want you to risk your agent at court. We only require a cover to use the Stargate to reach Saqqara."

"Yes. If we have to fight our way in, it would make finding our friends' families much harder," Entrapta said. "And we probably would have to invade the planet."

Judging by her friend's expression, Sam was sure that Anise didn't like the implication that the Alliance would launch an invasion if infiltration wasn't possible. Time to push, then. "Our mission would also provide a good cover for any sensitive information your agent passes over - at least for a time, future leaks could be blamed on us. And your agent would have an opportunity to replace a Goa'uld in the wake of the purge that a successful mission would start."

Anis gave her a look that made Sam suspect she had overdone it a little. "Will you also point out that if you happen to kill Apophis in his court, our agent would be free to return anyway?"

Well, that had come up during their discussion - it was bound to since that was how Ra had died - but… "This is a recon and rescue mission, not an assassination mission," Sam told her. Of course, if they stumbled on Apophis, all bets would be off.

Anise nodded. "I see. I will inform the Grand Council about this. But I can make no promises."

Sam knew that. But she had a good feeling about this.

*****

The Rescue Operation Part 1

Alliance Headquarters, Brussels, Belgium, November 9th, 1999

"...and while reports of magical attacks in the United States keep accumulating, none of them have been confirmed so far. According to today's press release, the police are investigating all reports of magical assaults to the best of their ability, though the press release didn't specify what exactly those resources are. Will we be seeing witch cops patrolling the neighbourhood on brooms?"

Catra switched channels while the stupid journalist laughed at his own joke.

"...and the Vatican has refused to comment on rumours that, following the recent reports of magical assaults in Britain and other countries, they are considering using the Holy Inquisition for witch hunting as several conservative politicians from various predominantly Catholic countries have demanded. However…"

"...authorities are still investigating the massive oak tree that has sprouted overnight in front of the Stortinget. Security camera footage from the parliament building has been leaked, showing that the tree grew within a few minutes from a sapling pushing through the grass to a towering height of twenty-five metres. Even though no one has yet proposed cutting the tree down, several dozen worshippers of the Norse Pantheon have gathered to protest any harm. According to their spokesperson, they consider the tree a gift from the gods, and…"

"I wonder if we should inform the Asgard of this," Catra commented as she changed channels again.

"Of what?" Adora looked up from the reports she was studying.

"That someone's trying to impersonate them."

Adora blinked. “They are?”

Catra snorted. “I doubt it. Looks more like someone in Norway figured out how to magically grow trees.”

“Oh!” Adora straightened. “Like Perfuma? We need to contact them, then! That could be a great boon to our logistics!”

Catra shrugged. “So far, no one has claimed responsibility. But we should tell the Norwegian Prime Minister.”

“Yes!” Adora made a note.

“Unless it’s limited to trees,” Catra added. “That’s not going to help much. And people might get angry if someone cuts it down.”

“Oh.” Her lover frowned. “That’d be… not good. But we still need to know if someone can grow trees. And how.” She went back to reading her reports, and Catra returned to watching the news.

“...crowds are gathering in front of the temple, hoping to be blessed by what was described as a kami by the local priest, apparently manifesting as a column of water in the temple’s pond. It was reportedly called by a shrine maiden whose name has been withheld. While the Japanese government has not yet commented on it, the Tokyo Police Department is monitoring the situation but has not seen any need to intervene so far, and…”

“...of the New South Wales Police Force announced that travel to the area was restricted after witnesses reported seeing a ‘great black monster dragging a kangaroo into the river’. While experts assume this was a saltwater crocodile, perhaps of uncommon colouration, some sources claim it was a ‘bunyip’, and…”

“If Entrapta constructs a bot to sift through all the Earth news for things that would be of interest, I bet the thing kills itself after a week,” Catra muttered.

“Hm?”

“Nothing.” Catra sighed and changed channels again. The Tok’ra should hurry up; waiting like this was the worst. Especially with the whole world still going crazy about magic.

“...and the police have confirmed that the girl died during an exorcism attempt by the local pastor after her parents complained about her ‘unnatural behaviour’ since Halloween. Dozens of members of the pastor’s church have gathered in front of the jail to protest his arrest. The family of the dead girl also released a statement protesting the arrest. According to them, the pastor only did ‘God’s work’, and…”

Catra shook her head. Crazies! The whole lot of them. Maybe she should stop watching the news and reread some of the reports. But she already read them and memorised everything about Saqqara. She could go bug O’Neill and help with training his ‘Snake Hunters’, but that would require a shuttle trip to Germany and leave Adora. And someone had to keep an eye on her.

She sighed and looked at the screen in their office - well, Adora’s - again.

“...and the police were forced to step in after a ‘miracle’ in the local church was exposed as a simple trick by a group of teenagers. Two people had to be treated in the hospital after the congregation grew violent following their ‘sabotage’ of Paster Lawrence’s service and tried to attack the teenagers, injuring themselves when their car ran into a ditch trying to ram a van…”

Yes, completely crazy! Catra sighed again as a bunch of kids were interviewed while their dog - the size of a pony - stole food out of the journalist’s car. This was…

Her tablet vibrated, interrupting her thoughts. More requests from Etheria for Earth media? They were lucrative but often annoying, especially when they didn’t know what exactly they wanted to watch or read.

It wasn’t an order. It was a message from Entrapta. The Tok’ra had contacted her.

Yes!

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, November 9th, 1999

“Chevron Seven… locked.”

Jack O’Neill watched as the wormhole formed. It still felt weird to be in this new base, with the familiar routines and familiar people, yet no longer being part of Stargate Command.

“Wormhole stabilised.”

He glanced up at the Gate Command Centre, where General Hammond was watching from behind armoured glass. Of course, this base had shield generators ready to isolate the Stargate and blaster turrets to deal with any intruders. They still had soldiers on guard, though. And a sorceress from Etheria - nominally under Jack’s command because of politics. Couldn’t have the Russians and Chinese be in command of sorceresses or Etherians.

“Alright! Let’s go - there’s no time to lose!” Adora said, already stepping on the ramp.

“Bot first,” Catra objected.

“Yes! You wouldn’t want to hurt its feelings, would you?” Entrapta asked.

“And we still have time,” Catra added.

“The delegation might be early,” Adora pointed out while the bot floated through the Stargate. “And if they try to open a Stargate and it doesn’t work…”

“They’ll expect Saqqara’s Stargate to be busy and wait for their scheduled arrival,” Catra retorted. “So, relax.”

“Visual confirmation,” Carter announced.

Jack glanced over to her screen, where a deserted Stargate had appeared - just as it was supposed to look. Then the view changed as the drone looked up into the dark sky above it.

“Tracking constellations… PK-Z642’s location confirmed,” Carter announced.

“No active power source or Naquadah on the scanner,” Entrapta added, watching a feed on her visor.

“Alright. Let’s go. We’ve got an ambush to prepare!” Catra walked past Adora and stepped through the gate.

“Hey!” Adora followed. “You said there was no need to hurry!”

Jack sighed. He knew that the two would be perfectly - well, reasonably - professional once the action started, but… General or not, making jokes before a mission to release the tension was his shtick.

“Let’s go!” he told the rest, walking up the ramp himself and through the gate.

He arrived on PK-Z642. A deserted world with barely any life on it. At least, according to their intel - and that was also exactly how it looked to normal people. Some biologists would probably be all excited about the lichens on the rocks near the Stargate. “Why did the Ancients place a Stargate here?” He shook his head. “They probably had a quota to make or something.”

“That was millions of years ago,” Daniel said, walking down the ramp. “Things must have been different back then.” Glimmer and Bow were close on his heels.

Jack shrugged. “I doubt it. There aren’t even any ruins here.”

“Who cares? It’s an empty planet with an address close enough to Saqqara’s so the Tok’ra can pull off the switch without looking suspicious,” Catra said. “That’s all we need.”

“Well, discovering a planet’s history might reveal valuable information.” Daniel smiled. “The more we know, the better we are able to understand the Ancients - but also our current galaxy.”

“Do you tell your students that to motivate them to sift through tons of sand, Professor?” Jack smirked.

His friend pouted. “I don’t have students. I merely give a few lectures on occasion. And I am not a professor.”

Jack knew that. “You give lectures at universities. So, you’re a professor.”

“That’s not how it works! It’s…”

“Anyway,” Jack interrupted him as Entrapta and Carter, followed by Teal’c and Bra’tac, arrived. “Close the gate and get ready - we’ve got a tribute delegation to ambush!”

“From Khalid, Apophis’s poorest and least important vassal,” Catra said. “I bet even Apophis has forgotten about the guy.”

“Oh, I doubt that.” Jack snorted. “Apophis is the kind of petty snake that will absolutely notice if even a single grain isn’t delivered as ordered.” Even though, according to the Tok’ra intel, Apophis hadn’t personally met Khalid’s delegation in decades. That was why they were going to use them as a cover, after all.

“Yes,” Daniel agreed. “He’s petty and cruel - and greedy.”

“And arrogant,” Glimmer added as the wormhole collapsed. “Everyone who has met him agrees on that.”

“Indeed.” Teal’c nodded.

“Oh, yes.” Jack nodded as well. He looked around. The place was flat, with no cover or concealment available. Under normal circumstances, that would be a bad spot for an ambush. But since their targets would be arriving through the Stargate, expecting to be on Saqqara thanks to the Tok’ra, their surprise should be enough. It wasn’t as if they could retreat through the Stargate, anyway. Not while it was active.

“Everyone knows the plan?” Jack asked. He didn’t wait for an answer before continuing: “Take them down as soon as they walk through the gate and drag them off the ramp. Don’t damage or dirty their uniforms and armour too much - we need them.”

“Yes, we know. It’s not the most complex plan we’ve ever seen,” Glimmer said, rolling her eyes.

“I’m ready!” Bow hefted his, well, bow and one of his trick arrows - the one launching a net.

“Alright. Take your positions!” Adora said. “They could arrive any minute!”

Then the waiting began.

*****

Gate Area, PK-Z642, November 9th, 1999 (Earth Time)

“‘Any minute’? It’s been fifteen minutes already. I’m going to take a nap. Wake me up once the gate activates!”

Adora frowned as her lover did as she announced and lay down on top of a rock near the Stargate. “Catra…”

“I’m sleeping.” Catra interrupted her, sprawling with two limbs and her tail hanging off the rock’s sides, her head resting on her lower arm.

Adora crossed her arms. “You’re not asleep.” Not yet - not even Catra managed to fall asleep that fast.

A snore was her answer. Adora could press on, but… Catra could be stubborn. And while this was setting a bad example, there were no soldiers around to get the wrong impression. Everyone - Glimmer, Bow, Entrapta and SG-1 - was already familiar with Catra's antics. Except for Bra'tac, but the old Jaffa seemed amused by the scene.

"No warrior can indefinitely stay ready to fight at a moment's notice," he said. "It just tires them out."

"Although the false gods often ignore that wisdom," Teal'c added.

"Yes, they do. And it has cost them battles and good warriors," Bra'tac agreed. "And once word of the new synthetic symbionts spreads, it might yet cost them even more."

That's why we are doing this - well, part of the reason, Adora thought.

"Let's hope so," Jack said. "We can…"

The sound of the wormhole being formed - a few minutes early! - interrupted him.

"Heads up! Incoming!" he snapped.

Adora stepped up and formed her sword. Catra had already rolled off the rock and drawn her shock rod.

A few seconds later, two men appeared out of the wormhole - Jaffa wearing armour and carrying staff weapons. They gasped, startled, but before they could react, Bow hit them with a net arrow that entangled both.

Adora was already moving, slapping their staffs out of their hands and pushing them off the ramp. They flew a few yards and landed in the sand, rolling a few more yards, tightly wrapped in the net.

Another Jaffa appeared, but Catra tackled him off the ramp as well, tearing his helmet off and stunning him with her shock rod

before they hit the ground. That would be the leader of the delegation.

Then a wagon came through the gate - the tribute for Apophis, pushed by slaves. They froze at the sight.

“Get off the ramp! Leave the wagon!” Jack snapped, gesturing to the side. They hastily did so, huddling together at the foot of the ramp.

Between Adora, Teal’c and Bra’tac, the two Jaffa bringing up the rear were quickly taken care of as well. The wormhole collapsed shortly after they, too, were in the sand next to the ramp.

Catra grabbed the still-twitching leader. “Alright! Let’s strip them!”

That didn’t take long, either. Though Daniel had to explain to the slaves that they wouldn’t be killed but set free. And to the Jaffa that they were now prisoners, but that didn’t go over as well - their leader was still threatening them with ‘the Great Khalid’s revenge’ as they pushed him through the gate back to Earth. It wasn’t very impressive, even if he hadn’t been in his underwear.

Glimmer eyed the robes the slaves had been wearing with obvious distaste as she held them up. They were clean, though - Khalid wouldn’t send his delegation, not even the slaves, in dirty clothes to Apophis.

“What? Not sparkly enough?” Catra grinned. “Too bad. You’re too small to pass for a Jaffa.”

Glimmer huffed. “I don’t want to wear the heavy armour anyway.”

“It’s not that heavy, actually,” Bow commented, slipping into the set that fit him best. “And not as constricting as I expected. And you can see quite well in this helmet,” he added in a muffled voice after putting it on.

“What good would it be to design armour that hindered a warrior in combat? Even the false gods would not indulge their vanity that

much," Bra'tac said, changing armour himself.

"Indeed."

Bow was correct, Adora found once she donned her own set. The helmet didn't restrict her vision much. About on par with Horde infantry helmets, actually. And they had a set of armour in She-Ra's size. Fortunately, it wasn't the more ornate set that the leader of the delegation had worn; Adora wouldn't have been able to pull off posing as him.

Bra'tac would do that, with Adora, Teal'c, Bow and Jack posing as his guards, and the rest disguising themselves with the robes from the slaves. The robes were a bit large on some of them, especially Entrapta, but that only served to disguise them better, in Adora's opinion. And the Goa'uld were supposed to ignore slaves anyway. Unless they were looking for hosts or something. But they should be safe enough pushing the wagon.

"It's really weird," Entrapta commented as they dialled the Stargate to Saqqara. "They have the technology. Why didn't they build a self-propelled wagon?"

"Tradition, I think. Paying tribute is a ceremonial event," Daniel explained. "It's more about the show of loyalty than the actual tribute - and that means the optics matter more than efficiency. Having slaves push your old-fashioned tribute wagon sends a message."

"Like a parade," Jack added.

"But according to our data, Apophis doesn't even watch this," Entrapta objected.

Daniel nodded. "Yes, which is also sending a message. To Khalid and Apophis's other vassals."

"Khalid sounds like Apophis's Kyle," Catra muttered as she adjusted her hood.

"What is a Kyle?" Bra'tac asked.

Before they could explain, the wormhole formed.

Adora nodded. It was time. They had people to save.

"Let's go."

*****

Gate Area, Saqqara, November 9th, 1999 (Earth Time)

The contrast to Chulak was striking, Samanha Carter thought after stepping through the wormhole and arriving on Saqqara. Chulak's Stargate was in the open plains, quite far from the capital, and guarded at most by a token force posted there.

Saqqara's Stargate was housed in a bunker. And Apophis had remodelled since Bra'tac and Teal'c had last visited, from the looks of it, with a dozen guards close to the Stargate augmented by more behind embrasures in a new wall that surrounded the entire setup. Apophis didn't take any chances on his homeworld. Though he lacked an iris or other mechanism to block the Stargate… no, she realised as she pushed the heavy tribute wagon forward, the Stargate could be lowered to the ground, blocking it. Of course, if a party was expected, the gate would be open…

The wagon reached the top of the ramp, and Sam and the others next to her pushing it had to switch to pulling back so it wouldn't run down the ramp and smash into the official from Apophis waiting there. Without Catra, they would have had to struggle, but as things were, it didn't take too much of an effort to slowly guide the wagon downwards.

That also meant Sam could focus on other things more easily. Such as taking in the layout of the room and the position of the guards watching them. They were set up for a crossfire, positioned in a quarter-circle so they wouldn't hit each other. Like at Stargate Command. And they were watching everyone, including the 'slaves', with their staff weapons ready. Good troops.

"...and here is the tribute of Khalid the Great for the magnificent Apophis! Treasure from his domain, jewellery wrought by the best smiths in his realm! The finest Dakir pelts, unique in the entire Galaxy! And salted Qu'adu fit for the most refined palate of the magnificent Apophis, may his reign last eternally!" Bra'tac gestured at the wagon as Daniel, Glimmer, Entrapta, Sam and Catra took a step back from it, bowing low.

The pompous official - not a Jaffa, a Goa'uld, Sam noted - sniffed rather derisively. "Yes, yes, the usual." He nodded at two Serpent Guards standing behind him. "Search it."

The two approached the wagon, pulled the covers away and started inspecting the various items and crates there. They were used to this, Sam noted - they moved and acted like customs officials at international airports. But a physical inspection wouldn't detect everything, and Apophis was no fool, so…

She kept her head lowered so the hood would hide her face but glanced around. There, on a raised balcony, another Jaffa stood behind a console. That would be the one to use sensors to check for contraband. As Bra'tac had told them. And the scanners she could see looked more advanced than the standard ones they met in the field. A little, at least.

"Nothing," one Jaffa reported.

The Goa'uld snorted at that and checked on his communicator. "And the scan is clean as well. Well, take the tribute to the usual vault." He made a dismissive gesture with his hand and turned away before Bra'tac could reply.

Evidently, Khalid was not held in high esteem. Or any esteem at all. Sam hoped that didn't extend to his servants and slaves being fair game for anyone higher up the food chain. The predictable response to any such attempt would complicate their mission.

Bra'tac huffed - softly, though - and gestured at the rest of their group. "Move! We fulfil our duty!"

Sam started pushing again, and they moved forward. The massive gate in front of them started to open, revealing walls fit for a vault, not merely a bunker. So, a gate room, surrounded by fortified firing positions, all inside a vault. And deep underground - a lift was waiting for them. Apophis took his gate security very seriously.

But not seriously enough to simply have the tribute handed over to his own guards in the gate room and Khalid's delegation sent home from there. Because, Sam thought as the lift stopped and the doors opened, he wants his visitors to see the glory of his capital.

Before them, a maze of buildings sprawled - stone and fake stone, Sam guessed - all massive, built in a vaguely Egyptian style. She could see factory complexes in the back. And all of them were dwarfed by the colossal, roughly pyramid-shaped palace of Apophis in the distance. Death Gliders roamed the sky above it in pairs, probably more for show than for actual patrolling. Jaffa guards lined the wide avenue leading to the palace. Their destination.

"And we have to push the damn wagon all the way to the palace…" Sam heard Catra mutter next to her. "I should have insisted on being a guard."

"Move!" Bra'tac snapped.

They started pushing.

"Architecture meant to impress," Daniel noted. "Some dictators back on Earth did the same. Or attempted to. Any visitor will march through the very heart of Apophis's power."

It was impressive, Sam had to admit. As they walked past the buildings, she could see hundreds, thousands of people moving between them, through side streets and on bridges and passages spanning between buildings. It was a stark contrast to the typical worlds under Goa'uld control.

Yet, she added silently, after making a few calculations, it still didn't come close to the metropolises on Earth. Or their factories. But this was only one of the Goa'uld Empire's core worlds.

*****

Apophis has to be compensating for a lot, Catra thought as they approached the Goa'uld's palace. The pyramid was even bigger than Bright Moon - the city, not the palace. And the street leading to it was wide enough for an entire hovertank platoon to travel side by side. Good ambush spots in the buildings lining the road, of course, but still - not the best arrangement from a defensible point of view.

Of course, if the Alliance had to attack the palace, they'd do with orbital and air bombardment and probably drop infantry and bots straight on the remains instead of launching a ground campaign. Much easier on the civilians as well. But if Catra would have to do a ground assault, she'd still send a unit straight down the road, if only to trip all the ambushers and traps. A group of bots would be perfect for that. Meanwhile, the main forces would strike at the exposed ambushers and push on - and also attack from the flank and make their own approaches by levelling some buildings. Hovertanks could fly over rubble, and the bots could climb over it.

But if she was limited to Earth ground troops… Yeah, assaulting the city would be a meat grinder for everyone. She'd better use assault shuttles to take the palace from the air. Though the air defences would have to be taken out first - even shielded shuttles could only take so much fire. And that meant they would have to lure the enemy forces into revealing themselves. Which meant Horde fighters piloted by bots as bait.

No matter how she looked at it, it would be a costly battle. And the cost would be even worse for Apophis's forces. Maybe it would be better to just level the palace from orbit, wreck the factories and barracks, and then wait the survivors out? Judging by how nice the air smelt, Apophis's factory complexes were either much cleaner than Horde ones - she doubted that - or he had a lot less

capacity around his palace than Hordak had had in the Fright Zone during the war.

Apophis himself was another problem for any assault, of course. The snake could, in the face of certain defeat, take over any servant and hide amongst his slaves. And he wouldn't be the only Goauld doing that. Sorting out the hosts from the rest would be a nightmare. They'd need a decapitation strike to prevent that, but that was a lot harder to pull off than a simple invasion with superior forces. And probably best done with stealth shuttles again.

Catra narrowed her eyes, wishing she could throw off the damn hood and let her ears move freely. And kick off - and shred with her claws - the stupid boots she was wearing. She shouldn't have to wear boots unless the environment called for it. And this planet wasn't too cold or too hot.

Anyway, decapitation strikes were a good idea, but with the genetic memory of the snakes and the whole religious indoctrination of their forces and slaves, even taking out Apophis wouldn't really end the battle. But it would fragment his forces, which would make it far easier to defeat them in detail or catch them on the move. Earth armoured forces would be quite effective for that.

They were now two-thirds to the palace. And she had to control herself every step not to unsheath her foot claws for better traction. She really should have insisted on posing as a Jaffa guard. Sure, she was a bit small for a Jaffa, but unlike humans, she had the strength for it. Have O'Neill pose as a slave pushing a damn wagon like a horse. Or get Swift Wind to pull it. Make the damn horse be useful for a change. Heh, a winged horse as a gift would get them an audience with Apophis, allowing them to take him out…

They were passing the massive shield generators - well, the shield projectors on the surface - that were guarding the palace. Those would have to be reduced from orbit, of course. Or sabotaged

before the assault. Breaking through on the ground would take a lot of firepower, though it wasn't impossible, as the Battle of Bright Moon had shown.

Inside the perimeter of the palace, though not yet inside the palace itself, she could spot far more guards than in the city. Enough to cover all approaches - not that that was hard; there was a strip surrounding the pyramid that had been cleared of any cover.

And now came the hardest part: Pushing the stupid wagon up the slope to the palace gates without losing her temper or losing her disguise. Grunting, she adjusted to the increased effort. If anyone ever made a draft animal joke about this…

"It's so inefficient…" Entrapta complained under her breath. "A single bot could have drawn the entire wagon. Somebody should have told Apophis that long ago!"

Catra snorted. Having slaves struggle was the point. Like in cadet training. Well, there, it was to foster team unity or something through shared hardship, though, for some instructors, that was just an excuse.

With another grunt, she pushed the wagon to the top of the slope, right in front of the palace gates.

Finally! They had arrived!

Now all they had to do was to vanish somewhere between the gate and the vaults, find Teal'c's family and Daniel's wife, kill Apophis if he was around, and leave.

After pushing the tribute wagon all the way here? Piece of cake.

*****

Palace of Apophis, Saqqara, November 9th, 1999 (Earth Time)

You'd think Apophis had a subscription to 'Dictator's Quarterly', Jack O'Neill thought as they entered the palace. Most of the decor would fit perfectly in any of the palaces of various 'great leaders' and other rich and powerful scumbags on Earth that he had studied during his career for missions that had never happened, and a few that *definitely* had never happened, no sir. Massive marble columns, wall reliefs with gold inlays, carved wooden and ivory - or something alien that looked like it - furniture littered the hallways and rooms wherever you looked.

Of course, they were walking to the tribute vault, so this would be a route where Apophis's underlings would have taken extra care to impress any visitors. The whole palace wouldn't be full of such expensive gaucheness, or whatever you called it. On the other hand, Apophis had had a few thousand years to decorate and so many worlds to plunder…

He kept looking around as they walked down a big hallway. The armour was alright, but the helmet was a pain in the ass. It restricted his field of vision just a little bit, but it was enough to be noticeable and make him keep moving his head to cover his blindspots. Maybe he should have posed as a slave instead. But then he wouldn't be armed, and that would feel even worse than wearing a stupid helmet.

They passed another pair of guards standing to the sides - the fifth on the route - and finally reached the big lift to the vaults. A red light flickered over them - some scanner, Jack was sure. But unless Apophis had suddenly rediscovered magic or turned the lift into some X-ray machine, the scanner wouldn't find anything amiss. The 'slaves' were not carrying anything unusual. The 'guards' were armed with two zats and a staff weapon, but that wasn't too unusual. And Bra'tac was carrying Entrapta's multitool, but she had assured them that no known Goa'uld technology would identify its magic parts. Or the other parts hidden in the staff weapons.

Would be a hell of a time to discover that the princess had been wrong, of course.

The lift doors opened without any alert being sounded, and Bra'tac motioned to the others to push the wagon inside, but that didn't mean anything. If Jack were in charge, he'd turn the lift into a trap for intruders. It was the perfect ambush spot.

But once again, no alert sounded, and the lift slowly descended without any trouble until it opened again into a hallway made of metal - Naquadah-enhanced steel; Jack recognised the shine. Apophis didn't joke around when it came to his treasure chamber.

He also had four Jaffa guards here, plus another snake flunky, and probably a dozen more behind one of the side doors.

"Halt!" the flunky said. "This is the tribute?"

Jack pressed his lips together before he could make a quip about having mixed up the tribute with the cargo for the recycling plant back home. What did the snake expect? That somehow the guards at the Stargate and the ones at the palace entrance had made a mistake?

"Yes," Bra'tac replied. "The Great Khalid has sent the finest treasure to…"

"The finest treasures of your master are barely fit to enter these vaults," the Goa'uld interrupted him. He inspected the wagon with a sneer. "Quadu? Are stupid? That's for the kitchen, not the vault!"

The snake still grabbed one of the things and snacked on it, Jack noted, before turning to the guards. "Take the rest inside and those bags to the kitchen!"

And now comes the dismissal, Jack thought. Petty flunkies like that snake always jumped at the opportunity to lord it over someone else.

"What are you still doing here?" The Goa'uld scoffed. "Return to your master!"

Bra'tac bowed his head, then turned around. "We have done our duty! We will return to the Great Khalid!"

They went back into the lift. Jack glanced around. They were under observation - the camera in the ceiling was not subtle at all. But they had expected that. And they had timed the lift's route on the way down.

As soon as the doors closed, Bra'tac slapped the tool into Entrapta's hands. "Don't break it!" he snarled, then gripped his staff with both hands, acting as if he was angry at the insults thrown his way by pretty much everyone. Well, maybe he was angry.

Jack didn't care as long as their plan worked. And that depended on Entrapta and Carter, who were huddling over the tool. And taking their time - they were already halfway to the top. Maybe closer.

Jack clenched his teeth. Carter and her buddy wouldn't let them down. He had to trust them.

"We did it!" Entrapta announced.

"We hacked the cameras, sir," Carter reported. "And we found a hiding spot."

"Great!" Jack grinned.

They reached the ground floor and stepped out of the lift. Vanishing inside it would have been a bit too risky. The guards would wonder why an empty lift arrived. But disappearing on the way out? Plenty of crossings to duck into. Especially if you controlled the cameras and knew the blind spots of the guards.

Halfway to the gate, they darted to the side and dashed down a small maintenance corridor - still shiny with all the gold you could muster - and into a storage room or whatever the snake used it for.

“Alright!” Jack said as he handed his staff weapon over to Carter, then pulled his spare zat out while she started disassembling it. “Let’s get this show on the road!”

*****

Adora watched the door while Sam, Entrapta and Bow quickly took apart the three fake staff weapons they had brought and started building - no, assembling - the tools they needed for this. And Bow’s ‘Q Bow’, as Jack had dubbed the contraption Bow had somehow managed to slide into the hollowed-out shaft of a staff. A reference to James Bond, Daniel had told them, before explaing that James Bond was a fictional British spy usually doing the same missions they were now doing. Which was a good omen, or should be one, in Adora’s opinion.

“Alright! With the computers linked and the programs loaded, we just need to adapt them to the latest data, and we can go hack the entire security system!” Entrapta announced, beaming from behind the rather fragile-looking array of bits and pieces spread out on the chest-turned-table in the middle of the storeroom.

“I’m almost done with the connection to the main data line here!” Bow was hanging upside down from the ceiling, next to Catra, who had sliced open the stone with her claws to expose the cables. One of Bow’s tools dropped when he shifted, but Catra grabbed it before it hit the ground.

“Careful.”

“Thanks.”

“I am adapting our algorithms,” Sam said, not looking up from her ‘improvised holographic laptop’, as Entrapta had called it. Even with both the screen and the keyboard replaced by holoprojections, the components for that alone had taken an entire staff weapon to conceal, as Bow had explained to Adora. The others had been mostly used to smuggle the explosives Jack had wanted and Bow’s bow.

That left them with two working staff weapons for Teal'c and Bra'tac and ten zats for everyone else. And Adora's sword, Bow's new bow - though he only had a few arrows for it - and Glimmer's staff, but that was literally just a weighted shaft of a staff weapon.

"Done," Sam said. "We can now begin our intrusion into Apophis's system."

"Great. Let's find our missing family members and get out," Jack said. "Wouldn't want to overstay our welcome."

"Visiting delegations often enjoyed some time in the taverns of the capital," Teal'c commented. "They will not expect us to return immediately."

"Although Khalid's delegations are not known to mingle as much as others," Bra'tac added, "since they are held in derision by the Serpent Guard and other vassals. Still, few of them would forego the opportunity to enjoy the amenities that a much more advanced planet than their master's holdings can offer."

"Meaning, we have some time until someone starts looking for us," Catra said, dropping from the ceiling and landing lightly on all four after flipping in midfall. She straightened and sniffed the air. "But don't take too long, anyway."

Adora nodded in agreement.

"We can do it quickly, or we can do it safely. Relatively safely," Bow retorted.

"Let's do it safely!" Daniel cut in. He looked nervous, gripping his zat tightly in his hand.

Of course, he would be nervous, Adora berated herself. Sha're might be in the palace.

"Yeah. We can go quickly later - we probably will have to go quickly, very quickly then." Jack nodded.

It was a very weak joke, and gallows humour, as they called it on Earth, but everyone chuckled at it.

And then came the worst part of any mission, in Adora's opinion - waiting while others worked. She hated this. She wanted to help them. Make herself be useful. Do anything.

But she couldn't do anything here. She couldn't help with the hacking - and even if she had the skills, the others were already crowded around both the one computer they had managed to smuggle in and Entrapta's tool. She couldn't even fetch some food or something - they were in a storeroom, not the palace or headquarters.

She gritted her teeth and sighed.

"Stop that," Catra whispered to her.

"Stop what?" Adora whispered back.

"Fretting and feeling useless."

"I wasn't…" Adora trailed off with a pout as Catra snickered. But then she narrowed her eyes. Catra's tail was twitching, and that meant… "Stop fretting yourself," Adora told her. Her lover wasn't doing any better! Well, she should have realised that at once - Catra wasn't the most patient person.

Catra scoffed in return but didn't deny it.

At least Glimmer was holding up better. Then again, she was watching Bow working, so that was kind of cheating. So…

"Look at that!" Entrapta exclaimed.

"Ah, yes. Let's check the records." Sam's fingers flew over… well, the table, passing through the projected keyboard.

"And the feeds from the cameras - can we run a quick search?" Bow added.

“We would have to free some computing power, but… I think so. The system is not quite as advanced as Horde Prime’s.” Entrapta nodded. “So… Oh! Another hit?”

“But not the same location. Oh. Different people.”

Adora clenched her teeth. She wanted to ask what was going on, but she didn’t want to bother her friends in the middle of this critical task.

“I’ve got confirmation! Look at that!”

Adoa cocked her head to look at the projected display. There were multiple pictures there, camera feeds, it seemed, slightly grainy, but…

“Drey’auc. Ryla’c,” Teal’c whispered.

“They’re in the palace dungeons. As expected,” Sam confirmed. “But…”

“Sha’re.” Daniel was staring at another picture. And that camera didn’t show a dungeon cell.

“Yes. She’s in the women’s quarters of the palace,” Sam said.

“We have to save her!” Daniel blurted out, looking at Jack - and then at Adora. “All of them,” he added a moment later.

Adora nodded. “That’s why we’re here,” she reassured him.

The only question was how. According to their data, the dungeons were not even near the women’s quarter. Those were close to Apophis’s personal quarters, in the upper part of the palace. If anything went wrong, if the alarm was raised, it would quickly become impossible to reach the other location.

“We’ll have to split up,” Catra said, looking at the holoprojection.

*****

The Rescue Operation Part 2

Palace of Apophis, Saqqara, November 9th, 1999 (Earth Time)

"We have to split up."

"Never split the party," the Colonel replied at once. "Don't tell me you never played Dungeons and Dragons!"

Samantha Carter refrained from rolling her eyes.

"Actually, we still have to play a game," Bow said. "I have a character and a mini ready, but we never seem to get around to setting up a session."

"With good reason, Bow." Catra did roll her eyes. "Seriously, we have to split up. Do you think we can sneak into Apophis's harem with Teal'c's family in tow?"

"You want to sneak into his harem?" Adora asked.

"You want to blast your way inside?" Catra retorted. "Give them time to retreat?"

"And endanger all the other people there," Sam added.

"Yeah, that too." Catra nodded while Adora frowned.

"We could go through the air ducts!" Entrapta suggested. "Like before."

"If it works." Catra shrugged.

Sam nodded in agreement. "Such a huge building has to have extensive air ducts to ensure it remains habitable."

"It might take time to circumvent the various filters and sensors, though," Bow pointed out.

"Yes. Apophis has a layered security system. The most important areas are guarded much more tightly than the rest of his palace," Bra'tac said.

"Well, spend too much on the glitz to impress the neighbours, and you end up not having enough to keep your home safe." The Colonel shrugged. "Couldn't happen to a nicer guy."

"But we don't have unlimited time," Adora said. "And if we're in the air ducts, we can't move fast and are vulnerable if anything happens. Most of us won't be able to do anything while Entrapta, Sam and Bow deal with the security."

That was correct as well. The longer they took, the higher the chances that someone would notice that they had never left the palace. And while she wasn't claustrophobic, Sam would prefer not to be stuck in an air duct during a battle. She grimaced at the thought of being helpless like that.

"It's not as if we can just walk into Apophis's harem or dungeons," the Colonel explained. "I doubt he gives tours to Khalid's finest."

"Then we'll have to change disguises," Glimmer said. "Find a disguise that will allow us to access the dungeons and the harem."

"We can check our data for that!" Entrapta cheered, and her hair flew over their holographic keyboard.

Sam pressed her lips together. She had a decent idea of what they would find based on their past experience. And she knew she would loathe it.

But it was probably the best way to rescue Sha're and Teal'c's family.

Sighing, she joined her friend.

*****

“So… standard guards in the dungeons,” the Colonel said five minutes later. “All we need to do is catch a shift change, get their armour, and walk inside.”

“And fight off the guards in the dungeons,” Daniel added. “Without triggering an alert.”

“Timing will be critical. We have to enter both locations at the same time, or close to it,” Catra said. “That will be tricky.”

“But not impossible. Apophis’s Serpent Guard follow a strict schedule - which we know thanks to your efforts.” Teal’c nodded at Sam and Entrapta.

“And they work in squads of four,” Sam pointed out. They had more than that.

“We could pass one of us as a prisoner to be processed,” Teal’c suggested, “if you can insert a fake order of such a transfer into the system. They will not check such an order with their superior, unlike an order to release a prisoner.”

And there went Sam’s alternative plan.

“Someone’s been watching a New Hope again.” The Colonel grinned. “Well, it worked on the Empire’s cells.”

“It ended with the whole team being crushed in a trash compactor,” Daniel said.

“I doubt Apophis has such a thing here.”

“That leaves the harem. The only ones getting in and out are servants,” Catra said.

Female servants chosen for their looks, Sam knew. And they were dressed to show that. She could hide some tools even so, but a zat would be difficult already. And if the Colonel made a joke about this…

“Well, that will work for you,” Catra said. “He has a small army of human slaves. But I think I would stick out a bit if I tried to pass as a servant in those clothes.” She narrowed her eyes. “And don’t even joke about shaving my fur!”

“Oh, I wasn’t thinking about that,” Glimmer said with a grin that belied her words. “Instead, I was thinking we should use that you will stick out.”

“What do you mean?” Catra blinked. “Oh, right.” She grinned. “That could work.”

“What?” Adora asked.

“We present her as a gift from a vassal - maybe Khalid,” Glimmer said.

“And you can bet that Apophis’s favourite will personally come to check me out,” Catra added. “Saves us the time to try and find her in the harem.”

“Oh, right.” Adora nodded. “And they won’t suspect anything if they don’t recognise us.”

“But Apophis might hear about that as well and come inspect his gift,” Daniel pointed out.

“Even better.” Catra grinned and flashed her claws. “Two rats with one swipe.”

“And we can use one of you as our guide,” Glimmer said, looking at Bow.

“Preferably one who knows the palace and the Serpent Guard’s drill,” Sam said.

“Right,” Bow agreed.

“I shall come with you, then,” Bra’tac said. “You, my friend, go free your family.”

"Indeed."

*****

Catra wasn't a prude. She had grown up as a Horde cadet in the barracks, with a shared shower and bunk room. But wearing what felt like a few strips of silk, liberated from a store room they had found a bit deeper into the palace, tied around her chest and waist, still felt a bit uncomfortable. Differently uncomfortable than the gold jewellery that Bar'tac had had with him - apparently, he used that to trade for supplies on Chulak. Fine metal rings and chains didn't go well with fur such as hers. Still, she could handle either easily.

But posing as a gift from an underling for his Lord, dressing to attract Apophis's attention? Catra wouldn't mind drawing attention, but the implications of what kind of attention she would catch were a little bit disturbing.

Not that she'd complain about that, of course. She could handle slight discomfort. And it wasn't as if anything actually would happen - if Apophis turned out to be home, she would cut him apart with her claws at the first opportunity. Too bad about his host, but taking out Apophis was worth it, and she couldn't hide a zat or shock rod like this.

She glanced at the others. Adora looked… Well, she was wearing about the same amount of silk fabric as Catra was, but on She-Ra's body.

"I think I should change," Catra's lover complained, tugging at the strips crossing her chest. "I'm sticking out a bit too much like this."

"And if you have to change into She-Ra in front of witnesses?" Glimmer shook her head. "It's safer this way."

'If'? More like 'when', Catra thought. The odds of Glimmer's plan working without a hitch were… Well, she wouldn't bet a *brown* Horde ration bar on it. "We want to draw attention, remember?"

she reminded Adora. “You’re not supposed to fade into the background.”

Adora nodded with a pout.

Catra snorted when she caught her lover trying to hide how she pulled on her clothes again. “Anyway, are we ready?”

Glimmer nodded. “Yes.” She looked determined. Of course, it was her plan, so she couldn’t complain about it.

Sam also nodded. “Yes.” She didn’t seem to be happy either, but that was understandable.

“Yes!” Entrapta nodded eagerly. She probably thought this was a great opportunity to gather more data about the Goa’uld.

“And remember,” Glimmer told her, “Don’t use your hair.”

“I’ll remember!” Said hair formed a thumbs-up gesture. From anyone else, that would have been a snarky gesture.

“Then I believe we should move,” Bra’tac said, pulling on his newly acquired Serpent Guard helmet.

“Good. And remember: The Alliance doesn’t kill prisoners,” Glimmer told him.

Catra rolled her eyes. They should have told Bra’tac that before he had used his zat to kill and disintegrate the former owner of his new armour. How could he have known about this policy?

Bra’tac, though, merely nodded. “I shall.”

Catra suspected that meant Bra’tac wouldn’t take any prisoners from now on and simply kill his enemies. On the other hand, he would know best that not everyone working for Apophis was actually a willing enemy.

Whatever. They were here to save Sha’re, not everyone else. “Let’s go.”

Bra’tac nodded and led them out of the room.

They didn’t encounter many on the way to the harem - only one patrol of four Serpent Guards who were easily fooled by Bra’tac and a handful of slaves. For the size of the Palace, it housed surprisingly few people. Apophis probably thought that showed off his might or something, but it was a serious security risk, in Catra’s opinion, if intruders could pretty much walk in the open without anyone seeing them - once the cameras had been hacked, of course. Although Apophis’s cybersecurity, as Sam called it, wasn’t exactly great either.

But now they were reaching the entrance to Apophis’s private quarters - of which the women’s quarters were a part. And the guards here were sharp. They still stared at Catra, like the others on the way, but she had a feeling that they were sizing her up as a potential threat as much as they were sizing her up. She did her best to look harmless. Like one of the silly catgirls from those Earth animations the Japanese made.

“I bring a gift from Khalid for Apophis!” Bra’tac announced. “An exotic concubine!” He gestured at Catra, who bowed her head in return. Her ears twitched, and her tail swished back and forth. This was it. If the guards checked with the Stargate room or the palace gates, then they would not only have to fight their way into the harem but also find and capture Sha’re before the Goa’uld possessing her could escape.

“A Sekhmet?” the commander of the guards asked.

Catra suppressed the urge to scowl.

“No.” Bra’tac shook his head. “A species of near-humans from a distant planet, according to Khalid's delegation.”

“An unknown world?”

“I would not dare speculate what the mighty Apophis knows,” Bra’tac replied. “But it was unknown to the Great Khalid.” He sneered at the title.

Catra’s ears caught two of the guards softly snorting in their helmets. Good. If they underestimated them, this would be easier.

“Should I take them back?”

“No.” The commander shook his head. He turned to look at the two closest guards. “Let them in.”

Bra’tac bowed, stepping to the side while the doors - thick, armoured gates - swung open.

And then the commander flicked his hand at them, and Catra and the others entered Apophis’s quarters.

So far, so good.

*****

It is a good thing, Jack O’Neill thought as they approached the dungeons, that the prison guards aren’t picked from the Serpent Guards’ elite. Between the four of them disguised as Jaffa, they had trouble marching perfectly in step with each other. Daniel wasn’t a soldier to begin with, Bow apparently never had done formation drills in the Princess Alliance, being ‘assigned’ by Glimmer to herself from the start, and while Jack and Teal’c had done the drills, the Air Force and the Serpent Guard had different marching cadences.

Still, while Jack would never let it go, it should be good enough for a prison guard duty squad. According to both Bra’tac and Teal’c, that wasn’t a high-prestige posting and was generally left to newer recruits. Unless there was a dangerous prisoner that rated special attention, of course. Such as Bra’tac, Teal’c or SG-1.

Teal’c’s family shouldn’t be in that league. But they were adjacent, sort of. And it was possible that this was a trap for a rescue

operation. So far, things had gone a bit too smoothly for Jack's taste. Judging by past experiences, something should have gone wrong by now, and SG-1 should have been scrambling to improvise. Sure, the security at the palace was pretty much like Bra'tac and Teal'c had said it would be, though the Stargate's security had been improved. But shouldn't Apophis have made more changes after both his last two Primes had defected? Tyrants like him were on the paranoid side.

On the other hand, deliberately weakening his palace's security to ambush a rescue team also didn't sound like something Apophis would do. He had to be wary of assassination attempts and coups by rival System Lords and ambitious underlings. That was what life was like when you were the top snake in your snake pit. Couldn't happen to a nicer guy.

They turned the last corner of the hallway and saw the entrance to the dungeons ahead of them. Four Jaffa stood at attention - just as they had seen on the cameras. They stood straight, with no sign of tiring, but standing straight and not showing weakness was pretty much beaten into Jaffa from their earliest childhood, so that didn't tell Jack anything about their quality as soldiers.

"Halt!" their leader bellowed, holding out his hand. "State your business."

The rest of the group didn't move an inch, just one standing a tiny bit straighter, Jack noticed. Wouldn't elite Jaffa warriors shift around a little, just in case a group of newcomers turned out to be hostile?

"We are to relieve the third guard shift," Teal'c replied.

"They are not scheduled to be relieved until later," the Jaffa retorted.

"I am aware of that," Teal'c told him. "But the orders we received were clear." He moved his shoulders slightly, not quite shrugging.

“A change of orders?” The Jaffa leader had to be scowling in his helmet as he checked his communicator. “Indeed, there is the order for the shift change. Ordered by…” He trailed off.

Ordered by Apophis himself, as the logs would show. That would keep the Jaffa from looking into the whole change. You didn’t question your almighty god no matter what they did.

“Why wasn’t I informed?” the Jaffa grumbled.

“I cannot say.” Teal’c tilted his head. “Maybe the guards we are to relieve are meant to be sent somewhere else?”

The leader scoffed. “Hopefully to Bre’stec. They deserve it.”

Teal’c chuckled at that, so it must have been a joke.

“Do your duty, then.” The Jaffa nodded at the guard to his left, who stepped aside to speak into a small mic mounted on the wall next to the door.

After a brief exchange, the door slid open, and the rest of the guards moved to let them through.

Inside, eight more Jaffa were waiting. Four were in full armour, standing guard. Another four were sitting at a table, fiddling with their weapons - doing maintenance, if a superior asked, Jack would bet - next to a bunch of glasses and one fancy bottle. One of them stared at Teal’c with narrowed eyes. “What do you want?”

“We were ordered to relieve the third shift,” Teal’c repeated himself. “New orders. From the mighty Apophis himself.”

“What?” The guy jerked and quickly got up to check the console at the other side of the room, almost pushing the guard there out of the way. A few seconds later, he stood straighter. “I see.”

“We are to be relieved?” the armoured Jaffa next to him asked.

“Yes. You are to wait for further orders in your quarters.”

“We hear and obey.” The other Jaffa sounded wary. Few soldiers ever complained about getting a break from guard duties, but new, vague orders were never a good sign.

While the four Jaffa marched out, the apparent Jaffa in charge scowled at Teal’c. “Take over their duties.”

Teal’c bowed, then turned to Jack and the others. “Take up your positions.”

Teal’c knew how the system worked, so he’d stay at the console. Jack moved to guard the door to the cell tract proper, leaving Daniel and Bow to stand at the exit. Good positions to catch the other guards by surprise. He peered through the window in the door behind him. The hallway lined with cell doors was empty.

They already knew in which cells Teal’c’s wife and son were held, so now they just had to wait for the signal from the other group that they had found Sha’re. Or for the alert being raised. Or for something to blow up.

Jack was betting on the last one.

*****

Adora straightened as they left Bra’tac behind and entered Apophis’s personal quarters. Focus on the mission, she told herself. She had done this before, when she had boarded Horde Prime’s flagship to save Catra. But she had been wearing more clothes back then. And she had arrived openly, demanding to be led to Horde Prime after Darla had smashed through the outer hull of the Velvet Glove. She hadn’t sneaked in in disguise. Although her friends had sneaked in.

Like back then, a group of guards faced her, though they were tall, armoured Jaffa instead of tall clones. Their leader looked Adora and her friends over, especially Catra, then nodded. “Follow me.” He turned without waiting for a response or just an acknowledgement.

Apophis's personal quarters were decorated even more opulently than the rest of his palace. So much gold - on the walls, inlaid in furniture, as decor… like Horde Prime, the Goa'uld had stuck to his style all the way through. Though most of the palaces of her friends had a theme as well, she reminded herself. Just nothing so… oppressively blatant?

The slaves they saw on the way to the women's quarters - the harem - were wearing more expensive clothes than the ones outside. Mainly because a lot of what they wore was golden jewellery, far more than Adora and the others were wearing.

She still felt self-conscious about her own skimpy clothes. And she was sure that the others felt the same. Well, not Entrapta - her friend was looking around with a big smile, taking in every detail.

Focus on the mission! Adora told herself. They were here to save Sha're. And take out Apophis if he was around - they hadn't found him on the cameras, but those didn't cover his private personal quarters. He probably didn't want anyone, not even the most loyal guards, to watch him when he slept. Or did other things.

But that would just make it easier to take him out. It would take Adora just a moment to summon her sword - and her suit - and deal with him.

They reached another big door with guards in front of it. That would be the entrance to Apophis's harem. The guards here didn't question the Jaffa leading them - they just stepped aside and opened the doors. It was a nice change for once.

The harem itself didn't look very different compared to the outside quarters. Maybe a few more silk tapestries and curtains lining the walls. And no guards, male or female - the one who had led them there stayed outside as well.

But she could see many women, all of them looking at them and whispering as soon as the doors closed behind Adora and the others.

“No, I am not a Sekhmet!” Catra announced, taking a step forward. “I’m a different species.” She glared at a few - her ears must have picked up their whispers - and the women shrunk away.

“Then what are you?” a Goa’uld’s voice rang out.

Adora turned her head as the women surrounding them parted, bowing their heads, and revealed a slender figure walking towards them, trailed by four slaves. Sha’re. No, it was Amaunet, Adora reminded herself - the Go’auld controlling her body. Apophis’s queen.

Catra met the Goauld’s eyes with a cocky grin. “I am a cat.”

Adora pressed her lips together. Catra was… being Catra. Jack would say cattish.

Amaunet sniffed and stepped closer to Adora’s lover, making a point of looking her over, and Adora clenched her teeth. If the Goa’uld tried whatever…

Catra cocked her head in return, grinning and striking a casual pose - though her tail swishing back and forth ruined it a little. At least for those who knew her, like Adora.

Amaunet narrowed her eyes and walked around Catra. “You are not a Sekhmet, indeed. And not a Furling.” She reached out and grabbed Catra’s tail, then tugged.

Catra hissed and straightened, her ears flattening against her head as she glared over her shoulder at the Goa’uld. “It’s considered very rude to pull a cat’s tail,” she snapped, baring her fangs.

Amaunet scoffed and released it. “Not a hoax, then. Not that Khalid would have dared to try to deceive Apophis with such an obvious plot. But others might have fooled him. Where are you from? Did Nirrti create you?”

Nirrti? Adora remembered the name from a briefing. A Goa'uld geneticist? Or biologist?

Catra shook her head with a sneer. "My species was created by the Ancients. The Gate Builders," she added in a slightly condescending tone.

Typical, Adora thought - Catra just had to try and match the Goa'uld's attitude. She glanced around. They had reached their objective. But they were surrounded by the women in the harem. Some of them might fight Adora and her friends if they attacked Amaunet. And what if Jack and the others hadn't infiltrated the prison yet? Until Entrapta reassembled the communicator hidden in her jewellery, they couldn't check in with them.

"Really? Your species didn't amount to much then if we had never heard of you in the time since the Gate Builders left us." The Goa'uld scoffed again. "Then again, the fact alone that you were acquired by Khalid proves that."

Catra flashed her fangs again in a grin but, surprisingly, didn't say anything to that.

On the other hand, judging by Amaunet's sneer, she didn't have to say anything to keep annoying the Goa'uld. Just being Catra was enough. Well, that wasn't a surprise either.

Amaunet dismissed Cara with a sniff and a gesture - and turned to look at Adora. "And who are you?"

"Adora." Adora bowed her head, then forced herself to stand still while the Goa'uld circled around her.

"You're strong," she heard the woman whisper behind her. "And so tall… Have you ever given birth?" she asked in a louder voice.

What? Adora couldn't help it - she turned to stare at the Goa'uld.

*****

What? Samantha Carter glanced at Amaunet, trying to keep her head down - her disguise wasn't the best, to say the least. The Goa'uld hadn't asked if Adora had a child, just if she had given birth, so it was about her fertility? But why was the Goa'uld interested in that? Goa'uld reproduced asexually by spawning larvae. The way Amaunet stared at Adora - at Adora's body… She must want her as a host, Sam realised.

Adora looked puzzled - and wary. "Why do you want to know that?" she asked.

Amaunet narrowed her eyes, and Sam winced. You didn't talk like that with a Goa'uld queen. Or any Goa'uld if you were a slave.

"Watch your tongue, girl," the Goa'uld snapped. She stepped forward and grabbed Adora's ponytail.

Sam tensed. They were surrounded by civilians, but some of them might be disguised guards. Or just slaves willing to fight and die for their gods. If a fight broke out… had the Colonel and the others reached the cell tract already? Sam hated that they didn't have working comms.

But Adora let the Goa'uld pull her head down, towards Sha're's face. "I am Apophis's queen," the Goa'uld hissed. "Your goddess!"

They stared at each other for a moment before Adora lowered her eyes. Sam didn't think that was enough to placate Amaunet.

"Answer your goddess!" The Goa'uld twisted her fist in Adora's hair. And with her enhanced strength…

"I have not given birth," Adora replied. She was clenching her teeth - but probably not because of pain, Sam suspected.

Amaunet frowned at that.

Was she disappointed? Sam wondered.

"Are you fertile?"

Adora blushed at that. “What?”

“Can you have children?” Amaunet snapped, twisting Adora’s hair further.

“I… think so.” Sam’s friend tensed up.

And Catra’s ears were flattening, her tail swishing back and forth rapidly. Things were about to boil over, Sam realised.

Then the Goa’uld scoffed and released Adora. “We’ll have to test that.”

“What?”

Why did Amaunet want Adora to have children? And with whom? If she desired her as a new host, then the only candidate would be Apophis, but Goa’uld didn’t reproduce with their hosts. It was taboo, according to what Sam knew. Amaunet and Apophis must be planning something. But what?

“You’re about to receive the greatest honour a mortal can hope for - provided your body is fertile,” the Goa’uld declared.

And Sam’s suspicion was confirmed. She glanced at the others. Everyone was tense. Ready. Even though they were still surrounded, this might be the best opportunity…

“Are you looking for a surrogate mother?”

Sam jerked at Entrapta’s question.

Her friend cocked her head at Amaunet. “I mean, it sounds like you want Adora to carry your baby to term if I understood you correctly. I might be wrong, though.”

Sam winced. Entrapta’s curiosity had gotten the better of her. It wasn’t entirely unexpected, too.

The Goa'uld looked puzzled for a moment, then suspicious. "You seem to be quite… educated about this."

"Oh, yes! I've been looking into surrogate motherhood," Entrapta replied cheerfully. "It's a fascinating alternative to more advanced methods when you can't reproduce naturally. Not that it's unnatural, of course!"

Amaunet looked surprised. Sam saw her glance from Entrapta to Adora, to Glimmer and then to Sam. A moment later, the Goa'uld's eyes widened in realisation - or recognition.

"Watch out!" Sam yelled as the woman raised her arm - with a ribbon device!

Catra and Adora launched themselves at Amaunet but crashed into a force field surrounding the Goa'uld.

Then Amaunet used her ribbon device, and Adora was thrown across the room, bowling over a handful of shrieking slaves.

Catra hissed and slashed at the force field, which flickered but held.

Glimmer grabbed a vase before she was tackled by two women from behind.

Before Sam could move to help her, she was attacked herself by a third rushing at her.

Sam stepped to the side and redirected the woman's charge with an Aikido throw, sending her flying into a large vase, which broke under the impact.

Then the alarm sounded, drowning out the shrieks from the fleeing women.

Catra grabbed a heavy wooden bench, but Amaunet hit her with the ribbon device, and she collapsed, screaming as the Goa'uld kept the device going.

"Catra!"

Roaring, Adora charged across the room, sword blazing. One slash shattered the force field. The backswing - with the flat of the blade - knocked Amaunet down, the woman rolling a few yards over the marble floor. She tried to get up, but Adora kicked her in the head and knocked her out.

Sam quickly raced over to relieve the Goa'uld of the ribbon device and her shield generator. If only they had been able to smuggle weapons into the harem! "Check on Catra!" she yelled as she slipped it on. It hadn't been long, but the pain caused by the device would have been excruciating.

Adora quickly took out the last woman fighting with Glimmer while Entrapta moved to Catra, who was groaning and trying to get up. Now that they had Sha're, they had to…

The sound of boots hitting the floor interrupted her thoughts. A moment later, the first Jaffa guard rushed around the corner, staff weapon moving to point at them.

Sam threw herself to the side as the guard fired, and a large, ornate vase vanished in an explosion.

*****

Damn! That hurt! Catra hissed through clenched teeth as she rolled on her front. That snake would pay for…Her eyes widened when she spotted half a dozen - no, more - guards storming into the room, weapons blazing. And her muscles were still shaking!

But before she could force herself to move, she was grabbed and dragged behind an oversized marble bench, just a step ahead of a barrage of staff blasts that blew craters in the wall behind her.

"Catra!" Entrapta gasped as her hair tendrils set Catra down.

"I'm fine!" Catra spat. "We need to move!" Grab Sha're and get out.

“Wait a moment! I need to put the communicator together!” Entrapta replied, crouching down while her hair grabbed the different parts from her jewellery.

“Bra’tac will inform them,” Catra told her friend. The old Jaffa would have noticed the guards charging into the harem even if the alert wasn’t raised in the entire palace. She grabbed Entrapta’s collar and pulled her down when another volley passed overhead.

None hit the bench, though, she realised. Why would…? Ah! They must not want to risk hitting Sha’re with shrapnel from blasts! Wounding or killing Apophis’s queen - or her host - was probably a death sentence. Catra bared her teeth in a grin. “Stay behind cover¨” she snapped and whirled around. She took two, three steps on all fours, her claws digging into the stone floor, then jumped, sailing over the bench in a shallow arc - and landed in the centre, right next to where Glimmer and Sam were dragging away Sha’re while Adora was busy fending off blasts with her sword turned shield to cover them.

“They won’t risk their queen!” Catra hissed as she jumped again, flipping in mid-air and hitting the wall to the side feet first. She pushed off moments before a staff blast hit her spot and pounced on the guard before the staff weapon recycled.

He tried to hit her with it instead, but she twisted around his weapon, her hand claws raking his hands, and then sliced her foot claws into his side, through his chest plate. He screamed and dropped his weapons - and a few fingers, and she went down with it, rolling to the side as two guards turned to engage her.

She dug one set of claws into the floor and spun, her legs sweeping the wounded Jaffa off his feet - and into the line of fire of the others. One staff blast hit his chest and blew through his armour. The other went wide and hit a half-wall, showering a corner with stone fragments. Shrieks sounded from that direction, but Catra ignored them and charged the two Jaffa.

Once more, she was faster than the weapons could cycle, but they knew and fanned out, staffs swinging to catch her no matter where she moved.

But she dug her claws in and stopped in the middle of her charge, then jumped as soon as the staffs passed where she would have been a moment later. One Jaffa kept turning, continuing his staff-swing to hit her, but that exposed his back. Catra kicked the other Jaffa's weapon to the side and raked her claws over the turning guard's back, cutting his spine.

He collapsed with a scream, and she landed on all fours, sliding a step before her claws stopped her. Close enough to cut the staff weapon when the other Jaffa brought it up again.

He stared at the stump of his weapon for a moment, making a surprised sound. Catra didn't need more than that to reach him and ripped his throat out with a swipe of her claws.

She kept going, jumping and rolling to throw off the rest's aim. That left…

A Jaffa flew past her, screaming until he hit the wall and bounced.

Adora was in the middle of the remaining guards. What was left of them, anyway. One Jaffa tried to engage her in melee - and she smashed him with the flat of her blade. Another tried falling back while shooting his staff at her, but he only got off one blast, which she caught with her weapon before she cut him and the staff down.

Another dropped his staff and drew a zat, but Catra disarmed him with a slash of her claws, then cut his throat while he was busy trying to stop the bleeding from his stump.

She ducked behind his corpse and glanced around. The harem women had fled, and Adora had just put down the last guard. But… Her ears twitched. Someone was fighting at the entrance! Bra'tac!

“Grab Sha’re - we need to go!” she yelled. “Bra’tac’s fighting! And grab some weapons!”

Adora whirled.

“Not you! They can handle Sha’re!” Catra snapped and rushed forward. Entrapta alone could probably drag or carry Sha’re with her hair.

Catra dropped to all four to take the corners - easier to avoid slipping on the polished floor. Four guards were standing at the entrance, taking cover behind the open doors and firing at someone outside. Catra threw herself at the closest, her hands slicing into his upper arms as she gripped them and drew her knees to her chest - then pushed down with her feet, claws disembowelling him as she jumped off him and into the next.

Adora took out the third guard, and the fourth had stepped too far out of cover in reaction to their attack, so Bra’tac caught him with a shot in the back.

“Nice shot,” Catra told him, shaking the blood off her claws.

“A raw recruit would not have wasted such an opening,” he retorted, but he was smiling. Not for long. “However, we have a problem,” he went on, growing serious and looking over his shoulder when the others arrived - Glimmer with a staff weapon in hand and zats stuffed in her belt, Sam carrying zats and Entrapta carrying Sha’re and herself with her hair while she was working on their communicator.

“Great,” Catra muttered. “What is it and who do we need to kill to solve it?”

*****

Just as Jack O’Neill was checking - again - if Entrapta had put their communicator together so they could coordinate their strikes, a loud siren filled the room. The other group must have been discovered!

The Jaffa shift leader jumped up and grabbed his helmet. "Enemies are attacking the palace! To arms! Prepare to…"

Teal'c blew his head off with a shot from his staff weapon.

Before the headless corpse dropped to the ground, Jack shot the closest Jaffa at the table with his zat. The guard fell over, toppling his chair. The one next to him dropped as well - but the last one managed to bring his staff weapon to bear, taking cover behind the table.

Jack ducked behind the console - which caught the blast - and when he came up again, Teal'c had already killed the guard.

But the console hadn't survived either. That meant… Jack cursed and whirled towards the door to the cell tract. Locked. And it could only be opened from the console. And the same went for the outer door. They were stuck inside - for now.

Bow checked on the two stunned guards. "This one is dead - we both hit him with our zats," he told Daniel.

"Forget him! Can you hack the door?" Jack asked him.

"Ah…" Bow got up and joined Jack, eyeing the lock. "That will take a while."

And they had to hurry. "Can you shoot a hole into it?" Jack asked Teal'c. He would know the place best.

His friend inclined his head. "It would take a while."

Great. "Time for the all-purpose door opener, then," Jack said, reaching inside his armour for the explosives hidden there. "Guard the entrance. I'll blow it open." There were still guards outside, after all, and though they were locked out for the moment, with the console destroyed, they would have the means to break in once they realised that the prison had been taken over.

Teal’c nodded and aimed his staff at the outer door while Daniel crouched behind the remains of the console and did the same with his zat, and Bow started to put his bow together again.

Jack looked the door over. No hinges to blow up - it slid into the walls to the side. And those were reinforced - he could tell from the way they bulged out. So, no weak points here. “I guess straight through it is,” he mumbled as he started placing the charge. “Never was much for the oblique approach, anyway.”

“Since when?” Daniel commented from his spot nearby.

His friend knew him too well. Jack snorted and armed the detonator before stepping back. “Take cover! This is going to be loud!”

He ducked behind the console next to Daniel, checked with a glance that Bow and Teal’c were clear as well, then hit the remote.

The charges went off, filling the area with smoke, and Jack felt the pressure wave in his chest. As expected.

He got up, zat aimed, and saw that the charge had blown a hole into the door - big enough to wriggle through, even for Teal’c. Not ideal, but it would have to do - he needed the other charges to open the cells themselves.

“Guard the entrance!” he repeated himself and slid through the opening. They had the cameras hacked, but the guards might wonder what was up with that explosion. “If they ask what happened, don’t tell them it’s a reactor leak!”

“I shall not,” Teal’c replied. Jack couldn’t tell if he was amused or not.

It didn’t matter. Once on the other side, Jack quickly moved to Drey’auc’s cell - third from the entrance, on the left. That one was the same model as the one he had just blown through, and Jack placed the charge, then went further ahead to do the same to

Ryal'c's door. "Move away from the doors!" he yelled. He hoped they did.

"Brace yourself!" Jack moved into the guard room again. Then he used the remote again.

Two simultaneous explosions, in a smaller space, were much worse than his first charge - smoke blew through the hole, and he felt the floor shake a little. The guards might have missed the first explosion, but they must have heard this one.

"Get your family," he told Teal'c, aiming his zat at the entrance.

With a curt nod, his friend moved, grunting a little as he had to push himself through the hole in the door. "Drey'auc!" Jack heard him call out. "Ryla'c!"

"Father!"

"Husband."

Neither sounded hurt. Jack was relieved. If they had been at the door when they blew…

"We are here to save you. Come."

Well, that reunion was as touching as Jack should have expected from Teal'c. Then again, the middle of a rescue wasn't the time for romantic moments. Though that bit of common sense wouldn't have stopped Daniel in Teal'c's place.

"Alright," Jack spoke up as Ryal'c and Drey'auc entered the room, coughing slightly from the smoke they had inhaled, followed by Teal'c. "Either the guards outside are deaf, or something is up."

"The walls and doors are thick, but not that thick - I remember hearing screams from inside when I stood guard as a recruit," Teal'c said. "They should have asked what was happening through the intercom, according to our standing orders."

“I guess the standing orders have changed since you and Bra’tac left the Serpent Guard,” Jack said. “Well, if they won’t come to us, we’ll have to go and meet them,” he added, grabbing his last charges.

Half a minute later, another explosion shook the room. But when the smoke cleared, the remains of the door only revealed a metal plate behind it. Heavily armoured, judging by the scratches his bomb had left. “I guess that’s also new,” he said.

“Indeed.”

Damn. Apophis had been a bit smarter than Jack had hoped. They were stuck in here.

*****

The Rescue Operation Part 3

Palace of Apophis, Saqqara, November 9th, 1999 (Earth Time)

"So, Apophis has installed a new layer of security since your defection." Adora nodded at Bra'tac. "Reinforced walls that turned sealed off sections of his private quarters."

"So it would seem. I saw walls go down behind me - fortunately, not between me and you - but the rest is conjecture. If Apophis had meant to limit this to his women's quarter, the walls would have been placed elsewhere," Bra'tac said.

"And we know that the others are trapped in the dungeons," Sam added, holding up the reassembled communicator. "The Colonel reported a similar armoured wall blocking their way. So, we can assume that this isn't limited to just those two spots. Apophis probably has several areas of the palace prepared like this."

"Well, let's cut through it!" Catra moved to the wall they were looking at and lashed out with her claws - only to wince, then frown when, instead of a hole, she had only left shallow cuts, as Adora saw. "That's a thick wall. I guess Apophis expected a lot of explosives."

Adora nodded. "I should be able to cut through it, though." She had yet to find anything that She-Ra's sword couldn't cut.

"Wait!" Sam snapped. "Let's scan it first."

"We're a little bit pressed for time," Catra objected.

"We already missed one trap," Sam countered. "Let's not run into the next."

"Yes." That was sensible. Adora nodded again, and Entrapata and Sam used Entrapta's multitool that Bra'ta had handed over.

“It’s reinforced with a Naquadah-alloy,” Sam said after a moment. “And it includes the ceilings and floor.”

Entrapta nodded. “But in the centre… That layer doesn’t make sense from a structural point of view.”

After a moment spent scanning more in-depth, Sam gasped. “It’s a charge. Like reactive armour.”

“Cut too deeply, and the explosion blasts you?” Catra asked.

“If the explosion is triggered, it will blast most of the area,” Sam replied. “There’s a chance that cutting won’t trigger the explosion, but with the forces involved, and the nature of your sword, I do not think that the risk can be easily dismissed.

Adora winced. That meant…

“We are trapped here,” Catra said. “Better tell Jack before he tries to blast his way through.”

“I don’t think the explosives he has with him can damage the armoured shell,” Sam said. She still informed him, though.

Adora agreed - Jack was crafty and might rig up a more powerful explosion.

Entrapta shook her head, looking up from her tool. “How did we miss this? My tool’s scanner didn’t have the range to detect the walls from further away, but we hacked his security system! There was no sign of this there! How did it trigger?”

“He would have kept this off the main security system - a nasty surprise for any traitor or assassin,” Bra’tac said.

“Oh! So, he’d lose the synergy advantage that combining multiple security systems provides but gains better compartmentalisation.” Entrapta nodded. “That makes sense. But installing this would have taken a long time and a lot of workers, and since he has no

bots that can be memory wiped, keeping it compartmentalised must have been hard."

"Not as long as all workers were killed after finishing their work," Bra'tac told her before Adora could stop him.

She winced at Entrapta's expression.

"But…" Entrapta shook her head. "That's…"

"He is evil," Bra'tac said. "He would not hesitate to sacrifice millions to preserve his life - or win against a rival."

"But… that doesn't make sense! Not even if you don't care about people does it make sense." Entrapta shook her head. "He would have lost so many talented, skilled workers…"

"That's one of the Goa'uld's weaknesses," Catra said. "But we can discuss that once we're out of here."

"I could get us to the Stargate - if you, you know…" Glimmer looked at Adora.

Adora pressed her lips together. She could restore the planet's magic, but that would leave Apophis in possession of a world with magic. And one of his most developed ones, with a lot of people. Some of them probably would have a talent for magic. And Apophis was thousands of years old - he was alive when magic was everywhere. He would recognise the signs and know how to exploit it - those people thought he was their god…

Not to mention she'd have to use all that magic power rushing through her when she unlocked magic on a planet.

"We can hack into this system!" Entrapta suggested. "It has to have a control system."

"And it has to have a way out in case it is triggered with Apophis inside," Catra added. "He wouldn't risk being stuck inside his

palace if a more powerful enemy or an alliance attacked him. Or suffocate if the air runs out."

Adora shuddered at the image this conjured. That would be an awful death - like in a collapsed mine.

"We could probably rig up a way to shelter from the explosion," Sam suggested. "If we build a makeshift bunker far enough…"

"Strong enough so we survive it here?" Catra looked doubtful.

Adora shared her doubts. If they were wrong about the power of the explosion… And all the helpless servants would be at risk as well.

"I think I can predict the bomb's yield so that we can avoid that," Sam said.

Catra scoffed. "You think?"

Adora stepped up before her friends started a row. "Let's try something less dangerous first. Entrapta, Sam - try to hack the new system. Everyone else - look for a secret way out. But don't get split up - we don't know if there are more people in here who're willing to fight for Apophis."

"Alright!"

"And if we don't find a way out?" Glimmer asked as Sam and Entrapta moved ahead to check the metal wall Bra'tac had mentioned, with Bra'tac following them to keep them safe.

"Then you can make yourself useful as transport," Catra said.

Adora frowned at her lover- It was correct, but she would have worded it differently. "Just be careful," she said, picking up Sha're.

"Alright." Catra smiled, but Adora thought she was just humouring her.

“So, if Apophis wanted a way out of here, it would probably be located in Amaunet’s quarters since he’d spend most of his time here there,” Adora said.

“If he trusts her not to betray him,” Catra pointed out. “But even so, it should be close to her bedroom. Let’s start there.” She looked at Glimmer. “Unless you disagree? You’re the expert on palaces.”

Glimmer rolled her eyes. “We’re not Goa’uld.”

“Yeah, you’re not small enough to take over someone’s body.”

Adora sighed as she followed her friends to Amaunet’s quarters - well, once they found them.

*****

Even for a System Lord, Apophis is paranoid, Samantha Carter couldn’t help thinking as she and Entrapta started hacking his second security system. To prepare such a trap in advance, on the chance that some could defeat his primary security system… Was this aimed at SG-1? As a trap? They had managed to sneak into his flagship when he attacked Earth, but that had been as much luck as skill - or more so if Sam was honest.

That wasn’t likely, she deduced while they were scanning for the sensors that triggered the wall. If Apophis had wanted to trap them using Teal’c’s family as bait, he could have picked a less crucial location to place his trap - a remote planet, for example. Even if he had to build a special prison for this, it wouldn’t have nearly cost what he must have spent - in resources and lives - for this. And if he honestly expected them to infiltrate his palace, wouldn’t he have taken his queen elsewhere? Amaunet was one of the few Goa’uld to be able to produce larvae. Without a queen, a System Lord depended on someone else to replace the Prim’ta of his Jaffa, and that would require major concessions.

No, she thought after another scan netted them no results - where were those sensors? - Apophis must fear betrayal from

within his own realm. Especially after the attack on his holdings and fleet by unknown forces. So, this was a way to strike back and trap traitors launching a coup, and the fact that it also trapped infiltrators from Earth and Etheria was an incidental result.

"No sensor here either," Entrapta said. "But someone or something must have triggered the wall."

"Amaunet," Sam realised. "She would have had a panic button."

"Oh?" Entrapta turned to scan the Goa'uld, who was still stunned - Sam reminded herself to stun her again as soon as it was safe to do so. "Yes! There's a transmitter hidden in her jewellery!"

"Good." Sam smiled. "If we can disassemble it, we can narrow down our search for the receiver."

It didn't take them long to take the transmitter apart. It was a very simple design - Sam would call it almost primitive, but for such emergency measures, simpler was often better since it generally meant fewer ways that it might malfunction.

But it also meant any receiver didn't need to be advanced either.

"Oh… it sends a coded transmission on a general frequency," Entrapta summed up their results. "The receiver could be anything - it could even be powered by the energy of the transmission."

"We can duplicate it, then," Sam said.

"Yes!" Entrapta nodded, then frowned. "But what if that triggers another reaction?"

That was… possible, Sam had to admit. But how likely was it that Apophis and Amaunet would risk accidentally triggering something because they triggered it twice by accident? It was meant to be used in an emergency. On the other hand, that could be avoided by a simple timer that delayed registering a second signal for a set amount of time. And Apophis was the type of System Lord

who would probably plan to take his enemies with him if he was trapped without a way out. Although, would he hand such a trigger over to Amaunet? She might decide to take him with her, should he turn against her. “Let’s risk it,” Sam said.

“OK! I’ll set the scanner to detect a receiver powering up in range.”

Sam nodded and picked up the transmitter. “Ready.”

“Ready!”

Sam triggered it and tensed. But nothing happened.

“Alright! I found the receiver! And No sign of poison gas or anything like it!” Entrapta cheered.

With the receiver found, they only had to isolate and power it to find the link to the rest of the system. That didn’t take more than five minutes - but Sam was very aware that wherever Apophis was, he would have been alerted the very moment the walls came down. And the more time he had, the worse his reaction would be. And the Colonel was trapped in the dungeons - without Apophis’s queen as leverage or incentive not to simply try to kill everyone inside the wall.

She had to hold herself back from rushing things. If everything else failed, they could activate the world’s magic to get out with Glimmer’s power.

The minute they spent hacking into the system still felt much longer. But they managed it.

“Yes! We’re inside! Now let’s check the data… oh!” Entrapta’s voice fell.

Sam pressed her lips together. The system could only lower the walls - it had no way to pull them back. They had wasted all this time with nothing to show for it.

Except for the fact that this did support the hypothesis that there had to be a secret way out for Apophis and Amaunet. They wouldn't risk being cut off from their troops in the case of a coup and rely on loyalist forces to free them.

"Let's go help the others," she said. Entrapta's scanner had a limited range due to the power restrictions its size brought with it, but they should be able to find secret passages that the others might have missed.

*****

Apophis was one sneaky bastard. Catra clenched her teeth as she forced herself to focus on the task at hand. And since he was a sneaky bastard, he would have a way out - people like him were not keen on dying with his troops. And having an escape route ready was basic tactics. They drilled that into Horde cadets, at least in the command track.

And it would have to be located where he and his queen could get to it quickly. Which meant in or near his or, in this case, since they were in the harem, her quarters. But no matter where Catra looked, she couldn't find it. The usual spots behind potted plants or tapestries were all busts - Catra had clawed enough walls to know. At least these walls weren't as hard as the ones trapping them. Slicing at those hadn't been pleasant.

Maybe Apophis had planned to escape without his host? Slither away as a snake, leave a decoy to die, and make the enemy think they killed you? That would certainly be like him, and he'd only need a tiny tunnel or pipe to get away. On the other hand, would he risk being stuck outside a host in such a crisis? He'd be very vulnerable and wouldn't have any easy way to prove himself to his loyal minions. Except for taking them over, of course.

Wait! She blinked. Pipes! "Oh, that's sneaky!" she hissed and dashed towards the private baths of the queen. As with everything else in her quarters, Apophis hadn't spared any expense when it came to his queen's private bath. The tub was

big enough to serve as a swimming pool. If it were any bigger, Mermista would probably claim it as part of Salineas. But big pools needed big pipes, so a pipe big enough to travel through wouldn't look too suspicious to anyone checking building plans. Like a saboteur.

She stopped at the edge of the pool, peering down at the bottom. Yes, there was an opening set in the bottom. Large enough for a human to pass through. But to use it, you'd have to either dive and let the water push you through - she shuddered at the thought of getting stuck and drowning in the pipe. Or just diving in general - or you'd have to let the water out first.

She didn't see any diving gear stashed nearby, so she looked for the mechanism to release the water. It would normally be used by servants to clean the pool, so it couldn't be obvious - anything servants did in palaces was usually done discreetly, as far as she knew - but it would also be easily accessible…

Ah! Right outside the bath, there was a small alcove with cleaning supplies hidden behind a tapestry. On the wall there, Catra found a control panel. "I think I found it!" she called out to the others.

Adora quickly arrived, followed by Glimmer - and Entrapta, still carrying Amaunet, with Sam. Good. They could analyse the controls - Catra was sure that Apophis didn't want to end up in the sewers - or have a servant accidentally open his escape route when cleaning the bath - so there probably was more to it than pushing a button.

*****

A few minutes later, Catra's suspicion was confirmed.

"Yes, if you push the buttons to open and close the drain simultaneously, it opens the drain and sends another signal out," Entrapta said. "That goes to a sensor in the pipe checking for water."

“So, once the water’s gone, the sensor reroutes the pipe,” Adora said. “Or something like it.”

“Exactly!”

“Well, time to leave, then.” Catra grinned. She cocked her head and put her fingers on both buttons. “Got anything you need to do before we leave? A parting message for Apophis?”

“No,” Adora replied seriously, shaking her head. “The less he knows about us, the better.”

None of the others said anything, so Catra pushed the buttons. Her ears picked up the sound of water rushing through the drain. The pool was already halfway empty when they entered the bath again. A minute later, only puddles remained on the bottom.

“I’ll go first,” Adora declared. “If I make it, all of us will fit.”

And if she didn’t, she could shrink by changing back. Or cut her way out. Catra nodded. She might not like her lover risking herself like that, but it made sense.

Adora took a deep breath and jumped into the hole. Catra heard her body slide through the pipe - tube - as they waited. If this was a trap… She clenched her teeth. The others had hacked the sensor; it didn’t check for anything but the water, so they shouldn’t need some badge or transmitter to reroute the tube.

But a bit of worry remained - until her ears twitched, and she heard Adora yelling: “It’s clear!” from below.

“It’s clear!” she repeated. “Let’s go!”

She jumped into the tube, clenching her teeth when she slid over the still-wet metal, down the pipe. It was like a waterslide from Earth, she told herself. Just completely closed.

And it was over in seconds. The tube suddenly evened out, and a moment later, she shot out of it into a bright room. Catra twisted

and landed on all fours, sliding a yard - and barely managed to jump out of the way before Glimmer rammed into the pad mounted on the wall in front of her.

Glimmer wasn't as quick, but Adora pulled her away before Sam arrived, followed by Entrpa and Amaunet, with Bra'tac bringing up the rear.

Catra looked around. They were in a small room with a sturdy door - and the walls to the side were lined with stuff. Armour, tools, wigs - and weapons!

She moved to check the door. It was unlocked. And behind it…

She grinned. How nice of Apophis to provide them with everything they needed to escape his palace!

*****

"Alright, folks, we've got a bit of a problem, but we're working on it!" Jack O'Neill said with forced cheer.

Bow nodded. "We're trapped in an armoured box that's also rigged to explode, and we can't get to the layer of explosives without using enough force to trigger the explosive. It's a problem, yes."

Jack glanced at him. Bow looked and sounded as if he was earnest, but this was coming a bit close to being sarcastic.

"We've been working on it," Daniel said. "But nothing we have tried or thought of has worked."

Jack frowned. Now, that was gloomy. And they couldn't have that. "We'll get out of here! We haven't tried everything yet. And we won't let our friends show us up by rescuing us!" He clapped Bow on the back. "Our resident tech master will find a way to get through all this armour plate, and then we'll disarm the biggest shaped charge ever built!"

Daniel narrowed his eyes. “The biggest shaped charge that you would have triggered if the others hadn’t told us about the trap.”

Now, that was unfair! Jack was about to defend himself - how could he have suspected such a crazy scheme? - when Bow shook his head and said: “That wouldn’t have happened. We don’t have enough explosives to blow through the wall, which would trigger the blast. But I think we could try to melt a very small hole down to the explosive layer in the floor using one of my arrows. It’ll be a bit tricky since the arrow carries only a little bit of acid, enough to melt through a Horde tank’s armour, but I should be able to manage that with the tools we have here.”

That wasn’t how acid worked, in Jack’s experience. But Bow’s trick arrows were magitech, and that was more ‘anything goes’.

“And then?” Daniel asked.

“Then we see how we can disarm the explosives,” Jack said.

“And then? We’re on the lowest level of the palace.”

“The lowest level in use - but they have to have pipes and maintenance tunnels down there,” Jack pointed out. Unless the snakes used some alien tech to get around that. But they’d cross that bridge once they reached it.

Daniel still looked doubtful, but he nodded. Good.

And if this plan didn’t work, they’d think of something else. Or the others would save them, probably by Glimmer teleporting them out. Which wasn’t ideal - it would mean restoring magic to Apophis’s planet and exposing their powers - but still better than suffocating in the sealed dungeons. Or getting captured by Apophis and snaked. After being tortured for a long, long while.

Jack would rather trigger the explosives himself than suffer that, and he was sure everyone else would agree. Not that it would happen, anyway. But if it did, having a way to touch off that massive charge would come in handy.

At least everyone was staying calm. Bow was busy working, Daniel was holding it together - it helped that the other group had secured Sha're - and Teal'c was talking to his family in the other corner. Jack couldn't hear what they were saying, but Ryla'c looked happy, and Drey'auc hadn't tried to tear off her husband's head, so it looked like it was going pretty well. At least compared to their general situation.

But if they couldn't get out, it wouldn't matter. And it was Jack's job to ensure they could get out. Alive and unharmed. Or at least alive - Adora could heal any wound, anyway.

"OK!" Bow held up one of his few trick arrows. One with a tip that looked like a green vial. "I've altered the tip so it'll release the acid in a very small trickle!"

"Good work!" Jack was more than a little queasy about handling a vial designed to break upon impact that contained enough acid to melt a tank's armour, but like Hell, he'd show it - a leader had to remain confident at all times. "Let's see how it works!"

"Well, we'll have to go through the normal floor first. We can't waste the acid on that," Bow said, smiling a bit sheepishly.

"No problem," Jack told him, hefting a pilfered staff weapon. The hidden armour would withstand a staff blast, so it should be safe to shoot a hole into the floor until you hit the armour layer.

And blasting stuff was an *excellent* way to release tension and work off frustration. Jack knew that from experience.

"Everyone, stay back! It's going to get loud!" he announced, aiming the staff at the ground in the corner farthest from everyone else.

Daniel scrambled to join Teal'c in the other corner, and Jack waited until Bow and his acid bomb were clear as well before he started shooting.

A bit later, his ears were ringing, but he was looking at the shiny and now slightly scorched reinforced armour in the hole in the floor. “Alright, you’re up,” he told Bow.

“OK! “ Bow approached the hole, then took a step back. “I think we better let it cool down a bit,” he said.

“Yeah, I think so too:” Jack could feel the heat from a few yards away. And when he dropped some water from the guard’s stash on the armour, it sizzled.

But it didn’t take too long for the metal to cool down enough so Bow could set up his contraption, and a bit later, the thing started dropping acid on the armour.

One drop at a time.

“I might have to adjust the drop rate,” Bow said, unasked, after the first drop had hit the armour plate. “But it’s working.”

“And when we reach the explosives? What then?” Daniel asked.

“Then we figure out a way to disarm them,” Jack said. Something. Anything.

Daniel gave him a look that showed he didn’t really think much of their chances.

Jack kept smiling. He didn’t think this had much of a chance to work, either, but a small chance was better than no chance at all. And it kept them too busy and distracted to panic.

*****

“A Tel’tak. Modified and likely equipped with a stealth device for ease of escaping an attack on the planet itself,” Bra’tac said, looking at the small ship they had discovered behind the door.

“Oh!” Entrapta beamed at it. “We have to analyse it - this could be the key to miniaturising our own stealth generators!”

Adora looked around in the small hangar. They had to be a bit below the palace's basement if she had correctly calculated their descent through the tube. But not too deeply underground.

"I do not think we have the time for that," Sam told Entrapta.

"But we'll have all the time we need once we're back on Earth!"

"It won't fit through the gate," Catra told her. "And we'll have to scan it thoroughly for a bomb and other traps," she added. "Apophis must be really paranoid about a coup, so I bet he has some nasty surprise hidden here as well."

Adora nodded. A ruler who'd install a failsafe lined with explosives would also prepare to blow up an obvious escape craft.

"I think our covert attacks and the failure of his false flag attack on PZ-921 must have convinced him that he has traitors in his court," Glimmer said, shifting her grip on the staff weapon she had taken from Apophis's stash.

Catra snorted.

"He would already be aware of that," Bra'tac commented. "The false gods are always ready to betray each other. But he would suspect one or more of them being about to move on him in this case, I would say."

"Great." Catra shook her head. "That's good for fighting him in the field, but it makes covert ops more difficult."

"And the purges will endanger the Tok'ra spies," Glimmer added.

Bra'tac looked as if he wanted to comment, but before he said anything, Sam spoke up: "We've found a bomb."

"Yes," Entrapta added. "It's placed at the main drive, so detecting it was a bit of a challenge."

"Can you disarm it quickly?" Adora asked.

“Let us check!”

“Are you planning to use the ship to flee the planet?” Bra’tac asked as Entrapta headed inside the ship, followed by Sam.

“As a last resort,” Adora replied. “But we can use it to fly out of here.”

“And then return to the palace to grab the others!” Catra grinned. “Apophis wouldn’t suspect that.”

“He is aware of the loyalty the Tau’ri show towards each other,” Bra’tac said. “He would not expect SG-1 to abandon their own.”

“Would he expect an offer to exchange his queen for them?” Glimmer asked.

Bra’ac tilted his head, obviously pondering this for a moment. “Potentially, yes. But I cannot say what his state of mind will be after a direct attack on his palace. This will cost him a lot of face, and being forced to negotiate for his queen would make it even worse. It will make him appear weak to all his rivals, both outside and inside his court.”

“We’re not planning to exchange Amaunet for the others,” Adora told him. They had no way to safely extract her from Sha’re, anyway. And they wouldn’t abandon Sha’re.

“Or expect him to deal honestly with us.” Catra scoffed. “But if he thinks we left the planet, that will help us save the others.”

“And we can send such an offer to throw him off our real plan,” Glimmer said. “If we have to,” she added. “Not dealing honestly with him would make it harder to negotiate with others.”

Bra’tac frowned at that. “Negotiating with the false gods is a recipe for disaster. They have no honour and will betray their own without the slightest hesitation if they think it will improve their position even a little.”

That sounded a bit biased in Adora's opinion. More than a bit. Then again, Bra'ta had been Apophis's Prime for decades - he would know him best. "It's not just the Goa'uld," she said. "But how can we expect others, like the Jaffa, to trust us if we act like that?" Honesty was the best policy.

"They will be aware that dealing honestly with the false gods is a foolish proposition and not judge us for this," Bra'ta retorted. But Adora thought he sounded a little defensive.

"Alright! We disarmed the bomb. And we also spoofed the tracking devices hidden in the ship!" Entrapta waved at them from the ramp leading into the Tel'tak. "It should be safe now."

"And does it have a stealth device?" Adora asked.

"Yes! Although it doesn't seem as effective as our own." Entrapta pouted.

"You said it was modified. Does it have missile launchers?" Catra asked. "We could launch the tracking devices and send Apophis on a chase into space."

"No," Sam said. "The only weapons it has are two staff weapons."

That was… not very impressive.

"Normal Tel'taks are unarmed," Bra'tac added.

"Ah." Catra shrugged. "Well, let's go! We have people to save."

"Yes." Adora nodded firmly. They wouldn't leave anyone behind.

"Indeed."

Now they just had to figure out how they would save the others.

*****

The others were trapped in the palace dungeons, locked in by armoured walls with an explosive layer - under specific

circumstances, it might act as reactive armour. Might that be a way to get through it? Unlikely. Based on their scans of the harem walls, the reinforced armour would withstand the blast from the explosive layer in either direction.

Samantha Carter was briefly distracted from her attempts to find a way to save their friends when Bra'tac started the engine, and the Tel'tak rose to float in the hangar.

A moment later, the hangar doors slid back in the walls, revealing a tunnel leading up to the surface. A concealed exit would be waiting for them at the end, probably rigged to be blown open once the ship drew closer. But what if an inhabited building might conceal the exit? Apophis would have no scruples to kill dozens, hundreds of people to escape!

"We need to stop and scan the exit before we open it," she said. "We don't want to blast our way free through a residual building."

"We cannot take the risk," Bra'tac retorted at once as he guided the craft up the tunnel. "Apophis will soon be aware of our escape - if he wasn't informed already by automated systems. He will be moving to block the exit."

"We can't risk killing innocent people!" Adora blurted out.

"We can check with our scanner," Entrapta offered. "We'll be in range soon… just stop when I say so!"

Bra'tac looked like he wanted to argue but nodded after a glance at Adora.

A few seconds later, they stopped at Entrapta's command.

"Alright, let's see… Oh."

The exit was indeed concealed beneath a building, Sam saw on the scanner. But it was a barracks building, not slave housing - the people inside were armed, carrying staff weapons that showed up on the scanner.

“He would blow up his own guards?” Glimmer shook her head.

“In the eyes of Apophis, the fact that he was forced to flee his palace would mean they have failed him, for their duty is to protect him from any kind of attack. Whether they failed or betrayed him, the false god would see death as a fitting punishment,” Bra’tac said.

“We could scare them away with an alert after hacking the security system, I think,” Entrapta suggested. “Or… Oh! They are moving.”

The markers showing the positions of the Jaffa inside the barracks were indeed moving - towards the exit. “Apophis must have alerted them!” Sam said.

“He will attempt to lock us in here,” Bra’tac snapped.

“Push on. We need to leave before they manage to set up a blockade!” Catra said.

“Do it,” Adoara agreed.

Bra’tac was already moving the Tel’tak further ahead.

They might be too late, Sam knew. If Apophis had a remote command to block the exit… But would he risk that a rival or traitor could use that to trap him if he needed to flee? Unlikely.

She was still relieved when the tunnel suddenly shook, and the scanner’s readings showed the building being blown clear a moment before the doors ahead of them opened, and the Tel’tak flew straight into a cloud of smoke.

Bra’tac activated the stealth device and then quickly accelerated. A moment later, they shot out of the smoke cloud.

“Death Gliders!” Catra yelled.

“We’re hidden,” Bra’tac replied.

But the enemy craft were shooting in their direction. Had Sam and Entrapta missed a tracker?

No, the shots went wide - and hit the cloud. They had been dragging some smoke with them as they flew out of the cloud, Sam realised, giving away their initial position.

But Bra'tac was manoeuvring now, banking to turn back towards the palace, and the Death Gliders were still shooting at the slowly rising smoke cloud. Sam winced when she saw shots hitting the streets and buildings below - and the people on the ground.

But there was nothing they could do about that, and she had to focus on how to save their friends. The walls had come down, locking them in. And there was no quick way to raise the walls from either side - Apophis had intended them to lock traitors in or out. Would there be an escape tunnel like the one they had used? In the dungeons? Very unlikely, Sam decided. Apophis wouldn't risk that. He could have prisoners brought to him if he wanted to personally interrogate or just torture them. That also ruled out a ring transporter set up to reach the dungeons.

They stopped in front of the palace - to the side, actually, in case an enemy craft approached the entrance or the landing pads above it.

"Now, how do we get back inside?" Entrapta asked. "And how do we get our friends out? Maybe we can construct a drill that won't trigger the explosives? Though that would take a long time…"

Sam shook her head. Trying to find a way inside through the armoured walls was the wrong way to tackle this. She knew the layout of the walls now. There was no way to quickly raise the walls - they had no machinery installed to do that - but they could be raised from the outside. It would take an attacker long enough to let Apophis escape since they had to bring in cranes or hydraulic lifts - or gravitational manipulators - and install them to lift the walls.

They couldn’t do any of that. But sooner or later, Apophis would be ordering his guards to do that to get to the trapped team inside the dungeons.

And that would grant them an opportunity to intervene. They didn’t have heavy machinery to do the lifting. But Apophis’s troops would have access to the machines needed...

Sam nodded. “I have an idea.”

*****

Outside the Palace of Apophis, Saqqara, November 9th, 1999 (Earth Time)

“I don’t like this plan,” Catra muttered as their freshly stolen hoversled - or whatever the Goa’uld called their floating transports - stopped in front of the palace’s gates. And it wasn’t because she was wearing equally stolen worker robes again, which restricted her tail.

“We know. You told us so. Several times already,” Glimmer whispered. “Now shut up!”

“It bears repeating.” Sneaking into the palace disguised as slaves for the second time? Third time if you counted the harem infiltration separately? Sure, Apophis wouldn’t expect that - because it was a damn dumb plan! Trying the same thing three times was a recipe for disaster. Not even the Princess Alliance at its worst had been that gullible!

Fortunately, fighting their way inside was a valid backup plan. They already knew the layout, they still had the primary security system hacked - Sam had checked - and Apophis’s troops would be limited to infantry inside the palace and wouldn’t be able to match or stop She-Ra. Well, unless the Jaffa blew up their own walls, but they could work around that. Probably.

She was eyeing the gate guards - she could take the two standing to the side while Adora barrelled into the main force in the centre,

and the others could kill the warriors who had brought them here - when the guard commander waved them on, yelling at them for being late. No checking under their robes and cloaks, no questioning their orders - though they had valid orders, taken when they took the hoversled carrying the gravity lifters or whatever Entrapta had dubbed them. The only ones getting checked were the Jaffa with them, and those were actual guards who - and wouldn't enter the palace anyway.

It seemed like their foolhardy plan was going to work. Catra steadily focused on the potential threats as they entered the palace. And not on her undoubtedly smirking lover. They weren't out of danger yet, anyway. The only one relatively safe was Bra'tac back in the Tel'tak, with the stunned and secured Amaunet and the stunned workers originally assigned to the hoversleds and gravity lifters.

"Move faster! The great Apophis is impatient!" one of the palace guards now escorting them snapped as they turned a corner.

Catra clenched her teeth and sped the hoversled up a bit - and resisted the temptation to accelerate even more and 'accidentally' bump the guard into the wall with it. Just a bit further…

It seemed that every hallway crossing was now guarded by Jaffa. Yet none of them stopped them to check the slaves' identities, only their escorts'. As Bra'tac had said, the arrogance of the Goa'ud and their warriors would be their downfall.

Until they wised up, at least. You couldn't count on the enemy not adapting.

They reached a lift that looked like the one they had taken down to the vault, entered past more guards, and then waited inside while they descended.

Her ears, flattered by her cowl, picked up Sam whispering into their communicator, informing O'Neill and the others that they

were close. He sounded a little tense under all his flippant comments, in her opinion, as he acknowledged that.

Then the lift stopped - they had arrived. More nervous guards hurried them on, towards an apparently freshly created hole in the floor. Catra stopped the hoversled next to it and used the opportunity to peer into it. Yes, that was the armoured wall down below. And the hole had been so recently created, its walls were still hot - as was the barrel of the staff canon the Jaffa had used to make it.

It didn't take long to place the gravity lifter over the hole, even though half a dozen Jaffa screaming at them to hurry up wasn't helping at all. But despite that, Catra could hear the Jaffa down below, massing to storm the dungeons as soon as the wall in front of them was lifted.

It looked as if everything was ready.

"We're ready," Glimmer told the Jaffa leader.

"Finally! You will be punished for your failure to arrive more promptly!"

"No, I don't think she will," Adora told him.

"What?" He looked up from his communicator just in time to catch her fist to the face and fell down the hole.

Catra was already in the air, tearing her robes off. She threw them at the closest guard, blinding him long enough for her to rake all four claws of hers over his partner as she came down. She hit the ground on all fours, then whirled, sweeping the first guard off his feet with her legs just as he dropped the robes. A swipe with her right hand tore through his armour and his throat before he could aim or swing at her.

Next to her, Adora threw another guard down the hole. He screamed until he hit the top of the wall below. "That was the last," she said. "Lift the wall!"

Entrapta’s hair flew over the controls, and the lifter started to hum. A moment later, Catra heard metal sliding against metal, and the wall below began to move upward.

And Adora jumped down the hole.

*****

The Rescue Operation Part 4

Palace of Apophis, Saqqara, November 9th, 1999 (Earth Time)

"They're about to raise the wall!"

As soon as he heard Bow's announcement, Jack O'Neill snapped: "Everyone, get ready!" and ducked behind the remains of the console, staff weapon aimed at the door. If only he had his gun! He'd prefer a zat, but the staff weapon was more effective against multiple enemies about to rush you.

He quickly glanced at the rest of the group. Teal'c was at the corner, staff aimed, not showing any tension. Bow was next to him, arrow notched but not yet drawn. And Daniel was in the corridor leading to the cells, zat ready to shoot at anyone running towards him, flanked by Ryla'c and Drey'auc. Having those two with weapons at his back made Jack a little nervous. Not because they might betray them. But they were civilians with weapons, thrust into a battle. Jaffa civilians, but still. At least Teal'c saw nothing wrong with it, and Jack trusted his friend.

The wall started to rise, and Jack tensed. If they shot a grenade through the gap… he got ready to blast it back.

But instead of a grenade, he heard screams and shots. And blasts from staff weapons.

"Hold fire!" Bow yelled, holding his communicator. "Adora jumped down!"

Ah. That explained it. Jack grinned as the wall quickly rose, revealing She-Ra in full armour fighting a few dozen Serpent Guards. They were shooting staff weapons and zats at her, to no effect. And in the back, he saw a group setting up a staff cannon.

A couple of blasts from him and Teal'c put an end to that, wrecking both the cannon and the crew.

To the left, Bow had hit three guards with a net arrow, entangling all of them. They were still struggling and trying to bring their weapons to bear, though, so Jack took them out with a blast from his staff weapon.

The wall had risen all the way to the top at that point. Adora charged forward, her sword turning into a shield to smash two Jaffa into three others, then changed back to slice through a fourth.

But more came running out of a side corridor. Teal'c caught the first with a shot to the chest that threw the guard back, and Jack shot the next one as he stumbled over the body, but then he had to duck when the rest opened up with a volley of blasts that finished wrecking the console more and blew up more of the guard room.

Things were getting heated. Jack clenched his teeth, took a deep breath and rushed out of his rapidly disintegrating cover to the entrance of the prison sector, drawing and wildly firing his zat one-handed.

A staff blast missed him but blew up the floor behind him, and he felt fragments hit his armour - and his bare legs.

The pain followed a moment later when he slid into the corner next to the door, out of the Jaffa's field of fire. Gritting his teeth, he quickly checked his leg. Nothing serious. He could still run.

"Watch out!"

"Hold fire! The others are coming!" Bow, now across from him in the other corner next to the door, yelled.

Jack leaned around the corner and caught a figure landing on a Jaffa trying to get into Adora's rear. Catra. She drove the guard into the floor, then ripped his neck open with a swipe of her claws.

Jack grimaced as she leaned out a bit more, checked above for anyone else dropping by, and shot a Jaffa who was getting up

after Adora had smashed into him.

More shots from above followed. A couple of not-very-well-aimed staff blasts that at least suppressed another Jaffa rush and a zat shot that took out another wounded Jaffa. That would be Glimmer and Carter, respectively.

Jack forced himself to ignore the pain in his legs and get up, then push on. They had to get out of here. "Just how many guards does Apophis have?" he muttered as he moved through the door, then crouched down on the other side.

"This is his capital," Teal'c replied, mirroring his move on the other side - which forced Bow, who had been about to do the same, to fall back, Jack noted.

"Set up our present!" he yelled at him. Bow didn't have many arrows, and with everyone else joining the battle, he wouldn't be very effective either.

"Alright!"

"Make way! Whee!"

He glanced up again and almost gasped. Entrapta was climbing down the hole, her hair tendrils reaching from wall to wall - and half-carrying Glimmer and Carter. It looked like out of a movie.

Shaking his head, he advanced some more, shooting at a straggler. Teal'c did the same, securing the other flank.

By the time Entrapta reached the ground, the Jaffa had been driven back into the hallways they had used to gather for the assault. They would rally again, though.

"Everyone, come on - time to leave!" Jack yelled. The longer they stayed, the more troops Apophis could bring in.

"Where is Sha're?" Daniel asked as he and Teal'c's family joined them.

“She’s with Bra’tac,” Carter told him before addressing Jack. “Sir, it looks like a regiment of guards is covering the upper levels.”

That complicated things.

*****

A regiment? Adora looked around - there were no enemies left near her. None who were alive or awake, at least. But that was a large number of guards to go through. “They’re blocking all the exits?”

“Yes,” Sam replied.

“Then we’ll have to make our own exits,” she said. “As long as we avoid more such walls, we should be able to cut through any wall - or ceiling.”

“And we can use the gravity sled,” Entrapta added.

Catra cocked her head to the side. “We could - if the guards hadn’t blown it up right now.”

That meant they would soon be coming through the shaft they had left leading up - or dropping bombs down. “Let’s move!” Adora snapped and moved forward.

As the others followed her, Jack turned and shot the controls of the door behind them as soon as it closed. “That should slow any pursuit. If only I had some spare charges…”

“We could rig one from the staff weapons,” Catra suggested.

“That will take too long. We need to move,” Adora cut in. “Come on.” She turned to Entrapta and the others. “Plot a route to the surface. Don’t bother with lifts and stairs.”

“But look out for traps,” Catra added - unnecessarily, in Adora’s opinion. Their friends knew what to do.

Sam ignored the comment, but Entrapta nodded. “Alright! If we stick to the route we took going in, there shouldn’t be any traps. Though… Hmm…”

“I think we should take an angled route,” Sam said, pointing at the display on Entrapta’s tool. “Here!”

“Oh, yes!” Entrapta’s hair flared out, then formed a hand, finger pointing at the ceiling. “Cut here!”

Adora nodded, hefted her sword and jumped. Two curved slashes later, she dropped to the floor and caught a piece of the ceiling, grunting at the effort - and with surprise when Catra jumped on top of the ceiling piece, then up through the hole. “Catra!”

“Clear!” her lover yelled back. “Hurry and come up!”

“Well, we don’t have a gravity sled,” Glimmer said, eyeing the hole.

“I should be able to…”

Adora lowered the piece she was holding. “Step on it.”

“Right!”

Adora had to lift it up twice. Not because of the weight - she could throw a tank; the steel piece, even with all their friends on it, was no problem. But the piece she had cut was too small to fit everyone, even with Entrapta using her hair to climb up.

But they all arrived safely on the floor above them and quickly moved to the next spot Entrapta and Sam had picked.

This time, a group of guards must have heard the floor dropping off, but Catra made short work of them before Adora could set down the platform and jump up.

The next floor, though, had Jaffa shooting at them as soon as Adora dropped down, and…

“Grenade!” Catra yelled.

Adora gasped, then flung the floor piece up as everyone dived into cover. A moment later, something exploded above her, and the slab of metal she had hurled came back down in pieces.

“That didn’t take out everyone!” Catra snapped, already moving towards the hole.

Adora beat her to it, though, pushing the fragments on her away and jumping straight up. A zat blast hit her on the way up, but she ignored it. Two staff weapons fired at her when she landed on the floor above. She caught both on her shield and charged.

A Jaffa on the ground, hurt by their own grenade, tried to raise, but without stopping, she kicked him in the head, sending him flying against the wall. Then she crashed into the line of Jaffa facing her and bowled them over.

A moment later, her shield changed into a sword, and she slashed at the groaning guards before they could recover.

She whirled. Catra was already laying into the surviving guards on the other side, followed by Teal’c arriving in the hole, pushed up by Entrapta’s hair. A couple of staff blasts later, the guards were down, and Entrapta brought the rest of the group up.

“The Jaffa are spreading out on the floor above us,” Sam reported. “They must have realised we change the location where we go up.” With a frown, she added: “And they are taking out the cameras - they must have realised we hacked them.”

That limited them to the short range of Entrapta’s scanner in her multitool. Adora briefly bit her lower lip. There was no helping it - they had to continue. “Let’s go!”

They caught the Jaffa by surprise on the next floor, but the guards quickly rallied - and tried to keep their distance, shooting at them from prepared positions instead of rushing in.

“They’re trying to slow us down,” Jack said, gritting his teeth as he poked a burn on his thigh.

It didn’t look too bad, but it must be painful anyway.

“To gain time to bring in more reinforcements?” Catra frowned.

“Something like that,” Jack agreed.

“Then we need to hurry,” Glimmer said.

“And we need to skip the gates,” Catra added. “They’ll expect that.”

“They’ve seen us cut through the floor multiple times,” Bow retorted. “They’ll have to surround the entire palace.”

“We can have Bra’tac fetch us,” Glimmer pointed out. “If we reach a landing pad further up.”

“They’ll cover those gates as well,” Jack said. “But it’s harder to block all of them, and if we’re quick enough, we should be able to get away.”

“Uh…” Entrapta spoke up. “Bra’tac just sent us a message: A Ha’tak is descending on the palace.”

*****

A Ha’tak? If it was bringing reinforcements, it could land directly on the palace to deliver them. Or to pick up Apophis if the System Lord was present - taking command of a Ha’tak would give him an excuse to leave his palace in the middle of a crisis.

Either way, the ship could cover every entrance with its guns.

Samantha Carter looked at the Colonel. “Sir, if they target the gates or any opening we make…”

“...we won’t have the time to embark on Bra’tac’s ship, yes.” He nodded with a grim expression.

“We need a distraction,” Catra said. “Something to draw their attention and fire away from the real exit.”

“And we need to keep going up,” Adora added. “We can’t waste time. Look for an alternative way out while we move.” She raised her sword, bent her knees and then jumped, striking at the ceiling.

Sam moved back with Entrapta and Bow while the others - mostly Adora, Catra, Teal’c and the Colonel - fought their way up and through the Serpent Guards waiting there.

It was a holding action indeed. By the time she joined the others on the next floor, the Jaffa had fallen back and were attempting spoiling attacks in small numbers. Wasteful but not entirely ineffective, Sam thought.

“Could we fool them into thinking that this is a coup attempt? Make them fight each other?” Glimmer suggested.

“If we had control of their communications,” Sam replied. Which they didn’t have. And the security system was rapidly losing coverage of the rest of the palace, with all the cameras near the Jaffa being destroyed.

“I have an idea. Is the Ha’tak landing?” the Colonel asked.

Sam relayed the question to Bra’tac. It was dangerous - the Tel’tak was in stealth mode, but any communication could theoretically be detected - but justified. And the comm channels had to be full of orders and reports right now.

“It seems to be set on landing on the palace,” Bratac told them.

“Alright. We’ve prepared a surprise for Apophis,” the Colonel said. “I didn’t want to use it while we were still inside the palace, but we don’t have much of a choice. But we need to get to the surface floor before the ship touches down.”

A surprise? What could… Sam's eyes widened. The Colonel couldn't have! Then she saw Bow wincing. No, of course, they could have. "We need to hurry!" she said. And they had to signal Bra'tac so he could be ready to pick them up. They wouldn't have much time to pull this off!

"Then let's go!" Adora announced.

They had two more floors to clear. And they had to reach the outer wall. All before the ship touched down on the top of the palace.

Sam indicated the shortest route to the outer walls, and they sprinted down the hallway, past dead and wounded Serpent Guards. This time, Adora didn't cut a hole into the ceiling - she jumped and smashed a hole into it, using her sword like a ramming tool. And Catra didn't wait for Adora to jump in first and draw fire - she bounced off the wall and disappeared in the cloud of smoke before Adora could jump again.

Sam heard shots from above, followed by screams, and clenched her teeth. As much as she wanted to help fight the Jaffa, she couldn't do much until she was up on the next floor. Not with her weapon, at least.

But she could do other things. The security system was in shambles, but she could still fill it with fake signals. It might not fool the Serpent Guard, who must have received orders not to listen, but the servants and slaves? A few fire alarms might be enough to disrupt whatever Apophis was doing. In a small way, at least.

But then she remembered the likely reaction of the guards to a bunch of panicking slaves trying to run past them - or at them. No, she couldn't do that. Not for such a paltry chance of improving their situation.

Instead, she focused on what intel she could gather with her rapidly shrinking means: The positions of some enemy troops -

and the movements of others. By the time Entrapta's hair put her down on the next floor, she had a new route plotted out.

That left another floor before the surface level. A Ha'tak on a landing approach was slow, but not that slow. "We are running out of time! We have to break through and then immediately go up again - without clearing the area of enemy troops!" she told the others.

"I'll keep them busy on this side," Catra said, pointing towards the inner part of the palace. "You suppress the rest."

"That's…" Adora started to protest.

"We don't have time!" the Colonel snapped. "Do it!"

Adora glared at him but jumped up, once more breaking a hole into the stone ceiling. She managed to get a grip on the broken edge somehow and swung herself up with a roar, followed by Catra. Then Entrapta started to move Teal'c and the Colonel up. Then Glimmer and Bow.

Then it was Sam's turn.

She was dropped on the floor, zat out, and started firing at the Jaffa moving at the end of the corridor. Smoke hindered her aim, but the goal was suppressing them, not taking them out.

A staff blast passed above her head. Teal'c turned and shot down the hallway as well.

"Brace yourself!" Adora yelled.

Then the ceiling exploded, and Sam ducked, holding her arms above her head as metal and stone pieces rained down on them. One hit her shoulder, and she yelled at the pain. Bruised. Not dislocated or broken, she thought, but it was hard to tell. Before she could resume shooting at the enemies, hair tendrils grabbed her and lifted her up to the hole. She reached out to haul herself

up with one arm, but then something exploded below her, and she was falling, the hair releasing her.

Staff weapon blast, she realised a moment before she hit the ground - on her already hurt shoulder. And she couldn't help screaming as the pain grew much, much worse. Broken, probably. She rolled on her back, holding her shoulder, as torn strands of Entrapta's hair floated down on her. Entrapta!

"My hair!"

So, she was alive! Sam smiled despite her wound.

Some appeared at her side. Sam almost shot them - or tried to, using her off hand - before she recognised Catra.

"Get up!"

Before Sam could do so - or say anything about her shoulder - Catra grabbed her and jumped.

And Sam hissed through clenched teeth as her shoulder flared with more pain each time it was jostled.

But she was now on the surface level. And they had to keep moving. Groaning, she got up. Catra had already jumped down again. The Ha'tak would be landing any moment.

She looked around. The Colonel and Teal'c were firing their staff weapons as fast as they cycled, suppressing a group of guards trying to rush them. Catra reappeared, carrying Ryla'c. Entrapta appeared in the hole, hair tendrils moving to pull her up - though not as much as before. And Glimmer and Bow were climbing up the hair tendrils instead of being lifted.

Ryla'c started shooting a staff weapon down the hole. Covering fire for Daniel and Dry'auc, Sam realised.

She crawled to the edge of the hole and added her own fire. Damn, her shoulder hurt!

“The ship’s about to touch down!” Entrapta yelled.

“Tell me when it’s landed!” the Colonel yelled back.

Catra appeared, carrying Daniel. Dry’auc was climbing herself.

Sam fired at the Jaffa charging at them from below. One Jaffa got hit and went down. Another dropped to the side when Ryla’c shot a staff weapon at them. Then Dry’auc reached the surface floor and pulled herself up next to Sam - and exposed her bleeding back to her.

But before Sam could say anything, Entrpata yelled. “The ship has landed!”

“Hit it, Bow!” the colonel yelled.

A moment later, Sam heard a loud explosion - and then the whole building trembled.

*****

The crazy bastard had rigged the charges in the dungeon to explode! Catra grinned as she felt the floor shift slightly under her feet. Then she heard the sound of metal straining and stone cracking and cursed. “We need to leave! Right now!”

Adora was already charging towards the outer wall closest to them. “Call Bra’tac!” she yelled over her shoulder.

“Sam’s hurt!” Entrapta.

“It’s just my shoulder!”

“Everyone’s banged up!” Catra snapped. She had caught some shrapnel herself. Nothing too bad, though. “Call Bra’tac - we need him to pick us up before the ship recovers.”

Adora slashed the wall, once, twice, then kicked it - sending a section flying outwards. Catra could see the sky outside - and

Jaffa on the ground getting up. Damn! That was too much firepower for Adora to cover.

And the sounds from the palace were getting louder, even though the floor wasn't shifting any more… The Ha'tak on top must be mangling the structure!

But there was a staff cannon whose crew had been taken out, next to the opening. Catra dashed forward on all fours, trying to ignore the staff blasts whipping past above her head as everyone started firing, and Adora tried to shield them.

"He's coming! Homing in on our signal!" Entrapta announced.

"Tell him to hurry!" O'Neill snapped.

"I can walk, sir!"

"You stay put!"

The corpse of the Jaffa gunner lay slumped over the controls. Catra kicked it away and started turning the cannon around. Her foot claws dug into the stone floor, but the weapon swivelled until the barrel pointed at the opening. And at Adora's back. "Move right!" Catra yelled.

As soon as Aodra did so, Catra started firing. Her first volley went wide, but she quickly adjusted, and her next blasts wiped out a squad of charging Serpent Guards. She swung the cannon to the side and started raking the grounds with suppressive fire, scattering more ranks of the guards outside.

"Incoming inside!" O'Neill yelled.

More explosions inside followed. Staff blasts. Catra gritted her teeth and kept firing. O'Neill arrived, half-carrying Sam, followed by Daniel and the ragged-looking Entrapta - part of her hair was still smoking. "Bra'tac's almost here!" she announced.

The sound of screeching metal drowned out whatever Daniel said to that. A moment later, a piece of metal and stone the size of a skiff crashed into the ground outside, shattering and throwing up a cloud of dust.

Then a shadow fell over the area outside, and Adora screamed: "Get out! Right now!"

Catra released the cannon's controls - it was overheating anyway - and dashed outside. Looking up, she froze for a moment.

The Ha'tak was looming over them, listing to the side and dragging part of the palace's top with it as its engines were straining to get the ship clear.

Entrapta almost cooed. "Oh! It must have gotten stuck on the pyramid connector when the explosion rocked the structure! The distance would have leveraged the slight shift on the underground level, resulting in…"

"Escape now, physics lesson later!" O'Neill snapped. "Where is Bra'tac?"

Behind him, Dry'auc and Ryla'c appeared in the opening, Teal'c bringing up the rear with Bow and Glimmer.

But the Jaffa outside were rallying, and the fire was picking up. Worse, the guards inside were barely being held back by the others laying down suppressive fire. They were boxed in!

"He's almost here!"

More stone and metal bits slid down the palace's side, one hitting a landing pad and ripping it off. The Ha'tak was slowly righting itself, twisting the landing structure it was stuck on.

Catra's ears twitched - that was an engine noise. A familiar one! It was coming closer! She looked but saw nothing - there! A slight distortion!

A moment later, a door swung open, seemingly from nowhere, revealing the interior of the Tel'tak they had stolen.

"Everyone inside!" O'Neill yelled. "Go! Go! Go!"

But even as he started to run, dragging Sam with him, the Tel'tak's stealth field started to ripple - the Serpent Guards outside shooting at them were hitting the ship instead! Catra clenched her teeth. The shields were deflecting the shots, but that disrupted the stealth field.

And the Jaffa must have realised what that meant since the fire intensified. O'Neill had reached the ship, followed by Daniel. Adora moved to cover the ship from the front, but she couldn't shield it entirely.

Catra picked up a staff weapon and started laying down suppressive fire on their flank while Dry'auc and Ryla'c sprinted to the ramp. "Hurry up!" she yelled to the rest. "They'll call in air support any moment!"

They had already done so, she realised a moment later, when two Death Gliders swooped down, their canons stitching a line of explosions into the ground - and then into the Tel'tak.

The shields flickered but held. Apophis wouldn't have trusted his life to a weak escape vessel, Catra thought. Good for him - and for us!

She started to move towards the ship herself, still firing wildly to break up the Jaffa formations trying to charge them. They just needed a little more time for everyone to…

The sound of stone and metal breaking, tearing, made her look up. The Ha'tak had torn off the top of the palace's pyramid top! And while the ship was stabilising, the structure it had wrecked was falling down in several large and countless smaller pieces - right on them!

“Take cover!” Catra dropped the staff weapon and dashed forward, slamming into Bow and Glimmer as they left the palace and pushing them back inside moments before a slab of stone smashed into the wall above them, shattering the stone and everything below.

She rolled on her side, jumping up - next to Teal’c still covering their rear - and whirled around.

Just in time to see the tip of the pyramid hit the Tel’tak’s shields and shatter them, then crush the ship. She gasped. Adora!

Then the pain hit her, and she noticed the blood running down her side.

*****

Outside the Palace of Apophis, Saqqara, November 9th, 1999 (Earth Time)

One moment, Jack O’Neill was reaching out to grab Ryla’c to drag the kid to a seat inside the Tel’tak and strap him in. The next, Bra’tac yelled something, and Jack found himself thrown against the wall. And the ceiling. Or the floor - it was hard to tell with all the smoke and…

He blinked and shook his head, glancing around. He was on the floor - and the floor was the wall. Or trying to be. All angled wrong. And broken. Like the rest of it.

The ship was wrecked, he realised, gasping - only to cough when he inhaled smoke. Something was burning. And that meant the whole ship would burn in no time.

“We need to get out!” he yelled, then coughed again. They never got the smoke quite right in crash and rescue drills, he thought before shaking his head again. He must have hit it hard to be distracted in the middle of an emergency.

Where were the others? He glanced around again.

Ryla’c was a few yards away, groaning. Alive then. On the ground but moving towards his mother. Who wasn’t moving. Carter… on Jack’s other side, a purple cocoon started to open up. He blinked. A cocoon? Entrapta’s hair! She must have wrapped it around herself and Carter.

“Sir?” Carter was alive!

“Get out!” Jack snapped. “We need to evacuate the ship!” Where was Daniel? He had been further towards the front of the ship and… Jack steadied himself against the floor/wall and climbed towards the ship’s bridge. Just around a new corner in a formerly straight passage.

“Shit!”

Daniel was unconscious and had a metal rod sticking out of his back - he had been covering Sha’re with his body. Sha’re’s body, which still had a snake in it, Jack reminded himself. Daniel’s right leg also didn’t look good - what Jack could see of it; the lower half was buried under a piece of wall. Or floor. And behind him, Jack could see more people. In their underwear. They didn’t move, and he could see blood on several of them. All unconcious? Or stunned beforehand.

And the bridge… Jack gritted his teeth. Whatever had hit them had struck the bridge and caved it in. “Bra’Tac?” he called out, coughing again. The smoke was getting worse. Where was the old Jaffa? If he had been piloting this thing… Oh.

There was an arm on the floor. In a pool of blood. Sticking out from under a piece of stone that looked bigger than Jack’s first car and filled half the bridge’s remains. Jack could see the remains of a seat peeking out from under it as well. And more blood.

Fuck.

He couldn’t do anything for Bra’tac. And Daniel needed help. “Daniel’s wounded!” Jack managed to yell before coughing again.

Kneeling down - he almost lost his footing and slipped - he checked the wound. The metal had missed the spine. And the lung, since Daniel wasn't choking on his blood. And it hadn't gone straight through him.

But if Jack pulled it out, Daniel would likely bleed to death. Quickly. And Daniel's foot was a goner, too.

"Sir? We need to… Daniel!"

Carter had managed to reach him despite her disabled or broken shoulder.

"Careful," Jack said, "We need to transport him without making it worse. And Sha're."

"And the slaves," Carter added. "We took their places."

"Ah." That explained the unknown people.

"Entrapta!"

"Coming! Something's burning in the part we can't get to!"

Hair tentacles reached around the corner, followed by Entrapta. "Oh, no!" She rushed forward.

"Careful!" Jack said.

Hair wrapped around the metal stuck in his friend, and more tendrils slipped under the piece of the ship that was trapping Daniel's foot.

Jack heard a screeching sound, then the hair pulled Daniel away - and Jack had to wince at the sight of his mangled, bleeding foot. "Tourniquet!" he snapped. They needed to stop the bleeding.

Hair wrapped around the thigh while Jack pulled the belt off his stupid armour. A few seconds later, he had stopped the bleeding. But Daniel needed medical help, and quickly.

First, though, they needed to get out of this wreck. The smoke was getting worse, and Jack thought he saw something flicker behind the caved-in parts of the ship. Fire. Or shots from staff weapons - they were still surrounded by Serpent Guards.

Focus on the task at hand! He told himself. First, they needed to get out of this death trap. He could figure out how to escape the other death trap later.

"Move him to the rear. I'll get the others."

"What about Bra'tac?" Entrpata asked as she started to lift Daniel up.

She must have missed the arm. Jack shook his head. "He's dead."

Entrapta gasped. "But… Are you sure?"

"Yes. Move!"

They moved. Jack grabbed Sha're's body and followed them. Just at the corner, the ship suddenly shook again. He was pushed against the tilted wall, almost dropping Sha're, and banged his arm against some piece of broken crystal.

He glanced over his shoulder and cursed again - flames flickered behind him, and smoke started to fill the passage. The ship was burning up with them inside!

The slaves! For a moment, Jack considered going back for them. But he was already carrying Sha're, and with all the smoke… He wouldn't make it out again.

Cursing Apophis and himself, he hurried towards the back of the ship.

*****

There they came! Adora gritted her teeth, swatted a staff weapon bolt away with a flick of her wrist while she waited for another

second, then jumped. A volley of blasts passed below her, rising as the pilot of the first Death Glider tried to adjust his aim, but she was already too close, her blade swinging out before he could react.

She cut the craft in two, flipped and landed on the larger part, then pushed off it, launching herself towards the Death Glider's wingman.

The second fighter banked, but it was too slow and too late as well, and the tip of her blade slid into its right wing, then through it. The wing broke apart, and the Death Glider entered an uncontrolled spin just as the parts of the first hit the ground and exploded.

Adora dodged a falling piece of broken stone as large as Scorpia, swatted a twisted metal shard away, then flipped again. Arcing downward, she brought her sword down just before she hit the ground. The impact shattered the stone beneath her and sent out a shock wave that threw the dozen Jaffa around her into the air just as more stone fragments pelted the area.

She stood, then cut apart a staff cannon they had brought forward as she whirled - she had to…

She gasped. The Tel'tak was a wreck, half of its hull caved in - smashed - by the broken top of the palace. Her friends! Catra!

She raced back, smashing, cutting through a formation of Jaffa trying to rally, sending them flying with broken and bleeding bodies, until she reached the wreck. It was burning, and its left side had collapsed, tilting the whole thing to the side.

At the back of it, facing the hole she had cut into the palace wall, she could see Ryla'c struggling to drag his mother out of the wreck. But a dozen Serpent Guards were shooting at the wreck - and at the hole, where Glimmer tried to return fire with a staff.

Where were the others? Inside the palace? Or the wreck? Both? Where was Catra? If only Adora had her communicator!

“Adora!” Glimmer called out. “We’re pinned down here!”

And above them, the Ha’tak would soon be ready to blast the entire area. Apophis might hesitate to fire on his own palace… No, he wouldn’t. They had his queen, and the Serpent Guard were still firing on them.

Adora blocked a ragged volley from the Jaffa, then threw a piece of the palace that had fallen off the roof at them, scattering them. Then she used the sudden lull in the battle and rushed forward, grabbing Ryla’c and his unconscious mother, then leapt to Glimmer, putting the two down. Bow, sitting on the ground with a bandaged leg, slid over to them.

And Catra was there, firing a staff weapon down the hallway, supporting Teal’c, and… She was hurt! Blood was running down her side and leg!

“Catra!”

“I’m OK! Get the others before they burn!” Catra snapped.

She wasn’t OK! But Entrapta appeared in the back of the wrecked Te’tak, carrying Daniel - who had a metal shard sticking out of his back! And Sam was stumbling along. Where were Jack and Bra’tac?

No matter. Everyone was hurt. The Tel’tak was wrecked and burning. And they were surrounded by Jaffa, with a Ha’tak above them and Death Gliders rallying.

There was no choice. None at all. They were all going to die if she didn’t save them.

Adora raised her sword above her head and closed her eyes. Focused on her power. On her magic. Reached out for that particular pattern and opened herself to the magic.

She connected, hissing through clenched teeth as she became a conduit for magic. For power. Felt as if she was about to burst as

the planet's magic filled her. Pushing her. Straining her.

Then she cut the pattern, and the world turned white as the magic was released.

The pressure vanished - but she was still blazing with power. She looked up at the hovering Ha'tak. She could destroy it utterly. She just had to slash her sword at it and let her power go.

And she wanted to do it. Destroy it. And the Serpent Guards. Everyone who had hurt her friends.

But that wouldn't save her friends. Wouldn't save Catra.

Adora clenched her teeth and stepped out of the palace. She was going to save her friends. Catra. Everyone.

A few Jaffa were firing at her, but the bolts didn't reach her - her aura stopped them. They didn't matter.

Entrapta was calling out to her, and she could see Jack behind Sam, almost at the heck of the Tel'tak.

She didn't listen to what they were saying. She couldn't spare the attention. Not with all the power filling her, almost overwhelming her.

She focused, took a deep, shivering breath - and released her magic.

And, once more, the entire area was bathed in white light. In She-Ra's magic.

Next to her, Glimmer gasped and shuddered. "Adora…"

Adora looked around. A bit away, a group of Jaffa in broken armour were on the ground, staring at her with wide eyes. Another dropped the weapon he had been firing at her and staggered back, stumbling over a Jaffa who was sitting up with a dazed expression and flexing his fingers.

No one was firing any more, she realised. Everyone was staring. Gaping. But that wouldn't last.

It didn't have to, though - everyone was gathering around her. Catra, Glimmer, Bow, Entrapta, Sam, Jack, Daniel, Sha're - still stunned, she noted. Weird. Teal'c and his family. "Bra'tac?" she asked, dreading the answer.

Jack shook his head.

No! Adora pressed her lips together. She had failed. But she wouldn't fail the others.

"Glimmer! Teleport us to the Stargate!"

*****

Teleport? That would take a while. Catra and Teal'c first, to start taking over the Stargate's control room, followed by the wounded - the civilians, all wounded had been healed - while She-Ra guarded the rest. Or attempted to.

Samantha Carter glanced around, zat'nik'tel in hand. Any moment, the Serpent Guards would overcome their shock and resume fighting. Or the Ha'tak above them would start firing at them. Apophis might be too intrigued by the display of magic to order a bombardment, or he might decide that even destroying his palace was worth it to kill them.

But Glimmer yelled: "Entrapta, grab everyone!", and Sam felt hair wrap around her thigh.

A moment later, she appeared next to the D.H.D. of Saqarra's Stargate in a shower of sparks. With everyone else.

One Serpent Guard shouted an alert, raising his staff weapon, but Adora laid him out with a kick while Catra pounced on the next, and everyone else started firing. Sam stunned the official trying to flee, then crouched down. They had to deal with the guards behind the reinforced walls, and…

Glimmer reappeared in front of her, panting. And the Colonel and Catra were missing. No, not missing - Sam saw flashes behind the firing positions in the walls.

"Everyone behind me!" Adora yelled, her sword changing into a huge shield, covering the group as they backed up to a wall. Several staff weapon blasts hit the shield or the wall next to them as the concealed guards tried to kill them, but it didn't take long for Catra and the Colonel to silence the weapons.

"Dial to the rally spot!" Glimmer snapped, still breathing heavily.

She must have severely strained herself teleporting everyone at once - and then following up with teleporting the Colonel and Catra. Sam hadn't even known that Glimmer could do that. Was it a result of the restoration of magic to the planet? A temporary boost?

Questions for another time, Sam reminded herself as she dialled PK-Z642's gate address. They had to escape and recover.

The Stargate spun, chevrons locking, as the Colonel and Catra returned. "I bet Apophis is currently cursing himself for burying his Stargate so deeply that he can't reach us," the Colonel said with a grin.

"We don't know if he is present," Sam reminded him.

"I doubt that the Serpent Guards would have risked killing Amaunet without his direct command," Teal'c said. He was standing next to his family, but his staff weapon was pointed at the main gate to the room.

He had a point, though Sam was sure the analysts back on Earth would go over it with a fine comb. Too bad they didn't have combat footage to dissect. The sensor readings from Entrapta's tool were rather limited. But they did have several scans and data from the security system of his palace, which might contain valuable intel.

The wormhole stabilised.

"Alright! Everyone through the gate!" The Colonel gestured to the ramp. "It's time to go home!"

*****

Gate Area, PK-Z642, November 9th, 1999 (Earth Time)

Samantha Carter dialled home to Earth the moment the wormhole collapsed. The sooner they were off this planet and back home, the better. They had already lost Bra'tac and narrowly escaped being killed themselves. If the broken tip of the palace that had crushed the Tel'tak's side had fallen slightly to the right…

Sam closed her eyes for a moment as the Stargate dialled. This had been too close for comfort. Far too close. Still, while it had cost them, dearly, they had achieved their objectives. However, she was well aware that the brass back home would not be pleased with the results. Bra'tac's death wouldn't be an issue. Soldiers risked their lives on every mission, in every battle. But the potential discovery of the Etherians and the return of magic - to a planet held by Apophis… that would cause more than some ruffled feathers amongst the Alliance. Pointed questions would be the least they could expect. And quite justified questions, Sam had to admit.

And yet, when she glanced at Teal'c, who was talking in a low voice with his family, and at Daniel standing next to Sha're's body, which was still carried by Entrapta, she couldn't help feeling that it had been worth it.

*****

The Rescue Operation Part 5

Alliance Headquarters, Brussels, Belgium, November 10th, 1999

Catra wasn't fond of debriefings. She knew how essential they were to properly wage war, to spot mistakes for corrections and improvements, to collect intel to pursue, and to evaluate officers, but unless she was the one running the debriefing, she couldn't help remembering how Shadow Weaver had always used them to put her down and manipulate her - and Adora.

And she wasn't in charge of this debriefing. So, she had to listen to someone else list everything that had gone wrong during the mission. And to make it even worse, it wasn't even Adora but some paper-pushing officers from Earth who had never done anything like infiltrating an enemy stronghold to spring a prisoner and do some sabotage while you were there.

She glanced at Adora. As Supreme Commander of the Alliance, she could take over any time she wanted. But her lover just sat there, straight and tense, as the idiot in front of the room, Admiral Kearsy, droned on.

"...and then, having narrowly escaped and commandeered an FTL-capable vessel, you decided to infiltrate the palace again instead of withdrawing.."

"Yes," Adora replied, nodding. "We don't leave anyone behind."

"Like the Marines," Catra added just when he was about to go on and flashed her teeth,

The admiral frowned briefly at that. She couldn't tell if that was because he didn't like the Marines - he was from the United States Navy and, as Jack had explained, the different branches of their mess of an armed force hated each other - or because he didn't like being interrupted. Probably both.

"Ah, yes. In any case, you decided to ambush a worker crew and impersonate them to infiltrate the palace - which, at this point, was on full alert with all checkpoints manned."

"Yes," Adora replied again.

"We counted on the Goa'uld and Jaffa arrogance to ignore their slaves, but we were prepared for being discovered," Glimmer cut in. She didn't like the briefing either - Catra could tell that she was struggling with her temper.

"Your alternative plan consisted of fighting through the Serpent Guards until you reached the palace dungeons." Kearsy didn't roll his eyes, but he made clear what he thought of that without saying so.

"Yes," Adora replied once more, and Catra smirked when her lover's earnest expression made the admiral blink.

"A perfectly reasonable plan," O'Neill said - he wasn't quite slouching in his seat, but he was a bit too obviously relaxed for the briefing. "We fought our way out, after all."

"While losing the ship you had taken, General O'Neill. And being forced to not only reveal magic to the Goa'uld but also activate the planet's magic!" Kearsy glowered at them.

"And losing Bra'tac, a valued ally and friend," Adora said with a frown.

Disappointingly, the admiral was smart enough not to openly dismiss Bra'tac's death as an acceptable loss. He nodded. "Yes, of course."

Catra was still dead certain that he didn't really care about Bra'tac. Even though the Jaffa had been Apophis's Prime for decades and had known both the Goa'uld and, even more importantly, Apophis's key Jaffa subordinates better than almost anyone else. His death was, even seen from a rather cold military view, a heavy loss. But they already knew that, and mentioning it

to yank Kearsy's chain wouldn't be worth making Adora feel guilty again. So she shrugged. "Anyway, our plan worked - the Jaffa were too arrogant to check all workers."

"But you took a considerable risk," Kearsy insisted.

"It was a calculated risk," Glimmer retorted. "And we would do the same thing again. We don't leave anyone behind."

"Yes," Adora firmly agreed.

"Though next time, we'll have better gear," Entrapta added. "Concealed weapons and communicators, shield generators that can be dismantled and hidden, stealth bots to carry gear and support us, maybe holographic projectors so we can wear armour and look harmless… there's so much we can do to make the next mission easier!"

A bunch of stealth bots to serve as a distraction or additional forces would have come in handy, though that ran the risk of having the enemy salvage their technology. Catra made a note to bring that up at the next planning meeting with SG-1 - or whatever they were called now. Not that Catra cared too much about official titles. Even Sam slipped from time to time and talked about 'the Colonel' despite O'Neill's promotion.

"And we have to interrogate Amaunet," O'Neill added. "As soon as the Tok'ra can get her out of Sha're. As Apophi's queen, she should know a lot about his realm. And, as a backstabbing snake, I am sure she'll be willing to sell him out."

"And the loss of his queen will weaken Apophis long-term," Sam said. "He needs her to replace the Prim'ta in his warriors. That can be compensated to some degree by prioritising who gets one, albeit with the risk of alienating those who would be shortened," she amended.

Catra nodded. Without a queen, Apophis would run out of larvae, but that would take years to take effect - in the best case. But it

was a hit to Apophis's prestige, and if that information spread, he would look vulnerable to his rivals.

"Nevertheless, the enemy is now aware of both magic and Etheria," Kearsy repeated himself.

"We can't assume that," O'Neill retorted. "They saw magic - but will they recognise it? Or think that was just advanced technology?" He grinned. "Hard to tell the difference."

"Technically, magic is a form of advanced technology," Entrapta piped up. "But I think you mean the specific form of magic, right?"

"Yes," Kearsy said, frowning some more.

"And the Jaffa who witnessed this might simply consider this a demonstration of divine power," Sam pointed out. "They were indoctrinated to see the Goa'uld as gods and their technology as divine powers, so they are likely to interpret She-Ra's demonstration similarly."

"And Apophis might do the same," O'Neill added. "He might suspect rivals - or other alien species - behind this, using advanced technology."

"Nevertheless, we cannot assume so," Kearsy insisted. "We must consider that our most secret advantages have been revealed to the enemy!"

"The Tok'ra will look into it," Adora said. "We should know more about this soon."

Catra hoped so. Out loud, she said: "So, no point in doomsaying yet. Who knows, Adora healing everyone might even convert more Jaffa to her worship.

Adora and Kearsy glared at her for that comment. She counted it as a successful debriefing.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, November 11th, 1999

"...and at that point, we withdrew through the portal." Jack O'Neill finished. On the holoprojection next to him, the figures representing their group finished moving through the gate and vanished, leaving the 3D projection of Apophis's gate room empty.

He took a step forward and fell into a comfortable parade rest as he faced the officers and selected troops attending this meeting. Most of them were still staring at the projection that Entrapta had configured based on the readings from her multitool. Ah, if Stargate Command had had such technology before they met the Etherians…

But a few - more than Jack was comfortable with - were staring at him as if he had just single-handedly kicked Apophis's butt and won the war or something. He hadn't seen that kind of hero worship back at Stargate Command; everyone had been used to SG-1's mission. At least the older hands. And the newbies generally were too shocked by the news that aliens were real to gawk at SG-1.

Anyway, his troops here would grow out of it once they had a few missions under their belts themselves. It was time to get down to business. "So, what do we learn from this?" he asked.

"She-Ra saved the day?" Kelly asked with a wide grin.

Jack chuckled. Leave it to SAS to be the first to dare to crack a joke. "That's one lesson. But what does that mean in more detail?"

Isa rose to answer, then sat down when she realised that she was blocking the line of sight for a bunch of soldiers sitting behind her. "It means that we need to bring more firepower on such missions if we can't have She-Ra with us."

Campbell, sitting next to her, added: "And we need to take magic respectively its absence into account when planning such

missions. We can't teleport."

Jack nodded. "Yes. Unless we drag our Supreme Commander and Queen Glimmer with us on every mission, we can't repeat that. And restoring a planet's magic is a two-edged sword."

Jones, the former SEAL, frowned. "We'll have to expect Apophis to start using magic against us - at least on his capital."

A number of the troopers looked wary at that. Jack smiled and shook his head. "Oh, he might have some magitech stuff lying around from before magic was sealed away, and that might surprise us, but Apophis can't just snap his fingers and have trained sorceresses at his beck and call - believe me, I know that. And if we return to Saqqara, we will do so with as many princesses and sorceresses as possible." That planet was now one where their powers worked from the start, unlike pretty much every other planet in the Goa'uld Empire.

That seemed to calm down the soldiers. But Jack knew that most of them wouldn't admit if they were concerned. He would joke about it himself, in their place. "What else can we learn from this?"

"That Apophis's forces are - or were - vulnerable to infiltration tactics," another officer, Lt. Fournier, said. "Though they are likely to adjust their procedures after this."

"Yes. We can't count on them falling for the same ploy again. But we can count on Apophis purging his guards for their failure," Jack said. "So, his forces will lose a lot of experience and cohesion." Like Stalin's purges wrecked the Red Army.

"And we need better kit if we're supposed to do such missions," Burke commented from the back. "I would rather not run around in looted rags and hope to take an enemy weapon before I can fight."

"I'll pass it on to Q," Kelly joked.

"We've already done that," Jack said with a grin. Try to be a wiseass, hm? "We should have some specialised gear if we have to infiltrate a place again - though, as was pointed out" - he nodded at Fournier - "we can't count on the Goa'uld remaining stupid about that." As Apophis had just proven, they did learn from their mistakes. The snake's traps had almost gotten them. "But for now, let's focus on less undercover work and more on traditional infiltration tactics. How do we assault such a complex with our forces? How do we get inside, get our target, and something very important: how do we get out again? Without a stealth shuttle or the fleet picking us up."

Campbell closed his mouth, Jack noted.

"We need breaching charges, lots of them," Jones said.

"Electronic warfare specialists to hack the security systems so we can sneak inside," Kelly countered.

"A few manpads to keep the airspace contested," Müller, former GSG-9, said.

More and more joined the discussion.

"Distractions - drones and bots."

"Rappelling gear."

"Those hover sledges."

"Some sort of active camouflage."

Jack nodded while his aide noted all the proposals, projecting them onto the screen behind him. Yeah, this would be a productive session; he could tell.

*****

P34-353J, November 13th, 1999, (Earth Time)

Watching the preparations of the Tok'ra, Adora couldn't help fidgeting. There was a chance that this would go wrong. Aumanet might kill Sha're before the Tok'ra could extract her. And even if Adora restored magic to the world, she might not be fast enough to save Sha're. As she had been told, she might not be fast enough even if she had Magic restored beforehand.

And the Tok'ra didn't want magic restored to this world. Not yet, according to Anise, but that might be wishful thinking according to Sam - their friend apparently couldn't wait to begin experimenting with magic.

She glanced at Daniel, who hadn't taken his eyes off Sha're since they had arrived on this world. If the worst happened, after all they had gone through, after everything they had done to save Sha're… Adora knew how that felt. When she had seen Catra fall on Horde Prime's flagship, had held her body… No one should go through that. No one would if she could help it.

But she couldn't always help it. She could only try her best, always. And she would.

She shook her head, trying to banish the gloomy thoughts. Things would go well. They had to. The Tok'ra had done this before, many times. They had saved Lieutenant Lenkova as well.

Remembering that also reminded Adora of how the woman had been affected by a relatively short possession. Sha're had been possessed for over two years. The horrors she must have gone through… Adora hadn't suffered like that, but others had. Catra, for one - her lover was staring at Sha're with a fixed expression. And she was far from the only one who had been mind-controlled by Horde Prime.

Maybe she should offer Daniel and Sha're to spend some time on Etheria to recover? They didn't have trained therapists like Earth had, not yet - although they were working on that - but they had experience with this situation. It couldn't hurt, at least, in Adora's opinion.

On the other hand, Sha’re had never seen Earth, Daniel’s home. She might want to get used to Earth first. Or go home to Abydos - though that would have to wait until they unburied their Stargate again. They could send a ship there, but that would take a long time… maybe once the spy bot network reached the planet, they could install a better system to protect the gate against invasions, and they could resume regular contact…

It wasn’t up to her, anyway, Adora reminded herself. That was the decision of the Abydonians. And to Sha’re and Daniel. They might just want to return to Abydos and resume their lives there. Though Skaara was still possessed by Klorel, so Daniel wouldn’t want to abandon him, would he? And neither would Sha’re abandon her brother. Or…

“They’re about to start,” Catra whispered.

“Oh.” Adora flushed a little. She had been so absorbed by her own thoughts, she had almost missed it.

The extractor started to humm, and a beam appeared, striking Sha’re. Adora clenched her teeth. This was it. If things went wrong…

But Anise, who was operating the extractor, seemed neither worried nor alarmed as the extraction continued. That must be a good sign.

She still fidgeted. Not as much as Daniel, though, who was trembling as he watched and waited.

“It’ll be alright,” Jack told him in a low voice, putting his hand on his friend’s shoulder. Sam said something in a whisper that Adora didn’t catch.

Daniel nodded, but Adora wasn’t sure he had heard either of them. Adora could understand that.

Then the extractor beeped, and she could see a symbiont - Aumanet - wriggle inside it. And Sha’re… was breathing. Adora

could see her chest rise and fall.

"The extraction was a success," Anise announced. "I'm administering the counteragent to the sedative now." She bent down and used an injector on Sha're's arm. "She should wake up soon. However, she was possessed by the Goa'uld for a long time..." Anise trailed off as Daniel stepped past her to stand at Sha're's side.

A minute passed. Was something wrong? Lenkova had woken up more quickly. Maybe the time spent possessed played a role…

A slight gasp interrupted her. Sha're opened her eyes, breathing heavily, looking around wildly.

Right. Adora bit her lower lip. The last thing Sha're would remember was being attacked by unknown women in Apophis's harem.

"Sha're…" Daniel bent forward. He was smiling and crying at the same time. "It's OK. You're safe. You're *free*."

"D-Daniel…" Sha're reached up to him, one trembling hand touching his cheek. "You're…"

He gently held it. "I'm here."

Then she started sobbing, and the two hugged each other, both crying and mumbling.

Adora pressed her lips together and blinked to clear her own eyes. Maybe they should leave? This felt like a very private moment. On the other hand, this wasn't their home, and if they needed help…

She glanced at Jack and Sam, who stood there, smiling at the couple. If they didn't see a need to leave, then it was probably OK.

No one was saying anything. Not even Anise. The two probably didn't really notice anyone right now.

And while Daniel and Sha’re kept holding each other, Adora reached out to grab and squeeze Catra’s hand. Her lover looked startled for a moment, then smiled at her.

*****

Samantha Carter had spent years ensuring that she wasn’t seen as ‘emotional’. That would have been, if not a death sentence, then at least very damaging to her career in the Air Force. She was aware that a lot of sexist officers would have jumped at the chance to cast doubts on her ability to handle the stress of combat and leadership. Even after she had established herself as the leading scientist of Stargate Command and an essential member of SG-1, she had kept any public display of emotions to a minimum.

But she couldn’t help the tears in her eyes when she saw Daniel embrace Sha’re, both crying. After all the suffering, all the danger, they were finally reunited. Safe. She took a deep breath and glanced at the Colonel - the General, she corrected herself once again. His eyes were suspiciously wet as well. She was tempted to tell him that she wouldn’t tell if he didn’t, but that would be crossing a line she had kept away from for a long time.

Instead, she cleared her throat. “Maybe we should give them some privacy?” The middle of a Tok’ra extraction chamber wasn’t the best place for an emotional reunion.

“Right,” the General agreed. He still hesitated a moment, though, before addressing the couple. “Hey… we’ve got a room prepared for you to, ah, recover.”

The Tok’ra had, Sam thought. They had done this before, numerous times.

It took a second before Daniel turned his head toward them. “Ah…” Then he looked at Sha’re, pulling back a bit with obvious reluctance before he seemed to remember where they were. “I think that’s a good idea…”

Sha’re also looked around. Her eyes widened when she saw Adora and Catra.

Adora beamed at her. “Hello! I’m Adora - or She-Ra when I am like this.” She waved a hand in front of her chest.

Catra rolled her eyes at that but nodded at Sha’re. “Catra.”

“I remember you.” Sha’re nodded. “You saved me?”

“We all did,” Adora said at once. “We’re Daniel’s friends. And we’d like to be your friends as well.”

“Thank you.” Sha’re nodded again. She hadn’t let go of Daniel, still clutching his shirt with both hands. Nor had she wiped the tears off her cheeks. She turned to nod at Sam and the General as well. “Thank you.”

Then she spotted the container with Aumanet inside and froze.

“She’s our prisoner,” Adora told her. “She won’t ever hurt you again.”

Sam half-expected Sha’re to demand the Goa’uld’s death - she would have, in her place - but the woman slowly nodded, trembling slightly. “I would like to leave this room,” she whispered.

Anise - no, Freya, the voice was hers - nodded. “Please follow me.” She gestured to the side, where a door opened, revealing a room with a large bed and other amenities. “Simply call for someone if you need anything.”

Daniel slowly stood, helping Sha’re up, and the two, holding hands, stepped into the room.

Sam sighed as the door closed behind them.

“She’ll need time to get over her ordeal,” Anise stated the obvious.

Everyone nodded at that quite solemnly without saying anything. Not even Catra or the General.

Instead, he looked at the captured Goa'uld queen. "So… I guess we'll add another snake to our aquarium."

"We would like to be present for her interrogation," Anise said. It sounded more like a demand than a request, in Sam's opinion. Then again, she knew that the Tok'ra were not entirely happy about the mission to Saqqara. The purges Apophis was conducting would endanger their agents at his court.

"Of course." Adora smiled at her.

Ansie looked surprised for a moment. She might not have realised that Adora was the genuine article, as the Colonel - the General - would say. Honest, open and idealistic. Even more so than most other Etherians they knew.

"Your knowledge of Apophis's court will be useful for that," Catra added.

"Yes." Anise took the container with Amaunet and handed it over to Adora before turning to Sam. "Would you like to see my latest work while we await your return to Earth?"

While they waited for Daniel and Sha're to recover enough to travel back, in other words. Sam nodded.

"No blowing up the planet," the General called out as they left.

"Yes, sir."

Outside in the hallway, on the way to Anise's lab, Freya asked: "How is Entrapta doing? I would have expected her to come with you for this. She wasn't hurt, was she?"

Sam sighed softly. "She's very busy researching and developing tools and weapons more suitable for similar missions."

Anise raised her eyebrows. “We have significant experience with such missions.”

“She wants to ensure that we won’t lose anyone else on the next mission,” Sam said, skirting the implied question. Entrapta hadn’t taken Bra’tac’s death well. Sam wasn’t even sure that her friend didn’t still hold out hope that Bra’tac might have survived, just like Entrapta had when she was thought dead during Glimmer and Bow’s rescue from the Fright Zone. Not that she would say that, of course - that was Entrapta’s business.

Anise might suspect it, anyway - she nodded. “Ah.”

The Tok’ra also had significant experience with losing friends on such missions, Sam reminded herself. Anise might even know better than Sam what Entrapta was feeling right now.

And while it was completely unreasonable, petty and likely unfounded, Sam couldn’t help feeling a bit envious.

*****

Thule Air Force Base, Greenland, Earth, November 14th, 1999

Another day in the Earth Kingdom of Ice and Snow. Catra shuddered at the thought of the temperature outside. Her fur wouldn’t do a thing against the cold out there. At least they could stick to the base this time since they hadn’t taken Frosta with them, so no one had to go outside and tell the princess that landing strips weren’t playgrounds to be filled with ice sculptures.

On the other hand, watching the locals react to Adora carrying the new ‘snake tank’ inside was amusing. The soldiers in the base seemed both surprised that she could carry the thing at all without any help and annoyed somehow that the Supreme Commander of the Alliance was doing ‘menial work’, as one of the officers had told another in a whisper they thought Catra’s ears wouldn’t pick up after Adora had refused to let them help.

As if they could actually carry the thing! However, as funny as it was to see Earth troops still being surprised at seeing senior officers who actually did more than merely leading from the back, it was also a symptom of a potential problem. The Alliance leadership had grudgingly accepted that Adora and the other princesses would be on the frontlines 'whenever necessary', and Jack had extended that to himself somehow, but it was still a tenuous thing. And if it became the norm… Earth officers weren't princesses. Or Catra. Jack was great in a fight, sure, but she didn't think every Earth general would do more good fighting in the trenches than at the planning table. And if Earth officers started thinking that to get promoted in the Alliance, they had to follow his example…

She winced at the thought. That was a good way to kill off experienced leaders. An acceptable trade-off if they were after your position and willing to stab you in the back - literally in some cases - since fighting a coup in the middle of a war was worse than having to replace a Force Captain and recover from a lost offensive. But the Alliance was still struggling with training troops to fight a war in space and on other worlds, and losing any officer with experience or talent would hurt that.

But, she thought as she glanced at Adora while they waited in the cargo lift taking them down, trying to explain that to her friends would be a challenge. Adora had been raised in the Horde, but she had fought for years in the Princess Alliance. And all the others had grown up there. Except for Scorpia, but… she could shrug off cannon shots and throw tanks around, so she would probably take a while to understand the problem.

Maybe she should talk with Jack about that. At the very least, it should be amusing to see if he could think of a solution that would allow him to keep fighting on the front and prevent others from following his example.

The lift stopped, and the doors parted - they were on the special prisoner level. Catra straightened. Time to focus on the task at

hand. She could deal with the military culture clash later. Maybe when Daniel was back at work - cultures were his thing.

“Hi!” Adora called out when they had passed through security and entered the holding area. “How are you doing?”

Osiris and Seth ignored her greeting, staring at the tank she was holding.

“That’s Aumanet,” Catra told them. “Apophis queen.”

Both jerked at that, their little heads twisting.

“A queen?” Osiris’s synthetic voice asked.

“Apophis’s queen?” Seth added.

“We sneaked into his harem and took her since she was using the body of a friend,” Catra said. Aumanet would tell them the story anyway once they finished interrogating her and allowed her to talk to her fellow prisoners. This was merely to show her that she wouldn’t be killed after talking.

Both Goa’ld laughed at that, the translator turning their hissing into synthetic laughter. They would probably be more amused if they heard about how close the whole mission had come to failing, but since Amaunet didn’t know that, having been stunned for the entire duration of that part, they didn’t need to know.

Wouldn’t want them to get ideas.

“And what about Apophis?” Seth asked.

“He wasn’t in the harem,” Adora said. “We just came for his queen and his prisoners.”

“Was she his only queen?” Osiris still eyed the other snake.

“As far as we know, yes,” Adora said. And the Tok’ra knew a lot. Though if Apophis had a replacement for Aumanet waiting, he

probably would have kept that a secret from almost everyone - including Aumanet.

“Anyway,” Catra spoke up. “We’re just showing Aumanet where she’ll be living afterwards.”

“Yes.” Adora proceeded to show the snake the third habitat in the tract. “We’ll be back later.”

“I’m looking forward to it,” Osiris said.

“It will be good being able to hold a decent conversation again,” Seth added.

Both were bickering when Adora and Catra left the cell tract and headed to the interrogation rooms. Which was a good thing. If their prisoners started cooperating, gathering intel from them would become harder.

*****

“Apophis will conquer your world, and you will pay for your crimes against your gods, Tau’ri.”

Jack O’Neill had met Goa’uld before and knew how arrogant they were, and this snake queen was a contender for the top position. She was a prisoner of war who had been captured in the palace of Apophis, on his throne world, and she still acted as if she was in charge. He shrugged as casually as he could. “He tried before and failed.”

“That was because he was betrayed from within and underestimated you. He will not make these mistakes again.” The synthetic voice from Entrapta’s snake tank interface didn’t sound as creepy as the actual Goa’uld voice. That robbed Amaunet’s boasts of any weight they might have left, in Jack’s opinion. In fact, she sounded almost like a complaining kid.

“Well, we’re looking forward to seeing what new mistakes he’ll make,” he said, grinning.

"I am looking forward to seeing how he will punish you for your insolence," she retorted. "He has kept some of his enemies alive for years, suffering unimaginable agonies, until he granted them the mercy of death."

Now, *that* was a threat if you knew Apophis. Which Jack did. And yet… the snake queen hadn't mentioned how *she* would take revenge on them so far. Was she planning to offer them mercy if they let her go or something? It wasn't the best plan, far from it, but better, at least a little bit, than trying to threaten them with Apophis's revenge. That had such a vibe of 'my daddy can beat you all up', Jack almost laughed out loud at the mental picture it evoked.

"You know, that would sound more impressive if we hadn't just walked into Apophis's palace and captured you, liberated his prisoners, and then walked out again," Catra cut in. She leaned back and stretched her arms over her head. "Apophis just doesn't sound that dangerous to me."

"I see no proof for your claims," the snake said.

"Other than the fact that you are our prisoner?" Jack raised his eyebrows at her.

"We obviously captured you and got away," Adora spoke up. "You know that."

Amaunet didn't respond to that. "Apophis knows you have me. And he will come for me with all his might. You cannot stand against his fleets. Your only hope is to beg for mercy for your world lest he burns it down for your crimes against your god."

And here came the pitch. Jack shook his head. "No, thank you. I think we're doing fine." He was tempted to tell her about their guard fleet, but that would have given the snake intel, and it was too early for such a ploy. And it was a Horde fleet, so boasting of its power kind of felt like Amaunet threatening them with Daddy Apophis's revenge.

“Your arrogance will be your downfall! You cannot stand against the might of your gods!”

Jack had to chuckle at the irony of a Goa’uld calling them out for being arrogant. He heard Catra snort as well. Unfortunately, the snake’s face wasn’t exactly very expressive, so he couldn’t tell how she took that.

Adora cleared her throat. “I disagree. We can and will stand against you.”

“You think your new allies will protect you?” Amaunet’s synthetic voice made a scoffing noise. “If they were powerful enough to be a concern, they wouldn’t have hidden from us like rats.”

She probably assumed that they were allied with cat people like Catra. It was an understandable assumption, given her knowledge.

And Catra laughed again. “We weren’t hiding from you - we were busy fighting an enemy a bit more impressive than the Goa’uld. But with them defeated…” She shrugged. “We might as well take care of you.”

“Words are cheap. I see only you here and no one else but Tau’ri.”

“Then you are blind,” Martouf spoke up.

Hearing the snake voice made Amaunet jerk in her tank. “Traitor!”

“You cannot betray whom you never owed allegiance to,” Martouf replied.

“That’s how you did it! You were let into the palace by a traitor! Who are you? Kabesh? Horon?”

Jack filed the two names away. Suspected traitors in Apophis’s court were potential turncoats.

Catra snorted again. “You still don’t understand what you are facing.”

“We aren’t Goa’uld,” Martouf said.

“Tok’ra!” Somehow, the synthetic voice managed to hiss.

“Yes.” Martouf stared at her. “We would have killed you after freeing your host. But others stayed our hand.”

The glance at Adora was perhaps a bit much, in Jack’s opinion. But they had to convince Amaunet that she was in the hands of a powerful enemy and that cooperation was her best bet to survive. “Osiris and Seth cooperated,” he said.

“Traitors!”

“Realists.” Priest stepped into the snake’s field of view.

And Amaunet recoiled. “Horde!”

So, she was familiar enough with Horde Prime to recognise his clones. Another bit of useful information.

“False goddess,” Priest retorted with a sneer. “You think you can stand against our fleets? The only reason we have not yet burned down your worlds and wiped you out is that our leader is more merciful than Horde Prime was.”

Jack couldn’t help wondering if Priest wasn’t acting but merely telling the truth.

“Horde Prime is dead?” Amaunet asked.

“Her Divine Highness destroyed the Great Deceiver and freed us!” Priest bowed towards Adora. “Her wisdom and mercy have guided us ever since.”

Adora smiled a bit weakly, but Jack doubted that the snake queen noticed - she was twitching in the tank.

Well, it seemed that they had softened her up enough for the interrogators waiting outside to take over.

*****

Royal Palace, Bright Moon, November 15th, 1999 (Earth Time)

"...and while the interrogations have just started, we're optimistic that Aumanet can be convinced to cooperate, at least to the degree Osiris and Seth are cooperating with us," Adora summed up. The Goa'uld queen certainly had been impressed once she had realised that she wasn't just facing Earth but the Horde.

"Which isn't much," Mermista commented. "They are still trying to manipulate us in the hope of gaining power for themselves."

Adora nodded. "But they are doing so by trying to ingratiate themselves to us, which means they are helping us."

"And trying to set up their inevitable betrayal," Mermista retorted.

"Of course they are." Glimmer snorted. "But we know that. And forewarned is forearmed."

"And without sapient hosts, they aren't at their best," Catra added. "They have all their memories, but they aren't as smart as they think they are. And that makes them vulnerable."

Perfuma frowned at that. "I still think that's cruel. Leaving them in such a diminished state… It's wrong."

"Letting them possess someone would also be wrong," Glimmer retorted. "No one deserves to be a prisoner in their own body."

Everyone nodded at that. Especially those who had been controlled by Horde Prime back in the war. Adora reached over and patted Catra's thigh.

Her lover snorted softly, with a twisted grin, but put her own hand over Adora's.

"I know!" Perfuma sighed, nibbling on her lower lip. "But isn't there a way we can help them without hurting anyone else? We've managed to create synthetic symbionts so the Jaffa won't have to depend on the Goa'uld larvae any more."

"It's a bit harder to create a synthetic host," Bow said. "Especially since they would have to be sapient to provide the Goa'uld with the boost in intelligence they are used to. And if they're sapient, they are people."

"And no one should be controlled by Goa'uld," Mermista added.

Not even criminals. Adora nodded.

"Where's Entrapta, anyway?" Netossa asked.

"She's busy in her lab," Adora told her. Their friend had been busy since they had returned from Saqqara. And that was worrying. She really needed to talk to Entrapta about this. As soon as this meeting was done. Well, this and the one after it.

"A sort of synthetic host would help the Tok'ra, too, wouldn't it?" Frosta asked.

Adora wasn't sure about that. "I think they want equal partners for their hosts, not some, uh, biological bot." Which was a kind of worrying concept to begin with.

"Yes," Perfuma said. "A true symbiosis, where both parts profit and the whole is greater than the sum of its parts."

"People aren't plants," Mermista said.

"Of course, they aren't," Perfuma said, frowning a little. "But the principles here are the same."

“Yes,” Scorpia spoke up with a smile. “And even if it doesn’t help the Tok’ra, if the Goauld won’t need people as hosts any more, that’s good.”

Frosta scoffed. “They are parasites. Why should we help them get smarter? That will only make them more dangerous.”

“Because we can’t have peace with them if they feel that they have to possess others just to be as smart as they are used to,” Perfuma told her. “We need to offer them an alternative that allows them to live peacefully with everyone else.”

“But with their genetic memory, they also feel that they need to be worshipped and rule over others,” Netossa pointed out. “At least the majority of them - I am aware that some of them joined the Tok’ra.”

“Yes,” Adora said. “Even Goa’uld can change.”

“Some of them,” Catra commented. “Most of them won’t.”

Frosta frowned at her, Adora noted, but seemed to agree.

“And editing their genetic memory would make us as bad as Horde Prime,” Bow said. Everyone looked at him. “Ah, just pointing out that that’s not a solution,” he said, smiling weakly.

Adora wasn’t sure if anyone had brought that up so far, but it was clear that Bow had thought about it. But he was right. “Yes. We won’t stoop to that level. To manipulate people like that…” She almost shuddered at the thought.

“And what if the Goa’uld won’t accept peace? Mermista asked.

“Then we banish them to their homeworld and blockade it,” Glimmer said.

“Or we simply capture all queens and don’t let them spawn more of them,” Frosta suggested. “Then they will die out. Peacefully,” she added when everyone stared at her.

“That is wrong as well. To keep them from procreating... We would doom an entire species!” Perfuma shook her head. “We can’t do that!”

“They wouldn’t die out - the Tok’ra would survive,” Frosta defended her idea.

“The Tok’ra don’t consider themselves Goa’uld,” Adora pointed out.

“Biologically, they are the same species unless you consider their genetic memory as enough of a difference to treat them as two species,” Bow said.

That sounded like a technicality. “We’re not going to wipe out the Goa’uld,” Adora said.

“Then we’ll have to lobotomise them and lock them up in their native swamp,” Catra said. She didn’t seem to be sad about that, Adora noted.

And she wasn’t alone with that stance in the Princess Alliance, judging by the nods from others.

It still felt wrong to do that to anyone. But unless someone came up with a better idea, it might be the least wrong solution the Alliance had.

*****

The Rescue Operation Part 6

Royal Laboratory, Dryl, November 15th, 1999 (Earth Time)

"..and this is a modular blast weapon - it's not quite as powerful as a staff weapon, but it can be hitched up to any stabilising component, such as a staff or even a broom, and will work as one. And this is a modular zat'nik'tel, which will separate into five components that can be hidden more easily and shouldn't show up on scans. At least not on scans with known Goa'uld technology. I had to redesign the trigger array to make it work, and the frame, but the latter was evident from the start, and it should work like a zat. And this is…"

Samantha Carter had to suppress a wince while watching Entrapta present the results of her recent work. Her friend had been… 'productive' was one description. 'Manic' was another. Both fit.

She glanced at the butler waiting in the wings. Wasn't watching out for Entrapta's health one of his duties? On the other hand, how much could a butler on Etheria do if their princess was set on something?

"...so, with just a few twists, we can have an antenna that will connect to the pocket multitool and increase the scanner's range by one hundred per cent - I wanted a greater increase, but that fried the test bot's matrix when it was used when worn, so I think it wouldn't be healthy to use as a human, though I haven't tested that."

Sam felt both relieved and even more concerned after hearing that.

"Anyway! I was mostly working with Goa'uld technology and haven't touched Earth technology yet since they don't like it if you copy their weapons - even if you improve them; I was told that I need permission to do that, and I didn't have time to get that

since they don't have a central authority to do that even though a global system should be obvious, but, apparently, you need to ask every single inventor for permission even though they have a patent office that should be handling that - did you know it's used to keep people from using others' inventions, not the other way around? That seems backwards, doesn't it?"

Entrapta was looking… well, like someone who had been running on caffeine and pure sugar for days. Which, a glance at the tray full of tiny pastries and a large teapot with a tiny cup told Sam, was exactly what Entrapta had been doing. Probably ever since they had returned from Saqqara. "There's a reason for that," she said, almost automatically. "But it's complicated."

"You always say that when something doesn't make sense on Earth," Entrapta replied. "But there's so much that doesn't make sense on your world. Anyway, I also worked on an alternative form of communication in case we can't bring the miniaturised system I showed you. So this…"

Sam felt guilt well up in her. She had been busy with debriefings and reports, and Daniel and Sha're needed help as well, but that was no excuse for neglecting another friend in need of help. And Entrapta clearly needed help dealing with this. But then, Sam wasn't her only friend. Where were the others?

"...and if we can't use the bones as speakers, I am looking into implants that directly connect to your nervous system, but that's a very challenging project. Although I think Alpha should be able to help us with it."

"Where's Hordak?" Sam asked.

"It was his turn to help Loki. But his implants won't help with this - they're not connected to his nervous system. Well, they are, but they aren't wired to be consciously controlled. Although I guess we could just hook up comm implants to our ears - or their nerves - and just have them transmit everything they hear. On the other hand, that would cause a feedback loop. Maybe a central control

unit would be needed to filter out loops? A dedicated stealth bot could handle that, I think. But if it loses connection to the network, that would stop, and we'd be back at square one, so to speak."

Sam winced. "I don't think everyone will want such an implant in their body." She couldn't think of anyone off-hand who would want an implant, much less this hypothetical one. Well, not amongst those who would be going on undercover and infiltration missions.

"Really? But it would be so useful if we can't carry our normal or the new modular gear!"

"I think it would need a lot of testing - especially the long-term effects - before it can be used in the field," Sam replied. "So we know it won't damage the user."

"Oh, that's probably right. Adora could probably heal that, but if we're on planets without magic, that won't work."

"We can't plan on Adora healing everyone," Sam pointed out. "She's needed for a lot of other tasks."

"Right. That's why we developed the synthetic symbionts. Anyway, what do you think about this? I just built it before you arrived!" Her hair tendrils held up what looked like a quarter of a spy bot. "It's supposed to fit with others and form a whole!"

Sam sighed and forced herself to smile. "Entrapta, when was the last time you slept?"

"What does that have to do with research?" Entrapta cocked her head to the side.

Sam wasn't fooled. "Did you sleep since we returned?"

"Yes!" Entrapta nodded, though her smile was a bit too wide.

"How long?" Sam asked.

“Did I show you another idea I had?”

That was answer enough. Sam sighed. “Entrapta! You can’t… This is not healthy. You need your rest.”

“We’re at war. I can rest once I’m done with my current project.” Entrapta shook her head and avoided Sam’s eyes.

For a moment, Sam was tempted to agree. She knew how annoying it was to cut your lab time short when you were about to solve a problem or finish a project. And she would be a hypocrite if she claimed to have never pulled an all-nighter. But she glanced at the various prototypes Entrapta had laid out, the notes on the screen… “And how long will that take?”

“Uh… that’s hard to say. Some of the design challenges are quite, well, challenging,” Entrapta replied.

“And you don’t think the challenge would be easier if you were well-rested?” Sam asked.

Entrapta looked a little guilty at that. “But the sooner I am done, the sooner I can rest.”

“And the more tired you are, the more mistakes you make.” Sam took a step forward and put her hand on her friend’s shoulder. “You’re not helping anyone if you work until you collapse.”

“But what if we have another mission, and we need this, and it’s not ready? We would lose another friend! Maybe more!” Entrapta blinked, then rubbed her eyes for a moment.

Ah. Sam suppressed a wince. “That’s not how it works,” she said. “We can’t know that.”

“If we had better gear with us, better weapons, we could have been faster, and our Tel’tak wouldn’t have been in position when the building’s top fell on it. Bra’tac would still be alive!” Entrapta shook her head. “That’s a fact!”

“That’s an assumption,” Sam corrected her. “The Ha’tak might have shot the Tel’tak down instead.”

“That’s very unlikely. They didn’t shoot the Tel’tak down, and they would have had even less time to do so if we just had been faster. We weren’t prepared enough!” Entrapta’s eyes were wet again, Sam noticed.

“But if we had different gear, we might not have ended up in the same situation,” Sam pointed out. “We might have chosen a different plan. We can’t second-guess our decisions like that.”

“But that’s what we did in the debriefing.”

Sam felt a sudden, unprofessional urge to hurt Admiral Kearsy. If he hadn’t run such a hostile debriefing, Entrapta might not feel so guilty. Might - Bra’tac’s death would have still affected her. And now I am second-guessing our actions, she thought. “Yes, we did. But we still can’t be sure how things would have gone if we had had different tools and weapons. Though it helps improving our procedures and equipment,” she added.

“And that’s what I am doing!”

Sam sighed. “Yes, and there’s nothing wrong with that. Except that you’re hurting yourself by not resting. It’s not…” She blinked. Oh, maybe she should have rested a bit more if she forgot how to reach Entrapta. “All the data we have shows that the less people rest, the worse they work.”

“You have data about that?” Entrapta looked surprised.

Sam nodded. “Yes. We’ve run experiments.”

“Can I see that data?”

“I don’t have it on me. I’d need to travel back to Earth to get it.” Sam hadn’t thought she’d need that kind of data.

“Ah.” Entrapta glanced at the rest of her lab.

“I can assure you, the data is conclusive,” Sam told her.

“If you say so…” Entrapta’s hair started fidgeting with her prototypes. “I did notice that I had a *slightly* higher-than-average failure rate with my experiments. Although the data I gathered did help with improving the prototypes. And Hordak said that was normal.”

“Before he took his turn in Research Station Alpha?”

“Yes.”

“Does he know you haven’t slept since then?” Sam raised her eyebrows.

“Ah…” Entrapta looked guilty.

And Sam felt guilty. But this was for Entrapta’s own good. “Come on, take some rest. We can look over the prototypes tomorrow.”

“We can do that now,” Entrapta grinned a bit weakly. “By my calculations, I have too much caffeine in my bloodstream to fall asleep for another hour and a half.”

Oh for… She had calculated this? A part of Sam wanted to throttle her friend. And another wanted that data. Just in case.

But she shook her head. “I think we shouldn’t work right now. Let’s talk about something else.”

“Alright,” Entrpata said. “What do you want to talk about?”

That was a good question, Sam had to admit. An embarrassingly good question. Most of what both of them liked was a bit too close to their work - or was their work. She couldn’t ask about the weather - she would never live that down should the General hear about it. Which he might; Entrapta had a tendency to reveal such things at the oddest moments. Well, they could discuss how to handle the loss of a friend, but that was a sensitive topic, not something to talk about when Entrapta was hopped on caffeine.

And it was a topic Sam would rather leave to a professional, but she didn't want to ask if Entrapta was planning to see a therapist. The Etherians had been looking into that, Sam knew, but she hadn't heard back from them since she had passed on the request for a list of trusted experts. Another topic for the future.

So Sam picked up one of the tiny muffins on Entrapta's desk and asked: "This looks good. Did you teach your staff some Earth recipes?"

Her friend perked up. "Oh, I got them all the data on Earth pastries I could find! Look at this!"

Yes, Sam thought as Entrapta showed her a list of recipes, that was a safe topic.

*****

Royal Palace, Bright Moon, November 15th, 1999 (Earth Time)

"...and she's now sleeping."

Catra nodded and ignored the slight glare from Sam. She did feel slightly guilty - she should have checked on Entrapta sooner; she had noticed that Entrapta was acting a little off, after all. And she would do better in the future. But she wasn't the only one at fault here - everyone else also had failed to notice that their friend needed help. And she was sure that they would have realised something was wrong once Entrapta had presented her latest designs to them.

Adora, though, looked like she thought she had personally hurt Entrapta. "That's… Thank you, Sam. I should have checked up on her much sooner! I can't believe I missed that."

"*We* missed it," Glimmer said before Catra could say it.

"Yes." Bow, too, looked abashed. "It's just… I didn't think she'd do this."

“She’s been doing such things before,” Adora said. “Remember when we met her?”

“That was different,” Glimmer protested. “She was having fun then, not feeling guilty.”

Ah, right. Catra had heard about that. Mainly from Entrapta, who had a sometimes unique view of things, but she had pieced together the rest later.

“Was that the first time she lost someone?” Sam asked.

Maybe the first time she lost someone she actually knew and cared about, Catra thought. She didn’t say so, though - that would have been unfair. “She was a bit isolated from the fighting, so to speak,” she said instead.

The others nodded.

“Ah.” Sam looked like she got it.

“And we might have focused a bit too much on the lack of special equipment for the mission in the debriefings,” Bow added.

“That was Admiral Asshole,” Glimmer objected.

“We also used it as an excuse,” Adora said in a serious tone. “And Entrapta would have felt responsible. Technology is her field. But she needs to understand that not everything is her fault.”

Catra raised her eyebrows at her - her lover thought everything was her fault.

Adora blushed a little in response but then set her jaw in that stubborn expression Catra knew so well.

“Even if it’s her responsibility, it’s not always her fault,” Glimmer said. “As a ruling princess, she should know that, but…” She shrugged.

“She’s not like other ruling princesses,” Bow said.

“Yes. And it is generally better to take responsibility as a ruler than to try to dodge it,” Glimmer added.

“But she shouldn’t overdo it.” Adora nodded again.

Catra cleared her throat, and her lover flushed some more.

“I wonder why Hordak didn’t notice anything,” Sam said.

Oh. Catra managed not to sigh. She didn’t like Hordak that much, but he had a decent excuse. “He probably thinks that’s normal,” she said. “He would do the same. Back in the Horde, he was often stuck in his lab while I ran things. And he probably did work himself to exhaustion for Horde Prime before that. He’s not really a people person.” Though power could make up for that to some degree.

“He did build up the Horde and took over the Scorpion Kingdom,” Glimmer objected.

Catra shrugged. “Yeah, but that probably was luck.” Or ineptitude on the part of Scorpia’s parents.

Sam looked like she didn’t agree, but that wasn’t Catra’s problem.

“We’ll have to talk to him as well. So this doesn’t repeat itself,” Adora said. “There will be more missions, and we’ll lose more people.”

That was war. Catra knew that. A voice in the back of her head whispered that as long as they didn’t lose people Entrapta connected to, things would be OK, and she felt angry at herself for thinking like that. Even though it was true. If you weren’t prepared to lose soldiers, you couldn’t wage war. And if you couldn’t handle losing soldiers, you couldn’t lead an army, either.

Something Adora knew - she and Catra had attended the same lessons back in cadet training - but sometimes seemed

determined to forget. “So, you’re going to talk to Hordak as well?” Catra asked Sam.

“Yes. I should check up on the research base anyway,” Sam replied.

“Yes,” Glimmer agreed. “It never hurts to double-check.”

Catra nodded. Hordak was a scientist, unlike the princesses usually supervising Loki and Morrison, so he would be harder to fool should Loki try to slip something under the radar, but he was also more likely to go along with questionable things. Like Alpha.

She blinked. On second thought… “Maybe we should also go and check up on things,” she said. “Alpha will listen to Adora above everyone else.”

“Right.” Glimmer firmly nodded. She was probably still a bit annoyed that while she laid claim to the entire moon, Alpha wasn’t beholden to her.

Well, that wasn’t Catra’s problem either. “Let’s go then.”

*****

HMNB Devonport, Devon, Britain, November 15th, 1999

Jack O’Neill was a little bit torn when he looked at the first Fleet Transport built on Earth, HMS Albion. Should he be glad about the Navy pukes getting shown up, proving that the Air Force should have been in control of the space forces, or annoyed that the Limeys had managed to beat American shipyards by several weeks?

“She’s a beauty, isn’t she?” Captain Baker, standing next to him on the pier, was beaming as he looked at the spaceship currently sitting in what used to be a drydock, according to what Jack knew about the Royal Naval base.

A beauty? The ship looked like someone had taken a Horde frigate, stuffed it into a container and then blew it up until it filled out most of the container, ending up with something that looked more like a brick with the edges smoothed out than a Horde frigate. Horde Prime had supposedly been fond of elegant designs, so Jack didn't know how that had slipped through. But saying that would needlessly annoy Baker, who seemed to be a decent fellow when he wasn't gushing about his new command. Jack found it a bit annoying, but he could understand the enthusiasm. "It has a certain charm," he said diplomatically.

"Oh, yes!" Baker nodded. "As fast as a frigate, but able to carry an entire brigade ready for combat! And she carries the shuttles to deploy the troops and enough firepower to provide ground support - or see an Al'kesh or two off!"

"No fighters, though." Jack couldn't resist.

"Well, no - but she's a transport and landing ship, not a carrier." Baker grinned. "We've got other ships for fighting an enemy fleet. I think the US Marines were looking into variants that could carry fighters, though last I heard, that didn't prove viable."

Yeah, Jack had heard about that. Mostly from Carter venting about having to look over the design notes. Apparently, the crayon-eaters wanted baby carriers, not just landing ships. Probably didn't trust the Navy to keep them safe. Well, Jack had mixed feelings about that himself. "They're still working on the modular transport concept," he said. "And probably will be working on that for years."

"I can see the appeal, but modifying an existing ship - and an alien design to boot - to that degree seems a bit tricky. It might be better to design that from scratch," Baker commented diplomatically.

"I think the idea was to create 'Space Jeep Carriers'," Jack explained.

“I see.” Baker was Royal Navy - he would be familiar with the CVEs from World War 2. Built to civilian specs and about as tough as that would suggest. “So, let me show the inside. Then we can discuss the best way to load and unload your troops.”

“Yeah.” That was what Jack was here, in Merry Old England - to help write the manual for embarking and disembarking troops from the new transports. He still thought it was a mistake - he had written the manual for embarking and disembarking troops from shuttles, but that was because they were basically transport aircraft that went into space, and he had experience with those. But troops didn’t live for weeks on a Hercules or Super Galaxy. On the other hand, Jack’s troops were the ones who would likely use these transports first, and if the Navy took over and treated this like a simple transport… He winced at the thought. Better do this right, he thought as he followed Baker to the gangway leading into the ship.

Inside, the ship looked as sleek and clean as Jack expected from a Horde ship - though instead of white, the Limeys had used grey paint. Jack liked the change. It felt more like a warship should look. The white made him think of a luxury yacht, too clean for a soldier.

“We’ve kept the bot storage areas,” Baker said as they walked through the crew quarters. “If we don’t get bots to transport, we can store additional supplies there.”

Was he fishing for information? Jack shrugged. “I think the bots are going to Etherian and mixed units. And to us,” he added with a grin.

“Oh? I heard they make good fire support units.”

“Yes, they do, but we don’t have the doctrine yet to use them effectively,” Jack explained. The first time they had trained with bots had been a disaster. They had been lucky Entrapta had programmed the bots so well, or they might have seriously hurt one of the soldiers getting in their way. And his troops were the

cream of the crop of the Alliance - he didn't want to imagine how the conscripts from France or Germany, or the National Guard units back home, would have done.

"Ah. Well, we'll figure it out. Just as we're figuring out space combat." Baker beamed again. "I can't wait to take her into action."

Once again, Jack managed to make a diplomatic comment. Barely.

*****

Research Station Alpha, The First Moon of Enchantment, November 15th, 1999 (Earth Time)

"Well, the base is still standing," Catra commented as they stepped out of the shuttle that had brought them to the moon. "At least the hangar."

Adora frowned at her, as did Glimmer, but Catra shrugged in her usual way. And Adora couldn't really say that she would disagree. Hordak was not exactly the most trustworthy supervisor. She didn't think he would betray them, but he was too much of a 'mad scientist', as they said on Earth, for Adora to trust his judgement implicitly. Of course, he had more common sense than Entrapta, but that wasn't a high bar to clear - and he hadn't even noticed that something was wrong with her!

Which, she thought as they entered the base proper through the airlock connecting it to the hangar, we'll have to point that out to him quite clearly.

Alpha's projection appeared in front of them. "Adora. Welcome to Research Base Alpha! Do you wish a status report?"

"Yes, please," Adora replied without slowing down.

The projection fell in, floating next to them as they kept walking. "We have made further progress on the Asgard project. The lack

of test subjects is still slowing down progress, though that cannot be helped without altering the base orders."

Catra rolled her eyes next to her. Adora knew what her lover meant - she thought this was a blatant attempt to get Adora to relax her orders to the bot. It was a touchy issue. Adora didn't like commanding bots like Alpha or Light Hope like that. But Alpha was as driven as Light Hope when it came to pursuing their goals - maybe worse. Light Hope had tried to do the right thing despite her programming. Alpha… well, the bot had been constructed to facilitate and assist in biological research, according to Entrapta and Sam, but she seemed a bit too eager to work around Adora's orders.

So Adora nodded and said: "I'm sure you'll cope."

"Yes. In fact, the alternatives to live testing we were forced to develop are projected to improve overall efficiency once we have more robust models for our simulations. Though I must point out again that it would violate safety standards to skip the final live testing," Alpha went on.

"In my experience, the Ancients - the First Ones - often skipped that part," Sam commented.

"I am bound to obey my superiors," Alpha replied. "Even when they ignore standard safety procedures."

Adora winced at the implications of that. Maybe…

Catra frowned again. "Well, some of those safety procedures sound rather unsafe for the 'test subjects'", she said. "How many 'prototypes' died during the final testing of the genetic experiments here?"

"That's restricted information," Alpha retorted.

"Please answer," Adora said firmly.

"None." Alpha sounded a bit too bland.

Adora blinked. What? That didn't sound right.

Sam spoke up: "And how many died during the 'final live testing' that revealed the need for more tests?"

"Twenty-seven developed unexpected fatal flaws after maturing."

Sam hesitated for a moment, Adora noticed. But her friend pressed her lips together, then asked: "And what happened to those who developed unexpected non-fatal flaws?"

"Depending on the severity of the flaws, they were released or recycled."

"You don't recycle *people*!" Adora spat. "And sapients of all species are people!" she added after a moment. That was wrong! Completely, utterly wrong!

"Noted."

"Wait! Does that mean you didn't have that noted down yet?" Adora asked. Hadn't Alpha understood her orders?

"Not explicitly as a general order," Alpha replied. "Only as a specific order covering the current research project."

Adora clenched her teeth. Alpha was a bot constructed by the First Ones, she reminded herself. She couldn't be fully trusted. Even if it might not be her fault but the fault of the First Ones who had created her - who were the same people who were willing to destroy Etheria to defeat Horde Prime. In any case, whether she was consciously or unconsciously doing it, it was clear that she would try to find loopholes in Adora's orders wherever she could. "I think we need to go over the supervisor shifts again," she muttered.

"Definitely," Glimmer agreed. "It's worse than I thought."

*****

They couldn't trust Alpha. The AI was utterly amoral - and more cunning than Samantha Carter would have expected. She couldn't think of the bot as a sophisticated computer - it was a true sapient being, she reminded herself. Able to think for herself - and to think about ways to get around orders. She could probably think of malicious compliance as well. But there were ways to deal with that - Sam had worked with people who had their own agenda before.

They arrived at the actual research lab - and found Loki, Morrison and Hordak standing around a projection that looked like a blend of ancient Asgard and human.

"Ah, you've arrived. Good," Loki turned to nod at them. "You might be able to help us here - would this be considered attractive for you?" He pointed at the projection.

Sam wasn't the only one to blink. What kind of question was that?

Catra was blunter: "What?"

"We are considering restoring sexual reproduction to the Asgard as a possible way to ensure their genome won't enter another degradation process," Alpha explained. "Though while the biological and genetic aspects are clear, we haven't been able to extrapolate the sociological changes."

Sam looked at Morrison. Hordak was a clone, and Loki was… well, also a clone, but Morrison was a human. He should know about sex. According to what she had heard, he had a certain reputation in his circles.

The scientist blushed a little. "Well, we're dealing with an alien species that has abandoned sexual reproduction for millennia. We cannot expect them to mimic humans."

"Although if we want that to be possible, the new appearance should be both compatible and attractive to humans," Loki added. "Which is why we need your data."

Oh, God! Sam closed her eyes for a moment and muttered: "I really hope this is their idea of a joke. The General will never stop joking about 'Asgard needs women' once he hears this."

Catra giggled, so she must have caught Sam's words.

Adora, though, shook her head. "Wait! You can't just decide that your species will sexually reproduce from now on!"

Loki frowned - at least it looked that way. "If that is the best way to keep our genome stable - and preliminary data seems to indicate that, especially since it worked for the Ancients - then that is the course of action needed to save my species."

Adora opened her mouth, then closed it again.

Catra shook her head. "What if they don't want to be saved if that's the price?"

"No one will be forced to have their genes altered," Loki said. "And they could still opt for asexual reproduction if they wanted - which they should since it's the objectively superior option as long as you mix genes from multiple donors - but straight cloning will have to be prohibited to avoid a repeat of our current problem."

"Yes." Hordak nodded. "While the act of initiating sexual reproduction is quite pleasurable, the actual reproduction using a human body as an incubator is inefficient, debilitating and dangerous to the host, and, therefore, not recommended. Which should be obvious to anyone looking into the matter."

That was… Well, Sam couldn't say she disagreed with the idea.

*****

Catra snorted. As if anyone sane would want to carry a baby to term inside them unless they had no access to magic or medicinal technology! She remembered those lessons from their time as Horde cadets very well. Of course, Hordak would follow the same

advice. He might have sex with Entrapta, but any babies would be grown in a pod.

“Right.” Adora nodded.

“But just adding the option for sexual reproduction will alter your species on a fundamental level,” Sam pointed out.

“We’re altering our very genes - that’s a much more fundamental change,” Loki retorted.

“Of the individual. But changing your entire society goes further than that,” Sam said.

“Which would also be the result of altering genes.” Loki tried to be clever.

“You don’t have to add sexual reproduction as long as you don’t do straight cloning, which you already said will be prohibited.” Sam shook her head. “I’m not a geneticist, but I have reviewed your reports.”

“Yes, we don’t have to - but more options are better,” Morrison said.

“And sexual reproduction is the norm in the known sapient species, therefore indicating a significant evolutionary advantage over asexual reproduction,” Loki added.

Ah. “And here I thought you were just curious about sex,” Catra said. “Which, by the way, is something great you’re missing out on right now.” She stretched and grinned when she saw Adora blush and Glimmer roll her eyes.

“The Asgard have abandoned such things long ago, but we have kept records,” Loki replied.

Records they apparently kept better than their data about their own genome. If Jack were here, he’d make a joke about deleting

vital information to save porn. Since he wasn't… "I see you've got your priorities settled," Catra said.

Adora looked confused, Glimmer rolled her eyes again, and Loki… nodded in apparent agreement. "Indeed. Since we're already changing our genome, it makes sense to add more improvements - or options - while we're at it."

Catra wasn't so sure about that. In her experience, adding more objectives and complexity to a plan generally lowered its chances of success. But whether or not the Asgard had sex again was neither her problem nor her decision.

"That doesn't explain why you would ask about human aesthetics," Sam said, still frowning.

"According to our data, humans are one of the species most open to sexual relationships with other species and, therefore, a good role model - as long as the aesthetics are compatible," Loki said.

Sam looked surprised for a moment, then glared at Morrison. "What kind of porn did you show him?"

"I didn't!" Morrison protested.

"I accessed your cultural data," Loki said. "Both ancient and recent."

Catra nodded. "That would do it." Sam glared at her, but she ignored it. Daniel had told them about ancient Earth legends and myths often enough on the way to Earth. Of course, Loki would come to that conclusion! Wait… hadn't he been part of some of *those* myths?

*****

Alliance Headquarters, Brussels, Belgium, November 16th, 1999

"...so, Entrapta is on forced leave?" Jack O'Neill asked his former second-in-command. He didn't think anyone had the formal authority to order her to rest. Well, maybe Adora had, as the Supreme Commander.

"Not officially," Carter replied. "But effectively, yes. Adora and the others will ensure she has completely recovered before she returns to work."

"Ah." He nodded before grinning. "And she built a lot of nifty gadgets for us."

Carter frowned at him. "That's what drove her into exhaustion."

"Well, scientists do that from time to time. Working too much." He shrugged as casually as he could.

Carter blushed at that. Too bad Daniel wasn't here - Jack's friend had pulled overnighters more than once as well, and not always for critical translations. But he was with Sha're in a retreat, helping her recover from her ordeal. They would probably move to Etheria for a while soon, last Jack had heard, before they'd brave an Earth city. And speaking of Etheria… "And our mad scientists haven't been developing bioweapons or plotting to take over the world?"

"Not to our best knowledge, sir." Carter nodded. "Although if they wanted to, Alpha would probably help them."

"Aren't AIs supposed to take over the world themselves?" Jack joked, even though the thought of an Ancient AI supporting such plots was very concerning. The things they could create on that moon…

"That is a movie cliché, sir." Carter didn't show any reaction to his comment and remained the professional officer he knew and lo… *liked* to work with. She was the best second-in-command any officer could wish for. Even now that she - technically, he reminded himself - wasn't his subordinate any more. Which had effects on regulations that he didn't want to think about.

“More seriously, is it safe?”

“To the best of our knowledge, yes, sir.” Carter nodded again. But she seemed to hesitate, Jack noticed.

He raised his eyebrows.

She pressed her lips together. “The changes to the Asgard genome they are planning are quite extensive, sir. More extensive than expected.”

That sounded… also concerning. “Aren’t they trying to build a better body and genome from the ground up? I’ve seen the pictures,” he said. And he had read the reports. The Asgard had changed *a lot* since they started cloning themselves. And Loki was planning even greater changes?

“Yes, sir. But they’re also planning to add the ability to reproduce sexually.”

He slightly tilted his head, prompting her to explain.

“That would cause a drastic change in their society. They’ve been living without sexual reproduction for tens of thousands of years. To add this back in would upset their entire society on a fundamental level.”

“Yeah, I guess everyone going through puberty at once wouldn’t be great for society,” Jack commented.

Instead of pretending she didn’t find his comment funny while she twisted her lips into a hint of a smile, Carter nodded as if he had been serious. “That is an apt comparison, sir. They would be like teenagers - only without any adult help or even up-to-date information about how to deal with this. It would be mitigated to a degree, I think, by the fact that this would be a conscious choice, so not everyone would be affected at once, but that would also cause the risk of dividing their society.”

“And sooner or later, most of them will want to find out what the big deal is about sex,” Jack said.

She nodded again. “That is a plausible outcome, yes.”

“It’s too bad Daniel isn’t here. That would be right up his alley.”

“Yes. He’d love it.”

But Daniel was busy being reunited with his wife. And so someone else would have to deal with this. “Well, I’d say that sounds like a future Asgard problem, but since they’re busy with their war against the Replicators, anything that shakes their society might also affect us.”

Teenagers in command of space battleships was a frightening thought, though Jack hoped that the Asgard would have the sense not to let their generals and captains do this until the war was won. Though they had only met two Asgard, and one of them was a mad scientist and the other a high-ranking officer, so it wasn’t as if Jack - or anyone else - knew enough about the Asgard to tell. They certainly couldn’t trust Loki’s information.

“Yes, sir.”

“Do you have an estimate for how long our dear alien mad scientist will take to finish his project?”

“No, sir. I would have to guess blindly. Any new and unforeseen problem could delay the project for an unknown length of time. It’s ground-breaking research, after all.”

He narrowed his eyes a little. Carter wasn’t considering joining that project, was she? He needed her on Earth. For the Alliance.

“Well, it’s a potential problem, then.” That meant he could focus on how to deploy his troops from the Fleet Transports. And maybe ask for one of them to be permanently assigned to his command. “But I think the Asgard can sort this out themselves. They’re old

enough. I don't really think they will need or want sex advice from us." He chuckled at his own joke.

Carter still didn't laugh. She cleared her throat. "That might not be entirely accurate, sir."

"Did you just quote Independence Day?"

She blushed. "Loki seems, ah, interested in the human approach to sexuality. He may consider humans as potential sexual partners for the new Asgard. He was asking for aesthetical advice so the new bodies would be attractive for humans."

Jack blinked. That was… "That's supposed to be a Hollywood cliché! A cheap, silly B-movie cliché! Asgard needs humans?" He shook his head. Oh my God, first Anise wanted a baby from him, and now this? What was it with mad alien scientists and babies? he asked himself.

Carter nodded with a grimace. "Yes, sir. No one seems to have told Loki that. On the other hand, if we consider the Norse myths about Loki…"

Jack grimaced as well. Daniel had gone into details in that briefing that Jack really could've done without. And speaking of Daniel… "Alright, I don't want to disturb Daniel, but… as soon as he is back with us, we'll get him working on this!"

"Yes, sir. That should…" A beep from her laptop interrupted her. A familiar beep.

"Message from Etheria?" Jack asked.

"Yes." Carter slowly nodded, eyes on the screen. "It seems the spy bot network picked up a request from Thor to meet with us."

"What a coincidence," Jack said in the flattest tone he could manage.

*****

The Asgard Question Part 1

Alliance Headquarters, Brussels, Belgium, November 17th, 1999

"...and the United Nations Human Rights Task Force has been criticised again for focusing on countries that are not members of the Alliance. James Malone is currently at the United Nations Headquarters in New York, where a protest is being held. James?"

"I hear you, Carol. Yes, we're here in front of the United Nations Headquarters, and behind me, you can see the people protesting what they call favouritism. They demand that the American prison system be abolished as inhumane. But as you can see, they have been joined by various others protesting the Etherian presence on American or Earth soil."

Adora frowned as she watched the TV in the meeting room. There were a lot of people on the screen holding up signs and banners. Well, compared to some of the protests she had seen on Earth, it was relatively tiny, but they were very vocal. But… "What does religion have to do with prisons?" she asked. Many of the signs didn't even say anything about human rights or prisons.

"Nothing. But the nutcases who want us gone because we're abominations in the face of their god or something will jump at every opportunity to recruit more idiots," Catra commented without glancing up from her tablet.

Adora shook her head. She still didn't understand those people. Adora and her friends hadn't done anything to those people. Yet a few lines in some ancient book were enough to cause such hatred?

"We contacted Amnesty International. They stated that they were in contact with the task force and were preparing several lawsuits about the treatment of prisoners in the United States. What do you think about that, James?"

"Well, Carol, that will take a while to reach the Supreme Court, and those people here want action now. Though I don't think they all agree on what kind of action they want - some are chanting 'aliens out', as you can hear, and others demand that the Etherians raid every prison in the USA. But it seems that the NYPD has the situation under control - as you can see, they have enough officers on the scene to intervene should anything happen."

"Thank you, James. Now, back to related news. Speaking of lawsuits, the Etherians have launched a few lawsuits of their own, demanding that 'The Church of She-Ra' be recognised as a religion. We have an expert here in the studio, Dr Kevin Stuart, who covers this matter in his lectures at Yale. Kevin, what do you say about this?"

"Well, Carol, first, I have to correct you or whoever wrote this line. The lawsuits launched do not aim for official recognition; they are aimed at rules and circumstances at various schools that members of the Church of She-Ra claim are discriminatory against their faith."

Adora blinked. "We did what? Who did that?" Oh. "Priest!"

Catra snickered, And Adora glared at her. "It's not funny! It's… I have to tell him that he can't sue someone in my name!"

"Technically, he's not. He's doing it in the name of your church." Catra touched a few keys on her tablet. "Oh, and I don't think you want to stop those lawsuits anyway. Look!" She held her tablet up, and Adora looked at the texts on it.

And blinked again. "What school prohibits *public displays of affection*? Do they hate love or something?"

Catra shrugged. "Probably; you've heard what their priests consider mortal sins."

Adora had. Far more than she wanted, to be honest. She quickly read on. "What dress code is that? Immodest? Bow is one of the

most modest people I know, and he'd violate this dress code!"

"Yeah," Catra agreed. "Apparently, he wouldn't be allowed in most schools in the USA."

Adora clenched her teeth. "Alright. I'll let Priest do this." It was for a good cause - to think people treated their children like this! In school! They were insane!

"It's not as if you could stop him, anyway," Catra said with a grin.

Adora frowned at her lover. "It's not funny. I am no goddess."

"Depends on the definition," Catra retorted. "You'd fit the description of a lot of what the humans considered deities back in the day."

"Back when they worshipped the Goa'uld?" Adora scoffed.

"Well, we don't know if they took over existing pantheons or invented them. Seth and Osiris claim the latter, but…" Catra shrugged.

"Yes." Adora nodded. They couldn't be trusted.

"But I certainly think you deserve to be worshipped," Catra went on, grinning.

Adora blushed against her will. That wasn't the point!

"And I think a little display of affection would be the right kind of worship." Catra slid out of her seat and stepped in front of Adora. "Don't you agree?"

"Ah…" Adora trailed off when her lover slipped onto her lap. And before she could remember what she had been about to say, Catra had started kissing her, and that completely derailed her thoughts.

"Alright, sorry for being late, but… Oh!"

Adora gasped and broke the kiss. Jack was standing in the door, grinning at them.

And Catra, who must have heard him approach, giggled as she stood. “Don’t worry. We kept ourselves busy.”

“No, we didn’t!” Adora protested.

“OK, I’ll admit - we didn’t do any work and just fooled around.”

“Wait, no! That’s not what I meant!” Adora glared at her, then at the chuckling Jack.

“OK, enough fooling around,” Jack said as he closed the door. “Let’s discuss Thor.”

“Unofficially,” Catra said. “Since officially, this is just a meeting about integrating princesses into your command.” She rolled her eyes. “And if anyone on the general staff believes we won’t discuss Thor, then they are unfit for their posts.”

“It’s all about plausible deniability,” Jack replied with a grin. “They know we’ll be talking about this - well, the ones who have the clearance for it - and they hate it, but as long as I don’t flaunt it, they’ll ignore it.”

Adora frowned. “It’s only natural that we’re discussing this. All of us know about the matter - we all have met Thor - and we’re friends.” Which was the most important part. She trusted Jack, Sam, Daniel and Teal’c - and, of course, the princesses in the Alliance - a lot more than she trusted the command council or the Alliance general staff. Not that she distrusted them, of course, but… they weren’t her friends.

“Exactly,” Jack said.

“Of course,” Catra added, “you’re also bypassing the chain of command and meddling in politics.”

Jack frowned at her, though with a slight pout, so she had a point, Adora knew. “It’s not meddling. It’s just hashing stuff out. Advising our Supreme Commander,” he said. “Who will discuss this with the rest, so everything’s alright. Technically.”

“It’s not as if they could do anything to you, anyway.” Catra snorted. “Not officially, at least.”

“And if they try screwing with my command to get to me, I’ll nail them to the wall,” Jack said.

“Sabotage won’t be tolerated,” Adora said with a nod. Especially over such a petty thing! “But we were going to talk about Thor,” she prompted him.

“Right. Thor. Supreme Commander of the Asgard Fleet. Who wants a meeting with you.”

“With us,” Adora corrected him.

“And it’s a meeting that couldn’t be done over comms,” Catra added. “So, it’s probably sensitive, important or both.”

“Daniel would say that could just be how the Asgard do things - they might want personal meetings to talk,” Jack said.

Loki should have mentioned that, Adora thought. On the other hand, they usually talked in person to him anyway. It was better to talk face to face - more personal. And… “I don’t think he’d call for a meeting if it weren’t important anyway, not while he’s fighting a war.”

“Yes, he had that ‘very responsible officer’ vibe,” Jack agreed. “Or what passes for it amongst the Asgard. We’ve got a lot of them in the Alliance as well.”

“Like you. You just try to hide it,” Catra told him, flashing her fangs. Jack snorted in return. “Anyway, do you have any idea what he might want?” She cocked her head sideways, and her ears twitched.

“The analysts don’t have much to go on with - well, the ones with the clearance to know about this,” Jack said. “He might want to tell us that the Asgard won their war and now want to attack the Goa’uld with us. Or he might want to ask for help with their war because it’s not going as well as he claimed when we met.”

Adora nodded. “Loki probably would have told us about his people losing a war, though he might not know it.”

“If he hasn’t some way to check on his people, I’ll escort Swift Wing on a tour of Earth’s elementary schools,” Catra commented. “But he might not tell us even if he knows.”

Adora hoped Loki would be more open with them, especially if it was so important. On the other hand, revealing such information might be seen as treason by the Asgard. Or he might honestly not know about it because it was a secret kept by the rulers of the Asgard.

“Or this is about Loki,” Jack said.

Adora winced. That was the worst case they had come up with as well.

“You mean, Thor found out we’re harbouring a wanted criminal and wants us to hand him over,” Catra said.

“Which we won’t do.” Adora shook her head. They had promised to help him save the Asgard, and they would keep that promise.

“We don’t exactly know everything that Loki did while trying to find a cure for the Asgard,” Jack said, looking at her with a guarded expression.

Adora frowned. “Even if he did bad things, if he wants to change and make up for it, we’ll help him.” He was trying to save his species.

Catra pressed her lips together and wasn’t looking at either Adora or Jack.

Adora suppressed a sigh. She had expected that.

“Well, there are some lines you don’t cross,” Jack said. His expression hadn’t changed. “If he has done stuff that is inexcusable…”

Adora didn’t flinch and met his eyes. “If he wants to change and do better, we’ll help him.” Everyone deserved a second chance.

“Earth isn’t as forgiving when it comes to certain crimes,” Jack said. “And if we have to fight the Asgard over Loki, the Alliance might not be happy.”

“Loki is on Etheria, though,” Adora pointed out. “In Bright Moon’s domain.”

Catra muttered something about ‘Paperclip’. Adora didn’t know what she meant, but Jack seemed to get it - he grimaced a little. She’d have to ask her lover after this.

“Well, there are precedents,” Jack said. “But would you really want to go to war with the Asgard to protect Loki? In the worst case, I mean.”

“I don’t think they’ll fight a war over him,” Adora said. “Not when he’s working so hard to save them.”

At least, she hoped so.

*****

Research Station Alpha, The First Moon of Enchantment, November 17th, 1999 (Earth Time)

“Thor has asked for a meeting with you?”

Loki did sound surprised, Samantha Carter thought. But she didn’t know him well enough to be certain - he might be acting. She nodded. “Yes, a meeting with the Alliance,” she confirmed. “He didn’t say what the meeting would be about.”

"Ah. He wouldn't - while we have since improved our communications, early in the war, the Replicators had limited success in defeating our encryption. While unnecessary, the fleet has stuck to strict information security protocols," Loki said. "I've long tried to make people understand that the tiny additional security such procedures provide is not worth the loss of timely sharing of crucial information they cause, which hinders both our military and scientific efforts."

That sounded arrogant to Sam; Information security was crucial to conducting any war with a peer-level opponent. Loose lips sank ships. And while research profited from shared information, so did spying. But this wasn't the time to argue about it. "Do you know what this might be about?"

"Unfortunately, my contact with the rest of my species has been somewhat limited lately," Loki said. "I am, as you would say, 'out of the loop' regarding the concerns of the Asgard High Council."

That implied - either correctly or not - that he once had been privy to that. Sam inclined her head. "But there isn't anything publicly known that might prompt such a meeting?"

"I have not paid attention to what the public believes," Loki replied with a slight hint of disdain. "They do not shape our species's policy."

Now, that was very plausible, in Sam's opinion. Loki wasn't the type to worry about the views of those he deemed his lessers. She doubted he would even pay lip service to caring about the Alliance's opinion If he didn't need their help. Still, it was also clear that he was evading the real question. "Could he have discovered that you're working with us on fixing the Asgard genome?" She watched him; she wasn't a diplomat, or Daniel, but she had been working for most of her career with scientists with a similar attitude to Loki's.

And he twitched a little. "That is very unlikely. I would say impossible, but that wouldn't be scientific. I have left no

information about our agreement anywhere Thor could have access to, much less access without me finding out about it."

He did seem sincere there, though Sam couldn't be sure. But she couldn't push him further, or it would feel like a straight interrogation. "I see."

"I assume you won't inform Thor of my current work and location."

Sam shook her head. "Based on our current knowledge, we do not plan to."

"That implies you might do so. That would be a going back on our deal."

Revealing their deal with Loki would go against the spirit, but probably not the letter of their agreement. But that wasn't Sam's decision. "While unlikely, there is the possibility that circumstances would force us to reveal this." Like Adora and her friends deciding that honesty was the best policy.

"What circumstances might necessitate such a course of action?"

Finding out that Loki had done worse in pursuit of his goal than what they already knew and assumed, in Sam's opinion. However, that might not be enough for the Etherians - they already knew that Loki was responsible for the creation of Horde Prime and so, albeit indirectly, for everything that Horde Prime and the Horde had done and still worked with him. "I cannot say," she said, half-lying. "But it's not impossible for new information to cause a policy change. Anything else wouldn't be scientific."

He frowned at that. Or at her using his own words against him. Sam didn't care. Loki was… He made Hordak look like a great friend in comparison. And knowing Hordak and his past, that was quite the feat. "I see," he said. "Where will you meet him?"

"Cimmeria," she said.

“Where you met Thor the first time.” He nodded. “An obvious choice.”

So obvious he had to ask to confirm it. Sam nodded anyway.

“And when will you meet with him?”

“Tomorrow,” she said. If Loki wanted to find out, he could just attempt to contact Entrapta - who should be fit for work again by then - and the other princesses under some pretext. If they were unavailable, odds were the meeting was taking place.

“It’s not a real emergency then, or he would have pressed for a quicker meeting,” Loki commented.

Sam filed the information away. Daniel would be interested in such comments. “Is there anything we should know before the meeting?” she asked.

Loki tilted his head slightly to the side. “Nothing comes to mind. But please keep me informed.”

“Of course.” Sam nodded once more.

“Good. When will Entrapta resume her work?”

“Probably tomorrow,” Sam said. But why was he asking after Entrapta? She wasn’t really that involved with their work here.

“Good. Hordak has been, as you would say, ‘off’ because of her, and his efficiency has suffered as a result, affecting our research.”

Sam withstood the urge to make a comment about not being jealous of Entrapta for being with Hordak. That was more the General’s style, not hers. And she also would rather not find out that her joke was actually correct. Not after she had heard Loki’s plans for the sexuality and appearance of the future Asgard.

*****

Gate Area, Cimmeria, November 18th, 1999 (Earth Time)

Catra realised Cimmeria's Stargate area had changed since their last visit. It was subtle, but she could tell. However, she couldn't tell if it went beyond repairing or replacing the defence system they had wrecked. But her friends could. She looked at Entrapta, who was jumping down from Emily's dome, her hair taking the brunt of the impact.

Her friend looked around, then at her multitool. "Oh… they added more defences. And more scanners."

That was good to know. If the Asgard had left the planet's security the same, that would have meant that they were either unable or unwilling to spare the resources to improve gate security. Or too arrogant to think they needed to.

"Hidden underground," Sam added. "But they aren't armoured or particularly well hidden."

"Tripwires, then," Jack said. "Could you disable them without noticing?"

"Hm…" Entrapta bit her lower lip. "Probably, I think. If they haven't changed the systems too much compared to last time, it should be easy. Otherwise, it would be a challenge!"

She was perking up, Catra noted. That was a good sign. To see Entrapta restrained and calm was just wrong. A bad sign - if you were superstitious.

"Good to know. But, ah, don't do anything. This was just a hypothetical question," Jack said. "We aren't here to sabotage the Asgard."

"Got it!" Entrapta nodded. "But you want us ready to do it if we need it."

"Well… yes." Jack nodded.

“Thor has acted honourably toward us when we met him,” Teal’c said.

“He almost got you killed,” Jack retorted.

“He thought I served the False Gods.” Teal’c didn’t shrug, but he tilted his head slightly as if that explained and excused everything. And, for him, it probably did.

Catra kind of understood the sentiment. If someone had made a trap for Horde members, and she walked into them… Well, she probably deserved it. For what she had done and for not noticing the trap.

“They shouldn’t have built a lethal trap in the first place,” Adora disagreed. “That’s irresponsible. What if they killed a Tok’ra?”

“Yes, their IFF procedure was rather sloppy,” Entrapta agreed. “Though that was probably based on bad data. If they had known about the Tok’ra, they wouldn’t have done that.”

“Or so we hope,” Jack voiced Catra’s own thoughts. “So… who’s going to announce our presence? Anyone seen a doorbell?”

“I don’t think we need a bell - the sensors will have registered the gate activation,” Entrapta replied. “I think we just have to wait. Though last time, Thor was able to communicate with us through the systems planted at the gate.”

“Correct. Greetings, Tau’ri and Etherians,” a voice sounded from one of the pillars surrounding the gate.

Catra was sure Thor had waited for this moment to announce his presence. Pretty dramatic - though that was probably better than Loki’s sneakiness.

“Ah, hello. Thor, Supreme Commander of the Asgard Fleet, I presume?” Jack asked.

“Correct again. I would invite you to my vessel. Do you accept?”

“Well, it would be pretty impolite to refuse your hospitality,” Jack replied.

And it wouldn’t actually be safer - Thor would be in his ship in orbit and able to bombard them from there if he meant them harm. Although, unless he had arrived in his ship right now, it meant neither Emily’s sensors nor the spy bot they had sent through the Stargate in advance had detected the Asgard ship. Granted, neither bot had the power of a proper ship behind their scanners, but they would have detected a Goa’uld craft in orbit.

“Stand by for transport, then.”

Catra clenched her teeth. The Asgard had the same teleporters that Horde Prime had had in his flagship. And the memories she had of the time she had used it…

She heard a humming noise and felt the air vibrate - though that might be her imagination. A moment later, they were inside Thor’s ship. Yes, she confirmed their location with a quick glance - it looked the same as it had during their first visit.

And Thor was waiting in the doorway to the next room. “Welcome aboard,” he said, bowing his head. “Please have a seat.” He gestured to the room, where several chairs were waiting - sized for an average human or Etherian, not an average Asgard, Catra saw. Quite considerate. Was Thor trying to butter them up, or was that standard Asgard procedure? She didn’t know. Too bad Daniel wasn’t with them. But if Catra had been reunited with Adora after her lover had been kidnapped for several years, well, she wouldn’t leave her side either.

“Thank you,” Glimmer replied.

“Yeah, thank you. We travelled a long way to Cimmeria,” Jack added.

Adora and Bow were the only ones who laughed at the stupid joke as they entered and sat down.

“So, you wanted to meet with us?” Adora said, leaning forward.

“Yes.” Thor nodded. “It’s a somewhat delicate matter. Embarrassing as well as potentially dangerous.”

Catra sat straighter. That sounded bad. Did he know about the deal with Loki?

“As you know, several Asgard were interacting with the humans on your planet in the guise of their gods,” Thor started to explain. “Myself and my father amongst them. And another Asgard, Loki. Who developed a colourful but by no means undeserved reputation for trickery and feats of what the humans at the time called magic.”

“Ah.” Jack nodded.

Catra tensed a little, then forced herself to relax. They had expected this.

“He is an accomplished scientist,” Thor went on, “but he doesn’t share the same ethics as most Asgard.”

“An ‘the ends justify the means’ type?” Jack acted as if he didn’t know it already.

“I think that would be a fitting description, yes.” Thor seemed to hesitate.

Catra glanced at Adora. Her lover bit her lower lip. She was probably trying to apologise already.

“And, unfortunately, we lost track of him a while ago. That wouldn’t concern you, but recent information we uncovered does.” Thor sighed. “Based on the data we recovered - research data from our last visits - it seems his interest in your planet and species was renewed, and he might attempt to acquire genetic samples for experiments.”

Catra blinked. Oh.

"Now, it is likely that he would target one of the many planets held in the grip of the Goa'uld Empire, where your species can be found. But he is unpredictable, and, based on some past predicaments with altered samples, he might wish to acquire a sample from your home planet."

Oh. This wasn't about the deal they had with Loki - Thor wanted to warn them of his fellow Asgard.

This was very awkward!

*****

In Orbit above Cimmeria, November 18th, 1999 (Earth Time)

"Ah. And you think Loki might not politely ask for such a sample," Jack O'Neill said, nodding and keeping his features bland. He felt a bit bad about the act - Thor was trying to warn them about Loki, not knowing they had a deal with his brother.

But if Jack felt bad about it inside, Adora wasn't even hiding it - Jack saw her grimacing and glancing at the others, biting her lower lip.

"He is not fond of asking," Thor said. "I think it's because he was so often refused permission by the Asgard High Council for some of his experiments, he assumes no permission will be forthcoming anyway. Although, since you have at least technological parity with us and are an unknown power, he might attempt a more diplomatic approach first. But he also might choose to attempt an underhanded or even dangerous course of action."

Was that a subtle way to ask if they had met Loki? Jack couldn't tell. He hadn't exactly been spending a lot of time with Loki, so he couldn't really read the Asgard that well - he wasn't twitching with surprise, at least. He glanced at Carter, but she was focused on Thor and so was no help either. They really should have brought Daniel for that. Still, if they played this cool, they could probably…

Adora cleared her throat. “We were actually approached by Loki.”

…just blurt it out. Jack closed his eyes for a moment. He should have expected this.

“You were?” Thor seemed surprised - he jerked a little.

Entrapta nodded several times. “Oh, yes! He needed help with fixing your genetic degradation. We’re working on that with him - well, some of us are.”

“He asked for your help?” Thor blinked. Then he frowned - as far as Jack could tell. “And he informed you about the state of the Asgard’s genome?”

That was probably a state secret. Loki was in deep trouble now - though, in Jack’s opinion, the Asgard mad scientist probably had been in deep trouble already. They had caught him faking a Replicator outbreak, after all.

“Yes.” Entrapta nodded with a smile.

“I wouldn’t have expected him to be so open about our troubles,” Thor said.

“We were very persuasive,” Glimmer said with a toothy grin. “One of his past experiments affected us, and we wanted to know why he took such risks.”

Thor frowned. “Did you threaten him?”

With you, Jack thought. But mentioning that wouldn’t be very helpful.

“We confronted him with the results of his experiments,” Glimmer said.

Thor frowned again. “The Clones of Horde Prime?”

And that was why trying to be clever by telling the veiled truth wasn't a good idea when talking to aliens, Jack noted. Thor obviously had looked into the whole Horde Prime thing since their last meeting.

"Yes," Adora said.

"So, they were his creation…" Thor sighed and shook his head in a very human gesture. "Brother, you never change, do you?"

"Anyway," Adora went on, "since we have access to a First Ones - an Ancients - research station specialised in genetic engineering, we offered him our help for saving your species, and he accepted."

"And we're making good progress!" Entrapta added.

Thor turned his head slightly to the side to look at them. "You expect to solve our problem?"

"Yes." Entrapta nodded with a wide smile. "All the research data we have accumulated supports that."

"My brother has been optimistic about his research in the past, but it has never worked out," Thor said.

"Well, the data we have doesn't lie. And we already solved a more urgent problem with another species, so there's no reason why we shouldn't be able to solve this either!" Entrapta beamed at Thor. "We're not giving up; don't worry!"

"I do not worry about Loki giving up," Thor replied, frowning a little. At least that's what it looked like. "I worry about him not stopping even past the point it becomes obvious that his idea will not succeed - or will not be worth the cost."

Yeah, that sounded like a typical problem of Loki to Jack. Next to mission and feature creep.

“The whole research is conducted under supervision,” Carter said. “Close supervision.”

Thor inclined his head. “Loki has earned his reputation as a trickster.”

“We’re aware of that. And we know how dangerous he can be,” Glimmer told him.

Jack nodded, even though that sounded a bit too confident for someone who had just discovered how untrustworthy the research station’s AI was.

“I do not want to question your experiences, but I have known Loki for longer than you have,” Thor said. “Far longer than any of you were alive. I know him better than anyone else - and yet, as today’s revelations demonstrated, he keeps surprising me. And the High Council.”

“Well, you’re his brother,” Catra said. “You might not be entirely objective.”

Thor frowned at her. “And you might be overconfident due to your lack of experience with him.”

“Well, we’ve been working him for a while now,” Entrapta said. “And Alpha answers to Adora - and Jack - and she controls the station. So, it should be safe. Reasonably safe. Besides, we’re making progress, and Loki wouldn’t risk that, would he?”

Thor sighed again. “I am afraid that he would. He is neither the most patient nor the wisest amongst us. Far too often, he proves to be too clever for his own good.”

“Yeah, that sounds like the Loki from our myths,” Jack said. At least some of the stories.

“They are based on events that took place. At least some of them, I suppose. Even though they were distorted by our, ah, deception,” Thor said.

“You mean, by your decision to pose as gods,” Teal’c spoke up.

“Yes. In hindsight, it might not have been the best plan to avoid unduly influencing your development.” Thor nodded. “However, I would like to see the security measures myself - there is too much at stake to trust your claims blindly.”

“And you want to see your brother,” Adora said, nodding.

Thor inclined his head again, and Jack sighed. The Alliance brass better not blame him for this.

*****

Research Station Alpha, The First Moon of Enchantment, November 18th, 1999 (Earth Time)

“Brother.”

“Brother.”

Adora winced at the tone of the Asgard’s greetings. Thor and Loki were so tense… The way they were eyeing each other seemed worse than her worst encounters with Catra during the war.

Then Loki turned to glare at Sam. “You said you would not reveal my work or location.”

“I said new information might change that,” Sam replied. She did flush a little, though.

Adora pressed her lips together but didn’t flinch. Telling Thor had been her decision. And it was the right one. Honesty was the best policy. “Thor wanted to warn us that you had taken an interest in Earth.”

“And he was quite eloquent about the danger you could present - the lengths you’d go to achieve your goal,” Jack cut in.

She frowned at him. This wasn't the time for quips and clever remarks. "It wouldn't have been fair to leave him worrying over your plans. Especially since you don't pose a danger to us." Or so Adora hoped.

"Yes!" Entrapta smiled. "So, we took Thor with us so he can see for himself that everything's fine and that our research is progressing nicely!"

"I would not quite call my brother left free to conduct experiments in a research station of the Gate Builders 'fine'," Thor said.

"That is because you cannot understand my work," Loki retorted. "You never could. And you fear what you cannot understand."

"No, my fears are based on experience with your past deeds." Thor shook his head. "Have you told your 'friends' what you did? The experiments that led to you being known as the sire of monsters in the tales of the Norse?"

"We know he is responsible for the creation of Horde Prime," Glimmer said.

"What?" Thor whirled to stare at her, then back at Loki. "I thought you were working for him, maybe with him, to create his clones and used the opportunity to conduct experiments with Asgard DNA, but you created *him*?"

Loki rolled his eyes, or tried to. "Did you really think he would have let me introduce my own DNA to his clones? Of course, he was my creation!" Loki sounded almost proud of this. After a moment, he added: "And my worst failure."

He didn't really sound too sad about it, though, at least in Adora's impression.

"And you have not learned anything from it? You are attempting to create another species based on our DNA?" Thor took a step toward his brother.

“No, I am attempting to restore our species to a viable state,” Loki spat. “To save us from extinction.”

“You think the High Council will accept your ‘solution’? You have not learned a thing from your past mistakes, then.”

“Uh… But that’s not true,” Entrapta cut in. “We - and that includes Loki - learned a lot from Horde Prime’s creation. And from Alpha’s data, of course. Learning from your mistakes is a core part of proper research! It’s the base of science!”

Both Asgard seemed confused for a moment.

“I don’t think he meant that,” Sam said.

“But he said so!”

“I think he was talking about the reasons and goals of experiments, not data,” Sam said.

“Oh!” Entrapta nodded. “But our goal is good - we want to save the Asgard! As long as we don’t cause any harm, we’re doing good, right?”

Adora nodded. Horde Prime had exterminated so many species, she wouldn’t let the Asgard vanish if she could help it. And she could. Well, her friends could. And she could help them.

“Just because your goal is good does not mean the means you use to achieve it are justified,” Thor said, nodding at Entratpa. “Something you never learned,” he added with a glare at Loki.

“But we’ve been teaching him that!” Entrapta objected. “We learned that ourselves.”

Thor shook his head. “You cannot trust him. As soon as he is faced with the choice to abandon his current plan or break whatever rules you set, he will choose the latter. He has proven that time and again.”

“Then we will ensure that this choice never happens.” Entrapta beamed at them. “Problem solved.”

Loki nodded in agreement, but Adora couldn’t help feeling that that wasn’t very reassuring.

*****

Samantha Carter refused to feel guilty. She had not promised Loki that they would keep his presence in Alpha a secret, nor had she been responsible for the decision to tell Thor the truth. Though she could stand behind that decision - trying to hide their involvement with Loki would only result in more trouble when it came out. Trouble for everyone - the Asgard wouldn’t trust them as allies, and they wouldn’t trust the cure they were researching either. Not easily, at least. Really, this was for the best. Of course, Loki couldn’t see it.

“You can say this now, but that is not something you can promise,” Thor said, looking at Entrapta. “If success solely depended on your will to succeed, we would have solved our problem long ago.”

Loki snorted at that. “So you say. But you and the rest of the High Council lost your resolve far too easily. Based on past experiences,” he added with a sneer.

“There were lines we were not willing to cross, and for a good reason. The risks were far too high - which was proven when you created Horde Prime, a scourge on the sector almost as bad as the Goa’uld,” Thor said.

“Worse actually,” Catra cut in. “More dangerous, at the very least - he had better tech than the Goa’uld.”

Loki nodded. “He was very skilled at acquiring and adapting our own technology.”

That’s a proud parent speaking, Sam thought. “He also destroyed an unknown number of planets and civilisations,” she added.

"Yes, he did. All in pursuit of his goal to rule the Galaxy - regardless of the fact that the sheer size of the galaxy made that goal impossible to achieve by any sane standard." Hordak spoke up. "He never let anything stop him."

"Until he met She-Ra," Catra said, flashing her fangs.

"Yes. Even Horde Prime had to bow to reality, and all the atrocities he committed did not reward him with success in the end," Thor said.

"I consider this comparison insulting," Loki replied. "I never tried to conquer a planet, much less a sector or the galaxy. Nor did I ever render any species extinct." He tilted his head. "Unless I had created it myself as part of my research."

Sam blinked. That sounded…

"You murdered a species you created?" Glimmer blurted out.

"Yes?" Loki looked confused for a moment. "It was not a sapient one," he quickly added. "Nor a very complex organism. It was merely meant as a proof of concept. And it failed."

"Still… creating life only to end it…" Entrapta shook her head. "Unless they were not viable, of course."

"I do not think they were competitive with other species in their ecological niche," Loki said. "But I never attempted it. Inserting them into an existing ecosystem would have been a risk I did not take."

"Ah, right. That's bad, yes." Entrapta nodded several times.

"You mean you did not do it *again*," Thor said. "You were not quite as cautious and diligent as you claim to be when you were experimenting with animals on Earth."

"All of them were unique specimens and, therefore, unable to procreate," Loki snapped back. "Even back then, I did not take

any such risks."

Sam somehow had her doubts.

"You experimented with animals?" Entrapta cocked her head.

"He created a monstrous snake and horse," Thor said. "And a wolf."

A snake, a horse and a wolf? Sam blinked. "Jörmungandr, Sleipnir and Fenrir?" she asked before she could stop herself. Daniel had given a briefing about the Norse myths after their first visit to Cimmeria.

"That is how the Tau'ri called them, yes," Thor said.

"Jörmungandr, Sleipnir and Fenrir?" Entrapta asked.

"The World Serpent, Odin's horse and the wolf that would kill Odin," Sam told her. "In Norse myths."

"Father was not amused about those animals. Or those stories," Thor said.

"I did not make up those stories," Loki said. "If Odin did not like them, he could have told the humans to change them."

"That was not our way. We already meddled too much with the Tau'ri," Thor retorted.

"See? Another pointless rule that only caused problems. Problems I get blamed for!"

"You were the one who created a giant snake, a monstrous wolf and an eight-legged horse that could barely walk, much less gallop!" Thor snapped back. "And then had them escape!"

"Oh! You created a new type of horse? Like Adora! She created a winged unicorn!" Entrapta beamed.

"And we won't ever let her forget it," Catra muttered.

Loki looked puzzled. “I didn't know you were a genetic engineer.”

Adora winced. “It was an accident.”

“You created a species by accident?” Thor stared at her. “No wonder you were willing to help Loki!”

“It was a magical accident, not an engineering, uh, project - I didn’t know what my power could do and hit a horse with magic by mistake.” Adora blushed, both from embarrassment and anger, Sam thought. “Anyway, I haven’t done that again.”

“Which you probably should,” Entrapta said. “Unless Swift Wind can procreate with normal horses, he will be the last of his species.”

“I don’t think we’re making the best impression on our visitor here,” the General commented in a whisper next to Sam.

She was forced to agree - Thor was staring at everyone as if he was expecting them to reveal abominations of science and magic.

If only Daniel were here.

*****

The Asgard Question Part 2

Research Station Alpha, The First Moon of Enchantment, November 18th, 1999 (Earth Time)

This isn't going well, Catra thought. Not at all. Thor seemed to believe that they were as bad as Loki about research and things. Which, to be honest, wasn't entirely wrong given that they had almost destroyed Etheria during the Horde War because they - especially Catra and Glimmer - hadn't really been cautious enough. And Entrapta, for all that she was a great friend and good person, could leave a bad impression on people who met her for the first time. Or at a bad time. Not everyone understood that she wasn't like Loki, even if both were passionate scientists.

Thor was still shaking his head. "This is… It seems obvious why you are working with Loki."

"Because we both share the goal of saving the Asgard," Loki said.

"Because we both love science?" Entrapta cocked her head to the side and blinked.

"Because, apparently, you share the same appalling lack of caution and common sense when experimenting!" Thor snapped.

That was… well, also not entirely wrong, Catra had to admit. Not out loud, of course.

"That's not true!" Adora blurted out. "We're very careful - we have the entire base under close surveillance!"

"And it's on a moon, and we have sterilising protocols, so the chance of any organism escaping into the wild is very low," Entrapta added.

"I doubt that disinfectant would have stopped Horde Prime." Thor scoffed.

“I will not make that mistake again,” Loki said. “You still act as if I never learned from my mistakes.”

“That’s because you do not! Or if you learn something, it turns out to be the wrong lesson!” Thor shook his head. “You should not ask how to do something, but whether or not you should do something in the first place!”

“I will not let our species go extinct,” Loki said, glaring at his brother.

“Yes! We cannot let you die out if we can help it!” Entrapta chimed in before Thor could answer. “That wouldn’t be right! Too many species have already died out - with their entire worlds. And that doesn’t even cover the number of non-sapient species that are going extinct on Earth! We will save any species we can!”

“How the Asgard deal with our genetic degradation is *our* decision. You cannot decide for us,” Thor retorted.

“But Loki can! He is an Asgard himself,” Entrapta said.

Thor shook his head. “He is not even a member of the High Council any more. He has no authority. The fate of the Asgard will be decided by the High Council, not by a renegade and criminal.”

“As if the High Council has the knowledge and understanding to do what is necessary!” Loki scoffed.

“They are the rulers of the Asgard.”

“But you can’t force Loki to stop trying to save you; it’s his life as well that’s at stake,” Adora said. “No one has the authority to order people to let themselves die - or die out.”

“The High Council has the authority to set the law for the Asgard,” Thor told her. “And he has broken the law multiple times, severely. He is a criminal.”

“He’s willing to change,” Adora said.

Catra bit her lower lip to keep from saying anything.

“And he’s trying to save your species. Would you really rather die out than give him a chance?” Glimmer added.

“He had many chances and never took them.”

Thor was avoiding the question, Catra noted.

“I was held back,” Loki said. “And sabotaged by unjust and ignorant people who did not understand what I was doing.”

Thor scoffed. “We understood the results of your work perfectly. You have not changed.”

“You know,” Catra said, “if you judge people by their past, of course, you’ll never notice any change.”

Adora nodded with a beaming smile aimed at her, and Catra bit her lower lip again. She shouldn’t be arguing like this - she wasn’t any better than Loki. But she couldn’t just let Thor talk like… like Loki couldn’t change. Even though Catra still had her doubts about that herself.

“Why should my brother change now when he has never changed before?” Thor asked.

Because it sometimes takes a lot of wasted opportunities to overcome your pride, Catra didn’t say.

“Because now, we’re helping him,” Adora said.

“And do you expect me to forget his past deeds?” Thor turned to stare at Adora.

“If you cannot look to the future instead of to the past, you’ll never have a future,” Adora retorted.

“Those who forgot the past are doomed to repeat it,” Catra heard Jack whisper under his breath, followed by a hissed “Sir!” from

Sam.

“We don’t ask you to forget what he has done - but you should keep an open mind and give him a chance,” Bow chimed in.

“He had many chances,” Thor repeated himself. “Does he deserve another chance?”

“Are we talking about a chance to fix your genome?” Entrapta looked a little confused. “Because then, the answer is obviously ‘yes’ - if you have a problem, you research a solution until you find it.”

“Everyone deserves a chance to change,” Adora said. “No matter how many chances they have blown before.”

Catra felt a mix of love and shame at hearing Adora say that and couldn’t help blushing from both.

“Yes. This time, it will work,” Loki said. “I can feel it.”

Catra looked at him and, once more, felt doubt about his willingness to change.

*****

“Or that might be your breakfast disagreeing with your stomach.”

Jack O’Neill shrugged at the glances everyone was giving him. “Hey, just saying that a gut feeling isn’t exactly scientific.”

Catra snorted, as did Glimmer, and Bow tried his best not to grin, but the others kept frowning at him. Well, someone had to try and lighten the mood before Thor thought they were all like Loki. Which he probably thought already, to be honest.

“Well, no - at least I don’t think that anyone ever ran a study on gut feelings,” Entrapta said. “Unless it was about medical issues.”

“Well, I think with the return of magic, odds are a lot of such experiments were run,” Jack pointed out. “Or are still being run. People are trying to find ways to predict the future by using magic.” Despite all the warning tales about prophets and prophecies he had heard from Daniel. And the utter lack of any such magic spell or power on Etheria.

“Hm. Since Earth has different magical traditions compared to Etheria, that is a scientific approach.” Entrapta smiled at him.

Unfortunately, Thor wasn’t smiling. The Asgard was scowling at his brother. “You are dabbling with magic again?”

“I have not used magic in our experiments so far. Not only would that defeat the purpose of finding a cure our species can use without depending on others, but it has not been necessary so far.” Loki sniffed. “I have made significant progress with the support of these people - I am positive that this time, I can save the Asgard from our ancient folly.”

“Like you were positive the last time? And the time before that?”

“This is so much like you! To dismiss my claims without even attempting to verify them. How… unscientific!” Loki sniffed in return.

“Yes. If you don’t verify your data, how can you trust your decisions?” Entrapta asked. “Decisions based on prejudice are bad! And those based on gut feelings, I guess. Unless those experiments on Earth result in data that disproves this assumption.”

Thor looked more surprised than angry, at least for a moment. Then he shook his head. “Optimistic projections are not hard facts.”

“I’m not talking about projections!” Loki scoffed. “Take a look at the work I’ve already done!”

As if Alpha had been waiting for its cue - and it probably had, Jack realised - a holoprojection appeared next to the two Asgard, showing DNA sequences and several figures that looked like a mix between Asgard and humans. Which was a rather disturbing thought, actually, in light of Loki's comments about sexual reproduction.

"See? With the data and tools here, restoring our genome is within reach!" Loki crowed.

"What?" Thor bent forward and peered at the figures. "Those aren't depictions of our ancient forms!"

"Of course not!" Loki scoffed again. "Why should we regress to a state we left behind when we can evolve instead?"

Uh-oh. Carter had mentioned something about the project aiming for a new form or something, but hadn't that been because they didn't have the data to restore an older form? This sounded more like…

"You wish to shape our entire species according to your whim?" Thor all but bellowed. He looked at the text again. "Sexual reproduction?"

Loki - typically, Jack thought - was undaunted. "Of course. Asexual reproduction has proven to have played a part in causing our current crisis, while the vast majority of the sapient species we know reproduce sexually. That means that if we want to avoid suffering the same crisis later, we need to adapt - to evolve," he said in a voice that sounded far too smug to Jack.

And far too smug for Thor, it seemed. "You are mad if you believe that our people will accept such drastic changes!"

"Do you think they would rather die out instead?" Loki shot back.

"Some will, indeed, before suffering such… changes!" Thor spat.

“No one will be forced to change,” Loki said. “But our species will not go extinct.”

“That sounds as if you already have a contingency plan.” Thor managed to narrow his eyes quite impressively for their size. “I see. You claim you will not force your plan on others, yet what will you do if the Asgard would rather die out than accept such changes to our species?”

“That is none of your concern,” Loki said. “For you will have adapted and changed already or have died when the time comes for any such plan to be implemented.”

That sounded like a threat to Jack, but with the looming extinction of the Asgard, it might just be a factual statement.

Thor shook his head. “So, do you plan to repopulate our species? With your own?”

Loki frowned slightly at that, so Jack was sure that Thor had hit the nail on the head. “I will not let my people die out due to ignorance, false pride and superstition.”

“That is not your decision to make!” Thor told him.

“So, you think the High Council can order me to commit suicide? And to abstain from procreating?” Loki said. “And you call me unethical!”

Well, he had a point. Kind of - Jack didn’t like agreeing with Loki. But letting others, even your own government, decide whether or not you were allowed to have kids? That decision belonged to you, not to the government or anyone else. And, Jack added with a slight grimace, remembering his thoughts about his own sort of heritage, what with Anise’s proposals, so does the decision whether or not you would have kids. Which he wouldn’t, at least not now.

*****

That wasn't right! Adora shook her head. "You can't order your people - any of them - to die. Or die out. That's wrong!"

"One person cannot decide the fate of a species," Thor retorted.

"But the High Council can?" Loki asked, scoffing once more.

"The High Council, at least, is the legitimate authority of the Asgard! You are a renegade and criminal with no authority at all - and a history of failures and violations of our people's most important ethics. Your careless actions endangered the entire sector! If anyone is the least qualified to make any decisions about a species, it's you!" Thor glared at Loki.

"You would doom our people merely to obey pointless laws and customs that have long since lost their relevance! When a species faces an existential crisis, it must adapt, or it will die! You cannot cling to outdated morals when your very survival is at risk!" Loki spat.

Now that was… wrong as well. Adora shook her head. "No. In a crisis, it's most important to stick to your ideals."

"Yes," Bow chimed in while the two Asgard glared at each other. "If you abandon your ideals for convenience, did you ever have any ideals at all?"

Loki turned to face her. "If your ideals lead to your demise, then they are obviously not valid."

"Of course you would say that!" Thor shook his head. "Some ideals are worth more than your life! Some lines are so important that no price is worth crossing them. Not that you would understand that."

Adora nodded in agreement. With the principle, not the judgement of Loki. The ends didn't justify the means.

"Life means change. Adapt or die. Ideals are no exception," Loki retorted. "If upholding an ideal does more harm than good, it

needs to be changed. Anything else is stupid. Suicidally stupid if you are in lethal danger."

Adora glanced at the others. Catra had her lips pressed together as if she was forcing herself to remain silent. Glimmer looked… angry but torn?

"Very pragmatic," Jack said. "But who gets to decide what is more harm than good?"

Loki frowned at him. "It should be obvious that the survival of your species is paramount."

"No!" Thor retorted. "You are wrong. Our survival is not paramount. Not if it costs everything that makes us what we are. If we follow your plan, if we change like you want us to, then we will not be the Asgard any more. We are more than our genes - and you want to change those as well!"

"We changed more radically in the past," Loki spat. "Did we stop being Asgard then? Once, we sexually reproduced. Were we not Asgard back then? We had other ideals in the past, as you know - ideals we changed or dropped."

"We changed, but not for mere expediency or convenience!"

"This is about the survival of our species, not about mere convenience or expediency." Loki glared at his brother again. He hadn't actually stopped glaring for a while, Adora noted.

"No. This is about *you*, above all." Thor spread his hands and gestured at the holoprojections in front of him, then at the room. "This is about your ego. About you being proven right. About your will being enforced on the Asgard. If it were about the survival of our species, you would not go behind our back, you would not conspire to… to create a new species from our genes."

"I have tried working with you and the High Council! Multiple times! But I never succeeded because you are unwilling to do what must be done - or let me do it. You are so terrified of

change, you are dooming our species!" Loki took a step forward toward his brother.

"No! We are not terrified of change! We are horrified by the atrocities you did and would do in pursuit of your goals!" Thor stepped forward as well until he almost touched Loki. "And as I told you before: If you have to betray your ideals to survive, then that is too high a price to pay."

"For you. I am willing to pay this price. Future Asgard can choose their own ideals."

"Oh, you fool! You have not changed at all!" Thor turned away, then addressed Adora and her friends. "And you! You have seen how he thinks - that he will do anything, no matter how vile, to achieve his goals. How can you support him?"

Adora clenched her teeth, then took a deep breath and met Thor's eyes without flinching. "Because everyone deserves a chance to change. To do better. Because to deny Loki that would be betraying our ideals."

Thor stared at her for a moment without saying anything, then glanced at her friends. "I see. It's on your head, then." He nodded in. "I shall take my leave. The Asgard will not condone any of this."

Adora didn't think he was just talking about the experiments.

Glimmer nodded. "A shuttle will take you back to the Stargate."

As Thor left the room, Alpha leading him to the hangar, Adora couldn't help sighing.

"This could have gone better," Jack said, echoing her thoughts.

*****

"It could not," Loki said at once, scoffing. "My brother has always stubbornly clung to the High Council's rules and regulations in

blatant disregard of logic and rationality. He would never change. But, ultimately, his disapproval does not change anything."

You don't seem to be quite as nonchalant as you sound, Samantha Carter thought. She wasn't an expert in Asgard expressions and body language, but Loki looked tense, and there was a certain underlying frustration in his tone.

"I think that's what he said about you," the General commented.

"Yes. And it's wrong. People can change, even after a long time," Adora added.

People could, Sam agreed. Humans, at least. But the Asgard were not humans, and they lived a very long time - over a thousand years at the minimum since both Loki and Thor had been in contact with the Norse on Earth in the early Medieval Age. Who knew how old Loki and Thor were? Older people were often set in their ways. Of course, that might not apply to the Asgard. However, she couldn't deny that Thor hadn't seemed open to the idea that Loki had changed. Or would ever change.

"Thor is the Supreme Commander of the Asgard Fleet," Catra said. "And a member of your High Council, right?"

"To my current knowledge, yes," Loki replied.

"Does he speak for it?"

"I would say that Thor is one of the High Council's mouthpieces instead." Loki snorted. "As you have seen, he will obey them without question."

Sam's eyebrows rose. That sounded like a very biased opinion.

"Whatever," Catra said, shrugging. "The question is: What will the Asgard do now? Will they try to stop you?"

"They would love to." Loki grinned. "But they cannot afford a war with you, not when they are already fighting the Replicators. They

can harp and complain, but it will not amount to anything more than noise."

Sam wasn't about to dismiss diplomatic pressure as mere noise. Once again, she missed Daniel.

"The Asgard are a major power," Glimmer pointed out. "And we shouldn't dismiss them like that. There's more to power than just the military."

"And they won't be fighting the war against the Replicators forever - they are winning, after all," Catra added.

"By the time the war ends, I will have completed my research," Loki retorted. "The deed will have been done, so to speak."

That sounded very confident. Maybe overly so. But neither Morrison nor Entrapta seemed to disagree with the assessment. Then again, both were a little quiet - understandable with Morrison; he wasn't used to interstellar diplomacy. But Entrapta usually spoke her mind, often without regard to the situation at hand. Sam knew that from experience.

"And then what?" Adora asked. "What will you do?"

"I will save the Asgard. I will offer the cure to my people," Loki said. "They deserve a choice. A chance to change and survive as a species."

"And what will you do if they refuse it?" The General shrugged at Loki's frown. "Sometimes, people act irrationally. They might not want a new body even if it's far superior to their old one."

Loki scoffed. "While I cannot deny that some of the Asgard might baulk at the idea of such a change - my foolish brother is one example of that backward thinking - that does not extend to everyone. Our numbers aren't what they were in the past, but even a fraction of the Asgard joining me will be enough to restore us in the long term since we will be able to reproduce again."

“Yes.” Entrapta nodded. “And even if all Asgard refuse, you just need enough genetic diversity to avoid inbreeding, and that won’t need too many samples - we can introduce variations here as well.”

“Exactly!” Loki smiled. “In the worst case, I can restore the Asgard myself.”

Just like Thor had feared.

“Sounds like a copyright complaint waiting to happen. Does Bright Moon have copyright lawyers?”

The General was joking, but this was an issue. “How would the Asgard react to that?” Sam asked. She couldn’t imagine that they would be happy about Loki’s plans. Thor certainly had said so.

Loki frowned. “I would hope that their foolish pride will not push them into an attempt to genocide the new generation of Asgard, but in light of my experience with the High Council - and Thor’s stated views, which you witnessed - I cannot exclude the possibility.”

That sounded a bit far-fetched to Sam.

“We won’t let them - or anyone - murder your children!” Adora, of course, jumped at it.

“They would have to attack the Clones as well if they wanted to destroy all your children,” Entrapta pointed out. “But they wouldn’t do that, would they? Thor didn’t seem to have issues with you.” She looked at Hordak.

“I doubt that he would have announced a desire or plan to kill us all in our presence,” Hordak said. “However, I don’t know if he has fully considered the implications of our creation - that we are, technically, your descendants.” He nodded at Loki. “Or what the rest of your High Council will think about this. Us. He has known we are related to the Asgard since we first met, though.”

Sam agreed. Thor had only discovered Loki's involvement today, but he might have already suspected something.

"But…" Entrapta shook her head several times. "Why would he want to murder you? That would make no sense! The Asgard protect people from the Goa'uld!"

Sam bit her lower lip. Her friend was getting worked up about this entirely hypothetical threat. An entirely hypothetical threat, she realised, that Loki had brought up. And which would make sure that the Etherians would support and protect him at any cost…

*****

Catra frowned at Loki. He 'couldn't exclude' the possibility of the Asgard attempting to murder all Clones? If the Asgard tried that, it would mean war. And he had said they were unlikely to start a war while fighting the Replicators. But the possibility alone - pure speculation - had Adora up in arms. Which was awfully convenient for Loki. Of course, they didn't know much about the Asgard; they had only met Thor and Loki, and you shouldn't judge an entire species after meeting only two of them - imagine if someone had met Shadow Weaver and Double Trouble and thought all Etherians were backstabbing bastards like them! But the Asgard were protecting at least some planets from the Goa'uld, and Thor had taken the revelation that Hordak and the other clones were closely related to the Asgard, enough to fool some of their Asgard's own defence systems, without much of a reaction. He had only lost his temper once he had discovered Loki had created Horde Prime.

She cocked her head to the side and snorted. "I don't think we should assume the worst about the Asgard just because Thor doesn't like Loki."

"Of course not," Adora agreed.

"They have been protecting people from the Goa'uld," Bow added. "Without exploiting them, as far as we can tell."

"They did pose as gods, though," Jack pointed out.

Teal’c nodded.

“Yes, but…Thor said that was a mistake, and they did it to avoid, uh, influencing their culture?” Bow shrugged. “They don’t rule them or demand worship, that much we know.”

“True.” Teal’c nodded again.

“And Thor didn’t make an issue about the Clones even after he knew you were related,” Catra pointed out, nodding at Hordak. “He only got mad at you, Loki.”

“Based on prejudices,” Loki said.

“Well, he must have suspected you before,” Jack added. “He mentioned scientists breaking their laws when we met him.”

Loki sneered. “The High Council would blame me without any proof.”

Not without reason, Catra thought. Loki must have done some really nasty things in the past for that. “He does seem a bit fixated on you,” she said. “Were you close before you became enemies?” She noticed Adora and the others glancing at her but ignored them. Being siblings didn’t mean you had to be close - they didn’t know much about Asgard society.

“We are brothers,” Loki said. “We grew up together. We worked together. But when I needed his support the most, he betrayed me to the High Council.”

Catra suppressed a wince. She knew that feeling. Very, very well. But she also knew that feeling betrayed didn’t mean you were in the right. Not at all. “And ever since then, you’ve worked to show him how wrong he was?”

“If he were objective, he would have admitted his mistake,” Loki replied. “But no matter what I did, he opposed me - sometimes ruined my work. I fear that he will deny I was right even after I save our species.”

Ah, yes. That sounded very familiar. Uncomfortably so. Catra nodded. “And it was never your fault?”

“Of course not! I only did what needed to be done to save our species!” Loki spat. “But he does not want to understand that the High Council is wrong and would doom us all!”

Catra glanced at Adora. Her lover was wincing. And so were Glimmer and Bow. And they weren’t looking at Catra. Pointedly so.

“Well, we won’t let them doom your species!” Entrapta said. “And then you can make up with your brother.”

Loki nodded.

Did he really think that would work? And did he really care so much for Thor’s acceptance? Or was it, as Thor had claimed, just about being right? Was this about his pride above all? Catra knew how that felt as well. It had been her lowest point, well, one of them, when she had risked Etheria’s destruction just to win against Adora.

On the other hand, Loki was trying to save his species. If the High Council really preferred dying out to changing, even radically changing, then they were being stupid and had no right to drag others down with them.

Catra shrugged. Ultimately, Loki’s relationship with Thor wasn’t any of her business. As long as it didn’t cause a war or something. “I think that will take more than being right, but he’s your brother, not mine.”

“Whatever.” Glimmer shook her head. “In any case, we need to ensure that the Asgard won’t attack us. We can’t launch an offensive against the Goa’uld if we have to guard against them.”

“And we should explain to the High Council that our experiments are safe,” Entrapta added. “They don’t have to fear us.”

Loki snorted at that. “They fear what they cannot control.”

"They must fear a lot, then," Teal'c commented. "Most of the Universe is outside of anyone's control."

Jack frowned. "I'm not sure how welcome we'll be in their space. Thor seemed pretty pissed off that we were working with Loki."

Catra could understand that as well.

"Yes," Adora said. "But we still have to reach out to him. And we need to find out what the rest of the High Council thinks."

"And we need Daniel," Jack said.

*****

Mojave Desert, California, United States of America, November 20th, 1999

Jack O'Neill wasn't sure what had been going through Daniel's head when he had picked a retreat in the Mojave Desert to help Sha're recover from being a Goa'uld host. Did he think it would look familiar to her? Jack doubted that. "At least it's not summer," he muttered as he brought his personal stealth shuttle to a stop next to what looked like a rather cheap bungalow.

Since landing and leaving indents in the ground from the shuttle's struts would defeat the purpose of using a stealth shuttle in the first place, he left it hovering with its rear facing the door, then quickly lowered the ramp and stepped out.

By the time he rang the door, the ramp had been retracted, and the shuttle was invisible again. And the two undercover security watching over his friend and Sha're he had made had stopped staring at him.

"Coming!" he heard from inside the bungalow. A moment later, the door was opened, and Daniel smiled at him. "Hi, Jack."

"Hi, Daniel." Jack made a point of looking his friend over. Civilian shirt, jeans, liht shoes, messy hair, no harried expression or

tension… Daniel looked like he was doing fine in the retreat. And Jack felt a slight pang of guilt for what he was about to do.

"Jack O'Neill. Welcome." Sha're joined Daniel, half a step behind him, one hand on his shoulder. She was wearing a simple dress and sandals and looked better than the last time Jack had seen her, but she was tense - and her eyes kept looking around, past him and back to the bungalow's living room.

"Hi, Sha're." Jack did his best to smile reassuringly at her. "How are you doing?"

"I am doing… well," Sha're said.

Jack would have believed it if not for the slight hesitation. And the way Daniel put his hand on hers and gently squeezed.

"Come in!" His friend took a step back, wrapping an arm around Sha're's waist, and gestured towards the living room with his free hand.

"Thank you."

The bungalow looked nicer on the inside. Probably refurbished by Uncle Sam in a hurry after their return from Saqqara, and the outside had been left alone because it would draw less attention. "Nice digs," Jack said as he sat down on the chair next to the couch.

"Yes," Daniel said. "The Air Force is being generous. Or the Alliance - I don't actually know who's paying for this."

Jack shrugged - he didn't know either. "It doesn't matter; it's still the least that you deserve for everything you've done for Earth."

Sha're appeared, carrying a tray with three glasses, three bottles of beer and a plate with olive oil, salt and flatbread that looked like it was homemade. She put it down on the low table, then sat next to Daniel on the couch. So close, Jack would have trouble sliding a sheet of paper between them.

"Thank you," he told her as Daniel opened the beers. It was some German brand Jack didn't know - it wasn't sold in the Lübtheen Base. It did look expensive, though.

"They sell them in California," Daniel said, smiling a little embarrassedly. He must have caught Jack studying the label.

"If they had to fly it in from Germany itself, it would still be fine - you deserve this and more," Jack told him.

Daniel shrugged.

"Daniel told me about this beer, back home. He did not lie about its taste. It's very different from what we have at home, but very good," Sha're said as she filled her glass.

Daniel did the same. Jack would have preferred to drink from the bottle, but when in Rome… "Cheers!"

The beer was good. "I'll have to order some for the base," Jack said, holding up the bottle, before he tried the bread. Yes, definitely homemade. "Did you make this?" he asked Sha're as he dipped another piece into the oil. "It's great."

She tilted her head slightly. "I am learning how to use the… appliances." With a wry smile, she added: "The first tries were… not so good."

"They were good," Daniel insisted at once. "Much better than what bread we get here."

Sha're smiled and nodded, but it looked as if she didn't believe him. Jack studied her while he grabbed another piece of flatbread and refilled his glass. She looked… fragile would be wrong. But she wasn't at ease. That was understandable, of course, with what she had gone through, but being on Earth would be a shock under the best circumstances. "So, enjoying the desert?" he said.

"It's nice," Daniel said. "Quiet. Peaceful."

"It reminds me of home. A little," Sha're added.

"Well, we couldn't take you to Egypt," Jack said.

"Daniel explained that, yes."

"I would have loved showing you the country where the Stargate was found, but… Politics make that difficult," Daniel said.

"I understand. I have… seen the news." She nodded at the television in the corner. "It was a little scary."

And coming from a woman who had been the host of a Goa'uld queen, that said a lot about the news.

"Yes." Daniel nodded again, finished his beer, then gently took Sha're's hand again. "Anyway, Jack, while I know you'd use a stealth shuttle just to come visit, you didn't come just to visit, did you?"

Jack felt guilty again. He grimaced, then slowly nodded. "Yes. I didn't come just to check up on you. We - the Alliance - have a bit of a problem."

"And you need my help." Daniel tilted his head a bit to the side, glancing at Sha're. He hadn't let go of her hand, Jack noted.

"Well… You're our foremost expert in alien diplomacy," Jack said.

"I'm not a diplomat, Jack. I'm an archaeologist."

Was that modesty or an excuse to let them down? Probably the former; Jack knew Daniel had never shied away from helping those in need. On the other hand, Sha're needed him right now, and he hadn't yet asked what the problem was… "I guess someone forgot to tell that to all the aliens we met," Jack said, grinning.

Daniel frowned a little but nodded. "Well, someone had to talk to people. But our actual diplomats have been in contact with Etheria

for over a year now. And also with the Tok'ra. And academics of all kinds have been analysing alien cultures." He nodded at a stack of magazines next to the couch.

He was right, of course. But none of them was Daniel.

"And the Etherians have diplomats as well," Daniel went on. "They have had global diplomatic meetings, formal ones, for centuries, and they've been dealing with people different enough they could arguably be aliens - although I guess that their cultures did share basic similarities, which would not be the same with actual alien cultures. On the other hand, we mostly talked to human cultures, so it's not that different compared to Earth's experiences."

Jack nodded. "Yeah. But none of our diplomats have made first contact as often as you did. Or at all. It's not about knowing how to behave at a state dinner or making nice with people you hate - it's about understanding aliens. And having an open mind." He looked straight at Daniel. "And most importantly, it's about being honest."

His friend blinked, then frowned. "OK, what exactly did the Alliance diplomats do, and why didn't Adora and Glimmer straighten them out yet?"

Jack winced. "Thor found out about the deal with Loki."

"Oh."

"Loki… the alien you mentioned trying to save his species?" Sha're asked.

"Yes." Daniel nodded at her.

That was a correct description, but one that left out a lot of stuff. "Thor had found some clues that Loki was interested in Earth and came to warn us," Jack went on. "

"Oh." Daniel winced. "And then he found out that we're working with Loki."

“Who apparently is Asgard’s most wanted mad scientist,” Jack said, smiling wryly. “And he and Thor have some issues with each other. Big ones.” And maybe a subscription to ‘Sibling Problems Weekly’.

“And Adora and the others couldn’t explain the situation?” Daniel cocked his head to the side, frowning again.

“They did their best, but…” Jack sighed. “Thor didn’t exactly agree with the whole ‘even war criminals get a second chance if they say they’re sorry’ stance of the Etherians.”

Daniel frowned some more and pushed his glasses up his nose with one finger. “That’s an unfair view, Jack. The Etherians do not see things the same as we do - they have entirely different traditions for settling conflicts, at least compared to modern Earth, and their culture focuses a lot more on personal relationships between rulers.”

Jack managed not to grin - Daniel starting to lecture was a good sign. “Well, as we found out, the Asgard don’t share those traditions, and Thor’s focus on the personal relationship with his brother the mad scientist didn’t go over well with the Etherians. And vice versa. So…” He spread his hands. “Thor also didn’t like the idea that Loki’s trying to build the future of the Asgard, including their body and sexuality.”

“Their sexuality?” Daniel blinked.

“I thought they didn’t have sex - they grow bodies like plants,” Sha’re said, frowning.

“Well, yeah, they do, but Loki thinks that’s part of their problem, and so he’s trying to change it. Make them more like us.” Jack snorted. “Literally - he wants to know more about how we handle sex and what we find attractive in a partner.”

Daniel blinked, his mouth half-open. Sha’re seemed surprised as well, but less so.

“Anyway,” Jack said, “Thor didn’t leave on good terms, and no one knows what the Asgard will do now. That Horde Prime was Loki’s creation doesn’t help at all, of course.”

Daniel slowly nodded. “Thor should have realised that after our second meeting since they scanned Hordak. But… maybe Thor didn’t want it to be true? Or maybe there were other possibilities?”

“He wasn’t aware that Loki created Horde Prime. He thought Loki just helped with the clones,” Jack explained.

“Ah.” Daniel nodded once more. “That would fit. But that would also make things worse - another thing that Loki did that caused a lot of harm. Indirectly, but still.”

“You’ve found the crux of the problem.” As expected.

Daniel gave him a look that told Jack he had been a bit too obvious with the flattery. Even though it was the truth. “Anyway, that’s the kind of mess we’re dealing with.”

“And you want my help with it.” Daniel glanced at Sha’re again, this time with a guilty expression.

And Jack felt guilty again. “Maybe look the files over and give us a bit of advice? You more than deserve your time off, and you’re dealing with a lot.” He shrugged. That wouldn’t be enough, though. Daniel was best when he was talking to people.

“And the Etherians trust me, while they wouldn’t trust a diplomat. Not as much,” Daniel said.

“Yes.” Though Jack, Carter and Teal’c all had also agreed that Daniel was the best choice. For mostly the same reasons. They knew and trusted him. With their lives, if necessary.

“And they are right,” Sha’re said.

Jack blinked, and so did Daniel. “Sha’re…” His friend trailed off.

Sha’re smiled at Daniel. “This is important. For everyone. For the war against the Goa’uld.” She bared her teeth for a moment, and Daniel wrapped one arm around her again. “And you won’t be gone - you can… commute?”

“Yes, commute.” Daniel smiled.

“Or we can go to your house. See more of Earth.”

Jack knew that Daniel hadn’t spent much time in his nominal home in Colorado since the Stargate had been moved to Canada and the Alliance had been installed in Brussels. But there was no need to bring that up. Hell, if Daniel wanted a villa in Belgium - or anywhere else - and a personal shuttle with pilot, he’d get them in a heartbeat. It would be a drop in the budget for the Alliance. And Daniel had more than earned it.

Anything to get his friend on the job. But they better look out for Sha’re as well. And separating them… “You can help him,” he said, looking at her.

She seemed surprised for a moment. Then pensive. “I have seen a lot. Much of it was…” She pressed her lips together. “But some was useful.”

Daniel hugged her, then glared at Jack. “You don’t have to do this. You already got debriefed. And that was…”

That wouldn’t have been pretty, no. Jack could imagine. But he also could imagine that doing something to help the war against the Goa’uld, or just doing something, would help Sha’re.

And, ultimately, it was her decision.

Especially if it helps fix the mess with the Asgard, he thought. And felt a pang of guilt again.

*****

The Asgard Question Part 3

Alliance Headquarters, Brussels, Belgium, November 21st, 1999

Daniel and Sha’re shouldn’t have come. They should have stayed in their retreat in the desert until Sha’re was over her ordeal. They had been separated for years; it was only fair that they could be together, just the two of them, as long as they wanted now.

And yet, Adora couldn’t say this. It would make her a hypocrite - she hadn’t said anything when Jack had announced that he would go and ask Daniel to help them. Well, she had voiced some concern, but she hadn’t stopped him.

So she smiled at the two when they entered the meeting room. “Hi, Daniel! Hi, Sha’re! Jack!”

Catra just waved from where she was sitting - and she had once again propped her feet on the table!

“Hi, Adora.” Daniel smiled and nodded at them.

“Hello.” Sha’re sounded a little shy. And she was avoiding Adora’s eyes - no, she was looking around in the room. “This is your office?”

“Ah, no, that’s a meeting room. I was just doing some work here while waiting for you,” Adora explained. And then wanted to wince - this sounded like Daniel and Sha’re should have hurried.

“It’s her second office, actually,” Jack said. “Not officially, but she’s so often in here, they stopped using it for anything else.”

Adora winced at that. She had noticed that the minibar had been stocked with all the drinks she and the others preferred, and this was the meeting room they always used for, well, meetings with their friends, but… “Really? Shouldn’t I have been told that?” Or asked, actually?

"It's the mark of a good staff and aide that such things are done without bothering the commander. It's not your job to worry about your office," Jack said.

"Yeah." Catra agreed. "Let people do their job and do yours." She flashed her fangs and added: "Unless they screw up, of course. Then, you need to straighten them out. But they've been doing well so far."

Adora frowned at her lover. That was… well, not wrong, but the way she said it was not too nice. But they had other things to worry about than their offices. Though if this was her meeting room, then maybe she could get a few things installed that would… Later, she reminded herself. "Anyway, please sit down. And thank you for interrupting your vacation."

Daniel shrugged. "Jack was very persuasive."

What? She glared at Jack. "He said he would ask you if you could help us!"

"Hey! That's what I did!" Jack pouted for a moment, then frowned at Daniel. "I didn't push you!"

Daniel grinned in return. "I didn't say that. But you did lay out our problems with the Asgard quite clearly. And it seems our relations with them are currently strained."

"Well, so it seems," Adora agreed. "We don't actually know what they will do. Or think of us." Though they had some ideas…

"But Thor was pissed when he left, and not without reason," Catra added.

"So I've heard. And I've read the reports on our flight here," Daniel said. He sighed. "I am not sure if things would have gone differently if I had been there. Both Thor and Loki seemed set in their views."

“But they’re brothers!” Adora protested. They just needed to realise that! “Thor is biased against Loki because of their past, but both want what’s best for their species.”

“But they don’t agree on what’s best for the Asgard,” Daniel retorted. “In fact, Thor seems to think that Loki’s vision would be a catastrophe even if Loki succeeded. So, it’s not just about Loki’s past, uh, deeds. Misdeeds.”

“You mean his crimes,” Catra cut in. “We did catch him trying to fake a Replicator outbreak to fool the rest of the Asgard, remember?”

Yes, Adora knew that. Loki had tried to trick his people. That wasn’t very remorseful - but he was desperate to save his species.

“Yes. And Thor and the other Asgard remain unaware of that,” Daniel said.

Catra nodded. “If Thor knew about that, he probably would’ve been angrier.”

“I’m not sure it would have mattered - he was already fuming,” Jack said.

“You can always get angrier,” Catra objected. “He wasn’t attacking us or swearing vengeance or anything.”

Adora sighed. That was another secret that would cause trouble when it would be revealed. “We should never have hidden that we’re working with Loki.”

“We don’t have a duty to tell the Asgard everything,” Catra said. “It’s not as if they told us anything.”

“But this concerns them,” Adora pointed out.

“We don’t know what they do that might concern us.” Catra shrugged. “They do control planets with humans who were taken from Earth. You could argue that that is not very honest either.”

"You could, but pointing out wrongs on the other side doesn't often help with making things right," Daniel said. "Sometimes, not even when you do it to help fix what's wrong. Certainly not when it's used to defend your own faults."

Adora nodded. That was true!

"So, what do you suggest? Sell out Loki?" Catra asked. "That would be breaking our deal with him."

"We won't do that to him! He was dealing in good faith with us!" Adora protested.

"As far as we know," Jack said.

And Catra nodded. As did Sha're, who had been very quiet so far.

Adora frowned. They couldn't assume the worst of everyone!

Daniel cleared his throat. "There's a few things we need to consider - and we need to talk to Loki. I think."

*****

Research Station Alpha, The First Moon of Enchantment, November 22nd, 1999 (Earth Time)

"I fail to see why you should even entertain the notion of contacting the Asgard again before we have finished our project. My stubborn brother has made his opinion clear, and experience proves he will not budge."

Samantha Carter rolled her eyes at Loki's words. It wasn't very diplomatic, but she didn't care any more. He had exhausted her patience.

"His opinion, which was clearly influenced by his personal, ah, issues with you," Daniel said - Loki hadn't exhausted his patience. "We don't know that the High Council shares it."

“He would not dare eat a meal without the permission of the High Council, much less refuse the salvation of our species without the High Council’s agreement.” Loki sniffed. “I’ve told you this before.”

“Yes, but how can he know what the High Council will think when they have not yet been informed about this project? By now, he will have told them, of course, but back then, he had not yet been able to do that, so he was acting based on assumptions - and you told us yourself that his assumptions were wrong, didn’t you?” Daniel smiled.

“I did, but that was about his assumptions about me, not about the High Council.” Loki sounded petulant.

“And yet, both are assumptions.” Daniel shrugged. “In any case, I doubt that it will do any harm if we contact the Asgard. Any additional harm, at least.”

“They might construct this as another attempt to interfere with their precious Asgard destiny and take offence.” Loki sneered.

If Sam hadn’t already known that he had deeply-rooted issues with his brother and the High Council, and probably the rest of the Asgard as well, this would prove it. Loki was usually at least acting calm and collected, in control of everything. Now, he was showing more emotions in a day than he had during all of her visits before put together.

“That wouldn’t make any sense!” Entrapta protested. “We have only talked to you and Thor, so it’s just logical that we would want another opinion to ensure we have all the data we need to make a decision about the Asgard.”

“Unfortunately, many of those who should be making decisions based on rational thinking seem to lack the capacity for it,” Hordak commented.

“Exactly!” Loki nodded sharply. “My former peers are letting their emotions rule them! And base emotions such as fear and pride, at that!”

Look who's talking, Sam thought. Out loud, she said: "They are acting based on past experience. That's not irrational."

"It's science," Entrapta agreed. "Unless you're unwilling to alter your views based on new data. Then you're not acting like a scientist should."

"Exactly!" Loki repeated himself. "In the past, my projects failed due to lack of support. This time, with your support, I will succeed!"

At least you didn't say: 'I cannot fail, only be failed!', Sam thought. But based on Loki's past comments, that was likely what he felt.

"So we hope," Daniel said with a smile.

Sha're, though, who had been silent until now, shook her head. "Failure is always possible. Something that the false gods often fail to accept or understand."

"Do not compare me to those parasites! They are mere scavengers, stealing the technology of their betters to fool the gullible into worshipping them as gods!" Loki hissed.

To Sam's surprise, Sha're didn't flinch. "If you don't want me to compare you to them, do not act in a way that reminds me of them." She looked at Daniel. "The Tau'ri and the Etherians are helping you. They are even risking a conflict with your own people for you. The least you can do to repay them is to show some respect for those not so fortunate. The followers of the false gods are not gullible - they have been raised from childhood to worship them as gods. That is not something you easily overcome."

Loki scoffed. "To mistake mere technology - and often not very impressive technology at that - for supernatural or divine power is the sign of a… naive mind."

"That is not true," Daniel interjected, a bit more sharply than Sam was used to from him. "You cannot expect people who have never been taught science to question their beliefs when they have no

reason to do so. The Goa'uld posing as gods act exactly like the gods they pose as are said to act. By now, they have been able to mould their follower's faith. Their dogmas have been entrenched for millennia. This kind of conditioning cannot easily be overcome. You would need to teach them about technology first and show them that what they consider divine power is something they could duplicate with the right tools - and that requires a lot of effort as well."

Loki scoffed. "That may be so, but the High Council has no such excuse. They were not raised in ignorance, yet revel in it anyway."

"Then that is one more reason to contact them," Daniel said. "How can we hope that they will change their opinion if we do not give them the opportunity to learn more?"

Loki glared at him. He really couldn't stand losing, whether an argument or anything else, Sam thought.

*****

Alliance Headquarters, Brussels, Belgium, November 23rd, 1999

"...and the police have not yet commented on whether or not they will resume the investigation. While no sign of foul play has been discovered, several relatives of Jones want the authorities to investigate 'curses and other foul magic', claiming that the pile-up near Dallas wasn't caused by Jones' 'brake-checking' a truck but 'evil outside interference'. The new Attorney General of Texas hasn't commented on the case yet, though, with the autopsy results showing that Jones was inebriated at the time of the accident, it seems unlikely that they will resume the investigation."

"Thank you, Carl. While the Dallas case seems like a non-starter, it is not the only case where the police are faced with claims that magic was used in a harmful way. With increasing signs that Earth's magic tradition is not quite as flashy as Etheria's, many people are afraid that what would have been dismissed as mere

bad luck or a wrong decision a year ago is actually the result of a witch using magic to curse or beguile someone. According to the latest count, three prominent divorce cases are claiming that the alleged infidelity was actually caused by magic influence, and the number of reports that claim someone was 'roofied with magic' is growing quickly. Some politicians are already calling for literal witch-hunts, despite the…"

Catra rolled her eyes and switched channels. "Took them long enough to find new excuses for their own faults," she muttered as a laundry ad started to play.

"What did you say?" Adora asked, looking up from her magazine.

"They're blaming 'witches' for their problems," Catra said. "If nothing's done about this, we might see witch-hunts in the Alliance." Too many other countries already had those - mainly but not limited to those where religious fanatics were in power.

"What?" Adora frowned. "That would go against all agreements! And their own laws!"

Catra shrugged. "Not if they claim they're just investigating criminals. And it's not completely impossible that someone is using magic to hurt someone." If you had the talent and felt you were hurt, why not strike back?

"But…" Adora blinked. "They don't have the sorceresses to investigate such things. How could they tell if magic was used without someone who can do magic?"

"According to the news, by questioning the suspects until they confess. I don't think they mean torture like in the old witch-hunts, but…" Catra shrugged again. Between the religious fanatics who hated all magic and the idiots who thought this was a great opportunity to blame others for their actions, and the examples from other countries…

"We need to do something about this," Adora said, frowning as she put down her magazine and got up from the couch to get

back to her desk.

And now I've ruined your break! Catra thought, pressing her lips together.

"...has voiced concerns about the continued growth of the worship of She-Ra. While the movement is most numerous in India, where a small minority claims she should be part of the Hindu pantheon, calls for her canonisation have also been heard in Europe, even though the Vatican has firmly opposed any such proposals. In the Middle East, several fatwas have been issued that…"

Yeah, no, this wasn't the time to tease Adora about her church. Catra switched channels again.

"...and the latest statistics show a concerning trend that, while currently overshadowed by the shift to a war economy, might lead to significant problems in the future as entire industries are rendered obsolete by advanced technology and magic. But it's not all doom and gloom - many experts think that the vast number of underdeveloped planets that are currently controlled by the Goa'uld represents an untapped potential market that will be a boost to…"

"That's what we need," Catra muttered. "Earth colonising the galaxy." Or was that neo-colonising? Was that a word? She snorted and pushed the button again.

"...have vetoed another resolution that condemned the Etherians for their 'aggressive violation of the sovereignty of other countries in a blatant attempt to enforce their imperialistic values on Earth'. Though the widening gap, both in political values and power, between the countries that joined or are associated with the Alliance and the countries that are not part of it, is a concern that needs to be addressed by the United Nations. If the majority of the countries are effectively at the mercy of the West, then that will have repercussions for the entire world and…"

“We need more sorceresses,” Adora interrupted the next ad on the television in her office - Earth had way too many of them, and they were far too repetitive once the novelty had worn off, in Catra’s opinion. And it had worn off long ago. “Earth needs to be able to investigate and disprove such claims about curses - and deal with the actual curses.”

“Send a memo to Castaspella?” Catra suggested. “They might have some sorceresses who don’t want to fight in the war but wouldn’t mind police work.” Not many, though. Not nearly enough.

“That won’t be enough. We need sorceresses from Earth.” Adora nodded. “We need a training program that actually works. Sending a few students to Mystacore is not enough.”

And that was still just in the start-up phase, anyway. “Tell Glimmer to handle it,” Catra told her lover. “Between her, Micah and Castaspella, they should be able to figure things out.” She didn’t add: ‘You have other things to do’, but she was sure Adora understood it anyway.

Judging by the way Adora pouted at Catra, she did.

*****

“Hello, Jack!”

“Hello, Anise.” Jack O’Neill nodded at the Tok’ra as he entered the meeting room. “Entrapta.”

“Hi, Jack!” Entrapta waved at him with her air, nose buried in a tablet in front of her, with two keyboards held by her hair at her sides.

Anise’s stance shifted slightly, and Jack knew she was releasing control before she spoke in Freya’s voice: “Hello, Jack.”

“And hi, Freya.” He nodded again. Polite and friendly. The Tok’ra were allies. And Freya was a lovely woman and not quite as

focused on having his baby as her counterpart. Her interest in him would have been flattering - but still not wanted - if she weren't a host to a snake.

"How are you doing?"

He shrugged. "Oh, you know - the usual. Kicking Goa'uld ass, dealing with paperwork…"

Freya laughed, but it was Anise who answered. "I see. Entrapta has been filling me in on the progress of her cloning research."

"Yes!" Entrapta looked up. "Unfortunately, it's not very useful for the Tok'ra since they need sapient hosts, not just bodies, and we haven't yet solved how to transfer someone's consciousness into a new body, like the Asgard do. Horde Prime knew how to do it - probably better than the Asgard since he did it so quickly and so often, but we lack data about the Asgard's process, except for some comments from Loki, which seem to indicate that it's not a short or easy process. Unfortunately, Horde Prime's data was lost when Adora turned his flagship into a plant, and the Clones didn't know anything about it. They haven't been interested in restoring it, anyway - which is kinda understandable, but still a loss for science. I could ask Loki, I guess, but if he told us how the Asgard do it, then the Asgard might get more annoyed with us and him for taking their secrets or something. Anyway, that's what we're currently doing!"

Jack blinked and tried to digest all that. "So… you're trying to transfer minds?"

Entrapta nodded. "Well, that would be the goal. Though we probably shouldn't do that unless we're sure it won't have side effects on us. We don't know everything we need to know about a person's consciousness yet. I mean, we know how the brain works, and the memories, but we're not sure if that's all or if there's more. Like, can you copy someone's consciousness into a new body and have a copy of the person? Or would something be missing? Or is your consciousness unique, and you can only

transfer it but not copy it?" Entrapta shrugged. "I can think of a few experiments that would help with finding out more about it, but they're kinda… questionable?" She cocked her head to the side.

"Questionable?" Anise asked, raising her eyebrows.

"Well, what if something goes wrong, and we lose the consciousness we want to copy? Or it suffers data loss during the process? It's a very delicate process. And what about magic? Is that tied to your consciousness, or is it tied to your genes? What if your new body lacks the talent? And what if you can copy a consciousness but not their powers?"

"Or what if you *can* copy someone?" Jack said, smiling thinly and trying not to show his actual thoughts about the whole idea. "Multiple times?"

"Oh!" Entrapta perked up.

"And what about their friends and lovers?" Jack went on before Entrpata could get carried away.

She blinked again, looking at him with her mouth open. "Oh. Yeah, I guess that would be… weird. And a problem."

"I concur. The implications of duplicating someone, and the effects of such actions on their relationships, and society in general, seems rather complicated," Anise said.

"That's one way to say it," Jack said.

"Maybe we should ask Loki if the Asgard have tried that," Entrapta suggested.

"I think we don't want two or more Lokis," Jack said. He could imagine Thor's reaction.

"But they must have thought about it - it's kind of obvious, isn't it?" Entrapta said.

"It might be a cultural taboo - or there might be, as you speculated, reasons why you cannot copy people," Anise said.

That was above his pay grade. Or should be. Jack shook his head. "Best not to rock the boat. We're still dealing with the problems caused by Loki's research into new bodies for the Asgard." And he didn't want to know how the rest of the Alliance and Earth as a whole, would react to Entrapta's speculation about copying people.

Though he'd have to check with Carter about all of this. She would know just how likely all of this speculation was.

And speak of the devil… Carter, Teal'c, Daniel and Sha're entered the room, interrupting the disturbing discussion. Jack checked his watch as greetings were exchanged. Adora, Catra, Glimmer and Bow were still not here for the meeting with Anise. And while arriving just on time was something Catra did, Adora usually was always early. And overprepared, of course. And Glimmer or Bow were never late when they could help it.

So, something was probably up on Etheria.

*****

"Hello, everyone!" Adora said. She smiled at the others in the room, feeling slightly embarrassed for almost being late. But their discussion about magical training had gone on for a bit longer than expected. And hadn't been very successful - at least, Glimmer hadn't been very optimistic about recruiting more sorceresses for police work instead of the Alliance forces.

But she had to focus on the task at hand now. She took a deep breath and nodded at Anise. "Thank you for coming, Anise and Freya."

"We're allies - and friends," Anise replied. "Of course, we'll come when you need us."

“And when you need us,” Adora heard Catra whisper under her breath.

She didn’t react, though. “Yes. Do you have more information about the state of Apophis’ court and forces?”

Anise nodded. “Our operatives have reported that he’s still conducting a purge of his court. He has culled at least a dozen Goa’uld and triple that number of Jaffa for treachery or incompetence - which he seems to use interchangeably.”

“Your god cannot fail. He can only be failed,” Jack commented.

“And failure is treachery,” Daniel added.

“Yes,” Teal’c said, nodding. “That is what the false gods teach their followers.”

“The loss of his queen has weakened his position. He has taken steps to hide that fact - he has killed the witnesses - but he cannot conceal it forever. Already rumours are spreading that she was hurt during the attack - or that she was behind it,” Anise went on.

Adora looked at Sha’re. The woman smiled at that, but she looked more resigned than satisfied. Of course, she would have known the other women in Apophis’s harem, who had been murdered just for seeing Amaunet being captured.

“That will greatly weaken his position,” Sha’re said. “Losing his queen is already a heavy blow, but rumours that she betrayed him? And reports of an attack on his palace, with significant damage? His rivals will probe for more weaknesses. And he will have purged some of his senior commanders and subordinates, in addition to those you killed, while his faith in the remaining ones will be shaken as well - and justly so. Most of the Goa’uld serving him will be looking for an opportunity to betray him, and the rest is only loyal out of fear.”

"Yes," Anise confirmed. "Our own assessment concurs. Even worse for Apophis, it seems his hold on his Jaffa is weakening as well."

"It is?" Teal'c leaned forward.

Anise nodded. "Our operatives confirmed that some of the surviving Jaffa who have fought you are questioning their god. In secret, of course."

"Do you know why they are doing this? As a rule, Jaffa have been fanatically loyal to their Goa'uld lords," Daniel said.

Anise lanced at Adora. "We are looking into it. We have heard that some of them talk - or whisper - about a 'golden goddess'."

Adora closed her eyes. Not again! "I am no goddess!" she muttered.

"Ah, yes," Daniel said. "Adora returning magic to the planet, and the effects of this action, especially her healing, would be able to shake even a Jaffa's faith. Though I would have expected Apophis to claim this, ah, deed, for his own."

"He tried, but too many Jaffa had witnessed the event, and killing them made even his followers question why he would heal them in the first place only to execute them afterwards." Anise shrugged. "It's too early to say how this will shake out, but it is another problem for Apophis to deal with when he's already dealing with multiple crises."

"That sounds like Apophis is a prime target for an attack," Jack said. "The only question is who will strike at him first - a rival snake or us."

"He still has a tight hold on his forces on other planets; rumours are spreading through his systems, but slowly. And hearsay will not impress people as much as personal experience or at least the testimony of first-hand witnesses," Anise pointed out.

“And we need to settle our problems with the Asgard before we can launch an attack on Apophis,” Adora added.

“Ah, yes,” Anise nodded. “We don’t know much about the Asgard - but the Goa’uld consider them a peer power, at the very least, and respect the treaty with them. Though last we heard, their goals aligned with ours. What happened to change that?”

“Our goals still align with regard to the Goa’uld Empire,” Adora said. “As far as we know.”

“We don’t know much about the Asgard either,” Glimmer added. “We only met two of them, but one of them is Thor, the Supreme Commander of the Asgard Fleet and member of their High Council. And he took offence at us helping Loki, who is trying to find a cure for their genetic degradation.”

Anise looked surprised. “They do not want your help?”

“They don’t trust Loki,” Adora explained.

“Apparently, he violated a lot of their laws in the past,” Jack said. “And they think we’re the same.”

“Ah.” Anise nodded. “I can see how that would be a problem.”

“Hindsight is always 20/20,” Jack said with a shrug.

There wasn’t much to add to that. They should have been honest from the start.

“So, what are you planning to do?” Anise asked.

“Talk to them and explain that we only want to help them,” Adora said.

“With the entire High Council, not just Thor,” Glimmer added.

“What if they do not believe you?” Anise leaned forward a little. “And what if they do not want your help? Or Loki’s?”

Andora grimaced. “That’s a tricky question. They can’t forbid Loki from working on this - well, they can, they did, but it’s not right. That would be like ordering him to commit suicide since if their genetic degradation continues, he won’t be able to get a new body and die.”

“And no kingdom has the right to order people to die,” Glimmer added.

“Well, there’s the death penalty,” Jack cut in. “And sometimes, you have to order soldiers to their deaths in a war.”

Adora frowned. The death penalty was barbaric. Brutal, cruel and such a waste. But Jack was correct about soldiers in a war - even though she’d do anything to avoid giving such orders, she would do it if there was no other way.

“And even without Loki’s past deeds, ah, mudding the water, it’s understandable that the Asgard would resent an outsider interfering with them on such a fundamental level,” Daniel said. “Loki *is* trying to define their future - without their approval.”

“If they want to die, then why should he listen to them?” Catra asked. “Once they’re gone, it doesn’t matter to them any more.”

“Well, their legacy obviously matters to them,” Daniel retorted. “They might consider this an appropriation or usurpation of their species’ identity, history and culture. Imagine if this happened to your kingdom.” He looked at Glimmer.

Glimmer frowned in return. “I wouldn’t want my kingdom to die rather than change.”

“Life means change,” Bow added. “Nothing can last without adapting and changing.”

“The Asgard tried, in a way at least,” Sam said. “They have been transferring their consciousnesses into new bodies.” She frowned.

Daniel nodded. “That would make it likely that their society is deeply conservative and inherently opposed to changes. Even at the cost of their own and their species’ existence.”

“It might be why they are facing extinction in the first place,” Sha’re spoke up. “On a fundamental level, they stopped changing, stopped adapting - stopped evolving.”

Adora nodded. That made sense. She noted that Sam seemed surprised by Sha’re’s words.

*****

Sha’re is more eloquent than I expected, Samantha Carter thought - and immediately felt ashamed for the assumption. Just because the other woman had been raised on Abydos didn’t mean that she would be… simple might be a good word. She had been married and living with Daniel since the first Stargate mission, after all, and Sam knew how prone to lecturing Daniel was. And then Sha’re had been possessed by Amaunet for years. Of course, she would have picked up more than just intel while she had been a prisoner in her own body. Sam knew from personal experience that if all you could do was observe, you did that - even though, sometimes, you’d rather not.

That didn’t mean she was right, of course. “That seems a bit philosophical,” Sam said.

Sha’re looked at her, but Daniel replied before she could: “It is - but that doesn’t mean we should dismiss the idea.”

“It’s not a philosophical point,” Sha’re said, frowning a little. “If you are no longer concerned with evolving, merely with maintaining the current state, you tend to grow lax as familiarity breeds contempt. Without a challenge, you don’t rise above your current level.”

“That sounds like a description of the Goa’uld,” the General cut in. “They’ve been keeping things the same for thousands of years.”

“Not quite,” Anise retorted. “While they might not have advanced their technology very much, which would support your assessment, their internal struggles did keep them from growing too complacent. One also has to consider that due to their inherent traitorous nature, any technological advantage gained by one System Lord tends to be quickly stolen and spread to their rivals. So, for extensive research and development to be profitable, a Goa’uld has to not only develop new technology - and advanced enough to render existing technology obsolete - but also build and deploy it in sufficient quantity to overpower their rivals without them noticing that buildup. Sufficient to not only topple the most powerful Goa’uld, namely Ra, but also defeat the coalition of their rivals that would form as soon as their power was revealed. This has been attempted multiple times in the past, with varying degrees of success, but never did it fundamentally change the balance of power under Ra - or Ra himself.”

“But Ra’s gone for a few years already,” the General said.

“And you can be assured that the System Lords have been busy trying to find a decisive advantage over their rivals ever since they didn’t have to fear Ra’s wrath any more,” Anise said. “We have been striking at the research projects that we found - such as that laboratory we sabotaged when we met you.”

“But there might be other such projects,” the General said. “Wunderwaffen.”

“Wunderwaffen?” Anise cocked her head to the side.

“A propaganda term from the Second World War on Earth,” Sam told her. “It referred to revolutionary weapons that were meant to change the outcome of the war, although they never were deployed in numbers high enough to actually have a significant effect on the war.”

“Ah.”

“So, let’s hope that whatever the snakes are working on in secret follows that example,” the General said.

“The sooner we strike at the Go’auld, the less time they have to develop new weapons,” Glimmer said.

“But as soon as we reveal ourselves, they will have a reason to band together against us,” Adora cautioned.

“What’s Apophis working on?” Anise asked, looking at Sha’re.

“He did not share all he was plotting with Amaunet,” she replied. “She was privy to some secret troop deployments but not to any such research projects. If she had been, she might have tried to gain control over it to topple him.”

“You’ve received that intel already,” the General told Anise with a slight frown.

Sam pressed her lips together at the implications as well. They wouldn’t hide that kind of information from their allies - especially not their allies with the best spy network in the Goa’uld Empire.

Anise nodded. “We digress. We were talking about the Asgard.”

“Right.” Adora nodded. “We’ll have to meet with them. Explain our point of view.”

“And without Loki there,” Catra added.

Sam agreed. Loki wouldn’t like that, but as the meeting with Tor had shown, if they wanted the High Council to listen to them, they couldn’t have Loki interfere. And his mere presence would escalate matters if Thor’s reaction was an example of the general view of the Asgard.

“Is this a meeting between the Alliance and the Asgard? Or Etheria and the Asgard?” Anise asked.

That was a good question. The agreement with Loki was, technically, between the Princess Alliance - or Bright Moon - and Loki, but SG-1 had been present as well, and it wasn't as if representatives of Earth had protested when they had been informed about it. However, they likely wouldn't have realised the consequences of the deal at the time. And while the Tok'ra, Earth and Etheria were in an Alliance against the Goa'uld, Sam doubted that the Asgard would draw that distinction. On the other hand, the Asgard might consider the Tok'ra just another faction of the Goa'uld.

"I think it would be best if you were present as well," Adora said, smiling. "So they won't feel that we're hiding something else."

"Well, we're not going to reveal our military secrets to them, I hope," the General commented in a joking tone that didn't quite hide his concern - at least to Sam.

"Of course not!" Adora said.

"But we would want some representatives of Earth with us as well, then," Daniel said. "I mean, representatives other than us. Elected ones."

"Of course," Glimmer said. Though the way she looked at Adora, Sam couldn't help thinking that they would much prefer to handle this with SG-1 and the Tok'ra.

"Great, more politicians," the General muttered.

"I was thinking more about diplomats," Daniel said.

"Same thing," the General retorted. "They'll mess this up."

"I wouldn't go that far," Daniel said.

"I would," the General insisted.

"I'm sure we can find a reasonable diplomat or two on Earth," Glimmer said.

Catra scoffed. “You remember our tour of the United Nations, do you?”

“That was the United Nations. We’re talking about the Alliance countries,” Glimmer replied. But she did look a little unsure, in Sam’s opinion.

“They will send a delegation, I think,” Daniel said. “So every major member of the Alliance is represented.”

“So… at least four? With assistants?” Glimmer shook her head. “That won’t work.”

“Well…” Daniel shrugged. “Etheria’s represented by all of you.” He nodded at Adora, Glimmer, and the others.

Glimmer had the grace to blush, Sam noted. But she shook her head anyway. “Technically, it’s just me for Bright Moon and Adora for the Alliance as a whole.”

“Ad me as a science expert,” Entrapta said with a smile.

“Then the countries of Earth could claim the same,” Daniel said.

“We’ll ask them to send a delegation,” Adora said. “It’s only fair.”

“Great,” the General muttered.

*****

The Asgard Question Part 4

Stargate Command, CFB Goose Bay, Newfoundland, Canada, November 25th, 1999

Catra wasn't impressed by the Alliance delegation from Earth - the official Alliance delegation, at least. Four diplomats, one each from the United States, the United Kingdom, France and Germany, with their assistants. At least they didn't have guards with them - it was already a huge delegation. "A few more, and we would outnumber the Princess Alliance meetings," she muttered as she leaned against the railing leading to the Stargate.

Glimmer, on her left, snorted at that. Adora, on Catra's right, didn't.

"Maybe we could lose them on the way? Have the gate malfunction and send them somewhere else?" Catra suggested.

Glimmer chuckled, and Adora finally reacted: "Catra!"

"I think that would be possible," Entrapta said. "We would have to shut the gate down and then dial to another address. But I don't think we could do that accidentally."

"Catra was joking," Adora told her.

"Ah."

"It's still too many people in the delegation," Glimmer said. "At least they agreed that they couldn't all have a say in the actual talks. But they'll badger us between the meetings."

"And some of them will want to speak up anyway, I bet," Catra said. The US Secretary of State, for one - the man didn't strike her as being content to observe in silence. And if he spoke, the other three diplomats would want to speak as well. They could only hope that the man's assistant would be able to control him - but the woman was an unknown; at least the Princess Alliance had no

records of a Dr Weir talking with them, and she hadn't been part of Stargate Command either.

"Well, yes. For all their talk about democracies being different from kingdoms, their leaders have the same egos as princesses," Glimmer said.

"You would know." Catra grinned when Glimmer frowned at her.

"Catra!" Adora hissed again. "They're coming over!"

"About time."

But Catra straightened when the Earth delegation approached them. No need to antagonise them from the start. She could wait until they gave her a reason.

Besides, Jack probably had annoyed them already - at least judging by the way he was trying not to grin, and half the diplomats tried not to show their annoyance. Weir, though, looked perfectly composed, Catra noted as everyone greeted each other.

"Alright. Since everyone's here, we can dial to the temporary base," Adora said.

"From which we will travel to the Asgard planet, right?" the Secretary of State asked.

"Yes, once the Tok'ra delegation has joined us," Glimmer told him. "As you were told at the briefing. And it's not actually an Asgard planet - it's a planet under their control, but nominally free."

"Yes, a Viking planet." The man nodded.

"Actually, it's Norse. They don't call themselves Vikings," Daniel added. "That was a term that originally just described a sea journey - at least according to the latest theory. Unfortunately, unless and until we resolve the current tension with the Asgard, we can't contact the Cimmerians to learn more about this. It's a fascinating opportunity to find out more about our own past."

Most of the diplomats smiled politely at that, Catra noted. They probably didn't like the fact that Daniel would be talking directly to the Asgard. Well, sucked to be them. She trusted Daniel a lot more than she trusted any of them.

"We should have taken a ship there," the American Secretary of State commented. "Show the flag."

"That would take too long. And they might not want to let us visit one of their planets with a spaceship," Jack said.

"And we might not want to show our ships to them at this point," the British diplomat added. "Just in case the negotiations fall through."

"That's why we're not bringing all of our bots with us," Entrapta said. "But we'll take Emily with us - they already saw her. But don't worry; she can keep all of us safe!"

"That didn't seem to reassure the delegation as much as Entrapta thought it would, Catra noticed.

Well, that's not my problem, Catra thought as the Stargate began to dial.

*****

Gate Area, Cimmeria, November 25th, 1999 (Earth Time)

"As often as we visit here, we might as well ask for an embassy," Jack O'Neill commented as he walked down the Stargate's ramp. "Would save us some trips."

"Shouldn't we wait with such plans until we have straightened things with the Asgard?" Daniel asked as he joined Jack. "I don't think they would want us on one of their protected planets if they think we're trying to subvert their species. Of course, even if we manage to smooth out our relations, they might be concerned about our effect on the Cimmerians - our mere presence would affect them unless we completely isolate ourselves, and I think

that wouldn't be realistic. The Asgard would have concerns about our influence here - not unreasonable ones, actually, given our history."

Jack snorted. "I was joking, Daniel."

"Ah." Daniel pouted a little - his friend tended to take Jack a bit too seriously - but when Sha're leaned into his side and whispered something into his ear, he quickly brightened.

Jack didn't make a comment about young love or anything. The couple had gone through too much for that to joke about it. And it would make him sound a bit jealous. Not that he was jealous, of course - he was perfectly happy with his current life. Mostly.

"The Asgard's sensors do not seem to have been upgraded since our last visit, sir," Carter reported.

He nodded. He had expected that - it hadn't been too long, after all. It was still a good sign, though. If the Asgard had upgraded the defences here, despite their war against those killer robots, then that would have meant they were pretty concerned about the Alliance. Or about the Goa'uld. Either possibility would have been bad.

"There's a ship in orbit," Entrapta said. She was looking at the sky, her visor down and slightly glowing.

"Can you spot it from here?" Jack asked.

"Yes. But Emily detected it first and then fed me her sensor data so I knew where to look. I could have spotted it without Emily's help, but it would have taken me longer. And my visor's software isn't as good at getting target data at that range as Emily's - it's mostly optimised for short-range analysis. And, of course, eye protection!"

The bot bringing up the rear of their delegation - which was too big for Jack's taste - beeped.

He nodded. He wasn't happy with revealing such information where they knew the Asgard were listening, but Adora wanted to be as honest as possible to rebuild trust. Jack doubted it would work - Thor probably thought that was an act or misinformation.

Well, Jack could live with that. He glanced at their guests.

The diplomats looked around like tourists, not quite gaping but clearly out of their element. The Secretary of State was bending over to look at a patch of grass. "This looks exactly like grass back home," he commented.

"That is grass from Earth, sir," Carter told him. "Genetic analysis showed that it was taken from Earth - Scandinavia, actually - at roughly the same time as the Cimmerians were moved here. If it had been introduced by the Ancients when they built the Stargate, the genetic drift would have been more significant. It was in the briefing."

The man straightened and frowned at her. Probably annoyed at the implication that he hadn't read through all the files provided to them. Well, Jack hadn't read them in-depth either. He trusted Carter to tell him about stuff like that if it became important.

"It's a reminder that the Goa'uld were not the only ones to operate on Earth in the past," Weir said. "Both them and the Asgard took humans from their homes and settled them on alien planets."

Jack grinned. That was a nice dig at the Asgard. They might complain about Loki's plans, but they didn't have a lily-white vest either when it came to manipulating another species. Weir was sneakier than he had first thought - then again, the US government wouldn't send dull people on this mission. "Well, everybody's here! So…" He cleared his throat. "Earth to Asgard, anyone home?"

"You're early."

That sounded like Thor. Quite a bit ruder than last time, too.

“Hi, Thor! Better early than late. If you’re not ready, we can wait.” Jack shrugged. “I brought my Game Boy.”

The Secretary of State coughed at that, but Jack ignored him as he ignored the snorts and chuckles from his friends.

“That will not be necessary. We require that you allow us to scan you for prohibited and dangerous items.”

“We’re here to talk to you, not to fight you,” Adora said, frowning. “But didn’t you scan us as soon as we arrived?”

That was how their anti-snake defence system worked, after all.

“Prepare to be scanned.” Apparently, Thor ignored the comment.

Jack looked around, but the gate area hadn’t changed. Anise was tense, as expected - they had informed Thor that a Tok’ra would be coming along and had had assurances that she wouldn’t be treated as a Goa’uld, but… you could never be sure, could you?

“Oh, the ship’s using her scanners!” Entrapta piped up. “Quite powerful ones!”

But were they working at full power? Probably not. They would also be scanned once they arrived at the actual meeting location, before meeting the High Council.

“The machine has to stay behind,”

“Her name is Emily!” Entrapta protested. “And why? She hasn’t done anything wrong.”

“Her weapon systems make her too dangerous for the meeting.”

Jack wondered what Thor would say if he knew how dangerous She-Ra was.

“Emily will guard the gate here,” Adora said.

“It’s still unfair!” Entrapta pouted. The bot beeped, and she turned to look at it. “You haven’t done anything wrong! You aren't able to replicate yourself, so there's no reason to be afraid of you!”

“But we’re visiting the Asgard. Their home, their rules,” Weir said.

For an assistant, the woman wasn’t afraid to speak up. But the rest of the diplomats took that as a sign that they, too, had to comment.

“We can’t let this delegation fail merely over a bot,” the Secretary of State said.

“And diplomatic meetings are generally conducted without heavy weapons,” the German envoy added.

“Generally not, no,” the Brit agreed.

“On the other hand, it’s also generally understood and accepted that we bring our own security,” the French diplomat pointed out.

“We’ll leave Emily here,” Adora repeated herself.

Entrapta wasn’t happy but nodded. Hordak put a hand on her shoulder, and she relaxed a little, Adora saw.

“Good. Stand by for the gate address,” Thor announced.

*****

Gate Area, Undesignated Asgard World, November 25th, 1999 (Earth Time)

This isn’t an actual Asgard world, Adora thought as she stepped down the gate ramp. The Stargate was out in the open, not in a building. However, there were defence systems similar to those on Cimmeria - more extensive, though, and not concealed. And two pillars flanked the gate itself - was that an Asgard version of an iris? If they didn’t want Emily to come along, they wouldn’t risk someone invading the place, either, would they?

As the others arrived behind her, she studied the building ahead of them. It didn't look particularly temporary. Quite sturdy, full stone, but also quite bare. And…

"No trails around the building," Catra commented. "No streets. No landing pads. No sign that anyone used this before."

Exactly. Adora nodded. Of course, with their transporter technology, the Asgard wouldn't need landing pads.

And there was nothing else around them - just an empty plain. Sure, most worlds seemed to avoid settling the area right next to the Stargate - probably to avoid any trouble coming through it - but there usually would be some traces of traffic. In short, as expected, this looked like an empty world that the Asgard had picked for the meeting.

"Any bet how long they'll make us wait?" Jack asked as he joined them.

"Jack! We can't expect an alien culture to have the same customs as Earth - or Etheria," Daniel said. "Rushing a meeting could be a sign of disrespect for the Asgard."

Catra snorted at that. "It would fit Loki's manners," she said. "The way he's always trying to rush things. And he's certainly rude when he thinks he can get away with it."

"Well, you're an expert on rudeness," Glimmer said.

Adora clenched her teeth - this wasn't the time to bicker! - but Catra snorted in return.

"Letting your guests wait at the gate is generally considered rude," Sha're commented. "At least amongst the Goa'uld."

"And the Tok'ra," Anise added.

"We were conducting further scans," a voice sounded from one of the pillars. *"Given whom you associate with, it was deemed*

appropriate to take a cautious approach."

"You could have just talked to us over comms if you're afraid we'll attack you," Entrapta commented. It seemed she was still annoyed at Emily's treatment.

"That would have been rude."

Jack snorted at that. "Well, they haven't lost their humour."

Adora hoped so. They really needed to reach an understanding with the Asgard.

Before anyone else could say anything, the door in the building ahead of them opened, and an Asgard appeared. Thor - or someone who looked more like Thor than Loki. It was a bit hard to tell them apart without closer observation. Or when they weren't together.

"The Asgard High Council welcomes you and bids you to enter." The voice sounded like Thor's.

"Great!" Adora smiled at him.

They entered the building, which was basically one big room with two long tables facing each other and a big screen on the wall. There were two more Asgard sitting behind the table facing the door.

Thor nodded to them. "These are Freyr and Penegal, members of the Asgard High Council."

Adora smiled at them and introduced herself and the others. Though she couldn't help feeling a bit awkward - they outnumbered the Asgard delegation by so many! Maybe they should have limited their numbers…

"Please have a seat," Thor said as he sat down. "We represent the High Council."

As they took their seats, Adora wondered if the rest of the High Council was watching through cameras or if they were trusting the entire meeting to those three. It didn't matter - they were here, and they could finally sort this out.

"Thank you for receiving us," she said, standing up and nodding at them once everyone was seated. "We're here to discuss the situation with Loki and, so we hope, straighten things out between the Asgard and the Alliance. We do not wish any harm on you."

"And yet, you not only shelter a criminal but give him support so he can continue to break our laws," Thor said.

That wasn't a good start. "He asked for help with the genetic degradation you suffer from," Adora said. "Why wouldn't we help him if we can?"

"Because he is a criminal," Thor said.

Freyr raised his hand. "Did you verify his claims?"

Adora nodded. "We did confirm the genetic degradation." Once Loki had arrived on the Third Moon of Enchantment, at least.

"And that was enough for you to trust him?" Penegal asked.

"Yes." Adora nodded again. "Enough to help him."

The Asgard exchanged glances.

"We have him under close observation," Glimmer added. "We're aware of the risks of such experiments."

"Risks such as the creation of Horde Prime," Thor said. He and the others looked at Hordak.

"Yes."

"And yet, you did not contact us." Freyr inclined his head.

"No, we didn't," Adora admitted. Perhaps they should have. But that would have felt like betraying Loki's confidence.

"Why not?" Penegal leaned forward. "Were you aware that he was a wanted criminal?"

Adora raised her chin. "We assumed that. But he asked for help, and we think everyone deserves a chance to change."

"Everyone?" Freyr tilted his head to the side.

"Everyone." Adora nodded firmly.

"Even the Goa'uld?"

"Even them, yes." Adora didn't flinch.

"And yet, according to your claims, you destroyed Horde Prime," Thor cut in.

"We gave him a chance as well," Adora told him.

"And he forced our hand," Glimmer added.

The Asgard exchanged glances again. Adora wished she could read them better.

Freyr turned back to her. "Putting this policy of yours aside for the moment, sheltering a wanted criminal does not seem to be a friendly act. Doubly so if you help him to commit the same actions that made him a wanted criminal in the first place."

That was… Well, it made sense when seen like that from the Asgard's point of view. But it was still wrong!

Daniel spoke up. "I think that depends on what exactly those actions you condemn Loki for are. We haven't been informed about his crimes yet."

Except for the faked Replicator outbreak that Loki had been planning, Adora thought with a pang of guilt.

“You are aware that he created Horde Prime,” Thor said. “His reckless, illegal experiments endangered everyone - the Asgard and the entire sector. Dozens of sapient species were rendered extinct as a result of Loki breaking our laws. What more do you need to condemn his actions?”

“But Loki didn’t intend to do that!” Entrapta blurted out. “He just made a mistake while experimenting, and his lab security procedures were insufficient!”

“That’s why he was banned from such experiments,” Thor replied. “Because he had already proven before that debacle that he cannot be trusted to take the necessary safety and security precautions.”

“But now we are taking those precautions,” Entrapta retorted. “So, it’s not the same.”

“Indeed,” Hordak chimed in. “Loki is under strict supervision, and thorough safety standards are enforced. There will be no repeat of Horde Prime’s creation.”

The Asgard looked at him, but not for long. The Asgard hadn’t really said anything about the Clones since the meeting started, Adora realised. And since the Clones were, technically, descendants of Loki and so closely related to the Asgard that their own systems had been fooled once, that was a little weird.

More than a little, actually.

*****

The Clones were a sore spot for the Asgard. Samantha Carter had suspected it before, but she was now quite sure. The way they avoided looking at Hordak, the way they had skipped the Clones’ creation entirely when focusing on Horde Prime’s creation, even though, at least from a purely technical point of view, the Clones also were the result of Loki’s attempts to solve their genetic degradation problem… It looked like this was something they didn’t want to address. Or face.

“So you claim,” Thor shot back.

“You have visited the research station,” Sam pointed out. “You’ve seen the measures we take to ensure there will not be another mishap.” Although, unless Thor was a scientist as well as a fleet commander, he might not have sufficient skill to judge the effectiveness of the lab’s security procedures.

“It is a research base of the Gate Builders - the Ancients or First Ones, as you call them. Their security procedures have not always been up to the challenge that their experiments presented, to say the least,” Penegal retorted.

“Feel free to inspect them yourself if you don’t trust us,” Glimmer cut in with a scowl.

Daniel leaned forward, smiling widely - though a little forcedly, Sam could tell. “And if you feel that the security precautions are insufficient, any suggestions to improve them are welcome. We understand your concerns.”

Adora nodded. “We have faced Horde Prime, after all. We have seen what he did and the results of his actions. We don’t take this lightly.”

“And we aren’t Loki,” Hordak added.

Once more, the Asgard glanced at him, acknowledging his point without addressing him.

“That is a generous offer,” Freyr said. “Although you did not offer to stop his experiments.”

“Why would we?” Entrapta asked. “You’re in danger of dying out due to your genetic problems, and Loki’s trying to fix that. Why should we stop that? We want to help you!”

“Because this is a matter of the Asgard,” Freyr replied. “You are outsiders. It is none of your business.”

“But Loki is an Asgard as well,” Daniel pointed out.

“One who is breaking our laws by these experiments,” Thor said. “With your help.”

“Your laws do not apply to our worlds,” Glimmer retorted. “We’re not your subjects.”

“This is true,” Freyr said, nodding. “But this is not a mere legal matter. By supporting him and his experiments, even if, as you claim, you have taken sufficient measures to render them safe, you are directly intervening in an Asgard matter against the will of the High Council. This is a direct attack on our sovereignty.”

Glimmer frowned at that, Sam noticed.

“But we’re trying to help you!” Entrapta repeated herself before anyone else could reply.

“We don’t want your help!” Thor snapped. “Nor Loki’s. Especially not Loki’s.”

Entrapta’s eyes widened. “But why? You do need help!”

Sam winced. Her friend meant well - and was probably correct - but this wasn’t very diplomatic.

“At least, that is our impression,” Daniel added. He pushed his glasses up as he looked at the Asgard.

Thor scowled at the implied question. “Our researchers are working on a cure.”

“Oh! Can we share data? If we combine our data, we might be able to find a solution together!” Entrapta beamed.

After a glance at Thor and Penegal, Freyr shook his head. “Our efforts are aimed at another solution than Loki’s plans.”

Sam nodded. “You’re working on stopping the degradation. Loki is working on creating a new body.” And if they hadn’t managed to find a solution yet, it didn’t look as if they would succeed in the future.

“A new species,” Penegal said with another glance at Hordak. “As he has done before. We wouldn’t be Asgard anymore if he succeeded.”

“That’s debatable,” Daniel spoke up again. “What defines you? Your appearance? Your genes? Your history? Your culture? Your values? All of that changes over time. You know that already, thanks to your long history and records.”

“It has to,” Sha’re added. “To live is to change.”

That triggered another round of scowls amongst the Asgard, Sam noted.

*****

Catra caught herself before she nodded in agreement with Sha’re, but the woman was correct. If Catra hadn’t changed, she doubted she would be alive any more. Or if she were, would want to be. Adapt or die was the rule in war as well. Though, sometimes, you could change for the worse - as Catra had proved in the Horde War.

“It is a matter of degrees,” Freyr said after a moment. “Loki’s plans are too drastic. They wouldn’t make us Asgard anymore. Like the Clones.”

He didn’t nod at Hordak, Catra noted.

Hordak didn’t react to the declaration. Cata had half-expected him to say that the Clones didn’t want to be Asgard anyway. Although… was that actually true? She didn’t know. The Clones had broken with Horde Prime, arguably their parent, even if he called them brothers, and Loki, who could be considered the Clones’ grandparent, genetically at least, hadn’t endeared himself

to anyone - least of all the Clones; he hadn't really hidden that he lumped them in with Horde Prime.

But would that attitude towards Horde Prime and Loki extend to the rest of the Asgard?

"You can't just deny that your children are your children! That's not how genetics work!" Entrapta, who had been gaping at the Asgard, blurted out.

"The mere fact that Asgard DNA was used in the creation of a life form doesn't make the result an Asgard," Freyr retorted. "Not even if the result is a sapient life form. To be an Asgard means more than mere genetics."

Daniel cocked his head to the side. "But what does it mean, being Asgard? You haven't answered that. And I think that's an important question for this discussion."

"To be an Asgard, you not only have to share our genome but also our culture and values," Thor stated.

"Now, where did I hear that before?" Catra heard Jack mutter.

"Oh, like the Tok'ra and the Go'auld?" Entrapta turned to Anise. "You are biologically the same, well, except for your genetic memory, which is different, but that's different amongst individuals anyway - but you don't consider each other a member of the same species."

Anise frowned but nodded. "Yes. To be Tok'ra is not a matter of mere biology."

"Ah."

The Asgard didn't show any reaction to the comparison. At least not one Catra could spot.

Daniel pushed his glasses up. "Does that mean Loki isn't an Asgard any more? You claim that he doesn't share your values."

Freyr inclined his head. “That has been debated by the High Council.”

“But you haven’t ruled that he isn’t an Asgard any more,” Daniel said, nodding. “Does that mean there were such cases in the past?”

Penegal tensed at that, Catra noted, and Thor and Freyr glanced at each other before the former said: “That is not germane to this discussion.”

Which meant ‘yes’ in Catra’s book. Interesting. As interesting as the fact that they hadn’t expelled Loki from their species.

Daniel nodded. “So, Loki’s actions so far were not enough to, ah, remove his Asgard citizenship…”

“His Asgard Club membership,” Jack cut in with a grin.

“...but you don’t consider the Clones Asgard. Is that based on their genetic makeup? If they shared your culture, would you consider them Asgard?” Daniel asked with a side glance at Jack.

“The question is moot since they don’t share our culture, values and heritage,” Freyr said.

“We don’t know your culture, values and heritage,” Hordak said. “Do you know ours?”

“We know Horde Prime didn’t share our culture and values,” Penegal replied. “And we haven’t shared them with you.”

“Loki might have,” Catra said. When everyone stared at her, she shrugged. “He hasn’t, but what if he decides to do that with his next children?”

“Loki is not a representative of the Asgard,” Thor snapped.

“Yet you have not purged him from the Asgard,” Daniel pointed out.

“He is a criminal. Would you want your criminals to shape your children?” Freyr asked.

Literally, in this case, Catra thought with a soft snort.

“What if you could shape his children?” Daniel asked.

“What do you mean?” Freyr asked.

Daniel smiled. “You don’t want Loki to claim Asgard’s future. You claim he doesn’t respect your culture and values. What if you could instil your values in his, ah, children? By raising them?”

“As long as you haven’t forgotten how to raise children,” Jack said in a low voice, followed by Sam’s hissed “Sir!”.

He was right, but in Catra’s opinion, pretty much anyone would probably be a better parent than Loki. Well, with the exception of Horde Prime or Shadow Weaver, of course.

The Asgard were looking at each other again. They seemed to be surprised. At least, that was Catra’s impression. Hadn’t they thought of that? To be fair, she hadn’t thought of that either.

“The question of their genetic makeup remains,” Freyr said.

“And Loki plans for them to reproduce sexually,” Thor added.

“As an option,” Sam retorted. “The Asgard did so in the past, didn’t they?”

“In the distant past,” Penegal said. He didn’t quite shudder, but his tone hinted at it.

But they didn’t seem to reject Daniel’s idea straight away. That was a good sign.

Probably.

Of course, whether Loki would agree with this proposal was up in the air. Shadow Weaver would never have agreed to relinquish

control like that. And Catra didn't think Loki was too different.

*****

Well, Daniel is delivering, Jack O'Neill thought. He got the Asgard thinking about his idea, at least. And that was no mean feat with aliens that made even the Amish look like rabid progressives or something. No, that is unfair to the Amish, he corrected himself. Amish teenagers looked at new things and even experienced them before they returned to their permanent Renaissance Fair-lifestyle. The Asgard, though, seemed stuck in their ways. Superglued and welded to them. And digging in their heels at the hint of the slightest change.

At least, that was his impression. Of course, they had only met four Asgard so far - three members of their government and one renegade - so Jack might be completely wrong about the average Asgard. He didn't think he was, though.

"So, will you entertain the proposal?" Daniel was beaming at the Asgard.

"We will have to discuss this with the High Council," Freyr said.

Jack was reminded of the tone parents used when they didn't want to tell their kids 'no' straight away. He had used it himself, back when… And he shut that line of thought down before it grew painful.

"Of course." Daniel nodded, still smiling.

"Do you need more data? We have the latest data and projections!" Entrapta piped up. She, too, was beaming.

Jack suppressed a sigh. They were too optimistic. Idealistic. Hordak, at least, looked as grouchy as ever. And Sha're seemed to be more pessimistic as well - her smile looked more bland. Polite, rather than heartfelt. Like the diplomats'.

Jack glanced at them. So far, they had been surprisingly silent. He had expected them to try and take over the negotiations, or at least say something just to feel important. But either they knew enough not to break the Alliance's united front in public, or they had been instructed not to make the Etherians mad.

Or, he added when he looked at Weir in particular, who was studying the Asgard with the same expression Entrapta looked at anything dangerous, they were here to gather information for their governments.

Probably a mix of both.

"No, thank you."

Entrapta frowned. "But how can you make an informed decision if you don't have all the data you need?"

"This is a matter of principle," Thor told her. "And, as such, it should not be influenced by details."

Now, that was a weird way to look at things.

"Are you sure?" Daniel asked. "You said this was a crucial matter for your people. Shouldn't you know what you are refusing or accepting?"

Freyr glanced at Hordak before answering: "Before we decide whether or not we would consider the… results of Loki's experiments as potential Asgards, we have to decide if we are open to the basic idea of incorporating new members in the first place."

Jack frowned. That sounded like…

"Does that mean you have stopped reproducing at all?" Carter asked. "Even asexually?"

Once again, the Asgard hesitated, which was answer enough in Jack's book.

“So, you have to decide whether you want to survive in the first place?” Entrapta blinked. “Because if you don’t reproduce any more, even if you fix your genetic problems and continue to clone your bodies, you will die out in the long term just from accidents alone. Though, depending on how cautious you are, it might take a long, long time.”

The Asgard were fighting a war - a war that, while being won, was fought hard, as far as Jack knew. And people died in war. So, it didn’t seem like the Asgard were being as cautious as they could be.

“As we said before, the fate of the Asgard will be decided by the Asgard. Not by anyone else,” Thor said.

“But…”

Entrapta was interrupted by Hordak putting his hand on her shoulder. “If they chose to die out, then that is their decision,” he said.

All three Asgard seemed surprised by that. Freyr nodded slowly at the clone with what seemed like his first genuine smile.

“But what if some of you dissent?” Glimmer asked. “Will you split then?”

“That is also a decision that will be made by the Asgard and no one else,” Freyr said. “Not by outsiders and not by renegades.”

And we’re back to square one, Jack thought. The Asgard hadn’t come out and said that they would force Loki into a collective suicide - if you could call stopping reproduction and waiting for their genes to fail that - but they also hadn’t said they wouldn’t do it.

On the other hand, at least they hadn’t threatened the Alliance with war so far. They hadn’t threatened them at all, actually, he realised - and if Loki’s experiments were as important for them as

they claimed, Jack would have expected some rumbling along those lines.

But did the lack of such sabre rattling mean that the Asgard weren't considering it, or did it mean that they couldn't afford it at this stage of their war with the robots and didn't want to bluff and risk Loki calling them out - or the Alliance calling their bluff?

They had a lot to discuss in the upcoming break.

*****

Temporary Base, Gate Area, PZ-1875, November 25th, 1999 (Earth Time)

"Taking a break from negotiations on another planet is something new, I'll say," the British diplomat said as they stepped down the gate ramp inside their temporary base. "To think we were complaining about long distances at the United Nations in New York!"

Everyone chuckled at that. Adora did so as well - though mostly because she realised that this had become normal for her. If you could travel to another planet more easily and faster than to another city, why not do it?

"It also improves security," the American Secretary of State commented. "We won't have to worry about bugs in our quarters here."

That meant he didn't trust the Asgard not to install listening devices in whatever quarters they might provide for their guests. That was… Well, Adora liked to think the best of potential allies, but she couldn't say it was wrong to be cautious. She glanced at Catra as they approached the quarters that had been prepared in the base for them. Her lover would eavesdrop on others in a heartbeat if she thought it was justified. Or if they weren't careful enough and underestimated how good her ears were.

“Welcome to Forward Base 1875, Ma’am.” The officer in charge of the guards saluted her.

Adora returned the salute. “Anything to report?”

“No, Ma’am. Your quarters have been prepared as ordered.”

“Hope they didn’t forget the fish snacks this time!” Catra commented behind Adora.

The officer didn’t react, so either they had prepared Catra’s favourite snacks or thought she was joking.

They had prepared the snacks, Adora discovered a moment later when Catra made a beeline to the small buffet waiting for them inside.

“It feels a bit of a waste to erect a temporary base for a single diplomatic mission,” the German diplomat, Häckler, commented as the group spread out a bit and sat down at the table in the centre, with a few headed to the bathrooms in the back.

“It’s safer this way, sir,” Sam told him. “The Asgard know of this world because we travelled here from their meeting place, so if we had a permanent base here, it would be compromised.”

“Yes,” Glimmer chimed in. “Besides, it’s not much of a waste - and good training for the troops who will be setting up such bases during the offensive.”

“It’s a bit like the Roman Legions,” the Secretary of State commented. “They erected a fortified camp every evening on the march.”

That had been two thousand years ago, Adora thought while Daniel told them a bit more about this, correcting the diplomat’s general statement. It was weird how some things never changed.

“Anyway,” Glimmer spoke up again when everyone had grabbed a drink and some snacks. “What are your impressions of the

Asgard?”

“They’re very conservative,” the American Secretary of State said. “It seems they don’t want to change, not even if it costs them their lives.”

Some nodded in agreement, though not all.

“And their decision-making procedures are suspect,” Entrapta complained. “They didn’t want more data.”

“I think they don’t trust us,” Sam commented. “Because the data comes from Loki.”

“He probably sold them a load of goods before,” Jack said, nodding. “Promised them the sky and delivered a turd. A bit like it usually goes with new weapons,” he added with a grin.

“They do seem very wary,” Daniel agreed. “Unwilling to extend us much, if any, trust.”

The American assistant cleared her throat. “Or this could be motivated by internal politics,” Weir pointed out. “The High Council might be facing internal opposition who would use such information to push for a change of policy that the High Council doesn’t want.”

Daniel tilted his head. “We don’t know much about their political structure, but according to Loki’s information, the High Council is composed of the Asgard with the highest ranks and status - an oligarchy of sorts, possibly meant to be a Council of the Wise.”

“They don’t look like elves,” The British diplomat commented with a smile.

“A reference to Tolkien’s works,” Daniel explained.

“Ah.” Adora nodded, even though it didn’t tell her much.

“We don’t know if they are facing a popular movement,” Daniel went on. “They do seem a very conservative species - understandable, of course, since all of them live for thousands of years.”

“They could also have dissenters within the High Council,” Weir retorted. “The information Loki provided was a little scant on the makeup of the council.”

And quite biased, in Adora’s opinion.

“It’s all conjecture, though,” Häckler said. “We don’t know enough to tell. This complicates the negotiations.”

“They haven’t been very aggressive, though,” Weir said. “They seemed to argue more on moral grounds. They didn’t raise potential diplomatic or even military consequences. Though that could be based on their experiences with the Alliance representatives.”

Adora blinked. What did the woman mean?

“You think they know that we react better to such arguments than we would to threats?” Jack asked with a glance at Adora.

“They are a very old species, and we know they have a treaty with the Goa’uld, so they aren’t unused to diplomacy. I think it would be prudent not to underestimate them,” Weir said. “They might know more about us than we think - either through deductions from their interactions with us or through other means.”

That was a good point, Adora had to admit. She had thought the Asgard didn’t trust them because they didn’t know them, but if they thought they knew more about the Alliance…

Anise nodded. “They are an old species, and they have met many other species. If they were inexperienced at diplomacy, they would not have maintained their position as a power the Goa’uld do not want to provoke - they would have appeared weak and

easily fooled and been considered a source of more advanced technology instead."

"Some of the System Lords might see them as that," Sha're said. "Though they might not have taken actual steps to acquire Asgard technology, many would attempt it if they thought there was an opportunity to do so."

"But as far as you know, they haven't done so despite having met the Asgard thousands of years ago?" Weir asked.

"Not according to Apophis," Sha're replied.

"So, Thor's sneakier than he appeared." Glimmer shrugged. "It doesn't change much. We are here to show them we're not a threat to them."

"But we are a threat to them - at least to some of them," Daniel objected. "We challenge their entire society. Well, Loki does, but we're helping him."

Adora pressed her lips together. This was so frustrating - they just wanted to help the Asgard! "We have to clear this up," she said. They were making plans based on speculation, and that wasn't a good thing.

Honesty was the best policy.

*****

The Asgard Question Part 5

Temporary Base, Gate Area, PZ-1875, November 25th, 1999 (Earth Time)

"If we're exploring options," the Secretary of State spoke up just as Samantha Carter wondered if she could focus on a few calculations on her laptop instead of the talk about diplomacy, "then maybe we should ask why you want to help them."

Sam winced at that.

"What do you mean?" Adora asked. "They need help!"

"But they don't want help," the man went on. "They made that clear. The easiest way to settle things with them would be to honour their wishes."

"That would break our agreement with Loki," Glimmer replied.

The Secretary of State didn't say 'Yes, and?', but his polite expression wasn't quite enough to hide his thoughts.

"It would break our word," Adora added with a frown. "Who would trust us if we would go back on an agreement because someone else demanded it?"

"Unless the other side broke the agreement already," Catra added with a snort.

"Or the deal was made under false pretences?" Dr Weir asked, tilting her head a little.

"Yes," Glimmer said. "Though Loki didn't do that. We knew he wasn't supported by the rulers of Asgard."

"You didn't know what he had done in the past, though," Dr Weir pointed out.

“We still don’t know what he did,” Glimmer said. “The Asgard didn’t want to tell us.”

“They might be a very secretive species. Loki didn’t share much about his culture and history,” Daniel speculated. “Or they might be ashamed of their past - both the High Council and Loki, I mean. Bringing up shameful deeds from the past might be taboo in Asgard society.”

“Or they simply don’t want to risk information that could hurt them get out,” Sha’re said. “They know the Goa’uld, and so they know that any information showing a weakness of theirs would be exploited against them.”

“We aren’t the Goa’uld,” Entrapta protested.

“But they don’t know us - and they don’t trust us, as they clearly demonstrated today,” Daniel said.

“That’s why we need to show them we are trustworthy.” Adora nodded. “Once they know us, they will know they can trust us.”

“And that’s why breaking our word to Loki could backfire,” Glimmer added. “You don’t trust people who break their word.”

Catra mumbled something that Sam couldn’t make out. It made Adora frown at her, though, and say: “That’s not applicable here.”

“But if the choice came down between honouring your agreement with Loki and peace with the Asgard…” The Secretary of State began.

“We aren’t at war with the Asgard,” Adora interrupted him. “We’re talking with the Asgard to settle our differences and clear up misunderstandings so we both understand each other.”

“They haven’t even threatened to war over this,” the General added. “Of course, they’re already fighting a war of their own.”

“Yes. They would be foolish to engage in another war,” Sha’re agreed. “And as far as we know, the war against the Replicators won’t finish soon.”

“According to Loki. He’s not exactly privy to their strategic situation,” the General pointed out, “being a wanted criminal, and all.”

“We lack confirmed data about the war against the Replicators,” Entrapta said.

“If we send spy bots to the front, the Asgard might see that as a threat,” Bow cautioned.

Sam didn’t think it was very likely - but they didn’t know enough about the Asgard to tell. “And we would have to find the system they are fighting in first.”

“Good point. If the spy bot network were spreading exponentially, we would have a good chance of stumbling upon it,” Entrapta said. “But that would probably make the Asgard think we’re a threat.”

“Probably, yes.” The General’s sarcasm was obvious to everyone except Entrapta, who nodded with a smile.

“Exactly!”

Sam made a mental note to have a talk with him about it - he looked a little guilty already.

“Anyway, we’re not going to break our deal with Loki,” Glimmer said. “Because even if the Asgard decide to die out, he disagrees - and they don’t have the right to force him to join them.”

“Not the moral right, at least.” Daniel nodded. “They might have the formal right according to their laws and customs.”

“They said he broke their laws with his experiments,” the British envoy said. “But we have no treaty with them that would

recognise their laws."

"And we won't as long as they act like that." Adora shook her head.

"We would have to know their laws first anyway, before making a treaty," Glimmer added.

"Yeah, it wouldn't be a good idea to make a deal without knowing more about the other side," the General said with an innocent expression.

The Etherians frowned at him. "We knew enough to make the agreement with Loki, and his information has been confirmed by everything we learned since then," Glimmer said.

"So far, yes."

The General had a point, of course. But even if they learned more about Loki's crimes, Sam didn't think the Etherians would go back on their word. That wasn't how they did things.

Unless Loki went back on his word first. Or committed a crime or otherwise betrayed their trust.

She couldn't help wondering if Loki was aware of that - or if he thought the Etherians would forgive future deeds as easily as they did past deeds. If he did, he might be in for a rude awakening.

As would be anyone else who didn't understand that the Etherians gave second chances to everyone but expected you to change and stay changed once you took them, she added to herself with a glance at the diplomats in the room.

*****

"...and I do think we need to consider the fact that the Asgard don't want the Alliance's help more strongly if we want to come to an accommodation with them to secure our, ah, flanks." The American diplomat nodded.

Catra sighed. Those diplomats didn't get it. If someone needed help, Adora and the other princesses would help them. Whether they wanted the help or not. Heh, if Adora had managed to capture Catra in Thaymor, they would have probably done their best to help her. And she would have needed the help. But whether they would have succeeded… Bah, there was no sense in dwelling on the past.

She finished her last fish snack and looked at the diplomats, all lined up on one side of the largest table facing the princesses and SG-1. "What we need is more information," she said. "We can't really make plans without knowing more about the Asgard."

"We can make contingency plans," Adora objected - as Catra had expected; her lover was fond of planning. And overplanning. The stories she had heard from Bow and Glimmer about her plans for the Princess Prom…

"Waste of time," Catra retorted.

"It would be helpful to know more so we can correctly interpret the Asgard's statements," Daniel said. "We can't solve this misunderstanding if we create more misunderstandings. And we can't avoid provoking them -. Or pushing them into an action both sides will regret - if we don't know where they draw their lines."

"Well, we don't know that because they don't tell us that," Glimmer said.

"Unless we already crossed those lines by helping Loki," Sha're pointed out.

That was a good point, Catra had to admit. If the Asgard wouldn't budge on that and were just trying to use diplomacy before they resorted to force… Well, then it would end badly since the Princess Alliance wouldn't back down.

"Being unwilling to compromise wouldn't be very diplomatic," the British envoy said.

“Everyone has some things they won’t abandon or compromise about.” Jack shrugged.

“Of course,” Daniel said. “And the Asgard have been very close-lipped about such things.”

“Which is also a diplomatic tactic. Like our stance towards Taiwan. We keep China guessing how we would respond to an attack on the island so they won’t attack,” the American said.

“That sounds weird,” Glimmer said.

Catra nodded. She would have said ‘stupid’, but if it was working, who was she to judge?

“It has worked well.”

“So far,” Jack added. “And it also means that we can’t support Taiwan as much as we might want to.”

“We have an agreement with Loki,” Glimmer repeated herself.

“But would the Alliance go to war over it?” the German diplomat asked.

“As we were told, technically, the agreement is between the Kingdom of Bright Moon and Loki,” the American assistant, Weir, pointed out. “And the Asgard aren’t the Goa’uld. That is why we are merely observing here.”

“Yes,” Glimmer said, narrowing her eyes.

She didn’t deny that an attack by the Asgard wasn’t covered by the Alliance against the Goa’uld. But Catra knew that if Earth wanted to stay out of such a conflict using technicalities, the Alliance was dead anyway - the Princesses didn’t do things like that. Not the ones of the Princess Alliance. No matter what the Alliance treaty said. “I don’t think the Asgard would bother with sorting out which of our forces would defend Etheria and which wouldn’t if they go to war,” Catra said.

“Nevertheless, fighting a war to protect a criminal - someone who has, as we know, admitted to breaking the laws of his species - wouldn’t be very popular on Earth,” the American said.

“The Asgard haven’t even hinted at the threat of war so far,” Daniel said. “They have been appealing at our, well, morality. Or common sense, if you want to interpret their warnings about Loki like that. We shouldn’t assume the worst.”

“But we can’t assume everything will be fine,” Jack objected.

“That’s why we need data!” Entrpata repeated her earlier words. “And why the Asgard need data. Even if they don’t want it.”

“We know that we know nothing.” Daniel nodded. “The question is: Do the Asgard?”

“They are an old species,” Sha’re said. “They should be aware that they don’t know enough about Earth and the Alliance. However…” She glanced at Adora and Jack. “They have a history with the Gate Builders, or so they claimed. And you are the descendants of the Gate Builders.”

“But would they consider us Ancients? We don’t share their culture or claim that heritage,” Daniel said. “We don’t know very much about the Ancients’ culture to begin with.”

“And what we know about the First Ones isn’t good,” Catra added. Bunch of ruthless imperialistic bastards.

“If they think we are like the First Ones…” Adora winced.

“The way we showed Thor Alpha might have given the impression that we kind of succeeded the First Ones,” Bow said.

Jack snorted. “And if their impression of Earth’s culture is a tribe of Vikings, they might expect us to raid and plunder them.”

“I think that’s another misunderstanding to deal with. A potential misunderstanding,” Glimmer said. “Once the talks resume, we

should focus on getting to know each other."

Catra snorted at the unintended double-entendre, but Daniel nodded eagerly. "Yes! A cultural exchange. Or something like that. Provided they are willing, of course."

"Earth has been asking for such exchanges for quite some time," Weir pointed out.

And Etheria had stalled them. For a variety of reasons. Good reasons. As their movies and TV shows and everything else showed, too many humans were crazy. And dangerous. But if they could have a cultural exchange with the Asgard, they wouldn't be able to deny Earth one. Still…

"Best have that exchange with Etheria," Catra said with a snort. "I don't know if they would trust us any better if they visited Earth."

The others laughed at that, but Catra wasn't completely joking.

*****

Gate Area, Undesignated Asgard World, November 25th, 1999 (Earth Time)

"...and we will discuss your proposal in the High Council," Thor told them. "Such a decision necessitates careful deliberation."

"And all the data," Entrapta mumbled, though the Asgard didn't react to that, Jack O'Neill noticed.

Thor hasn't mentioned the rest of the Asgard, Jack thought. It seemed that the council would decide this, not the entire population. Not too unexpected - that was how things were run in the USA as well - but at least back home, the government was elected by the people. Indirectly, as Daniel would point out, but that was a technicality. Still, having your government decide whether your species lived or died - which this came down to, in his opinion - didn't sit right with Jack.

Glimmer nodded in response. “Of course. However, we have another proposal for you that shouldn’t need a lengthy discussion and could influence your decision. We invite you to visit Etheria and study us - our culture, our people - to better understand us and our friends.”

Once more, the Asgard seemed surprised, judging by the glances they exchanged.

“You’ve seen the research station of the first ones, but you haven’t seen our world,” Glimmer went on. “You don’t know us. We understand that without knowing more about us, you cannot trust us, and we want to change that.”

“We have nothing to hide,” Adora added, smiling brightly.

“Except for military secrets, of course,” Catra added.

Adora nodded. “Yes, that goes without saying.”

For all her idealism, she had been raised as an officer in the Horde, Jack reminded himself. She was familiar with information security.

“You already know about our base technology anyway,” Entrapta added, “since you knew Horde Prime.”

“Yes.” Thor nodded after a moment, which might mean he didn’t know as much about Horde technology as Entrapta assumed. But if he didn’t, he probably was too proud to admit it. Or he was just a little distracted by their offer of a cultural exchange.

“And how much access to your world would we have?” Freyr asked.

“That depends on the individual kingdoms, but you will have full access outside the military areas to Bright Moon and Dryl, and I can’t see our friends in the Princess Alliance refusing you access either,” Glimmer said. “I can’t speak for the kingdoms not associated with us, though.”

“Like Earth, your planet has no unified government but is dominated by an alliance of the strongest countries?” Freyr tilted his head.

“Yes.” Glimmer nodded.

Jack could see that the diplomats stirred a little at that. Probably took offence at Glimmer being so blunt about it even if she was correct - the NATO countries dominated Earth, now more than ever, with the Alliance technology spreading amongst them.

“Although said dominance is limited by treaties and international law,” Daniel pointed out. “Neither world is a dictatorship.”

Freyr looked at Anise next.

“The Tok’ra do not have a home world,” she said. “Our fight against the Goa’uld necessitates constant moving of our bases to avoid detection. At this point, we are not willing to compromise our security by revealing our bases to outsiders.”

“We wouldn’t expect you to,” Thor commented.

“This is about our agreement with Loki, anyway,” Glimmer said. “Earth and the Tok’ra are our allies against the Goa’uld, which is why they are present, but the only countries directly concerned are Bright Moon and the Princess Alliance of Etheria.”

“And the Asgard,” Penegal added.

“Of course,” Glimmer didn’t quite frown, but her smile grew a bit strained.

“So, will you visit?” Entrapt leaned forward.

“We will have to discuss this with the High Council,” Freyr said.

“Ah.” Entrapta pouted, but Glimmer nodded before she could comment further. “Of course. So, will you contact us when you’ve made a decision?”

"Yes."

And that was it. A few polite goodbyes later, they were back on PZ-1875. Catra made a point of stretching her arms over her head as they walked down the gate ramp. "Now, that was a long meeting with nothing to show for it," she complained.

"We learned more about the Asgard, and we made two important offers," Glimmer disagreed.

"We mostly learned that we don't know anything about them," Catra said.

"Which is generally an important lesson," Daniel said. "Being aware of such ignorance prevents decisions made in ignorance. Or it should," he added.

"Let's hope the Asgard share that view," Jack said.

"They didn't seem to want all the data they could have," Entrapta pointed out. "That's not a good sign."

"Well, that's not really that unique. A lot of politicians don't like data that contradicts them either," Jack said.

"They're not very good politicians, then," Entrapta commented.

The diplomats laughed at that together with the others, but they didn't sound too honest about it. Probably struck too close to home, in Jack's opinion.

Not that he cared. He was a soldier, not a politician or a diplomat. The politicking he had to do as a general was already bad enough.

He just wanted to fight the snakes without having to fight half the generals on his side. Well, except for the admirals, maybe.

*****

Royal Palace, Bright Moon, Etheria, November 26th, 1999 (Earth Time)

"...and so we hope that the High Council of the Asgard will accept our invitation and send a delegation to Etheria," Glimmer finished.

Adora nodded in agreement, but not everyone in the Princess Alliance seemed to share her views. Perfuma, of course, was beaming with obvious enthusiasm, which meant Scorpia would be on board as well, but Mermista seemed more sceptical, as did Frosta. Netossa and Spinnerella seemed interested, but they weren't ruling princesses.

"So, we need to convince the Asgard that they should let us save their species?" Frosta asked with a frown.

"We would settle for convincing them that they shouldn't start a war with us over this," Glimmer replied.

"They're currently fighting those Replicators," Memista chimed in. "Since they're slowly winning, they can't be ready to fight another war. And last we heard, it'll take them a while to finish the robots - if all goes according to plan."

"Yes." Frosta nodded. "They can't do anything to us, and they can't help us in the war either, so why should we go to such lengths to placate them?"

"Because we don't want them as enemies only held back from attacking us by the demands of their current war," Glimmer said.

"The War against the Goa'uld will take a long time," Catra pointed out. "And even if we finish the snakes before the Asgard finish the Replicators, do you want to fight another war?" She scoffed, and Frosta glared at her.

"And we want to be friends with them," Entrapta added. "Loki's a great scientist! The Asgard have great technology - we could learn a lot from each other!"

“As long as you don’t learn *everything* from Loki,” Catra mumbled next to Adora.

Adora wanted to frown at her lover, but Catra was right. Loki wasn’t the best role model for ethical science. Quite the contrary.

Frosta pouted at that. “I still don’t like it.”

Mermista shrugged. “Meh. If they want a tour of Salineas, they can have one. But we won’t put on a show for them.”

“Oh!” Sea Hawk piped up. “But think of all the shanties they have never heard! And we can show them the thrills of…” He jumped on the table and raised his sword. “...ADVENTURE!”

“Sit down!” Glimmer snapped.

“We won’t show them an adventure!” Mermista hissed. “We don’t want them to think we’re trying to kill them!”

“But nothing invigorates you more and makes you appreciate your life than a harrowing brush with death!” Sea Hawk protested. “This could convince them to accept our help!”

“Or convince them that we’re dangerous lunatics,” Mermista retorted.

“My love!”

As the two bickered, and Glimmer fumed, Adora sighed. At least, it seemed as if Mermista had been convinced to allow this. And Frosta might still change her opinion once everyone else agreed. But that left another issue.

*****

“Alright. Now that that’s settled, there’s another related issue,” Glimmer continued ten minutes later. “Our allies on Earth have indicated that they, too, would like to open cultural exchanges with Etheria. More than we already have,” she added.

“Didn’t we host enough of their diplomats to fill a frigate?” Mermista asked. “And half my people are addicted to their ‘shows’.”

Adora frowned. That was hyperbole. Mostly.

“Don’t tell me they want to talk about embassies again!” Frosta groaned. “I won’t let them take part of my kingdom!”

“Technically, an embassy is still part of your kingdom,” Bow spoke up. “It just has certain protections according to their treaty.”

“A treaty which we didn’t sign,” Frosta retorted. “And won’t sign.”

“They have ambassadors at our courts; they don’t need an enclave for diplomacy,” Mermista said.

“It’s not about embassies,” Adora told them. “And it’s not about tourism either,” she added before anyone could bring that up - the documentaries about the effects of mass tourism on Earth had certainly had an impact on her friends. “It’s about cultural exchange - artists and scholars - to show us more about Earth and to learn more about Etheria.”

“We already know their culture,” Mermista said. “Earth TV shows are spreading everywhere.”

“Indeed!” Sea Hawk nodded. “Even in kingdoms where they are banned, smugglers will carry them.”

“Viewers that can display Earth media are one of our biggest exports,” Scorpia added. “Thank you again for sharing the design.” She nodded at Entrapta.

“But we don’t have such shows,” Glimmer said. “Earth doesn’t know as much about us as we do about them. They want to change that.”

“You mean they want to make TV shows about us.” Mermista closed her eyes. “Ugh.”

"Yes." Adora nodded. It was no secret that many journalists and TV companies had been asking for the opportunity to do that.

"We'll need a lot of guards to ensure they don't cause trouble," Netossa said. "Or run into trouble."

"Yes." Glimmer nodded with a frown.

Adora understood her friend. There were security concerns. Smuggling, spying. Recruiting. And getting eaten by monsters. But they could be dealt with. "We can handle it," she said. "And this will help us build more trust with Earth as well."

Something, as the latest news had shown, they still needed - many on Earth didn't like or trust them.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, November 26th, 1999

"So, the brass is unhappy with Earth being sidelined in the Alliance negotiations with the Asgard," the General said as he refilled his cup of coffee.

Sipping from her own cup - not quite as good as the coffee in her lab, if she were honest, but good nonetheless - Samantha Carter nodded. The Secretary of State had made a few comments expressing that sentiment on the way back to Earth.

"I thought they agreed that this was a matter between Etheria and the Asgard?" Daniel asked.

"That's their official stance," the General replied with a slight snort. "Unofficially, they're still smarting about the fact that they're not top dog any more, and some people think this mess with the Asgard is a great way to gain some influence or leverage."

Daniel frowned as he pushed his glasses up, Sha're mirrored his expression, and Teal'c didn't show any reaction, as usual. Sam

tried not to wince. “I don’t think the Etherians will like this - it’s sending conflicted messages.”

“Call it lying to their faces, Carter.” The General shrugged. “Or politics. Or diplomacy. Same things.”

Sha’re nodded in apparent agreement. Sam wasn’t surprised - Sha’re’s idea of politics and diplomacy had been formed by observing Amaunet.

Daniel, of course, didn’t. “The Etherians - the princesses in the Alliance, at least - prize honesty. Especially amongst their allies. I thought the government would have realised that - we’ve been working with the Princess Alliance for a long time by now.”

“The President surely knows that,” the General replied. “But not everyone in the government agrees that this means we should imitate Adora’s approach to diplomacy.” He shrugged again. “Anyway, that’s just office politics. Officially, our orders haven’t changed.”

“Since Adora is the Supreme Commander of the Alliance, changing orders against her will would be treason,” Teal’c commented.

“The American definition of treason is a bit stricter,” the General retorted, “but the sentiment is the same.”

Teal’c nodded.

“So… what do we do?” Daniel asked.

“Nothing. It’s all unofficial talk so far.” The General finished his cup.

“Shouldn’t we tell the Etherians?” Daniel frowned again.

“You mean leak internal information, Daniel?” The General’s eyebrows rose.

Sam rolled her eyes at his innocent act. He wouldn't have told them if he weren't planning to do something about it.

"To reveal dishonourable actions is not dishonourable," Teal'c stated.

"But if we do this, we expose ourselves as well," Sha're objected. "This could be a loyalty test."

"Oh." Daniel blinked. "You think this is a trap?"

The General shrugged. "It's a bit low-key for a trap. Nothing solid, nothing big, just rumours and sour grapes talk at the water cooler. But it could be a test to see where we stand."

"And where do we stand, Jack?" Daniel stared at him.

"We've sworn an oath to defend our country against all enemies, foreign and domestic."

"That's not an answer," Daniel complained. "And the Etherians aren't our enemies."

"Yep." The General was far too smug about such a delicate subject, in Sam's opinion. For all his complaints and comments about politics, he liked being clever a bit too much.

"I don't think we can classify our own government as a domestic enemy of our country," she commented.

"Of course not," the General agreed. "So, currently, we don't have enemies, foreign or domestic - except for the snakes, of course."

"And except for your rival countries on Earth, chiefly Russia and China," Sha're added.

"Ah… they aren't exactly enemies," the General told her. "Mostly because if they were our enemies, it wouldn't end well for them. Anyway, our job is to ensure that things stay like this. Except for the snakes, of course - there, our job is to defeat them."

Daniel frowned once more. “And what does that mean here?”

“Why, Daniel, something right up your alley: Promoting understanding between everyone!”

Sam smiled thinly. So, that was the reason the General had called them to his base to ‘discuss the latest mission’. “Are you referring to the planned cultural exchange between the Asgard and Etheria, sir?”

“And to Earth’s part in it.”

“You want us to take part in that?” Daniel seemed surprised.

“Do you know anyone who knows more about this? It’s sort of your thing, isn’t it, Daniel? And you can show Sha’re Etheria at the same time.”

Or use that as a cover, Sam finished the thought. And she would be expected to do her part as well - even though her best friend on Etheria was about the worst princess for this sort of thing she could think of.

“I guess so,” Daniel said, glancing at Sha’re.

Sha’re nodded at him. “We can do this.”

“Great!” The General clapped his hands. “Now, about our last mission…”

*****

Royal Palace, Bright Moon, Etheria, November 27th, 1999 (Earth Time)

“Still no reply from the Asgard…”

Catra snorted at the sigh from her lover. “Did you expect them to make such a decision - any decision - quickly?” She shifted on the chair in Adora’s office to curl up a bit more on the cushion and let

her tail dangle down over the armrest that was not serving as her headrest until she had the perfect position to read things on her tablet.

“Well…” Adora turned her head to look at her. “...yes?”

“The same people who are currently debating whether dying out is better than trying something new?”

Adora frowned at her. “That’s a bit unfair, isn’t it? We’re asking them to change their culture and genes.”

Of course, it was a bit unfair. But it was also, technically, correct. Catra flashed her fangs in a grin. “Everyone else has to do that as well. It’s called evolution and progress.” Or progress and evolution. Whatever.

“Not as drastically,” her lover retorted.

Carta frowned. “Did you change your opinion about helping them?”

“What? No! They need help, so of course we should help them! But I realised that they’re… like the Horde.”

“Like the Horde?” Catra blinked. How were the Asgard like the Horde?

“Not like that!” Adora frowned again. “I mean, they’ve been raised in their culture and don’t know anything else, so change is hard for them.”

Catra gave her a flat stare. “Everyone was raised in their culture - or a culture.” Like Adora and herself had been raised in the Horde as orphans.

“Yes, but the Asgard seem to be more conservative than… pretty much anyone we know.”

“Except for half of Earth,” Catra pointed out. “The half that hates our guts for being different. Or because they think their stupid god tells them so. And like the Asgard, they don’t want actual data to make decisions.”

“It’s not quite that bad…” Adora’s frown changed into a pout. “And Earth is changing - we know that.”

Catra nodded. Daniel had told them so, and Entrapta got the data. “They are still worse than the Asgard - and hate change even more.” Unless the Asgard were better at hiding things than they thought.

“Anyway, it’s a big step for them. We have to consider that.” Adora nodded. “But they’re not hurting anyone. Or trying to colonise planets.”

“That we know of,” Catra pointed out.

“They didn’t colonise Cimmeria,” Adora said.

“Unlike Earth.” Catra grinned. “At least they would if we let them.”

“Earth hates colonialism.”

“They say so,” Catra corrected her. Adora’s frown grew deeper, so she’d better not overdo it. “Anyway, we can’t do anything but wait until they call us.”

“I know…” Adora sighed again. “But we can prepare the cultural exchange. Even if the Asgard turn our invitation down, Earth is going to send a delegation to visit us.”

Catra was tempted to say ‘another delegation’ - they had had diplomats over - but that would be too much needling Adora. So, change of topic! “Do you think they’ll send actors over as well?”

“Actors?” Adora blinked. “Daniel said we’d get scholars and artists.”

“Actors are artists,” Catra said. “Though I guess we are already familiar with their art thanks to their movies and TV shows. Well, many of us, at least.”

Adora blinked again. “Oh…”

It was Catra’s turn to frown. “What?”

“We should ask them to send some actors - I think their fans here would love to meet them!” Adora beamed.

That was… well, not a bad idea. Still… Catra shrugged. “As long as it’s not one working on one of those catgirl shows, I don’t care. And if it is, I’ll claw them!”

“Catra! And those are cartoons, anyway.” Adora shook her head. “But I think this is a good idea. I’ll talk to Glimmer about this. Though we need to find out which actors are the most popular here.”

“And vet them,” Catra added.

Adora snorted. "I don't think actors are going to be a threat."

"Don't let Double Trouble hear that," Catra retorted. They were damned dangerous.

"That's different. Earth doesn't have anyone like them."

Catra sure hoped so.

*****

Alliance Headquarters, Brussels, Belgium, November 29th, 1999 (Earth Time)

“Hi, Jack. You wanted another meet… You’re watching the Simpsons?”

Jack O’Neill snorted as he turned towards Daniel - and Sha’re - who had just entered his office. “It’s for work.”

His friend blinked while Sha're moved to get a better look at the screen. "Work?"

"Cultural exchange, remember? The Etherians had a 'suggestion' about our delegation." Jack pointed at the screen where Homer was making another mess. "They wanted actors to visit."

"Oh." Daniel tilted his head slightly to the side. "That makes sense, I guess - movies and TV shows are a cornerstone of our culture. But that's a cartoon series."

"Voice actors count," Jack defended himself. "And they mentioned the Simpsons being popular on Etheria."

"Oh? I wouldn't have expected that. They have theatres, so live-action movies and shows seem to be a logical step, while they don't seem to have anything similar to cartoons. On the other hand, that might make them more appealing."

"Oh, it's not just cartoons," Jack admitted. "They also have a slew of other shows and movies they like. But I wanted to familiarise myself with the Simpsons," he added with a grin.

"Don't you know the series by heart?" Daniel asked, looking from Jack to the screen, then at Sha're, who was softly laughing at Bart's antics.

"I watched the series. I didn't study it." Jack shrugged. "But if that's part of how the Etherians have experienced our culture so far, I thought I should take a closer look." And rewatch some of the classics on the government's dime.

"Ah, yes." His friend nodded. "That is going to be very interesting - finding out what preconceptions the Etherians have after experiencing our culture mostly through media. And Western media, at that. Although most of their contact with Earth has been limited to Western countries anyway."

"Let's hope they don't take the Simpsons as an example of our culture," Jack joked.

Daniel didn't laugh - he frowned. "That is a danger. Probably not as much with cartoons, but the live-action shows might be mistaken to be closer to documentaries than fiction. And the various cultural references and assumptions won't be understood at all, of course, without the background of having grown up in our culture. When Japanese animation started becoming popular in the West, they often had additional material with the videos that explained Japanese culture so the viewers would have the context to understand the references. It's quite a challenge for translations."

Great. If the Etherians thought that the way families in sitcoms behaved was normal… Jack shook his head.

"Yes. It is often confusing," Sha're chimed in. "But it's still funny."

"Some humour is universal," Daniel agreed.

"And you always explain things to me, so I'm learning more about Earth."

"Of course!" Daniel beamed at her. "And you teach me more about the Goa'uld. Though we should check what shows and movies are popular on Etheria. And maybe introduce them to a few choice examples they might have missed."

"Sounds good. And Hollywood can start getting royalties from the Etherians." Jack chuckled.

Once again, Daniel winced. "Ah… that's actually a problem. The Etherians have no concept of trademarks or intellectual property laws. Quite understandable given their society and culture, of course - it's far more artisan in nature than Earth's industry. They value the work of creating something as much as the idea behind it - sometimes even more."

"They have factories."

"Yes - remnants of the Horde military-industrial complex, as far as I know. And the effects of those being turned to civilian

production might be interesting." Daniel nodded. "But they have no concept of intellectual properties. If they can copy something, they do it. Whether that's an idea for a new product or a media."

"They've been pirating Hollywood movies and shows?" Jack asked. Of course, they had - he had known they were copying and recording whatever media and news they could get, and their ships in orbit had full coverage. And soldiers would smuggle things back home, but there weren't that many Etherians on Earth… "How bad is it?"

Daniel winced. "I don't know exact numbers - the Etherians don't know either; I asked. But since it's all data, digitalised copies, it's easy to copy without any loss of quality. The limiting factor seems to be the electronics to view the media. And such viewers, or tablets, apparently are amongst the most popular products of the former Horde lands. And since there are only about fifty million people on the planet, they can probably cover the entire market quite quickly." He shrugged. "I think a lot of people still don't understand that the Etherians aren't a medieval culture just because some of their kingdoms have, ah, 'fantasy aesthetics'. It's probably just a question of time before they start producing their own movies and shows."

Jack snorted. "Hollywood won't like it. They want their cut."

"And that's another issue. In order to pay royalties, the Etherians would need to trade with Earth. Otherwise, their money would not be worth anything on Earth except for collectors and visitors to Etheria. Fungible goods could be a substitute, but that's trading," Daniel said. "And the Etherians probably won't open their countries to Earth's industry since we would flood their markets with our goods. The economic consequences would be… drastic."

"So Wall Street won't like it either," Jack said. But what could they do? And even if the Etherians agreed on cracking down on pirating - the electronic kind - could they stop it? Earth hadn't had a lot of success with that.

This cultural exchange thing was looking to be a lot more complicated than he had thought. And he had been quite pessimistic about it in the first place.

*****

Cultural Exchange Part 1

Royal Palace, Bright Moon, Etheria, November 30th, 1999 (Earth Time)

"...and so we have accepted your offer. We will send a delegation consisting of three representatives of the Asgard High Council to visit your planet and examine your civilisation in depth at your earliest convenience."

Adora smiled as she listened to the recording of Thor's voice. This was great! "They've accepted our offer!"

"Yes." Glimmer's reaction was a bit more subdued than Adora had expected. Although she probably had seen the recording before - Adora had just returned from an inspection of the Alliance training camp in the Scorpion Kingdom.

Still, she better made sure everything was alright. "Is something wrong?" Something she could fix?

"No." Glimmer shook her head.

"Not wrong per se," Bow added. "But we're not quite as ready for their visit as we hoped to be."

"I thought everything was being prepared," Adora said, frowning.

"That was the plan, yes," Bow said. "But it's taking longer than we planned."

Catra cocked her head to the side. "Really? What's the problem? Is Princess Sweet Bee making noises about her lack of relevance again? Or are your people striking?"

"No." Glimmer shook her head with a snort. "Sweet Bee hasn't contacted us since her last complaint." With a frown aimed at Catra, she added: "Although once she hears about this, she'll

show up at once. And Prince Peekablue will notice this. Also, my people aren't striking - quite the opposite."

Huh? "What do you mean?" Adora asked.

"They are very enthusiastic," Bow explained while Glimmer grimaced. "We have far too many volunteers - and from outside Bright Moon as well. A lot of people want to meet the humans."

"And that is the problem. Part of it, at least - it seems everyone is fired up about meeting the humans." Glimmer pouted. "We don't have as many volunteers for the Asgard visit."

"So?" Catra shrugged. "As long as they are still doing what you tell them to do, where's the problem?"

"We want to make the best impression on the Asgard," Glimmer replied. "But if everyone is talking about the humans when the Asgard are here, that won't leave a good impression."

"That seems a bit far-fetched," Catra objected. "Besides, you don't need a lot of servants to handle three Asgard."

"It's not about the servants. It's about the scholars, musicians, artisans and sorceresses of Etheria," Glimmer said. "Most of them are eager to meet their human counterparts."

"Well, my Dads also want to meet the Asgard." Bow smiled.

But Glimmer didn't. "Because they want to ask them about the First Ones they might have met."

"Well, yes - but that's not any worse than wanting to meet the humans behind your favourite TV show," Bow retorted.

"Which your Dads also want." Glimmer sighed. "And Mermista and Frosta are still not fully on board. They'll receive the Asgard, but I don't know if they'll be very welcoming."

Adora winced. Frosta had a temper, and Mermista could be very mean when she didn't like you. "We need to talk to them."

"And to several scholars and artists," Glimmer said. "And we need to do it quickly, or the Asgard will get impatient."

"And we need to prepare for the visit from Earth as well - people are getting impatient already about meeting their favourite actors and musicians," Bow added.

Oh. Adora grimaced. She shouldn't have gone inspect a training camp - she should have worked on this!

"It's not your fault, you idiot," Catra said with a scoff as if she had read Adora's thoughts. "You didn't suggest this."

"But I didn't contradict Daniel, either," Adora objected. And she had agreed with his plan. It was a good plan, anyway, even if they had hit a bit of snag. They just needed a plan to pull this off. "Let's make a plan!"

"How to hype the Asgard?" Catra asked.

"Yes?" Adora smiled when Catra grumbled. "We need to make people enthusiastic about meeting the Asgard. Honestly enthusiastic."

"We know nothing about the culture of the Asgard," Glimmer pointed out.

"We can ask Loki about that. He probably has a huge collection of Asgard movies, songs and TV shows," Adora said."There's bound to be things that will interest people!"

*****

Royal Palace, Bright Moon, Etheria, December 1st, 1999 (Earth Time)

Adora stared at the screen for a few seconds after the recording had ended. “How many were those?” she asked.

“That was the fifteenth,” Bow replied. He sounded far too happy for what they were doing.

“Don’t tell me you actually like that stuff. Watching paint dry would be more interesting,” Catra complained from Adora’s lap, where she had rested her head halfway through the recording.

“It’s… interesting. It offers us insight into a completely different culture,” Bow replied.

“A completely boring culture,” Catra retorted. “I think we should reconsider saving the Asgard. The universe won’t miss them.”

Adora frowned at her lover. She knew Catra was joking, but that wasn’t a laughing matter. “They have great scientific knowledge,” she said.

“And the worst entertainment I’ve ever seen. Don’t tell me you liked any of the recordings we checked.”

Adora winced. Finding anything about the Asgard to catch the interest of the Etherian people was a bit harder than she had thought. Though this was probably Loki’s fault - they only had his favourite media to examine, after all. And he was hardly a representative member of his species.

*****

Space Lab, Earth Orbit, Solar System, December 1st, 1999 (Earth Time)

“...so, apparently, Asgard culture is boring. At least the things Loki likes. I don’t understand it - I didn’t enjoy the songs or the epics, as he called them, but I also don’t enjoy some of the Earth media we collected, yet others like them. Very much, actually, so much they really want to meet the creators and actors, which actually is the problem we have with the Asgard since people don’t want to

see the Asgard creators. Which would be a little hard, anyway, since even with their cloning technology, most of the creators are dead, so that would be a dead end anyway."

Samantha Carter nodded as Entrapta rambled while her hair manipulated the latest experiment. So, the Etherians found the Asgard culture boring but were fans of Earth media.

"I do not think Loki is a good example for the taste of the average Asgard," Hordak added, looking up from his console. "He is, according to their High Council and himself, a renegade. As such, he obviously doesn't share the opinions of the majority of his people, or he would have mentioned that in an attempt to get Earth to support him in a potential populist coup against the High Council."

That was… a very peculiar view of Loki's motivations. But Sam couldn't honestly claim that Hordak was completely off base - painting the High Council of the Asgard as some oligarchy oppressing the common people would have rang a note with certain human politicians. Although Loki might not have realised that since he primarily interacted with Etherians, who had a quite different take on ruling systems, and his contact with humans hadn't been entirely positive.

She sighed. As Daniel had often mentioned in the last few days, they simply didn't know enough about the Asgard to tell. "He might have lied about that anyway," she pointed out. Most revolutionaries tended to overestimate their popular support.

"Which supports my deduction," Hordak said in a smug voice.

"But you can't assume that a difference in political views also means a difference in entertainment," Sam retorted.

"In a society as hide-bound as the Asgard's?" Hordak shook his head. "I do not think I am wrong."

You don't think that often anyway, Sam added silently.

“So, it could be that the Asgard have other media that would appeal to us!” Entrapta smiled. “Although that’s not helpful to getting a better welcome for the delegation since we can’t get their media until we have decent relations. Unless we manage to get a spy bot into the range of their transmissions and can download their media that way,” she added with a smile.

That idea was problematic on several levels, Sam knew that. “I think they would see an attempt by us to find and infiltrate their systems as a hostile act,” she pointed out. “And copying their media is also a bit questionable.” Not to mention illegal in many places on Earth.

“Copying freely broadcasted transmissions is not illegal on Earth,” Hordak retorted.

“But redistributing them is,” Sam told him.

“On Earth.” Hordak’s mouth twisted into a thin smile.

“It’s stupid anyway,” Entrapta chimed in. “Information should be free!”

“Within limits,” Hordak disagreed. “Military information is obviously exempt from that, but certain scientific knowledge is also best kept from those who would abuse it.”

Sam nodded. She didn’t like it, but she had to agree with Hordak. “Yes. But there’s also the problem of reimbursing the creator of copied media. They spent time and effort, and often money, on their work. Others should not be able to take it for free.”

“But didn’t they get paid for it already?” Entrapta looked confused. “Most of the artists - and the scientists - on Earth are employed, right? So, they got paid for their work already.”

“Yes, but their employer wasn’t,” Sam said.

“But they’re not the actual creator!” Entrapta protested. “They’re just the sponsor.”

“Patron,” Hordak added. “And often, it’s the government financing the work, like at your universities.”

Sam winced. Trying to explain how Earth copyright and patent law worked wasn’t something she wanted to do any more than she wanted to go into the details of academic research.

“And for science, sharing of research is essential! We can achieve a lot more working together and building upon each other’s results than working alone in secret!” Entrapta nodded emphatically. “We’ve proven that on Etheria!”

But Etheria wasn’t Earth. “A lot of research on Earth is privately funded,” Sam explained. “As is most of the entertainment. And those who grant the funding want to make a profit from their investment.”

“That doesn’t sound like a very effective way to do science,” Entrapta said, frowning. “And if they don’t want to share their entertainment media, why broadcast it where everyone with a receiver can pick it up?”

Sam sighed again.“They usually only do that once they have shown the media in theatres. Or they get reimbursed by subscription payments or advertising money.”

“That doesn’t sound like they care a lot about their work,” Entrapta said. “And that doesn’t work for science anyway.”

“I have to concur,” Hordak said. “This system seems prone to abuses and unintended consequences through the incentives it creates.”

Daniel would love debating this, Sam thought. And he would love talking about what such debates reveal about us - and to us. But she wasn’t Daniel. She was a scientist and wanted to focus on that. “So far, it has worked on Earth,” she said. Not perfectly, but well enough. No system was perfect.

“Well, we do things differently on Etheria,” Entrapta said. “And it has worked for us.”

But would they be able to work together? That was the question. And Sam didn’t think she had an answer.

*****

Gate Area, Near Bright Moon, Etheria, December 2nd, 1999 (Earth Time)

“We should have waited another day. Prepared some more. Maybe we would have found a song or epic that isn’t boring, weird, or both.”

Catra rolled her eyes at Adora’s fretting. “Do you really believe that? We went through far too many of Loki’s recordings, and they were all bad. Even Bow admitted that.” And Bow was far too nice to say that lightly, even if it was true.

“Well…” Adora trailed off, pouting. “I just think we could have done more.”

“You always think that.” Catra snorted. “You’d think you could have done more, done better, no matter how well something went.”

“Complacency breeds failure,” Adora replied - and froze a moment later, looking guilty.

Catra clenched her teeth together for a second. That had been one of Shadow Weaver’s lessons. Adora was still suffering from the effects of having been raised by that woman. So was Catra, of course, but she was handling it. And ignoring it. “I think we did what we could, given what we know,” she said.

Adora slowly nodded. “Hopefully.” Then she checked the time. “Shouldn’t be long now. They already arrived at the temporary base.”

It wouldn’t be long, indeed - unless the scans at the base detected something amongst the Asgard delegation. That would delay things. And probably cause a diplomatic crisis or a war, depending on what it was.

But no alert came from the comm nearby, connected to the spy bot network. Catra still checked the comm personally when the request to open the gate arrived - trust, but verify. That lesson hadn’t been one of Shadow Weaver’s; the woman had never trusted anyone. Or deserved any trust herself.

But the signs, countersigns and codes matched. “It checks out,” Catra told Adora - and Glimmer, who was hurrying over to their spot from where she had been checking the uniforms of the gate guards.

“Raise the Gate!” Glimmer ordered, and the Gate smoothly rose out of its pit into a standing position.

As soon as it was ready, Catra gave the all-clear on the comm. A moment later, the Stargate activated. Cutting it a bit close, she thought - they would have started dialling before they got her message to be that fast. Were they trying to impress the Asgard with speed and efficiency? She wouldn’t put it past the soldiers stationed there, but Netossa and Spinnerella should be less reckless.

The vortex collapsed, and the wormhole stabilised. A few seconds passed, then two guards in Bright Moon uniform stepped through, followed by three Asgard. Thor, Freyr and Penegal. She briefly wondered if the fact that they were meeting with the same three Asgard would tell them something about the species’s culture. Focus, she reminded herself as she followed Adora to meet the Asgard at the foot of the ramp.

“Welcome to Bright Moon.” Gimmer nodded at them.

“And Welcome to Etheria!” Adora added with a bright smile.

Catra had to suppress the urge to add a smart-ass comment. This was an important diplomatic meeting.

The Asgard looked around. "Are there no representatives from Earth?" Freyr asked.

"They'll join us later," Glimmer told them with a diplomatic smile. "This is about showing you Etherian culture."

Alliance culture, Catra silently corrected her. If they showed the Asgard the culture of the Crimson Waste, they would probably consider it an act of war. Both the Asgard and the Crimson Waste.

She had to suppress a snort at that thought as they walked past the lines of guards standing at attention to the skiffs that would take them to Glimmer's palace.

"Are those ceremonial weapons?" Penegal asked, eyeing the spears with open curiosity.

"No," Glimmer told them. "They are also still in use where melee combat is expected."

Or crowd control, but that worked out the same, Catra added to herself. They were pretty useless, though - and the less said about the proposal to replace them with an Etherian version of the Goa'uld staff weapons, the better. Catra would have expected better sense from the Princess Alliance - they had used any Horde laser rifles they could get their hands on quite effectively during the war.

Freyr nodded, though it wasn't clear what he thought about that. Well, he'd see different soldiers when they visited the Scorpion Kingdom.

Thor and Penegal looked at the skiffs with interest as well. "Magitech," Penegal said. "Is that in common use?"

"Etheria never lost its magic," Glimmer reminded them. "The skiff itself is relatively common, but most people use at least some

magitech in their daily lives."

"Ah." Thor nodded. "You said that you are descendants of the Gate Builders - the Ancients - who used Etheria for their experiments."

Glimmer kept smiling. Very diplomatic. "Yes."

"Yet, your technology is not very similar to theirs." Penegal cocked his head sideways.

"We built our own," Glimmer said.

"George - my Dad, one of my Dads - wrote an essay about the development of magitech on Etheria, if you're interested," Bow added.

"I am." Penegal nodded.

Bow beamed at him and started fiddling with his tablet while the Asgard climbed into the first skiff, together with Glimmer and Adora.

Catra followed them. That was pushing the skiff's carrying capacity a bit, but they'd be fine - the Asgard didn't weigh too much.

Besides, someone had to pilot it, and having the Queen of Bright Moon or the Supreme Commander of the Alliance doing it probably wouldn't really impress their guests - it would look far too forced. At least in Catra's opinion.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 2nd, 1999 (Earth Time)

"I would have never expected to be able to travel to another planet in my lifetime!"

"What? Not even after First Contact? It won't cost a lot to step through a portal!"

"It's called a Stargate, not a portal."

"What's the difference?

"A portal is science fiction or fantasy; a Stargate is real!"

Jack O'Neill glanced at Carter and grinned. His second-in-command had the expression she usually showed when she was struggling not to correct a superior who was using imprecise or plain wrong technical terms. All polite, but her eyes just had that 'why me?' expression shining through.

Granted, none of the actors and artists gathered in the room next door - unaware that they could observe them - was actually her superior. No matter what some of the arrogant idiots clearly thought. But their orders were to be polite to their guests anyway. At least until they found an excuse to boot the worst of them.

"Anyway, I expected space tourism to start much sooner."

"Really? We're at war with a galactic empire, and you want to play tourist?"

"We didn't stop travel on Earth so why shouldn't we travel the galaxy?

"Because the Stargate is vital for the war effort?"

Someone amongst the bunch has a little common sense, Jack thought.

"It's not a spaceship - you just step through it, and whoosh! You're on another planet. That's not going to take a lot of time at all."

"Besides, if it were so vital, they wouldn't let us travel to another planet, would they? Back in World War II, they had rationing. We

don't have that now, so things can't really be that bad."

"They still won't let me buy a space shuttle!"

I got a personal stealth shuttle, Jack thought with a grin.

"Why would they let you have a shuttle?"

"I've got money."

"Shuttles are vital for the war effort."

"One shuttle more or less won't make a difference."

"And we're also vital for the war effort, or we wouldn't be here!"

"Someone has a high opinion of themselves," Jack commented.

"All of them are famous artists, Jack." Daniel shook his head. "And they've just been told that they are so popular on Etheria that the Alliance requested their participation in the upcoming cultural exchange program. Of course, they'll feel important - they are important."

"But not as important as they think they are," Jack retorted with a snort.

"Indeed." Teal'c nodded.

His friend was hard to read, but Jack thought Teal'c was a bit annoyed as well - and he should be. He should be with his family, not meeting a bunch of overpaid actors and musicians so the shrinks and spooks could judge how they would react to Etherians.

"Well, I think we've let them wait long enough to spot the first problem children," Jack said.

"Yes." Daniel pointed at the most arrogant actor in the next room. "I don't think the Etherians will react well to his sense of

entitlement and his lack of care about the war, but I'll still need to talk to him in person."

"And try to find out if his sense of entitlement extends to sex," Jack reminded him. The last thing they needed was an actor hitting on a princess and not taking no for an answer. No, he corrected himself a moment later, the last thing we need is an asshole seducing a princess and ending up their prince-consort or whatever the term was. "Yeah, let's go and talk to our future cultural ambassadors. Try not to murder them, folks!"

"Jack!" Daniel exclaimed, but Jack was already moving to the door to the meeting room.

"Hello, everyone!" he said as soon as he stepped inside. "I am General Jack O'Neill, and this is my team. Dr Daniel Jackson, Major Samantha Carter and Teal'c. We're going to brief you about Etheria."

"Finally!" Mr 'I want a personal space shuttle' cried out, almost spilling his drink. "We've been waiting for hours!"

Half an hour, tops. But Jack smiled anyway. "Sorry about that," he lied. "Things came up. We're fighting a war. Anyway, you're here because we're going to launch a cultural exchange program with Etheria, and you're potential members of our delegation."

"I thought the Etherians specifically requested us?" a singer asked. Jack didn't know her or her music, but according to Daniel, she was one of the artists who wrote their own songs, which was supposed to vibe well with the Etherians.

She was polite as well, so Jack nodded. "They gave us a list of artists who are popular on their world. But we still have to vet all of you."

"'Vet'?" Another guy, already a bit into his cups, or so it looked, asked.

"Check if you are a security risk," Jack told him with a toothy smile. "We don't want a diplomatic incident. You're going to meet and greet a lot of powerful people, and we'd rather not have to smooth out things if you end up in a duel after insulting a princess. Or dead." He shrugged.

"Dead?" The man blinked, lowering his drink. "But… they're our allies, aren't they?"

"Yes, they are. They are also a totally different culture, and they've been through a decades-long war that only ended a year or two ago." Jack grinned again.

"But… duels?"

They were paying attention now, Jack noted with satisfaction. He nodded at Daniel.

His friend took a step forward and cleared his throat. "Well, it's not as if Etheria has a formal duelling culture, like Earth had in the past, but it's a world divided into individual kingdoms ruled by absolute monarchs - who all have magic powers and are generally expected to personally fight in a war to defend their people, so their first impulse is not to call for the police, but to settle matters personally. That doesn't mean they'll react violently to a misunderstanding, but depending on the situation, things could escalate rather quickly, and so …"

*****

Bright Moon, Etheria, December 2nd, 1999 (Earth Time)

"...and this is Bright Moon."

Adora watched the Asgard's reaction to Glimmer's announcement. There was no awe, no wonder, just polite - probably - interest as they studied the city ahead of them. It was completely unlike her own reaction years ago. Or SG-1's.

"What purpose serves the artificial waterfall?" Freyr asked.

“It is nice to look at,” Glimmer replied in her ‘I am being polite but I wish I didn’t have to’ voice.

“Ah.” Freyr nodded as if that was a profound piece of knowledge. Maybe it was for the Asgard - they would have been raised very differently than Adora or anyone else she knew.

“You mentioned a war on this planet before the invasion by Horde Prime. Was the city ever attacked?” Thor looked around as they entered the gate.

Was he trying to spot defences? Or battle damage? And was she starting to think a bit too much like Catra - or Jack?

“Yes, a few times, but the shield held,” Glimmer explained.

Although only barely, Adora knew. Catra’s first attack had almost shattered it, and Horde Prime could have destroyed it from orbit easily if he had focused on it.

“Is it a magitech shield?” Penegal asked.

“Yes.” Glimmer didn’t add ‘of course’, but Adora heard it anyway.

“You have an eclectic mix of technologies,” the Asgard went on as they passed a floating wagon drawn by a horse.

Oh - Ketro and Jesa were on the wagon, probably transporting their produce to the market. She waved at them, and the two farmers waved back.

“It works for us,” Glimmer said. “And people are used to it.”

“So, it’s tradition? And not a result of your war?” Freyr cut in.

“Mostly tradition,” Glimmer admitted. “The Horde War caused a lot of changes, but most of them were limited to the military.”

“And horses are great,” Adora added. “A skiff doesn’t have a personality.”

“According to the tech pool in the Horde, some vehicles had a nasty personality,” Catra cut in as she steered the skiff towards the palace gates. “Not as bad as Swift Wind, of course.”

“Catra!” Adora frowned at her lover. Swift Wind was a great friend!

“Did someone say Swift Wind?” And there he was, swooping down from the sky to land next to them. “Hello!”

The Asgard stared. “Hello,” Freyr said after a moment.

“Are you flying thanks to an innate magical power, or do you have anti-gravity implants?” Penegal asked. “Your wings are not large enough to lift your body - unless it’s much lighter than a horse’s.”

That sounded a little rude to Adora. But they were obviously surprised by her friend, so that excused it. Partially, at least. Or maybe that wasn’t rude by their standards - Loki acted the same if something interested him, after all.

And Swift Wind wasn’t offended. “Oh, it’s magic! When Adora created me, she granted me a part of her power! A sign of the sacred bond that links us!”

And now all of the Asgard were staring at her, Adora noticed. “Uh… I was new to my power and was experimenting,” she explained.

They were still staring. Harder, even, or so it seemed. Oh! She blushed. “I wasn’t trying to create Swift Wind, or anything - I was just trying to, ah, unlock my sword’s power.”

“And you accidentally created a new sapient life form?” Adora could clearly hear Thor’s sarcasm.

She still nodded. “Yes.” That was the truth, after all.

“That’s Adora for you,” Catra added. “Creating flying unicorns and space plants by accident.”

“Space plants?” Penegal cocked his head to the side.

“I turned Horde Prime’s flagship into a plant. In space,” Adora explained. “There was the power of the Heart of Ethera, all the magic the First Ones had been collecting, and I had to send it somewhere…”

The three Asgard didn’t look like they believed her. Even if it was the truth again.

“You can see it from here when its orbit takes it above Bright Moon,” Glimmer said. “We can also take you up in a shuttle if you want a closer look.”

“I think we would like a closer look at this ‘space plant’, yes,” Thor said.

“Does it grow in space? Spread?” Freyr asked.

Oh, no. “It’s harmless,” Adora assured them. “Perfuma checked, and she is the greatest expert on plants on Etheria - she can control any plant. Even cactuses. The space plant just absorbs sunlight and, well, exists.”

Unfortunately, it didn’t seem as if the Asgard believed her about that either.

The cultural exchange wasn’t up to a good start, and it was all her fault.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 2nd, 1999 (Earth Time)

“...and that’s a brief overview of the Etherian social and economic structure.”

Samantha Carter suppressed a smile when Daniel finished his lecture. Her friend was an academic at heart, and it always

showed when he was briefing people. And, she added to herself when she looked at the assembled actors and artists in the room, those people are, by and large, not academics, and it shows.

"So… basically medieval kings and queens?" an actor Sam wouldn't have recognised without her own briefing since she wasn't a fan of his movies asked.

Daniel blinked. "No, as I just said, the similarities are only superficial. There is no feudal system, for one. The absolute monarchs of the Renaissance would be a better comparison, especially those championing Enlightenment, but even there, we have critical differences in the social and political structure, for example, the general lack of an entrenched noble class. In fact, the princesses, despite being defined so by their inherited power, both magical and legal, are remarkably free of class or caste biases when choosing their partners or consorts."

"So, they're like Walt Disney princesses," an actress who had played in Disney movies joked, and most of the room chuckled.

"Walt Disney princesses in a Tarantino movie," the General's remark cut through the fading laughter. "They went through a bloody war against a literal evil Horde, and they fought in the trenches." He pointed at the group picture of the Princess Alliance displayed on the screen behind Daniel. "See that little girl in front? She can freeze you into a solid block of ice. And she isn't some comic superhero who won't kill - she's fought and killed enemies despite her age."

The actors looked quite taken aback at that. "But she's a teenager!" another actress protested. "She looks like she's barely in high school!"

"Etheria doesn't have the same values and customs as we have," Daniel spoke up again. "They are more liberal than most countries on Earth in some areas, such as gay marriage, but that doesn't mean that they share everything that we Americans would consider liberal values."

“Aren’t they all about forgiveness and rehabilitating? Even their former enemies.” An actor with the biggest ego of anyone Sam had ever met, and that included both generals and politicians of the highest ranks, shook his head. “That sounds very liberal to me. We would have nailed those bastards to the wall.”

Daniel frowned and pushed his glasses up. “That’s another misconception. This Etherian policy - custom would be more precise - is rooted as much or more in what we would call pragmatism or realpolitik as it is in personal views and ideals. By sparing the leaders of an enemy kingdom, they ensure that wars aren’t prolonged unnecessarily because the losing side is fighting for their ranks, freedom or even life - which also means they can expect the same should they lose.”

“They aren’t some naive girls who only see the good in people,” the General added. “They are veterans.”

Sam nodded in agreement. Of course, some of them might seem a bit naive, such as Perfuma and Scorpia. But for all their sweet tempers, they were terrifying in combat.

“They are honourable warriors,” Teal’c said.

“Does that mean they will challenge us to a duel if they feel their honour was insulted?” That came from an actor who had a reputation as a womaniser. Although he, like everyone else present, had already passed a background check, so there was nothing unsavoury about it. Or shouldn’t be - nobody was perfect. And the way he had checked out Sam when they had introduced themselves had felt uncomfortably familiar.

“They might do that - or they might just attack you or punish you,” Daniel said. “Remember: They have a different culture, and they are absolute rulers of their country.”

“And the US government won’t be able to bail you out if you piss them off too badly.” The General grinned.

A few of the actors and singers seemed to have second thoughts about this 'tour'. Unfortunately, the ones with the biggest egos didn't seem to be amongst them.

*****

Fifteen minutes later, they were 'mingling' with their guests, and what fear of Etheria Daniel inadvertently and the General deliberately had induced in the artists was fading again.

"So, Major Carter - Carter was it, right? - You've been talking about princesses all day. Aren't there any princes?" The lead actress of a sitcom Sam was not familiar with asked.

"There are princes - like Prince Peekablue," she replied, "but the majority of the rulers are female, and when people say 'princesses' on Etheria, they mean both female and male rulers."

"Sounds like a feminist dreamland!" The arrogant actor that they had listened to before entering the room chuckled.

"They have a remarkably egalitarian view of genders," Sam said with a slight frown.

"For absolute monarchs, I suppose." The man shrugged. "People in power always have more privileges.

The actress frowned. "Is that true?"

"It permeates their entire society," Sam reassured her. "Men and women are equal on Etheria - at least in the kingdoms we visited."

"Ah."

"And yet, there are more princesses than princes!" The man snorted. "That doesn't sound very equal to me."

Sam schooled her features. "That might be a result of how magic powers are inherited. We don't know too much about how their society came to be and how magic talents are passed on."

“Speaking of magic talents…” An actress who played teenagers in TV shows smiled at Sam over a drink she wouldn’t be allowed to have in the USA. “Can we get a test for magic talent on Etheria?”

Sam blinked. They hadn’t thought about that. “I am not sure,” she said. “Magic is generally handled by Mystacor, and they are a bit isolationist.”

“What? We can’t visit the flying magic academy?” The woman looked shocked.

“You will meet sorceresses,” Sam told her. “Both male and female ones,” she added with a side glance at the arrogant actor.

The man snorted again, and Sam made a mental note to bring up his attitude at the debriefing - he might be a potential problem on Etheria.

Unfortunately, he was not the only one with such an attitude by far.

*****

Bright Moon, Etheria, December 2nd, 1999 (Earth Time)

“Say… are there horses on your planet?”

Catra was really tempted to ‘accidentally’ steer the skiff into Swift Wind. The stupid horse was about to ruin this event with his thoughtless chatter.

“No. We don’t have horses. We stopped using draft animals long before we achieved faster-than-light travel,” Freyr explained - in a tone that told Catra that he wasn’t impressed with the fact that Etheria still used them.

At least, that was her impression. They might just be wary of what they saw as another biological experiment. It was hard to read the Asgard, even with her experience working under Hordak. The Asgard were not like the clones. Fortunately, they also were

nothing like Horde Prime. Though Loki had some similarities, if you thought about it…

"Oh? That's a very enlightened attitude!" Swift Wind beamed at them. "I'm still working on freeing my fellow horses from bondage - here and on Earth. Could you tell me how you managed to convince your species to stop using draft animals?"

"Ah…" Adora winced. She must have picked up on the implications of Freyr's comment.

"They were too inefficient compared to more advanced technology," Freyr said.

"Oh. Then I don't understand why Etheria and Earth are still forcing horses to work - both planets have advanced transport technology!" Swift Wind complained. "And they aren't as traditional as you are."

"I am sorry to say that we cannot be of any help here - we do not know much about either planet's culture," Thor said. "We are here to learn more about Etheria's culture."

And that was a polite 'get lost' if Catra had heard any before.

"Oh. That's too bad."

Not that Swift Wind would get it, of course.

Catra glanced at Glimmer - Adora wouldn't send Swift Wind away, and the Asgard couldn't - but it seemed that the queen didn't mind their guests being bothered by a pushy horse. Probably still annoyed at their attitude and being petty about it.

Whatever, it was no skin off Catra's butt. Thanks to excellent timing, they had reached the palace gates, so she focused on parking the skiff while more guards lined up to welcome the queen and her friends and guests.

Swift Wind flew off with some cheery goodbye as they disembarked. Catra used the opportunity to check a suspicion. "You don't have former draft animals living free on your planet, do you?" she asked, bending slightly towards the three Asgard.

Thor looked at her. "You are correct."

Catra nodded.

Adora frowned. "How did that happen?"

"They had long since domesticated and had lost the ability to survive in the wild. Once the Asgard stopped caring for them, they logically died out," Freyr said.

"But…" Adora shook her head. "Couldn't you have kept them alive?"

"We could have, but why should we have? Their time had passed." Freyr tilted his head slightly to the left.

"Couldn't you have… bred them back into wild animals?" Adora asked.

"Why would we have done that? Their wild ancestors had died out already, and their ecological niche had been filled again." Freyr shook his head. "It was much more appropriate to let them die out."

"I take it you're not very sentimental about pets," Catra said in a dry voice.

"I'm not gonna let them near Luna," she heard Adora mutter.

Catra snorted. She didn't think the Asgard would hurt Luna. But their attitude was… weird. She was tempted to ask if they ever thought that the Asgard's time was passing as well, but that would have been rude. Probably.

It would explain their stance towards Loki's experiments, though.

“Welcome to the Royal Palace!” Glimmer interrupted her thoughts. “These are my father, King Micah, and my aunt, Castaspella, the Head Sorceress of Mystacore.”

If the Asgard had cat ears, they would have twitched with excitement, Catra was sure. They focused on Castaspella.

And wasn’t that interesting?

*****

Cultural Exchange Part 2

Alliance Headquarters, Brussels, Belgium, Earth, December 2nd, 1999 (Earth Time)

"So, you're an alien. But you're human." The actor peered at Teal'c like he were in a zoo, in Jack O'Neill's impression.

Teal'c, of course, was stoically ignoring that. "I am a Jaffa. The false gods altered the human slaves they brought with them from Earth to create us as warriors for their armies," he explained.

"So, you're human." The actor nodded as if he were an actual scientist instead of having played such roles.

"I am a Jaffa."

"But you are descended from humans. Can you breed with humans?"

Jack pressed his lips together. That wasn't a question you asked a stranger you had just met. He made a quick note on his Bow-made tablet - that actor wouldn't be on the delegation; Jack would rather not find out how the princesses reacted to such rude questions.

"We are too different to produce viable offspring," Teal'c replied.

Jack thought his friend had way too much self-control as he finished his note.

"But can you have sex with humans? I mean, do you find humans attractive? Or do we smell alien to you?"

OK, that was enough!

"It depends," Teal'c replied in the same polite voice. "I do not find you attractive, but that is not because of your hygiene."

The actor stared at him with his mouth half-open while Jack and Teal'c left to head to the buffet. His friend also had a very dry sense of humour, Jack reminded himself.

"Sorry about that," Jack said in a low voice while picking up some sandwiches.

"It is better if such fools reveal themselves here instead of Etheria."

"Well, yes, but it's still not nice to deal with them." Jack glanced around. One singer was staring at them and keeping her distance. That wasn't a good sign, either.

"Compared to being shot at?" Teal'c raised his eyebrow.

"Well, at least you can shoot back there. Of course, we could…" Jack trailed off as he saw one of the more famous actors approaching them.

"Ah, General O'Neill!" The man smiled at him, then nodded at Teal'c. "I was wondering about something…"

Jack smiled politely. "Yes? We're here to answer questions."

"Will we have access to magical healing on Etheria?"

"They take good care of their guests, don't worry," Jack replied. "And they won't charge you for it, either."

"Ah."

"But unless you do something stupid, you won't have to fear getting hurt any more than you have on a promo tour on Earth," Jack added.

"And if we had a lingering issue?" The man took a sip from his drink.

Something in the way he said it made Jack want to frown. He didn't recall reading about any serious health issues when he checked the candidates' files - they had screened for that. "Are you currently sick?" They wouldn't send sick people to Etheria, either.

"No, no, just wondering if, say, Etheria has a magical cure for hangovers." The man chuckled at his own joke - if it was a joke.

The man's smile was open and friendly, but it raised Jack's hackles. Half the crowd here were actors - professional liars, in a way, he reminded himself. He shrugged. "I wouldn't know. I am usually on duty when I am on Etheria."

The man frowned for a moment, then leaned a bit closer with a toothier smile. "And even if you indulged, I doubt you'd suffer - you look like you're twenty years younger."

Oh, hell! Jack didn't look twenty years younger - but he felt like it. At least when he wasn't dealing with the current generation. But that effect of Adora's healing was classified. So, why did this damn civilian know about it? "You flatter me," he told the man. He had to get to the bottom of this - they couldn't afford leaks. It had been bad enough when people had rioted about magical healing. If they thought they could grow young again with magic…

"I'm just telling the truth."

Jack wanted to have the man dragged out by two guards and thrown into an interrogation room, but that would ruin the event at the least - and probably cause a lot of problems. Especially if the man blurted out what he knew to the rest of the room. "Sounds more like a rumour," he said.

"Sometimes rumours are truthful."

Wasn't that a line from a movie? "Well, I just have to look into a mirror to know it's not true."

"Age is not just your appearance."

“Don’t let Hollywood’s plastic surgeons hear that!” Jack quipped. “They’d lose all clients if that were true.”

The man smiled thinly. “Age is also how you move. How your body feels. Good actors - like me - know the difference between a young body and an old body moving.”

Yeah, the bastard definitely knew more than he should. “I wouldn’t know; I am no actor,” Jack said with a shrug.

“I find that hard to believe. Soldiering is hard on a body, isn’t it?”

Jack looked around. “Maybe we should talk about this later.”

The man’s smile made Jack want to smash his teeth in.

*****

Royal Palace, Bright Moon, Etheria, December 2nd, 1999 (Earth Time)

“So, the talent necessary to work magic as a sorceress is genetic - you and your brother both have inherited it, and King Micah passed it on to his daughter,” Freyr said.

“Yes,” Castaspella replied. She didn’t look annoyed at the question even though she had been telling their guests exactly that just a minute ago, Adora noted.

“And yet, all Gate Builders were able to use magic,” Freyr went on, “while this is not the case on Etheria, despite you being descendants of them.”

“We don’t count as First Ones,” Catra said. “With or without magic.”

“The genetic drift is probably too much,” Bow said. “It’s the same for the humans from Earth. Only some amongst them are recognised as First Ones - Ancients - by Alpha’s scanners.”

Thor frowned. Probably because he knew Alpha was working with Loki.

“You have not researched this?” Penegal sounded surprised. “Even though you have access to the Gate Builder’s research station?”

“Why would we care what kind of genes you must have to be considered a First One by an ancient laboratory?” Glimmer made a point of shrugging - quite Catra-like, Adora realised. “What matters aren’t your genes but your character.”

“But with a modicum of research, you could determine what makes someone a sorceress,” Penegal retorted. He almost sounded scandalised.

“We probably could, yes,” Micah said. “But why would we want to? We’re not going to breed people like animals.”

“Someone tell Anise that,” Catra muttered with a snort.

“Besides,” Castaspella said, “it’s usually passed on to your children.”

“You said usually.”

“Sometimes, children of a sorceress don’t have the talent. Sometimes, it skips a generation.” Castaspella shrugged. “It’s not like a princess’s lineage.”

“Have you examined those bloodlines?” Freyr asked.

“No,” Glimmer said. “If any princess wants to know more, they can have their genes analysed, but so far, none have asked.”

“Very curious,” Freyr said.

“And dangerous. If you are breeding out those talents, you might not realise it until it’s too late,” Penegal added.

Catra snorted again, and Adora didn't have to glance at her lover to know she was rolling her eyes.

Glimmer shook her head. "If that should happen, we have Alpha's databanks to go back to."

"Backed up," Bow added with a smile.

The Asgard frowned again. Were they disappointed that Etheria didn't have such records?

"And does Loki have access to this data?" Thor asked.

"No," Glimmer told him. "We won't let him use our genes to experiment."

"And yet, you let him use our genes," Thor shot back.

"His genes," Glimmer's smile grew a bit toothier. "He can experiment with his own genetics as much as he wants - they're his and his alone."

Uh-oh. Adora winced. They had planned to avoid that topic.

Bow smiled widely - and a bit forcedly, if you knew him. "But that's a different topic. You're here to experience our culture. So… how about we start with the palace? It's one of the oldest structures still used for their original purpose on Etheria, dating back to the founding of the kingdom." He gestured at the main corridor behind them. "And that leads directly to the throne room, where Glimmer holds court. Or Micah, if Glimmer is away."

The Asgard nodded - less reluctantly, or so it seemed, than Glimmer's own agreement.

Micah, though, beamed at them. "Oh, yes. However, it's a bit large for daily business, so that's usually done in our offices - unless we want to make a point.

They led the Asgard through the wide corridor, but their guests didn't look impressed. They hadn't been impressed by anything at all so far, in Adora's impression. Even though the palace was one of the most beautiful buildings she had ever seen.

Of course, she might be a bit biased since she was living here, and she would never tell the other princesses that she thought Glimmer's palace was the best.

They reached the throne room. Glimmer must have noticed the Asgard's lack of a reaction as well since she opened the doors herself with a flourish. "We've gathered a delegation of Etherian's best scholars and artists and most of the members of the Princess Alliance."

The Throne room held a decent crowd. Partially because they had decided to recruit for both cultural exchanges together, Adora knew, but even so, now that the Asgard had arrived, the smiles and curious looks of the people in the room seemed genuine. At least to Adora.

George and Lance, standing in the front row next to the princesses, certainly were enthusiastic. Mainly because the Asgards were contemporaries of the First Ones, but it still counted. Or should.

As Glimmer started introducing the various people to the Asgard, who were quickly surrounded by the crowd, Adora let herself relax. Things were looking up.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 2nd, 1999 (Earth Time)

"Where did he get classified information? And who is backing him? I need answers, folks!"

The General was furious. Samantha Carter could see that in his tight expression. The clipped sentences confirmed it. He wasn't

cracking dark jokes, but that was usually a mixed sign. And he wasn't pacing in his office.

"Do you really think this is a plot, Jack?" Daniel asked. "He could just have heard a rumour and decided he wanted this for himself as well."

"Would a mere actor really challenge the military leadership like that without someone more powerful backing him?" Sha're asked.

Sam pressed her lips together for a moment. Daniel's wife had not yet fully acclimated to Earth society or she wouldn't ask that question.

"In a heartbeat," the General told her. "Those actors are all full of themselves - they think they're above everyone!"

"Not everyone, Jack!" Daniel objected. "But a fair amount of them do have a bit overblown egos, yes." He frowned. "One of them tried to argue with my thesis based on an article he read in the *Rolling Stone*. Not even Popular Science!"

Sam had to smile at her friend's outraged expression. She was pretty sure she knew which actor had done that - one had been asking her quite the questions, but the man had at least not tried to argue physics with her.

"See?" The General nodded sharply.

Sha're didn't look convinced, though. "You also impressed upon them that they would be under your authority during this mission, and they didn't disagree."

"Indeed." Teal'c nodded slowly.

"That's because they know we won't let them go to Etheria if they don't play nice," the General said. "But once they're there? Or back? Some of them will already be talking to a ghostwriter for their 'The Truth about Etheria' book."

“But that’s why you had this meeting - to weed out those untrustworthy,” Sha’re pointed out.

“Yes. But we won’t get all of them. At least one will have to find out the hard way that we’re not joking.” The General shook his head. “But that’s not as serious as this. We’re dealing with a leak here!” He turned to her. “Have you checked our data security?”

“I would need a thorough evaluation of the entire data traffic to find proof of illegitimate access,” Sam explained. “And that wouldn’t detect someone with the necessary clearance showing his screen to someone else - or just telling someone after work.” Of course, if they had been sloppy, one could check if the time of access of the classified data correlated with a visitor in that office, but she doubted that anyone with the clearance for his would be that careless.

The General frowned at that, and Sam suppressed the slight guilt she felt for disappointing him. It wasn’t her fault that reality worked that way.

“So, we need to start with Mr Self-Important and work backwards.” He nodded. “But that will take a while. And we have to deal with the bastard soon.”

“He has shown he knows classified information,” Sha’re said. “Can’t you imprison him?” She looked at Daniel. “This seems to be a case of this ‘national security’ excuse you mentioned.”

Daniel winced a little, but the General chuckled. “I wish! But he’s very prominent and has given himself enough cover, so a decent lawyer would demolish us if we locked him up. And no, we can’t just vanish him either - even if we wanted to, and I am sure the NID would love to, and even if we managed to fool the press and the cops, the Etherians would ask questions. The bastard is really popular on their planet, or so it seems.”

“Well, he’s the lead of a very successful TV show,” Daniel pointed out. “And he plays a very nice and charming character. He’s not at

all like his character, of course, but…" He shrugged.

"Yeah, yeah. Maybe we can vanish him after the Etherians discover what he's like, but that won't help us now."

"What does he want?" Sha're asked.

"Access to magical healing," Sam replied.

"If he is as well-liked as you say on Etheria, couldn't he just ask for healing during his visit?"

"He could. But he'll discover that the magical treatment he might receive on Etheria won't duplicate She-Ra's healing," Sam explained.

"And then he'll want the real thing," the General finished. "And I don't like giving in to this kind of underhanded pressure. If you let them get away with this, they'll try to get more next time. So, we need to shut him down - and plug that leak."

Sam suppressed a sigh. He was right, anyway. "I'll look into his communications, sir." That was illegal, but between her advanced technology and some help from Entrapta, it was unlikely that she would be caught. And even if she did, that kind of thing could be swept under the rug, given the circumstances.

And if it couldn't, she could move to Etheria and do science with less paperwork and more freedom, a small voice in the back of her head whispered.

She ignored it.

"Good!" The General nodded. "And I'll need everyone else on the meeting with the bastard. Anything, any hint, any insight."

*****

Royal Palace, Bright Moon, Etheria, December 2nd, 1999 (Earth Time)

“So, you actually met the First Ones - I mean, the Ancients, oh, you call them the Gate Builders, right?”

Catra had to give credit to the Asgard - they didn’t react much to Lance getting so close in their face, even the French would remind him to respect personal space. On the other hand, the man’s enthusiasm and cheer were obvious, and the Asgard might like that. Especially after the somewhat lukewarm reception by most of the artists in the room - they didn’t think much of Asgard epics and music, although they were very polite about it. And most of the princesses weren’t much better, either - though Scorpia and Perfuma were talking animatedly with Penegal right now at the buffet.

“Dear…” George put his hand on Lance’s arm with a wry smile.

“Oh, I’m really sorry!” Lance bowed his head - no, his entire upper body - in apology. “The First Ones are a passion of ours, and when I heard that we would be meeting people who had actually met them…” He sighed.

Adora’s a First One, too. Catra didn’t say that, of course. They could use any honest enthusiasm for this visit. And it was kind of interesting to see where Bow got some of his mannerisms from. He was a bit of a mix of his two dads.

“We did not meet the Gate Builders at their peak, but we do remember them, yes,” Thor said. “Though not the ones who did build the research base here, I don’t think so.”

Yeah, Catra didn’t think the First Ones would have ignored the Asgard if they had known them during their war with the Horde - they should have known about the connection between the Horde and the Asgard once they had analysed a clone’s genes. Which they had - Alpha had mentioned bioweapon research. Although… “Well, they were busy building an Empire of their own and colonising planets, so they might have hidden from you as well.”

Thor frowned at that. Adora as well, of course - even if it wasn't her fault.

"That might have influenced them to keep hidden, though it seems a bit odd that they didn't reach out to us once they started losing the war against Horde Prime," the Asgard commented.

Catra shrugged. "They might have been too proud to ask for help."

"Or they feared your reaction," Glimmer added.

"But this meeting is not about Horde Prime but about a cultural exchange between Etheria and the Asgard!" Adora cut in with a wide and forced smile.

Right. No reminding, even indirectly, the Asgard of their unwanted grandkids.

"Yes!" Lance nodded enthusiastically. Very enthusiastically - Bow was wincing, Catra noted with a smirk. "And the First Ones are a very important part of Etherian culture - quite natural, of course, since they were responsible for creating so many of our ancestors."

"And are our ancestors," George added.

"Yes, yes, of course." Lance nodded again. "Their structures might lie in ruins, but their influence remains - although often in a subtle way."

"And how strong is this influence?" Freyr asked.

"That varies from kingdom to kingdom," Lance replied. "Different princesses took different aspects of the First One's culture, from what we can tell - though we are still researching this complex topic."

"And how much of their influence remains in Bright Moon?" Freyr asked, tilting his head a bit.

“Bright Moon’s a special case since its founder, Queen Angella, was a direct, ah, result of the First One’s genetic engineering program on Alpha and ruled the kingdom for so long. And yet, she never mentioned meeting the First Ones. So, we don’t know her views of the First Ones culture. But Bright Moon doesn’t share many aspects of known First Ones culture,” Lance said.

“We didn’t even know about the Stargate network,” Glimmer added. “Mum would have told us that if she had known.”

Adora nodded at that. “And she would have told me more about She-Ra if she had met Mara - my predecessor, and also a First One,” she explained.

“Ah.” Freyr nodded.

“And yet, you control the research base they left,” Thor said.

“Yes, because we have a claim on the Moons of Enchantment,” Glimmer replied a little testily.

“Even though until recently, you had no means to reach them?” Freyr looked curious.

“Yes.” Glimmer looked as if she dared him to question her claim.

Which could be seen as a bit questionable from a certain point of view, Catra had to admit. Not that she cared about it - as long as Adora was fine with it, it was OK.

“This claim could be influenced by Queen Angella’s history with the First Ones,” Lance speculated. “We just don’t know enough about her - or the First Ones. It was such a boon when Bow introduced Adora to us. We were not even able to read their language before she translated it for us!”

Adora blushed a little.

“That’s why I have this tattoo,” George said, pulling his left sleeve back. “I thought it meant ‘love’,” he explained with a wry

expression.

"It means 'lunch', I believe," Freyr said.

"Yes, it does." Adora looked embarrassed, and Catra snickered with everyone else at George's expense - he took it good-naturedly.

Didn't they have a saying on Earth? That love went through your stomach or something?

"So, does your view of what are safe experiments contain some of the Gate Builder's influence?" Thor asked, and everyone grew serious again. Well, everyone who was paying attention and not raiding the buffet, like most of the others in the Throne Room were doing.

"No, they stem from our experience with dangerous experiments," Glimmer told him. "We're very familiar with such - Etheria was almost destroyed because of a First One project."

"Our culture is very safety-conscious," Adora said - with a smile that wouldn't have fooled Emily.

Catra sighed. Her love was trying way too hard.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 2nd, 1999 (Earth Time)

"So, any new intel?" Jack O'Neill asked a last time as he checked his computer for any possible notices.

"I'm sorry, sir, but I haven't been able to find any electronic leak so far."

"Sorry, Jack, celebrities aren't exactly my, ah, speciality. I've been going over the available material, but it's a bit limited - tabloids

rarely report what people celebrities talk to at parties and mixers. Unless it's about a new affair."

"Are you sure that some of this isn't deliberate disinformation, my love?."

Great. He had to go into that meeting with the bastard without intel to back him up. He didn't like that at all, but it wasn't the fault of his team. Or would that be friends now? They weren't exactly his team any more, not formally.

He pushed that thought, and also the small voice in the back of his mind that wanted to point out what not being in the same chain of command would mean, away and nodded. "It was always a slim chance," he said.

"Yes, sir." Carter pressed her lips together as she nodded, and Jack felt a bit guilty - she would still feel as if she had failed him, even though it wasn't her fault at all; not even Carter could work miracles all the time.

But the bastard was waiting, and short of an actual crisis, Jack couldn't let him wait any longer - the arrogant actor had the vibe of someone who'd take petty revenge no matter the cost if he felt slighted, and they had to assume he had contacts in the Alliance. "Alright, let's see what exactly the bastard wants. Did anyone start a betting pool?"

Daniel chuckled at that, and even Carter smiled a little. Sha're looked confused, but Daniel would explain.

Jack left his office and went to the meeting room where the blackmailing bastard was waiting.

"Sorry for the wait," he said as he entered the room. "But we're in the middle of a war, you know."

"I heard war was ninety-five per cent waiting and five per cent action," the actor replied before taking a sip from his soda. He didn't get up from his seat at the table, of course.

“It’s mostly training, actually,” Jack told him as he sat down opposite the bastard. “For the soldiers, anyway. Analysts and staff rarely have to wait a lot - we’re buried in work.”

The man shrugged, obviously not caring about any soldier or other people actually doing their thing to defend Earth. Or that was what he wanted Jack to think - he was a skilled actor, after all, Jack reminded himself. He couldn’t trust anything the man said or did.

Of course, his team was watching over the cameras, and he was wearing a bud in his ear in case they found something, but Jack didn’t expect them to have more success at analysing the actor.

“So… what do you want?” Jack asked, leaning forward and putting his elbows on the table.

He couldn’t tell If his direct question rattled the bastard. The man smiled at him. “Direct and to the point - just as your reputation claims!”

Flattery - or had someone told him about Jack as well? Anyone who knew Jack knew he could be sneaky when he wanted to. Although most would also know that but for the Alliance with Etheria, Jack wouldn’t have gotten his current rank - he had made too many enemies, and saving Earth against orders could only make up for so much in the shark pool of staff politics. But this might be an attempt at deception, to make him underestimate the man’s knowledge. So Jack shrugged. “I have to. So much to do, and a day only has so many hours, so why waste it on chitchat?”

The actor chuckled. “Oh, don’t I know it! Whenever I am on a set, it’s always like that!”

Now, that was a lie - Daniel had discovered and confirmed that the man wasn’t exactly the most stressed actor. He did his scenes and then fucked off to his trailer - or home - at the first opportunity. Sometimes with a starlet. The last thing he did was

working too much. But Jack nodded as if he believed him. "So, let's not beat around the bush. What do you want?"

The man nodded. "I'm not getting any younger, and there's no cure for age. Or there wasn't until magic appeared."

Ah. So, it seemed that the man wasn't hiding some serious illness from his employers and the military doctors. He simply wanted to be twenty again - as he had hinted at during their first meeting. And without makeup, he looked his age, Jack noticed.

"The Etherians didn't find a fountain of Eternal Youth either," Jack told him. "Magic can't do everything."

The man snorted. "That's a nice story - good to keep the masses from realising what they can do - but I know better." He leaned forward as well. "*You've got the body of a twenty-year-old*."

Jack's classified medical report actually said 'peak health for a man his age' and 'healthy as a twenty-year-old', but this was too close to be a mere guess. The man wouldn't have gotten this from analysing She-Ra's mass-healing in India. Someone had read Jack's medical files and revealed it to a damn actor. And once Jack found out who had done it, he would nail the bastard to the wall!

But while this was bad enough, anyone who could get his medical file could also access other classified data. Even if they were limited to medical data, that was a lot. This was about as bad as Jack had feared. But it still wasn't solid enough to arrest the bastard.

He smiled, showing his teeth, and didn't try to hide his disdain. "And you want that."

The other man nodded, smiling without any shame. "Yes. Who wouldn't? Eternal youth has been a dream of humanity since forever," he added. "If this got out, it would make the First Contact riots like a kindergarten spat over the last slice of birthday cake."

"I've heard worse rumours about what magic can do," Jack replied.

"Rumours, yes. But this is the truth." The man flashed his teeth at Jack. "It can be proven."

And that was the threat. "If someone slipped, you mean."

"Or something happened to me." The man shrugged. "You have a certain reputation."

Jack nodded - and hid his grim satisfaction. The number of people who had access to his medical data and his black ops past was far smaller than those who had access to either but not both. Carter was probably already running an analysis. And Jack had a list of people who he had clashed with during his career in that field.

But that would take time. So, for now, he had to play along. But not too eagerly. "If such a magical cure for ageing existed, it would be in the hands of the Etherians."

"In the hands of She-Ra, who is your close friend - so close, she made you a general." The actor shook his head. "She'd do you a small favour like this without question."

The leak definitely was someone with a grudge against Jack, then. And either a fellow general - or someone who didn't get promoted as fast.

Good.

"It's not exactly a small favour, though…" Jack continued the act, thinking about how he would enjoy bringing down both this bastard and the leaker.

*****

Royal Palace, Bright Moon, Etheria, December 2nd, 1999 (Earth Time)

"...and that was the first All-Princess Ball - which ended the Age of War. Well, Etheria still saw wars, but never again on the scale of that epoch until the Horde War, which dwarfed every other conflict. The All-Princess Ball…"

"Or Princess Prom."

Adora wasn't sure if Glimmer was being helpful or not, but Lance nodded at her before he smoothly continued: "...also known as Princess Prom - remains the most prestigious and most important diplomatic event of Etheria, where all Princesses, no matter if they rule a kingdom or not, are allowed entry, with strict neutrality guaranteed by their host. This tradition was upheld over centuries, even during the Horde War. In fact, except for a violent incident between the then-rulers of Plumeria and the Kingdom of Snows over a shared lover, which was, by all accounts, a private affair and only escalated to a conflict between the realms after the near-strangling respectively freezing of the involved princesses, the Horde was the only power ever to break the ancient rules of hospitality of the event."

"It seemed a good idea at the time," Catra commented with a shrug.

"You broke centuries of tradition during?" Freyr asked. He seemed more concerned about that than the fact that Catra had been a Force Captain in the Horde at the time.

"I'm not a princess, so technically, it was Scorpia, but I gave the order, yes." Catra met the Asgard's eyes.

"And we've all moved past that," Adora cut in. "The Horde War is over, and we're all friends now."

"Try telling Frosta that," Catra muttered under her breath, but the Asgard nodded.

"This event seems to have influenced your diplomatic traditions - namely, that you are willing to forge alliances with former enemies," Freyr commented.

“Yes,” Lance said. “Although it was but one element of several, being able to meet other princesses in a neutral setting and socialise with them would have helped foster a culture of limited conflict where peace didn’t require the complete defeat of the enemy.”

“And yet, the Horde War ended with the complete defeat of Horde Prime.”

Thor sounded a tad smug. At least, that was Adora’s impression.

“Well…” Bow spoke up. “It depends if you consider the Horde War one conflict or two. There are arguments for both views. But even so, the only one who suffered total defeat was Horde Prime - the Clones and the Horde Soldiers were welcomed into the Princess Alliance even if they didn’t defect during the conflict.”

That was, perhaps, a bit generous. Technically correct, since the Horde Soldiers were pretty much all living in the reformed Scorpion Kingdom, which was a member of the Princess Alliance, but not many other kingdoms except for Plumeria had welcomed them within their borders. And the Clones pretty much stuck to their own. Except for Third Fleet’s missionaries, of course.

“But do you expect to treat the Goa’uld the same?” Freyr asked. “Offer them the chance to change sides and retain their positions?”

“If they change, yes,” Adora said. “They cannot keep slaves or oppress anyone. And they can’t take unwilling hosts. And they have to be honest.” Hadn’t they told the Asgard that before?

“And, of course, if they break their word, we aren’t bound to ours any more either,” Glimmer added, showing her teeth. “And the same goes for Loki.”

“Ah.” Freyr nodded.

“We’re not naive,” Glimmer told him. “But we give people a chance to change.”

“Laudable,” Thor said. “And yet, you ignore that Loki has failed to change despite having had many such chances.”

“It’s never too late to change,” Adora said.

“That seems to contradict Queen Glimmer’s claim,” Freyr pointed out.

“It doesn’t.” Catra was tense - her ears were laid back a little, and her tail twitched a lot - and she had crossed her arms over her chest - as she narrowed her eyes at him. “You can give people more chances if you can keep them from being a danger to you and others.”

“And if you can’t?” Thor asked.

“Then you do what you can to neutralise them as a threat.”

“But we’re talking politics again,” Adora stepped in. “We’re here to show our culture and traditions.”

“The point of this visit is to build trust,” Thor retorted. “And the biggest issue is my brother. And his plan to alter the very heart of our culture.”

She pressed her lips together. Did he have to insist on this?

“You’ve heard about our traditions. Some of them,” Glimmer said. “You know how they came to be,” she added with a nod and a smile at Lance and George. “But we’re a long way from finished. There are many kingdoms with their own cultures and traditions, even if we limit this visit to the Alliance.”

“But you didn’t come here for Etherian traditions anyway, did you?” Catra spoke. “You came here for Etherian *magic*.”

Adora frowned. What was Catra saying? The Asgard looked… not guilty, but not surprised either, she noticed.

“It is unique to Etheria,” Freyr said.

Penegal nodded. “We never used magitech much, lacking the ability to use magic, so we developed our technology without it, but the Gate Builders relied on it.”

“Are you looking for a magic cure for your problems?” Bow asked, then blushed and glanced around. “Sorry.”

Catra snickered, and Glimmer groaned, but Adora didn’t think it was bad. They were surrounded by friends. And except for Bow’s dads, the other guests didn’t seem to be paying them much attention, anyway.

“We don’t know if this is a feasible option,” Freyr said.

“In other words: Yes, you are.” Catra smirked.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 3rd, 1999 (Earth Time)

“You didn’t pull an all-nighter, did you, Carter?”

Samantha Carter suppressed a frown at the General’s question. He couldn’t know from seeing her that she had worked through the night on this - she had checked in the mirror before this meeting. And she had had a nap before this. She had done worse before, anyway. And before She-Ra had healed her during the mission on Saqqara. “I finished before bedtime, sir,” she replied, a little sharper than usual. It was true, anyway - depending on which day you were talking about. And she’d had to do this - it was important. For the Alliance and for the General.

He didn’t seem to believe her, but he didn’t press her on this either. She had expected that, of course.

As she took her seat at the table, Daniel leaned over and whispered. “You did, didn’t you?”

She rolled her eyes at him in return and took a sip from the coffee he handed her. Good.

"So!" The General sat down as well. "Now, let's see what we can do about our blackmailing problem. You've said you had something for me, Carter."

"Yes, sir." Sam switched her laptop on - this kind of thing was best done off the main computer system. "I've correlated the data Daniel and Sha're gathered through the news and the known schedules of the various people with access to our medical files." Which was technically illegal, but this wasn't a criminal investigation. And she had access to the databanks for technical reasons, so one could argue the legality of this.

"Our suspects." The General nodded.

"Yes, sir." She opened the charts she had prepared, her laptop's holoprojector displaying them floating above the table. "There's no direct correlation between them, and their itineraries - their offical ones; I haven't had access to private ones - don't match up."

"I sense a 'but' coming." The General grinned.

"Yes, sir. There are several flights of his private jet logged between Los Angeles and Washington D.C. that do not match up with any publicly known events of our… main suspect."

"I think, seeing as he admitted to blackmailing us, we can call the bastard 'culprit,' Carter."

"And those dates line up with the vacation days logged by General Smith." A four-star general. Short of the leak being a member of the Alliance High Command, this was the worst case situation. "Not all of them, but three in the time span of five years," Sam finished, highlighting the six flights. "None of them during regular holidays."

"And given how difficult it is to get leave even during major holidays as a general, as I found out…" The General bared his teeth. "That would be quite a coincidence."

"It's not proof, though," Daniel pointed out.

"It's proof enough," Sha're disagreed.

"Not for a court, my love. Or to arrest anyone."

"But it's proof enough to, ah, take a closer look at what my dear fellow general has been doing in Hollywood. It wasn't negotiating Air Force support for 'Top Gun 2 - The Air Force Strikes Back', that's for sure."

"They're making a sequel?" Daniel blinked. "And I thought Top Gun was about the Navy…?"

"That's 'No, they aren't', and 'Exactly', Daniel." The General grinned. "Which is my point. We've got our suspect. Now we just need to find enough proof to nail him."

Sam nodded. Enough proof to deal with the man. Not necessarily enough to charge him. "We should inform the Etherians, sir."

He frowned at her. "The idea is to keep this under wraps until we've dealt with it, Carter."

"They have resources that would help with this," she pointed out. And they had diplomatic immunity.

"Adora also can't act worth a damn, and Glimmer's got a temper," he objected. "We'd be blowing this wide open if we involve them. Can you imagine them playing nice with Smith while they're in a meeting that's already annoying?"

"I wasn't thinking about Adora and Glimmer, sir," she explained. "I was thinking about Catra. And Melog."

"Ah!" He smiled widely. "Yeah, that's different."

*****

Cultural Exchange Part 3

Royal Palace, Bright Moon, Etheria, December 3rd, 1999 (Earth Time)

"...and we thought you could help us deal with this. From the Etherian side, so to speak."

"So, you've got a scumbag trying to blackmail you into Adora healing him, and you want me to help you without making Glimmer lose her temper or Adora trying to act innocent?" Catra cocked her head to the side as she looked at Sam and Daniel.

"Err, yes." Daniel blushed a little. Had he really expected she wouldn't figure out why they were coming to her with this instead of to Adora - the Supreme Commander of the Alliance - or Glimmer, Queen of Bright Moon and member of the Alliance Command Council or whatever they called it this week? Catra didn't even have a formal rank in the Alliance.

"Well, that was a good decision." Catra nodded in approval. Judging by the faint smile on Sam's face, that had been her idea, then. "But what do you want done about him?"

"We're working on uncovering the leak," Sam explained.

"And you can't just arrest the guy and interrogate him until he spills his source because that's illegal on Earth, right?" Catra shook her head. Sometimes, she wondered how Earth countries could function with all that red tape. On the other hand, if someone had been able to restrict her more reckless decisions, back in the Horde… Bah. That was the past.

"Yes." Sha're sighed a little as she nodded.

"Err, there are good reasons for that," Daniel said.

"I know, my love, but they are also inconvenient at a time like this."

Catra could agree with that. “Well, I guess we can’t really have him disappear on Etheria, either.”

Daniel gasped a little. “No, we can’t!”

Catra had been joking, anyway. Mostly. A little trip, and he could become ‘lost’ in the Whispering Woods. If he was as over-confident as some of his roles, no one would question that he wanted to brave the woods alone. But people would wonder why he had been allowed to enter the woods alone and question the competency of the Princess Alliance. Or suspect foul play - Earth media were all about such plots, and from what Catra had learned about Earth's history, their governments were worse. But that wasn’t the point here, anyway.

“We just need you to ensure he doesn’t cause any trouble,” Sam said, “while we handle the Earth part of this.”

Catra nodded. “Especially if he wants to cause trouble. Which he would if he suspects something.”

“We’re hoping he won’t,” Sam said.

“That’s why you came to me.” Catra nodded. Slowly. And took a deep breath. They meant well. They just hadn’t thought it through. They hadn’t considered how this would look from another point of view. Namely, hers. “Yeah, that’s a solid plan. Simple goal, clear reason. There’s only one problem with it.”

“Oh?” Daniel looked surprised. Sam’s eyes widened as well. And Sha’re was frowning.

“You want me to lie to my friends. To Adora.” Her love.

“Ah.” Daniel blinked. “Oh.”

Sam winced.

And Sha’re glanced at Daniel, then met Catra’s eyes.

“That’s…” Daniel started to say, but Sha’re interrupted him. “We’re sorry. We should have realised what we were asking of you, but we didn’t.” She bowed her head for a moment.

Catra let her breath out. “Yeah, it’s…” It wasn’t OK, but it hadn’t been deliberate. “I understand your line of thinking.” But to suggest she should betray Adora, hurt her like that… She clenched her teeth at the thought. Never again. She’d rather die.

All three winced at that, and Catra felt a pang of guilt. They still had a pretty serious problem to solve, and their reasons for suggesting to keep this from Adora - and Glimmer, and the others - were not entirely stupid. What Catra had heard of the mission to the Enchanted Grotto didn’t fill her with much confidence in the Princess Alliance’s capability to conduct undercover operations.

Sighing once more, she said: “So, we’ll have to plan this carefully - with the others. And if Her Sparkliness blows her top, I’m not going to intervene.”

“That’s fair,” Sha’re said. The other two grimaced.

“Let’s hope the Asgard haven’t frustrated Glimmer too much today,” Catra said as she got up.

“Oh? Are things not going well?” Daniel asked, pushing his glasses up his nose.

“They haven’t threatened war yet,” Catra told him. “But they have very different views, and, apparently, they think as little of our art and stuff as we think of theirs.” Which was to be expected if the Asgard enjoyed the things Loki had shown them.

“Oh.” Daniel frowned for a moment. “Have you tried to show them artwork comparable to the Norse culture’s works? They influenced that culture, after all, and so they might enjoy similar art.”

Catra snorted. “Yes. But the Asgard apparently thought sea shanties were parodies of their epics.” To be fair, Sea Hawk singing them probably hadn’t helped. The man had a good voice,

but he was just too passionate about it. And turning every second shanty into a love song for Mermista hadn't helped.

Daniel winced again. "And what about rune carvings?"

Catra sighed once more. "Castaspella said most Etherian runes were related to magic and that it wasn't a good idea to try out new runes without proper precautions. The Asgard disagreed. Last I heard, they were still 'discussing' things when you called for me."

"Ah. Well, we didn't hear any explosions on the way in…"

Catra laughed at the weak joke. "Anyway, let's go and see if we can get Adora and Glimmer. If all goes well, they'll probably be happy to be called away."

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 3rd, 1999 (Earth Time)

General Smith had been up to no good. Jack O'Neill was sure of that. And serious no-good stuff, not just the usual things a four-star general did to get promoted if they hadn't saved the world from evil alien body-snatching snakes a few times and were friends with magical princesses who had a huge fleet of spaceships with big honking guns.

Jack leaned back in his seat and dropped the report he had been trying to read on his desk.

The problem was finding enough proof of said no-good stuff. Well, that was one problem. The other problem was finding out what Smith wanted. Why would a four-star general send a bloody Hollywood actor to blackmail Jack? It didn't make much sense. Smith didn't have a reputation for gossiping or drinking, so while it wasn't impossible that he had let slip something classified to a civilian friend at a mixer, it was very unlikely. Smith also wasn't stupid - he would know that Jack wouldn't let some arrogant actor

push him around. And he would be aware that, especially now that the United States finally were officially at war, said arrogant actor could end up arrested in a heartbeat.

It wouldn't stick, though. The bastard had used a cover story that was bullshit but just plausible enough to get out of prison as soon as a decent lawyer was brought in. Or, if that didn't work fast enough, the press got a story about the evil Alliance trying to send an actor who had found out too much to a gulag. Which the public would take as proof that the Alliance was keeping magic that made you young again for themselves.

And that would be a catastrophe. Everyone with money and influence would try to get this, and most of them would not baulk at anything to be young again. Even worse, those without influence or money would riot. The First Contact riots had been bad enough, but this would put the worst anti-magic riots in the Middle East to shame. And if the Russians and the Chinese leaders decided that they wanted access to this…

The Alliance would be hard-pressed to handle all of this without the war against the snakes and the current issues with the Asgard.

Was that what Smith was counting on? That Jack would rather ask Adora to heal a puffed-up actor than risk such a catastrophe? But Smith would also know that Jack wouldn't let this go. And neither would the princesses. Was Smith trusting the threat of revealing the healing effects to keep him safe from retaliation? That would be short-sighted. And stupid. Such a threat would have to be neutralised. Not to mention that Jack didn't think the idiot actor would be able to keep quiet once people noticed. No, that scumbag would tell his trusted friends - or people he wanted to impress or get favours off. Or the latest starlet in his bed.

And even if Smith were stupid enough to trust such a scheme, what was he getting out of this? Jack couldn't see how this whole thing benefitted Smith. If they gave in to the blackmail to keep the secret, then that would mean the odds of anyone else getting

Adora's healing would be even lower. If Smith wanted to have a young body again, it would have been better to do the blackmail directly. Hell, if he skipped the blackmail and just asked Adora directly, maybe added some sob story about being in pain, she might have healed him anyway.

So, what was Smith's goal? Was he being blackmailed by someone? Had he had some affair with a starlet, courtesy of his 'friend', and now it turned out that his friend had some demands to keep it a secret from Smith's wife? But would Smith go that far? Not for an affair, Jack thought. That sort of stuff still damaged your career, but they were at war now, which meant standards were looser - and Jack wasn't going to dwell on what might mean with regards to other rules that he wouldn't break anyway - and Smith was a decent officer and would know similar secrets of politicians and fellow officers. Enough to keep his post, though it might cost him a future promotion.

So, if Smith was being blackmailed, it had to be something more serious. And it would have a Hollywood connection. Drugs? They regularly tested for that - when you had to check for snake possession or weird alien stuff, scanning for drugs at the same time was just routine. So, if Smith had a secret, it had to be something more serious.

Which brought Jack back to his main problem: Finding out what Smith was hiding. And who was helping the bastard. Maybe he should do some field work himself, check out the man's home… No. He snorted at his own foolishness. If he got caught breaking into Smith's house, not even Adora's influence could save him from getting cashiered or worse. He had made too many enemies to escape such a blunder, both in politics and the general staff. Too many would be happy to see him gone.

He blinked.

Maybe that was Smith's goal.

*****

Royal Palace, Bright Moon, Etheria, December 3rd, 1999 (Earth Time)

"...and so we would like you to act as if nothing is wrong while we investigate further."

Adora took a deep breath after Sam finished her explanation. So, in the middle of the Asgard visit, they were facing another crisis. This was….

"We've got a scumbag trying to blackmail the Alliance, and we're supposed to do nothing about it?" Glimmer blurted out as she stood, both palms pressed on the table.

…infuriating, yes. "We can't just do nothing," she agreed with her friend, looking at Daniel, Sha're and Sam.

"We're not expecting you to do nothing," Daniel told her - wincing a little. "But until we know what's going on, we don't want to let the, ah, suspects, get spooked - we want them to think their plan is working."

"And Melog and I are going to help find out what's behind this blackmail," Catra added.

Melog glowed briefly in a smattering of colours.

Right. Sam had mentioned that as well. Adora nodded.

"Why you?" Glimmer asked with narrowed eyes.

Catra grinned. "Because we're unlikely to lose our temper and blow up this operation."

Adora winced, already knowing Glimemr wouldn't like that. Especially not when she was already angry.

"Says the woman whose mood can be spotted on Melog!" Glimmer spat, as expected.

Melog did flicker red for a moment before switching back, Adora noticed.

"Not too many people know that," Catra said. She cocked her head to the side, listening to her friend. "And Melog won't be visible often."

Adora bit her lower lip. That was one potential problem handled. "But if you leave, the Asgard will wonder why," she added before Glimmer could say something else to continue the argument.

Catra shrugged. "So? Let them. We're fighting a war. They can't expect us to focus everything on them."

"Well, they could - we don't know much about their culture and customs," Daniel pointed out. "But they have to be aware that both Etheira and Earth have different customs."

"If they want to take offence, they will take offence anyway," Sha're added. "Whether at this or at any other excuse."

That would ruin the entire plan of earning their trust. But if they were not willing to be open-minded, then the plan had been doomed from the start. Still… Adora shook her head. One problem at a time, she reminded herself of the old lesson from cadet training. If she tried to do everything at once, she wouldn't succeed at anything. "So… you'll go to Earth for a while?" she asked Catra.

Her lover shrugged. "I can return through the Stargate anytime I want. But we'll probably need some time to find out what's behind this."

So, they would be separated for a time. Again. Alone. Adora briefly pressed her lips together. She was better than that. And Catra and Melog were needed on Earth, less so on Etheria right now, while Adora had to be here to handle the Asgard's visit. They could do this. It wouldn't be too long, anyway. Either they would find the culprit quickly, or the Asgard visit would end, and Adora would spend more time on Earth in the Alliance Headquarters. At

least until the cultural exchange with Earth started. Though if Adora was on Earth, then that would be a good reason not to heal that traitorous actor…

She nodded. “Alright. Anything else?”

Glimmer frowned at her. Had she expected Adora to veto this plan? What was the alternative? Risk having everyone on Earth think she could turn back old age? It was bad enough that so many wanted her to heal them, they were willing to riot. Adora suppressed a shudder when she remembered Paris.

“I can’t believe they’d do that,” Bow spoke up. “I love that show!”

“They’re an actor,” Cara told him with a scoff. “They are just playing a role. You can’t trust them.”

Was she talking about all actors or this one in particular? Or was she talking about Double Trouble? The spy’s actions hadn’t really left a good impression on, well, anyone, but Catra carried a particular grudge. Adora could understand it, of course.

She wished things were different, though. It was too bad that they couldn’t trust Double Trouble. They would be perfect for such a mission. But letting them loose on Earth? That would be a disaster. If they were lucky, Double Trouble would finish the job before going off on their own to cause chaos, but they wouldn’t be able to resist stirring up trouble.

And they wouldn’t care that Etheria was in the middle of a war or that the situation on Earth could break out in riots or worse with just a slight provocation.

“Well, they’re a good actor,” Bow defended himself.

“But not a good person,” Adora said.

“As far as we know,” Daniel cautioned.

Even Sha’re rolled her eyes at him at that, Adora saw.

He flushed a little. “I am just pointing out that we don’t know what is behind this yet. We shouldn’t judge people without all the information.”

He was right about that, but things were not looking good for the man, in Adora’s opinion.

*****

Above the Pentagon, Washington D.C., United States of America, December 3rd, 1999

“So, you have checked the ‘suspect’s’ offices in the Alliance headquarters already, and found nothing suspect? That’s suspicious.”

Samantha Carter nodded at Catra’s question and ignored the wording. If her friend wanted to make fun of the correct terms for an investigation, then that was fine as long as it didn’t hinder the investigation. “He has not been working in Brussels for long, and he seems not to have made many friends amongst the general staff of the other Alliance members.” Something unfortunately quite common for many American officers, as Sam had also found out. It apparently wasn’t just because the Stargate had been kept a secret from the other countries, either - many NATO members had long memories. But that was a problem for another day.

“Yeah. He certainly has no friends in our ranks. Acquaintances yes - he did good work on the PZ-921 offensive - but he wasn’t really friendly. Juliet thought he might have issues with magic.” Catra shrugged and shifted in the copilot seat of the General’s stealth shuttle.

Or women, Sam thought with a slight frown. From what information she had gathered, General Smith had never shown open misogyny - he wouldn’t have kept his position, much less have been integrated into the Alliance command structure if he had - but he hadn’t spoken up for female officers either. Or had had any trouble with the more open misogynist officers in the

force. Of course, he might just have had issues with General Juliet's style. The commander of Bright Moon's forces liked to wear her armour when on duty. Which included a cape.

But that was irrelevant right now. They were not investigating Smith's views on women but his potential crimes. "If he is doing anything illegal, it's unlikely he'll do it in his office."

"Which you have bugged already." Her friend grinned.

"Appropriate measures have been taken," Sam confirmed. "We're tracking his electronic communication as well." Including all cell phones used at his home, in case he was using burner phones.

"And you think it won't be enough, or we wouldn't be here." Catra nodded at Melog, who was sitting on the floor next to her seat.

"We haven't found any electronic trace of General Smith being in contact with our primary suspect. So, it was likely done face to face or through an intermediary."

"Like we do things on Etheria." Catra flashed her fangs, and her tail swished, then she turned to frown at Melog. "That was different! That was just regular communication during the war."

A moment later, she frowned again. "It was an undercover operation as part of the war. And that was in the Horde."

It seemed that Melog was disagreeing with her claim. And being pedantic about it - or facetious. Not being able to directly communicate with Melog was a bit frustrating, but it was merely a nuisance. And Sam couldn't really expect Catra to serve as a translator for every quip the other cat made.

The General would, though. And he would probably find it incredibly amusing to banter with Melog through Catra.

She pushed the thought away. "Anyway, I'll continue to monitor his electronic communications."

"And we'll spy on him in person." Catra nodded. "And if we don't find anything, we'll go after the actor."

The man was currently under observation by some of the General's 'acquaintances' who owed him a favour or two, as he had called it. "If you turn up nothing here," Sam told Catra.

"If we don't find anything, we can poke him and see how he reacts." Catra cocked her head to the side, and her ears perked up. "Melog can't read minds, but he can detect emotions. Should give us some clue." Suddenly, she frowned at her friend. "I don't always annoy everyone, so if he is annoyed, that's still a clue!"

Sam couldn't help snorting at that. It was a bit like seeing the General and Daniel banter during a mission.

*****

Washington D.C., United States of America, December 3rd, 1999

Smith lived in a pretty nice house, in Catra's opinion. It was on the outskirts of Washington, but that was a nice area in America. You wouldn't catch General Juliet living in the countryside instead of in the palace. Or any of Mermista's admirals. But the United States didn't have a palace - the White House came closest, but anyone could see it wasn't a palace; it was much too small to house a court.

No one inside.

She nodded at Melog. That was what the shuttle's scanners had shown them, but it was always good to double-check intel.

"Good," she whispered. "Now, let's take a closer look at his home." She didn't expect to find anything incriminating, but if you could do recon in person, you did it. It would help with finding the best approach to observing the general's home life.

And she was curious how the man lived. She had only visited one Earth general's home before, and Jack hadn't been a general at the time.

Breaking into the man's home was easy. Not suspiciously easy - they had magitech tools to fool his security system, and Catra had been sneaking into restricted areas all the time as a cadet - but she would have expected a bit more from someone apparently trying to blackmail the Alliance. Or taking a shot at a personal friend of She-Ra, if Jack was right.

"Looks a bit… drab," she commented once they were both inside. "Nothing too personal."

Family.

Melog stared at a couple of pictures on the sideboard next to the couch.

"Those are the same pictures he has on his desk." In fact, the living room left a similar impression as the man's office. Tidy. Neat. Like the barracks before an inspection.

Catra wasn't sure what that said about the man, but it was something.

*****

Above the Pentagon, Washington D.C., United States of America, December 3rd, 1999

Smith is a … workaholic is the Earth term, Catra thought. It was past eight, and he was still in his office in the Pentagon. Which was a weird structure, in her opinion; until the shield generator had been installed after the United States joined the Alliance, it hadn't had any protection from air or orbital attacks. Why would you put most of your military leadership into an easily identifiable and destroyable building? And in the same region as the not-palace of your supreme leader? Sure, they had the bunker where

they had first placed the Stargate, but most of the people running the military were in Washington.

Of course, the people in the bunker might be enough to keep the armed forces going just fine, but if that was the case, why would they need the Pentagon in the first place?

Well, they had shield generators now, so the point was probably moot, but she made a note to ask Jack about it anyway. At the least, his answer would be entertaining.

Much more entertaining than tracking Smith. She sighed and stretched her arms over her head, then shifted a bit in the shuttle's seat. "No change?"

No.

Melog was sprawled out on the backrests of the two seas behind her in a very comfy position. She would also have to try that when she wasn't nominally on pilot duty. And they weren't in the middle of an operation.

"You know, with all those millions of soldiers, I would have expected you to have more spies available," she commented, twisting her head a bit to look at Sam, who had installed herself at the comm console in the back. Which, Catra noted, fit her gear perfectly. Jack must have had that installed just for her, but whether he had done so intentionally or not was another question that should have an entertaining answer. Or reaction.

"Smith is a four-star general. We cannot be sure how much influence he has in the various government agencies, so using American assets to investigate him increases the risk that he will become aware of it," Sam replied without taking her eyes off the screen in front of her.

The man would be expecting an investigation anyway since his acting stooge had made contact with SG-1, though it was a fair point. "And so you came to us."

"Yes."

Not to any of America's allied nations. No, Jack trusted Catra and her friends more than anyone else amongst his contacts to handle this crisis. Well, they were his friends, so that was normal. Still, it said something about Earth that…

A beep from the scanner interrupted her thoughts. Smith was moving! Catra twisted and grabbed the shuttle controls, tracking Smith's icon on the holoprojection display in front of her.

Smith was moving through the Pentagon towards the exit. His usual exit, close to his car.

"No change in his routine," Sam reported.

"Yeah," Catra replied.

She checked the sensors in case another shuttle, or one of the old choppers, but those were growing scarce here, was arriving, but the sky was clear. Grinning, she accelerated a bit and started following Smith once he got in his car. "Fancy a car chase?"

"We are invisible to him."

No challenge.

"Spoilports." She chuckled. Still, they had to be pretty close for Melog to sense the man's emotions so she could at least practice some nap-of-the-earth flying. Which would be more fun if the Americans didn't have all those flimsy powerlines crossing the airspace.

Still, she managed to avoid them all - it wasn't hard with how slow those ground cars here were going.

Anticipation.

"Oh?" That was new. "Smith is expecting something," she said for Sam's benefit.

“There’s nothing on his schedule,” Sam replied.

“He might have planned a romantic evening with his wife.” He certainly should, in Catra’s opinion, for how much time he was spending at work and not with her.

She felt Melog’s amusement clearly. Her friend didn’t think Smith would either.

“You did not see any preparations for such an event in his home or office,” Sam said.

“You can plan a romantic evening without any of that,” Catra pointed out. She had done so herself plenty of times. Though Sam was more like Adora, who couldn’t plan anything without at least a whiteboard and three different pens to draw on it.

Anticipation grows.

“Oh! He’s growing more excited!” Catra reported.

“He’s still driving along the highway,” Sam said. “But he’s slowing down a little. A few miles, tops.”

Catra frowned. There was nothing down there, and the traffic looked normal, so… Wait! There was a truckstop, or whatever those things were called. A big parking lot with a cheap diner. But Smith wasn’t driving off the highway - he drove past the exit. And accelerated again to his usual speed.

Disappointment.

“He was checking the parking lot,” Catra said. “And whatever he expected wasn’t there. Or whomever.”

“He didn’t call or mail anyone about a meeting here,” Sam added.

Catra grinned. “Someone’s trying to be clever.” But not clever enough for them.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 4th, 1999

"If anyone asks, we are inspecting a potential site for the Alliance base on the Moon," Jack O'Neill said as he entered his stealth shuttle.

"We are supposed to do the Moon survey in two days, sir." Carter frowned at him.

"So we've decided to reschedule because something else came up." Jack grinned - she was always a little peeved when her schedule was changed. "It's even true. And it's not as if we're the actual surveyors, anyway. We're just checking to see if we like the locations."

"So, you've got the final word?" Catra asked. She was sprawled all over the pilot seat in a position that would break Jack's spine if he attempted it. "I wasn't aware we're building a special forces base on your Moon."

"We aren't. It's supposed to host an early warning system and secondary fleet base."

"Why would the Alliance need either?" Catra frowned. "We've got the spy bot network covering the entire system - and the area beyond it - and you've got plenty of secondary bases."

"It's mostly to lay claim to the Moon, I assume." Jack shrugged. "Or prevent that someone else lays claim to it. Like the United Nations."

"OK." Catra nodded.

Her reaction made sense, of course. Others might have commented that the Moon belonged to all of Earth, but Catra came from a planet where Bright Moon laid claim to three moons. Or she just didn't care. Jack was betting on the latter.

“Anyway,” he said, “it’s mostly Carter who’s involved since she’s supposed to build the sensors used there. But guarding the station might be part of my command’s job - they’re still sorting that out - and doing that will allow me to send my folks out on patrols on the moon, which will be good training, so we’re involved as well.” And they were friends with Princess of Power She-Ra, Supreme Commander of the Alliance, and while Jack wouldn’t really abuse that - unless some idiot picked a truly awful place - others would, and the officers responsible for planning this were playing it safe.

Damn, he was starting to think like a politician instead of a soldier! Jack shook his head.

“Sir, if we’re supposed to use the survey as a cover, then they will expect us to actually do the survey.”

He made a dismissive gesture with his hand. “Just pick a location you like.”

“But there are several important factors that will influence this choice,” she protested.

“And I am sure that you’ve already considered them all.” He flushed her a grin.

She actually blushed a little in return. “Yes, but strictly based on the data I had already - I haven’t surveyed the actual locations myself.”

“Just check the best location, and if it’s good enough, pick it. We’ve got the technology to build a base anywhere anyway. We’ve got more important things to do.”

“Not every decision has to be planned out like a night assault with green troops,” Catra commented.

Jack nodded in agreement.

Carter obviously disagreed, but she was in the minority here. Not that this was a democracy, anyway.

He clapped his hands together, then took control of the shuttle from the co-pilot seat. "So, let's head to orbit and go over what we found out about Smith's dead drop!"

"Well, sir," Carter began as Jack took the shuttle up, "we've run the records we recovered from the diner through the Space Lab's main computer, but we didn't get any suspicious matches. Whoever General Smith might be exchanging messages with probably paid in cash. We've analysed the data from a traffic control camera next, and we've placed advanced sensors in the area, and we have a potential hit there, sir."

Jack refrained from commenting on whether or not Carter had acquired this data legally. They couldn't risk Smith or one of the man's unknown backers catching wind of their investigation. That was a good excuse, at least. "A potential hit?" He checked their course and the sensors, then looked over his shoulder at her screen. It showed a particular car. "The FBI?"

"Yes, sir."

*****

Potential Base Site, Moon, Solar System, December 4th, 1999 (Earth Time)

"So, he's in contact with an FBI spook. Special Agent Wilkinson. Hank Wilkinson."

No one chuckled at Jack O'Neill's Bond impression. Catra probably didn't get the reference, and Carter was staring at her screen, trying to do a complete survey on the sly, but Daniel…

…was gazing at his wife.

Jack cleared his throat. "Focus, people! This whole thing just became a bit more complicated!"

"I would say so," Daniel replied. "It's one thing to investigate a general, it's another to investigate the FBI."

"Why?" Catra asked. "As you told me, you don't have the official authority to do either."

"Ah, well… the FBI is in charge of counter-espionage," Daniel said.

"So is the Alliance Joint Military Intelligence. And they have better stuff," Catra retorted. "Or did you funnel Alliance gear to your local organisations?"

Jack wouldn't be surprised if such a thing had happened, under the table or disguised as 'testing potential uses' or whatever excuse the gang around Kinsey could come up with, but he would have expected that to go to the NID.

"We would have detected any non-registered piece of advanced technology in use in the USA as long as it depended on Naquadah or used hyperspace fields or waves," Carter commented. "They cannot detect this shuttle."

Which was one reason Jack had wanted a stealth shuttle as his private shuttle. No way to track his movements should he have to alter his filed flight path.

"But we'd still be spying on the FBI. That's…"

"...perfectly fine, Daniel," Jack interrupted his friend. "We're going to get to the bottom of this one way or the other. Besides, if there's corruption in the FBI, we best find out as soon as possible." And success generally meant forgiveness, as long as you didn't break too many rules or laws. Or made the wrong people look stupid.

"So, we bug the FBI?" Catra asked.

"Not quite," Jack said. "Or not yet."

"We'll use standard electronic information gathering."

“You can call it hacking, Carter.” Jack grinned at her.

“It’s not limited to accessing FBI computer systems. We’re also going to use advanced sensors to track key suspects.”

“So, hacking and stalking.” He nodded. “We need to find out if there’s a rat in the FBI or if they are used as stooges.”

“Stooges?” Catra frowned. “Like in those old movies?”

“Patsies,” Daniel explained. “Being used as unwitting tools of the real culprit.”

“Ah.” Catra nodded, then nodded again at Melog. “Right, shouldn’t be too hard - if we can check the suspects’ reaction.”

“Which brings us back to Hank Wilkinson,” Jack said. “Not quite first of his class, but not bad either - you don’t make Special Agent if you’re stupid or lazy. Good career so far, but he’s fallen a bit behind on promotions. Good in the field but ‘untested as a leader’, according to his file.” That could mean he either wasn’t good with people - unlikely based on the cases he had solved - or he had stepped on the wrong superior’s toes. Or he had simply been in the way of someone’s protege. Jack knew how office politics worked. And based on what they knew so far, Wilkinson didn’t. He didn’t have a patron and didn’t know where the right bodies were buried. He seemed to be the stereotypical honest detective in a not-so-honest organisation. *Seemed*. “I wonder if he’s a stooge or player,” Jack said.

“We’ll find out,” Catra said. “Once you put us down on the planet again.” She cocked her head at the other cat. “Yes, it’s getting late. Tomorrow, then.”

By then, they should have a better picture of the situation in the FBI. He looked at Carter. “Carter?”

“A few more minutes, sir,” she said without looking up from her screen. “The preliminary scans are done, but a geological survey takes a bit more time.”

"Wouldn't want our base to vanish into some sinkhole we missed, yes," Jack said, nodding.

"Given the moon's geology, there is no danger of sinkholes - and we would spot such an anomaly in the early stages of building," Carter replied. "Even if we don't use Tok'ra tunnelling techniques."

"Which we are supposed to use," he reminded her. "To preserve the Moon's environment or something."

"And for camouflage. Like the First Ones did with Alpha," Catra commented. "Too bad you can't completely hide its existence from your people."

Jack sighed. The crazies were already spreading conspiracy theories about secret alien moonbases. This *actual* hidden base wouldn't help. Too many politicians had access to the Alliance's budget numbers. At least the Ancients' little mad scientist base was still classified somewhat. If people started fearing that they would be turned into animals…

"Apart from the concerns the United Nations have voiced, several groups are protesting the militarisation of the Moon," Daniel said. "And there are concerns about the effects it might have on Earth's magic, given the importance of the moon in myths. To be fair, we don't know much about that."

"It didn't affect Etherian magic," Catra said.

"But Earth magic is different," Daniel retorted. "We don't know if that's the case here as well."

"And it could affect Etherian magic without you being aware of it - the research base has been on the moon since before your kingdoms were founded," Sha're pointed out, "so without older records, you cannot know if there are any differences."

That was a good point, but as long as things worked, Jack was okay with not caring about the details of magic. It was bad enough that even without the Chinese being in the Alliance or

having a realistic chance of joining the Alliance, some people wanted Feng Shui consultants to approve of every planned construction.

What was next, sacrificing goats to bless new ships? Jack was almost glad about some good, old-fashioned corruption plot to deal with instead of that nonsense.

*****

Cultural Exchange Part 4

Royal Palace, Bright Moon, Etheria, December 4th, 1999 (Earth Time)

"...and it's with great pleasure that I am here, announcing a performance of one of the Asgard's greatest epics, the 'Lost Sons of Vanir', a recording loaned to us by our guests from Asgard."

Adora clapped encouragingly when Glimmer nodded at Thor, Freyr and Penegal, who were sitting next to Adora in the first row of the theatre. She leaned over and whispered: "Thank you again for allowing this."

Thor smiled at her. "When you told us that your only examples of our culture were from Loki's private collection, we had to show you the real culture of Asgard. Even as a child, that rogue had no taste."

Adora kept smiling and nodded. She agreed with Thor's judgement of Loki's taste, but saying so would feel like talking about Loki behind his back. "We've been looking forward to this." Especially after the visit to Ketro and Jesa's farm. The Asgard had overwhelmed the farmers about the magitech they used to till the land with questions that would have been better addressed to the actual creators of the various tools. And she best not think about the Asgard's opinion on using draft animals and magitech together.

But that was over now, and the next day, the Asgard would visit Mystacor, where they could satisfy their curiosity about magitech. That should put them in a good mood, Adora hoped. And make them more receptive to Etheria's culture.

Meanwhile, Glimmer had stepped down from the stage and retook her seat in the front row, next to Bow and Adora, as the lights dimmed and the audience quietened down.

Once the theatre was mostly silent and dark, the stage was suddenly illuminated by a dim blueish glow, which turned into a holoprojection of an Asgard. According to Thor, it was a famous performer, Baldr. A famous *dead* performer, Adora reminded herself, wincing at how embarrassing it had been when she had asked the Asgard if he would like to visit and perform himself.

Then the holographic projection started to speak, and Adora sat straighter. This was it - genuine Asgard culture. Mainstream culture, as Daniel would say.

"In ages past, when faced with dire news, the Asgard were united, and yet…"

Baldr sounded as if he were half-dead already. Adora pressed her lips together - this was something Catra would have said - and forced herself to focus on the performance.

*****

"...and so the Vanir left, never to be seen again."

Adora smiled and clapped her hands as the holographic projection on the stage bowed their head. She was genuinely happy - that the performance was now over. If the recordings Loki had given them of the Asgard epics had been bad, then this - Thor's favourite epic, apparently - was worse. The delivery had been just… 'Wooden' would be a compliment. If Jack were here, he'd be making jokes about robot performers. And if the performer had been a bot, Entrapta would have offered to repair it.

But, she noted with a side glance, the Asgard had liked the performance. At least, they looked moved. Especially Thor.

"If we show another such epic, we'll have a rebellion on our hands. Or a lynching," Glimmer whispered.

It was hyperbole, of course. But Adora was glad Catra was on Earth. Her lover wouldn't have been able to keep her tongue in check, Adora was sure.

At least Glimmer was clapping her hands as well, if not very enthusiastically. Only Bow and his Dads showed genuine enthusiasm in the front row, from what Adora could tell.

"That was fascinating!" George said.

"Oh, yes!" Lance was beaming. "It is so very interesting to see a truly alien culture - it seems that humans share similar cultural traits, possibly influenced by our shared First Ones heritage, though we'd have to research this more thoroughly, which would explain why Earth media are so popular on Etheria, while Asgard culture does not resonate nearly as well with us."

"Well, I found the story very interesting - a tribe of Asgard, lost in the galaxy," Bow said.

"From a historical point of view, of course, the story is interesting, but the performance itself utterly failed to entertain humans," Lance retorted. "A quick look at the audience proves that, especially given the circumstances."

"I see," Thor said.

Adora winced while Lance grimaced. Bow's dad was honest, but he probably shouldn't have said that out loud in the presence of their guests.

Though she couldn't really say that he was wrong. On any point.

*****

Above the J. Edgar Hoover Building, Washington D.C., United States of America, December 4th, 1999

"This would be much easier if we simply monitored the FBI's electronic communication," Samantha Carter pointed out. It would also, if you stretched definitions, be covered by the mandate of the Alliance. Of course, no one would believe that they actually feared a Goa'uld plot in this case, but it would be hard to disprove it. She turned her seat to look at the General.

"Yep, but we can't." He grinned. "They're using a dead drop - I doubt they'll be using electronic communications for anything juicy."

Sam pressed her lips together as she nodded. That was a logical deduction. She still didn't like it.

"Well, at least we can bug their offices while we're infiltrating their hideout," Catra commented. "So, you don't have to do that at a later date."

"I don't expect bugging the FBI offices will be necessary after this," Sam retorted. It would also be hideously illegal.

Catra somehow managed to shrug while sprawled over the co-pilot seat's armrest. "If there's one traitor, there could be more. Besides, they're your spy hunters, so they're an obvious target for infiltration."

"Most spies would consider the FBI an obvious organisation to avoid," Sam said.

Catra snorted. "Not the good spies. They would know that they'd be safest pretending to hunt spies - they would be aware of any investigations."

Sam glanced at the General. He was the closest they had to an expert in such undercover operations.

He frowned a little. "Well, it would be a bold strategy but also a high-risk one. Surrounding yourself with people trained to spot spies is not a safe tactic. Could have a great payoff, but the odds of surviving it for long aren't good. Of course, sometimes you don't need to survive undercover for long. But getting inside would be very hard since any new recruit would be vetted."

"By possibly corrupt people. Once you have a foot in the door…" Catra shrugged again. "But it's your decision. Unless it's Goa'uld-related."

“We can’t determine whether something is related to a Goa’uld plot without investigating,” Sam retorted.

Catra grinned. “Then I guess mission Bug-the-FBI is on.”

“Yeah, the logic is flawless,” the General said.

Sam didn’t roll her eyes at Catra and him. But she huffed under her breath as she turned back to her computer. She really didn’t like breaking the law so blatantly. Hacking a computer was just… collecting data. It was a kind of unorthodox research, from a certain point of view.

She blinked. She probably had watched Star Wars too often. Teal’c was to blame for that.

In any case, if this operation failed, she probably would have to emigrate to Etheria. As would the General. Of course, that would also mean that the UCMJ wouldn’t apply to them any more, and… She shut down that annoying thought. She was better than that!

“So, how’s the hacking of the FBI security going?” Catra asked, craning her neck to look at Sam upside down.

“You shouldn’t have any problem bypassing their security system,” Sam replied. Not with the advanced technology at their disposal. And with Melog’s illusion power, that could effectively render the two cats invisible. No challenge, as Melog supposedly said.

“Yeah. But do you have anything else?” Catra didn’t change her position. Sam felt her back hurt just looking at her twisted form.

“Not at this point.” Nothing that her preliminary search had flagged. Of course, she might have missed something, but that was why she was running a much more thorough - and slower - search of the FBI data centre she had hacked.

But if Smith and Wilkinson were as careful as they had shown to be so far, this wouldn’t get them any actionable intel. At most, Sam was hoping for clues and hints at what Wilkinson was doing -

she already knew he wasn't running an official investigation that required contact with Smith; Smith didn't appear in the databanks at all.

And neither did anything connected to Kinsey or the NID so far. That was disappointing but hardly unexpected. They wouldn't have been half as dangerous if they had been incompetent, and their influence on the US government agencies would have only grown after the President had relied on their support to push through crucial policies to secure the Alliance with Etheria.

"Well, let's see what we can find out, then!" Catra got up from her seat with a fluid grace that Sam couldn't have pulled off in her best form, and Melog joined her.

Sam checked the scanner one last time. No sign of any improved security that she wasn't already aware of and had neutralised. Then she nodded. "Go!"

Catra grinned, then turned to her companion. "You heard her!"

Moments later, they faded from view - no, Sam corrected herself; an illusion of an empty shuttle interior covered them. Melog was showing off - they would have to create a different illusion for the building's roof. And for the rappelling down.

Still, they knew what they were doing. "Clear," she announced,

"Gotcha!" The general replied.

A moment later, the ramp was lowered, and Sam barely heard feet - and claws - on the metal surface before the shuttle's system informed her that they had jumped off.

"You know, seeing this makes the CIA look a little less stupid for trying their ESP experiments in the 70s," the General commented. "I wonder if they found a way to make it work this time, with magic returned."

Sam made a noncommittal noise and focused on her screen before he could find a way to make her hack the CIA to search for such programs.

She was sure that they were running more than one, anyway. As would be any other intel agency. Even the FBI, actually.

She frowned. That was the only threat she could imagine to this operation. But they hadn't found any hint of such a program being run here in Washington - all such research was supposed to be conducted in Quantico.

*****

1. **Edgar Hoover Building, Washington D.C., United States of America, December 4th, 1999**

Catra slid down the rappelling rope and landed lightly on her feet on the roof of the FBI headquarters. Melog didn't bother with the rope at all and simply jumped down the few metres from the shuttle ramp.

"Show off," she whispered and felt their amusement and some smugness in return.

The light's hue showed that they were inside an illusion of an empty roof right now. And above a half-empty building - it was Saturday, and most people didn't work on Saturday or Sunday. At least if they were working for the FBI.

Catra was glad of that - it made her mission easier. Usually, with a building that size, she'd sneak through the air vents - using the hallways and taking out whoever you met before they could sound the alarm was not possible since there could be no sign of their intrusion at all. But with Melog's help, they could just go down the facade and break through a window. No one would see them.

No challenge.

“The challenge is finding proof,” she whispered. Any proof useful for stopping this plot.

She peered over the edge of the roof. “Coast’s clear.”

Melog moved the illusion - Catra could tell from the way the light just changed a little bit in her sight - while she fastened the rope to the roof. She could hear Entrpata’s voice in her kind as she used the self-adhesive option of the rope: ‘It’s the new and improved self-dissolving climbing rope mark II - this one won’t dissolve spontaneously; well, it didn’t so far in testing without the correct catalyst - and you can use a different catalysator to make it self-adhesive! Either the rope or the material you attach it to will break before the adhesive!’ Jack had ordered a cargo container’s worth of the rope for his troops. But his expression when Catra had asked what the troops would get up to with the adhesive rope in their spare time…

Focus on the mission, she told herself as she slid over the roof’s edge and down the facade. She reached Wilkinson’s office in no time and perched on the windowsill while she peered inside. There he was, shuffling papers on his desk. Which was placed so she couldn’t see what he was reading from her point of view.

Well, they already knew he was competent. And a workaholic. No partner, no kids, and distant parents - which was a point in his favour, said parents being part of a rather bigoted community according to their research, while Wilkinson himself hadn’t visited a church unless it had been for a wedding or a funeral ever since he had left his home town.

Waiting. Busywork.

Oh? Catra’s ears perked up. That was interesting. Busywork on a Saturday? And waiting for something or someone? Time to get to work! They weren’t here to spy through windows; any drone could have done that.

She quickly climbed up and then over to the next office, resisting the urge to use her claws. Leaving suits and gauges in the facade would be a clear sign she had been there.

This office was empty, as expected, and she quickly had the security disabled and the window opened. Bracing herself, she held out her arms and whispered 'Ready" through her comm.

Coming.

A few moments later, Melog came down the rope, changing forms into a slinkier form before reverting back once they could jump off and into the office.

Catra used the catalysator pen to dissolve the rope before closing the windows, watching for a moment while the rope seemed to fade from view, turning into smoke that blew away in the light breeze.

Messy.

Yeah, the desk was messy. But it was not very interesting - the files belonged to some boring financial case or something. Nothing related to their investigation. They had checked beforehand.

They had picked this office since it was next to Wilkinson's - and because the owner was messy. Which meant they would be very unlikely to notice a few well-hidden changes to their office walls.

She pulled a set of tools out of her belt and started to drill, or 'etch' according to Entrapta, who had made them - through the wall. Silent even to her ears, there was no way Wilkinson would hear that. And since the hole wouldn't go all through, he couldn't spot it either.

A few minutes later, she slid the bug into the hole, plugging it with a battery that would last years and some plaster. "Done!"

Visitor.

Oh? Perfect timing, then! Catra would have hated to wait for hours for whatever Wilkinson was expecting to turn up. Almost as much as she would have hated to sit through an Asgard Epic. Poor Adora.

She grinned and switched her communicator to the bug's frequency. Not even regular Alliance scanners would detect that both Entrapta and Sam had assured her, and since they had created said scanners, they would know.

She heard someone knock on the door, followed by Wilkinson snapping: *"Come in!"*

"Wilkinson."

"Paris."

A female voice. They and Wilkinson sounded… familiar. But not too friendly.

The door closed. Footsteps. Lighter ones than Wilkinson's.

"You know the brass still isn't convinced we're ready for work. We're still training. And experimenting."

"Consider this training, then."

"I'm saying that I don't have any experience with this. Not a little - none, Wilkinson."

"You already told me that."

"Just clarifying it again."

Wilkinson snorted, but it didn't sound as if he was actually amused. *"You don't need to cover your ass with me. The brass isn't convinced your work can be used in court. And they won't be convinced until the Supreme Court approves it. But I won't need this for evidence. All I need is additional security."*

Catra heard the woman snort. *"I'd say you're paranoid, but… this isn't for your official case, is it?"*

"Safer if you don't know. It might damage your career if you knew and were caught."

"Then I'll find something else. In case you missed it, anyone with a talent for magic is currently headhunted by everyone. I could be making the big bucks in no time, Wilkinson."

"And yet, you stayed with the FBI."

Catra hissed. A sorceress? And Wilkinson wanted her for 'security'?

They hadn't planned for that!

Problem.

Definitely a problem, yes. If she could spot illusions… Catra pressed her lips together. They didn't know much about Earth magic - no one did. But two things had been observed so far. Earth magic often dealt with 'spirits' and similar beings or things conjured to do something, like the Wild Hunt. And all the myths about guardian and vengeance spirits. And the other thing was subtle stuff, like curses that brought you bad luck or sickness. Either possibility was bad news.

"Because they won't expect me to fight aliens with my mind."

Wilkinson snorted again. *"But they could probably offer better training."*

"Not according to what I heard."

"And what did you hear?"

"That the aliens have no idea about what magic we can do, and so can't train us any better than anyone else."

Catra frowned. The Alliance really needed to get their act together and start training sorceresses.

"Well, it's your career. Your decision," Wilkinson said. *"I'm just a special agent on a case."*

"On an unofficial case where you fear magical interference. Did you go through the X-Files?"

X-Files? Catra frowned. She would have to look those up. This sounded important.

"No. I'm investigating a case of corruption."

Or not, Catra corrected herself.

"And you think magic is involved, or you wouldn't have called me. No - you want additional security. You think someone might use magic to interfere with your investigation!" After a moment, Paris continued: *"Oh, don't make such a face! Anyone could have deduced that!"*

"It's safer if you don't know the details. I just need some way to keep magic off me."

"'Keep magic off you'? That's a big thing, Wilkinson. Ever since the first news of killing spirits, everyone wants a way to stop them. But no one knows how to do it."

"No one?" Wilkinson sounded sceptical.

"It's hard to test things. We've got several potential ways to block curses, but we don't know anyone who can curse people to test it."

"I'm volunteering. Can't hurt to try, at least."

Paris scoffed. *"Oh, you sweet summer child - it very well can hurt. That much we know."*

"I trust you."

"I always knew you were an idiot."

Catra snorted softly. She knew that tone. Those two had history.

After another moment of silence, Wilkinson asked: *"So, what can the best witch of the FBI do against magic?"*

"I'm not a witch. I am a thaumaturgist."

"That's what they're going with?"

"They hope it won't piss off the crazies as much as 'witch' would since it also has religious connotations."

Wilkinson scoffed. *"As someone raised by such crazies, trust me when I tell you it won't help."*

"I know. But our boss thinks he can have a magic division without the religious right frothing at the mouth about satanic government spooks. Even though we've recruited a priest recently."

"Really? A priest?" Wilkinson laughed.

"An exorcist. As a consultant."

"I'm starting to have doubts about this…"

"He's actually very nice. And he knows a lot that might turn out to be working now that we have magic back."

Wilkinson scoffed. *"Don't come crying if he tries to burn you at the stake."*

"Oh, stop it! The Pope himself has said that magic was God's creation, so it's not inherently evil. Any good Catholic knows that now."

Wilkinson scoffed again. *"So, what can you do for me? Pray for my soul?"*

"Do you want my help or not? I can do something more productive on a Saturday than listen to you regurgitate your childhood trauma."

"Sorry." Wilkinson didn't sound sorry. *"I need whatever magic you can do."*

"And what I can do depends on what we're facing. You mentioned 'interference'. What kind of threat are we talking about? Curses? Spirits?"

Catra cocked her head.

After a second, Wilkinson answered: *"I don't know exactly. Any kind is possible."*

"Any kind?" Paris sounded annoyed. *"Don't give me that bullshit. I know you. You wouldn't have called me if you didn't have something more concrete."*

A sigh followed. *"I'm investigating a corruption case with an Etherian connection."*

"Shit."

Catra suppressed a snort. Well, they already knew that, but it was nice to have confirmation.

"Yeah. So… anything is possible if I get too close. I could trip over a vine and break my neck. Or freeze to death in my bedroom."

"What the hell are you investigating? That sounds like…"

"Yeah. Corruption at the highest level. I've got an informant in the army, and the things he told me…"

"The Etherians all have diplomatic immunity. What do you think you can do?"

"The Etherians might have diplomatic immunity, but their business partners on Earth don't. And those are profiting from the corruption."

"Shit. You really meant the highest levels."

"I told you it would have been better if you didn't know. If you want to back out…"

"You know me better than that."

"Yeah. Yeah, I do."

Catra heard Paris take a deep breath. *"Alright. Let's start with basic charms of protection against curses. We haven't been able to test them, but we've got the wording confirmed from different sources - thanks to Father Ryan, actually. So… just relax and let me work."*

That sounded like an excellent opportunity to exfiltrate to Catra. Get back to the shuttle while the FBI sorceress was busy casting whatever on Wilkinson.

She turned to look at Melog and nodded. "Time to move."

Yes.

*****

Above Washington D.C., United States of America, December 4th, 1999

"So, my office is now protected against magic?"

"It's supposed to be protected against evil magic as the ancient Romans considered it. We haven't actually been able to test that since we don't have anyone who can do evil magic."

"You don't?"

"We're the FBI, Wilkinson. Not the CIA."

"Point. And I guess you don't want to ask them for help testing this since that would give away that the FBI is building up a magic division."

"Yes."

"So much for the spirit of cooperation in the face of a shared enemy."

"That didn't work with the USSR, so why would it work with aliens?"

"Right. Anyway, thank you for doing this for me."

"We don't know if what I did is actually working. I did something - I can feel it lingering - but I can't promise it will protect you against Etherian magic."

"It's better than nothing."

"You still know how to make a woman feel appreciated, Wilkinson."

Jack O'Neill snorted. He wished the two FBI spooks would talk about the unofficial investigation Wilkinson was apparently running, but at least their banter was entertaining - and offered insight into the FBI's magic program.

"You know, I thought the whole 'our real enemies are the other American intelligence agencies' was just a TV thing," Catra commented from behind him.

He checked the autopilot - still set on automatic evasion should a plane or shuttle approach - and then headed back to Carter's station. "It's the capitalist way - a healthy competition keeps everyone sharp."

"Having your intel organisations run secret programs without oversight or control doesn't sound healthy to me," Catra retorted.

"It's healthy for certain people," Jack said. "For their bank account and influence, at least."

"That sounds like that corruption the guy was talking about."

"Yep."

Catra rolled her eyes. And Carter was staring a bit too intently at her laptop - even though Jack's shuttle had a holoprojector; it was great for briefings, and Jack was looking forward to movie nights once Hollywood got the hang of actual 3D-movies. Or someone started making games for it. But the FBI agents were still talking.

"So, who are you investigating?"

"Paris! You don't want to get involved in this any more than you are already, trust me."

"I'm already involved too much. You know that the kind of people you were talking about won't really stop with you if things go wrong. And if they find out about you, they'll find out about me as well."

Jack grinned. That was exactly what they were hoping for! "Yeah, Wilkinson, tell her everything about your investigation!" he muttered. "Leave nothing out!"

Catra snorted at that, and he heard Carter chuckle briefly, but he was focused on the two FBI spooks.

Wilkinson sighed. *"Alright. I've got a source in the Alliance high command who stumbled upon hints of corruption. Misuse of military assets for private gain, nepotism, illegal operations, both authorised and unauthorised, smuggling and trading favours."*

Business as usual, in other words, Jack thought with another snort. But he had thought they had done a decent job keeping that stuff down to trivial levels.

"A source?"

"Yes. An old friend of the old director. They contacted me."

"And asked you to investigate this on your own time?"

"That was my decision."

"And no one who knew you could have ever predicted that, right, Wilkinson?"

"Still my decision."

"It's your career."

"Damn right."

"So, you're investigating corrupt generals and magical princesses."

"Yes."

"And I thought becoming an FBI Thaumaturgist was weird."

"I've investigated Saudi princes and princesses before."

"And that investigation was shut down by the government."

"This one won't."

"And what makes you think that, Wilkinson?"

"The government stepped on too many toes to get into the Alliance. People went along with it because they had to, but they didn't like it. All the new laws, the constitutional amendment, magic and gay marriage… A lot of people are waiting for a chance to strike back."

"I didn't take you for a bigot, Wilkinson."

"I'm not a bigot. What people do in their own bedrooms is their business. And I don't give a damn about the Bible. But I am not blind to the fact that many people do have issues with all the changes that were forced on us."

"And you want to use them? You know how that usually turns out."

"All I want is criminals brought to justice, Paris. And justice is blind."

"And that's the corniest line I've heard in months," Jack commented. "And I work with magical princesses."

"I'll tell Adora you said that," Catra said.

"Do it. I am sure she can need the laughs." The Asgard were proving to be frustrating guests, as Jack had heard.

"Whatever. So, what are you investigating?"

"Smuggling. Earth media are the hottest thing in Etheria, and that means merchandise brings more money than drugs. And Earth is crazy for anything magical."

"But the only way to transfer goods is through the Stargate - or by spaceship, but a trip to Etheria takes weeks."

"Exactly. But if you control the Stargate and the fleet, that's not a problem. And guess who managed to get a personal stealth shuttle for private use? The former second-in-command of Stargate Command!"

Jack blinked. "They think I am smuggling movie merchandise in my shuttle? They think *I* am corrupt?"

"Well, we're currently using your 'private' shuttle." Catra shrugged at Jack's glare. "The other generals are probably just jealous they can't use a stealth shuttle to make money."

"I am not using the shuttle to make money!" Jack spat.

But some people would think he was.

*****

Royal Palace, Bright Moon, Etheria, December 4th, 1999 (Earth Time)

"It seems Asgard and Etherian culture is more different than we expected."

Adora pressed her lips together and reminded herself that honesty was the best policy before she nodded. Thor was right, anyway. "I fear so."

"I wouldn't say that," Bow said. "Etheria has a very diverse culture. Of course, fundamental aspects are shared by every kingdom, but every kingdom has unique cultural expressions and styles. We just haven't found the kingdoms whose people like Asgard epics. I mean, really like - it's not that they are disliked or anything, really!"

He meant well, but he wasn't a good liar - his smile looked as forced as it had when they had visited his dads for the first time, Adora noticed.

And Thor hadn't been there, but he must have noticed something since he tilted his head slightly and stared at Bow with an expression that would likely have included raised eyebrows if Asgard had them. "And yet, according to what we were told, Earth media is 'all the rage' across Etheria. It seems your planet's cultures share this as well."

"Well…" Bow winced.

"We can't be sure that everyone thinks your finest epics are boring until we've got enough data to make such a conclusion!" Entrapta cut in. "Our sample size is not large enough, and the people present today were not chosen at random either, so this is not representative."

Freyr made a snorting sound. "Correct me if I am wrong, but I assume that you picked people you thought would favour us."

"We did?" Entrapta looked at Glimmer, then at Adora.

Adora winced. “Yes, we did.” She reminded herself again that honesty was the best policy. “We wouldn’t pick people who disliked the Asgard.”

“Oh? I thought you might have hoped that if even people who were prejudiced against Asgard were won over, it would have made a great impression.” Entrapta nodded. “But even so, we need a larger sample size to draw sufficiently solid conclusions from this. It’s not like we have data from past samples to extrapolate from - we’re breaking new ground here!”

“And,” Freyr went on with a kind of smile, “the reason you invited us to visit your planet wasn’t to make your people like our epics but to show us your civilisation and build trust.”

Well, he was right, but it would have been a great help if Etherians liked Asgard culture. Adora smiled anyway.

“Well, at least this shows that we’re honest,” Bow said.

Thor frowned at him. “It has to be weighed against, and judged in light of, the circumstances of your involvement with Loki.”

Adora winced again. If they had been honest with the Asgard from the start… But that would have meant breaking their deal with Loki. In hindsight, they should have looked into the whole matter a bit more before making a deal, but… If people needed help, and you could help them, you helped them.

“Anyway,” Glimmer spoke up, “thank you for your performance. We learned something about each other.”

“Yes, we did.” Freyr nodded again.

“And tomorrow, we’ll visit the Scorpion Kingdom so you can see a completely different culture!” Entrapta said. “I’m sure you’ll like it!”

Adora nodded in agreement even though she wasn’t so sure any more.

*****

Fifteen minutes later, she entered her room, sighing.

“I guess the performance went over as expected.”

Catra! Adora beamed at her lover and quickly moved to the bed on which Catra was lounging. “You’re back!”

“Obviously.”

“You didn’t tell me!”

“I didn’t want to disturb your diplomatic event. And I arrived only fifteen minutes ago.”

“Ah.” But she had had enough time to change into her sleepwear.

“You can set me down now, by the way.”

“Mhh.” Adora held her a bit tighter and took a deep breath with her face pressed against Catra’s cheek. And she had taken a shower as well - Adora could smell the shampoo.

“If I have to wriggle out of your arms, your dress might not survive.”

Adora was briefly tempted to let her do it. Losing her clothes sounded very attractive right now, with her lover in her arms. But that would be a waste - Glimmer’s tailor had worked hard on this dress.

So she released Catra and sat down on the bed. “Yes, things didn’t go as we hoped. No one liked the epic.”

“Nice to hear Bright Moon’s population has good taste.”

Adora snorted - weakly - at that, then sighed again. “They know we find them boring.”

“They’re not dumb.”

“How did your day go?”

“Oh, Melog and I had a successful mission. We found out that a rogue FBI agent is investigating Jack for corruption based on General Smith’s information.”

Adora blinked. “What?”

*****

Alliance Headquarters, Brussels, Belgium, December 5th, 1999

“...and they honestly think you’re corrupt?”

Adora sounded incredulous, Samantha Carter noted. Her friend looked like she wanted to pace, but even the General’s large office felt a little crowded right now, with ‘SG-1 Plus’ as he liked to call their old team and Sha’re, and the ‘Best Friends Squad’ and Entrapta present. At least they hadn’t tried to get Emily inside - the bot was guarding the parking lot right now. However, Entrapta had assured everyone that she was listening in through her sensor tool.

Sam had already mentally prepared a response to the General’s inevitable request to harden his office’s anti-eavesdropping protection after that revelation.

“Well, we don’t know if Smith honestly thinks I am corrupt,” the General replied. “But Wilkinson sure does - unless he’s such a good actor, he should replace Mr Blackmail on the next big-ticket movie. But if he were any good at acting, he wouldn’t have been sidelined in the FBI and treated like a rogue agent.”

“But why?” Adora shook her head. “That doesn’t make sense. You haven’t done anything.”

“And nothing was planted on you,” Catra added. “Or in your home. Or as your home.”

“How do you plant a home on someone?” Entrapta asked.

“You register them as the owner,” Catra explained.

“Oh! Did someone hack your government databases and add your name to some properties?” Entrapta leaned forward. “That would be possible, I think, if they don’t check with the owner.”

That was a possibility, Sam had to admit. Not something as blatant as adding the General’s name, but if someone used a shell company or two and built up a convincing set of layers that made it look as if it was meant to hide the actual owner… It was a common way to cheat on taxes. She would have to look into that.

The General frowned - he would have come to the same conclusion. “If this is a frame-up, then they could have done this. And if they pointed the IRS as well as the FBI at it…”

“Oh! That would be great!” Entrapta beamed, and Sam blinked for a moment. Why would her friend think that? “The lack of a central registry for all land ownership in your country is a bit bothersome - you should really organise such a database, you know, it would be so much more efficient - because we would have to hack so many places, but if the IRS is involved, we can just hack their computers!”

Ah. Sam suppressed another sigh. Her friend’s logic was… Well, it wasn’t as if Entrapta was wrong, but she tended to see any problem as a technical challenge and ignored the ethical and legal aspects. Or the political dimension.

“Hacking the IRS?” The General raised his eyebrows and glanced at Sam.

“I believe there are alternatives to such a course of action, sir,” she told him. Not very efficient ones, though.

“Really?” Entrapta frowned a little.

"Well, we don't know if whoever is behind this would go that far," Daniel said. "Or if they have the resources for that. Although if Kinsey is involved…"

Sha're frowned. "If your rival is moving against you, why would he bother with such a ploy? He would know he needs to kill you to be safe from retaliation as long as you have the backing of the Princess Alliance, and your friends won't be fooled by this plot. If he has to kill you anyway, this plot will only serve as a warning for you to prepare for an assassination attempt, negating any usefulness it might have as a distraction."

"Indeed."

Sam reminded herself that Sha're had, as a helpless passenger while her body had been controlled by Amaunet, been a witness to politics in the highest sphere of the Goa'uld Empire. Obviously, this had left an impression similar to Teal'c's experiences as Aphophis's First Prime.

"Ah, yeah, that sounds like something Kinsey might think," the General said, looking a bit surprised himself at Sha're's thoughts, "but he probably would be wary of the possible consequences if I get killed and he was involved."

"But wouldn't he also be wary of the consequences of framing you for corruption?" Sha're retorted.

"Yes, he would," the General agreed. "Which is why I don't think that's the NIDs work. It just looks a bit too… amateurish to me. They tend to hide their tracks a bit better when they do stuff like this. Unless they set off Smith and let him do the work without realising that he's being manipulated."

"But without fake evidence, Wilkinson won't find anything," Adora said with a frown. "So, why would he do this?"

Sam smiled a little. Her Etherian friends weren't naive, but they had a different view of how things were run.

“Ah, it’s not as if there’s nothing suspicious if you look at it from the right - or wrong - angle,” Daniel said, pushing his glasses up.

“Definitely the wrong angle, Daniel,” the General cut in.

“What?” the Etherians were staring at Daniel, then at the General.

“Ah…” Daniel blushed a little. “From the point of view of someone who would abuse their position for personal gain, or someone who is used to dealing with such people, Jack would look suspicious. Not just because he managed to get a Stealth Shuttle for personal use.”

“I need it for work,” the General retorted. “If I had to go through the Space Force every time I needed one, I’d never get anything done. And it’s owned by the Alliance, not me.”

Sam refrained from pointing out that he also used the Shuttle as a personal craft when it wasn’t used by his command.

“And why shouldn’t you have a personal Stealth Shuttle if you wanted one?” Entrapta asked. “It would be a gift from your friends, namely us! And refusing gifts from your friends would be rude!”

The rest of the Etherians looked as if they agreed, with the possible exception of Catra, Sam noted.

“Ah… accepting gifts is actually a bit of a problem for many people in positions of authority or power.” Daniel smiled weakly. “Or, well, it should be - and with good reason. Because accepting a gift often implies an obligation to reciprocate, and that could be problematic if they, ah, returned the favour, abusing their power.”

“Then you punish them if they do that. Problem solved,” Glimmer said. “Why would you punish someone for accepting a gift if there’s no actual corruption?”

“It’s also, ah, about the appearance of corruption,” Daniel said. “If people think you are corrupt, their trust in you and your

organisation tends to weaken."

"Wouldn't they trust their princess to check? Or is this another problem with democracy?" Entrapta asked.

Yes, their Etherian friends saw things quite differently, Sam reminded herself as Daniel continued to explain the way corruption worked on Earth. They didn't quite understand how people could think the General was corrupt just because he used a shuttle for private purposes.

*****

Cultural Exchange Part 5

Alliance Headquarters, Brussels, Belgium, December 5th, 1999

"...and we need to counter these accusations. This cannot stand!"

Catra snorted when Glimmer hit the table with her fist to emphasise her words. She was taking this hard, but then, she had been quite concerned about her own reputation, back during the Horde War. Back before - and after - Queen Angella had… sacrificed herself to save the world. From Catra's folly.

She pressed her lips together and tried to ignore the guilt she felt as the others continued to talk.

"They aren't accusations - not in the formal sense. It's just rumours," Daniel said.

"Then we need to counter those rumours!" Glimmer spat.

"Yes!" Adora agreed.

"Why? Let them talk. Soldiers complain about their leaders all the time," Sha're said. "What can they do? You're the Supreme Commander, Adora. Unless you turn against Jack, there is nothing Smith or anyone can do."

"Ah, that's not exactly how this works, dear," Daniel said. "Adora isn't supposed to abuse her power and protect criminals."

"I am not a criminal, Daniel."

"Well, of course not. I'm just saying Adora can't order the Alliance around like that if you *were* a criminal."

"I think that means you aren't supposed to do that," Catra commented, grinning at her lover. "You totally could do it, and

Priest and the entire Third Fleet would follow you." And that was the backbone of the Alliance at the moment.

Adora scowled at her. "I'm not going to abuse my position!" Then she blinked and smiled at Jack. "Not that protecting you from such accusations would be abusing my position since you haven't done anything wrong!"

"Nothing that not everyone else did as well," Catra added.

Everyone frowned at her. "What do you mean?" Glimmer asked. Rather sharply, in Catra's opinion.

"Using the shuttle nominally attached to his command for private purposes," Catra replied. "Apparently, you're not supposed to do that."

"Why not?" Glimmer asked. "He's in charge of the Special Operations Command. He can use the shuttle as he pleases."

"It's more efficient that way," Entrapta added. "Of course, we could give you another shuttle, but then at least one of them would always be standing around and not used since you can't use two of them at the same time. Of course, it would be a spare shuttle for emergencies…"

"Ah, I don't think adding another shuttle for Jack's personal use would help with battling the rumours of corruption," Daniel said. With a glance at Jack, he added: "Sorry."

"Don't worry, one shuttle is enough for me." Jack grinned widely.

Catra snorted, but not everyone found Jack's joke funny - Sam glared at him.

"Wait! You're not supposed to use your equipment?" Adora asked.

"They're not meant for private use," Sam told her. "Although there are exceptions for personal vehicles."

“And a shuttle is a vehicle!” Jack grinned again, but not for long. “Anyway, everyone hops on an Air Force plane if they can - it saves time and money. And if you’re a pilot, you also take any stick time you can get. But not everyone has a shuttle they can use for that.”

“General Naird was quite unhappy that his command wasn’t assigned a shuttle,” Sam added.

“And he wasn’t the only one, I bet,” Jack said. “They’re jealous.”

“So, should we hand them shuttles as well?” Entrapta asked. “It would set our projected production back a bit, but if that will solve our problem, we can do it!”

“I fear, at this point, it would be seen as an attempted bribe,” Sam objected.

“Yeah,” Jack agreed. “Once they start talking about how you shouldn’t use a shuttle like that, they can’t go back and get one of their own - well, they could, but it would make them the next target.”

“Then what can we do?” Adora asked.

“What can Wilkinson do?” Bow asked. “He’s in Washington, and Jack’s usually here or in Germany. Or in Etheria.”

“He can snoop around in Washington and ask all my fellow generals,” Jack said. “And he can hop on a plane and travel to Europe as well.”

And just dealing with the spy wasn’t on the table, Catra knew.

“But he wouldn’t have any authority in Europe - or outside the USA in general,” Daniel pointed out.

“This isn’t an authorised investigation, so he doesn’t have any authority to begin with,” Jack said.

“Ah, right.” Daniel winced. “Still, that means he is limited in what he can do.”

“Never underestimate a lone wolf. Whether it’s an assassin or a spook.” Jack bared his teeth.

Catra nodded. A single spy like Double Trouble could cause a lot of harm.

“So, what can we do?” Daniel asked.

“We could try to speak to him?” Entrapta suggested. “Explain the situation?”

“That would make him even more suspicious; I know the type,” Jack said. “He’ll already suspect foul play - you’ve heard him. He probably thinks I’ll ask some old Black Ops contacts to silence him.”

“Or us,” Catra added. She grinned. “But if he suspects foul play, what if he finds something worse than corruption? An attempt to frame a brave hero?”

Jack blinked. “You want to set him on Smith?”

Catra nodded. “We can set up Smith. Give him a taste of his own medicine.”

“Yeah, we could. It won’t be easy, but we could do that.”

“But what if Smith is honestly mistaken?” Adora asked.

“I doubt that,” Jack said.

“But we can check that first, I think,” Bow said. “Well, you can - we still have to deal with the Asgard.”

“Don’t remind me,” Glimmer muttered.

Catra grinned. She could do something interesting and avoid something boring - perfect.

*****

Above the Pentagon, Washington D.C., United States of America, December 5th, 1999

This is a waste of time, Jack O'Neill thought as he leaned back in his seat in his stealth shuttle. Smith was a four-star general - you didn't reach that rank by being naive. Or by being so honest and by the book, you couldn't tolerate the usual rules-bending by the brass. Smith's own command would have sabotaged him if he had been that kind of hardass because no one wanted to serve under such a commander.

So, Smith had to know what he was doing. But the Etherians would need more than that to use slightly less-than-honest means to deal with him. Well, most of them - Jack was sure that Catra would be fine with framing Smith for any crime. But they didn't have to go that far, anyway - Smith must have some skeletons in his closet; they only needed to find them.

But still… Jack couldn't help feeling that he was missing something. Smith wasn't dumb. Did he really expect a drummed-up charge of misuse of a service vehicle - which everyone did to some degree - to bring down Jack? Smith was aware that Jack was a close friend of Adora and the other Etherians. Too close to be hurt by such accusations - especially since the Etherians considered using his shuttle for anything perfectly fine and dandy. Hell, the government was counting on Jack and the rest of SG-1 to use their friendship to influence the Etherians, and that cut both ways.

No, even if Jack were corrupt - and he wasn't - this wouldn't be enough to get him cashiered. They needed him too much. Not just because he was friends with Princesses, of course, but also because he had the most experience fighting the snakes. And he was good at it.

So, why was Smith sending a rogue FBI agent after Jack? What did he hope to gain from this? Was he actually counting on the

disgruntled conservatives and religious nutcases to push the government into dropping Jack? The government had made it clear that it valued the Alliance far more than what influence those people had left. Even with the presidential election coming up next year, no candidate - none with a serious chance at getting a nomination in either party, at least - was campaigning on a platform that would piss off the Etherians.

Wilkinson was right that a lot of people were unhappy with the changes the Alliance with Etheria brought to the United States, but the country was in the middle of a war, and that meant people were closing ranks and rallying around the flag.

He glanced over his shoulder. "Anything?"

Carter shook her head. "No, sir. Smith hasn't left his office or called anyone since you last asked."

Which had been… fifteen minutes ago. That explained why she looked a little annoyed.

"Alright." He suppressed a sigh. Maybe he should take a nap - Catra and Melog were sleeping in their seats. In such weird positions, Jack's back hurt just from looking at them. They really were like cats in that regard.

But he couldn't sleep. He was missing something, he knew that. Why was Smith doing this? And what was he hoping to gain? A promotion? He was already a four-star general, and even - or especially - if he managed to get Jack cashiered, he wouldn't get a promotion out of it. He would have pissed off the government too much with his meddling. Unless he thought his involvement would remain a secret.

Did he? Jack frowned. Wilkinson might keep the secret. But Wilkinson alone wouldn't be enough to hurt Jack. That would need a lot of influence. So, others would have to get involved. And Smith would have to move very carefully to benefit from this. Too much caution and others would take over. Too little, and he

would be sacrificed to appease the Etherians while someone else got promoted.

Would Smith really risk that? He didn't strike Jack as reckless - quite the opposite, actually. Not a coward, but quite a bit more cautious than Jack or the Etherians. Anger or desperation might change that, but envy or spite?

No, there was something else. Someone else was involved. Which, Jack admitted to himself with a grin, means that this isn't a waste of time.

If only Smith would copy Wilkinson and invite a co-conspirator over. Or start monologuing in his office! But it seemed Smith didn't want to cooperate with this investigation.

Well, Jack already knew the guy wasn't an idiot. Then again, Smith was picking a fight with Jack and his friends, and that was a really dumb move.

Something Jack was looking forward to demonstrating.

*****

Factory Complex, Scorpion Kingdom, Etheria, December 5th, 1999 (Earth Time)

"...and these are our bot factories. They used to produce bots for the war, then we - well, Entrapta and Hordak - repurposed them for agricultural bots, but now they're producing war bots again. And spy bots." Scorpia pointed with her pincers at a massive and - to Adora, at least - familiar factory complex.

Sure, they had prettied it up - and, more importantly, cleaned it up; it wasn't leaking acid into the water any more, and they had better filters for the exhaust pipes, as Entrapta had explained - but underneath that, it was still the same factory Adora and Catra had climbed as cadets. She could see the very spot they used to watch the Fright Zone from here. Ah… She was smiling widely, she

realised, and quickly schooled her features. This was a diplomatic event!

"You switched from agricultural equipment to arms?" Thor asked. "How did that impact your food production?"

"Not at all," Scorpia replied. "Well, not much - Perfuma worked on the plants we use so they produce more for less work." She beamed at Perfuma, who blushed a little, Adora noticed.

"I only changed the rate at which they absorbed sunlight and the efficiency of their chlorophyll. And I made them a bit more resistant to pests - not too much, or that would have meant they couldn't be cooked in the traditional way," Perfuma explained.

"Well, we could have just used them to produce Horde rations, but those factories were dismantled entirely," Scorpia said. "I kind of miss them, from time to time."

Adora stared at her friend. She missed the Horde rations? After tasting real food? Unbelievable!

Glimmer looked like she was feeling sick, and Bow grimaced. Perfuma, though, smiled at her lover.

"You ended your capability to produce rations for your soldiers?" Thor sounded incredulous as well. "In the middle of a war?"

"We did that before we knew about the Goa'uld. And only once we had better food to disperse," Perfuma said, sounding defensive.

"And if we tried to feed those rations to our soldiers, they'd probably revolt!" Scorpia chuckled. "Anyway, that's about it for our kingdom's factories. We mostly rely on Horde designs for weapons, though Entrapta has improved the models since the war."

"Oh, yes!" Entrapta piped up. "I had so many ideas I couldn't try out during the war because Hordak said the loss of production

would be worse than the gain of capability, but with the war over, I could implement them. Some of them, at least. And now, they can be field tested!”

Adora winced a bit at the enthusiasm her friend showed at this prospect. She knew Entrapta didn’t think that the war against the Goa’uld was a good thing - well, defeating them and liberating their slaves was a very good thing - but the way she talked made her sound like she did.

But the Asgard didn’t seem to react to that as they looked at the factories.

“You make heavy use of bots, then?” Thor asked.

“Oh, yes,” Scorpia said. “Bots can be repaired and replaced - most of them,” she added with a glance at Emily, “while people can’t.”

The Asard exchanged glances. “But you also field artificial intelligences.” Penegal cocked his head. “What do they think of this?” He wasn’t looking at Emily directly but glanced in her direction.

Emily beeped.

“Emily knows that we need to free the slaves of the Goa’uld,” Entrapta translated. “And she also knows we can replace the dumb bots.”

“So, they are willing to risk their existence for the war?” Penegal asked.

“Yes?” Entrapta looked puzzled.

“Everyone is aware of the need to defeat the Goauld,” Perfuma said. “Though we won’t force people to fight them if they don’t want to. But we learned harsh lessons during the Horde War.” She looked at the factory complex. “And we’re going to do things better in this war. We won’t make the same mistakes.”

If Catra were here, she'd say that they were going to make all-new mistakes. But she wasn't. Adora cleared her throat in the sudden silence. "Anyway, this is where most of the weapon production on Etheria happens," she said. "We've adapted the former Horde factories." And staffed them with former Horde soldiers.

"And you're showing us your key weapon factories?" Thor turned his head a bit to glance at the factories again.

"Yes?" Entrapta looked confused again. "Why wouldn't we?"

"It's not as if we have something to hide here," Scorpia added.

"Aha." Thor didn't seem very impressed, though. Well, the backbone of Etheria's military in this war were the Horde fleets, and those were built and maintained in space, which the Asgard would know.

Freyr, who hadn't said much so far, suddenly addressed Perfuma. "You mentioned adapting the plants you grow for food. As I understand, you used magic for it. How exactly did you do that?"

Perfuma perked up. "Oh, let me show you!" She spread her hands, and vines grew out of the ground, quickly sprouting colourful fruits. "I altered the fruits, for example, to be more efficient and less appealing to the birds that usually eat them, so we need fewer people to tend to them. Then I spread the plants." She smiled. "I also altered the colour of the fruits, but that was just for variety." As she spoke, the fruits changed colours back and forth.

The Asgard were staring. At the plants and at Perfuma.

"Genetic manipulation on such a level…"

"And at that speed!"

"Without any tools at all. Pure magic."

Adora wasn't quite sure if their reaction was a good thing or not.

*****

Alliance Headquarters, Brussels, Belgium, December 5th, 1999

I might be getting a bit too comfortable with this, Samantha Carter thought as she ran another search algorithm on files she officially didn't have access to but could easily download with a bit of effort that could barely be called hacking. Being involved, and in a significant position, with building the Alliance computer network had its perks.

But the General was correct - too much about this case didn't make enough sense to dismiss the possibility of an outside element influencing or manipulating Smith. And since Adora had signed off on the investigation, it was legal anyway. Only technically, though, and only because of the Etherians' influence on the Alliance regulations - NATO regulations wouldn't have allowed such interference on the Supreme Commander's say so. And whether that authorised her to break into civilian databanks without a warrant by a judge was unclear.

She didn't expect much from this particular data analysis, anyway. Smith hadn't been very active in Brussels. The man had done a stint at NATO headquarters, but it hadn't been anything more than another mark in his file to push his career at the Pentagon. And when he got his new post with the Alliance, he hadn't even bothered with getting a flat in Brussels despite having an office here.

With someone else, that might have been explained by caring too much about his home and family in Washington D.C. to bother setting up a new home here, but Smith wasn't spending enough time with his family. Sam wouldn't call him a workaholic, but only because the man still didn't work quite as much as she did, and she wasn't a workaholic either; she merely had a sound sense of priorities.

On the other hand, she would have expected Smith to focus on his career in the Alliance. He should have realised that the most important decisions were being made here, not in the Pentagon or Washington.

Shaking her head at the inconsistencies, she checked the computer. Almost done. And Catra had already finished bugging Smith's office here. Sam didn't expect much from that either, but you had to cover all bases in such an investigation. Literally, in some cases. At least Smith had been posted to the Pentagon for the last few years, or they would have had to investigate even more places. If Sam had to root through another inefficiently organised computer system just to…

A beep interrupted her thoughts. Her algorithm had flagged something… no. It was from the stealth bot monitoring Wilkinson. The man was moving.

"What's happening?" Catra walked over. Apparently, the noise had caught her interest.

"Wilkinson is leaving his office," Sam told her.

"With Paris?"

"No. He seems to be alone. He might be going for a lunch." According to his filed expenses, the man liked to eat out.

"Hm. Good idea. It's lunchtime there - and dinner time here."

Sam raised her eyebrows at her. Catra thought about eating while their suspect was moving?

The other woman flashed her a wide grin. "Do you want something as well?"

"Are you going to Noordzee again?" Sam asked.

"Of course!"

The place didn’t have a constant menu, but they always had fresh seafood. And trying to get Catra to go somewhere else was an exercise in futility. And often frustration. “Get me a sandwich.”

“Alright.” Catra got up and left their office.

Sam checked her computer again. Wilkinson was still driving. He had passed his favourite diner already. She quickly ran a short check on his expenses. There wasn’t another restaurant in that direction that he had frequented in the last year. She brought up Smith’s data. No, nothing there either - and Smith hadn’t left the Pentagon.

A few minutes later, she watched Wilkinson’s car park next to an old Italian restaurant. If the General were here, he’d make a joke about the mob, but this didn’t have to mean anything. Odds were, the food wasn’t even authentic Italian.

The stealth bot flew a bit down to get a better line of sight into the restaurant. Wilkinson didn’t take a table at a window - he was headed to the back. If he entered a private room… No, he sat down at the bar, gesturing to the bartender.

The bot’s sensors were good but not good enough to listen in from that distance. But the mirror behind the bar meant Wilkinson’s face was visible.

Sam wasn’t a lip-reader, but she had a program for that. A few clicks got it up and running on the feed from the bot.

“… Pastrami?”

“Yes. And a coke.”

Well, that wasn’t a very important conversation. Sam shook her head with a smile.

Then another man sat down at the bar, next to Wilkinson. And they looked at each other in the mirror, Sam noticed. She ran a

search for a match for his face while he ordered a sandwich as well.

"What do you have for me?"

"You're being used."

"Tell me something new."

"Your source has contacts with us."

"Again, tell me something new."

"The kind of contacts that involve the kind of business you hate."

"Is he involved?"

"Hard to say. But someone's covering up whatever he is involved in."

"Can you uncover it?"

"Not without risking more trouble than this is worth."

"I see."

Sam frowned. What did that mean? Were they talking about the General? Or Smith? Smith was Wilkinson's source, wasn't he?

Her laptop beeped again. She had a match for the other man. Oh. Kevin Miller. CIA.

Things got just a little bit more complicated.

*****

Langley, Virginia, United States of America, December 5th, 1999

A whole building full of spies! Catra grinned as she studied the CIA headquarters on her screen. "I can't believe that's just one of

your spy agencies."

"We're a big country," Jack replied.

"And you spy on everyone. Even yourselves."

"As this mission demonstrates, we got reasons for that."

She snorted at that without taking her eyes off the target. "Now, this is a challenge."

"The FBI wasn't?"

"They're not really spies," she told him. "They're cops who also hunt spies. But the CIA? All spies. And it takes a spy to hunt a spy."

"I think the FBI disagrees."

"Of course they would. But we infiltrated their headquarters easily. This, though…?"

"We do not need to infiltrate their headquarters," Sam commented from her seat. "We just need access to their data."

"For which we need to sneak into the building." Catra grinned again.

Challenge.

"Melog agrees," she added.

"The FBI has a magic program. The CIA undoubtedly has one as well," Sam pointed out. "You will have to deal with this."

Of course, they would. But they weren't facing experienced sorceresses. Hell, the FBI witch hadn't even known what her spells would do. The CIA ones would be a bit better - they would probably not shy away from testing their spells against evil magic, according to everything Catra had heard about the CIA - but they were still beginners. And Catra had spent years fighting princesses

and sorceresses trained at Mystacor while Melog was, well, Melog. “We can do this.” All they had to do was to sneak in and get into Miller’s office and his computer.

“Don’t get caught,” Jack said. He sounded as if he wanted to sneak in as well.

“I won’t.”

“Scans still show no advanced technology,” Sam reported.

“And that’s suspicious,” Jack repeated himself. “If anyone should have managed to get some of the good stuff for themselves, it’s the CIA.”

“They would be aware that we can detect such technology, sir.”

“Won’t stop them.”

They had gone over his before. Catra shook her head. “Let’s go. It’s almost midnight here.” Not that that bothered her - she could nap whenever she wanted on this mission - but close to midnight on a Sunday meant the building would have the least number of spies in it.

“Alright.”

She grinned and walked to the shuttle’s back, followed by Melog. Just hovering over the building and rappelling down, like they had done with the FBI, was out. The CIA had improved the security on their roof - and on their office windows. Not with advanced technology, and not with magic, according to Melog, but the sensors they had were annoying enough. Unlike the FBI, the CIA had not ignored how they had broken into Iran’s prisons. Or the CIA was just more concerned about their own allies breaking into their building than the FBI.

It didn’t matter. They were using another way into the building anyway.

Ready.

Catra nodded. “Melog has the illusion up. Drop the ramp.”

The ramp started to lower with a very faint hissing sound, and Catra sniffed the air. Langley wasn’t as bad as the Fright Zone had been, but it was bad enough. And the sewers - or storm drains, as Sam called them - would be worse.

She pulled a mask on as she stepped out of the shuttle, then quickly rushed over to the grate covering a shaft leading down.

Stinks.

“Yeah, I know.”

But she had smelt worse. The Horde hadn’t really bothered with environmental regulations. She grabbed the grate and easily lifted it up. A moment later, Melog, changed into a slinkier form, sneaked past her and vanished down the shaft.

Clear.

She followed, closing the grate behind her. With the mask, she could ignore the smell of rotting matter. She would still need a long shower after this - the smell would linger otherwise, and to imagine her fur having even a hint of this…

She shuddered as she quickly followed Melog, back in catform, down the tunnel. A few sensors were easily fooled by illusions, and the sensors covering the exits were not a challenge either if you were used to dealing with Horde and Alliance security. The CIA apparently hadn’t gotten around to covering the underground areas as well as they had covered the roof and windows.

And now they were inside the complex. Not yet inside the target building, but close enough. And past the guards who might or might not have been sorceresses and their dogs.

She recalled the layout of the place and quickly made her way over to the building Miller was working in. The security there was a bit trickier, but Sam had her back. All Catra had to do was climb a wall until she could stick a device to the sensor covering the entrance, and Sam would hack the whole system.

Easy. They just had to…

Catra froze for a moment, her ears swivelling as she caught steps headed their way. So close to the last patrol? It seemed the CIA took care to have their guards actually patrol at random.

Dog.

And they had a dog with them! Catra hissed under her breath. "Come on!" she whispered, then quickly climbed the wall again, with Melog hanging on her shoulders.

From a windowsill on the second floor, still covered by an illusion, she watched while a guard with a damn dog walked past on the ground below. The animal even seemed to catch her scent, but a quick illusion of a squirrel dashing past distracted the dog and made the handler curse.

By the time the patrol had gone to the next building - actually random patrol patterns were a pain to deal with - Sam had dealt with the security, and Catra and Melog slipped into the building with no one the wiser.

But halfway to Miller's office, her hackles rose. Someone - no, *something* - was nearby. She could hear faint steps. Very faint steps. And she felt the temperature drop a little.

Magic.

The CIA seemed to be a bit more ahead of the FBI than Catra had thought.

"Back!" she hissed - even though Melog would already know what she was doing - and whirled around, quickly darting past two

closed doors to the corner behind them. Rounding it, she glanced at the rows of doors there, ears twitching. She hadn't heard anything on the way past them, so they should be empty. But if whoever - or whatever - was coming had a magical way to check through doors, they would be spotted anyway. Risk it?

No.

She nodded, and they kept running. She had to remind herself to keep her claws sheathed, so she didn't make any sound - or leave scratches and gouges on the floor. It was much easier to run all out with her claws digging into the ground.

Another corner. She remembered the layout. Stairs to the right, lift to the left. And around the next corner was a little nook with a window that was too small to keep the stench of cigarette smoke from lingering and seeping into the plaster.

But it was big enough for Catra, and Sam had dealt with the sensors covering the windows at the source. She opened it, hopped on the windowsill, then turned around. "Go on!"

Melog flowed past her, changing shape to avoid jostling her, while she fixed a small thread to the window's frame. A moment later, she jumped, grabbing the edge of the roof above them, then pulled the window closed with thread.

Normally, she would have slid onto the roof, but the sensors there were still working. So she had to wait, hanging from the roof, until the coast was clear again.

Melog changed shape again, this time into a snake.

Hold you.

She didn't need his help. Hanging from a branch had been standard training - and punishment - back as a cadet; she could do this all day long. Almost. She slid onto their back anyway.

Magic close.

She shouldn’t be doing this, but…

Scoffing, she bent down until she could spy through the window. She heard the steps clearly, coming closer, but there was nothing. Then she felt a cold shiver run down her spine - and saw the small window fog over slightly.

A moment later, she had pulled herself up.

Magic.

“Earth magic,” she whispered. “That’s not a human patrol.”

The CIA had summoned a spirit or something to patrol their headquarters.

*****

Alliance Headquarters, Brussels, Belgium, December 6th, 1999

“...and then we waited a bit longer and went back inside. Miller’s office is bugged, and Sam is already hacking his data.”

Jack O’Neill nodded. Catra might make a point of slouching so much that she looked as if she’d flow off her seat any moment, but her report was concise and to the point - as good or better than he was used to from his own people. And she didn’t make him feel guilty for involving them in a slightly illegal mission. “So, the CIA got ahead of the FBI. Probably recruited outside talent.”

“To guard their headquarters?” Catra shook her head. “That doesn’t sound like a good idea.”

“The spooks aren’t nearly as smart as they think they are,” Jack agreed. That didn’t mean they were dumb, of course, even if some were. But recruiting sources and turning spies was one thing, trusting the security of your headquarters to some hired help was another. And God help the spooks if they tried to get

some leverage on a sorceress while they were still hurting for magical assets.

"And they're competing with the Alliance for recruitment," Catra added.

"That, too." Jack nodded again. The Alliance needed every sorceress they could get. And while not every sorceress who would get hired by the CIA would be a good fit for the Alliance, Jack knew that the overlap between the requirements for his command and the CIA was considerable.

"So, gonna squeal on them? I bet they kept their magic program hidden from your government." Catra grinned. "Sam would have found it otherwise."

Jack made a noncommittal noise. Of course, Carter would have found it, but admitting even in private that you thought your Second-in-Command hacked the government wasn't something you made a habit of. "Well, I'll think about it. We would have to explain how we found out about the CIA's spooky spirit program." Oh, damn - he missed an opportunity to make a spooky spook joke. Well, Carter wasn't here, so he could use the line on her later. Although it was early morning here in Brussels already, and he had stayed up the entire night…

"Right."

"And the CIA might have kept it off the official records, but I bet the NID knows about it. And that means Kinsey knows about it. And since the man is so tight with the president…"

"Ah, yes. Democracy at work." Catra nodded with a sage expression that was obviously faked.

Jack snorted in return. "Anyway, we need to…"

A beep on his computer interrupted him.

“Huh?” That wasn’t a mail announcement. That was… an alert from Carter. “Someone’s hacking into Smith’s computer. Someone else, I mean.”

“Oh?” Catra cocked her head, then grinned.

She probably thought this was getting more interesting. Well, she wasn’t wrong. But Jack would prefer things to get boring instead.

*****

A few coffees - Navy style, but Jack would bite his tongue off before acknowledging that to anyone - later, he was talking to Carter and trying to act as if he had any clue what the stuff on her screen meant. “So, what do you have for us?”

“I’m tracking the intruder. They have tried to obfuscate their location, but their tools, while good, are no match for ours.”

“Ah.” That was… good. Jack stifled a yawn and took another sip from his coffee. “Any idea who they are?”

“This cannot be said with any certainty at this point, sir.”

He grinned. “So, you have a pretty good guess.”

For a moment, her mouth twisted into the hint of a pout. “They are using exploits that have been fixed in the Alliance systems and are scheduled to be fixed in the Pentagon systems next week. Highly-classified ones.”

“Ah. Definitely the NID, then.” Wilkinson didn’t have that kind of resources.

“Or any other agency or person with access to this information,” Carter pointed out.

He shrugged, then finished his cup of coffee. “And how many of them would hack a general’s computer in the Pentagon? That’s illegal!”

She frowned at that. Right. Right, they were doing it as well. “The CIA?”

He snorted as he nodded. “Good point. But I still say it’s the NID.”

She tilted her head in what he knew was cautious agreement.

“So!” he went on, putting his cup down on her desk. “The NID is snooping around. Did you find out what they were looking for?”

“They downloaded the entire content of his private computer, sir.”

And Smith was too smart to keep anything classified there, which the NID would know. They weren’t going for military secrets, then. Of course, with Kinsey having the president’s trust, they didn’t need to break the law for that. “Blackmail?”

“It would have been unsuccessful then.”

Carter hadn’t found anything in Smith’s files either. Although, sometimes, innocent information turned into compromising material when combined with something else. He blinked as he had another thought. “Did they plant anything?”

“No, sir.”

He caught the unspoken ‘I would have noticed and told you that already, sir’ clearly despite the late or early hour. “Right.”

Her computer decided that the slightly awkward silence that followed was the perfect moment to announce something. The numbers that appeared on the screen meant garbage to Jack, but Carter perked up. “Oh! The trace went through. The hacker is located at…” Her fingers flew over the keyboard, and a map appeared. “...here.”

He could read maps in his sleep. “Washington D.C. Not Kinsey’s address, though?”

“No, sir. Redirecting the spy bot for a close look.”

Right. If they'd had such bots during the Cold War… Real-time recon on demand, without risking anyone, was a game changer. A few minutes later, they were looking at a house so average and devoid of anything unique, it almost seemed to stick out even in its boring suburban neighbourhood.

"I think we found a NID safehouse," Jack said.

"If this is a NID operation, sir. We haven't confirmed that yet."

"No, we haven't." He grinned. "But I'm betting a month's supply of jello that I'm right."

"I'm not taking that bet," Carter replied. She waited just a moment before adding: "I have no interest in jello."

He snorted, then had to stifle another yawn. "Anyway, go to bed now. We've got a long day ahead of us. And it's a Monday to boot."

"Technically, it's already Monday here, sir."

His chuckle turned into a yawn, and he could feel her raised eyebrows on him without having to look at her.

Damn, the Navy pukes couldn't even brew their coffee right any more. No wonder their ship-building program was lagging behind the Limeys' so much.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, December 6th, 1999

"Good morning, General!"

Jack O'Neill narrowed his eyes at Lt. Brown's dig. It was past noon, but he had gone to bed at half past six in the morning, and only if you counted napping in a shuttle flying on autopilot. But saying anything would acknowledge a hit. So he nodded at his

aide. “Good morning, Brown. Anything urgent?” His communicator would have woken him up if anything had come up, but old habits died slowly.

“Senator Kinsey called, sir.”

Jack tensed. Kinsey? “He did? What was it about?”

“He didn’t say, sir. Just that it was important but that he could wait until you were in the office.”

Jack silently cursed. The NID hacking last night, and now Kinsey was calling him? The timing wasn’t suspicious, it was obvious!

And he had a bad feeling about it.

*****

Cultural Exchange Part 6

Royal Palace, Kingdom of Salineas, Etheria, December 6th, 1999 (Earth Time)

"Ugh. Giving a demonstration like a trained pet. This is so annoying."

"But think of the opportunity to impress guests from another planet, my love! Another planet that's not Earth, I mean! Anyway, I've prepared a medley of my best sea shanties for this occasion, which will be the perfect accompaniment for your performance!"

"Don't try to steal the spotlight!"

"I would never do that to you, my love!"

Adora couldn't help sighing a little as she watched Mermista and Sea Hawk.

"I don't know why she keeps this up; no one believes her act, anyway," Glimmer muttered next to her. "She loves to show off."

Adora wasn't quite sure about that. Mermista was a bit grumpy at times. And she had a temper - like the sea, Sea Hawk had said once. And that this was one of the countless reasons he loved her and had never given up courting her.

Which was quite romantic, actually. But they were on a schedule. "I think we should proceed with the demonstration of your power," she told Mermista. "Sea Hawk can present his shanties after dinner."

"Oh, yes - when everyone's fed and content!" Sea Hawk nodded with a smile.

And Mermista shrugged, which counted as agreement as well.

"Let's go join our guests, then," Glimmer said.

“Our guests? We’re in my kingdom.”

“You know what I mean.”

“Whatever.”

Adora briefly, very briefly, rolled her eyes - it wasn’t fair to be annoyed at her friends; this visit was proving to be more stressful than expected, and the whole plot against Jack on Earth wasn’t helping. Nor that Catra was so busy with it. She hadn’t come back until the morning, shortly before Adora had to get ready for the visit to Salineas, and so they hadn’t been able to do much else but kiss and hug.

And then Catra had gone to bed, and Adora had gone to Salienas. Fortunately, they had taken the scenic route in a shuttle, flying at low altitude over the sea, and so the Asgard’s reaction to seeing sailing ships plying the ocean’s trade routes had not been overheard by Mermista. For a diplomatic delegation from an old species, the Asgard could be rather blunt. Adora didn’t think there was anything wrong with using magic and sails together. Or magitech and sails. Weren’t the Asgard supposed to be very traditional?

They stepped out of the palace and onto the mole sheltering the private harbour of the queen of Salineas, where the Asgard were waiting with the others.

“...and I had plans for the Horde frigates as well, to make them fly instead of float, but Hordak reminded me that if we wanted flying transport and warships, we might as well go all the way and make spaceships - only, we had a fleet already, and if I constructed a new ship for us, Darla might get jealous,” Entrapta explained, hair and arms waving around.

“You won’t design new ships because your old ones might get jealous?” Thor sounded doubtful - and a little bit shocked - in Adora’s opinion.

“Well… she was abandoned and buried in the Crimson Waste for so long, I don’t want her to worry that we would replace her - which we would never do! I can keep her upgraded so she can match any modern ship. Well, any modern ship we know, and in her class. She wouldn’t be able to match a battleship, would she?”

“With enough of a technological advantage, yes, she would,” Hordak said.

“Oh, right.”

It looked like they would have to keep an eye on Entrapta again so she wouldn’t neglect either crucial projects or her health so she could build more upgrades for Darla, Adora noted. But that could wait until this visit was over. “Sorry for the wait,” she told the group. “Something came up.”

“Yeah, yeah,” Mermista added, nodding at their guests. “So, you’re interested in my magic.”

“Yes, we are,” Freyr replied.

They were here so the Asgard could enjoy Salineas’s culture. Adora almost said something about it, but Mermista had already turned away and was facing the sea.

“So, take a good look.” She raised her trident, then gestured with it, and a huge wave suddenly rose from the sea. Higher than the masts of the ships in the main harbour. That was… more than Adora had expected. She knew Mermista could do this, but her friend rarely did that outside emergencies.

“Someone prepared for this,” Glimmer mumbled. “And she acts as if she didn’t want to show off?”

“Ah, my love - the Queen of the Seven Seas!” Sea Hawk put a hand over his heart and raised his chin as the wave slowly moved closer, then turned around its own axis, barely missing the mole.

Mermista grinned, then jumped into the sea, startling the Asgard - and even more when she emerged, her legs having turned into a fishtail, and rode the wave all across the harbour, then out to the sea.

"Telekinetic control over liquid on such a scale!"

"And the ability to manipulate her own body to transform into a hybrid life form!"

Well, the Asgard were impressed, Adora told herself.

"Now we just have to make sure Sea Hawk's shanties won't mortally insult the Asgard, and this trip wasn't a waste," Glimmer commented while they watched Mermista show off more of her powers.

Adora nodded, though she didn't think that was likely. Not after sitting through their best epic before. Sea Hawk was a master performer compared to that.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 6th, 1999

Being healed by She-Ra when she was channelling the magic of an entire planet wasn't quite a rejuvenation treatment, but it came close. Samantha Carter had felt a lot younger ever since that moment on Saqarra. Although, as she was reminded today again, feeling younger didn't mean she was actually twenty again. At the age of twenty, she had been able to work through the night without feeling it in the morning.

Or, she amended her thoughts as she stepped out of the shuttle that had brought her to Stargate Command, maybe she hadn't been old enough to realise that her efficiency had been affected by lack of sleep. It wasn't as if most of the tests at the Air Force Academy had been too challenging.

“Major Carter.” General Hammond himself was there in the hangar, greeting her. “We’re happy you found the time to come.”

Was that a trace of resentment? And if so, was it aimed at her or at the fact that he was stuck at Stargate Command and hadn’t been transferred to Alliance headquarters? Sam couldn’t tell. “Of course, I’d make the time, sir,” she answered, stifling a yawn. She’d had almost five hours of sleep, she reminded herself - she shouldn’t be so tired.

“Well, I am glad it’s not my command that’s keeping you awake until the morning any more,” General Hammond flashed her a wry smile.

She returned the smile. Of course, he’d see through her act - he knew her almost as well as the General did. “Needs must,” she said. “But I don’t make a habit of it.”

The General would have made a joke about Sam only doing it every second night, but Hammond merely nodded. “Anyway, we’re glad you came. Dr Gregorovich tried his best, but he couldn’t solve the issue with the Stargate central computer program.”

Sam frowned. She had documented the code and written a user and maintenance manual for the entire system before she had transferred to the Alliance - precisely because she wouldn’t have the time to run back to Stargate Command to solve every issue that cropped up. Or shouldn’t have the time - the Stargate was crucial for the Alliance, so fixing any issues with it took priority even over the latest problem. She wouldn’t have left the General face Kinsey by himself, otherwise. But, still! Iwan could read English perfectly fine, his accent notwithstanding! “And what about the other scientists?”

“They couldn’t solve the issue either.” General Hammond nodded at the guard at the lift, who stood at attention as they entered. “To their great chagrin, as General Petit put it.”

She eyed the general with slightly narrowed eyes. Was that a pun? Or was she imagining things? She focused on the task at hand. “So, none have found the reason why dialling an address suddenly takes longer than it should? Did anyone look for a mechanical defect yet?”

“Yes. The gate itself is not affected.”

Of course, they would have checked that. Still, Sam had to ask - sometimes, people overlooked the most simple cause for a problem. She nodded. “So, not a hardware problem.”

“Not as far as we know.”

Oh. General Hammond was being a bit too… bland. Sam narrowed her eyes again. “Did Iwan ask for my assistance?”

“Yes, he did. General Sidorov and General Li wanted him to keep trying, but he insisted that he had tried everything to fix it.”

That sly Russian - a quarter Welsh - scientist! Sam was pretty sure he knew far more about what was wrong with the Stargate Command computer than he had let on. And he wanted her to find it. And that meant this wasn’t a computer problem.

This was a security problem. And a political problem.

“I’m a scientist,” she muttered under her breath.

“Pardon?” General Hammond turned to look at her right when the doors opened.

“Nothing, sir.”

Just an overdose of politics, she heard the General comment in the back of her mind.

*****

Gate Area, Near Bright Moon, Etheria, December 6th, 1999 (Earth Time)

Catra smiled as she approached the Stargate. It was afternoon, and she had spent the entire day in bed while everyone else was dealing with the Asgard. And with the grumpy water princess. Sure, Catra had worked through the night before, but that had been while infiltrating a spy headquarters and hunting traitors - interesting, not boring. Or annoying.

And now, it was time to head back to Earth and check up on the plot against Jack. And avoid more paperwork.

Work waiting.

She snorted, tilting her head to raise her eyebrows at Melog. "It's not the same."

Same.

She snorted again. "It's not." If it was interesting, it wasn't really work. Earth had a saying about that.

Melog radiated some smugness in return.

The guards at the Stargate didn't even twitch; they were used to them communicating like that. The officer in charge nodded at her while the Stargate started to rise. "To Earth?"

Where else would she be going? She had been doing that trip every day for a while now. She nodded instead of pointing that out; better to stick to procedure than to let the gate crew get used to anticipating any requests. That could really mess up things in the worst moments.

The Stargate started spinning a few moments later, followed by the vortex extending and collapsing. Catra suppressed the slight unease she felt as she approached the stabilised wormhole. If there was a mistake, or sabotage, she would end up splattered against the iris at Stargate command at lightspeed or something.

She had to trust that this wouldn't happen. Had to trust the people at Stargate Command. And all the stories she had heard from Jack and the others made that a bit difficult. All those crises…

Well, they hadn't messed up in that way. Not so far. She nodded at the guards and stepped through.

A disturbing but also thrilling moment later, Melog and Catra stepped into Stargate Command on Earth. "Hi, everyone!" She waved with a grin - but narrowed her eyes when she spotted Sam in the control room, bent over the console there, with the Russian scientists next to her and Hammond and the Russian general hovering a bit behind.

"I think something's not right here," she muttered. Sam wasn't assigned to Stargate Command any more. And she had better things to do, many more, than helping out her old command - unless she was urgently needed here for another crisis.

Yes. Problem, Melog agreed.

"Then let's see what the problem is - and what we can do about it," she said. Turning to the Gate guards, she added: "We're going to meet Major Carter." She flashed her fangs to make sure the men knew this wasn't a request.

A minute later, they entered the command room. "Hi, Sam! Hello, General Hammond. Dr Gregorovich. Everyone else."

They were expecting her. "Catra." Hammond nodded at her. "Melog."

"Miss Catra! Melog! Welcome to humble abode!" Gregorovich smiled at her.

Sidorov, of course, glared. The man didn't like to be lumped in with everyone else. Which was why Catra had done it.

“So, what’s wrong this time?” she asked, hopping up to sit on the console next to Sam’s.

“We’re dealing with a computer problem,” Sam explained. “The core unit doesn’t perform to spec.”

“Da! Half as fast as it should be,” Gregorovich added.

“It isn’t quite that bad,” Sam corrected him. “But it’s still a noticeable drop in performance.”

“Someone messed with your code?” Catra asked. It would have been stupid, but people were stupid. Even the smart ones. Or especially the smart ones. Many of them just couldn’t let things be as long as they worked. If someone had tried to improve the computer and messed up…

“The core programs are working fine. We’re checking the subroutines now, then the peripherals.”

Catra wasn’t a computer expert - Entrapta and Bow handled that stuff - but she had kept up with the basics when she had led the Horde. If they were checking every part of the system… “No documented changes, I guess.”

“No.” Sam frowned.

“And no one admitted extra work.” Gregorovich shook his head. “Not even after we say that no gulag waiting for them for mistake.”

Catra snorted, though it might not be a joke. Or a mistake. Sidorov hadn’t commented yet, she noticed. The Russian was glaring at everyone, especially Gregorovich, though.

And wasn’t that interesting? She grinned.

Then her ears twitched when Sam’s computer beeped. She knew that kind of alert - it had found something.

Sam dropped all pretence that she had been paying attention to their talk and focused on her screen. "Ah! The peripherals have undocumented activity showing." Her fingers flew over the keyboard. Another beep. Different tone. "And there just was an attempt to access my computer."

"A hacker?" Hammond asked.

"More like a virus, sir." Sam looked up with a grim expression. "Someone infected the Stargate computers with malware."

Catra hissed under her breath. Sabotage. Or spying. Or both. If that virus had gotten to the controls for the iris in mid-transit… She glanced at Sidorov. He was tense, but everyone was.

Afraid.

Catra bared her teeth in a grin. Infecting the Stargate computers wasn't easy. Sam and Entrapta had done the security; the core computer and its peripherals weren't connected to the outside. So, it had to be an inside job.

And Catra was sure she knew who was responsible.

Hammond was still cursing under his breath. "Can you remove the virus?"

"Yes, sir. But it will take a while. And we should shut down the Stargate until we've purged the systems."

"Da. Better safe than sorry, right?"

Catra nodded in agreement. "And we need to find the traitor behind this," she added.

Sidorov tensed up even more.

*****

Capitol, Washington D.C., United States of America, Earth, December 6th, 1999

"Thank you for coming to see me on such a short notice, General O'Neill. Even for a Senator, getting a flight on short notice so close to the Holidays would have been a hassle, and some things shouldn't be trusted to a phone call."

Jack O'Neill was pretty sure that Kinsey was lying. The first clue was that the man was talking. But Jack was also sure that Kinsey wouldn't have any problems getting a flight, even if it were Christmas Eve. "It was no trouble," he replied, leaning back in his seat.

"Ah, yes - I heard about your personal shuttle." Kinsey smiled almost wistfully. "It's remarkably convenient. I don't think even the President has a shuttle at his disposal like that."

Jack narrowed his eyes at the man as his polite smile faded. "It's assigned to my command. When it's not needed for combat missions or training, it serves as transportation." He managed to close his mouth before he added a comment about Kinsey's office being much nicer than his own. Even if it was true - the scumbag probably had lots of equally corrupt visitors to cater to.

"Of course. I'm sure all the i's are dotted, and the t's are crossed." Kinsey's smile wasn't as patronising as it usually was when the guy thought he had the upper hand, but he couldn't hide his attitude completely.

Jack nodded. "Of course. I've got nothing to hide." He made a point of glancing around the senator's office.

Kinsey was unfazed. "Of course not. Although in politics, appearances matter as much - or more - than facts." He put his elbows on his desk and laced his fingers

Jack shrugged. "You would know. I'm a soldier, not a politician."

“Isn’t there a saying that war was just the continuation of politics by other means?” Kinsey asked.

“Clausewitz.” His exact quote was a bit different, but that was the gist. “But he didn’t mean for soldiers to make politics.” Well, maybe he had meant that - there was the old joke about Prussia being an army with a state, which had some grounding in facts.

“You’re a member of Alliance High Command, General. At your rank, you are involved in politics whether you admit it or not.” Kinsey’s smile grew a few teeth. “And, seeing how close you are to the Supreme Commander of the Alliance and key leaders of the senior member in the Alliance, I would say you are doing very well.”

And I bet you’re envious, Jack thought. He didn’t say that, though, but snorted instead. “That’s not politics, senator. We’re friends.”

“And friends help each other.”

Oh, for… Jack clenched his teeth for a moment. “What are you insinuating, Senator?”

Kinsey’s smile grew just a smidgen. “As I said, appearances matter in politics. You appear to be rising beyond the reach of many of your peers, General, thanks to your friendship with the Etherians.”

Jack slightly tilted his head to the side. “My peers, who cultivated the friendships of American politicians to advance their careers?” Such as yourself?

“Precisely.” Kinsey’s smile didn’t falter. “Unfortunately, some of your peers are not quite as skilled in politics as they thought they were and are misjudging their situation.”

Jack frowned. “Misjudging their situation?”

Kinsey nodded. “They - and, unfortunately, a number of my esteemed colleagues in Congress - don’t seem to understand our Etherian allies, and their actions reflect that.”

Jack nodded, wishing the man would get to the point.

Kinsey leaned back. “They act as if the princesses were American politicians, beholden to public opinion and certain standards.”

Jack snorted again. “They should attend a lecture or two of Daniel about that topic. He loves talking about the differences between Earth and Etheria.”

“Oh, yes. Dr Jackson’s lessons were very insightful. Unfortunately, many of my colleagues tend to listen to lobbyists more than to scientists.” Kinsey sighed. “Many are also too conservative to adapt to changes, even drastic, fundamental changes. But I digress.”

Yes, you do, Jack thought. You didn’t call me here to vent about your colleagues.

Kinsey leaned forward. “They don’t get that Etherians consider politics a personal affair. And they don’t get that the Etherians won’t throw a friend to the wolves to maintain appearances because they don’t have to care about appearances - at least not as far as the public is concerned.”

So that was why Kinsey hadn’t moved against him, Jack realised. A great deal made sense now. “Are you talking about General Smith?”

Kinsey nodded, his expression shifting to show satisfaction. “Of course. You’ve been aware of his attempts to slander you as corrupt for some time now.”

Kinsey made it sound as if Jack kept tabs on all potential ‘rivals’ or something. Like Kinsey surely did. Jack shrugged in response. “Not in any detail.”

"You are too modest, General. I know you've been investigating him and his contacts." Kinsey smiled, showing all his teeth. "And so have I."

And now came the offer. Jack tilted his head. "Ah."

"Yes." Kinsey nodded in that smarmy, self-satisfied manner of his. "Smith thinks that if you look like you're abusing your position, you will be relieved of your post. He's wrong, of course - even if you were abusing your position for personal gain, your friends wouldn't care. That's just how leaders in absolute monarchies act, after all. Something anyone with experiences with dictatorships on Earth should have been aware of, of course."

Jack glared at the scumbag. "Are you really comparing Adora and the other princesses to dictators, Senator?"

Kinsey nodded. "They effectively are dictators, General. Absolute monarchs. Friendly, idealistic and, as far as it looks like, benevolent ones, but they aren't beholden to anyone and not bound by any law but, possibly, outside pressure. Pressure which not even a united Earth could bring to bear at the moment."

That was… not as completely wrong as Jack would like. It was still not right, though. "And yet they are more trustworthy than anyone on Earth," he retorted. "They'll keep their word even if it costs them." As their issues with the Asgard proved.

Kinsey shrugged. "You're not exactly unbiased, General. But as long as the interests of Earth and Etheria align, I doubt that the princesses' honour will be put to the test, so to speak."

Jack pressed his lips together. As if Kinsey knew anything about honour! "I doubt that you called me to Washington just to talk about our allies'."

"Not *just* to talk about our allies, no." Kinsey smiled again. "But your relationship with the Etherians features a great deal in many talks at the highest level, General. And that means you are a person of great interest and importance to our government."

Something you no doubt hate, Jack thought - but he nodded slowly. No point in denying the obvious.

"Should anything happen to you, the repercussions would be grave and unpredictable. And that means many people keep tabs on you."

Jack snorted. "Like the NID."

"Amongst others." Kinsey didn't quite shrug but tilted his head to the side for a moment. "Not just American groups, of course - our NATO allies are aware of your influence as well, and so are Russia and China, especially with their access to Stargate Command's records. Even redacted, they reveal quite a lot about you."

"Only good things, I hope." Jack flashed a grin at Kinsey.

Kinsey's smile twisted for a moment. "That's a matter of opinion. The insights those records allow into your characters are a two-edged sword, so to speak. In more ways than one, actually - you have a history of doing what you think is right, sometimes to the point of insubordination. While your results speak for themselves, that is not a trait everyone considers admirable in a soldier, much less someone with your personal influence on the highest level of politics."

"Mindless obedience is not a trait encouraged in the US Armed Forces," Jack retorted. "That's the Goa'uld way."

"Soldiers acting independently of, or even against the will of the civilian government is not the American way either, General."

Oh, that was rich! "Neither is having secret services running out of control," Jack snapped.

Kinsey smiled in return. "Like having a team investigate General Smith and various civilians?"

Jack clenched his teeth. Can't lose my temper, he reminded himself. "Investigating potential alien infiltrations falls under the

mandate of the Alliance."

Kinsey laughed. "Oh, I have no doubt that you ensured your private investigation was authorised by the Supreme Commander. But we both know what you did - and why, General."

You think you know, Jack thought. "What do you want?"

Kinsey leaned back, smiling in that self-satisfied way as if he had just won something. "I want you to be more careful, General."

"What?" What did he mean?

"As I've said before, you are a very important person. With the possible exception of Major Carter, no one else in the Alliance, or on Earth, is as close to the leading Etherian princesses as you are. And most of them are very young, barely out of their teens. Idealistic. Passionate. And absolute monarchs in control of the most powerful member of the Alliance. Who could tell how they would react should anything happen to you?"

Was that a threat? Jack narrowed his eyes. "They're veterans. They fought in a decades-long war. They know the risks." Or should, though She-Ra's ability to heal anyone would skew that.

"Oh, yes. Combat isn't what I - and others, including the president - are worried about. No, it's attacks of a different nature against you, General."

"Like Smith, you mean."

Another smug grin. "Exactly. Appearances matter, General," Kinsey repeated himself. "If you are seen as corrupt, as abusing your position for personal gain - or to sabotage potential rivals - and the Supreme Commander of the Alliance makes it clear that you will not suffer any consequences, how will that look to the public? And to your peers in the Armed Forces?" He shook his head. "It would undermine the support for the Alliance and even the war. Not fatally, of course. Not in the middle of a war for our lives. But it will strain our relations with the Etherians and the public's trust

in our soldiers, our allies and our government. And that will affect the war."

And probably your plans, Jack thought. "Unless such detractors were revealed to be corrupt themselves."

Kinsey chuckled. "Indeed, General. Whether they actually are corrupt or not, should they be perceived as such, the whole affair would look very different, wouldn't it? And that's where we come in."

Ah. Jack forced himself not to snarl at him. "You want the NID to handle this."

"What I want is you and your friends to stop meddling in this and focus on the war. The NID is already handling this. You're a very capable officer, General, but this is not your area of expertise. And the more you meddle, the harder you make it for us to handle this and keep your reputation clean."

Jack wanted to deck the bastard. Smash his grinning teeth in. "You've been handling this for a while, have you?" he spat. That would explain why Smith thought he had the support to pull this off. And probably how the damn actor got involved. And Wilkinson… had probably been on the NID's list as a useful crusader for justice or something, perfect for this kind of plot.

Kinsey smiled. "It pays to be proactive in this business. You do your job, General, and we do ours. Everybody wins."

Until those jobs collided with each other, Jack thought. Or Kinsey would attempt to use this as leverage. But he hadn't, so far. If Jack pushed the issue, things would go as Kinsey had mentioned, only worse. And while Jack was tempted to stick it to Kinsey anyway, it wasn't worth it. Not now.

Damn.

*****

Royal Palace, Kingdom of Snows, Etheria, December 6th, 1999 (Earth Time)

The ice skating show was great, in Adora's opinion - she was clapping with a wide smile when the skaters - or would they be dancers? - showed up at the end to bow to the audience after dazzling them with jumps and stunts, performed to live music, for an hour.

"Encore!" Bow yelled. "Encore!"

"Huh?" Glimmer looked as confused as Adora felt.

"That's what they yell on Earth when they want another song at a concert," he explained.

"And do you think they know that?" Glimmer asked.

"Ah…" Bow winced. "I didn't think of that."

"Duh!"

Adora glanced around. Indeed, no one seemed to have caught Bow's meaning in the audience - and the cast of the show left the stage - or rink to applause without performing another scene.

Sighing, she glanced at the Asgard - the show had been so captivating that she had almost forgotten about them.

They had their heads stuck together and were talking. Had the show fascinated them as well? Adora hoped that was the case. Sea Hawk's shanties hadn't, unfortunately. "So, what do you think?" she asked.

"The ice that covered the stage," Freyr said. "Princess Frosta couldn't have produced so much water out of the air; we would have felt the effects. She must have magically created the water."

"Uh… yes?" Adora tilted her head and tried not to look confused.

“How long will it last?” Penegal asked.

“Normally, until it melts?” That was how it had been when Frosta had fought in the war. “But since we’re here in the Kingdom of Snows, it won’t melt unless someone heats the ice,” she added.

“By ‘melting’, do you mean ice turning into water or disappearing?” Freyr sounded very intently for such a simple question.

“Frosta’s Ice turns into water,” Glimmer told him. “It’s magically created, but otherwise works as normal ice.”

“So, she creates matter - water - out of nothing?” Thor shook his head.

“Yes?” Adora answered him anyway.

“But… that means…” Freyr seemed concerned. “You’re creating matter from magic. How does that affect the planet over time?”

Adora frowned. That was a good question, actually. Constantly adding water to Etheria over time would probably affect the climate. On the other hand… “I don’t think Frosta creates enough ice to affect the entire world,” she said.

“But if her successor inherits her power, and if her predecessors had the same power…” Freyr trailed off.

“The whole line would only be a thousand years old,” Glimmer said. “That was when the First Ones created the powers.”

The Asgard quickly nodded, but Adora was sure they would try to calculate the total amount of water Frosta and the other princesses of the Kingdom of Snows had created since the founding of the line.

She blinked, then sighed a second time. Once more, the Asgard had been focusing on the magic used in and for the show, not on

the performance of the artists. “What did you think of the show?” she asked, already suspecting the answer.

“It was rather interesting,” Freyr said, but Adora didn’t think he sounded honest.

“It was a little light on magic and magitech. I thought this was a core part of your culture,” Penegal commented.

Thor nodded. “And it was a little hard to follow the plot.”

“And when the performers moved to the back, it was hard to see what they were doing,” Penegal added.

“Yes.” Freyr nodded. “If you could play the recording as it’s being recorded on a big screen, that would probably make it easier to watch the performance.”

“It wasn’t recorded.” Frosta had arrived, and Adora winced - she must have been too distracted to notice the princess’s approach. If Catra were here, she would tease her mercilessly about it.

“It wasn’t recorded?” Thor looked surprised.

“This was a royal performance in your honour,” Frosta explained. “Recording it would have been rude.”

“So… the only recording of this performance are our memories?” Freyr shook his head.

“Exactly,” Frosta said.

“But you aren’t… You will all die one day. And the memory - the memories - will be lost. Your heirs will never know this performance.” Penegal looked at them. “Don’t you think this is a great loss?”

Bow looked a little torn about it, but Frosta shook her head without showing any doubts. “No. My successor will make their own memories.”

"That's part of our culture," Glimmer added. "Not everything is recorded for prosperity."

"But you'll lose so much…" Thor sounded as if this was the weirdest thing he had ever heard during this visit.

"And we won't get weighed down by it," Micah cut in. "We won't have to live up to our predecessors. Our performances won't be compared to those of the distant past. That's rather liberating, I think."

The Asgard didn't look as if they'd agreed, but Adora understood what he meant. And so did the others, judging by the way they smiled at Micah.

Though Adora didn't really feel like smiling - the more of Etheria they showed to the Asgard, the deeper the rift seemed to grow. And the Asgard only seemed to be interested in finding out more about magic and magitech.

She blinked. They really only seemed to care about magic. Much more than they cared about the deal with Loki, even.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 6th, 1999

The full Stargate Command Council had been assembled before Samantha Carter had finished her examination of the last peripherals of the system. Of course, she had expected that - any commander in charge of a military installation would come running if told that their computer systems had been infiltrated.

But it did affect her attempts to complete her scans. General Hammond, of course, knew better than to bother her. And General Haig had merely asked for a short explanation and then let her work, but General Petit had offered both questions and suggestions that were neither new nor helpful and only showed that he wasn't a trained IT specialist. And Sidorov and Li…

“Are you absolutely certain that the system was hacked? After you were reassigned, other specialists took over maintenance. They might have changes you mistook for unauthorised alterations,” Li asked. Or suggested - after a few similar questions, his tone and manner had subtly shifted and now implied that Sam should ‘carefully consider’ this. At least in her impression.

“I can safely discard that possibility, General,” she replied.

“Who’s to say that you didn’t plant those programs yourself? To frame others or sabotage the Stargate program now that you aren’t in full control of its systems any more?” Sidorov glared at her, then at General Hammond. “I know NATO is just waiting for a pretext to take over Earth’s gateway to the stars!” he blustered.

“Really? Is that the best you could come up with?” Catra burst out laughing before Sam could think of a response that would let her call the Russian a paranoid liar while remaining within the bounds of proper conduct for an officer.

Sidorov rounded on her. “And what are you doing here? This does not concern aliens! This is a highly secret matter for the United Nations Security Council’s appointed task force!”

“I’m here because I was passing through when I heard that the facility we use for crucial Alliance tasks was compromised,” Catra retorted with a wide grin that showed her fangs. “So, I’m here to find out what happened - and who did try to sabotage the Stargate.”

“This is none of your business!” Sidorov snapped. “You do not have any authority here! And neither do you!” he added with a glance at Sam. “Who let an outsider access our computers, anyway?”

“I specifically called Major Carter because of performance issues with our systems which she, as the one most familiar with our computers, would be most likely to solve,” General Hammond spoke up. “You were aware of that, General.”

“Da!” Iwan nodded. “It was my recommendation - Sam is best specialist for computers here we know.”

Judging by the glare Sidorov sent at him, Sam expected Iwan to ask for asylum in the West - or on Etheria - after this so he didn’t end up in a gulag. There weren’t supposed to be any gulags left in Russia, but Russia also wasn’t supposed to bug Stargate Command’s system, and while Sam hadn’t proof of the latter, she was sure that Sidorov was involved - and Li as well.

And she really doubted that either of the two Generals had done this on their own initiative. The real question was why they had done it.

She pondered this while her programs worked on analysing the code of the last group of peripherals and Catra needled Sidorov. From what she could tell, the programs she had discovered monitored all traffic, both data and Stargate traffic. But Russia and China already had access to Stargate Command’s records. They had access to the Stargate as well. They could track any Alliance movement already.

But the Alliance, through the U.N. Security Council, controlled the Stargate. And that must rankle Russia and China. And half the world’s nations that had issues with the Etherians, the West or both, she added. Still, what was the point of this software? They already had access to Stargate Command’s systems.

She frowned and ran a few more checks while the scan continued. Yes, the programs monitored the data traffic, but that shouldn’t lead to performance issues. And wouldn’t have necessitated such a complete infiltration of the systems. No, the reason the performance had suffered was that the program effectively ran the entire system, all peripherals, anything connected, through a subsystem of its own. Merely monitoring the data wouldn’t be enough of a reason for that, nor for the risks they had taken.

No. She pressed her lips together. Whoever had done this wanted to manipulate the system. But to what point? It wasn’t as if they

could hide using the Stargate from the Alliance. Not when three-fifths of Stargate Command was staffed by the militaries of allied nations.

Or could they?

Sam ignored Sidorov's yelling in the background - Catra had made him lose his temper entirely - and focused on the subverted systems. If you could manipulate the security system and the database, you would be, in theory, able to manipulate the system so you could sneak strangers through the Stargate by placing trusted people in key positions.

But because of such threats, the Alliance ensured that no matter what, someone trusted kept eyes on the Stargate at all times. And Russia and China already had the opportunity to sneak spies or diplomats on missions by listing them as military personnel; it wasn't as if the Alliance could dispute such claims. So, this was pointless.

Unless, Sam realised with a sinking feeling, some of the trusted staff on Stargate Command had been suborned by Russia or China. Or both.

*****

Spy Games Part 1

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 6th, 1999

Spies.

Catra wouldn't say that she hated spies. They had their uses. All other things equal, the side with the better information won a war. Sometimes, even if things weren't equal. And spies were usually the only way to get the kind of information your scouts and recon missions couldn't get. But spies also worked by earning and then betraying the trust of their targets. Sometimes, that just meant wearing the enemy uniform to sneak into a base. But sometimes, that meant working for the enemy, rising through the ranks, becoming friends with them - and then stabbing them in the back. Occasionally, that kind of betrayal included turning people against their friends. And hurting people just for the heck of it.

She clenched her teeth and forced the memories of that last talk with Double Trouble away. Then she noticed how everyone was glancing at her. Sidorov was looking a bit pale. Oh - Catra's claws were out. And had torn through the edge of the console she was sitting on. She hadn't noticed. That was embarrassing. But also useful.

She flashed her fangs. "So, we don't just have to deal with a spy, but with a potential saboteur. Or an assassin."

"That's a ridiculous accusation!" Sidorov bellowed. "Even if this were a spy program - it could just be a program to monitor the system for faults."

"Bugs, not faults." Gregorovich corrected him. "Mistakes in programs are called bugs in English. Colloquial English."

"Whatever!" the Russian snarled. "There is no assassination!"

“But there could be!” Sam cut in. “If the iris is closed after the wormhole has stabilised and the clearance codes have been sent, the result would be fatal for anyone stepping through the gate. And if the system is thoroughly compromised, the Stargate could be forced to dial to another location than the desired one, leaving a team stranded - or worse.”

“But that would be obvious since we could still see the symbols as the chevrons lock,” Haig objected.

Sam blinked. “Yes, but that would require someone to check the address visually.”

Catra snorted - Sam didn’t say it, but Catra had a feeling that few of the current people working at the Stargate were that familiar with the symbols.

Hammond frowned. “We will have to adjust our procedures.” Then he shook his head. “But that can wait until we have exposed everything behind this. We need to know who has so completely penetrated our computers - and how.”

Well, the answer to the first question was crystal clear: Sidorov and Li were behind that. Probably on orders from their leaders. The answer to the second question was probably something simple, like giving orders to a Russian or Chinese soldier working on or with the computer.

Guilty.

Catra nodded. But while Melog confirmed it for her - and for the Princess Alliance - their Earth allies would want more proof before they would accuse Russia and China of betraying them. Politics at work. “Well, I’m sure Sam will be able to tell us how this was done.”

“I’m going through the logs. They will have hidden their manipulations, but there are ways to check for traces. Inconsistencies, buffers that were incompletely cleared, small

variables…" Sam was talking without looking up, eyes focused on her screen. "We'll also have to pull the hardware to check."

Catra smiled - and glanced at Li and Sidorov. Next to the snarling Sidorov, Li looked stoic, but she spotted how tense he was. And both of them were glancing around. Checking the guards.

But Hammond had already called SG-3 to the gate and control room; Catra recognised several members of that team from their operation against Seth's compound. And there were British soldiers as well, so the half a dozen Chinese guards next to the Stargate were outnumbered. That should deter any stupidity on the traitors' part.

Should.

If she had been running this spy operation, she would have prepared a backup plan or two. A few distractions ready to be triggered, or something more serious. And she wasn't vain enough to think no one else could have the same idea.

She hopped off the slightly damaged console and walked over to Hammond. "Did you scan for explosives?" she asked in a low voice.

"Every day," he replied.

She nodded. Good. One less worry.

Not too worried.

And that made her worry. If the threat of being exposed didn't worry either of the two traitors, then they must have something planned.

But what? A scapegoat? Maybe they had a subordinate ready to take the blame for this? But that would make them look incompetent. And no one would believe it - not after their reaction to the discovery; both of them had all but outright tried to make

Sam say she had made a mistake. The only way they could have looked more guilty would have been by bragging about it.

Or was that their plan? Were they ready to be the scapegoats for their rulers? Catra was sure Sidorov hadn't thought of this himself. The Russian reminded her of a few Force Captains she had known; no initiative at all, just strict adherence to orders no matter how stupid or costly - unless their own lives were in danger.

"If your claim that someone managed to penetrate the Stargate Command computer systems is true, then that would be a grievous failure of the computer security - a system you developed!" Sidorov glared at Sam.

Li nodded. "Indeed. We were assured that the security of the systems was impenetrable."

They were changing tacks, Catra realised. She glanced at Melog.

Less nervous.

"We said it was the most secure system we had developed," Hammond corrected the general.

"And now you claim it was defeated thoroughly?" Sidorov sneered.

"The best technical security cannot prevent an inside job," Sam retorted.

"Inside job?" The Russian blinked.

"Betrayal by the people with the clearance to operate the system," Sam said.

"Yes!" Gregorovich nodded. "KGB was very good at that."

He sounded almost proud - he was a better actor than Catra had thought. Or there was more to this. Both Li and Sidorov had

tensed up again, she noticed. So, probably not a frame job, as Jack called it, but a turncoat.

"I'm currently analysing the access logs - and comparing them to the various other logs," Sam said. "Any discrepancy should show up soon."

"Other logs?" Sidorov frowned again. Catra wondered briefly if he ever smiled or simply shifted between frowning, scowling, sneering and glaring.

"There are more logs than the main one," Sam said.

"Da. Is like backup for important data so mistake - or sabotage - not wipe all work." Gregorovich nodded. "And what is unknown cannot be sabotaged. Good KGB rule, da?"

Anger.

Well, Catra could tell that herself. Gregorovich was as blunt as ever. But was he trying to cut ties to Russia, or was that a ploy? If it was an act, it was a bit too blatant, too obvious. On the other hand, that might be what they wanted the Alliance to think…

Maybe I've been thinking a bit too much about spies, Catra thought. I'm sounding like Jack in my head.

Sam's computer beeped again, and she looked at the screen. Catra couldn't see the screen from her spot, but she could see Sam's expression change from surprise to shock.

"What did you find?" Sidorov said.

"I'll have to verify that," Sam replied without looking at the Russian.

Catra didn't need to look at the screen to know it wasn't good news. Still, she needed more information, so she slid around the console and peered over Sam's shoulder at the screen. The screen

was full of rows and tables of code and numbers, but that put her face next to Sam's, and Catra whispered: "Who was it?"

"Siler's access codes," Sam replied without moving her lips.

Oh. That was one of the veterans from Stargate Command - Catra had seen him often in the control room back in the mountain. Had they managed to turn him?

"They must have used his codes somehow… Cross-checking the timestamps with the security recordings," Sam went on.

It couldn't be magical compulsion: the Stargate had sorceresses on duty to watch for that.

The computer beeped again. "File not found?" Catra asked.

"What?" Hammond joined them.

"Someone deleted the security recordings of the suspicious access times, sir," Sam reported.

"Suspicious access codes?" Hammond growled more than he asked.

"I am crosschecking their whereabouts during the times in question, sir. But without recordings, we can't prove their innocence."

Smug.

Yeah. So, that was going according to plan.

"There are more ways than security recordings to prove someone's innocence," Haig commented.

"But they take time to gather," Petit retorted. "And people trust recordings more than testimonies."

That, Catra agreed with. She wouldn't trust the word of any Russian or Chinese right now. But they would say the same about

the Alliance.

Was that their plan? Discredit the entire Alliance staff? But what would they gain from that? The United States, France and Britain could always outvote the Russians and Chinese. So, what was the point of this?

She glanced at Melog, but her friend didn't have an answer either.

Then Haig spoke up: "In any case, we'll have to suspend Gate travel until further notice - we cannot risk travelling with compromised security."

Catra froze. She was stuck on Earth? Away from Adora?

She was going to kill those spies!

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 6th, 1999

"...and the Stargate has been closed?" Jack O'Neill asked.

"Until we are certain that the system is free of any unauthorised programs, yes, sir."

The consequences of that… He closed his eyes for a moment. "And here I thought my day was bad enough already." He glanced at Catra, who was staring out the window of his office, unsheathing and sheathing her claws, while Melog was sprawled at her feet like an actual cat. That explained her bad mood, at least. "So, someone tried to frame Siler? And by someone, I mean the Russians and the Chinese."

"We have no proof of their involvement, sir," Carter replied. "But yes, someone used Sergeant Siler's access codes." With a frown, she added: "He has been restricted to the base until we can prove he wasn't present during the times the software was manipulated."

“An idea how long that will take?”

“No, sir. The base entrance logs have been tampered with, so they have been compromised and cannot be used to exculpate him. And the secondary logs we’re piecing together are not as detailed with regard to individuals as they should be.”

“That’s not your fault, Major,” he told her. “As I understood, those secondary logs are the only thing that will allow us to sort out the entire affair because the Russians didn’t know about them.”

“Not by design, sir. Those logs are the result of imperfect system architecture resulting in unplanned accumulation of data.”

Always the perfectionist. He almost snorted, but that would have been inappropriate. “Well, I’m sure you’ll crack this, Major.” And the spooks could handle the rest of the investigation - that was basically police work anyway.

“We should just grab Li and Sidorov and make them talk,” Catra muttered.

Jack softly whistled. Someone was madder than he had thought. “I don’t think the government - governments - would be happy about that. You’re not supposed to do that.” No matter how much you wanted to teach certain individuals a lesson. “At least not to generals from countries with nukes.” The rules were a bit fuzzier about people from countries without nukes. Or had been during Jack’s time in that sort of business.

Catra scoffed. “We’ve got a fleet in orbit. Who cares about nukes that won’t reach their targets?”

Jack shook his head. “There are other weapons of mass destruction. The Russians are sneaky.” And if the Alliance fleet was used against Russia or China - hell, just actually threatening to use it against a country on Earth, instead of implying that by having ships in orbit, would make many Alliance countries uncomfortable as well.

Catra scoffed again. “We can’t let them get away with this.”

“We won’t,” Jack promised. “But we have to be smart about this.” If Hammond heard me right now, he’d probably laugh out loud, he thought. “I knew I shouldn’t have accepted the promotion,” he muttered.

“Sir!” Carter was frowning at him. Couldn’t hide anything from her.

“Just an idle thought, Major. Anyway, is there any good news?”

“Iwan has been very helpful,” Carter replied. “I am sure he suspected something like this as soon as he noticed the system’s performance issues.”

Jack slowly nodded and tried not to clench his teeth. ‘Iwan’ was too damn helpful and too damn friendly in his opinion. And that was based on perfectly rational arguments and wasn’t related to Carter being on a first-name base with the half-limey half-Russian scientist! “Can we trust him?”

She frowned at him. “If he was involved, he could probably have prevented the investigation - at the very least, he could have taken steps to avoid my involvement. Instead, he suggested calling me.”

“It wouldn’t be the first time that the Russians would go to great lengths to insert a spy,” Jack pointed out. “If we think Gregorovich burned his bridges with the Russians and take him in, he’d get access to advanced technology research.” Entrapta would not suspect a thing, and Carter might not be objective, either. And the Russians would gladly sacrifice a dozen generals to get their hands on the latest Alliance gear or plans. Without such technology, their army was obsolete. The same went for the Chinese, of course.

Carter didn’t look convinced. She turned to Catra - and Melog. “Is Iwan a traitor?”

Catra tilted her head to the side, listening to Melog's thoughts or whatever for a moment, Jack knew. "Melog can't actually read thoughts. Gregorovich was nervous, but everyone was nervous," she said. "And he found it funny," she added after a second.

"Funny?" Carter looked surprised.

"Well, he's a Russian; they have a pretty dark sense of humour - if they have one at all," Jack commented.

"Ah." Carter nodded. "I can see that. But he has opposed General Sidorov, and publicly at that."

And Hammond and the others could only do so much. Jack sighed. "I'll see if we can find a spot for him in a safe-ish Alliance program." Somewhere not too close to Carter's crucial research. Maybe set him to analyse Goa'uld entertainment devices. Although the Russians might be able to get valuable information and technology out of that as well. "And we'll have to inform the spooks about this, of course."

Though he suspected that the Alliance spooks had contingency plans for such a situation already. It was the kind of thing they did.

"And what can we do?" Catra asked. "I don't want to sit around and do nothing."

That was a good question. Jack didn't like waiting either.

*****

Royal Palace, Kingdom of Dryl, Etheria, December 6th, 1999 (Earth Time)

"...and this is my lab - well, one of my labs since there's also the Spacelab near Earth, though that's mine and Sam's, and I also work in Alpha, the research base, but Glimmer owns the moon there, and Alpha, the bot, answers to Adora, so it doesn't really

count I think - I'm not sure, the whole ownership thing is a bit confusing - and my lab in the Fright Zone wasn't destroyed, but I usually only go there if I need to do some work on the factories in the Scorpion Kingdom, and I didn't actually ask Scorpia if she claimed it or not, but this, this here is my first lab! I built my first bots here! And I restored First Ones bots here, too. Unfortunately, almost all of them were destroyed when they were infected by a First Ones computer virus that altered their control matrices and made them attack everyone, and I didn't have the time yet to rebuild most of them, but I still have them in a storage room if you want to see them!"

Adora winced a little at Entrapta's enthusiastic explanation. Some of the details her friend got into would probably not go over well with the Asgard.

"Your bots went out of control following a mishap with technology from the Gate Builders?" Freyr asked a bit sharply.

"Yeah? That's what I said, didn't I?" Entrapta nodded. "It later also infected She-Ra's sword and took over more First Ones tech. For a computer virus, it was really impressive."

"And dangerous," Glimmer added in a flat voice. "Extremely dangerous."

"Have you kept a sample of this technology?" Penegal asked.

"We had to destroy the disc it was installed on to stop the infected bots and other pieces of technology," Entrapta replied with a pout. "I am actually not sure if it was a, technically, a computer virus since it took over tech but it didn't make copies of itself - it was limited to the data carrier it was found on, and given the way it acted - it showed some more advanced decision-making ability - it might have been a sort of bot instead. Technically." She perked up. "I could attempt to reverse-engineer a bot that did that, actually. Since it wouldn't be able to make copies of itself, it wouldn't be self-replicating, which is banned according to Sam,

but if we could make it take over Goa'uld tech, that would be useful, wouldn't it?"

"We don't want a bot-virus that can take over technology," Adora firmly said.

"We don't?"

"No. It's too dangerous," she explained.

"Well, if it were limited to Naquadah-base technology… Although if that included bombs, or if it learned how to combine bombs and Naquadah…" Entrapta trailed off, scrunching her nose as she pondered what Adora suspected were terrible things.

The three Asgard were looking very uncomfortable, she noticed.

"Yes. Such technology shouldn't be developed. As our own war proves, the consequences could be dire - they could threaten the entire galaxy," Thor said.

"Well, the First Ones did it," Entrapta countered. "And the galaxy is still around."

"The Gate Builders view of what they considered safe technology is not something anyone should emulate," Freyr said.

"Yes," Glimmer agreed in a clipped voice. "They also built the Heart of Etheria."

"Oh, right." Entrapta nodded. "I forgot about that for a moment - that did threaten a piece of the Galaxy. And did remove magic from the sector. They were really careless there."

"Did you preserve this 'Heart of Etheria' as well?" Penegal asked.

"No. We destroyed it," Adora told him.

"So, that's a piece of magitech you can't study," Glimmer added with a slightly toothy smile. "And it's not a part of our culture,

either.”

Adora pressed her lips together. Her friend wasn’t too subtle about her opinion of the Asgard’s obvious interest in magitech and equally obvious disinterest in Etherian culture. Except for the Etherian safety culture in research, Adora added to herself. Or lack thereof, in the Asgard’s view. At least Glimmer hadn’t openly called them spies. Not yet.

“Anyway,” she spoke up to change the topic, “Dryl is the leading kingdom for non-magitech technology on Etheria. So…”

A signal from her communicator interrupted her - a priority signal. It must be an emergency! She thumbed the thing. “Adora.”

The voice of a clone answered. “Supreme Commander, We have received a priority transmission from your consort over the spy bot network from Earth. Due to a computer virus, the Stargate has been shut down until further notice.”

She gasped. What? Shut down? Catra! Adora’s love was stuck on Earth! But she was safe - she better be safe - and this affected the entire Alliance. Adora was its Supreme Commander and had her duty. “A computer virus infected the Stargate?” she snapped.

“Apparently, it infected the Earth-based computer system controlling the Stargate,” the Clone replied.

Adora relaxed a little.

Then she noticed how everyone, especially the Asgard, was staring at her.

“The Stargate on Earth was infected by a virus?” Freyr sounded shocked.

“Really?” Entrapta sounded intrigued.

Adora winced. She should have worded her question a bit better, given the circumstances. “No. Well, not the Stargate itself…” she

started to explain.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 7th, 1999

Samantha Carter had worked under bad conditions before. On board a Ha'tak, hacking computers to sabotage the entire ship, with Jaffa warriors gunning for her team. Or under direct fire. Cleaning up Stargate Command's computers wasn't quite as dangerous. But she couldn't help feeling on edge anyway as she worked - everything she had discovered so far pointed at an inside job, and while the clues they had implicated Russia and China, that didn't mean everyone else was trustworthy. Almost anyone here could be a traitor, and that made her glad that Catra and Melog were around in case someone got desperate enough to escalate from spying to assassination.

Of course, it was also concerning that she still hadn't found out how exactly they had bypassed all the security protecting the computers. Even if they had had official access, there had been measures in place to prevent the suborning of the entire system. And, as she rooted through the databanks and caches, too often tempted to just condemn the entire machine and replace it with a factory-fresh piece, she found more and more clues that didn't quite fit the assumption that this was a HUMINT infiltration job by the successors of the KGB with Chinese support.

The programs planted in the system to sift through the data and manipulate it were easy to understand, following established principles and using bits and pieces from known sources combined with some usually clever original work. Slightly challenging, but nothing she would consider extraordinary. But the routines that dealt with the interface to the Stargate itself? They were too advanced, and they worked too smoothly with the alien technology. She remembered how much work it had taken her to get the whole system to work, and while she didn't want to sound

arrogant, she was one of the most experienced programmers in this area.

Even with the manual and notes she had left, it should have taken a Russian or Chinese programmer longer to subvert the entire system to this degree. Understand, yes - that was the point of the documentation. But to program alternative solutions to hers that wouldn't show up on regular system scans and checks? That was essentially duplicating her work from scratch - and in less time than it had taken her.

She glanced at Iwan, who was running additional checks on a cleared peripheral. Wouldn't he have known about such an individual? She could believe, based on everything she had heard, that the Soviets might have been paranoid enough to keep their research compartmentalised even though that might slow down or cripple some projects, but could Russia have continued such a policy and achieved such results anyway? And would they have worked with China, risking to expose themselves anyway, after taking such extreme measures?

If the alternative was seeing their country, or countries, becoming powerless and irrelevant as the Alliance advanced far beyond them? Probably. The arrival of the Etherians had shaken the entire world to the core and rendered most militaries obsolete.

So, this could be the work of some secret Russian research project. One that had been conveniently easy to adapt to the Stargate project. Too conveniently, actually.

She started another scan, then leaned back. "Hey, Iwan."

"Da?"

"Do you know if yours was the only storage for alien technology?"

She could see him tense for a moment.

"You think this was done using alien technology?" Catra, of course, had heard her - and apparently had deduced Sam's

hypothesis straight away. She shifted on her seat as well, still lounging, but Sam knew her well enough that she didn't have to glance at the colour-changing Melog to tell that Catra was ready to jump into action now. Catra's tail was swishing, and her ears were twitching.

But the really interesting reaction was Iwan's. He stopped typing on his keyboard and glanced at the closed door before answering: "Well, there were rumours. But there are always rumours. Would be stupid to separate research, no synergy, no helping each other, da? But then, Russia has history of doing stupid things with very important - or dangerous - things."

That didn't confirm her hypothesis, but neither did it disprove it.

"Wouldn't your scanner have found another hoard of alien technology?" Catra asked.

"Only if it used Naquadah," Sam replied. "Not every alien technology depends on Naquadah." Etheria or the Horde's didn't.

"But the Goa'uld's tech does," Catra pointed out.

"The technology they adapted," Sam corrected her. "They might have studied other alien technology as well." Some of the Goa'uld, at least.

"And you think that the Russians or the Chinese found such technology and kept it hidden?" Catra frowned.

"Russia found Goa'uld technology and kept it hidden," Iwan said. "Keeping secrets from everyone, even themselves, is Russian way."

"If they had access to unknown alien technology, it would explain how they managed to subvert our security so thoroughly," Sam said.

Catra looked a little doubtful, but she nodded and slowly started to grin. "Great!"

“Great?” Iwan sounded as surprised - and wary - as Sam felt.

Catra bared her fangs. “It means we have to find out if your idea is true. And that means we have to go spying!”

Sam winced, but a part of her relished the idea. Turning the tables on whoever had done this to Sam’s systems was quite appealing.

*****

Earth Orbit, Solar System, December 7th, 1999 (Earth Time)

“...and Sam is sure that the programs used against Stargate Command were based on alien technology because they interface so easily with the Stargate.” Catra shrugged. “According to her, the parts that interface with Earth-based programs are ‘too clunky’ to be made by the same people.”

“Oh.” On the screen in Catra’s cabin on the flagship of the Earth Guard Task Force, Adora frowned in that cute way of hers, with her eyes losing focus for a moment while she pondered this. “So, whoever did this had contact with another species? Or found some relics of theirs and analysed them?”

“Yes.” Catra nodded. “And we’ll find out who did it - and what technology they hid.”

Adora bit her lower lip. “And you want to take the technology.”

Catra shrugged again, smiling. Adora knew her so well. “Of course. It was used against Stargate Command - and against the Alliance as a result - so it’s a legitimate target. No matter what Russia and China try to claim.” Like when Russia tried to claim that only unsecured advanced technology fell under the Security Council’s confiscation order and that they would ‘donate’ the secured technology they had - which was now proven to be a lie. Almost proven.

Adora nodded. “Yes. We can’t let such an attack go, or they’ll try again.”

They would try again anyway, in Catra’s opinion. They had no choice if they wanted to remain a military power. Well, unless they found another source of technology, or an ally, out there in the galaxy on one of the Stargate Command’s exploration missions. Of course, the odds… Catra’s eyes widened. “They might be in contact with another species,” she said.

“What?”

“Sam thought - and Gregorovich hinted at it - that Russia recovered old advanced technology that the Goa’uld had collected back before the rebellion and kept that when they handed over the DHS and other stuff,” Catra explained. “But what if they managed to hide contact with another species? If they can take over the computers, they could also fool other security and smuggle in any gear.”

“Or a visitor acting as an advisor,” Adora said. “We’re monitoring traffic for Naquadah because that reveals Goa’uld even inside a host, but if they are in contact with an alien species that doesn’t use Naquadah, that would be useless.”

Catra sighed as she bared her teeth. “And, like every damn Horde soldier, the guards won’t really look for that kind of deception - not if they think the scanners will spot any attempted invasion or infiltration by snakes.” This was worse than Catra had thought. “We should just bomb them from orbit.”

“Yes,” Adora nodded, then blinked and gasped. “What? NO!”

Catra chuckled. “Relax. I’m joking.”

“Don’t joke about that on a ship of the Third Fleet! Priest could take you seriously!” Adora scolded.

“Priest knows better than that,” Catra objected. “He should know, at least.” You never knew with religious zealots. If he thought

Catra being Adora's consort meant she acted on She-Ra's authority… Priest wouldn't try such a ploy unless he thought it would serve his goals, but that wasn't really reassuring either.

Adora sighed. "You know how he is."

"Yes." Priest had learned far too much from religious leaders on Earth. And the wrong lessons. "But I'm not going to make such jokes where he or his men can hear me."

"Good." Adora sighed. "I should be with you."

Well, Catra wasn't going to disagree with that. "It's all the fault of the Russians. And the Chinese."

"Yes. But we need proof before we can move against them."

"We'll get you proof. Jack's working on that." Catra grinned. "He's mad as hell about this." Jack probably still felt as if he was a member of Stargate Command - and there were a lot of his friends serving there.

But Adora didn't grin in return - she frowned. No, she was concerned.

Catra rolled her eyes. "We're going to be fine." She was no princess, but she could take whatever Earth could throw at her. And chew it up and spit it back out.

"But they're now using their magic…"

"Yes. But we'll manage. Ghosts and everything." Catra hoped so, at least. "Jack's working on that." Jack had said he had a plan to do something about that.

"Jack is?" Adora didn't look reassured. "He doesn't like magic."

"Yes. So, he's very motivated to do something about any magic that could be used against him." Catra could understand the feeling. In the Horde, they had been fighting princesses with

decades of experience with basically bots and rifles. They would have given everything for a princess of their own.

Adora was still frowning. Damn. She was probably feeling guilty about not being on Earth - and worried about Catra and the others here.

"We're going to be ok," Catra told her, smiling softly. "And I'll be back home soon."

Adora slowly nodded. "It's not the same without you. It feels… empty. Luna misses you as well."

A part of Catra was glad to hear that she was so important for her love. But a bigger part felt guilty for not being with Adora.

But she didn't say anything about either. Instead, she nodded.

And hoped she would be back with Adora soon. Being separated again… No, she wasn't going there.

*****

Pentagon, Washington D.C., United States of America, Earth, December 8th, 1999

Jack O'Neill had been tempted to hold this meeting in orbit, on board his shuttle, or perhaps a frigate, but given everything that had gone on in the last few days, that would likely have backfired. Less 'be part of the greatest endeavour humanity has ever done before' and more 'watch me show off my private shuttle'. At least with this particular person.

So he straightened and got up, smiling broadly when his visitor arrived. "Good morning, Special Agent Paris."

"General O'Neill." She didn't look like it was a good morning. She looked like she expected a squad of Jaffa warriors to jump out of the filing cabinet and charge her screaming. Of course, with the scandal around Smith breaking - Kinsey had pulled out all the

stops; the press was crying for blood - and her involvement in the investigation, she probably had good reason to be wary despite Wilkinson turning against Smith. Or because of that.

Well, he had worked with worse. “Please have a seat.”

She sat down with a brief nod, all business-like. Well, that matched what they knew about her.

“Coffee?” Jack gestured at the coffee maker in the corner of his (temporary) office. “It’s not Navy coffee, but actually good, I promise.”

Paris turned to glance at the pot. “Did you import an Italian coffee maker for your office?”

He didn’t wince at the implied accusation. Instead, he grinned. “No need for that. The Pentagon contracted for them a year ago for the general staff. Couldn’t stand to be shown up by Alliance headquarters, I guess.”

“Fitting.” Her smile was tight and thin. “I’ll pass, thank you.”

He shrugged and took a sip from his own cup. “So, you’re probably wondering why you’re here.”

“I assume you’re trying to recruit me for your army, General.”

“Not quite.” He grinned again. “Though if you feel like volunteering, we’d take you in in a heartbeat, of course. We need every talented sorceress we can get.”

“I am a thaumaturgist, not a sorceress.”

“Sorceress is the correct term for anyone with the talent to work magic in the form of spells instead of having a magical power,” he told her. Smiling, he added: “That’s what the leader of Mystacore told me, and as the foremost experts in magic from Etheria, I’ll take their word over a feeble attempt by the FBI to placate Bible-thumping politicians.”

She snorted, then looked a little surprised, probably as much at her own reaction as at his comment. “The other agents call us witches.”

Jack had already known that, but telling her he had been spying on them wouldn’t go over well. “That’s not the same, as far as I know.” Castaspella hadn’t gone into detail about the difference, and Jack hadn’t asked at the time. “But you’d have to ask the expert herself.”

“Are you trying to sell me on attending magic school in Etheria?” She snorted, but Jack thought she hid some interest there.

“I wish!” He shook his head, trying not to grin at her surprise. “They’re still sorting out a training program. It seems Earth has unique magic, and they’re not sure that training people like you as if you were Etherians is a good idea.” Unless, of course, you passed the ‘Ancient’ test. Then they wanted you very badly.

“I would have expected such an important question to have been settled by now.”

“Me too.” He sighed. “But that’s bureaucracy for you.” And politics.

She nodded again, still sitting straight and tense, as if she were facing a court-martial - or an internal investigation, in her position. Hell, she probably was facing one by the FBI. “So, if you don’t want to recruit me…”

“Oh, as I said, we’d love to have you!” he cut in.

“...then why did you invite me to this talk? And put enough pressure on my boss to make him order me to attend?”

“I didn’t actually put any pressure on your boss,” Jack corrected her. “I guess he feels like playing nice with us because the government wasn’t too happy about his creative ways to get a secret sorceress training program going.” Not as unhappy as they had been about the CIA program, of course. At least publicly.

“It was all covered by current regulations,” Paris retorted.

“Yeah.” Jack nodded. “All perfectly legal.”

She scowled at him in return. “Like your shuttle.”

“Exactly.” He pondered mentioning Paris’s own private investigation with Wilkinson, but that would feel like blackmail.

“So, will you tell me why you called me?” She was glaring at him now. Time to dial back the snark.

Jack nodded. “Sure. We want you to help us hunt a spy.”

“What?”

“We’ve got a spy problem. And we’d like the FBI to help us hunt down the spy - just like you’re supposed to do, right? It’s an international affair, so the FBI can’t take the investigation over, sorry.”

“You want my help?” She looked suspicious. Not unlike Daniel when Jack praised his books or something.

“You’re the best sorceress the FBI has.” Which wasn’t as impressive as it sounded, but no small feat either.

“You could call in an army of princesses and *sorceresses* from Etheria. Why do you want me?”

They couldn’t actually call in an army from Etheria right now, what with the Stargate down. But that was a military secret. “They don’t have your training as an FBI agent. And we can’t depend on them for everything.” Not forever.

She slowly nodded. “And you fear magic is involved.”

“Well… we don’t know for sure, but it’s a distinct possibility.” He shrugged. “Better safe than sorry, and if we can get a trained investigator at the same time…?”

She snorted again. “I’ll agree to help you under one condition.”

“Yes?”

“You get Wilkinson on board as well.”

Jack blinked. He hadn’t expected that. But he should have, he realised, recalling how Paris and Wilkinson had acted. They were certainly closer friends than they admitted. And her loyalty was a point in her favour. “Sure - if he wants to.”

“He will.” And now she sounded like Carter when she wasn’t going to budge no matter what Jack said.

He chuckled. “I’ll take your word for it. Welcome to the team!”

*****

Spy Games Part 2

Royal Palace, Bright Moon, Etheria, December 9th, 1999 (Earth Time)

"They're just here to learn more about magic and magitech. They don't care about our culture at all. We should send them home!"

Adora winced while she watched Glimmer pace and complain - or rant - in her office. "We invited them," she reminded her friend.

Glimmer scoffed. "So we can rescind the invitation. We don't have to let spies stay."

"Unless they're at Princess Prom," Bow pointed out, then grimaced when Glimmer glared at him. "Just saying."

"We aren't at Princess Prom!" Glimmer shook her head and kept pacing.

Adora bit her lower lip for a moment, then asked: "Well, can you really call them spies if all they do is ask questions of their hosts?" It wasn't really fair to call the Asgard spies, in her opinion. They were giving them tours, after all.

"Are we sure that they are just asking questions?" Glimmer asked back.

"Well… we've got them under permanent surveillance," Entrapta spoke up. She was still working on her multitool, though, and her hair tendrils were typing on a keyboard next to her. "Although that's to keep them safe from any attacks, and to prevent Double Trouble from copying them, as you told me. But! It also means we can be sure that they aren't sneaking out of their quarters at night to break into our data banks. Unless, of course, they managed to fool our security."

"Could they have done this?" Adora asked. First, the Stargate Command computer got taken over, and now this?

“Well… It’s possible. In theory. Nothing is impossible, after all.” Entrapta smiled as she nodded. “So, yes, they could have done this. That’s simple logic.”

Adora suppressed a sigh, and even Glimmer looked taken aback for a moment. “Uh, is it likely that they could have done such a thing?”

“Wellll…” Entrpata scrunched her nose. “That’s a different question. We don’t know everything about their technology, especially their computer technology. I’ve taken scans of their sensors on Cimmeria, but I don’t think that was their best work. And Horde Prime used their technology for his systems, but he had a long time to develop it further, so we can’t judge Asgard technology based on Horde technology. Still, there are similarities. Also, since they’re fighting bots, they probably have good computer security, so they should also be good at penetrating computer security - you can’t have one without the other, you know? You wouldn’t be able to test your security measures without having the skill to penetrate it. And as Loki told us, a lot of their technology is heavily automated, especially their ships, so that’s another point for them being good at computers - you can’t have good bots, and automation is just another term for having bots do the works, without good computer technology. Control matrices with the required complexity for bots, even if they aren’t self-learning ones, need good computers. On the other hand, Loki didn’t seem to have better computer technology than we do. Then again, he is kind of banned from their research, so he wouldn’t have access to their best systems. On the other hand, since Horde technology is based on Asgard technology, the similarities would make it a bit easier to hack a computer than if it were a truly alien system - which is why I so want to take a look at the programs Sam found. Imagine the data we could get from an alien system! Anyway! We don’t have enough data to tell what the Asgard could do.”

Adora blinked. That had been a lot of words for basically ‘we don’t know’.

“So, we have to assume the worst,” Glimmer said.

“No!” Adora shook her head. “We can’t assume the worst of others!”

“Unless we’re defining security procedures. At least Hordak said that,” Entrapta added. “You need to prepare for the worst mistake you can think of because someone will do that.”

Ah, yes. ‘Kyle-proofing’ was what Catra called it.

“Whatever. We still have to face facts: We can’t earn the Asgard’s trust by showing them our culture. We’re too different from each other,” Glimmer said.

“Well, I think just making the attempt has helped us. Showed our good will.” Bow smiled.

Adora’s smile was a little forced. She didn’t want to be a downer, but in her impression, the Asgard’s experiences on Etheria so far had hurt their trust in the Alliance as much as they had helped it. At least as much.

“If they dislike our culture as much as dislike theirs, we might have been insulting them for the entire visit so far,” Glimmer pointed out. “At least they have been more polite about that than some of us.”

Adora winced again, and Bow blushed a little. Lance and George had been enthusiastic about the Asgard but also a bit too honest.

“But back to our security: Entrapta, we need you to double-check our systems. Just in case,” Glimmer said. “And we’ll have to get more guards, in case our sensors are compromised. Can’t fool people the same way you can fool a bot.”

“Unless you’re Double Trouble,” Bow said.

Entrapta nodded. “Or unless you use optical illusions backed with sound. That would fool both people and bots, as long as the bots

don’t have other sensors. That’s why I always build my bots with multi-sensory scanners!”

Glimmer ignored both and looked at Adora. “And we need to decide what to do with the Asgard. It’s pointless to show them more of our culture. We need to do something else.”

Adora nodded. The question was: What could they do? She had an idea, or at least the start of one, but the others wouldn’t like it. Still, they had to do something. And they were her friends. They would hate her for suggesting it.

She cleared her throat. “I had an idea about that…”

*****

Adora checked her appearance in the mirror, turning her head left and right to get a different angle. She looked presentable and nodded to herself. For a moment, she expected a dry comment about vanity, or a sappy one about being beautiful from every angle, but Catra was stuck on Earth, and her friends here were…

“I still think this is a bad idea.”

“We all agreed it was the best idea we had.”

“That doesn’t make it a good idea.”

“Well, that depends on how you define a good idea. Is there an objective or relative good? Or a minimum value you have to reach?”

…still not done with the discussion they had had for an hour. Even though, as Bow had pointed out, they had all agreed that Adora’s idea was the best they had. Which wasn’t very flattering since it was the only idea they had, not counting Glimmer’s muttered wish to deport all Asgard. Or make them sit through a medley of Sea Hawk’s worst shanties.

It was kind of weird how the Asgard seemed to annoy Glimmer so much. They hadn't actually done anything to her except for scorning Etherian culture and being curious about magic. Not unlike Catra having made some scathing comments about Bright Moon's traditions, and Entrapta still having some issues with boundaries when she was fascinated by something.

On the other hand, dealing with the Asgard's continuing lack of trust was frustrating. Adora and her friends only wanted to help them! And they would help them, one way or another!

Nodding again, she turned to the others. "Let's go before it's too late to visit them."

"Why would it be too late to visit them? Oh, is that about bedtime? If we want to be sure that they aren't asleep yet, we can call ahead! Although if they didn't set their comm on silent, we'd wake them up that way. Oh. That would kind of explain why people were always awake when I called, wouldn't it?"

This isn't the time to ask Entrapta for an explanation, Adora told herself. Besides, she could guess what happened. And she could imagine Catra's reaction if Entrapta ever called them when they were asleep.

She chuckled at that thought as she walked to the door. "Let's go!"

"But what if they are asleep?" Entrapta asked.

"They aren't. We have them under surveillance," Glimmer replied.

"Isn't that violating their privacy? Even if it is for their own good?" Entrapta cocked her head to the side.

"It's a security measure." Glimmer scowled a little, Adora noticed.

"Oh. It's for our own good, then?"

“It’s to ensure that nothing happens to them or us while they are our guests,” Bow explained.

“OK.”

At least by the time they reached the guest quarters - which weren’t the guest quarters that had been used as cells for prisoners in the past - Entrapta was focusing on her tool again, and Glimmer and Bow were busy keeping her from walking into walls.

If the Asgard saw us right now, they would lose even more trust, Adora thought. But she forced herself to smile and knocked on the door.

Penegal opened the door. “Yes?”

“Hi!” Adora beamed at him. “Can we come in? We have something important to discuss.”

“Something to discuss outside a formal meeting,” Glimmer added.

“Oh. And what would that be?” Penegal looked wary, in Adora’s opinion.

“Magic and magitech,” she replied.

“Please come in!”

Adora didn’t have to glance over her shoulder to know that Glimmer was giving her the ‘told you so’ look, even though everyone knew that the Asgard were fascinated by Etherian magic.

Freyr and Thor were sitting on the couch in the living room of their suite, the one sized for their height, and had overheard them - both were staring at Adora and her friends intently.

“You want to talk about your magic? Off the record?” Freyr asked when everyone had sat down.

“We want to talk about it informally, not off the record,” Glimmer corrected him.

“Ah.”

“Without all the, ah, trappings of a formal diplomatic meeting,” Adora explained. “Just a straight talk.”

“Ah.” Freyr nodded.

“It’s kind of obvious that you’re not really interested in our culture,” Glimmer started. “And that you’re very interested in our magic.”

“Which is part of our culture,” Bow added.

“Yes.” Thor sounded a bit… snobby? Or maybe Adora was imagining it. It was hard to read the Asgard.

“You are very interested in magic, but the Asgard can’t actually use magic,” Glimmer went on. “Loki told us that,” she added.

“He would,” Thor said.

“Even if he hadn’t told us, the fact he didn’t ask to be taught magic would have kind of given that away.” Adora shrugged. “Not completely, but we would have noticed.”

“So, we’re wondering why you’re so interested in magic,” Glimmer continued. “Are you planning to attempt to use magic to fix your genome?”

“It is doubtful that magic could fix it,” Freyr said. “Or you would have suggested it already. Right?”

Adora was sure that she didn’t imagine the challenge in that question. “We haven’t suggested it so far because you seem to have issues with altering your species’s genes,” she told him. “And if magic can fix your genetic degradation, you would be altered.”

“Like reset to an earlier version, if you were a program,” Entrapta not so helpfully added. “Probably at a point magic considered ‘healthy’ - if it works. Which is kinda doubtful since healing magic doesn’t change people’s species. It does fix genetic disorders, though - we found that out when Adora healed so many people in India. But magic won’t fix a Jaffa’s genetically engineered missing immune system, even though that is clearly not healthy. But! Those are just theories. We won’t know for sure unless Adora tries healing you. So, do you want to try that?” She beamed at the Asgard.

Who were now looking decidedly uncomfortable.

“You talk as if magic possesses a will of its own,” Freyr said.

Glimmer frowned. “Well, it does? Magic chose She-Ra, for example. You know that.”

The Asgard looked at each other. “We thought this was a… cultural assumption,” Freyr said.

“You thought we made that up?” Adora blinked.

“It sounded like a religious belief,” Thor replied. “Not a scientific fact.”

“It is proven by science.” Entrapta nodded. “We have the empirical data and records to prove it. Well, mostly - the records are a bit iffy, being so old. But that’s just one example. There are others. Mostly on Mystacore, though. Or in their archives.”

The Asgard looked at each other.

“We would like to visit Mystacore,” Penegal said.

“Ah.” Adora winced. “We can ask them.” Again, she added silently.

“If you ask them to let them do the magic healing experiment on you, I am sure they’ll invite you!” Entrapta tried to help.

Adora winced again. Technically, this was exactly what she had been thinking of - offering the Asgard magical healing and information about magic. But the way it was shaping up wasn't how she had hoped this would go.

*****

Pentagon, Washington D.C., United States of America, Earth, December 9th, 1999

"You want me to help you hunt down a suspected alien spy in Russia."

Wilkinson looked wary, Samantha Carter thought. Not very eager to be part of this - though she had expected that, given what they knew about the man. He was a lone wolf, not really a team player. Or, she corrected herself, not a good team player unless he was leading the team.

And this team already had a leader.

"Or China - we're not sure yet." The General grinned. "So, you might get a lot of frequent flyer miles out of this."

Of course, making a roundabout joke about the exact thing he had almost been framed for was exactly what the General would do. Sam suppressed a sigh while Daniel whispered to Sha're, probably explaining what frequent flyer programs were. Catra chuckled, but that was no surprise.

Wilkinson, though, frowned, and Paris rolled her eyes. "I didn't know you had a background in military intelligence, General O'Neill," he said.

"I am a man of many talents." The General shrugged. "Though you're right that I wasn't formally part of military intelligence."

"Your record was heavily redacted."

"Yes." Another grin that showed a bit too many teeth.

Sam wanted to roll her eyes as well. This was posturing, and they had a job to do. "We have no conclusive proof that alien technology was used to infiltrate Stargate Command's systems, but the data we have is quite convincing."

"And Russia and China are the main suspects," Catra cut in. "They have the motive for it and shouldn't have the means."

That earned her a frown from Wilkinson. The man probably loathed pop culture's portrayal of his work. Sam certainly didn't like how most scientists were portrayed in TV shows. Especially most female scientists. Or most female soldiers. That the Etherians seemed to like Earth media despite this common bias… She forced herself to focus on the task at hand and spoke up again: "I've analysed the code of the programs we found, and it contains parts that are too original to be deduced from existing Earth-based tools as well. Combined with the smooth integration of the program with the Stargate technology, the most obvious explanation is that they used alien technology."

Wilkinson kept frowning, but he didn't question her conclusion.

"The question is," the General went on, "did they find some alien relics left on Earth thousands of years ago and kept them secret while they analysed the technology? Or are they in contact with an unknown alien species, and that's where they got the tech from?"

"How would they have kept such contact secret from the rest of Stargate Command if they didn't have the technology that allowed them to infiltrate the system yet?" Wilkinson asked.

"Good question!" The General smiled. "If they got the tech during their first contact, they could have used it after their team returned. That way, they could have kept the next trips a secret. It wouldn't have taken much, anyway, to hide such a contact - they could easily travel to one planet and then dial to another from there, with no one the wiser back home. But they would

need more control over the system to smuggle things through the gate. Or people."

"And that's what you are afraid of: a covert alien invasion."

"Concerned, not afraid," the General corrected him. "Any invasion would have to deal with the guard fleet in orbit before making headway. And our anti-body snatching protocols are pretty good - we don't just rely on Carter and Entrapta's magic scanner."

Sha're tensed at that, Sam saw, and Daniel took her hand and held it.

"That seems a bit careless," Wilkinson said. "They managed to hide their infiltration of Stargate Command from the Alliance, didn't they?"

"Not successfully," Catra said. "And they had a big advantage since they were working from the inside."

"I don't think we should dismiss the possibility that we became complacent, though," Daniel commented. "We might have relied a bit too much on established technology and procedures. Even, or especially, since they were working so well." He smiled apologetically at Sam.

But her friend was right - the system should have been protected against such an attempt. It was embarrassing - especially for her; she had been responsible for most of the computer security until her transfer to the Alliance.

"When did this happen?"

"Three months ago at the earliest," the General said. "That's when the programs were inserted. But if they had contact with aliens, it could have happened at any time since they started sending teams through the gate, but probably not too much before that unless they got really lucky and then rushed things. Which doesn't fit either Russia or China."

"Both governments must be under immense pressure," Daniel pointed out. "With NATO building spaceships, they might have felt compelled to take considerable risks to keep up and so moved without the expected caution."

"Or they were manipulated by aliens," Sha're said. "The desperate are easy victims for such ploys."

"Yes." The general nodded. "In any case, handling Russia and China isn't our problem; that's for the politicians. Our job is to catch a bunch of spies. So, now let's talk about how we're going to do that!"

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 9th, 1999

Catra was, once again, very glad that the new Stargate Command location included integrated hangars for shuttles. Just walking over the tarmac - which was covered in snow - would have been a hassle in what was, apparently, 'not even close to a blizzard' according to the Canadians but looked very much like a snowstorm to her.

"This makes me miss Washington in the winter," Paris commented to Wilkinson behind her.

"We're not going to stay here for long," he replied. "Just examining the crime scene."

That seemed a bit optimistic to Catra. She glanced at Melog.

Honest.

So, Wilkinson believed this? She snorted. "Don't jinx it," she said, looking over her shoulder.

"I don't believe in superstition," he replied.

“Like you didn’t believe in magic?” Catra retorted, flashing her fangs for a moment.

He frowned at her in return, then glanced at Paris.

“We didn’t cover ‘jinxing’ in the course,” the sorceress told him. “But there are theories that common ‘superstition’ such as this might have a base in reality - or shape reality now that magic was returned.”

Wilkinson seemed surprised. And definitely not pleased. “Why am I only hearing this now?”

“It’s just a theory,” Paris replied. “There are dozens like it. We’re still trying to figure out how magic works on Earth. A lot of what we knew once has been distorted during the last thousand years.” She glanced at Catra.

Catra shrugged. That wasn’t her fault, for once. “Yeah, the First Ones messed up a lot of planets when they redirected their magic.”

“Except for Etheria,” Paris said.

“Only because they were stopped before they could use all that magic to blow up Etheria to power a superweapon to take out their enemies.” Catra smiled grimly. “And their superweapon was still active and ready to fire when we took it out.”

“I never heard about those details,” Paris echoed Wilkinson’s earlier complaint.

Catra shrugged again. “It’s classified information.”

“And you’re telling us?” Wilkinson glared at her. Was he mad that he had been told a secret and didn’t have to find it out himself?

“You’ve got the clearance for such stuff now,” Jack cut in, walking down the ramp behind them, followed by Sam, Daniel and Sha’re. “Can’t investigate Stargate Command without it.”

"I don't remember signing anything to that extent," Wilkinson complained. "Or being informed of it."

Jack shrugged. "I've just told you now."

"That's…"

"...perfectly fine in the Alliance," Catra interrupted Wilkinson. For a 'loose cannon', the man cared too much about everyone else following what he thought was proper procedure. At least in her opinion.

Thinks special.

Well, he wasn't alone with that.

Jack clapped his hands together as the special forces they had fetched from Germany on the way here joined them. "Folks! You know your job, so let's get to it! Fan out, we'll meet up again at dinner time!"

And that was her clue. Catra nodded and started walking toward the lift leading down to the main part of the base. The one for people, not the huge one for cargo.

Safe, Melog commented as they approached the guards - French ones - there.

That was good to know. Keeping the team safe was part of her job, after all - you couldn't trust anyone in Stargate Command right now. Not when they might have been compromised. Or manipulated by aliens.

It wasn't a long trip - unlike at Cheyenne Mountain - and Catra's ears caught Isa whispering and Campbell about not liking being so 'hemmed in'. She snorted - the cabin was large enough for scorpion-people, so it was probably just soldiers complaining about everything.

General Hammond was waiting for them when the doors opened. "General O'Neill."

"General Hammond."

Concerned.

Well, Catra could see that. And it was understandable, what with two-fifths of the people on base potential traitors.

"We've brought more help in. Special Agents Paris and Wilkinson, FBI." Jack nodded at them. Special agents, General Hammond."

The three exchanged polite greetings.

"Russia and China have lodged a formal protest against the Alliance investigation," Hammond told them as they walked towards the gate and control rooms.

"So we were told," Jack replied.

"Generals Sidirov and Li also pointed out that the main suspect was Sergeant Siler, a member of the US armed forces, not one of their people."

Catra snorted at that. As if anyone would believe that!

"Clearing him will take a bit more time," Jack said. "But we're working on it."

Well, they were working on investigating and exposing the Russians and Chinese, but it should work out the same. Eventually. But that wasn't really a concern for Catra.

At their destination, Sam split off to check the gate computers, Jack went on to meet with the rest of the Command Council and Catra, followed by Wilkinson and Paris, headed into the gate room.

They had to be sure that the gate was safe before proceeding. And it looked safe - Iris closed, American and British guards present, sorceress on duty.

“A satyr?” she heard Wilkinson mutter behind her.

Right, the man probably hadn’t seen goat-people before.

“It’s a goat-woman,” Paris corrected him. “Not a satyr.”

“Looks like a satyr to me. Hooves and horns.”

The woman saluted as they approached her. “Commander Catra.” She didn’t show any resentment or seemed ill at ease, so she probably wasn’t a Princess Alliance veteran. “Kira,” she introduced herself.

Catra returned the salute, noting that the name matched her tag on her Earth-style uniform - without boots, of course. “These are Special Agent Paris, an Earth sorceress, and Special Agent Wilkinson.”

Kira perked up as she extended her hand for Paris to shake. “An Earth sorceress! I’ve heard a lot about your magic!”

“We’re still figuring it out,” Paris replied with an apologetic smile.

“She’s the best of her class,” Wilkinson commented.

That earned him a frown from Paris, but Kira looked even more interested.

Catra would have to keep an eye on them - it wouldn’t do for their sorceresses to be distracted by a magic discussion right now.

But the gate room looked safe. For now, at least. And Paris and Wilkinson were staring at the Stargate. Right, they hadn’t seen it before. Not in person, Catra reminded herself. When you travelled through the gate almost daily, it quickly stopped being extraordinary.

“It’s fascinating, right? To think this device, and without any magic, allows us to travel from one end of the galaxy to another… It’s marvellous!” Kira, apparently, hadn’t used the Stargate often enough.

“It’s hard to believe,” Wilkinson replied.

“Doubting Thomas,” Paris muttered under her breath.

“Two years ago, this was science fiction,” he shot back.

“No, two years ago, it was real, just a secret.”

That made Wilkinson pause for a moment. Then he nodded. “You’re right.”

“Of course I am.”

Catra narrowed her eyes slightly at the exchange. So, Wilkinson was one of those people. Well, best to put him to work, then.

*****

Yeah, Sidorov and Li are guilty as hell, Jack O’Neill thought as he tuned out the loud protestations from the Russian general and the more polite but still fake ‘concerns’ of his Chinese colleague. Or co-traitor, even though Daniel would probably tell him that it wasn’t a real word.

And Carter would probably mention that it was not treason according to the legal definition. But Jack didn’t care - if you stabbed your fellow soldiers in the back, you were a traitor. The Russians and Chinese had joined Stargate Command. Their soldiers had been treated as Stargate Command members like everyone else - Jack had trained them. Hell, Jack and his team had risked their lives to save them when things had gone wrong.

And in return, those bastards had sneaked some alien spyware into the base’s computers and done who-knew-whatever-else.

Ah, Li had finished ‘helpfully’ ‘reminding’ them once more that all the evidence pointed at Sergeant Siler being the culprit, and Sidorov seemed to have run out of steam for now. Time to end this charade. “Your concerns have been noted,” Jack told them in his best diplomatic voice - and with his toothiest grin. “And they will be given the attention they deserve while we, in accordance with the decision of the Stargate Command Council, keep investigating the matter.”

“Your sham of an investigation! It’s clear that you are trying to cover for your people!” Sidirov hadn’t run out of steam.

“I must agree - this seems like a highly biased affair.” Li shook his head. “And the timing, so close to the scandal involving another of your generals, seems a bit too convenient.”

The bastard didn’t just go there, did he? Jack swallowed his first response and shrugged as casually as he could manage. “Noted. Do you have anything new to add?” He waited a moment. “Didn’t think so.” Turning to Hammond and the rest of the Command Council, he added: “So, we’re going to continue our investigation.” Carter and the others should already be at work.

He left the room, nodding to Campbell and Isa to follow him - Jack wouldn’t put it past the Russians or Chinese to try something drastic, whether or not they were under the influence of unknown aliens, and while he knew he was good, having help at hand never hurt. Especially if part of the help was the closest you could get to a walking tank without getting a bot.

His next stop was the gate room. Carter was busy at the main console, as expected - they had to clear the gate for operation as fast as possible. And the soldiers assigned to her were standing close by. But he couldn’t see the others.

He walked over. “How’s it going, Carter?”

“Slowly, sir,” she replied. “We have to be very careful not to miss anything.”

Jack clearly heard the 'again' despite Carter not saying it. She was still blaming herself for this, was she? "I trust you to handle it." That sounded a little corny, didn't it? He cleared his throat. "So, where are the others?"

"Catra took them to check the labs and talk to Iwan, sir."

"Ah. I'll head down there myself then." Wilkinson meeting Iwan the Too-Friendly? Jack had to see that!

"Sir."

Getting to the labs didn't take him long - but it took him through two manned checkpoints, one of them with both Chinese and French soldiers, and you'd have to be blind and deaf to miss the tension. Jack would have preferred to remove all Russian and Chinese troops from key parts of Stargate Command, but the Alliance Command Council had disagreed. Well, if things ended with people shooting each other, he knew who would be to blame.

He knocked and entered the lab without waiting for an answer.

"...and this is another weird alien device. Lots of those in the galaxy, da? And all different weird. Oh, hello, General O'Neill." Gregorovich smiled at Jack, apparently not at all unhappy about the interruption.

"I see," Wilkinson said, then turned to glance at Jack.

"It's not magical," Paris added before nodding at him as well. "General."

"We're checking out alien relics," Catra told him. "No luck so far, though."

"I don't recognise any of them," Sha're added. Daniel just muttered something without looking up from staring at a stone table on a side table.

"Would be embarrassing for me if I missed suspicious alien programming technology under own nose." Iwan smiled in that annoying manner of his.

Embarrassing and incriminating. Jack nodded and took a step closer to check what they were doing. "Are those new relics?"

"Recovered by various teams during last few months," Iwan confirmed. "But all under lock and key."

Jack managed not to snort. If Iwan was compromised, then that wouldn't mean a thing since he was working with the relics. He glanced at Wilkinson. The spook had realised that as well, judging by how he stared at the Russian.

Or he didn't like the Columbo act Iwan had going on. Either way, it seemed things were OK here.

Which meant he could go and conduct his own interview. Once he found his target, of course.

Which took a bit longer than expected, even taking the disrupted schedule into account. It seemed that the dear Lieutenant Lenkova was not in her quarters or the training area. According to the log, she was outside.

Which meant Jack also had to go outside. In the middle of December. In damn Newfoundland. And no matter what Daniel and Carter liked to say about the local climate being warmer than in continental Canada and Catra's comments about the place having nothing on Greenland or the Kingdom of Snows, it was still below freezing. "I'm getting too old for this," he muttered when he slipped a parka on in his shuttle.

"Sir?" Campbell asked.

"Nothing." Jack shook his head. He was tempted to tell Campbell and Isa that they didn't have to come with him, but that would be stupid. You couldn't trust anyone from Russia right now. Besides,

they had gone through arctic training, so this should be easy for them.

And it wasn't as if they had to trek through the wilderness to find the Lieutenant. Due to having been a Go'auld host, she still had traces of Naquadah in her body - enough for Carter and Entrapta's magic scanner to find her. The magic scanner in Jack's shuttle, of course - he didn't quite trust the base's sensors right now, even though Carter had reported that the sensor net matched the scanner's results. Jack knew the Russians were too experienced at this sort of thing to give the game away by having the sensors permanently ignore their people.

Still, Lenkova was at the very edge of the base area, in the most remote of the training areas, and the ploughs were focusing on more important areas, so Jack and his escort had to hike quite a bit through deep snow and in the middle of heavy snowfall.

"Reminds me of the expedition to the north," Isa commented behind him.

"Oh?" Campbell sounded interested. Anything to distract yourself from the cold, Jack guessed.

"Yeah. We went there to look for some First Ones tech."

"In the Kingdom of Snows?"

"No, not quite that far north. But it was cold enough to feel it even through our uniforms. That was back in the Horde."

"Ah. Was it as cold as here?"

"Colder, I think. But we forgot about that when the Alliance - the Princess Alliance - attacked. Blew up the entire forward base we had built. Not our finest hour."

Campbell made an agreeing sound.

“Didn’t even have special training - we just got basic instructions for arctic operations and then we were sent up north. Some had to watch the lessons in the transports.”

“Really?”

“Yeah. The Horde was often like that - some stuff you trained every day even though you could do it in your sleep, and some did, and other stuff was rushed like hell.” Isa snorted.

“No wonder you lost the war.”

“Heh! We were still more organised than the Alliance!”

“Really? That’s hard to believe. The Etherian units we’ve met were well-trained.”

“That’s because the entire Horde leadership switched sides.”

Not quite how Jack had heard it. Technically true, but if the grunts were talking about the Horde War like this, he had to nip that in the bud. “The Horde was organised differently,” he said without looking over his shoulder, “because they were preparing to fight a different war than the one the Princess Alliance fought.”

“Yes, sir!” Campbell replied with the familiar reflex of a grunt caught by their commander.

“But we were fighting the same war!” Isa protested.

Jack grinned even though they couldn’t see it. “And that was the problem for the Horde.”

“Oh.”

For a moment, the two soldiers behind him fell silent, and then they turned a corner and reached the training area. Where, as Jack could see, Lenkova *wasn’t* training unless it was some Russian kind of ‘meditation while standing’ thing he wasn’t familiar with. But he would place good odds on her just staring at the sea.

“Lieutenant Lenkova.”

She jerked, whirling around, then froze as she spotted him. “General O’Neill?”

“In the flesh.” He couldn’t see her face very well at this distance, and with her all wrapped in winter clothes, but he thought she sounded surprised - and guilty. “I wanted to talk to you.”

Even in the thick winter uniform, he could tell that she was tensing up. Of course, soldiers usually did that when they were faced with a general taking an interest in them, doubly so for female soldiers, but… Jack had a feeling that there was more to this.

He signalled to Isa and Campbell to hang back a little and walked up to Lenkova. “Taking in the sights? The snow is really great this time of the year.” If he squinted, he could see the shore through the falling snow. Barely.

She hesitated for a moment, then replied: “It’s better than Siberia in the winter.”

“So I’ve heard.” Despite any rumours to the contrary, he had never operated in Siberia, much less during the winter.

Lekova looked at him with narrowed eyes but didn’t say anything.

“So, how’s life at the new base?” Jack asked. “Feeling nostalgic yet?” He didn’t wait for her to reply and went on: “It wasn’t really a consideration when they picked the new location for the Stargate, but Cheyenne Mountain had at least a decent town nearby. One used to the big base. It’ll take some time until you have a decent selection of bars here. Well, not without a shuttle ride or at least a personal plough.”

She didn’t snort at his joke. “Yes.”

“It won’t take too long, tough - people know what a money-maker a bar near a base is. Especially in the middle of nowhere.”

"Yes."

Another short, terse reply. With the snow, and the heavy clothing and hood, he couldn't see too much of Lenkova's face, but what he saw told him enough. She was too tense. "So, how have missions been?"

She hesitated a fraction of a second, then bit out: "Good."

"Really?" He raised his eyebrows, though she probably couldn't see that. "According to the reports I read, it was just boring routine stuff. Trips to known worlds."

"Boring is good sometimes."

He nodded, acknowledging the point. Lenkova would know that very well after her ordeal. On the other hand, she hadn't struck him as wanting to withdraw to safe duties, back before he had transferred to the Alliance. "It isn't boring any more, though, is it?"

She stayed silent for another second. "No, General."

"Quite a mess at the base."

"Yes, General."

"The entire security system compromised… Anyone could have been using the Stargate without Earth knowing about it." He shook his head. "If the snakes know about this…"

Even in the breeze, he heard her draw in a sharp breath. For a moment, he felt guilty for pushing her buttons like this. But he was sure that she knew something about the whole affair, something crucial given her position - and this threatened Earth and the entire Alliance. And she was a Russian spook.

Belatedly, she replied: "The snakes couldn't pass through the scanners. Not even I can pass through them without them detecting the… remains inside my body."

He shrugged again. “The snakes are just one species out there. There are lots more, and many of them are quite nasty. And sneaky.”

She flinched at that. “You would know that better than me, General,” she said in a clipped tone.

Ah! Had she actually met other aliens? And hid it from the official records? Should he push her for more? She still sounded as if she felt guilty to him - and with her background, she should be able to hide that. Unless that was what she wanted him to think so she could feed him misinformation.

But to what point? He snorted softly. Time to push on. “Have you met them?”

She froze for a moment. “Who?” she asked.

“The aliens whose programs were used to hack our computers.”

“Aliens hacked the Stargate computers?” She tried to appear confused or surprised but didn’t pull off either.

“Yep.” Jack nodded. “And you already knew that.”

She straightened a little, lifting her chin. It was as good as a confession.

He kept looking at her without saying a word. Were those tears in her eyes? If they were, was it just the cold?

After half a minute, she sighed, and her shoulders slumped as she looked away. “I suspected about the hacking,” she said in a low voice that he almost missed in the breeze. “We were told not to worry about being discovered.”

He nodded even though she wasn’t looking at him.

“I wasn’t there when we first met them, but I was told afterwards. When it was my team’s turn to meet them.”

“Them?”

“They call themselves the Eurondans.”

*****

Spy Games Part 3

Mystacor, Etheria, December 10th, 1999 (Earth Time)

Adora's idea had been a bad idea. Or had had bad timing, at the least. They just found out that the Russians and Chinese were in contact with unknown aliens - or alien humans; Jack had said that according to Lenkova, they looked and acted human - and Adora and her friends were still going to Mystacore with Asgard.

But Adora knew that even if they had rescheduled the visit - which would have required them to explain to the Asgard why, though that wouldn't have been too bad since they already knew that the computers of Earth's Stargate had been hacked - it wouldn't change that Adora was stuck on Etheria and couldn't travel to Earth. Couldn't do anything about the problem there. Couldn't be with Catra…

"And we've arrived!" Bow announced from the front of their shuttle.

"We have? I don't see anything," Penegal said, peering through the cockpit's windows. "Just an empty cliffside."

"Mystacore is magically hidden. If we want to enter it, we have to do it here," Glimmer said and opened the ramp in the back.

"Ah." Freyr nodded.

Adora had half-expected them to challenge this - ask why they couldn't land directly in the city. Like most humans would have. But the Asgard just accepted it. Or, she couldn't help thinking, they were too polite to voice such questions.

Once everyone was outside, Bow used his tablet to lock up the shuttle, then had it enter stealth mode.

"Mystacore doesn't use the same method to hide, does it?" Penegal asked.

“No. Mystacore is using magical means,” Glimmer told him. “The shuttles use magitech.”

“Technically, all magitech is a sort of ‘magical means’,” Bow added. “But traditionally, if it doesn’t use any physical tool - like spellcasting - or only glyphs, runes and similar tools, it’s called magic. Anything more complicated is called magitech.”

Glimmer rolled her eyes, probably annoyed at the interruption, but the Asgard nodded. “So, it’s merely a case of traditional yet arbitrary definitions for the same thing?”

“Well, you could say that, yes,” Bow said. “But you’d have to ask a sorceress about it - I’m a tech-master.”

“Who also can build and use magitech,” Thor pointed out.

“Anyone can build magitech if they have access to the right magical resources and know what they are doing,” Bow replied with a smile.

Glimmer snorted, and Adora agreed with her friend’s sentiment - Bow was too modest; it took a lot of talent and effort to learn how to build magitech, even more to develop it.

“And how would one get access to such resources?” Freyr asked.

“That would be a question best asked to Castaspella,” Glimmer replied before Bow could say anything. “And we should hurry - the flying mountain has arrived.”

Adora blinked - she had missed that. The sky and the air in front of them, and below the ledge, looked as empty as always, with just a few clouds obscuring part of the view of the ground. Then again, she wasn’t a trained sorceress, unlike Glimmer. “Let’s go, then,” she said.

“Yes. Just follow me.” Glimmer stepped to the edge, then jumped off.

The Asgard didn't react to that either - they walked up to the edge themselves just in time to see Glimmer rise, standing on a floating mini-island.

"It's perfectly safe," Bow told them, then stepped on it himself.

"I would say that I assume you wouldn't use it if it weren't safe," Freyr said rather dryly, "but your culture's safety standards have been demonstrated not to match Asgard's."

But despite his words, all three Asgard followed Bow and Glimmer on the island.

Adora smiled at that as she jumped on it as well. Maybe this wasn't going to be a waste of time.

The floating island - it looked far more like an island than a mountain, in her opinion - didn't take long to take them to Mystacor.

Still, it was long enough for Penegal to cock his head at Glimmer and ask: "How are you controlling it?"

"Magic," she replied.

"Yes, I assume that is the case, but are you controlling it with mental commands? Or are you using magic on it to steer it?"

"Both." Glimmer's smile looked a little toothy. But before anyone could answer, the island trembled a little, and then Mystacor appeared before them - they had passed through the barrier hiding the kingdom.

And that sight seemed to shut up the Asgard. At least until they had made landfall where Castaspella and the other leaders of the kingdom were waiting for them.

"Welcome to Mystacor," Castaspella greeted them, slightly bowing her head. "Be welcome and at peace while you are here."

“Thank you,” Freyr said.

Adora blinked. That was… “She didn’t greet us like that when we visited,” she whispered to Glimmer while the Asgard mirrored Castaspella’s bow.

“You were there to relax, not as part of a state visit,” Glimmer whispered back.

“Ah.” That made sense. It still felt weird, especially since Castaspella had met the Agsard before. But no one else seemed to feel like that. Adora blamed her Horde upbringing. If Catra were here, she would at least joke about it.

Castaspella introduced the other sorceresses with her, then led the Asgard on a tour through Mystacor - and, since they were with their visitors, that meant Adora and her friends received the tour as well.

“And here’s the Library of the Elements - a relic from an early attempt to categorise magic powers. The theory behind it was disproven after royal lines developed powers that could not be linked to one of the elements, but the library was kept out of tradition.” Castaspella gestured at an old-looking building connected by a path lined with pillars to the main entrance.

“And even expanded,” Glimmer added.

Bow smiled. “If you don’t find anything in the central library, this is your next stop.”

“I don’t understand… you do not have centralised access to your databanks?” Penegal asked.

“No,” Castaspella said. “It’s a matter of security. If anyone would gain access to such a centralised databank, they would have access to all our knowledge. As it is, an intruder would have to physically remove a memory crystal to steal the knowledge contained in it, which would take time and a lot more effort than copying a databank.”

“But… that means your research will be slowed down as well. If you have to physically search through your data…” Pegenal sounded as if he couldn’t believe anyone would have such a system.

“Yes. But while that may seem like a drawback, and often is, sometimes, slowing down a research project can be beneficial.”

“Not every research project should have been started,” one of the older sorceresses stated. “And none should be rushed. Often, a pause can grant someone insight that would have been missed if they had been able to work without rest.”

“Whether that’s the researcher - or those who take care of the library, and of Mystacor as a whole,” a man with few strands of white hair left on his head added.

Adora winced. They meant Shadow Weaver. Or Light Spinner, as she had been known here before her… last experiment. She wondered what the sorceresses here thought of her. But this wasn’t the time to ask such questions - they were here for the Asgard, she told herself with guilty relief.

“It sounds inefficient.”

“It’s also traditional,” Glimmer added with a smile too wide to be honest.

Judging by the way Freyr frowned briefly, the Asgard hadn’t missed that.

And neither had Castaspella, who narrowed her eyes at Glimmer before tilting her head and smiling at their guests. “You also have to understand that research here is a personal affair. Our people decide which idea to research without answering to anyone.”

“Magic shouldn’t be treated as a resource,” the older sorceress, whose name Adora still couldn’t remember, added. “Nor should magic be treated as if it were a machine.”

“And if one were to do that, what would be the consequences?” Freyr asked.

“If you do not respect magic, if you reach too far, or be too greedy or too ambitious, and you might suffer a fate worse than death,” the man said. “Magic… is like a dangerous but beautiful, immensely powerful creature.”

That sounded… well, like Sea Hawk talked about the sea. Or Mermista, when he had drunk a bit too much. At least, Scorpia claimed that.

And Adora didn’t miss the soft snort from Glimmer at hearing this.

But the Asgard nodded. “I see,” Penegal said. “So, it’s more akin to taming a beast than building a tool - or growing a plant?”

“A not entirely incorrect comparison,” Castaspella agreed.

“Is that the case for all magic, or is this a particular aspect of Etheria’s magic?” Freyr asked.

“As far as we know - although our knowledge of other planets’ magic is still very limited - it’s the same for everyone,” Castaspella told him. “At least, Earth’s magical traditions, or the myths based on them, often contain similar warnings of hubris and its consequences.”

Once more, the Asgard exchanged a glance. “And yet, you use magitech,” Penegal pointed out.

“Magitech is not magic as we do here,” Castaspella said.

“Magitech’s magic is… very limited. Constrained,” the man said.

“Dead,” the older woman added.

“Not dead, I wouldn’t say that. But… so limited and bound, it cannot adapt and grow anymore. Cannot live,” he retorted.

“If you cannot live, you die,” the woman said with a smirk.

“Eventually. I would say that magitech keeps the magic in the moment between life and death. Symbolically, at least.”

“Oh, no - they won’t stop now,” Glimmer muttered.

“Symbolically? We’ve heard that Earth’s magic is centred on symbols,” Penegal said. “And that it affects magic.”

“Oh, yes!”

“Not at all!”

The others glared at each other.

“So, this is in dispute?” Thor asked.

“Amongst some,” Castaspella said. “But some of us do not believe that either excludes the other.”

“And there we go,” Glimmer whispered. She glanced to Adora, then her eyes widened. “Oh, no!”

Adora turned to the side and saw Bow frowning deeply. Her friend took a step forward. “As a user and creator of magitech, I have to disagree with the claim that magitech abuses magic. That is a very narrow and biased view, based on concepts that are still mere hypotheses, not facts as some claim.”

“They might as well be facts!”

“That’s not how it works!”

Adora’s smile felt frozen on her face as everyone but Glimmer and herself started to debate. Or dispute - it was hard to tell, given how passionate most were. Even the Asgard.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 10th, 1999

"So, according to Lieutenant Lenkova, she has met the Eurondans twice so far under cover of doing routine exploration missions, both times escorting diplomats from Russia and China?" Samantha Carter repeated the General's statement out of ingrained habit - and tried not to feel grimly satisfied, or even vindicated, about the fact that Lenkova had been revealed to have betrayed Stargate Command. Or Earth, depending on your definition.

"Yep." The General nodded.

"Diplomats?" Daniel frowned. "They cannot have been high-ranking diplomats; the Russians and the Chinese might have fooled the electronic system and tampered with the records to make them appear as common soldiers or scientists, but I think we would have recognised anyone with influence in either government on sight."

"I think you might overestimate the intel we have on Russia and China, Daniel," the General told him with a slightly rueful grin. "We kind of cut back on the spying we did in the Cold War when Russia collapsed, and with the chaotic mess Russia was left in after the soviet union collapsed, it's a bit hard to keep track of who's actually in power."

"But… their president…" Daniel frowned.

"...will be replaced at the end of the year, in three weeks, by his elected successor - at least that's the official party line," the General interrupted him. "And from what we know, he's been a figurehead ever since the Etherians arrived, maybe even longer. We don't know yet how much actual power his successor has or will have." He shrugged. "Judging from his background, he could have been the power behind the throne for a while or just a puppet for others."

"Gotta love spies," Catra muttered.

“So much for the CIA,” Wilkinson commented. “Can’t even find out who rules Russia.” The FBI agent looked a bit lost but trying to hide it, in Sam’s impression.

Paris, on the other hand, didn’t even try to hide that she thought this was above her head.

“I’m not sure the Russians know who rules them at the moment.” The General snorted. “Anyway, what is clear is that whoever is running things has control over the faction of their military and spy services that run the Russian side here at Stargate Command. Enough to insert trusted agents into their teams here to do some diplomacy for them under the table. And if what Lenkova said about a resource trade being set up is true, they have the backing of at least some of the rich guys currently controlling the Russian economy.”

“What about the Chinese?” Daniel asked.

“Their current leader seems to be entrenched, but that could be a facade so that the Chinese people won’t worry about instability - or question their leaders. They are good at concealing power struggles from us either way,” the General replied. “Last I heard, the CIA analysts are hit and miss with them.”

“For someone who doesn’t like politics, you know quite a lot about it,” Daniel commented with a grin.

The General scowled at him for the little dig.

“You can’t run a war without politics,” Catra said. “So, basically, the Russians want to trade resources for technology? Do we know what kind of technology we’re talking about?”

“Advanced military and medical technology,” the General told her. “But Lenkova claimed not to know how advanced.”

Either the Russian ‘diplomats’ were playing it close to their chest, or Lenkova was lying. Sam pressed her lips together. She couldn’t let her… emotions about the Russian officer influence her thoughts

about the matter at hand. Lenkova had come clean about the Russian - and Chinese - plans; lying about this wouldn't really serve a purpose.

"Advanced enough to take over our - I mean, Stargate Command's - computers," Daniel said.

Sam frowned a little. That had been her responsibility, and she had let them down.

"Yeah."

"But not too advanced," Sha're pointed out. "If they had technology equal to ours, or even the Goa'uld, they wouldn't need anything that Russia or China could provide that they couldn't get themselves. If it were a Goa'uld, they might need Naquadah, but we know that Earth has no deposits."

"The Russians and Chinese might be trying to swindle them. Wouldn't put it past either," the General said.

"That would be extremely short-sighted," Sha're said. "Like an inexperienced Goauld. Although they might count on any retaliation for such a deception dragging the Alliance into the conflict."

"Wouldn't put that past either country either."

"It's also possible that their technology requires resources that are scarce on their planet but not on Earth," Sam said. "Although I can't think of anything that wouldn't be found on other planets either."

"Well, whatever the answer turns out to be, we're going to find out," the General said. "We can't let the Russians and Chinese jeopardise Earth's safety by making shady secret deals with unknown aliens."

"You said that according to Lenkova, the Eurondans were humans." Wilkinson frowned.

The General grinned. “They looked human. That doesn’t mean anything.”

“And, as the Etherians and others prove, merely sharing human genes and origins does not mean we are culturally close enough not to count as aliens,” Daniel added. “We cannot reduce this to a biological question, or we might be working from faulty assumptions that lead to potentially catastrophically wrong conclusions.”

That was correct, but not the General’s point. Sam didn’t say that, though. Instead, she brought up a few files on her computer. “I’ve prepared an overview of the planets where Lenkova met with the Eurondans, sir. We might find more clues at those locations.”

“Once we can use the Stargate again,” the General said. “Until then, this will have to be a local investigation.”

Wilkinson straightened at that, Sam noted.

The General bared his teeth. “It’s time to show our ‘trusted partners’ from Russia and China that they’re not the only ones able to play spy games.”

*****

Clear.

Catra smiled at Melog’s notice and quickly slid around the corner, then dashed forward to the closest door on the right side of the hallway. It was locked, but the override Sam had put together took care of that with the push of a button, and a second later, she was inside the quarters of the Russian’s latest ‘scientist’, Piotr Novikov - an assumed name, of course.

He was asleep, as expected at this time of the night, snoring slightly. She studied him for a few seconds, watching his chest rise and fall and listening to his breathing. If he was faking it, he would be a great actor. Of course, he was probably a spook, or a former spook… Whatever, she could take him.

She looked around. The room was very neat, very organised - almost sterile. The only personal item she could see was a family picture on the side table. She pulled out her camera and took a few images for analysis, then started going through the man's belongings. According to Jack, it was unlikely that a spook would have incriminating data on them - unless they had reached an agreement to be ratified by whoever was in charge in Russia. Or it was data stolen from the aliens. But that would likely have been moved to Russia already - the last suspicious mission had been a few days before this whole mess had started and Stargate Command had been locked down.

And she found nothing. No scraps hidden in the man's gear. No electronic data, according to Sam's scanner. No…

She narrowed her eyes at a suspiciously scratched corner in the locker. Sure, that could have been from boots thrown into the locker without cleaning them beforehand; she had seen that happen back in her cadet days. But she had also learned how to hide stuff in your locker.

It was easy to slip the tip of a claw under the panel's corner there and work it loose. And behind it was a small cylinder. She didn't recognise it, but it looked quite advanced. And it hadn't shown up on the scanner.

As the humans said: Paydirt!

*****

Five minutes later, she was back in the lab Sam had appropriated, watching her friend study the device.

"It's a sort of data storage. I'm working on how to access it."

"Good." Jack nodded. "He grinned. "Either the Russians aren't as efficient as they used to be, or our spy here kept a copy of the alien data for himself, or for someone else pulling his strings. Anyway, if you can copy the data before our Russian spook wakes up, we can slip it back in, and he'll have no idea we found it."

“I’ll try my best, sir. But I can’t promise success. This is an alien device with unknown protocols. Though we have samples of their programs, so that should provide us with an advantage.”

“Oh, a data storage device!” Entrapta piped up from the screen in the corner. “Neat!” A moment later, she added: “I’ll help!” And another moment later: “Yes, that will help us!”

Even with the signal routed through the closest Stargate to Earth in reach of the spy bot network - and only as long that one was open to Etheria - the signal lag to Etheria was still a few seconds long. But that shouldn’t be an issue when it came to decrypting. Unlike remote construction or lab work. Or so Entrapta had explained.

Entrapta beamed. “Let’s hope this will be easier than the alien cube!”

Right. The thing they had found on their trip to Earth. Which they hadn’t managed to decrypt yet. Of course, as far as Catra heard, it wasn’t a priority for either Sam or Entrapta, but still - not the most encouraging remark. Then again, Entrapta didn’t mean it like that.

“And what do we do if you can’t encrypt it until the suspect wakes up?” Paris asked. “Put it back?”

“We don’t want to tip them off that we’re onto them,” Jack said. “We can get the thing tomorrow night again.”

Sam tensed at that, Catra saw. She would be working all night to decrypt the device. Well, that was her decision. And the sooner they got more intel about those Eurondans, the better.

She pushed off the table she had been leaning against. “So, let’s hit our next target.” She looked at Wilkinson.

“We could make a copy, I think,” Entrapta chimed in late, interrupting Wilkinson before he could say anything. “A duplicate of the device that looks exactly like it.”

“Let’s focus on cracking the device,” Jack said before looking at Wilkinson.

“Wang Zhen,” Wilkinson said with a slight frown. “Which is like a Chinese John Smith. According to the official documentation, he’s got a doctorate in anthropology, but his publishing history is rather suspect and not available online.”

“Probably majored in propaganda at their spy academy,” Jack commented.

“Ok!” Entrapta cut in.

“I don’t think they call it…” Daniel trailed off and pouted at the grinning man.

Wilkinson cleared his throat. “He’s sharing his room with Captain Li Wei, a legitimate veteran soldier of the People’s Liberation Army, so infiltrating his quarters will be more difficult.”

Catra snorted. More difficult didn’t mean actually difficult. She glanced at Melog. In a pinch, their illusions could probably let her search the room while both were awake.

Ready.

She smiled. “We’ll be right back.”

Jack nodded. “Don’t stay out too late.”

She snorted at that as she vanished under Melog’s illusion. As if!

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 11th, 1999

“We’ve done it, sir. Copied the data on the device in a readable form.”

Carter had worked through the night. Just as Jack O'Neill had known she would. But as he had also known, she had managed to crack the alien data thing they had taken from the Russians. He still felt guilty for not stopping her and making her get some sleep, but that was the price an officer had to pay for doing what was necessary. Like he had done when he had talked to Lenkova, playing on her obvious guilt to make her crack.

Forcing the guilt away, he downed the last of his latest cup of coffee and got up from the seat where he had not quite been napping for half the night. "Yes?"

"We've done it!" Entrapta chimed in, late due to communication lag.

"Good." Catra stretched, yawning and looking rested as if she had slept in a bed and not curled up with Melog on a blanket on the ground. She probably felt the same either way, Jack suspected with a bit of envy; the woman was more cat than you'd suspect upon first meeting her. "Can I take it back then?" Cocking her head, she added: "Novikov is still asleep. Won't take long. Unless you want to tamper with the data on it beforehand."

Jack shook his head. "Take it back. We've got him under surveillance now and can replace it later if we want to." When they were more rested. Trying to be clever and do stunts like this wasn't a good idea when you were operating on a few hours of sleep and a lot of coffee. Unless you absolutely had to, which wasn't the case here.

She nodded, grabbed the thing and vanished from view. Melog was showing off his illusion power again.

Jack waited, cocking his head and trying to hear the door opening and closing. He missed it, though, when Entrapta exclaimed behind him: "Oh, did you see this? It's a neural interface! Non-invasive! And it probably won't fry the brain if you use it too much, either!"

They were going through the data already? He snorted. Of course they were! Carter would claim that it was a necessary check to ensure they had cracked the encryption, but he knew she wouldn't be able to resist the lure of new technology.

"Yes," Carter said. "Used to remote control drones, as far as I can tell." She looked up from her laptop - or what had been her laptop; Jack wasn't sure what she had turned it into with her tinkering - and nodded at him. "It's more advanced than our own drone technology. The data compression for the sensor feeds surpasses anything we have."

That wasn't good news. "More advanced than Ancient technology?"

Carter frowned. "Not across the band, at least, from what I can tell, sir. They are using radio, not faster than light communication, to transmit data, for example."

That was some good news, at least.

"Oh, did you see the way they do data compression?" Entrapta asked. "That's so clever! But we would have to restructure our entire computer core and crystal matrices to take advantage of it, I think… Oh, you did see it! We really need to do something about the lag."

"We'll have a meeting later today, when we're all rested, so don't geek out too much over this and get some sleep," Jack said with a grin, then made a point of yawning.

"Yes, sir." Carter had the grace to blush a little, which made her look cute, not that Jack would ever say so.

He blinked. He shouldn't be thinking that, either - he must be more tired than he had thought. "Anyway, get some sleep. It's just data, not some bomb. Is it?" Better safe than sorry.

"No, sir, it's not a bomb or a carrier for biological or chemical weapons."

He nodded. “Then we don’t have a reason to wake up the others for a meeting right now. Let’s get some real sleep.”

“Yes, sir.”

“Oh! That’s a nice drone - it’s a fighter drone! And it has energy weapons of a new design! Bulkier than bot blaster cannons, though. And it’s not space capable…” Entrapta trailed off, and Carter’s eyes darted back to her laptop.

Shaking his head, Jack turned away. What he didn’t see, he didn’t have to do anything about.

He left the room just in time to spot Catra and Melog fading into view before him. “Done?” he asked.

Catra nodded, flashing her fangs in a grin. “Of course. He slept through it.”

Melog was looking smug like a cat that got the canary.

“Good.” Jack nodded and stifled a yawn. “Meeting at… eleven,” he added. That would give Carter six hours of sleep or so.

Catra eyed the lab door. “I’ll send them to bed in a while.”

That worked as well. Jack nodded again. “Good work.”

“Of course.” She grinned and walked into the lab, and Jack headed to his temporary quarters. It was past time to get some sleep. Even with his magically healed body, he wasn’t twenty any more.

*****

Mystacor, Etheria, December 11th, 1999 (Earth Time)

Adora should be happy. Her plan was working out nicely. Everyone - almost everyone - was talking with each other. Connecting. Freely discussing important matters.

“Magic can actually heal genetic conditions. She-Ra proved that when she healed people in India,” an older sorceress said.

“That was a special occasion - she had to channel Earth’s magic as it returned to the planet.”

But the way they were talking about her as if she wasn’t present… Even Castaspella seemed to be too caught up in the discussion to realise that Adora was right here while they were discussing what she had done.

“I still say that we should call it undoing a blockade. It’s not as if she had to actually send the magic back; she just had to free it.” The older man shook his head, the thin remains of his hair moving back and forth.

“That works out the same,” the woman retorted.

“Not quite. The general result might be very similar, but how it is achieved is distinctly different. Blowing a dam isn’t the same task as carrying water up a slope to fill a river.”

“Of course, you’d use water metaphors to make a point!”

“Just because I am from Salineas originally doesn’t mean using this metaphor is wrong - water is a great metaphor for magic.”

“Can we get back to magic healing genetic conditions?” Penegal asked.

“Oh, sure. Anyway, the healing won’t turn you back into an older form of your species. Even if your older form was, ah, healthier,” the sorceress went on.

But the older man - Adora really needed to learn his name, but asking at this point would be embarrassing - disagreed. “We don’t exactly know that.”

“Humans evolved from far sturdier species.”

“But magic might not consider them healthier.”

“I think it’s a question of whether the recipient of the healing would consider an older form healthier.”

“That’s not how healing works. Magic *knows*.” Castaspella cut in.

“Etherian magic, maybe. But Earth magic works differently,” a fourth sorceress added.

Castaspella frowned. “The only differences that have been proven so far is how magic is used, not that magic works differently on Earth.”

“But you can’t exclude the possibility, can you?” Penegal leaned forward a little.

“We haven’t conducted enough experiments to determine the truth of the matter,” Castaspeall told him.

“That’s because we don’t have enough examples to investigate. Magic hasn’t been returned to enough different planets yet.”

That sounded like they blamed Adora for that. But you couldn’t just restore magic to a planet at a whim; that was dangerous. And some people might react badly to that - though, so far, the only example was Earth. She cleared her throat.

But Glimmer was quicker: “Restoring magic to a planet has to be carefully planned. We don’t want our enemies to profit from it.”

“Even if their oppressed slaves could benefit from magic returning?” the older sorceress asked.

“They could use magic to fight for their freedom!”

“Or they would be fooled into thinking magic was a gift from the Goa’uld.” Glimmer scoffed.

That was a good point.

“So…” Bow smiled. “Back to magic healing?”

“Yes. Your magic wouldn’t recognise our genome’s degradation as a defect to be cured?” Penegal sounded as if he couldn’t believe it.

“Yes.” Bow nodded. “We’ve checked Alpha’s archives - you can’t use magic to ‘heal’ a genetically engineered person from the genetic engineering.”

“That seems like an odd limit,” Freyr commented.

Glimmer shrugged. “Well, it’s not technically impossible. You could, in theory, create a spell to do that by not relying on magic guiding its power but by doing it yourself. But that would require immense research and experimenting, and the complexities of trying to alter someone genetically…” She winced.

“So, in theory, someone could create a spell that halts our genetic degradation?” Thor spoke up.

“In theory, yes,” Castaspella said. “But I don’t know anyone who could even come close to achieving such a task. And to make it work on any Asgad, and not just on a specific individual… That’s even more challenging.”

Which was apparently sorceress-speak for ‘impossible’.

“If the task is too difficult, can it be broken down into smaller tasks?” Freyr asked.

“That is also theoretically possible. But in practice, trying to combine two different spells is more complex than creating such a spell from the ground up since every spell is created individually and personally,” Castaspella said.

“On Etheria,” Penegal said.

“Yes.” Castaspella nodded at him. “It might be different on another planet.”

The Asgard exchanged glances. Adora wasn't quite sure what they were thinking - they couldn't cast spells themselves, after all.

"So, magitech can reproduce healing magic. And spells can be created for specific tasks. Combine both…" Penegal trailed off.

"...and we might be able to construct a magitech device that halts and even reverse our genetic degradation," Freyr finished for him.

"Oh!" The older sorceress perked up. "That's even more daring!"

"And even if you found trained sorceresses and magitech crafters willing to work with you on this, it would still take you a long, long time. Decades would be my guess - without a guarantee of success to begin with."

The Asgard didn't seem to consider this a problem, Adora noticed.

They are so weird, she couldn't help thinking. But the sorceresses were weird as well. So, was it really surprising that they had finally found people on Etheria that the Asgard seemed to understand and got along with?

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 11th, 1999

Samantha Carter had slept for five hours. It could have been six, but that would have required ignoring the data Entrapta and Sam had decrypted. And that would have meant she couldn't present a proper report.

At least, that was what she told herself when she hid a yawn as she set up her laptop in the briefing room the General had commandeered at Stargate Command for their team. And guarded by the special forces team he had taken with him. A sensible precaution given the scope of this… affair. Even more so after what Entrapta and Sam had discovered. Some prizes were worth a nigh-unthinkable escalation, and this prize was…

She took a deep breath as she straightened and faced the others in the room - the General, Daniel, Sha're, Catra, and Melog, all of them looking attentive. And Wilkinson and Paris, both looking as if they were not sure if they really should be here. Or wanted to be here. Well, they were here. Unlike Teal'c, who was dealing with some of the Jaffa prisoners, now that Adora couldn't visit them on short notice.

Sam nodded. "We've fully decrypted the data storage cylinder we recovered. Entrapta is currently briefing the Alliance leadership on Etheria." If Hordak had let her, at least - the former warlord had been quite firm about the need to sleep when he had cut short their data analysis this morning.

Wilkinson looked around. "And…" He cleared his throat. "What about the Alliance leadership on Earth?"

The General didn't quite smirk, but his smile was far too open to be genuine. "We'll brief High Command once we know what exactly we are facing. And Adora or Glimmer can brief the politicians."

Wilkinson and Paris exchanged a glance at that, and Sam once more had the impression that they would rather be elsewhere right now, having just realised what kind of clearance they had. They were likely imagining how harsh the punishment, should they leak any of this, would be.

But that wasn't any of her concern. She straightened. "First, the data contains descriptions and documentation of Eurondan technology and its uses, but not the schematics and documentation necessary to build or reverse-engineer any of it." The data had given both Sam and Entrapta some ideas of possible research avenues to pursue, but so had, at least in Entrapta's case, watching some Earth SciFi shows.

"Specs, not plans." The General nodded. "Advertisement."

"Bait," Catra added with a snort. "For the Russians and the Chinese."

Sam agreed with the assessment. The cylinder's content was structured like a presentation, even including combat footage, though likely carefully edited.

"So, what kind of technology are we talking about here?" the General asked. "How does it compare to ours?"

"It's generally more advanced than Earth's native technology," Sam replied. "Provided the information is factual, the weapon technology significantly surpasses whatever the Russian and Chinese can produce on every level. Advanced aircraft with energy-based weapons, neural interfaces that allow remote control of said aircraft, communication efficient and secure enough to handle combat, and energy shields that can withstand extensive bombardment. Medical technologies, including cloning and stasis pods. Drugs that rapidly accelerate healing."

The General whistled. "But no spaceships with big honking guns?"

"We've found nothing of the sort in the data available to us," Sam replied. "Generally, the data didn't contain any description or presentation of advanced technology necessary for faster-than-light travel or communication, nor space travel in general. And no magitech as far as we can tell," she added. "Though that is based on our experience with Etherian and Ancient magitech, so it's possible that some of the technology presented uses magitech based on a different magical tradition."

"Would magitech be possible in the first place without Adora restoring magic to their planets?" Daniel asked.

"They could have had relics from the time before the First Ones stole magic," Catra said. "But it's not really likely. Probably."

"And it doesn't really matter," the General said. "As long as it works for them, it would work for the Russians."

That might not be completely correct, but Sam wasn't an expert, and this wasn't the place to discuss magitech. "Compared to Horde technology, the Eurondans have advanced communication protocols. Their neural interfaces are also beyond current Horde technology." Horde Prime had been able to take control of any clone at a moment's notice, beating even what Sam had seen from the Eurondans, but that knowledge had died with him, and the Clones seemed happy to let it stay dead. Sam could understand the feeling - she wouldn't want to pursue a technology that was designed to take over her body and replace her own consciousness with someone else, either. Though she would if she had to develop a defence against it.

But that was neither here nor there right now. "The medical technology seems at least comparable, maybe superior, whereas the cloning technology and stasis pod are harder to judge; the documentation is a little scant there. All in all, Eurondan technology is generally not as advanced as Horde technology except for the aforementioned areas."

"But current NATO technology is left in the dust by this stuff." The General shook his head. "And having it would make the Russians and the Chinese a lot more powerful on Earth. They'd still lose in a standup fight, but if they started passing out such goodies to insurgents and other patsies, as they used to in the Cold War, things could turn ugly. Just the threat of that would give them a lot more influence in politics."

"And it would greatly boost their own research. Even more so if combined with access to technology recovered by Stargate Command," Sam added.

The General nodded. "Yep. They'll do anything to get this. The question is: What are the Eurondans asking for in exchange? Just raw materials, as Lenkova said was being talked about?"

"There was nothing about that in the data, sir," Sam told him. She would have included that in her briefing otherwise.

“Yeah.”

Catra suddenly tensed, cocking her head at the door. “There’s another question,” she said, showing her teeth. “What will the Russians and Chinese do if they suspect we know or might find out about their dealings? Because Lenkova is telling the guards out there that she needs to talk to Jack at once. And Melog says she’s feeling both scared and guilty. Very much so.”

The General muttered a curse under his breath.

Sam wanted to as well.

*****

Spy Games Part 4

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 11th, 1999

Catra watched Jack tense. Then he sighed and said: "Figures. Anyone wanna bet that this isn't good news?"

She snorted. Of course, it wasn't going to be good news. Lenkova had messed up - messed up more, to be precise.

Before anyone else could say anything, the door was opened, and Campbell peered inside, straightening when he saw Jack. "Sir? Lieutenant Lenkova says she has to speak to you urgently."

"Send her in," Jack told him.

Catra looked the woman over when Lenkova entered. She wasn't carrying a weapon - at least, Catra couldn't spot one. And she looked nervous - even glancing over her shoulder as the door closed behind her. "Is this room safe?"

"It's safe and supposed to be soundproof," Jack said. With a glance at Catra, he added: "Though no soundproofing is ever perfect."

She grinned at him. Her ears were better than the insulation here. Having a bit of warning from Melog helped, of course - she had to listen carefully to catch anything.

Lenkova looked at the others in the room, frowning at Wilkinson and Paris.

Catra lazily waved at her and flashed her fangs. She tried not to show how tense she was. If Lenkova was feeling like this, things must be worse than Catra had expected. And since she had expected the worst…

"So, what's the emergency?" Jack asked.

Lenova straightened. “Sir, I have betrayed you.”

Catra shifted on her seat. Lenkova was close enough for her to reach with one leap. And she wasn’t armoured - a few swipes with Catra’s claws, and she’d be dead.

Jack, though, didn’t blink. Nor did he draw a weapon, unlike Sha’re, who was aiming a zat straight at Lenkova.

“Where did you get that?” Catra heard Daniel whisper.

“Your Etherian friends,” Sha’re replied.

“So, how exactly did you betray me? Personally, not the thing about making contact with an unknown alien species,” Jack said.

Lenkova straightened, assuming what they called ‘parade rest’ on Earth. “After I… informed you about my country’s actions, I told Vlad… Sergeant Popov about it. About me informing you. He… disapproved.”

Popov was the other Goa’uld survivor from Lenkova’s team, Catra knew.

“Thought he’d join you, did you?” Jack asked in a soft voice.

Lenkova noded curtly. “Yes, sir. I was wrong.”

“And now the Russians know we know.” Jack sighed. “So much for surveillance.”

Sam was typing furiously on her laptop. “Sergeant Popov met with Major Baburin on the training fields.”

“Which we hadn’t bugged,” Jack said.

“You bugged the base?” For a moment, it seemed as if Lenkova’s surprise replaced her guilt.

“Of course we did. Learned that from the KGB,” Jack told her with a toothy grin that made the woman blush - probably with

embarrassment; Catra wasn't sure. "Did he know about the bugs? Or suspect it? Or was he just trying to find the major right away?" He shrugged before anyone could say anything else. "Anyway, what makes you think this was a betrayal?"

"Because they'll try to kill you, General."

Oh. Catra's eyes widened. So did Jack's. Daniel had his mouth open but wasn't saying anything. Sam looked like she wished she had a death ray powered by the Heart of Etheria at hand. And Sha're looked even more annoyed with Lenkova.

"That would be a murder attempt!" Wilkinson blurted out, then blushed when everyone, Paris and Lenkova included, stared at him. "They wouldn't dare to attack an American general in an Alliance base, would they?" he added. "That would be insane!"

"So is trying to make a deal with an alien species behind the back of the rest of Earth," Jack said. "Didn't stop them."

"Wasn't that what we were trying to do before we met the Etherians?" Daniel asked. "Make a deal, I mean."

Jack frowned at him. "Not the point, Daniel!"

Despite the situation, Catra snickered.

"They won't openly attack you - they will try to assassinate you," Lenkova said.

"Make it look like an accident?" Jack sounded perfectly calm. "Or make it a demonstration?"

Catra snorted. "Everyone would know they did it," she said.

Jack pouted at her. "I made a lot of enemies!"

"Jack!" Daniel protested.

"What?"

"That's not something to be proud of!"

"It is if it's the right sort of enemies," Jack retorted.

Catra also snickered at that. Daniel pouted, and Sam sighed softly under her breath. The others - well, except for Sha're - looked confused. Especially Lenkova. "Do you not think this is a serious threat, General?" she asked.

"Oh, I do," Jack replied, flashing his teeth. "I very much do so."

Catra grinned. It looked like she'd be able to teach the bastards responsible for stranding her on Earth a lesson, and sooner than she had thought she would.

Good, Melog thought at her.

*****

So, the Russians planned to assassinate him? Jack O'Neill bared his teeth. He wouldn't tempt Murphy by saying, 'Let them try!' but he couldn't help feeling almost glad about this - it meant that the Russians were desperate. Of course, they must have been desperate in the first place to attempt their takeover of Stargate Command. Or stupid, but the Russians Jack knew from the Cold War weren't stupid, and as far as he could tell, the old KGB spooks were calling quite a few shots in Russia. Probably literally as well.

Lenkova, though, still looked like he had just laughed in her face when she had been trying to warn him - and risking pretty much her life for it. Jack almost winced and forced himself to nod at her with a warm smile. "We're not going to underestimate them, Lieutenant. But we'll be ready for them."

"But…" Lenkova glanced at the others. "They have at least a dozen trained former KGB members here."

Including Lenkova. Jack didn't say that. Instead, he nodded. "Yes. But we've got advanced technology and magic. And we've got an

edge in experience."

"Yes," Catra said, flashing her fangs. "They won't know what hit them."

Paris looked a little… spooked. Or embarrassed, Jack noted. "I'm not actually that experienced," she said.

"Neither are the sorceresses the Russians could use against us - if they have any," Catra told her.

"And we have Kira here as support," Daniel added.

"Ah." Paris looked reassured.

"Of course, Kira is guarding the Stargate," Catra said. "So, once we leave the base, you're our sorceress."

Paris didn't look reassured any more.

"You'll do fine," Wilkinson told her. But he didn't really sound convincing to Jack. And, judging by the frown on her face, Paris agreed with him.

"Why would we leave the base?" Daniel asked.

"Because once we've dealt with whatever assassins and spies they have here," Jack explained, "we'll go after the one in charge of this plot. And that's not Sidorov." Not unless the man was a much better actor than anyone else Jack knew. And a much better spy.

"You want to go to Russia?" Lenkova blurted out.

"Or China. Or both. Depends on what we find out," Jack said. He shrugged.

"You're planning to use yourself as bait, aren't you, sir?"

Jack almost winced at Carter's frown. Right, he should have expected that. "You heard the Lieutenant. They're coming after me, so I can hardly avoid being bait." He shrugged again.

Carter's scowl deepened. "You could move back to the Alliance base - or into orbit - until we finish our investigation."

While you risk your own life? Jack gave her a look, and she had the grace to blush slightly.

Catra snorted, and Daniel sighed. "You know Jack," he said, then blinked. "I mean… I didn't mean… Ah…"

Jack's laugh cut him off. "Anyway, we've got people gunning for me. And you can bet they have all the old tools of the KGB at hand."

"So, be wary of umbrellas," Wilkinson said with a forced grin.

"Those were actually Bulgarian," Jack told him. A spook should know better.

Wilkinson frowned. "I know."

"But we cannot assume that they are limited to those tools and methods," Carter pointed out, still focused on Jack. They might have received some advanced tools from the Eurondans."

Jack nodded. Officially, or through an under-the-table deal - or just from trade between a few grunts. Soldiers always made such deals.

"And they might have some alien relics that they didn't reveal," Daniel added. "They might not have used such to take over the base's computers, but that doesn't mean they have nothing useful in an assassination."

"If it's a tool known to the Goa'uld, I'll be able to spot it," Sha're said.

Right. She had been trapped as a helpless spectator in her own body when it was taken over by Apophis's queen - she probably had seen more assassination plans and attempts than everyone else in the base together, Jack reminded himself. She wasn't the

young woman he had met during the trip to Abydos any more. He nodded again. "Good. Now, everyone, stay sharp - we'll continue our work, but we'll have to ensure we don't endanger others." Jack didn't think the Russians would shy away from collateral damage as long as it saved them from the consequences of their plots.

"We're continuously scanning for explosives, both conventional and advanced, sir," Carter said. "Also biological and chemical threats, though those scans are less dependable."

"Less dependable?" Daniel asked.

"Binary poisons are hard to detect. And bioweapons might be mistaken for normal organisms depending on how advanced they are," Carter explained.

Well, Jack hoped that the Russians were not as crazy as to use WMDs against a joint base on Canadian soil. That would… not end well at all for them no matter how it played out. "And that's why I am going to explore the area around the base," he said, "while you root out the last of the alien malware." He rolled his eyes at Daniel's open surprise - Carter hid hers much better - and added: "I do keep up with the times, Daniel."

"Of course!"

"Whatever!" Catra cut in. "Let's hash out who goes with whom. We have a general and a major to guard."

"Yep."

*****

Mystacor, Etheria, December 11th, 1999 (Earth Time)

"...and yes, in theory, you could probably merge a 'gene scanner' with a magitech device that casts a healing spell and rig it so it uses input from the scanner to guide the spell. But you'd have to develop everything from the ground up - we don't have that kind

of magitech device at the moment, nor do we know a healing spell that can affect genetics," Castaspella said.

Adora managed not to sigh out loud. They were still at it! Hours later! And she had thought Alliance meetings were bad!

"But magic can affect genetic conditions," Freyr said.

"She-Ra's magic, when channelling a planet's magic, can," Castaspella retorted. "That's a magic power, like a princess' power, not a spell - at least as far as we know. We haven't really analysed her power that deeply."

"We did come up with a variety of hypotheses, but we couldn't test any of them yet," the balding older man cut in with a frown aimed at Adora.

Adora met his frown. "We're in the middle of a war. Restoring a planet's magic just to run an experiment - on *my* power - has to wait."

"But it wouldn't take long at all!" the man all but whined. "And it would allow us to form a theory about this crucial aspect of Etherian magic! This could unleash a new age of research!"

"Unless your hypothesis ends up disproven," the oldest sorceress pointed out.

"Then we develop another hypothesis based on the new data!"

It was more than a little eerie how similar to Entrapta the man just sounded.

"And then we test it again," another sorceress chimed in.

Adora pressed her lips together so she wouldn't snap at the sorceresses that she wasn't at their beck and call. That would have been rude. But then, so were they.

“Are you honestly planning to replicate She-Ra’s magic?” Glimmer asked with raised eyebrows.

“Duplicate the effects, at best,” the man told her. “Replicating magic powers has proven impossible even in cases where the magic power in question seems to conform to the basic principles of spell-based magic since the underlying mechanics are completely different, but the effects often can be approximated with some research.”

“A lot of research,” the older sorceress added.

“Wait!” Adora refrained from raising her hand as if she were in a cadet training lesson. “If you can’t duplicate my power because it’s too different from spells, then why would you need to analyse it?”

“Oh, we wouldn’t need to analyse it for the project,” the man told her with a cheerful smile. “But analysing She-Ra’s magic would greatly enhance our general knowledge and understanding of magic!”

Adora glanced around and saw that all sorceresses present were nodding in agreement with him. This was…

“Princesses aren’t research subjects!” Glimmer snapped with a scowl.

“Is this a social norm, or are there factual reasons for this restriction?” Penegal asked. “Because it doesn’t seem logical to restrict magic research in that manner.”

“As I understand it, technically, princesses were research subjects of the Gate Builders - the First Ones - to start,” Freyr added.

Once more, the sorceresses nodded, and Glimmer’s scowl deepened. “Princesses are sovereigns. You ask for our help; you don’t expect it unless you’re a subject of the princess in question,” she said.

“So… would you help us?” the man asked.

Castaspella frowned at him. “Drogan!”

That was his name! Adora made a mental note.

“What? I’m just asking.”

“We shouldn’t forget that She-Ra’s magic isn’t the result of the First Ones’ experiments but predates their arrival,” Bow pointed out. “There was a She-Ra on Etheria before there were other princesses.”

“We don’t know if there were no other princesses,” the older sorceress disagreed. “There are no records in the First Ones’ research base, but we know that there were sorceresses back then, so we cannot exclude the possibility that there were magic-users that used similar principles as today’s princesses.”

“That’s your pet hypothesis. You don’t have any proof for it,” Drogan said.

“Just because you like to think that sorceresses were rulers back before the royal lines were established doesn’t mean you can dismiss my theory without any evidence!”

“It’s a hypothesis!”

“And it’s irrelevant for the project we’re discussing here,” Castaspella said. “Creating a magitech device to stop and possibly reverse the genetic degradation of the Asgard doesn’t need either.” She nodded at Bow. “But you do make a good point. We do need to determine if the effects of She-Ra’s healing magic can be duplicated by spells.”

You’re talking as if this is a done deal, Adora thought. But, seeing how the sorceresses and the Asgard acted, it probably was as good as a done deal. Everyone seemed enthusiastic, which was, of course, understandable in the case of the Asgard, but the

sorceresses of Mystacor were also very invested in the idea. Even Bow.

She looked at Glimmer. Her friend probably had realised the same thing since she was frowning in the same way she usually did when Entrapta started talking a bit too enthusiastically about some new project.

Still, it was nice to see that the Asgard had finally found common ground with at least part of Etheria.

"This will be a long undertaking, though," Castaspella went on. "We're breaking entirely new ground here. It is unclear if this will result in success."

"We're aware of that," Freyr said. "But it's the best opportunity to save our species that we've discovered."

"And if it works, we won't have to deal with Loki's scheme," Thor added.

He sounded as if that was almost as important as saving the Asgard in the first place.

And that wasn't nice, in Adora's opinion.

She blinked. They would have to tell Loki about this, and she had no idea how he would react.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 11th, 1999

The General was using himself as bait. Typical. Samantha Carter should have expected it. She had known he'd do it as soon as Lenkova had mentioned the threat of assassination, but the possibility had been clear from the moment she had discovered that Stargate Command had been hacked. It was his style. He might claim it was just leading from the front - she had to

remember to call it ‘Princess style’ to his face next time he did so - but he was not merely leading from the front; he was deliberately exposing himself to draw fire. And he was doing it outside the base proper so that collateral damage would be minimal.

She hoped that the Russians weren’t actually as insane as attempting to assassinate a US General, a high-ranking officer in the Alliance forces and personal friend of Etheria’s most powerful leaders. Or that, if they were, they did so in a rushed and ill-prepared manner that was easily foiled, at least.

But she couldn’t dwell on this - she had a job to do. She had to root out the remnants of the programs infesting the base’s computers. They needed the Stargate operational again to transfer people to and from Etheria and other planets. Moving their only ship-mounted Stargate from its current position near the expected area of operations back to Earth would take weeks and significantly reduce the strategic mobility of the Alliance’s ‘princess squads’ and command assets. And special forces, she added after a moment.

Fortunately, she wasn’t doing this alone. Entrapta’s help was limited since she could only work through remotes, but that didn’t affect programming tasks that much. And they were making steady progress. Most peripherals were clear now, their memory scrubbed clean and reformatted or physically replaced where possible before the software was restored from clean backups. The main computer was a bit more complex, but it could be safely taken offline, and all memory purged as well. More or less safely.

The real problem was the security system. Taking it offline would render the base very vulnerable for the duration. And even isolating the different components and scrubbing them one by one would lower the efficiency of the security system as a whole since it was built with the synergy of all elements in mind. Until they had replaced all parts, they would have two partial security systems working simultaneously using different components - and they couldn’t be connected or risk reinfection of the clean components. The resulting decrease in efficiency would be

significant enough, in Sam's estimation, that a skilled and experienced operator might be able to exploit this to infiltrate critical areas of the base to conduct sabotage - or an assassination. Especially if they were already inside the base, like the Russian and Chinese agents posing as soldiers.

Of course, that would require those agents to know which subsystems were inoperational at any moment, and it wasn't as if Sam and Entrapta would announce their carefully planned schedule, but with the system already compromised, it was not impossible that the Russians and Chinese had the level of access this would require. Sam would only be able to tell after she could analyse all the programs on both the mirrored caches and the removed memory banks, at which point it would be moot one way or the other. And it wouldn't even take that to simply observe their progress and then estimate when they would be about halfway done - probably at the most vulnerable point of the entire operation.

To *safely* purge the security system, they had to install a temporary replacement. And that would take unacceptably long, as the General had made clear when Sam had mentioned it. Which left the only alternative - except gambling that the Russians and Chinese wouldn't risk doing exactly what Lenkova had warned the General about - trusting guards and other ad-hoc measures to take up the slack.

Sam didn't like it. But the General did. He was actually hoping that the Russians would attempt something - would try to assassinate him! - and expose themselves in the process.

She gritted her teeth at his foolish risk-taking - he was a general now, not a colonel any more, and no matter what Etherian princesses did, generals weren't supposed to 'lead from the front' like this. Hadn't been supposed to since the 19th century!

But she was wasting time, crucial time, again. She had a main computer to purge of all spyware. They had removed the memory banks completely already, but the caches and internal memory of

the core remained. Sam would prefer to replace the entire core, but General Hammond had blanched at the cost of the replacement, and even the General had agreed.

Of course, he had agreed by stating that he trusted Sam to clean up the core, she reminded herself, smiling softly for a moment before frowning at her foolishness and focusing again on the task in front of her.

"Anyone want a sandwich?" Catra's voice interrupted her. "The tuna sandwiches are mine, but I got pastrami, cucumber, eggsalad and some 'croque monsieur', which is French for 'cheese sandwich' as far as I can tell."

Sam was about to ignore Cara - who should be guarding the General, not her, no matter what the General thought - but the woman held a plate entirely too close to Sam's face, and the scent of fresh bread and cheese hit her nose and made her stomach remind her that she hadn't eaten in a while.

Which Catra must have been aware of, judging by her smug smile when Sam grabbed a sandwich. Damn her.

"So, how's it going?" Catra asked, munching on a tuna sandwich as she sat down on the table next to Sam's temporary desk, tail and legs dangling.

"As projected," Sam replied.

"That bad, huh?" Catra grinned.

"It's going well," Entrapta chimed in, lagging again.

Catra nodded. "Jack's outside, 'inspecting' the snow still. I don't think…"

Sam looked up. Catra had gone tense, and her ears were twitching as she cocked her head to the door.

No, to Melog, who had gotten up from where they had been sprawled on the floor.

Something was up, and Sam was sure it wasn't anything good.

*****

Danger.

Yeah, no shit, Catra thought, her ears twitching as she listened to the discussion outside the room between a Chinese scientist and the guards stationed there. The man was claiming that he needed access to the computer for his research, and he was acting as if he wasn't aware of the current tension between the Chinese and Russian contingents and the rest of Stargate Command, but his 'absent-minded, research-focused' manner felt very suspicious.

But he was alone and facing not just a fire team from SG-3 but a team of Jack's special forces as well, and she couldn't really hear anyone else nearby, so even if he was a spy or assassin, what was he planning to do when outnumbered like that? Against alert guards? Even for a princess, that could be tricky.

Hurting.

The man was hurting? "What?" Catra muttered under her breath.

"What's going on?" Sam asked.

"Huh?" Daniel looked up from the book he had been reading, but Sha're had already drawn her zat.

"Trouble?" Wilkinson asked, putting his hand on his gun, like Paris.

"Yes," Catra replied. "But not sure what kind. One Chinese 'scientist' is arguing with the soldiers outside, and he's hurting…" How? And why?

"What's going on?" Entrapta asked, lagging.

Catra ignored her friend - Entrapta's question was answered already.

Others hurting now!

Melog's urgent message came a moment before Catra heard the groans - and the falling bodies. What the… Her eyes widened while she was moving towards the door. "Poison!"

"Poison? We haven't cleared the sensors for…" Sam trailed off. "They must have taken them over! But my scanner should have detected it!"

"Poison gas?" Daniel blurted out.

"Prolly," Catra replied. None of the soldiers outside had managed to get a shot off, so that was some nasty gas.

She was at the door now. It should be airtight, but…

"Gas is more efficient than poisoning the food and drinks unless you are after a single target," Sha're said, joining her.

Catra heard a series of unfamiliar but identical noises outside. "He's shooting the soldiers," she snapped.

"Poison?" Entrapta's gasp was drowned out by the sound of an alarm going off inside the entire base - Sam's work, no doubt. Chemical attack warning, Catra realised.

"That means the door is next," Sha're said in a clipped voice. "And the gas is still outside."

"I shut down the climate controls, but if they sabotaged the system…" Sam trailed off. "The core rooms are compartmentalised, but the main part of the base…" She started typing on the console but drew back after a second. "They shut down the controls!"

“Would they attack the base with gas?” Daniel sounded shocked. “I mean, the entire base?”

“No sign of that,” Sam reported, fingers flying over her keyboard.

No hurting outside.

With the alerts still sounding, it was hard to follow the action outside. Catra couldn’t track the spy’s steps any more. But she knew what he was doing. “Back away from the door!” she snapped, moving to the side.

A moment later, an explosion shattered the door, and Catra’s ears rang. She had to stop herself from leaping through the smoking hole - there was gas outside. Coming inside.

Then she felt a breeze from behind - and heard Paris chanting shakily.

Magic wind.

Catra grinned, baring her fangs. That was quick thinking! She looked at Melog. “Do your thing!”

Melog cocked their head to the side for a moment, then Catra saw the room change, people vanishing, replaced by figures writhing on the floor as her friend’s illusion took hold.

“Overpressure! Keep the gas out!” Entrapta yelled on the screen. “Reverse flow on the climate controls!”

Oh. Catra’s friend hadn’t noticed what was going on - this was bad.

But they couldn’t stop. Catra loudly groaned, faking pain. The others chimed in, some more, some less convincing.

And then a figure stepped through the fading smoke, holding an unknown weapon in one hand and an alien cylinder in the other.

Sha're's zat dropped him before he could do anything, and Catra quickly secured him - holding her breath just in case. She couldn't hear any hissing noise, so there was no gas being released here, but better safe than sorry.

"No! Get up! Help! Hel… Oh!" Entrapta's frantic, desperate voice trailed off as Melog's illusion faded again.

"It was an illusion," Sam explained. "But the gas is real."

"And I'm not sure how much longer Paris can keep her magic breeze going," Wilkinson commented.

Catra glanced at the FBI sorceress. She looked like she was struggling. Severely struggling.

"We have to get out of here!" Catra yelled. But that would take them through the invisible poison cloud outside.

"I'm clearing the ventilation," Sam said. "The filters cannot be circumvented by remote controls. But I cannot predict if they will work on the gas used. My scanner didn't detect it."

Damn. Catra gritted her teeth. They were trapped inside the room. And Paris wouldn't last much longer.

"Can you build protection gear?" Entrapta asked.

"And I can't raise the General on the radio!" Sam added.

That was bad news, but Catra couldn't really afford to worry about Jack right now.

They had to find a way out of this death trap!

Wait! The assassin - he wasn't wearing a gas mask or a suit. He must have been immunised to the gas - partially, at least. He had been hurting. So, that wouldn't help them either. But… "Can you track the gas with your scanner?"

“I’ll need to tweak it, but if I enhance it, it should be able to detect any particles.” Sam was already fiddling with her scanner.

“Can you fix the door? With the desk? And using a sealant?” Entrapta suggested, still lagging.

“Done!” Sam announced. “Tracking unknown particles…” She drew hissing breath. “The entire hallway outside is filled with the gas. The other hallways are clear.”

No choice. “Use your magic to push the gas into a corner in the hallway,” Catra told Paris. “So we can get to the door.”

“Can you do it?” Wilkinson asked.

She has to, Catra thought. Or they were done for.

Shakingly, Paris nodded.

*****

Training Grounds, CFB Goose Bay, Newfoundland, Canada, December 11th, 1999

As soon as he heard the alert, Jack O’Neill reached for his gas mask, reflexes reaching back to boot camp taking over. Chemical Attack! Gas! Mask on!

But he wasn’t carrying a gas mask! He wasn’t even carrying his full field kit!

Before he could do more than curse, Isa almost slapped him in the face with a mask. “Sir!”

The sergeant had already masked up - as had Campbell. Jack had picked his people well.

So, instead of making a comment about always having known that a desk job would be his death, he slipped the mask on. “Thank you. I somehow doubt that this is a drill.”

"Yes, sir." Isa wasn't looking at him. The huge woman had her machine gun shouldered and was scanning for threats together with her partner.

Jack quickly glanced around, but he couldn't spot anything or anyone, and his radio was quiet - jammed? He pulled his communicator out. "Carter?"

"Under attack, sir. Chemical."

Jack drew a sharp breath as he felt his stomach clench. Then rage filled him. If the Russians had gassed Carter - and the base - he'd nuke their country from orbit! Priest would do it, anyway - Catra was with Carter, and killing Her Holyness's Holy Consort or whatever would certainly earn divine retribution!

No! He was better than that. And personally hunting down everyone responsible for this would be far more satisfying, anyway. "Sitrep."

"We're temporarily containing the gas and are moving to a safe area of the base," Carter reported.

Jack let out a breath he hadn't realised he was holding. They were safe. Safeish.

"There were casualties, though. The guards assigned to us were shot."

Damn. Jack looked at his two guards - now the only survivors of the squad he had taken with him. "Gas attack inside the base. Someone shot Brandis and his team."

The masks hid their expressions, but he could see them tense.

"We've captured the attacker."

Only one attacker? But they had been using gas. Still… Jack would have to review procedures. "Keep me informed. We're returning to base."

"Yes, sir. Passing into a secure area now."

Good. Jack glanced at Isa and Campbell again. "We're going back. Stay sharp. If they attacked the others, they won't be planning to let us be." The Russians would have to be complete fools if they thought they could get away with killing Jack's team without taking him out as well. Of course, the Russians would have to be complete fools to believe they could get away with this attack at all.

This has the scent of a hasty, improvised operation, Jack thought as they started to walk back towards the main entrance to Stargate Command's compound. Someone must have panicked when we started unravelling their plot.

That was both good and bad news. They had to expect anything now, even insane attempts at taking the entire base. Jack froze for a moment. Would the Russians start a war over this? He didn't think so, but he wouldn't have thought they'd use a chemical weapon in Stargate Command, either. Hell, that was already risking a war. So was what he was about to do, but he didn't see any way around it.

Switching channels, he contacted the task force guarding Earth's orbit. "O'Neill here. We're under attack by unknown forces, suspected to be Russian and Chinese in origin. Prepare to repel any military attacks against Alliance countries."

"Yes, General!"

If Jack was wrong, he might have just sunk his career. And possibly started a war. Well, he could always emigrate to Etheria. There was bound to be a nice spot in the mountains somewhere there with room for a hut and a lake for fishing.

Snorting, he pushed the thought away and focused on the area ahead of them. Survival first, future later. The roads and the main paths were clear of snow, but the rest of the area was covered with it. That meant anyone trying to attack or ambush them was

either limited in where they moved or had to deal with leaving tracks.

But the Russians had experience with that. Canada wasn't Siberia, but snow was snow. Mostly. And while they were inside the base area, few people were outside at this time, so an assassin wouldn't have to dodge - or deal with - too many people. There were patrols, of course, but they were focused on keeping threats away, not hunting down assassins inside the base. Still, an assassin wouldn't want to get too close to the perimeter. That limited the approaches they could take.

"Watch the small ridge ahead," Jack called out. "Good ambush spot."

"Yes, sir." Isa twisted her upper body a bit and aimed her machine gun at it.

Campbell moved to cover the other side, where a field was currently serving as a snow dumping spot. A decent spot to set up crossfire, but you'd have to climb the mound of snow and expose yourself. Or you'd have to burrow through it…

"Stop!" Jack snapped, dropping to the ground and quickly moving behind a heavy chest full of snow-clearing gear stashed nearby. Using binocs with a gas mask on was annoying but not impossible. And it beat discovering an ambush by walking into it.

He scanned the piled-up snow. This was a hasty attack - they wouldn't have had time to prepare much, if at all. And they would have been under pressure not to miss Jack and his team before they returned to base. So… He studied the upper parts of the mound, hoping that whoever was out there wasn't lining up a shot at him right now. The snow was riddled with sticks and darker stones, which didn't help. But Jack knew someone was there. He just had to find them.

There! That wasn't a stick - that was a barrel! AK-style!

Jack bared his teeth. “Sniper nest. Ten yards to the left from the top of the mound. Isa.”

“Got it,” Isa replied as she and Campbell switched sectors.

A moment later, she started firing, the machine gun’s bursts ripping through the snow. Even densely packed, you needed a lot of snow to stop a heavy machine gun - and Isa was an excellent shot.

“Contact ridge!” Campbell yelled. He was already firing.

Jack ducked down and made a note to start carrying something heavier than a pistol. He still shot back at what looked like two people with assault rifles but didn’t think he hit either. Not before Campbell and Isa, who swung her gun around, cut both down.

Almost literally, in her case. No need to check for survivors there.

By the time the first patrol - a squad from SG-3 - arrived a few minutes later, they had found the sniper in the mound as well. A burst from Isa had gone through his torso, showering the snow tunnel he had dug with blood and gore, but the head was intact enough to identify Sergeant Popov.

Damn. Lenkova would blame herself for this. Even if it wasn’t her fault at all - she had done the right thing.

His communicator announced an incoming call. “O’Neill!” he snapped, looking around.

“Stand by for Her Divine Highness,” a clone told him.

Oh. Of course, Priest would have informed Adora. And, of course, Adora would be calling him at once. From Etheria. With all the delay in communication that caused.

Damn.

"Jack." Adora sounded very tense. *"What's going on? Catra said they were safe, but she had Russians to fight. And Priest is asking for permission to prepare an orbital bombardment."*

Oh! "It's not like that!" Jack replied. "Russians and Chinese attacked us in Stargate Command, so I asked him to be ready to deal with attacks on the Alliance by either country. Just in case."

Seconds passed.

"Good. They have firing solutions ready for every Russian and Chinese military installation they know of."

Jack was pretty sure they had firing solutions for any known military installation on Earth, including the Alliance bases. But that was just standard procedure. "We're sorting this out here," he told her.

"Get the Stargate open again. I need to come to Earth as soon as possible."

Jack knew better than to argue that. And with Priest sounding so trigger-happy, the sooner they could get Adora to Earth, the better. "Will do."

He left the patrol to deal with the rest and hurried back to the base. He had to check up on his team. And the Russians and Chinese needed to be dealt with.

But when they reached the entrance to the base proper, he could see that things were already, if not in hand, then getting done. A squad of Chinese soldiers - disarmed - was led out of the base under armed guard.

"What's the status of the base?" Jack barked. Stargate Command wasn't under Alliance command, but he was the one with the direct line to the spaceships in orbit with the big honking spaceguns, and members of the Alliance had been killed with a chemical weapon, so he doubted that anyone would try to pull rank on him.

The French Lieutenant straightened. "We're securing the prisoners in a 'angar without direct access to the base, General," he replied in slightly accented English.

"Is the Stargate secure?" Jack asked. The Chinese looked… not mulish but stoic, despite not being dressed for the outside. He couldn't see any wounds or other signs of having fought amongst them or the French soldiers, either.

"Yes, General." The Lieutenant nodded. "The Chinese surrendered without a fight when General Haig ordered them to. The Russians… resisted and had to be subdued."

Jack nodded. He would have to ask Hammond for more information. "Carry on."

"Yes, General."

They stepped into the lift, and Jack used his communicator again. "Carter, we're coming down. Had a little scuffle with Russians trying to stop us. Status?"

"We're in the control centre, sir." Carter sounded relieved. *"General Haig ordered the Russian and Chinese troops to lay down their arms and surrender. General Li complied. General Sidorov ordered his soldiers to resist before General Haig stunned him. Some are still holding out in their barracks."*

"Not for long, I hope."

"I don't expect them to, sir. Catra and Melog are assisting Stargate Command with securing the base."

"Copy that." Good. It seemed things were under control. At least inside Stargate Command.

The lift arrived, and Isa moved in front of Jack before the doors opened. He didn't argue with her either. Never give an order you know won't be obeyed.

But the hallways were secure - a British squad was covering all doors.

Inside the control centre, Carter was busy at her computer, with Daniel and Sha’re standing a bit to the side, whispering to each other, and Wilkinson hovering near Paris, who was sitting on the ground, leaning against the wall, looking like she had just ran a marathon or two.

That… “Don’t tell me that they also attacked you with magic!” Jack blurted out.

“No, Jack,” Daniel replied. “But Agent Paris had to use a lot of magic to contain the gas so we could pass through safely.”

Paris nodded weakly. “It drained me more than expected.”

“It was enough to save us all,” Sha’re said.

She had saved his team? Jack would have to make sure she joined his command. Or at least the Alliance.

But first, he reminded himself as he turned towards Hammond, he had to sort out this mess. Preferably without starting a war, but he wasn’t particularly picky about that right now.

*****

Spy Games Part 5

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 12th, 1999

Adora could barely keep from running down the ramp when she arrived on Earth. Finally! After hours of doing nothing while Sam and Entrapta worked on the Stargate computers, worrying while she waited for the all-clear… But she was the Supreme Commander of the Alliance. She couldn't rush into this like some worried girl.

Jack was there, as were Generals Haig and Hammond, and Isa and… Sergeant Campbell, and that was Kira in the background.

"Supreme Commander." Jack saluted her, followed by the other generals.

She returned the salute.

Before she could say anything, Entapta arrived behind her and rushed down the ramp - and past them. "Hi, everyone! Bye, everyone - I'll be in Sam's lab!" And then she was out the door, leaving everyone else blinking.

"Good to have you back," Jack said with a grin as he lowered his hand.

"Good to be back. Glimmer was held up but will join us in a while." Once she and Bow had explained things to Loki. Adora glanced around. Where was Catra? She hadn't been hurt while taking down the last Russians, Adora knew that, but why wasn't she here? She wouldn't care about proper procedure, either… "So, what did you find out about the attack?"

Jack didn't mention that his latest report had been sent an hour ago and nodded. "We're still interrogating the prisoners. Sidorov is staying silent, as is Li, and most of everyone else is claiming to have merely followed orders."

She snorted at that. “And the assassin you caught alive?”

“Under guard in the infirmary.”

Was that where Catra was? Standing guard so the prisoner wouldn’t be murdered to silence him?

Jack shrugged and went on: “It looks like he was using some alien drugs to keep the alien gas he was also using from harming him too much. But when Sha’re stunned him, he couldn’t use the drug any more, and…

“I can heal him,” Adora said. “I can heal all wounded.”

“That would be appreciated,” General Haig said.

Right. This was Stargate Command, not an Alliance base. Adora had been a bit rude by talking to Jack, hadn’t she? “It’s the least I can do,” she told him. She glanced around. They were almost at the door leading out of the gate room, and she couldn’t see any sign of Catra. “Let’s head to the infirmary first, then. No need to let our wounded suffer any longer.”

“This way,” Hammond said, gesturing down the hallway.

“Are the Russians and Chinese leaders still claiming that this was done by rogue soldiers?” Adora asked.

“That’s their story, and they’re sticking to it. For now,” Jack replied. “Li hasn’t refuted that - he commented that a scheme to smuggle alien goods through the gate would have made him and Sidorov a fortune.”

Hammond scoffed at that.

Adora frowned as well. “And Sidorov is staying silent?”

“Probably waiting for orders from Russia,” Jack said. “The whole attack smells rushed and improvised. Never a good combination.”

Hammond coughed loudly, and Jack pouted at him.

"We can count ourselves lucky that they apparently lacked proper planning and support," Haig said. "Albeit, I assume that they had contingency plans worked out in advance."

"Which Carter and the others wrecked when they started poking around, I bet:" Jack grinned.

Adora nodded - Sam and Entrapta rooting through the compromised computer memory banks would have likely spoilt some plans.

They reached the infirmary. No Catra in sight, but Melog was curled up in front of a room with two guards next to the door. They looked at her, yawned and curled up again.

So, Catra was fine. But still missing.

Adora quickly healed the wounded - about a dozen, ranging from lightly hurt to having caught a few bullets - then headed to the room where the assassin was held.

Two more guards stood to each side of the bed there, and the prisoner was tied down as well. He looked pretty bad - he had tubes running into his mouth and nose, and his skin had a greyish tone.

"Can't have him suicide, should he wake up," Jack said. "But he's stable as far as we can tell. The Doc says they're still analysing the poison gas, but a lot of it broke down already."

She nodded and healed the man. He remained asleep, or so it seemed - but she caught him tense just a bit. "We know you're awake," she said.

He didn't react. Ah, well… She glanced at Jack. "We can start interrogating him."

"I'll inform our specialist."

Their specialist? Did he mean Wilkinson? Probably.

"We've prepared a meeting room," Hammond said. "Unless you have to travel to Brussels immediately."

Without Catra? Adora almost snapped at him. She managed to nod. "No, we've got a few things to discuss."

And a cat to find. She was getting worried again. Even though Melog would have shown if Catra was hurt. Or in danger. But she couldn't help…

"Hey, Adora."

Adora whirled. There, leaning against the wall outside the infirmary, was Catra! Smirking like… well, her.

"Catra!"

"Yeah. Finally made it back here, huh? About…"

"Catra!" Adora's hug cut off her lover's next words. And then her kiss cut off any protests.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 12th, 1999

Samatha Carter cleared her throat as she stepped up to the big holographic screen in the meeting room the Alliance had taken over inside Stargate Command. "Supreme Commander. General. Commander." She nodded at Adora, the General and Glimmer, then at the others present. "We've finished our preliminary analysis of the recovered alien technology." Very preliminary. She wished she was better prepared for this - between the need to clear the base's computers and ensure there were no boobytraps left by saboteurs so they could reopen the Stargate, she hadn't had a lot of time to examine the alien technology they had secured. That wasn't long enough to draw solid conclusions.

Although Entrapta had joined her as soon as they had opened the wormhole again, followed later by Bow, and between them, they had managed at least to get a decent overview of the various pieces. And realise how close we had come to dying, she added in her mind - Entrapta hadn't reacted particularly well to that. Not after having seen her friends dying from the poison gas and communication lag preventing her from realising it was one of Melog's illusions for several seconds. Catra hadn't taken that well - she hadn't realised how her plan would look to Entrapta.

But sorting that out could wait. She had a briefing to do. She pressed a key on her laptop, and the projection of a small cylinder appeared on the screen, slowly rotating around itself. "This is the container that carried the poison gas used against us by Qiang Lee." They hadn't yet found out whether the assassin they had captured was Dr Quiang Lee, a young astrophysicist who had published several works or a soldier impersonating him - the man had refused to answer any questions, last Sam heard. "It is shielded from any conventional sensors we know on Earth, though not from magic or Ancient sensors," she explained.

"Then how could they smuggle it into the base?" Glimmer asked, frowning deeply.

"Because the compound contained inside the cylinder is not poisonous until it reacts with human biochemistry. It's like a binary poison where one component is a part of the human body. The poison so produced acts like a standard poison, but since it is generated upon contact, our scanners didn't pick it up until it started taking effect. And even then, the scanner focused on the poison created, not the compound in the air." Even the magic scanner had been fooled by this, which Sam suspected was accidental, but they couldn't rule out that the Eurondans used magic themselves.

"Which we have corrected now!" Entrapa chimed in. "And we've adjusted the scanner to show any unknown particles - though that will make it probably overly sensitive to many harmless

substances on alien planets, so… We might have to be careful about that."

"We'll get false alerts for a while," the General summed up.

"Yes, sir. We suggest that a dedicated crew of technicians and scientists is part of any force landing on a new planet to speed up such adjustments," Sam told him.

"Making the scanner adjust to that automatically is kinda difficult," Entrapta said with a pout. "We'd have to give it the same databanks and sensor capability Alpha has, and that would make it hard to fit into a portable scanner. Though for a fleet action, we could have a special ship with a lab on board to analyse any such data transmitted from the surface!"

"A science vessel in the fleet?" The General snorted. "I guess Star Trek will be vindicated."

Sam narrowed her eyes at him - slightly. "It is the same concept of having scientists as part of an exploration team." That had been her own position in SG-1!

"Right." He looked a little sheepish for a moment before nodding at her.

"The poison is a neural agent attacking the central nervous system of anyone exposed to it. The effect is debilitatingly painful but would take quite some time to kill a victim."

The others in the room looked shocked or grim at the news - and with cause. It was a very cruel way to kill someone. It was almost a mercy that Lee had killed the teams he had used the gas against. Almost.

The General nodded again. "That's the gas. And the gun?"

"It's a direct energy weapon of unknown make," Sam told him as the gun appeared on the screen. "Definitely alien in origin. The

gun's velocity is relatively slow, but it can damage both organic and inorganic targets and has a stun setting."

"Like a zat?" Catra asked.

"It follows a similar concept, but it works differently," Sam corrected her. "It causes direct physical or stun damage."

"And it didn't show up on our scanner either?" The General raised his eyebrows.

"The power source was not powerful enough to show up on the general scan," Sam explained.

That had the General snort. "Figures it was something like that."

Sam could see the irony, but they had lost two squads to this weapon and the gas. "We also secured this." She showed another, smaller cylinder. "It's a medical device - it works similar to an autoinjector. We first assumed that the substance was an antidote for the poison, but it's actually a medical compound that very quickly heals the body once administered. Quickly enough that Lee didn't succumb to the gas even though he was exposed to it for a length of time."

"But it hurt him," Catra said, "Melog felt it."

"Yes." Sam nodded. Lee must have been suffering horrible pain throughout the fight.

The General frowned. "That does sound like he was improvising. If he had prepared this beforehand, he probably would have had an antidote ready. And how much of that stuff was the assassin carrying?"

"Half a dozen injectors, sir," Sam replied.

The General looked at her, then at the others. "That wasn't an assassination attempt. He wanted hostages."

That was a likely conclusion, indeed.

“Hostages?” Adora scowled.

“Me.” Catra hissed. “To use against you.”

“It would make the whole attempt to take over the base a little less insane,” the General went on, looking at Catra and Adora. “Still not sane, but if they thought taking you hostage would stay your hand…” He shrugged.

Sam nodded. Everyone knew that the Etherians treated politics as a personal affair. If the Chinese - and the Russians, since they had been working together - thought that meant they would value friends above everything else… Well, they weren’t entirely wrong, but they would have completely miscalculated how the Etherians would respond to such a ploy.

And, Sam added with a slight wince when she saw Adora, Catra and the other Etherians’ expressions, they might end up finding out exactly how wrong they had been - and how right.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 13th, 1999

Usually, meetings in the Alliance Headquarters were dominated by the military. This time, there were far fewer military uniforms visible than usual, Catra noticed. Instead, more people wore suits. And humans insisted that these weren’t civilian uniforms even though every Earth ruler seemed to be wearing them!

She snorted as she sat down next to Adora. Not every ruler was attending, but the most important ones were here - the ones from Britain, France, Germany, the United States and Canada, though the last one’s importance was questionable, according to Jack. Still, the Stargate was on their soil. Or surrounded by their soil, depending on how you interpreted the international treaty covering it. Catra wasn’t a lawyer, but if you lost the right to rule a

piece of your land and other kingdoms had free access to it and could station what troops they wanted there, it wasn't your land any more, was it?

Not that it mattered. This would be decided by the leaders of the Alliance, and that only because Adora was, again, being a goody-two-shoes about the rules.

"Alright," Adora spoke up. "You've all received the preliminary report about the attacks on Stargate Command. Do you have any questions?"

She looked formidable, all serious and angry, and Catra felt a shiver run down her spine. Her love.

Most of the people present shook their heads, and after a moment, Adora went on: "We've lost four Alliance soldiers killed in action. Stargate Command lost ten soldiers killed in action and fifteen wounded. No civilians were hurt or killed during the chemical attack."

"An attack with an alien gas weapon," the Canadian Prime Minister said. "That is a war crime. They attacked us."

"Russia and China are claiming this was the result of actions taken by officers going rogue," the German Bundeskanzler said. "Given the current state of relations with the United Nations, disproving that claim could prove tricky."

"What you mean is that too many countries in the United Nations are ruled by bigots and dictators who fear and resent the Alliance and would never rule in our favour no matter what proof we have," Glimmer said with a slight sneer.

Catra wasn't the only one who snorted at that.

The German nodded, apparently not fazed. "Exactly. Even if Russia and China didn't have veto powers, the odds of achieving support by the United Nations for our response are not good."

“We don’t need their support,” Glimmer retorted. “We can destroy the Russian and Chinese military from orbit without trouble.”

Catra saw the other rulers tense at that. They must have known that, though - the Alliance knew what Horde frigates could do and how good the Alliance scanners were. Their military was planning to use orbital fire support for planetary invasions, even!

“But if we do this, other countries might be driven to similarly desperate actions,” the German Bundeskanzler said. “They would remember the intervention in Iran as well. Can we afford such ‘distractions’ during wartime?”

“And even part of the public in our own countries might not react favourably to what they might see as a disproportionate retaliation,” the British Prime Minister pointed out.

Catra overheard the British Admiral muttering something about “another General Belgrano”, but she had no idea what he meant.

“We were attacked with chemical weapons! Our soldiers were murdered!” the Canadian Prime Minister retorted. “I doubt that anyone sane will dispute that this requires a reaction.”

“The problem is that the whole attack was so insane, many people won’t believe that Russia or China could do this,” the British Prime Minister said. “And, as the report states, the whole attack seemed to have been an improvised and panicked reaction to the discovery of their takeover of the Stargate Command main computer.” He looked around, “Can we really dismiss the possibility that this was decided and executed by officers acting on their own?”

“Russia and China are still responsible for their forces. If they cannot control them, then that’s on them,” the French Président said.

The US President looked a little doubtful. “We cannot actually tell if the trade deals with the aliens were authorised by the Russian president, much less the escalation to attempted assassination.

He will be replaced at the end of the month, and by all accounts, he has not been in control of his government for quite some time, with oligarchs instead struggling for power in the wake of First Contact. What the new president will do is anyone's guess."

"China has no such excuse," the Canadian Prime Minister retorted. "And the attack with chemical weapons was done by a Chinese agent posing as a scientist."

"They are saying that this is proof that the man is a rogue spy and criminal," the Bundeskanzler cut in.

"We have had reports about internal struggles from China, but nothing concrete," the US President said. "But it is unlikely that they were so compromised that rogue elements could infiltrate their troops and scientists at Stargate Command."

Catra nodded in agreement. That was nonsense. Even if a number of countries would claim to believe it.

"But why would they do something so insane?" the Bundeskanzler asked. "They must have known that even if they had taken hostages, they wouldn't have gotten away with it - and if they had made any demands, they would have had to abandon the claim that this wasn't done on the orders of their governments."

"They're paranoid and desperate," Jack spoke up. "The Russians have convinced themselves for decades that NATO wants to attack them. I doubt the Chinese have forgotten the Korean War. And now their military has been rendered obsolete - they know that; don't think they haven't spies in places - and they know what they would do in our place. So, even an insane plan might look better to them than their current situation."

Catra pressed her lips together. She knew about risking everything on a slim chance of victory instead of accepting defeat. She had almost destroyed Etheria as a result. But that didn't excuse it - or her own actions.

"That doesn't excuse their actions," Adora said, repeating Catra's thought.

"And they cannot be allowed to get away with this, or they'll try the same thing again - and so will everyone else," Glimmer added.

"No matter if they're actually guilty or not," Jack said.

"The buck stops with them," the US President added. He seemed to agree with Jack, even if Catra didn't get the reference.

"So," Adora spoke up. "What do you suggest we do?"

Several of the people present tensed up again, Catra noted.

*****

Jack O'Neill raised his eyebrows a little at the wording. 'Suggest' - Adora didn't make it sound as if she was humouring the politicians present, but he had no doubt that if she didn't like a suggestion, she'd ignore it.

The question was: Were the politicians aware of that? They should; the President had had a lot of briefings from Jack and his team about the Etherians, and Jack was sure that the other leaders had been briefed by their people. And they had been working with the Princesses for over a year now. But the Etherians hadn't really thrown their power around as they could have, and Adora and her friends had been primarily working with the military staff, not the civilian leaders.

"First, we need to know if we have proof that this was an organised attack by Russia and China," the Bundeskanzler said. "Our response has to take into account how much support we have amongst our allies and the public. There's also the question of how NATO is handling this."

Glimmer rolled her eyes. Probably barely holding back a cynical comment about the free press, Jack thought. Or daytime TV.

Catra leaned forward. “The assassin isn’t talking. If you want proof, we need to go and capture the Russian and Chinese leadership and see if they talk.”

The Bundeskanzler drew back, and his eyes widened at that.

“That would not be received well by many other countries,” the French Président said. “Especially not in Africa, Asia and Central America.”

“You mean primarily the countries where the former colonial powers continued to topple governments they didn’t like?” Daniel asked. “Including the United States.”

“Yes.” The French Président nodded with a slight smile.

Jack snorted. You could almost admire the way the French shamelessly owned up to it. The President, on the other hand, was wincing, and the British Prime Minister looked like he had bitten into a lemon. He half-expected the Canadians and Germans to claim they weren’t involved in any of that, but neither did.

“The Stargate was attacked with a chemical weapon,” the Canadian Prime Minister repeated himself instead. “Soldiers of Stargate Command but also Alliance soldiers died as a result. And it was done by Russians and Chinese using technology and weapons from an unknown alien power. I think this will speak for itself, at least in our countries.”

“If we present it like that, focus on the brave soldiers uncovering the infiltration and fighting off the insidious attack…” The President nodded. “The media will like it. It’s almost a Pearl Harbour moment.”

Jack pressed his lips together. Those had been his people who had died, both Special Operations Command and SG-3. They hadn’t died for the optics of this. But saying so wouldn’t help things right now. Even if he really wanted to.

“So, that covers the support from your people,” Glimmer said, not quite rolling her eyes to make sure everyone understood what she thought about the whole thing. “But what do you suggest we should do?”

“What do you suggest?” the Bundeskanzler asked. For a moment, he looked as if he was surprised by his own question, in Jack’s impression. It was a fair question, though, even if it would have been sassy coming from someone else - like Jack.

“We need to ensure that they will not launch another such attack against us,” Glimmer replied. “We don’t know if they have more of the poison gas and the other alien technology the assassin used.”

“They wouldn’t dare, would they?” The Bundeskanzler said. “Their excuses are already threadbare thin. Another attack with either poison gas or alien technology would be a clear act of war - against the entire Alliance and NATO..”

That was debatable, as far as Jack understood the issue. The Alliance was aimed against the Goa’uld, not other countries on Earth; the Princesses had made it clear that they didn’t want to be dragged into internal conflicts on Earth. But Alliance soldiers had been attacked, and aliens were - directly or indirectly - involved, and that made it Alliance business. Of course, an attack against a NATO country could trigger Article Five.

“If they are as desperate - and paranoid - as Jack said, then what do they have to lose?” Catra shrugged. “If they expect us to crush them, we might as well do it before they cobble together another attack. Nukes and gas we can stop, but what if they have biological weapons?”

That was a horrible possibility. Jack had seen the data about Ancient bioweapons. If the Russians and Chinese had something comparable…

“If they had that capability, I’d expect them to threaten us with it,” the British Prime Minister said. “At least through diplomatic

channels."

"They might not think it would be worth losing the element of surprise in case the Etherians are willing to sacrifice Earth to destroy them," the French Président retorted.

Adora and her friends gasped. "We would never do that!" she blurted out.

Glimmer nodded emphatically. "It would be a betrayal of everything the Alliance stands for!"

Jack grimaced. "We know that. But the Russians and Chinese would do it in your place." At least their leaders, as far as Russia had a leader at the moment. Which was another can of worms - if the Russian leadership was dysfunctional… "Whatever we do, we need to know what technology the Russians and Chinese have at their disposal," he said.

Everyone agreed to that. "But the prisoners aren't talking," Adora said. "The most they say, some of them, is that they were following orders and defending themselves. And as long as they don't talk even Kira's Truth spells won't really help."

There was a solution for getting people to talk, Jack knew, but it wasn't a solution the Etherians would condone. And since they needed their sorceresses for the truth spells, the solution was off the table.

Which was a relief - Jack really didn't want to torture prisoners. And letting others do it wasn't any better - worse, actually.

But that didn't change the fact that they needed more information. He could only hope that his people working on it would come up with something.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 13th, 1999

“Da, following orders is Russian way. If you follow orders of superior, you do no wrong even if you do wrong. Unless, of course, superior or superior’s superior disagrees.”

Iwan was a good scientist and had quite the charm - Samantha Carter might even consider him a friend, if not a close friend - but his English was really annoying. Doubly so since she was certain that he could speak far better English yet chose to talk like this. The man not only read all relevant science publications in English, he published in them!

“But the Russian government disavowed their actions,” Special Agent Wilkinson pointed out. “If they don’t want to be tried as criminals - and for capital crimes - they should cooperate.”

“They have family in Russia, da?” Iwan shook his head. “They betray Russia, family suffer.”

“What about your family?” Special Agent Paris asked. “You’ve been cooperating.”

Iwan shrugged. “No family left. No family I care for, at least.”

Sam couldn’t tell if he really didn’t care or was trying to hide something. For all his boisterous manners, which were often quite stereotypical Russian, as Daniel had pointed out to her in private, the man had a good poker face. That wasn’t surprising, of course, since he had grown up in the USSR and had been involved in top-secret research.

“I still can’t believe all of them would take the fall.” Wilkinson shook his head. “There’s always someone who turns.”

“Did you offer bribes?” Iwan asked.

Wilkinson frowned at him. “Offering bribes? That would invalidate their testimony!”

“We can point out that cooperation will get them leniency, but we aren’t authorised to offer actual deals,” Paris added.

Oh. Sam winced. As did Iwan, she noted. “You’re following FBI rules and regulations,” she said.

“Of course,” Wilkinson said.

“This is an Alliance investigation,” Sam pointed out. “You don’t answer to the FBI here but to the Alliance. To Alliance High Command,” she emphasised.

“The legal procedures are the same, at least as far as fundamentals are concerned,” Wilkinson retorted. “You can’t bribe a witness, and we aren’t authorised to offer deals.”

Iwan cocked his head, acting as if he was confused. “Legal procedures? This is military and political matter. Result important.”

“We’re not in Russia!” Wilkinson snapped. “We have a working judicial system! People have rights!”

Sam grimaced. She shouldn’t be handling this - she was a scientist, not a lawyer. Or a politician. But the General and the others were meeting with the Alliance leaders. And while the exact chain of command was a little vague, the General had left her in charge here. “We’re investigating an attack on the Alliance and Stargate Command,” she said. “Our priority is to find out what happened and who is responsible. Whether or not that intel is applicable in a court of law is of secondary importance.”

Wilkinson stared at her as if she had threatened to shoot him in the back. “What?”

“Princesses and Generals not care about procedures,” Iwan said. “They want results for military and politics.”

“You might as well torture the prisoners then!” Wilkinson spat.

“Torture doesn’t work,” Paris cut in.

“It work for Russia.”

“We aren’t Russia!” Wilkinson glared at Iwan.

Combining torture with a truth spell would likely work, Sam knew. As long as the victim still knew truth from lies, the spell would detect any falsehood they knowingly said - and they would say something to stop the torture. But that wasn’t an option. “The Alliance doesn’t torture people,” she said. If Wilkinson had met the Princesses for longer than a brief greeting, he would know that.

“Da. Alliance very good about that.” Iwan grinned.

“But deals and bribes are allowed,” Sam went on. “And Kira can check for lies. Whether or not that would invalidate any testimony is irrelevant.”

“Even if it means a war criminal escapes justice?” Wilkinson retorted. “Over a dozen people died because of this attack!”

Sam was tempted to mention Hordak. And Catra. She didn’t, though. Instead, she said: “Do you think any of our prisoners were the masterminds behind the attack?”

Wilkinson frowned at her. “Sidorov was in charge of the Russian troops. Li commanded the Chinese contingent. We don’t have any records of them contacting their superiors in their home countries.”

Absence of evidence wasn’t evidence of absence, though. “They could have had orders for such a contingency,” Sam pointed out. “But do you really think the soldiers we captured acted independently?”

Wilkinson didn’t answer that, but his expression said enough. “We still have no authorisation to offer any plea deals. Or other deals.”

“You have it now,” Sam told him. “I’ll ask Adora to make it an order. In writing.”

Both special agents seemed surprised at that.

“Alliance way, this is,” Iwan told them. “Princesses are honest like that.”

“They aren’t naive,” Sam added. “But they take their responsibilities as leaders seriously. They won’t sacrifice people under their command to save themselves. Or to follow procedures.”

Judging by the glances Wilkinson and Paris exchanged, they weren’t used to that in the FBI.

To be fair, Sam had not been used to that in the Air Force either. Not until she had started serving at Stargate Command under the General and General Hammond, at least.

She looked at the two agents. “Get them to talk. We need to know who to go after in Russia and China.” She smiled at the way Wilkinson and Paris’s eyes widened at that. “This is a political and military matter. Not a matter of jurisdiction.”

“Da!” Iwan nodded. “Like Iran.”

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 14th, 1999

“So, the Chinese government claims that this was all your doing and that your government has had no knowledge about the contact with the Eudondans or the attack on Alliance personnel?”

Wilkinson sounded rather frustrated. Catra could emphasise.

The Chinese general slowly nodded with a polite smile that was just so slightly smug that Catra wanted to slash the mirror glass separating her from the interrogation room and rip it off his face.

“You’re not fooling anyone,” Wilkinson said, shaking his head. “We know you’re lying.”

“I have told you no lie,” Li retorted.

“True,” Kira said next to Catra.

It didn’t mean anything, though. Li hadn’t actually said anything substantial during the interrogation. Of course, as a member of the Stargate Command Council, Li had been aware of magical truth spells - it wouldn’t have made sense to send sorceresses from Etheria to help guard the Stargate and not inform the people in charge of what they could do.

In hindsight, using truth spells on the people in charge would have made more sense, at least in Catra’s opinion.

Wilkinson looked even more frustrated on hearing Kira’s report through the bud in his ear. “What was the plan, anyway? Take us all hostages?” he snapped.

“Not you. Just the friends of She-Ra,” Li replied.

“True.” Kira sounded as surprised as Catra felt - was Li suddenly breaking his silence?

Wilkinson’s eyes had widened, but he quickly recovered and leaned forward on the table separating him and Li. “Catra, Major Carter, Dr Jackson and his wife?”

“Yes.”

“True,” Kira whispered.

“And you thought this would give you leverage to make demands to the Alliance?” Wilkinson asked.

Li slowly nodded again. “The Supreme Commander of the Alliance values her friends dearly.”

“And yet you tried to murder General O’Neill.”

“That was General Sidorov’s plan.”

“True,” Kira reported.

Wilkinson shook his head again. “You had access to the Stargate. You had the freedom to explore the galaxy. Why would you risk all that?”

Li kept smiling without answering.

“He won’t say anything that can be proven as a lie,” Catra said.

“Earlier, I thought he might, but now…” Kira sighed.

The sorceress had to be tiring; keeping up a spell for so long was exhausting. Catra doubted that Kira would bring it up, though. Not until she was about to collapse. The woman probably felt guilty for missing the entire plot until Sam had come in.

“You knew you wouldn’t escape. Hostages or not,” Wilkinson tried again.

“A small chance is better than no chance at all.” Li sounded as if he was quoting someone.

“Were you planning on letting your superiors ‘convince’ you to release the hostages and surrender?”

Li’s smile didn’t change. The man had a great poker face. On the other hand, his refusal to answer was an answer itself.

And, despite Wilkinson’s frustration, this was enough. At least for Catra. “So, Li’s been planning to take the fall for his leaders. Even though no one’s going to believe the story. And he probably set up Sidorov somehow.” Maybe to make himself look better in comparison. Or to get back at the Russian - Catra didn’t think anyone who had to work with Sidorov liked the man even a little bit. Unfortunately, the Russian general hadn’t said a single word. For all his faults, he could shut up perfectly.

“Yes.” Kira nodded in agreement.

“Do you think that this would have changed anything? No one believes your story!” Wilkinson repeated himself.

Li, once more, didn’t answer.

“What do you think was his plan?” Kira asked.

Catra shrugged. “Trade hostages for concessions, maybe.” That was what they usually did in the files she had read. Though that only worked when the kidnappers had managed to get away in the first place and managed to make a deal later, from a safe position. She couldn’t remember anyone actually successfully using hostages to escape.

“In the movies, they usually demand a flyer for some reason. Maybe he wanted to use the Stargate?” Kira suggested while Wilkinson repeated himself again in the interrogation room and Li predictably failed to answer.

“And get stranded without supplies on some rock? Or end up eaten by a monster? Not that we would have let him go - he knows too much,” Catra replied.

“What do you think would have happened if you had killed us all?” Wilkinson said. “To China.”

That was a good question.

“I do not think Princess She-Ra would punish others for my crimes. Or would let anyone else do this.”

“True.”

“And do you think that extends to your government?”

Once again, Li didn’t answer.

Well, they would find out. Once they reported back to the Alliance High Command with the results of the interrogation.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 14th, 1999

"...and in the face of worldwide outrage at the use of chemical weapons against the Alliance, the Russian and Chinese governments both independently released a statement that their representatives at Stargate Command acted on their own and denied any responsibility for the attack. In other words, either the Russians and Chinese are lying, or they have no control at all over their most important forces! And neither the current Russian president nor his elected successor has been seen in public since the attack, prompting speculation about a coup."

"...meanwhile, the United Nations Secretary-General called upon 'all sides to refrain from hasty actions', and various nations from the Middle East condemned 'unprovoked aggression against sovereign nations for alleged crimes committed by individuals'."

"...while the Secretary General of NATO has released a statement that the organisation is 'closely coordinating with the Alliance' with regard to their response to the attack on the Stargate but refused to comment if Article Five has been brought up so far. With uncertainty whether or not NATO countries in the Alliance have access to space-based weapons, it remains…"

"...in response to the senator's repeated statements that 'another day of infamy' required an 'equally swift and decisive response from the United States', he asked whether or not they consider Newfoundland part of the United States, and what…"

"...the world holds its breath as the Alliance leadership is gathering to decide whether or not they will respond to the Stargate Incident with war."

"...where the peace protesters and the counter-protesters clashed violently, and the police arrested…"

Jack O'Neill sighed and switched the TV off. Yeah, releasing the news about the attack on Stargate Command had gone about as well as he had expected - but they couldn't have let the Russians and Chinese set the narrative or something. As if anyone would believe anything what either country claimed! Well, except for half the world, according to the United Nations.

He got up, checked that he hadn't left anything on his desk that he needed, and walked out of his office, nodding at the additional guards posted in the hallways as he passed them. Security was very tight, with most of the allied countries' leaders present. Two frigates in orbit directly over Brussels, a full regiment of his command ready to drop in combat shuttles, the rest of the special forces on standby… He snorted at the thought that if the Alliance decided to attack Russia and China, they could just change their preplanned deployments and strike at a moment's notice. Or rather, mop up what the frigates above Russia and China would have left standing after Priest opened with orbital bombardment.

Getting into the meeting room took getting scanned - three times. It was a bit of an overreaction, in his opinion, but he hadn't said so out loud.

This time, uniforms and suits had about equal numbers inside the room. Jack nodded at the guards inside the room, then headed to his friends, trying not to catch the attention of the assembled presidents and prime ministers. He wasn't in the mood to make small talk with politicians on a good day, certainly not now when everyone would want to use him to get more information about the Etherians' thoughts on the matter.

Exchanging greetings with his team and the Etherians, he took his seat. "Let's see whether or not we get to do a live-fire invasion exercise in Russia and China."

Catra and Glimmer chuckled, but Adora frowned at him. "Don't give Priest ideas! He already proposed that we have a volunteer 'act on his own and bombard all strategic assets of both countries'."

That would actually be very fitting, in Jack's opinion. Show the Russians and Chinese that if they tried to be clever with 'rogue soldiers acting on their own', they would suffer the same in return. And since it would be a clone acting, they could just have him change his name and claim they had punished him - no one would be able to tell the difference…

"Don't you get any ideas either!" Adora told him.

He gave her his best innocent smile. It didn't work, of course, but Glimmer and Catra laughed again. Then the meeting began, and everyone stopped laughing.

*****

"...and so while we are almost absolutely certain that the dealing with the Eurondans wasn't an unauthorised action by Generals Sidorov and Li, but a coordinated plot by at least parts of the governments of Russia and China, we don't have sufficient intel to say the same about the actual assassination attempts," Adora finished her report.

"Do we have proof of this?" the German Bundeskanzler asked.

"Not according to your legal standards," Glimmer replied. "But General Li refused to answer any question that could have shed light on that while admitting his own guilt."

"While under the effect of a magic spell," the President pointed out.

"No. Kira cast the spell on herself to detect truth, not on Li," Glimmer corrected him.

Jack had to suppress a snort when the President frowned at her. "It's not going to make a difference for the United Nations. They'll claim you can't trust magic."

"We could have a signed confession, witnesses and a recording of the Russian and Chinese leadership plotting together, and they

would claim we made it up!" Glimmer shot back.

She wasn't wrong, of course.

"Besides, neither the UN nor Russia and China pose any military threat to us," Glimmer added. "They cannot stop us from doing what we want."

"Which, according to our analysts, is what prompted the whole thing in the first place," the French Président pointed out.

"Well, that ship has sailed. They did it, and if we don't respond, they or someone else will try it again," the British Prime Minister said.

"We cannot let such an attack go unpunished," his Canadian counterpart added.

"And we won't," Adora said. "But what will we do? Wipe out the Russian and Chinese military and arrest their leaders?"

"That would throw both countries into chaos!" the Bundeskanzler protested. "Millions of civilians would be endangered from the internal strife alone, and other countries would be encouraged to take action against the disarmed nations!"

"And we don't have the forces or the political capital to occupy Russia or China, let alone both of them," the President added. "We would be dragged into an insurrection at once."

"So, they're holding their people hostage?" Glimmer scoffed. "All the more reason to not let them get away with this!"

"We could take out their strategic weapons," Catra suggested. "And their leaders."

"That would still leave them leaderless and with huge armies that will be dragged into the resulting power struggle. A new civil war in either country would be almost certain," the British Prime Minister said. "If we want to take out the leaders responsible for

the attack, we need to ensure that a replacement government is ready to take over."

One that will be seen as a puppet regime, Jack thought. With all that entails.

The President nodded. "And we'll still have to be on alert against asymmetrical responses like terrorists sponsored by either country."

"We can handle that with our updated scanners!" Entrpata chimed in. "Unless they have more alien technology like that gas they used."

"We need more information," the British Prime Minister said. "We need to know what is happening in the Russian and Chinese governments. If there are internal divisions that we could exploit. And who is responsible for the whole affair, of course," he added almost as an afterthought.

"So we do that. And we need to release the information we have so we can keep up the pressure on Russia and China," the President agreed with a glance at Adora and Glimmer. "And placate our own public."

Both nodded, although a little reluctantly.

"And we need to find those Eurondans and investigate them," Catra added.

Jack nodded. They hadn't found them yet, but with Lenkova cooperating, that was just a question of time. Sooner or later, the aliens would contact their 'partners' again, but this time, the Alliance would meet them - disguised as Russians and Chinese.

More spying. And no crushing the Russians or Chinese. For the moment, at least.

*****

Spy Games Part 6

Palais des Nations, Geneva, Switzerland, December 15th, 1999

"...and that's why the Russian and Chinese forces have been expelled from Stargate Command," the Canadian ambassador to the United Nations finished his explanation.

"You cannot unilaterally decide that!" the Russian ambassador protested - without being invited to speak, Adora noted.

But the Secretary-General didn't intervene. Well, it was an emergency session.

"It was not a unilateral decision, but the decision of the majority of the Stargate Command Council," the Canadian retorted.

Adora felt a little bad about having the Canadians defend the decision - they were not part of the Stargate Command Council. But the Stargate was on their territory, and they hadn't refused when asked by the Alliance.

"That is not in the purview of the Stargate Command Council!" the Russian snapped. "The Stargate is under the control of the United Nations!"

A lot of people present in the hall seemed to agree with that - Adora saw them nod, and the murmurs grew louder. And the Russian was correct - the United Nations had officially taken control of Earth's Stargate. Which, Adora reminded herself, had been the right decision since they represented Earth and the Stargate belonged to Earth as a whole.

On the other hand, removing the Russian and Chinese troops from Stargate Command was also the right decision. They had betrayed the trust of everyone else and endangered the entire planet. And they had tried to murder Catra and our friends, she reminded herself, clenching her teeth at the thought.

“Russian and Chinese forces have attempted to take control of the Stargate, engaged in secret dealings with an alien civilisation for unknown reasons and attacked Stargate Command with *chemical weapons*!” the Canadian replied. “This is not acceptable!”

“Lies and slander!” the Russian protested. “You have no proof of anything!”

“We have caught the culprits in the act!”

The Russian sneered. “You have captured our troops and refused to let our government talk to them - and refused to have the affair investigated by an independent commission! Your claims are baseless - mere lies made up to cover your blatant attempt to control the Stargate for your war!”

Adora managed not to wince at the loud agreement from half - or more - the ambassadors present that filled the hall.

The Canadian ambassador glared at his counterpart. “Your attempts to play the victim won’t work. We have proof of your attempts to control the base’s system and your attack!”

“Fabrications of your own!” The Russian scoffed, and more ambassadors cheered.

Adora clenched her teeth again. Glimmer had been right - the truth didn’t matter. The rulers of those countries ignored the proof presented to them.

But they couldn’t ignore reality, either.

The Canadian shook his head, but before he could go on, the Chinese ambassador spoke up - unprompted as the Russian one, which, Adora understood, was very unusual for him. “You do not have the right to take control of the Stargate,” he said. “That would require a decision by the United Nations Security Council.”

Which the Russians and Chinese would veto, of course.

Adora knew she should be waiting to be given permission to speak, but it seemed no one was following the rules anyway, so she stood up. She was the Supreme Commander of the Alliance, so this fell to her. "The Stargate is of vital importance for the Alliance's war against the Goa'uld. We cannot allow untrustworthy powers control over it - and we certainly cannot allow hostile forces control over it. Russian and Chinese forces have tried to take control of the Stargate and attacked Alliance forces, killing several of our soldiers. They also have made contact with unknown alien forces and used their weapons against us. Russia and China may claim that those were the actions of rogue forces, but even if that were true, it means that both countries sent untrustworthy, hostile forces to Stargate Command. In any case, we cannot and will not allow your forces to remain part of Stargate Command and threaten our forces and the war."

"You cannot do that!" the Russian ambassador yelled.

"We can," Glimmer hissed next to Adora.

"This is a military decision taken by Alliance command," Adora went on, ignoring the man. "The trustworthy elements of Stargate Command remain in control of it, fulfilling the United Nations mandate. It is up to the United Nations Security Council to decide if they wish to add more forces to Stargate Command."

No one had to say out loud that any decision that didn't please the Alliance would be vetoed.

"That's a blatant attempt to conquer Earth!" the Iranian ambassador spat.

Adora sat down as others chimed in despite the Secretary-General's attempts to restore order.

"The Stargate belongs to Earth - you said so yourself!"

"So much for the honour of the aliens!"

"You brought that on yourself!"

“Don’t play the victim!”

“Infidels!”

“We won’t let you attack us with impunity and then claim it was a rogue soldier!”

“Colonialists! We won’t let you take away our sovereignty!”

“Shame on you!”

“Shame on you!”

“Well, we know where everyone stands,” Glimmer commented to her.

Adora nodded. Not that it changed anything. Technically, the Stargate was still under nominal UN control. And the United Nations could move to add more countries to the Command Council - like India. But Adora was sure that every country picked would be vetoed by either Russia and China or the United States, France and Britain.

Of course, that also depended on what exactly had been going on with the Russian and Chinese governments.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 15th, 1999

“Just for record: I would like to ask for asylum. Before being deported back to mother Russia with others.”

Samantha Carter looked up from her laptop’s screen and at Iwan. “You won’t be deported.”

He shrugged with a grin. “Never know. Bureaucracy can make mistake. Even Western bureaucracy, as I found out here. And Russia demanded all people here back.”

They also protested against the removal of the Russian contingent at Stargate Command, but that was just performative - Sam doubted that even the Russians actually expected the Alliance to leave Russians near the Stargate. They would all go, except, possibly, Lenkova and Iwan, and that only because Adora and the other princesses had made it clear that sending either into 'protective custody' far away from Newfoundland wasn't going to happen.

Sam agreed with that stance. Both Iwan and Lenkova had made it clear where they stood in the conflict between Russia and the Alliance. The odds of either being a spy for Russia were too low to be taken seriously. Of course, a small voice in the back of her mind whispered, either could be working for a faction of Russia's rulers that wasn't currently in power. Lenkova had been trained by an intel agency, and Iwan would have had to pass a lot of loyalty tests to be allowed to work with top-secret alien technology…

She pushed the voice away. She wasn't going to become paranoid. And both would be closely observed by people watching out for spies, anyway. People like Wilkinson.

The FBI agent in question looked up from his own - far less advanced - computer. "No one's getting deported until we've finished our investigation. We still haven't found out what everyone involved knew."

"And we probably won't," Agent Paris added. "Most of them aren't talking. And those who do talk are only admitting the bare minimum."

"That's still confirmation for some claims," Wilkinson retorted. "And we have other sources for information to correlate their claims."

Paris raised her eyebrows. "That only works when people talk."

Wilkinson pouted in return. "They'll start talking when they realise that that's the only way they'll get out of a cell."

“Oh, compared to welcome back in Russia, Alliance cell is paradise. Or luxury hotel, at least.” Iwan grinned. “Siberia is very cold this time of year. And grave is colder.”

Sam glanced at Lenkova. Unlike everyone else in the room, the Lieutenant wasn’t working on anything. She was just staring at the TV in the corner. With the volume set as low as it was, Sam doubted that Lenkova was hearing anything.

Then again, it wasn’t as if there was any news on the TV - it was just loops of things they already knew, with banners at the bottom adding more ‘breaking news’ that was anything but breaking.

“They haven’t talked even when offered asylum,” Wilkinson said with a scowl.

“KGB picked spies well, much experience,” Iwan said.

Lenkova tensed, Sam saw. “Some will talk, eventually,” the Lieutenant said after a moment - without looking at anyone in the room. “Once they realise that they can get a good deal from the Alliance.”

“Wouldn’t they know that already?” Paris asked. “They’ve been working with us for months.”

“They take long time to trust, if ever,” Iwan said. “West was enemy for decades, so no trust there. And Alliance - Princesses - look too good to be true.”

And the Russians and Chinese at Stargate Command hadn’t worked with the Alliance except for selected individuals like Kira. “What about the Chinese?” Sam asked after checking that her computer was still working on her analysis.

“Same as Russians, just more secret,” Iwan said with a shrug.

“I wouldn’t say this. They’ve been more cooperative,” Wilkinson said.

"Marginally," Paris disagreed. "And that could be misinformation."

"We can check their claims." Wilkinson looked at Lenkova. "Once we can contact the Eurondans."

"I've given you all the addresses that I remembered," Lenkova told him. She hadn't looked at the man - or Sam had missed it.

"And we're analysing the data," Iwan said. "But all are empty planets so far."

"The Eurondans should contact us soon." Lenkova turned around. "They seemed very eager to make a trade deal when I saw them. But I didn't have much direct contact."

Eager - or desperate. Lenkova had mentioned that the Eurondans were fighting a war, though they hadn't revealed against whom. Nevertheless, they were potential allies. But with the Russians and Chinese banned from the Stargate, the Alliance would have some explaining to do to gain the Eurondans' trust.

Her computer beeped. Had it finished the analysis already? That would… No. It was a message from the spy bots they had placed around the Stargates used to contact the Eurondans. Oh.

"We've received a message from the Eurondans," she told the others present while she forwarded the message to the General, Adora and the rest of Alliance Command. "They've sent the address for the next meeting."

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 16th, 1999

"Finally, progress!" Catra grinned as she approached the Stargate. "No more waiting!"

"We've had diplomatic meetings around the clock," Bow said as he joined her in the ready area. "Adora and Glimmer are still in one. I

wouldn’t call that waiting.”

She shrugged in return. “Might as well be. We need intel, and we won’t get it talking to people who know less than we do.” Such as the rest of the Alliance leaders.

“Other countries have more sources than the Alliance has, at least in Russia and China,” Bow pointed out.

“That doesn’t mean their sources are worth any damn,” Catra retorted. “None of them had any clue about the Stargate plot, had they?” She cocked her head and flashed her teeth.

“Well, the British sources are mostly focused on that recently surrendered city,” Bow said. “Hong Kong.”

Probably planning to take it back, Catra thought. With just a single corvette in orbit, the British could take out the entire Chinese military, though it would take a while. And they had already two operational and launched the third and fourth. There were news reports of protests against the Chinese rulers in the streets as well. “I don’t think those sources will tell us who is responsible for the attack on us,” she said. “And I don’t think the Americans are any better off.” It seemed no one had any real idea what was going on amongst the Chinese rulers.

She eyed the Stargate. Sam and Entrapta had assured them that the computers were now clean and safe, and Catra trusted them, but… she still felt a bit uneasy about the trip. Not that she would show it, of course. But knowing that the Russians and Chinese had infiltrated the entire base so thoroughly that they had been able to fool everyone wasn’t a comforting thought at all.

“We don’t know anything about the Eurondans either,” Bow went on. “Well, nothing except that they are humans - or look human - and want supplies in exchange for technology because they are fighting a war.”

Catra nodded. “Heavy water, food, and other raw materials.” That meant that they still had the production capacity to use the

resources, so they weren't reduced to fighting a guerilla war with whatever supplies they could scrounge up. But it also meant that they had lost whatever access to resources they had before, so their situation wasn't sustainable.

"But we don't know who they are fighting. They apparently never told Lenkova." Bow glanced at the Russian - or was that ex-Russian? - standing a bit to the side.

She was also staring at the gate. As the only one who had met the Eurondans before who wasn't currently in a cell, she had to come with them, but it didn't seem as if she was looking forward to the trip. Probably still feeling guilty about ratting out the Russian plans. If she had heard them - they were close enough for it, but the gate room was noisy as usual - she didn't show it.

Whatever. "Can't be the snakes," Catra said. "They would have bombed the planet already." And if the Eurondans had spaceships, they could get those resources themselves.

"They could have the technology to hold them off," Bow objected. "They do have energy shields."

That was a possibility. On the other hand… "They didn't mention the Goa'uld, as far as we know," Catra said. "They would have if they were fighting them, if only to check that Earth hadn't any dealings with them. Or to warn us."

Bow nodded in agreement.

Catra was about to comment further when her ears twitched - she knew that voice! "Adora's coming!"

"Yes, she… Oh." Bow blushed a little. "You mean she's arrived."

"Yes!" Catra was already moving towards the main door. "Hey, Adora!" she called out as soon as it opened.

"Catra!" her love beamed at her, and they embraced. And kissed.

Glimmer and Bow greeted each with more restraint, not that Catra cared. They hadn't been separated for days because of a stupid plot by stupid people.

"So, done with the meeting?" Bow tried to make conversation.

Glimmer rolled her eyes, Catra saw as she released Adora. "It's a damn mess with China. The British are 'concerned' about the Hong Kong protests and a possible massacre of the protestors by the Chinese army, and the Americans are worrying about the Taiwanese pushing for independence - or taking over China. They don't seem to be able to settle on either. And we didn't even get to meet the exiled ruler of Tibet."

"Oh?" Catra cocked her head.

Adora sighed. "It's a mess."

"China has a lot of problems that were only kept in check thanks to their military," Jack added as he joined them. "Internal and external. Now that their army has been rendered irrelevant, those problems are growing more urgent."

"Their military was obsolete the moment we arrived," Catra pointed out.

"Yes, was." Jack smiled toothily. "But it wasn't that obvious, that blatant, until we kicked them out of here. China could still claim they were a big boy in politics, powerful enough to get access to the Stargate with us. Same as Russia."

Catra nodded. And now that they had lost both the access and the image of power that went with it, everyone who had been holding back out of fear was… no longer holding back.

"If they lose Tibet and Hong Kong, that's going to have consequences for their government. And if Taiwan declares independence - or starts trying to influence mainland China's politics - and the protest movement from ten years ago starts up again, all bets are off."

Jack didn't seem to be too unhappy about that, Catra noted.

"Whatever!" Glimmer said. "I am sick of hearing about China or Russia. We have a meeting with the Eurondans to make!"

"Right." China and Russia could wait.

*****

Gate Area, PX-812, December 16th, 1999 (Earth Time)

Jack O'Neill stepped through the wormhole, checked for threats - nothing came up - and took a deep breath. The air smelt just slightly alien but in a familiar way. Oh, he had missed that feeling, that smell, of exploration. Of course, if he commented on that, Carter would claim it was just his imagination since her drone's sensors had not detected anything alien in the air. And she had been rather thorough - after the poison attack by the Chinese, Entrapta and Carter had adjusted their scanner.

But feeling nostalgic for the days when he had been a mere Colonel, going on missions with SG-1, wasn't why they were here. "So, let's check the receiver!" he said.

"Yes, sir." Carter moved to kneel down next to the plain box on the ground at the side of the ramp.

"You left it out in the open like that?" he asked, looking at Lenkova.

"Yes, General. The odds of anyone stumbling over it this gate were considered too low to bother," she replied with a slight frown.

Whether that was aimed at her former superior, who ordered it, or at herself for following the order, Jack couldn't tell. "Well, the Eurondans stumbled on the address here, as did we."

"Yes, General." She grinned briefly.

It was annoyance at her superior, then, Jack decided.

“Perimeter secure,” Isa reported.

“Orbital scan clean,” Entrapta added from where she was sitting on Emily. The big bot’s upper body was rotating back and forth as it kept scanning the sky, but that didn’t seem to bother Entrapta.

Catra and Bow were looking at the grass around them - and on the ramp. “It doesn’t look like anyone travelled here since the Russians’ last visit we know about,” Bow said.

“Or they cleaned up after them,” Catra added.

Bow nodded in agreement.

Jack saw Carter stand up next to the box. “There is no new message, and the receiver’s memory shows no sign of tampering, sir.”

That meant that the meeting with the Eurondans was still on.

Jack looked around. PX-812 was deserted. Both literally and figuratively, as Daniel said; the Stargate was in the middle of a sandy steppe, not quite a desert but getting there. “Did you find anything here?” he asked Lenkova.

“No, General. The native flora and fauna is rather primitive. No sign of civilisation.”

Jack nodded. That had been in her briefing. “Some planets are a bust like that. Can’t always hit the interesting ones.”

“There were plans to settle it,” she added. “But the lack of large sources of fresh water, especially near the Stargate, made that proposal uneconomical.”

“You could drop ice asteroids on the planet,” Entrapta chimed in, walking over to them on her hair. “That wouldn’t be enough for an ocean, of course, but you could make a great lake. That would

sustain a kingdom or two. Maybe three if you use genetically adjusted plants that don't need as much water. Perfuma created some for the former Fright Zone."

"We don't have spaceships in the system," Carter reminded her.

Entrapta nodded. "Oh, right. And it's a bit far for a trip. But still faster than setting up a factory here and building a spaceship to get ice asteroids, I think."

Neither Russia nor China had the technology to build spaceships on Earth, so they wouldn't have been able to build them here either, Jack knew - checking the space programs of the two countries had been the Alliance's first priority back home - but the Alliance could do either. And he didn't doubt that a number of people were already planning to build such projects for after the war.

"Speaking of water," Daniel spoke up. "The Eurondans want heavy water, you said?"

"Yes," Lenkova replied.

"I wonder why they don't set up a production facility off-world," Daniel went on. "This planet is not suitable for that, but there are others."

The Alliance Council had gone over that before the mission. They didn't have enough data to draw conclusions. They could speculate, though.

"They might not know a suitable planet," Carter said.

"Or they lack the resources for such a project," Catra added. "It might take everything they have to stop their enemy from winning the war."

That would make the Eurondans desperate. Something the Russians and Chinese would have exploited or planned to exploit.

The Etherians wouldn't do that, of course. And that might help earn the aliens' trust.

Though, in Jack's experience, people who were waging a bloody, lengthy war tended to be a lot more distrustful, even paranoid, than people who were at peace. Of course, as Daniel would say, they couldn't judge other cultures according to their own experiences and biases.

Well, they would see. It was almost the agreed - or announced - time for the meeting.

As if the Stargate had read his mind, the Wormhole started forming.

"Showtime," Jack said, grinning. "Be on your best behaviour - we don't want to spook them!"

He heard several snorts while the wormhole stabilised. Then, everyone grew serious as the first figure stepped through the gate.

*****

Adora looked at the man who had appeared on the ramp. He was tall - well, taller than her, about the same height as Jack - and wearing a dark green-brownish uniform. And he was armed with one of those Eurondan energy guns - his hand went to its grip as soon as he saw Adora and her friends standing at the bottom of the ramp.

"Tralan." Svetlana took a step forward, nodding at him.

"Lieutenant Lenkova." He didn't draw his weapon. But he was very tense, Adora could tell. Especially when he glanced at her - no, at Catra. And at Emily and Isa. "I expected other people."

That was her cue. Adora smiled widely at him and walked a few steps towards the ramp, past Svetlana. "Hello. I am Adora - She-Ra, Princess of Power. I am the Supreme Commander of the

Alliance against the Goa'uld." She gestured at her friends. "This is Queen Glimmer of Brightmoon, Princess Entrapta of Dryl, General Jack O'Neill, Major Samantha Carter, Tech-master Bow, Dr Daniel Jackson, Sha're, Catra and Teal'c. You already know Svetlana."

"I am Tralan. I represent the Eurondans." He glanced at Svetlana, then back at Adora. "We expected to meet our kindred from Russia and the Chinese."

Adora let her smile slip a little. "We know. But those Russians and Chinese officers who made a deal with you were disavowed by their countries and declared rogues." Which they had, even if Adora didn't believe their claims.

"What?"

"Yes. According to the Russian and Chinese leaders, Generals Sidorov and Li acted on their own, and for their own profit, not for their countries." That was all technically true, Adora knew, but she still felt like a liar presenting it like this.

"They… deceived us? They promised to trade us dearly needed supplies in exchange…" Tralan grew even tenser. No one else had joined him so far - according to Svetlana, the Eurondans usually had a larger group but only followed through once their advance party gave them the go-ahead.

"Apparently, they deceived everyone, including their own soldiers like the Lieutenant here." Jack nodded at Svetlana. "They tried to kill us as well when it came out, but that didn't work out for them."

"I see."

Adora gave him her best smile. "But we heard you were fighting a war and in need of help, so we came to see what we could do for you."

"Without exorting your technology from you," Glimmer added.

“Yes!” Entrapta chimed in, beaming at Tralan. “But if you want to share, we won’t turn you down! You’ve got some nice technology - we got some samples from those who attacked us - and the data compression you managed is impressive. And that poison was quite advanced as well.”

“Ah…” Tralan smiled weakly and looked a bit confused. But that was normal when people met Entrapta for the first time.

“Yes.” Glimmer nodded. “So, we’d like to meet your leaders to discuss this. We don’t know what enemy you’re fighting or your circumstances, so we don’t know how we can best help you.”

“I see. I have to inform our leader about this. You have told us a lot, and he must decide how to proceed.” Tralan slowly said.

“At least they don’t have to vote on it,” Adora heard Glimmer mutter.

“We’ll be here all day if you need additional information,” Jack said. “Seeing the sights, admiring the view…” He turned his head to look at the sandy dunes around them.

“Jack!” Daniel hissed through clenched teeth.

“Good.” Tralan nodded, then pulled out a communicator and whispered into it.

“He’s telling them something came up, and he needs to return,” Catra said in a low voice.

The wormhole collapsed, and Tralan walked over to the D.H.D. to dial the home address. The wormhole formed soon afterwards. “I’ll be back,” he said before stepping through.

“Do you think that’s their home address? Or a temporary base?” Entrapta asked once the wormhole had collapsed again.

“It is the same address they used in our last meeting,” Svetlana said.

“It would be smart of them to route travel through a temporary base on another planet rather than risk revealing their home address,” Glimmer said.

Adora nodded in agreement.

“But not everyone always does the smart thing,” Catra pointed out.

“See: Russia and China,” Jack added. “But we shouldn’t assume that this is their home address.”

“Well, if we are to help them, we’ll have to visit their home world,” Catra said. “Can’t just act without decent intel.”

They could hand over supplies, of course, Adora knew. But they could help much better if they knew more. And it was always best to visit the people you were dealing with. Well, often, at least. “In any case, this went pretty well, I think,” she said.

“We’ll see,” Jack retorted. “He wasn’t happy to see us.”

“He was very surprised by the presence of Catra and Isa,” Daniel said. “It didn’t seem as if he had met aliens before.”

“He also looked at Emily a lot,” Bow added. “But that might just be because he wanted to guess how advanced our technology was.”

Adora nodded. That sounded like a good guess.

“He also glanced at me, although covertly,” Teal’c commented.

Daniel frowned. “Really? He might have encountered Jaffa before. Or he recognised the symbol of Apophis.”

“Well, if they are fighting the Goa’uld, it shouldn’t be hard to earn their trust,” Glimmer said. “We just have to defeat the Goa’uld attacking them.”

While Adora nodded, she couldn't help feeling that it wouldn't be so easy. "Let's build a camp," she said. Just in case.

*****

Samantha Carter was halfway through a data analysis for a side project when the Stargate activated again. She quickly closed her laptop and got up while Emily placed herself in the middle of the group. Just in case the Eurondans overreacted - they didn't know what the Russians and Chinese had told them about the Alliance. If they attacked through the Stargate, trying to take them hostage…

But when the wormhole stabilised, Tralan stepped through, followed by an older man, a younger woman and several younger men. Probably guards, Sam thought - they stayed back and kept an eye on both the Alliance delegation as well as their surroundings. All Eurondans were wearing the same uniforms, though that wouldn't be unusual for a people at war.

"Greetings," the older man said, smiling as he stepped off the ramp. "I am Alar, the leader of my people. This is Farrell, my second-in-command. You already know Tralan." He didn't introduce the other Eurondans, so Sam had been right - they were guards.

Adora returned the smile and introduced herself and everyone else.

Alar nodded at everyone, then looked at the camp they had erected. "Are you taking possession of the planet?"

"What? No!" Adora blushed. "That's just a temporary camp," she said.

"We didn't want to build an actual base," Entrapta chimed in. "Or we would have built walls and underground shelters. But we had this new design to test, so… An actual meeting room is better than just standing in the open, right?" She beamed at Alar.

‘Room’ was a bit optimistic. It was meant for temporary bases on safe planets and was more like a tent, just with sturdier walls and roof. It wasn’t an actual prefab building, much less a shelter, though they had Emily’s shield for protection. All in all, it was, in Sam’s opinion, far less impressive than what the Alliance could build and had built for meetings. But it would serve well enough and hopefully not make them appear belligerent.

“Indeed.” Alar briefly chuckled. “We’ve been reduced to staying in our underground defence facility for years, so we’re not used to staying in the open any more.” He looked at the sky. “Though it is comforting to see a sky above us where we don’t have to fear bombers attacking us.”

It sounded as if they were in a desperate situation, Sam noted. Alar might be exaggerating their plight, though that would weaken his position in potential negotiations. Unless the Russians and Chinese had let him know how the Etherians felt about helping people in need. Then again, if they had, and if the Eurondans had believed them, wouldn’t they have tried to contact the Alliance?

The General would say that I’m starting to think like a spook, Sam thought with a slightly rueful smile as they entered the meeting room.

Farrell’s eyes seemed to linger not only on Catra and Isa but also on Teal’c. Like Tralan before. If Teal’c hadn’t mentioned it, she might not have noticed that. Oh - Farrell seemed to glance at Bow and Sha’re as well. That seemed a little weird.

“Please take a seat!” Adora gestured at the row of chairs lined up on one side of the table in the middle of the room.

“Thank you.” Alar smiled at her and took a seat. Farrell and Tralan followed, flanking him, and the guards took up positions at the back.

Adora cleared her throat. “So… We’ve heard you’ve been looking for help because you’re fighting a war you’re losing.”

Alar nodded. “Yes. A war against an enemy that already controls the majority of our landmass and has driven us underground with constant bombing attacks. For decades, we have been holding our own thanks to our superior technology, protected by our defence field, but we lost access to the resources we need to keep defending ourselves. Sooner or later, we will be at the mercy of our foes.”

That was a very frank opening, Sam noted. And it was pretty much a perfect pitch for the Etherians. For some of them, at least, she amended her thought - Adora, Bow and Entrapta seemed very empathic. Glimmer and Catra, less so.

“Who are you fighting?” Glimmer asked.

Alar winced. “Another nation. We’ve coexisted with them for centuries, but they kept expanding, breeding indiscriminately. They showed no respect for our culture, our values, our way of life. War became inevitable.”

“We call them ‘Breeders’,” Farrell added.

“That’s not what they call themselves, I assume,” Daniel spoke up.

Alar winced again. “They call themselves the ‘Alliance’.”

“Oh.” Adora grimaced - as did Glimmer. “That’s…”

“...an unfortunate coincidence, as I understand,” Alar said with a slight smile. “But when the Russians and Chinese told us about an Alliance taking control over the majority of their world, it sounded familiar - and concerning - to us.”

Yes, Sam could understand that. And the Russians and the Chinese would have played that coincidence up.

“And what do you call yourselves?” Daniel asked.

“We’re the Eurondan Nation,” Alar said. “Though it sounds much grander than it is, now that we have been reduced to sheltering in our underground facility and fending off the attacks of the enemy with our aero-fighters.”

“I am the first to say that airpower is key to victory on the battlefield,” the General said. “But air power alone generally isn’t enough to control significant territory. You need boots on the ground for that.”

Farrell shook her head. “The surface of our world has been poisoned since the start of the war. It is so hostile, ground forces cannot operate effectively there and survive - the enemy found that out early on.”

Sam drew a sharp breath. The surface of their world was poisoned to that degree? That was horrible.

“How do you survive?” Adora asked with a gasp.

“By rationing our resources and living on hydroponically grown yeast,” Farrell replied.

Adora shook her head. “We can change that. We can heal your world.”

“Perfuma can create plants that filter out the poison from the soil and the air,” Entrapta said. “She did so for the Fright Zone.”

Adora nodded. She was probably pondering using a boost from returning the magic to clean up the planet.

“And we should be able to ship in food,” Bow added.

“But first, we’ll have to end your war,” Glimmer said.

“If you are as powerful as we’ve heard - and as you claim - then the enemy won’t be able to stand against you,” Alar said. “Please, save us. Please, help us destroy them.”

“Destroy them?” Glimmer shook her head. “It sounds like you’ve already almost destroyed each other and your world.”

Sam agreed with that assessment. It sounded like an apocalyptic war.

“We had no choice but to fight if we wanted to survive,” Alar said. “The enemy is ruthless. If you leave them be, they’ll attack us again as soon as they can.”

Sam felt forced to agree. If they had fought for decades, wrecking their world, then it was unlikely that they could make a lasting peace.

Adora and the other Etherians, however, clearly disagreed. Sam could tell.

“We’ll make them see reason,” Glimmer said.

Alar didn’t seem convinced. “All we need are supplies. Even just deuterium oxide to fuel our reactors will be enough to save us,” he said. “Everything else, we can source or substitute.”

“And then you can defeat your enemy?” the General asked.

“Yes.”

“Then why did you lose access to this resource in the first place if having access will be enough to win?” The General tilted his head to the side and spread his hands.

“An unfortunate combination of underestimating the enemy and overestimating our own forces,” Alar said with a frown. “A mistake which won’t be repeated.”

“Because you’ll be making new mistakes?” Catra cut in with a snort. “You can’t assume everything will go as planned.”

“The enemy gets a vote too. That’s why he’s the enemy,” Bow added. “Or so the saying goes.”

Sam glanced at the General - he had snorted at that - but he didn't comment any further.

Alar's frown deepened for a moment before he focused on Adora. "All we need are supplies. We can handle our war and do not wish to distract and divert you from your own struggle."

"We can handle the distraction," Glimmer said, a bit flippantly in Sam's opinion.

"And if it serves to end a war and save lives, then it's the right thing to do." Adora nodded and smiled confidently at the Eurondans. "Trust us, we can do it."

"Can you?" Farrell asked. "In order to operate on our world, you would have to use the Stargate to deploy and supply your forces. As we understand it, that would be a significant effort even for your Alliance and hinder you from using the Stargate for much of anything else."

That was true. Sam had run the numbers - any large-scale deployment through a Stargate would require a massive effort to sustain it long-term.

"We don't need to deploy forces through the Stargate. We can send a task force with frigates," Adora retorted. "But we don't need to deploy an army right now. All we need is to talk to your enemy."

Daniel nodded. "A neutral mediator might be all you need to end this war."

They were too optimistic, in Sam's opinion. A bitter war over decades generally couldn't be solved with some mediation. But that didn't mean you shouldn't try. And they needed more data. All they knew about this war was what the Eurondans had told them so far. They didn't even know where Euronda was located or its gate address.

“It would be futile. The enemy cannot be reasoned with. We tried that, to avoid the war, but they would not listen to us.” Alar shook his head. “Please. All we need to save our people is fuel for our reactors. You do not need to concern yourselves with our conflict any further. And in exchange, we can offer you our technology. Which is, as I understand, in parts even superior to your advanced technology.” He smiled at Adora. “We do not wish to drag you into our war to fight our enemy. We merely wish to trade fairly.”

Adora glanced at Glimmer and the General before turning back to Alar. “But we could end the war and help you restore your planet. Save lives! Surely that would be better than just letting you fight on.”

“And you wouldn’t have to risk underestimating your enemy again,” the General said.

“It is a risk we are willing to take,” Alar retorted. “It is our world. Our duty.”

“And what if we won’t help you without at least trying to make peace first?” Glimmer asked.

Alar openly scowled at that. “It seems that the Russians and Chinese told us the truth - you attempt to take control of our world and enforce your own rules on us.”

“What? No!” Adora blurted out. Then she blinked. “Not like that, not really. But you can’t expect us just to send you supplies for your war!”

“And what about your people?” Glimmer asked. “We offer you peace and a restored world. Why would you want your people to suffer, hiding underground, if they could return to the surface to live in peace?”

“Most of our people aren’t suffering,” Alar shot back. “They’re in stasis, awaiting the end of the war.”

Adora gasped. “You’ve put your people in stasis?”

Sam stared at him.

“Oh! To save on resources? That seems quite a clever solution!” Entrapta nodded. “As long as you don’t need more resources to keep them in stasis than supplying them while awake would be, of course. Or if you start running out of resources to keep them in stasis, which I guess is the problem if you are running out of fuel for your reactors. Unless you don’t need power for this? And people in stasis cannot help you in your war effort. Though if you’re already forced into an underground bunker, I guess that’s not an option any more because you lack the production capacity to use the additional manpower.”

Sam winced. Entrapta was correct, but the way she said it…

Alar pressed his lips together.

“Do you really want to risk losing the war?” Daniel asked, leaning forward.

“You do not understand,” Alar replied. “The Breeders cannot be reasoned with. They will not change their ways.”

“Then help us understand!” Adora snapped. “We want to help you, but we won’t, can’t, just send you fuel.”

“Why not? All we ask for is a fair trade,” Alar shook his head. “We had a deal with the Russians and Chinese, or so we thought. Will you keep us from looking for other countries on your planet willing to trade with us?”

That was a delicate problem. The Alliance could block such trade deals, but they were supposed to do so only to keep Earth and the Alliance safe. Of course, after the attack by the Russians and the Chinese on Stargate Command, that wasn’t as much of a hurdle as it could have been.

“We won’t block you from finding trade partners - provided you won’t endanger Earth and the Alliance,” Glimmer said. “But your

technology was used against us once already. Without further information, we can't let you do that."

"Please," Adora said. "We want to help you. Just let us help you."

"Think of your people," Glimmer added.

Alar scowled again but slowly nodded. Farrell drew a sharp breath but, after exchanging a glance with Alar, pressed her lips together and didn't say anything.

*****

Spy Games Part 7

Gate Area, PX-812, December 16th, 1999 (Earth Time)

Catra narrowed her eyes. For someone who had something to hide - and she was sure that the Eurondans had something to hide, even if she didn't know yet what it was - Alar had given in a bit too easily. Was he so desperate for supplies? Or was he confident he could keep them from discovering his secret? Or was he trying to betray them like the Russians and Chinese had done? He had been in contact and about to make a deal with them, after all, and they had been his only sources of information about Earth and the Alliance. Who knew what they had told him?

But Adora was smiling at him. "Thank you! We can help you - we can restore your planet's surface once we know what's wrong with it, trust us!"

"Yes!" Entrapta chimed in. "If plants that filter the poison out of the soil and air won't work - or take too long for you - Adora should be able to use her magic to remove the poison. At the very least, a combination of her power and magitech should achieve that result, I think. Although… You said you would restore the surface once the war was over, so you probably have made plans to deal with the poison already, right?"

Alar blinked, then nodded. "We have some plans, yes. In the worst case, we'll wait it out. Once we are safe from our enemies, we have all the time and resources we need to deal with this."

Entrapta gasped. "You want to wait it out? But you said that it lasted for decades already! Oh, wait - is it close to breaking down naturally?"

"It will take a long time to break down, but with our stasis technology, we have the time to wait until we can reclaim the surface and live in safety and peace again," Alar replied. "It is but

a small sacrifice compared to what others have already made for the war."

"But you won't have to make this sacrifice," Adora told him. "Trust us, we can help you. But first, we need to end the war."

"Well, offering to restore the planet's surface should be a great incentive for your enemies - the Eurondan Alliance - to agree to end the war," Glimmer said.

Alar frowned at that. "I doubt that they will agree to make peace. And if they do, I doubt that it will last. Until the Breeders change their ways, they will always threaten us."

"People can change!" Adora said, shaking her head. "We know that - we have fought against the Horde for decades, and then we made peace, and now we are allies!"

Catra winced. Peace on Etheria hadn't come until the Horde had changed - well, dissolved would be a better word - once Horde Prime had arrived. And at that point, they had already been pretty much defeated militarily. Of course, if Horde Prime hadn't arrived, the Horde could have fought on with the forces left even after the core of the Fright Zone had been taken by the Alliance, but they would have lost the initiative and the core of their logistics, so the odds wouldn't have been great… She shook her head. Somehow, she doubted that the Eurondans would settle things like the Princess Alliance had.

"But with the Stargate, you can expand to other worlds," Daniel said. "You do not need to compete for your world - not when many uninhabited worlds are left to be settled!"

"We haven't found a world with the resources we need so far," Farrell said. "And we tried all the addresses we found with the gate."

"And we won't abandon our home. Eurondan is our world; We've been fighting for it for decades. To leave would betray all the sacrifices of our people," Alar added.

“You don’t have to leave,” Daniel retorted. “But you won’t need to compete for resources any more.”

“We can find a world for you that’s not inhabited,” Adora said.

Catra suppressed a snort. That was easier said than done, in her opinion. If they found such a world, without any native civilisation on it, then Earth would also want it.

“Though if you manage to survive underground, then you shouldn’t have any trouble once the surface is habitable again,” Entrapta said. “Especially if we give you a few plants optimised by Perfuma for your planet. Or improved hydroponic cultures - I am sure we can come up with one that makes tiny food!”

Catra snickered at the expression on the Eurondans’ faces. Getting used to Entrapta took a bit.

Adora cleared her throat. “Anyway, let’s focus on ending the war and restoring your world!”

“Yes,” Alar said with a smile that looked as honest as the Russian ambassador’s, in Catra’s opinion.

“Good. So, let’s visit your planet now?” Jack said.

Catra’s ears twitched as she heard Daniel whisper: “Jack! That’s not how you make what is a state visit!”

“But it is a good way to prevent a trap,” Jack whispered back while smiling toothily at the Eurodans.

Catra agreed; it would make it harder for the Eurondans to lay a trap, at least. Sure, they might scrounge up an attack once they were on their planet, but that could be dealt with. Especially if the Eurondans had no idea what Adora could really do.

Although they hadn’t reacted to Entrapta mentioning Adora’s magic, she remembered. That wasn’t a good sign.

Glimmer, though, smiled. “Yes. Unless you wish to prepare for a bigger visit - we could take a ship to your planet in that case.”

“But we…” Entrpata, probably about to say they didn’t have Euronda’s coordinates, was interrupted by Sam whispering to her.

“That won’t be necessary,” Alar said. “You are welcome to visit now. Although, as you would expect, we cannot offer much in the way of hospitality due to the demands of the war.”

“That’s not a problem. We can bring our own food,” Jack replied.

“Jack!”

“General!”

Catra snickered.

*****

Gate Room, Euronda, December 16th, 1999 (Earth Time)

“Seen one underground bunker, seen them all,” Jack O’Neill muttered as he stepped down the ramp in - presumably - the gate room of the Eurondans. The Eurondan Nation, he corrected himself. This was just one country on a planet.

“I’m not quite sure that’s correct,” Daniel objected on Jack’s left side. “There are stark differences between the architectural styles of different cultures, even when it comes to utilitarian buildings such as bunkers. And when it comes to the gate area, we’re literally talking about the face a world presents to its visitors.”

Jack tilted his head sideways, then made a point of looking around. The room was neither large nor well-lit and lacked any decorations. In fact, it looked pretty new. Then again, Alar had said they had recently discovered the Stargate when expanding their bunker.

“We relocated the Stargate to this room after contact with the Russians and Chinese,” Farrell said. “They impressed upon us that the gate presented a security risk and should be housed accordingly.”

“That explains the guards,” Jack said, nodding at the squad of Eurondans forming a half circle at the back. They looked pretty interchangeable, Jack noted. Alert, but their attention seemed split between their leader and Jack’s group. Not much experience handling ground combat then - not unlike an airman fresh out of basic. Jack almost snorted at the comparison when he realised that the Eurondans were like an Air Force with a country, according to Alar.

“The main defence of the gate is a defence field we can raise in the case of an unauthorised activation,” Farrell explained, pointing at a large device in the corner, with another guard behind a console next to it. “We adapted this after we heard about your iris.”

The Russians and Chinese had been talking shop, then - sharing Stargate Command’s experience. Jack hadn’t expected them to be that forthcoming with knowledge, even if it was knowledge the Air Force had earned before the two countries had forced themselves into Stargate Command. On the other hand, they might not want to risk the Goa’uld taking the planet before they had gotten all the technology they wanted.

“Oh! Is that a projector linked to your main shield generator, or does it form a defence field independently? Is it linked to your main generator, or does it have an autonomous power supply?” Entrapta was halfway to the thing before Carter managed to stop her.

Farrell raised her eyebrows at that but didn’t comment. The guards, though, looked a little twitchy. As did Tralan.

Alar, on the other hand, smiled at their group. “Come, I’ll show you around!”

The quick tour didn't much to refute Jack's impression; they passed through narrow tunnels that lacked any decor - and were pretty dark. Either the Eurondans were saving power or lacked the resources to add more lightbulbs. Or both.

But the vault Alar showed them - over the silent objection of Farrell; Jack recognised that expression when the Eurondan leader made a detour - was another thing. Huge, quite well lit - and full of thousands of 'stasis pods' stacked on each other. And each contained a Eurondan, waiting in stasis for the war to end.

Jack felt a shiver run down his spine at the sight. His friends looked queasy as well.

"This is what we are fighting for: Our people. For an entire generation, they have been asleep. They trusted us with their lives and future when they went into stasis," Alar said. "Look!" He walked over to a console and hit a few keys, flipping through half a dozen pictures of frozen people.

"Oh! Is this stasis like stopping time? Or slowing it down? Or did you freeze them?" Entrapta peered at the display, then pulled out her tool. "Oh! They are in a sort of suspended animation, I think - right Sam?" She held the tool out to Carter.

Carter flashed a quick, apologetic smile at Alar before glancing at the recorder-scanner-thingie. "Yes, it looks like suspended animation. Like hibernation," she added for those who weren't up to date on the latest technobabble.

Alar nodded. "Yes. Their bodies have slowed down, and they barely age during stasis."

"But they do age," Entrapta said. "It's not perfect stasis. So, you can't fight your war forever."

"We are aware of that," Alar said. His smile slipped a little.

"Oh, shouldn't I have said that? Sorry! It's still a bit hard to know when I'm supposed to talk about facts and when not. It's pretty

confusing."

"Confusing?" Alar blinked.

"The social coding about facts and data," Catra explained - or tried to; Alar didn't seem to follow her.

Adora cleared her throat. "Well, that's varies from culture to culture. But let's talk about how we can help you." She glanced at the rows of sleeping people. "Perhaps in a meeting room?"

Alar nodded. "Oh, let me show you our command room first!"

Ah! Jack perked up. Whether that was their actual command centre or just a fake one, this was bound to be interesting!

*****

Underground Base, Euronda, December 16th, 1999 (Earth Time)

The Eurondan command centre felt pretty packed, in Adora's opinion. A dozen soldiers were staring at screens and brightly lit map tables, barely looking up when Alar entered with Adora and her friends in tow.

"From here, we run the defence of our people!" Alar announced. "Our entire forces are coordinated here."

He didn't seem to mind Entrapta peering at the tables and screens, so Adora took a closer look as well. This was of professional interest, after all. The tables displayed a map of what Adora assumed was the main continent of Euronda. It was easy to see where the territory controlled by the Eurondans was - the entire area, in the centre of the continent, was covered with markers while the surrounding areas had much fewer markers. Their reconnaissance capability must be limited, she thought. They probably had no orbital assets to spy on their enemies' main areas.

Or that's what they want us to think, a small voice in the back of her mind which sounded like Catra's whispered.

But it didn't look staged to her. The people working here seemed genuinely busy and focused - few of them snuck glances at Adora and her friends. Entrapta, her hair lifting her up so she could look over the shoulders of the soldiers at the screens, and Isa, hanging back, her machine gun held loosely, drew the most attention.

"Airstrike detected!" a Eurondan announced.

A jolt seemed to go through the assembled soldiers as the screens flickered and the symbols on the tables changed.

"Bombers incoming."

The enemy symbols were close to their territory - if Adora had guessed the scale of the maps correctly, at least. Another sign that their sensor range was limited. And the poisoned surface would make scouting missions difficult. Surface attacks were impossible, according to Alar. Still, with both sides apparently focusing on the air war, a small surface scouting element might be effective if they had protective suits and the supplies to operate in a poisoned environment.

"Launching interception."

"Come!" Alar said. "Let me show you how we defend us against their bombers!"

He led them to the room next to the command centre - or the other half of the room; there was no clear separation. Several people were sitting in large chairs lining the wall, with some transparent canopies covering their upper bodies and consoles in front of them.

"These are our remote flyers. With them, a single pilot can control an entire formation of aero-fighter," Alar announced.

Adora blinked. So, the command centre wasn't just for the strategic control of their forces - they operated their forces directly from here as well? That was… unique. Not possible for the Alliance forces, though it presented advantages. You could use your best pilots for every attack, shuffling them around. But it also made them vulnerable to a decapitation strike - unless you had alternatives.

"Oh! How do they work? Radio transmitters, no doubt, but the signal density… Look, Sam! That's a magnitude above our own remote controls, even taking the superior data compression into account! That must be a direct neural interface."

"Correct," Alar said. "The aero-fighters are controlled directly by thought. The manual controls are a mere backup. Each pilot controls an entire squadron."

"Oh! And are the aero-fighters able to act autonomously?" Entrapta asked, beaming at him. "Like bots?"

"They cannot execute complex actions such as fighting," Farrell told her. "But they can stay aloft on autopilot. Emergency landings are possible as well, though unnecessary since if the autopilot engages, we can easily have a pilot take control of them for landing." He smiled. "Do you wish to try them out? The controls are intuitive. If you have any piloting experience, you will find them easy to use and effective to fight."

Adora blinked again. "You want us to take control of your craft in the middle of an attack?" He trusted them that much? No, he wanted them to fight their enemy!

Glimmer shook her head and gave Alar her 'I want to tell you what I really think, but I have to be polite right now' smile. "That would be considered an act of war against your enemy. We're here to end the war, not take sides in it."

"Nice try," Adora heard Catra mutter next to her.

Alar remained unfazed. “Of course. I apologise. You seemed so interested in our technology, I merely thought to let you try it out in actual action.” His own smile turned rueful. “We’ve been fighting this war for so long, it seemed normal to me, and I did not think about the political aspects of my offer.”

Catra softly snorted, and Adora agreed; she didn’t think this had slipped Alar’s mind. He was the leader of the Erondans, after all, and used to politics.

“Enemy bombers destroyed,” another soldier announced.

“Ollan is one of our best pilots,” Alar said, nodding at the soldier sitting in the remote flyer next to them.

“Nice shooting, I guess,” Jack said as the canopy rose.

Ollan just stared at him, though, without saying anything. His mouth was half-open, though…

After an awkward moment, Alar spoke up again: “Now, let me invite you to a meal. And, I hope, a fruitful discussion.”

*****

Samantha Carter didn’t want to have a meal and a discussion. She wanted to take another look at those ‘remote flyer’ consoles. She was a scientist, not a diplomat or a politician. But they were guests here, and if they wanted to have a chance at ending the war and helping the planet here, they would need the Eurondans’ cooperation.

She still glanced back at Ollan as they left the command centre. The pilot was staring at the wall, his face blank.

Sam had seen soldiers before who had cracked from traumatic experiences, but they didn’t look like Ollan. The Eurondan pilot seemed functional, but… empty was probably the best word. He was just sitting there, not showing any reaction or emotion. Burnt out, she thought.

She wouldn't have expected this in a war fought primarily by remote-controlled drone fighters. Was the experience of flying a fighter in combat through a neural interface that much more personal, that much harsher and more terrible? She itched to examine the technology to find out.

But Alar led them into a smallish dining room with elaborately carved chairs lining a long table. If not for the darker lighting, this could have been a formal dinner on Earth.

"Oh! There's no chair for Isa?" Entrapta asked.

Sam glanced down the table. Her friend was correct - she didn't see a chair large enough for Isa to sit in comfortably. Not unexpected since all the Eurondan they had seen so far were of average size.

Alar looked momentarily surprised - and concerned, Sam noted. "I was under the impression that the… woman was your guard."

"Isa is assigned to our security, yes," the General cut in.

Isa nodded with a grunt from where she and Campbell had already taken up guard positions at the wall, facing two Eurondan guards.

Alar smiled, apparently relieved. "Good. Please, sit down!"

The meal was worse than Sam had expected. It was a thin soup and a pudding-like substance that made tofu taste spicy. Seasonings and spices would be very profitable trade goods, Sam couldn't help thinking.

"Yeah, should have taken an MRE," she heard the General mutter.

"I've eaten worse," Catra commented. "Back in the Horde."

"The brown rations," Adora agreed. Both shared a smile.

That would mean they considered the grey rations better than this, Sam knew. Damning with faint praise, indeed.

Daniel, though, showed no revulsion. He dug into the meal - though that was likely more his interest in a new culture and civilisation than the taste. Sam hoped so, at least. "I've never had such a meal before," he said, smiling at Alar.

Sha're nodded. "It's exotic."

Alar smiled at Daniel. "As I said, it's a sacrifice we all make for the war effort. A tiny sacrifice compared to that of our people in stasis, though."

"Earth has several examples of meals that were originally the result of poor resources yet became loved cornerstones of a culture's cuisine," Daniel told him. "Like the Italian cucina povera, literally the 'kitchen of the poor'."

"My people would never waste food as long as it was edible, no matter the taste," Sha're added. Daniel took a little while to get used to that when we lived on Abydos.

Daniel beamed at her. "You made everything taste good, my dear."

Sha're snorted. "Flatterer."

Sam's smile slipped when she saw Alar briefly scowl at the couple. Had Daniel managed to insult the man without meaning to? But he hadn't reacted to the General's far more blunt comment…

"Are you… in a relationship?" Alar asked with a strained smile.

"We're married," Daniel replied, putting his hand over Sha're's.

Sha're nodded. "We were separated for years due to our enemies but were reunited some time ago."

"So, it is true - your culture is a 'melting pot', as the Russians and Chinese called it," Farrell said. The woman's smile was very thin as

well, Sam noticed.

What was the issue?

"Well, the United States has been called that," the General said with a casual shrug that Sam knew was entirely faked. "We're a nation built by immigrants from all over the world."

"And the Alliance is formed by many countries working together against a common enemy," Glimmer added. "As was the Princess Alliance on Etheria."

"I see." Alar slowly nodded. Then his eyes widened in obvious surprise.

He was looking at Adora and Catra, Sam realised. The two were also holding hands; Catra probably felt the need to show off after Daniel and Sha're had drawn attention.

Alar *shuddered*. Sam saw him grab his glass and drink deeply from the watered-down liquor served to the meal, taking deep breaths and still barely managing to smile again - politely - when he set the glass down.

He made a point of focusing on the General - and on Sam, she realised with a sinking feeling.

*****

Catra was tempted to smirk at Alar. So, the leader of the Eurondans had a problem with Adora's and her love? Too bad for him! Just like the bigots on Earth, they needed the Alliance far more than the Alliance needed them. The Alliance actually didn't need them at all - well, the medical technology could save lives, or so the preliminary analysis told them, and the data compression had Sam and Entrapta excited, but the Eurondans had admitted that they needed heavy water to defend themselves or they'd lose the war.

On the other hand, Adora really wanted to stop the war here to save lives and restore the planet. Catra understood that. From a certain point of view, the Eurondans looked a lot like the Horde. Terrible rations, surrounded by a poisoned environment, everything and everyone focused on the war, and no civilians to worry about. The Eurondans weren't trying to conquer the planet. Instead, they were defending themselves, but the Horde had been on the backfoot a few times during the war as well.

She blinked, not even pouting as Adora withdrew her hand to continue eating. Who actually had started the war on Euronda? Alar had been a little vague about the whole thing, hadn't he? Just like the Horde instructors, he had focused on the current situation in the war, the Alliance's actions and forces, and what to do about them, not the causes of the war itself. Of course, everyone - except for Adora the dummy - had known that the Horde had started it and was trying to conquer Etheria, so that hadn't been necessary or useful, but… The similarities between the Horde and the Eurondans were pretty striking, weren't they?

She looked at Alar. He was talking to Jack and Sam about aero-fighters. Apparently, they used the same principles as the Air Force planes - no anti-gravity technology or magic. And he wasn't looking at anyone else. Even when Bow added something technical or Teal'c commented on the tactical uses of Death Gliders, Alar barely glanced at them.

That was weird.

"Are you a couple?" Farrell suddenly asked Adora. The woman looked tense - her smile was barely there, her lips pressed together, and Catra half-expected to hear her grinding her teeth.

Adora, though, beamed at her and nodded. "Yes, we are!" Catra's lover reached over again and squeezed Catra's hand.

Catra flashed her fangs at Farrell and leaned into Adora's side to rub it in. Bigots hated that!

“Ah.” Farrell took a sip from her glass.

Catra hadn’t touched hers since the first sip. She had had better from a still in the cadet’s barracks.

“I assume when you’re not fighting a war for your people’s survival, you don’t have to care about having children,” Farrell went on.

Children? Was that what this was about? Catra glanced at Adora, who looked taken aback. They hadn’t talked about children! Not with each other. And they certainly wouldn’t start discussing children with the Eurondans! Catra was tempted to mention Luna as their baby. Entrapta probably had a picture of the kitten at hand in her tool.

Bow, though, must have overheard yet missed the context or tension since he leaned over with a smile. “Oh, if you want kids but can’t rely on, ah, natural conception or adoption, you can use magitech to combine your genes and have the baby grown in a womb - artificial or natural. My Dads did that.”

“Yes! Etheira had had the basic technology since the first royal lines started - a relic of the First Ones genetic engineering, I think,” Entrapta chimed in. “And now, with the Horde clone technology and Alpha’s data, we can pretty much combine any genes no matter the species! Hordak and I haven’t yet decided if we’ll have kids, but we’ve run a few simulations to check possible appearances and designs.” She smiled widely as she pushed a few buttons on her multitool, and a small projection of a child-Hordak with long dark purple hair appeared, followed by a child version of Entrapta with Hordak’s skin tone and eyes. “See?”

Farrell gasped. She was staring at the projection as if it was the most horrible thing she had ever seen. “This… this…this is…” She shook her head. “How can you do this?”

“Oh, easily with genetic engineering!” Entrapta replied without looking at Farrell. She was smiling at the projections instead.

“That’s how a lot of Etheria’s population was created, you know? By First Ones scientists combining different species! It’s kind of a tradition, you might say - and so exciting!”

The whole table was now looking at them, Catra noticed. Her friends looked a bit annoyed or embarrassed, but all of the Eurondans looked horrified. Even the guards back at the wall.

“Ah…” Daniel cleared his throat. “I guess genetic engineering is not practised on your world?” he asked with a forced smile.

“We don’t breed uncontrollably!” Farrell spat. “We maintain genetic purity!”

Wait... Catra blinked. Breed? They call their enemies ‘*Breeders*’. “And your enemies don’t, right?”

The table was silent.

*****

Oh, damn! That explained the attitude of the Eurondans that Jack O’Neill had picked up. The way they had glanced at the Etherians. And at Teal’c. And Daniel and Sha’re. ‘Genetic purity’ indeed!

“They breed indiscriminately,” Alar said after a moment. “Mixing their genes with no thought! Tainting their own people! Their legacy!” He spat out each word with a sneer. “They are impure!”

Yeah, Jack had heard - or read - that kind of speech before. Just replace ‘genes’ with ‘blood’, and it would fit perfectly into the Third Reich.

Daniel had grown pale but was rapidly recovering - and frowning. Sha’re looked puzzled. The Etherians looked shocked, but their expressions were changing as well as realisation set in, Jack saw.

Except for Entrapta. “But that makes no sense. That’s not how it works. Genetic diversity is a good thing. Otherwise, you get inbreeding.”

“Inbreeding?” Farrell scowled at her.

“Yes. That happens when people who are too closely related, genetically related, reproduce. Over a few generations, genetic defects start to accumulate,” Entrapta explained. “In extreme cases, you might end up with genetic degradation, like the Asgard, though in their case, it was imperfect cloning that was the source since they had stopped reproducing sexually long ago.”

Farrell scoffed. “Such defects are a sign of impurity. Maintaining genetic purity relies on culling any weaknesses to create the perfect people.”

Jack wasn’t a geneticist, but he had looked into things, a little - after discovering that he had some Ancient genes, Jack would have been a fool not to read up on what it meant - and that sounded even worse.

Entrapta gasped. “But imperfection is beautiful! If everything is perfect, you cannot experiment! Science would be useless!” She shook her head, her hair tendrils flailing. “There is no perfect people; that is not how science works. That’s not how life works!”

“What could be considered a weakness in some circumstances might be a strength in others,” Daniel added.

The Eurondans were scowling at both.

Jack pressed his lips together and eyed the room. Pissing off their hosts, no matter how much they deserved it, wasn’t a good idea when you were in the middle of their base, alone on their world, without a fleet in orbit.

“Yes!” Entrapta nodded. “You need data for science. The more data, the better! And diversity creates more data! If everyone is the same, you won’t have any variance to experiment with! Nothing new to discover! No competition!”

Now, that sounded a little concerning as well to Jack. At least it would if it came from, say, Loki or Hordak. He made a mental

note that he would have to check up on what exactly they were doing in their lab with Alpha.

"You are wrong! Strength is found in purity. In unity!" Farrell's voice was rising. Not quite screeching, but Entrapta must have hit a nerve. "Impurities weaken a people! Like impurities weaken materials!"

"Actually, many alloys are far stronger than their pure components," Carter cut in, then frowned.

"The whole is often greater than the sum of its parts," Daniel agreed.

They were correct, of course, but they were arguing with fanatics. And Jack might not be a scientist, but he had experience with zealots. Logic didn't work with them.

And it didn't work here either. "We have maintained our genetic purity for generations and have been proven stronger for it!" Alar snapped. "We know the truth!"

Jack couldn't resist. "Yet, you are losing the war to the 'Breeders', aren't you? Seems to me that they're proving to be stronger."

"They have the advantage of numbers and benefitted from a few miscalculations on our side," Alar retorted. "That is not strength. That is mere luck."

"Sounds like you're making up excuses," Catra said with a snort. "Trust me, that's not going to work. You can't win a war by ignoring facts because you don't like them."

"Yes!" Entrapta nodded. "Data doesn't lie!"

"We will prevail! We almost won the war before, and we will finish it with a victory!" Alar spat. "We will not let the Breeders wipe us out!"

"You'd rather destroy the world than let them win, huh?" Catra scoffed again, shaking her head - and then froze for a moment.

Jack felt a cold shiver run down his spine - the Eurondans were nodding. "Just how did the surface end up poisoned?" he asked. It couldn't… but it would fit. "Was that a 'miscalculation'?"

Alar glanced at Farrell for a moment. "We had no choice. They were breeding indiscriminately. Spreading their taint all over the world. We could not let them take over and wipe us out. And they were not listening. They would not listen - they would not change! My father realised that we had only one choice left. Unfortunately, we were too late, and they managed to preserve enough forces and resources to press us hard."

"You started this war?" Glimmer gasped.

"We had no choice. They were breeding and would have wiped us out if we hadn't acted. The longer we waited, the worse our situation would grow," Alar retorted. "We had waited too long already, or we would have won the war with our preemptive strike."

Hell! They were even more like the Nazis than Jack had feared.

He really wanted to shoot Alar right now.

*****

The Eurondans had started the war? And they had poisoned their own world to kill their enemies? Adora shook her head. She couldn't believe it! It was… monstrous! "How could you do that? Destroy your own world to kill your enemies?"

She saw Catra flinch next to her and winced. Of course, that would remind her lover of the portal that had almost destroyed Etheria! She squeezed Catra's hand but focused on Alar.

"We are facing an existential threat," Alar replied. "If we lose the war, our people will perish. If we had not poisoned the surface,

we would have lost the war - and our world with it. Sacrificing what you will lose anyway is not a difficult decision."

Adora shook her head again. Alar made it sound as if wrecking an entire world - poisoning the air and soil - was logical. Rational. Simple. It wasn't! "And you started the war!"

Alar scoffed. "We had no choice. The Breeders were growing stronger and more numerous with every day that passed. What else could we have done but striking as long as there was still a chance of victory instead of assured defeat?"

"Our enemies depended on the resources on the surface much more than we did," Farrell added. "We were prepared for this while they weren't."

"And it still wasn't enough to win," Jack said in a flat voice. "You miscalculated."

"As long as we can get heavy water, we can win this war," Farrell told him. "Our people are in stasis, waiting for us."

"And once you win, you'll wipe out your enemy?" Daniel asked.

"They are trying to eradicate our people. Erase our way of life," Alar said. "If they win this war, they'll do the same to us."

"I'll take that as a 'yes'," Jack said. He looked at Adora.

She clenched her teeth. She wouldn't let them murder the Breeders - the Eurondan Alliance. But she couldn't let the Eurondans be murdered either. Everyone deserved a second chance. A chance to change. "The war will end," she said. "Without either side winning."

Alar shook his head. "You cannot end the war like that. It has been waged for decades. Too many have died. It's either the Breeders or us."

"Well, you started it," Jack said.

"Jack!" Daniel frowned at him, then turned to look at Alar. "Peace is possible."

"Yes!" Entrapta said. "The Horde and the Princess Alliance also fought for decades, technically, at least, and now we're at peace! And we're cleaning up the environmental damage done to the Fright Zone, working together. Although the Alliance arguably won the war. But we didn't kill the Horde. We're friends now!"

Adora heard Catra softly scoff at that. But Entrapta was right - they were at peace. And while Adora knew that some grudges remained, the majority of both former Horde and Alliance members were working together now. Of course, many former soldiers of Hordak's Horde had switched sides at a point before Horde Prime's defeat, which certainly helped with that.

But even the Clones had joined the Alliance after Horde Prime's end - at least the Clones they knew about - so it was possible for enemies to become allies. They just needed a chance.

She firmly nodded. "We can and will end this war." Even if they had to send a fleet here. Which they hopefully wouldn't have to. "We'll talk to your enemies. And we'll restore your world."

"And then? The Breeders will wipe us out as soon as they have the chance!" Farrell protested.

"We won't let them start a war. Or you," Glimmer said.

"Left alive, they'll overwhelm us sooner or later," Alar said. "They don't need to wage war for this."

Adora frowned. That made no sense. "What do you mean? They'll destroy you by… living?"

"They will destroy us by breeding uncontrollably," Alar explained. "Mixing genes indiscriminately. Rendering our people impure. We'll vanish, our entire way of life fading as they take over Euronda."

"And good riddance," Jack muttered under his breath.

Adora blinked. Was Alar serious? “Are you saying they’ll… force you to have children with them?” That would be rape!

“Of course they will!” Farrell spat.

“We won’t let them do that to you,” Glimmer said. “What do you think we are, monsters?”

Alar exchanged a glance with Farrell before he replied: “Will you force us to allow interbreeding with the Breeders?”

Oh, no! Adora scowled at them. As did her friends. “We won’t let you keep people from loving whoever they want,” she said. “If one of your people and one of the Eurondan Alliance want to be together, they’ll be allowed to.”

“Just as we were warned by the Russians and Chinese! You want to destroy our way of life as well!” Alar said.

“If your way of life means keeping people from loving who they want, then it deserves to be destroyed!” Glimmer spat.

“That will destroy our people!” Alar had stood up and was glaring at them. Then he glanced at the guards behind him. “We have no choice.”

What did he… Adora’s eyes widened. No!

She jumped up, her chair falling down behind her. “Don’t…!”

But before she could finish, Catra pounced on Alar, reaching for his hand.

Adora caught a glimpse of a device he held a moment before the alarm went off.

*****

Spy Games Part 8

Underground Base, Euronda, December 16th, 1999 (Earth Time)

One moment, they were talking. The next, all hell broke loose. Samantha Carter was already moving when the alarm went off. She threw herself out of her chair and dragged Entrapta to the floor.

"For the Honour of Grayskull!"

Adora's yell and Entrapta's surprised gasp were both drowned out by Isa's machine gun, followed by more shots ringing out.

Samantha Carter kept her head down and drew her zat. No one under the table - wait! Someone was on the floor! She aimed her weapon before she realised that it was a body chewed up by automatic fire. She twisted, checking the other end of the table. More corpses.

And the shooting had stopped.

"Secure that door!"

"Yes, sir!"

A moment later, something heavy slammed against something metal.

Sam got up, zat still in hand. The guards and half the Eurondans at the table were dead, cut down by Isa, Campbell and the General. Alar was on his knees, holding his bleeding right hand with his other hand. Sam caught a glimpse of two fingers on the floor.

Farrell was still in her seat, slumped over. Stunned. No, dead - Sam saw the blood dripping down the legs of the chair.

Isa and Campbell were at the door, Isa holding it closed with her sheer bulk. Daniel was getting up from under Sha're, and Teal'c was keeping watch over another surviving Eurondan, zat aimed at it.

And Catra was holding up a small device half-covered in blood. "He pressed the button on this before I could stop him."

"Oh! Looks like a communicator!" Entrapta said, peering at the device as her hair grabbed it. "Let's check!"

"That's how you return our hospitality?" Alar said, panting. "By murdering us during a diplomatic meeting?"

"You were about to attack us," Catra spat.

"I was about to order you to leave!" Alar retorted.

"Yeah, right." The General shook his head. "That's why you were triggering the alarm."

"We need to move!" Glimmer said. "The base is on alert - the guards will come at us."

"We've got the leader. Will that keep them from throwing bombs at us?" Catra asked.

"Ah… it is hard to say without knowing more about the society of our, uh, former hosts," Daniel replied. "It also depends on whether or not Alar has rivals waiting for the opportunity to remove him and blame foreigners for it."

"The people are loyal!" Alar spat. "We know our duty."

"And we know ours," the General said. "Let's get out of here before we get trapped."

"To the gate?" Campbell asked.

“No.” The General grinned. “We’ll need a diversion to reach it. And what better diversion than their command centre getting destroyed?”

“No! You can’t!” Alar gasped. “The Breeders will murder us all!”

“We’ll be back home before that,” the General replied.

“We can’t let them continue their war,” Adora said.

Sam half-expected the General to make a comment about how they totally could, but he just sighed. “I hoped you wouldn’t say that.”

“Jack!”

“Daniel!”

Adora moved to the door, and her sword became a shield. “I’ll check the hallway,” she said.

She had barely opened the door when Sam heard what had to be the firing noise of Eurondan weapons, and Adora’s shield was hit by multiple beams. The door shook as well, cracking in several places.

“Not exactly the best shots,” the General commented.

“You are trapped in here!” Alar yelled.

“Shows what you know,” Catra told him. “Didn’t the Russians and Chinese warn you about us?”

“They told us about your technology!”

But not their magic? Sam raised her eyebrows. Either the Russians and Chinese had been setting up the Eurondans or the Eurondans hadn’t believed them.

“We need to leave, sir,” Lenkova spoke up. “We can take Alar with us.”

Sam glanced at the Eurondan leader, expecting him to protest. But he was grinning. That was a remarkable mood shift… Oh.

She grabbed her scanner and aimed it at the door. A glance at the screen confirmed her suspicion: "There's a force field blocking our way."

"What?" The General glared at Alar.

The man grinned toothly at him.

"They might have taken the one from their gate room," Bow speculated. "Or used another one."

"Whatever - we need to get out of here," Catra said.

Sam agreed. But how? "We could cut through the walls, but… the field is quite powerful and might expand to cover such holes in the area as well."

"Oh, yes. Depending on the projector technology, the shield could do that," Entrapta said. "We should test it!"

Catra frowned but stepped up to the wall, lashing out with her claws, then kicked the material.

A piece of the material fell back and down, revealing the round hole Catra had slashed into the wall. No shots rang out from the other side.

And when Sam used her scanner again, it confirmed the presence of a force field.

"We're locked in here," she said.

"Shit."

*****

Catra eyed the ceiling. They might have set up a field to cover the walls, but did they extend it to the top? They probably had, but

best to make sure.

She jumped on the table, which creaked but held under her weight - it was sporting a few new holes from the firefight - and raked her claws on the ceiling, carving out a piece of it. Catra jumped off the table a moment before the jagged mass of the piece smashed and broke it.

“That’s also covered by a force field,” Sam reported.

“Had to check,” Catra said. “Would have been terribly embarrassing if we had missed the easy way out.”

Jack snorted at that. “What about the floor?”

Catra was about to bend down, but Adora had her sword out and swung it in a circle. The cut material stayed - propped up by another force field. Or… “Is that the same forcefiled, or one each?” Catra asked.

“The spectrum of the fields is exactly the same,” Entrapta replied. “That doesn’t mean that it’s the same field - their projectors could just have tight tolerances.”

“They’re massing outside,” Isa reported.

“They’ll have to drop the shield if they want to hurt us,” Jack told her. “And if they can hurt us, we can hurt them.”

“Or they try to poison us,” Glimmer pointed out.

Catra glanced at Alar. The man had his lips pressed together, but she didn’t know him enough to tell if that meant this was a possibility. Best assume it was - they had almost died because of Eurondan poison before, and it was obvious that they liked using such means.

“Mask up then,” Jack said, reaching into a pocket of his uniform.

Catra slipped a hand inside her own uniform and pulled out her own mask - a new design by Entrapta that could be folded up until it was hardly bigger than a handkerchief thanks to new filters. It would help with a gas attack but wouldn't stop nerve gas.

So, they had to get away quickly. And since Glimmer couldn't teleport without Adora releasing the planet's magic, which she wouldn't do until she was ready to use the boost to save the world… "Walls, floor or ceiling?" Catra asked.

Adora eyed the ceiling.

"We did that in Apophis's palace," Jack said. "Let's try the wall."

The command centre was on this floor - and roughly on the way to the gate room. Catra grinned.

Adora slowly nodded. She had her 'determined face' on. That meant she wouldn't let anything stop her, Catra knew.

"You can't get through our defence field!" Alar snapped. "You should surrender!"

"You haven't seen anything," Glimmer told him.

Adora nodded again, then stepped to the door, holding out her sword. "Hah!" She swung it with both hands, striking at the force field. The blade hit in a shower of sparks, and Catra saw flickers appear in the air as Adora lifted the sword for another strike.

"Field strength is fluctuating," Sam reported. "Stabilising… at a lower strength." She moved her scanner.

"Just hit it until it breaks," Catra translated.

But Adora was already dishing out a flurry of blows, striking so rapidly that the entire door area was covered in sparks, obscuring the view of the waiting enemy.

Alar was staring, open-mouthed, at the sight, and Catra grabbed his collar to drag him out of the potential line of fire - he was, after all, a potential hostage as the enemy leader. And for later negotiations, probably.

Jack was pulling Lenkova to the side as well - judging from her earlier position, the woman probably still needed to understand that you shouldn't try to charge ahead of a princess.

Catra checked the ceiling. The field there was holding steady, no sparks or even flickers. So, different shield projectors, then.

And then suddenly, the sparks disappeared as the shield shattered. A second later, the Eurondan soldiers opened fire with their beam guns, but Adora had already changed her sword into a shield. Catra saw half the beams miss her lover as Adora charged down the hallway, straight into the enemy's ranks.

The Eurondans broke ranks even before Adora smashed into and through them, Catra noted as she sped after her. They must not have much, if any, experience with infantry combat, she thought as she kicked a dazed soldier in the head, knocking him into the wall behind him before he could reach for the gun he had dropped.

Another one was screaming and holding his broken leg - she could see parts of the bone sticking out through his pants - and Catra knocked him out as well.

She caught Daniel stunning the man for good measure as the rest of the group followed in their wake, Teal'c carrying Alar and Isa bringing up the rear and covering side alleys with Campbell.

Those two had no intention of getting ahead of a charging princess, Catra noted. Good - Jack was training his people well.

Half a minute later, they had cleared the area of any enemies and were standing in front of a big blast door.

Adora raised her sword, then hesitated. “They’ll expect us to go through the door.”

“And we can’t count on them acting like the ones we went just through,” Catra added.

She looked up at the ceiling, then at the walls.

“We need to check if they deploy poison.” Before running into it.

*****

Jack O’Neill cursed under his breath. Of course, the Space Nazis would use gas. If only they could have brought NBC suits along - but not even Carter, Entrapta and Bow working together would have been able to build protective suits that could be concealed like those new masks. Maybe he should take another look at the proposal for new uniforms for Alliance troops that doubled as NBC and vacuum suits with a helmet added, even if they looked like Horde uniforms…

But you fought a war with the gear you had, not the gear you wished you had. “Carter?” He cocked his head at his second-in-command.

“Working on it, sir. Our scanners don’t show any poison gas, but given the known capability of the Eurondans to create a gas that evades detection, we cannot exclude the possibility of another such case.”

Jack eyed Alar. The Space Führer looked confused for a moment, then his eyes widened. So, whatever poison the Eurondans used, they were unaware of its effect on Alliance scanners.

But that didn’t tell Jack whether or not they had such poison. “No bombs?”

“No explosive devices detected in range, sir,” Carter reported. “Not with advanced technology or sufficient conventional explosive filler to function as a hand grenade.”

That was one worry less. Unless… "Incendiaries?" he asked.

Carter blinked, then started pushing buttons on her scanner.

As soon as Jack saw her jaw muscles twitch, showing she was clenching her teeth, he knew he had been correct.

"They are concentrating fuel tanks on the other side, sir. I expected them to use hydrogen as fuel since they have fusion reactors, but this seems to be a fuel based on ethanol - distilled from the yeast they are growing in hydroponics, I assume."

"Probably," he agreed. Not that it mattered. What mattered was that they were about to burn if they forced the door. And not even Adora's shield would keep the heat back. It was already quite the break that the Eurondans weren't sucking the air out of the rooms. Maybe their bunker wasn't set up for that - they were pretty inexperienced with infantry combat.

The others looked concerned as well. Most of them, at least.

"OK… so, no forcing the door, Adora," Bow said.

"Ceiling?" Catra looked up.

"They're moving fuel up there as well," Entrapta announced.

The bastards are learning quickly, Jack thought. Of course, they might suck at infantry tactics, but they are probably naturals when it came to poison attacks and other war crimes, he reminded himself.

"Down then?"

"The level below seems clear, sir," Carter confirmed.

"Or we unblock magic, and I port us to the Stargate," Glimmer suggested.

Adora shook her head. “Not yet. We might need that power to save the planet.”

That was fine - Jack would rather avoid being too close to Adora channelling a planet’s worth of magic again. He didn’t want to be turned into a plant - or an alien. “We’re going down, then!”

“Jack!”

Jack chuckled at his friend’s reaction, as did others. Spirits lifted, mission accomplished. “Let’s hurry before the Space Nazis decide that their dear leader is an acceptable sacrifice to kill us.”

Alar glared at him. “I will gladly die for my people!”

“Be my guest,” Jack retorted with a shrug. The odds of the Eurondans being willing to negotiate were probably higher if they could blame everything on a conveniently dead leader. Not that Jack would trust them, anyway - after a decade or two of waging total war against ‘racial enemies’, their indoctrination would be hard to overcome. At least without utterly crushing their army like the Allies had done to the Nazis.

“Hah!” Adora slashed at the floor again, carving out a round section. Then she stuck her sword into it, bent down - and heaved it up with a grunt.

Alar was gaping at the display. Jack snorted - if he knew just how strong She-Ra was, he would probably piss himself. Or start worshipping her as an Aryan goddess or something.

Adora made short work of the force field covering the floor with a few more strikes, then jumped down, quickly followed by Catra.

Jack heard someone screaming, followed by a crash, before he reached the hole. He gripped the edge and lowered himself down before dropping. He wasn’t some magical princess or catwoman, and his knees wouldn’t stay healthy if he tried to imitate either.

He landed in a crouch, scanning the room with his gun out, but Adora and Catra had already taken down the Eurondan guards here. This seemed to be a storage room - he could see stacks of metal parts. Aero-Flyer parts, from the looks of it. No missiles or what looked like weapons, though. As far as he could tell, at least.

Behind him, Entrapta followed, carrying Carter in her hair. Then Teal'c jumped down with Alar, followed by the rest of their group.

"Which way?" Jack asked. There were two doors here. One led towards the direction of the Stargate, but that didn't have to mean anything in a bunker.

Carter and Etrapta used their scanners. "There are two lifts close to this room. One large, one smaller," Carter reported.

The large would be to transport the stuff in here to wherever they were doing maintenance of their planes. "Let's take the large one," Jack said. "Might take some of the parts here with us as cover."

"Good idea. We should…"

"Shh!" Catra snapped, interrupting Bow. Her ears twitched. Then she sniffed the air - and hissed. "They're pouring fuel into the area above us."

Damn! He had been right about those bastards! "Let's hurry - I don't want to end up in a Eurondan barbecue!" Jack clenched his teeth and rushed towards the closer door.

*****

Adora gasped and stepped below the hole she had cut in the floor - the ceiling now. She couldn't see any liquid yet, but she trusted Catra… oh, there it was. Dripping down the hole. "It's just a trickle now, but that won't last!" she yelled. And once the Eurondans ignited it…

“Can you stop it?” Sam asked. “The fumes are explosive. If it fills the room…”

Adora drew a sharp breath - and smelt alcohol. Clenching her teeth, she quickly eyed the opening. If she changed her sword into a large shield, she could plug the hole. Most of it. It wouldn’t be perfect, but it should stop the fuel from reaching the storage room. Or… She looked to the side. Yes.

She grabbed a batch of armour plates and pushed them below the hole, then grabbed the uppermost plate and jumped on the stack. The fuel was falling down the hole now, drenching her. She raised the plate above her - and pressed it against the opening.

The stream slowed down to a trickle, quickly filling the hole above her and weighing down on the plate. She could take it tough - she was She-Ra.

“Open the doors!” Jack said.

“We need to hack the electronic locks,” Entrapta said. “And their systems are good - better than Goa’uld technology.”

Catra sniffed the air again. “We’re getting fumes inside here.”

Adora bared her teeth. She couldn’t help that - the plate wasn’t a perfect seal. The fuel trickling in formed a growing puddle beneath her.

“Can’t you just slice it open?” she heard Daniel ask.

“If we do that, the fuel will follow us through the hole,” Catra retorted.

“And if it starts burning, it will suck the air from outside in,” Bow added. “Or blow up.”

“The Eurondans must be crazy to try this!” Daniel blurted out.

“They probably don’t realise that we’ve cut a hole into the floor,” Sha’re replied. “But even so, the damage to the level above us would be extensive.”

Jack cursed. “Hurry!”

“We’re working as fast as we can, sir.” Sam sounded stressed.

Adora felt stressed. The weight on the armour plate was growing rapidly - it was getting harder to keep the pressure on to seal the opening above her. She could take it, though. She had to do it. Her friends depended on her. She wouldn’t let them down!

“There are some parallels to the software used against the Stargate Command,” Entrapta said - she sounded intrigued rather than stressed, Adora noted. “But it’s only superficial. I think the software there was heavily adapted to First Ones technology while this is completely native Eurondan architecture.”

“Whatever it is, solve it!” Jack snapped. “If alcohol has to kill me, it should be an expensive whisky. Not some cheap alien fuel.”

Adora snorted at that - and almost fumbled her grip on the shield. The puddle of fuel below her was spreading, reaching the stacks of supplies next to her. “Just how much fuel are they using for this?” she snapped.

“They’re fanatics,” Jack replied. “Probably everything they have.”

“That might hinder their aero-fighter strikes,” Bow said.

“I don’t think they care about that while we’re threatening to destroy their command centre,” Glimmer retorted.

“Carter, how much longer?” Jack asked. He sounded urgent, and when Adora glanced at him, she saw that he was staring at the fuel that was slowly spreading.

“Help me with this!” Catra snapped. She was dragging poles - pipes - with her. To prop up the armour plate, Adora realised.

Jack and Teal'c jumped to help, dropping Alar on the ground in the process. The man hissed with pain.

"I… ngh… don't think the poles will hold," Adora said.

"If we get enough, they will!" Catra insisted.

"They will help, at least," Jack said.

Adora doubted it. But her friends did their best to jam the pipes between the stack of armour plates below her and the one she was holding up.

"They are a bit too long," Jack said.

"Not any more," Catra snapped, slicing through them.

All three grunted and pushed the first pole into place, wedging it against the armour.

Adora barely felt a change but held her tongue. She could still take it, anyway. She had to. She had endured worse.

"OK! Let's get more!" Catra was already speeding off to grab more poles.

"Carter, how's it looking?"

"We're making progress, sir."

That was good. More poles joined the first ones as Isa helped as well. The fuel puddle was still spreading, but that couldn't be helped. It was covering half the floor now.

"If only we had some sealant…" Jack looked around.

"There might be something," Catra said. "But I can't tell from the labels."

Jack turned to Alar. "If you don't want to burn with us, you better help us out."

“I will gladly sacrifice my life for the people!” Alar spat. He sounded terrified, though.

But Adora had to focus on holding up the armour plate. How much longer until they had the door open? She could still hold out, but the pressure was increasing.

“Done!” Entrapta announced.

Adora gasped. Done!

“Or not!”

No!

“Wait - *that*’s the command to open it!”

Adra heard metal sliding over metal, followed by cheering. The door was opening! Yes!

But Catra cursed, staring at the ceiling. “They set it off!”

No!

“Everyone out!” Jack yelled. “Go! Go! Go!”

Adora turned to look at Catra. “Go!”

Her love wasn’t moving. “What about you?”

“I’ll jump once everyone is clear!” Adora said. “The poles will hold long enough.”

Catra stared at her, then jumped up to her.

Adora wanted to protest, to tell her to run, but before she could say a word, Catra kissed her. “Don’t die!” she whispered.

Then she turned and raced to the door, splashing through the puddle.

Adora strained. Was the armour plate growing hotter? Or was that her imagination? Could the fuel be burning that fast? Could it burn past the plate while there was still liquid above her?

"We're out!" Catra yelled. "Come!"

"Close the door!" Adora yelled. "Start to close it!"

"No!"

Adora hissed through clenched teeth: "I'll make it before it closes! Start it!"

"Close the door!" Jack snapped.

Adora heard the doors starting to close. Saw them moving. Guessed the speed. And the distance. If she was wrong, her friends would die. She wouldn't let them.

A bit longer… a little bit… Now!

She jumped, clearing half the room. Metal screeched behind her as she touched down in the puddle and launched herself forward, towards the door.

Catra was in the shrinking opening, staring wide-eyed at her. The sound of roaring, falling fluid filled the room as Adora flew towards her. The doors were almost closed - she could only see Catra standing there. A bright light lit up behind Adora, turning Catra even paler.

Adora hit the door, one shoulder scraping against the metal.

She hit Catra, grabbing her, rolling over the floor, curled around her lover.

Then she heard the explosion go off.

*****

Samantha Carter threw herself to the side when the storage room exploded, closing her eyes at the flash, waiting for the heat.

It didn't come. She looked up and saw the doors had closed completely and held. They were dented and buckled, and there was a burning patch of fuel in the middle, where the shockwave must have pushed burning fuel through the gap as it closed, but they had held.

She pushed herself up and looked at the group. Adora was up already, staring at the burning fuel, then at the doors. Catra was running a hand through her hair and frowning - both must be covered in fuel. Like Alar, whom Teal'c was dragging away from the burning puddle.

"Well, that was exciting. Let's not do it again and get back to the Stargate," the General said. "And see if we can get a shower on the way before a spark lights us up."

"Or before the fire reduces the doors' structural integrity too much," Entrapta added, looking up from her multitool.

Sam glanced at the screen and winced. The doors were rapidly heating up - the storage room must be an inferno. But that meant… "The ventilation must still be working, feeding oxygen to the fire!" she blurted out. Why hadn't the Eurondans shut that down?

It was a stupid question - they wanted to burn the group. But they risked dooming themselves. The ventilation could spread explosive vapours and poisonous smoke throughout the bunker if the filters couldn't handle it - or caught fire. "We need to move quickly!" she said.

"That's what I said," the General had to comment.

"Where is the closest bathroom?" Glimmer asked as they started moving towards the larger lift.

Sam tried to remember the floor plan she had derived from their scanners, but she hadn't paid attention to those facilities. An obvious mistake in hindsight.

"There's a toilet up ahead!" Entrapta, able to check her own screen while being carried by her hair, replied. A moment later, a projection appeared in the air, showing the layout of the floor they were on, with a blinking symbol. It was close indeed - around the next corner.

"OK! Everyone who's soaked with fuel, wash it off. The rest, move ahead to secure the lift!" the General snapped.

"That includes you, sir," Sam pointed out when he was about to move past the washroom - he had helped shore up the improvised plug Adora had used and so had been splashed with fuel, if not exactly soaked.

Before he could say something stupid, Adora reverted to her normal form, her soaked armour disappearing. Why would…?

"For the Honour of Grayskull!"

Ah. She was back as She-Ra - in dry armour. "I'll secure the lift!" she said - and sped off.

"I really have to revisit that uniform proposal," Sam heard the General mutter as they entered the bathroom.

Washing the fuel off - or, at least, diluting it sufficiently so the danger of catching fire was lessened enough - was a rushed, cramped affair. The washroom was far too small to fit everyone. Even worse, as was expected from a bunker running low on resources, they hadn't much to work with.

And the clock was ticking, as the General reminded everyone. The storage room doors wouldn't last much longer. Sure, the fire would take some time to spread through the level, but the smoke and vapours would spread quicker, and if more rooms caught fire… Sam shuddered at the thought.

Catra sliced off the sink and toilet, opening the pipes and turning the room into a fountain, and the General sent those who hadn't been splashed much with fuel in first so they could join Adora. That meant Glimmer, Bow, Daniel, Sha're - and Sam and Entrapta.

Sam hated leaving the others - she just knew the General would, given the chance, take too many risks for himself in order to keep others safer - but they had no choice.

They reached the lift, where Adora was guarding the closed doors. "Locked!" she called out.

Sam pressed her lips together. The Eurondans didn't have cameras in the bunker - as far as she could tell, another oversight perhaps, or the result of limited resources - but the electronic locks were linked. They couldn't just crack the doors open without the risk of alerting the Eurodans that they had survived the fire.

"We'll hack it," she said. Which might be easier said than done. The Eurondans weren't on the level of the Ancients, but their electronics were more advanced than Earth's native technology, and the system architecture was utterly alien.

Fortunately, she quickly discovered that this door worked like the storage room door that they had already hacked. That meant they already knew where the weak defences were. They still had to be careful, though, to avoid triggering an alert or lockdown, and checking took precious time. And they had to hack the lift as well, which was a challenge in itself.

But one Sam could handle.

Teal'c arrived, carrying Alar, followed by Lenkova. Shortly before they opened the lift's doors, Isa and Campbell joined them as well. That left…

"Where's Catra and Jack?" Adora asked, sounding tense.

"They are bringing up the rear," Isa reported.

Typical! Sam bit her lower lip. Then she froze. That sound… And did she feel the air moving, like a breeze? She checked her scanner. The temperature around the storage room was quickly rising - the doors must have failed! They were running out of time! And soon, air!

The General arrived at the nearest corner, running all out.

“Where’s Catra?” Adora yelled.

“She’s coming!” he replied. “She’s faster than I am.”

But the fire was spreading - the entire level was heating up. Sam could see it on her scanner as they piled into the lift.

Sam focused on removing the last defences of the system. And stopping the system from sounding an alert.

“Catra!” Adora yelled again.

But there she was! Sam looked up as the programs finished taking over the controls and saw her running towards them, on all fours, claws tearing up the floor.

And behind her, Sam could see flickering light illuminating the hallway - the fire was growing closer.

“Everyone aboard!” the General said. “Let’s go!”

Sam pushed a button, and the doors closed.

Then the lift started moving.

*****

Catra couldn’t help glancing at the floor of the cabin - or platform; it was a freight lift - for a moment. Below them, on the level they were leaving, the fire was spreading. Sooner or later, the flames would reach the lift shaft. They had to be out of the lift by then - and as far away from the shaft as possible. If that fire turned into

the thing from the Earth action movie in that skyscraper while they were in the shaft…

But there was nothing they could do about that. If only the lift were faster - Catra was sure most would be faster climbing a ladder. The more time this took, the more time the fire had to reach them - and the Eurodans above them time to get ready.

At least their group was ready. Adora had changed her sword into a shield again and was standing in the middle of the doors, ready to block enemy fire, and everyone else was lining up behind her, weapons aimed.

Or keeping their head down, in Entrapta's case.

The lift stopped with a soft beeping noise, and the doors started to open. A moment later, Catra's ears twitched as she heard several of the Eurondans' ray guns go off, and the door rang from the impacts - few, if any, hit the widening gap.

Amateurs, she thought. They had fired far too soon - and with weapons that couldn't penetrate the metal doors. Even Kyle would have done better than this.

Despite the shots, the doors kept sliding open, and more and more energy bolts were hitting Adora's shield. But that meant the enemies were exposing themselves as well. They were as skilled at taking cover as they were at other infantry tactics, and Catra saw Jack put two bullets into the head of a guard standing at a corner, not behind it, before the doors had opened wide enough for Adora to rush through.

As the Eurondan fell back, gun dropping to the ground, Isa rose, a shot bouncing off her armoured shoulder, and cut loose with the heavy machine gun.

A group of Eurondans was shredded by the bullets, bodies collapsing in pools of blood, parts blown off, as Isa swung her gun around, and Adora charged forward, Catra right behind her.

The Eurondans were breaking before Adora reached their line but were too slow to get away in time. Adora smashed into their front, shield out, and half a dozen Eurondans were thrown back, slamming against the wall with loud cracks. One tried to rally them, screaming something at the running guards, but they ignored him - and when he turned to shoot at Adora, Catra sliced through his arm and weapon with a swipe of her claws, and he dropped to his knees, staring at his bleeding stump as if he couldn't believe his eyes.

Whether he managed to stop the bleeding or not, he was out. Catra was rushing after Adora. "Next one left!" she yelled - according to Entrapta's projected map, the Stargate was about three potential choke points this way.

Adora smashed a few more too-slow guards into the wall - and the ceiling in one case - and whirled, moving her shield to block a ragged volley from a side tunnel.

"Fire in the hole!"

Catra gasped at Campbell's yell - and pressed her hands over her ears the moment a grenade shot between her and Adora, going off in the side tunnel. The explosion cleared the tunnel. Thoroughly.

They rushed on, through and past the wounded and the dead. They passed the first two potential chokepoints without any resistance - the Eurondans must have lost all cohesion. The third choke point, right before the gate room, was held by three guards.

Adora didn't even slow down for them. She charged through them and the doors in one smooth motion - and drew up to a sharp stop.

Catra sprinted after her, then veered off to the side as soon as she was in the gate room. What was…? Oh.

She stopped as well, her claws ripping the floor open, and glared at Tarlan, who was standing next to the D.H.D. - which was covered in blocks of explosive.

Damn.

*****

"Don't move, or I'll destroy the command console, and you will be stranded here!"

"It's actually called the D.H.D. - the Dial Home Device," Jack O'Neill said with far more nonchalance than he felt as he joined Adora and Catra in the gate room. If the fool blew up the D.H.D., they would be stuck on a foreign planet *again*. And one with far less friendly inhabitants than Etheria.

"I don't care what you call it. This is the device that controls the Stargate. Without it, you won't be able to flee," Tarlan yelled.

Jack wanted to just shoot the idiot and be on their way, but if the Eurondan had the detonator on a dead man's switch, that would be a terrible idea.

"Sir!" Carter had arrived.

Jack held up a hand. "Stand back, Carter! We don't want the nice Nazi to get nervous." More nervous, actually - the guy was already twitchier than a junkie going cold turkey. Too twitchy to bear more pressure - his eyes were already darting back and forth as he tried to keep Jack, Adora and Catra in his view. If they spread out, he might blow the D.H.D. up out of sheer desperation.

"Don't do it!" Adora said. "You gain nothing from destroying your last hope of surviving this!"

Tarlan clenched his teeth. "I heard what you told Alar - you want to destroy us!"

“We don’t have any quarrel with you,” Jack snapped. “We just want to go home.”

“You sabotaged the agreement that would have saved us!” Tarlan was panting and sweating now.

Teal’c arrived, Alar slung over his shoulder. And stunned, Jack noted with relief. The last thing they needed was Alar telling the idiot with the bomb to die for their cause or something. Although the Space Nazi Führer hadn’t seemed to be that willing to die. If he could be persuaded to order Tarlan to stand down… No, too risky - the rest of the Eurondans had had no qualms about sacrificing their leader to kill Jack’s friends.

“Look, you and your people need the D.H.D. more than we do. Without it, you won’t get any supplies - and can’t escape the bunker when your power runs out,” Jack said. “We can whip up a computer to control the Stargate with what we have with us.”

“Well, it wouldn’t be easy, or… Ow!” Entrapta piped up behind Jack, but Carter had that under control. Right now, honesty was the worst policy.

“You would die with us!”

“No, we would not.” Adora took a step forward, and Jack held his breath. “We would restore your planet’s magic, use that to cleanse the poison from the surface, and then leave this bunker.”

“And we’d grab the Stargate and build a control device while we wait for your enemies to wipe you out,” Catra added. “Or we construct an FTL communicator and contact our fleet to fetch us.”

“You wouldn’t survive!”

“We’ve survived worse,” Catra shot back.

Isa arrived. “The fire is spreading, sir,” she reported in a low voice. “It has gotten past the lift shaft.”

Jack saw Catra sniff the air and then clench her teeth. Time was running out. Maybe if he shot the guy's hand off… or if he hit the detonator… A dead man's switch was one thing, but Jack doubted that Tarlan had rigged the bomb to explode if the transmission cut off or something. Still risky, but better than dying in the bunker fire.

"We all can survive," Adora said. "You, us, your people. No one else has to die. We can end the war, restore your planet, and help you set up a country for your sleeping people."

"We'd rather die than lose our world!" Tarlan spat.

"You're about to do both," Catra said. "The fire's spreading - I can smell the smoke coming closer. How much longer until you lose the command centre? And then your enemies can finish you off, and even if we all die, they can work on restoring the surface - as you planned."

"Whether you destroy the D.H.D. or not, you can't win the war any more," Adora said. "But you can still save your people - if you let us help you."

Tarlan remained silent - but as tense as a bowstring. He was looking around wildly now - at the walls and the floor, not just at Jack's friends and himself. And at the Stargate.

Jack drew a short breath through his clenched teeth. He hated trying to make fanatics see reason. Especially desperate ones. "You can't take us with you. We can escape the bunker. Your people can't."

"You're stuck here as well!"

"No, we are not," Adora said. "We have magic and much more advanced technology. We can survive here. But your people cannot. Not without our help. Let us help you, please. No one else has to die." She smiled at Tarlan. "Think about your people. They depend on you. They trust you. Do you want them to die in their

sleep? From a fire your own men set? Or do you want them to live? In peace?”

Tarlan shook his head. He seemed to be crying. “We can’t live in peace with the Breeders! They want to wipe us out!”

And with good reason, Jack thought. But not even attempted genocide justified a genocide.

“We won’t let them kill you,” Adora said. “Trust us. We can stop the war - we will stop the war. If you let us. We just want to help you.”

Tarlan blinked - he was crying. “But…”

“Please.”

Tarlan closed his eyes, and Jack held his breath.

A moment later, the detonator dropped to the floor, and Tarlan collapsed, sobbing.

*****

Tense Negotiations Part 1

Underground Base, Euronda, December 16th, 1999 (Earth Time)

Yes! Tralan had dropped the detonator. Adora beamed, relieved - he had seen reason! They could save this work without further deaths!

Jack was moving towards the D.H.D., and Catra had already snatched up the remote detonator and was handing it over to Entrapta, but Adora walked to the sobbing Tralan and crouched down to gently pat his shoulder. "We'll save your people," she promised.

"From themselves as well," Catra muttered before joining Jack in removing explosives from the D.H.D.

"Uh… speaking of saving people…"

Adora turned to look at Bow.

He grimaced. "We need to stop that fire. Or contain it."

"Yes!" Entrapta chimed in. "The scanner shows it's spreading on this level - and if it reaches this room, we won't be able to move in supplies or evacuate anyone. Not unless they're fire-proof."

"And if the defence shield goes down, the bunker will likely be bombed by the Eurondan Alliance," Sam added. "The fire's already covering a third of this level. Although no essential areas have been touched yet, the air quality is dropping - the filters must be straining."

Adora heard Tralan gasp. "No!"

She shook her head. "Alright. We have to stop the fire from spreading any further."

“And the rest of the Eurondans from shooting at us,” Catra added.

Right. Tralan wasn’t their leader. And Alar was still stunned.

“We’ve got enough explosives here to put out an oil well fire,” Jack commented. “Just saying.”

Tralan gasped again, and Adora frowned at Jack. Sometimes, like now, his jokes were a bit disturbing. At least she hoped that he was joking. “No explosives,” she said. “We’ll get Mermista. And Frosta.”

“Oh! Good idea!” Entrapta nodded. “I thought about modifying some of my bots to shoot fire suppressants, but that would probably have taken too long.”

“That still doesn’t solve the problem with everyone else shooting at us,” Jack said.

“Glimmer, please open a Stargate and get Mermista and Frosta,” Adora said, rising. “We’ll deal with the Eurondans in the meantime.”

Glimmer opened her mouth, and Adora half-expected her to say that she was needed here, but after a moment, her friend nodded. “Right.” She turned to Sam and Entrapta. “Dial to the forward base.”

Adora was tempted to tell them to dial straight to Etheria - that would be faster; they still had to fetch Mermista and Frosta to the Stargate - but she knew the procedure. They wouldn’t expose Etheria’s address like that.

While the Stargate started dialling, Adora walked back to the gate room’s door. Catra joined her.

“I can smell the smoke through the mask,” she said. “We don’t have much time left.”

Adora pressed her lips together and lifted her mask for a quick check - the air was getting worse indeed. They would have to contain the fire somehow, and quickly. But they couldn't do that with the Eurondans shooting at them. Or, they could, but it would make everything more difficult and cause more deaths.

She couldn't see anyone in the hallway. Were they already fighting the fire? That would make sense - they couldn't stand up to Adora and her friends, and the fire was a much more dangerous threat. But the Eurondans hadn't struck her as very sensible. Not at all, actually - they set fire to their own bunker, after poisoning the entire planet, and both times to defeat an enemy? That was suicidally stupid!

Well, it was time to talk some sense into them. "Can you tap into their communications?" Adora asked, looking back at Entrapta. The Stargate was collapsing - Glimmer and Bow had just left.

"Can we? We already did!" Entrapta smiled. "Though they aren't saying anything interesting. It's mostly calls for help and complaints about cowardice."

"Alright. I need to talk to their leader. Their new leader," Adora said.

"Whoever that is," Catra said, looking down the hallway. "And we need to ensure that they don't set this room on fire as well."

"Isa, Campbell - secure the checkpoint!" Jack snapped behind them. "Lenkova, secure the explosives. Carter, plug those air vents or something!"

"Yes, sir!"

"Yes, General!"

"Yes, sir."

That was handled. Adora smiled and grabbed her communicator. She cleared her throat, then switched to the channel already

highlighted by Entrapta. “This is She-Ra calling the leader currently in charge of the Eurondans. We have control of this planet’s Stargate. The fire you set hasn’t hurt any of us, nor Alar, which we took prisoner. But it’s spreading and will soon reach critical parts of your installation. We want to save you before it’s too late, but we can’t do that with you fighting us.”

Well, they probably could, but it was better for everyone if the Eurondans stopped fighting right now.

“How did you get on this channel?” a young voice asked.

“Laren! That’s not the point!” another voice, slightly older-sounding, added. “And don’t give them any information!”

Adora sighed. “This is She-Ra. I want to talk with your leader. If we don’t do something soon, you’re doomed. There has been enough loss of life - and all of it on your side. Let’s end this.”

“Really?” Catra stared at her.

Adora winced. That probably hadn’t been the best way to word this.

*****

“Alright! This is like dealing with a lab fire. Just a lot bigger. And we don’t have a lab with automated fire-fighting systems, nor do we have bots ready to step in. And we can’t just evacuate the place and let the fire burn itself out. OK, it’s not like dealing with a lab fire at all.”

Despite the situation - and the correct, if not very encouraging summary - Samantha Carter had to smile at Entrapta’s comment. “We might still have to evacuate the Eurondans, even if we manage to get the fire under control,” she pointed out. “If the reactors or their command centre are lost to the flames, the Eurondan Alliance will likely exploit this and launch strikes on this facility.” It might take them a while to realise it wasn’t a trap, though Sam was pretty sure it wouldn’t take them longer than it

would take to replace a reactor - or a command centre. Although if they just had to build an adapter and could connect a mobile power generator… it depended on the power demands of the Eurondans.

"Also, we can't seal off the burning areas and pump the air out," Entrapta added. "Or they would have done that already. Their construction isn't very optimised. We had better bunkers in the Horde."

Sam was happy that the Eurondans hadn't thought to add such features - they would have used them against Sam's friends and herself. "Sealing off the burning sections will still help. It will at least slow down the fire," she said, "even if it might not stop it."

"OK! Let's do that then!"

"Once Adora gives the go-ahead," Sam said. Adora was still negotiating with the Eurondans. Judging by her grimace, things were not going too well. "The Eurondans have to agree to stop fighting us."

Entrapta blinked. "But why wouldn't they? If they keep fighting, they'll lose the facility. They can't fight us and the fire. It's not logical."

The Eurondans hadn't acted very logically at all, in Sam's opinion. 'Suicidal' would be a more precise term. Although Tralan - who was begging the others over the comm channel to stop fighting - showed that some of them retained a modicum of common sense. Or the ability to face facts, even if they had to be shoved in their faces by a magical princess breaking through your entire force. "I think they'll see reason," she told her friends. Eventually, at least. "So, what can we do to seal off the burning areas?"

"We can't use their defence field - since the fire is spreading, it must not repel heat," Entrapta said. "That's actually an interesting weakness, though you can probably compensate by adding enough insulation, space or just armour around your projector

and shield generator to avoid it catching fire. Anyway! The doors should be able to withstand the flames for some time - long enough for Mermista and Frosta to arrive - but I think the air ducts are the problem."

"I concur." Though Adora and the others smashing their way through all doors, the fire hot on their heels, couldn't have helped. "And the ventilation system is likely supplying the fire with fresh oxygen. We need to cut that." Taking out the entire ventilation system would doom the facility, with the surface and atmosphere poisoned.

"Alright - let's check the air duct layout!" Entrapta pushed a few buttons, and a holographic projection of the facility - as far as they had managed to scan it - appeared between them and Adora, who was now gesturing wildly with one hand as she glared at the communicator in her other hand.

Sam focused on the air vents. "I see the problem," she said, wincing.

"Lots of redundancy," Entrapta said. "We'll have to seal off… these, these, and these air ducts. But only if we can manage that in the next ten minutes. Or this area there will be lost as well."

Sam nodded. "And if that area starts burning, this area could be cut off." She pointed at a large section of the floor below them.

"That's… the infirmary and part of their quarters," Entrapta said after checking their scanner's result.

Sam nodded. "We might have to evacuate them soon."

And if the fire took this area, then two of the stasis vaults would be in danger next.

"Let's prepare to seal the air ducts," Entrapta said. "I think we'll have to use armour plate for that. And sealing those will be tricky."

Sam winced again. “We could ferry special equipment from Earth,” she said, “but that would take too long.”

“Bow’s trick arrows!” Entrapta perked up. “They could seal the most crucial air ducts!” She blinked. “But he left with Glimmer.”

Sam wanted to curse. That would have been a solution. Although… “We won’t have time to whip up a reagent from the available resources here,” she said. “We’ll have to go with the armour plate, but getting that seal tight enough will be difficult. Cutting armour plate so it fit an air duct and sealed it was nigh impossible on the fly. Or in time.

“The Eurondans should have some industrial glue,” Entrapta said. “And I think I know how we can jam the armour plate into the ducts.”

She was looking at Adora, Sam realised. Oh. Of course.

*****

“...no, we don’t have the time to wait until you can discuss this further with your officers! *You* don’t have the time - the fire’s spreading as we speak! And we can’t stop it while you’re still trying to fight us - we’d have to take your forces out first! So stop being stupid and agree to stop attacking us so we can save you!”

Catra shook her head as Adora tried again to make the Eurondans see reason. Her ears twitched as she listened to the Eurondan’s answer.

“We can’t trust you! You’re as bad as the Breeders!”

“*We* aren’t trying to kill you all!” Adora retorted. “We’re trying to save you!”

Catra couldn’t resist. She rose on the tips of her toes, bent towards the communicator Adora was holding and added: “And you started the war with the Eurondan Alliance.”

"They were about to destroy us!"

Adora glared at her, of course.

Catra shrugged. "Can't let them forget that," she said. If those idiots would rather doom their entire people than stop the war and accept help, then it might probably be better to wipe out their leaders.

"That was then, this is now," Adora said through clenched teeth. "You're both fighting over a ruined world - and you're losing. We're offering you a way out of this."

"We won't abandon our home world! It's ours by right!"

Catra shook her head and sighed.

Adora rolled her eyes for a moment and took a deep breath to calm down. "No one says you have to abandon your world. I - we - can restore your world. But you need to stop fighting us."

"We're only defending ourselves!"

The man was technically correct, Catra had to admit - the Eurondans were holed up at several choke points and not attacking the gate room any more. They had learned that, at least.

"You are letting the fire spread. Soon, it will become uncontrollable," Adora said.

"We're fighting the fire."

Catra looked at Entrapta and Sam. "Is the fire still spreading?" she asked. According to her nose, it was, but her friends had their magitech scanner.

"Uh… yes," Entrapta replied. "Although it slowed down a little for a while, it's spreading as fast as at the start again."

“Did you hear that?” Adora asked. Without waiting for an answer, she added: “Whatever you’re doing is not enough. We’re running out of time, so this is our last offer: Stop fighting us, withdraw your forces, or we’ll have to take them out so we can save the rest of your people! We won’t let your pride destroy your people!”

“If we have to destroy you to save you, we will,” Catra heard Jack whisper under his breath and chuckled.

“Please, Kaltur. We cannot stand against them. We cannot hurt them. The longer we try, the worse we suffer,” Tralan added on the comm.

“I won’t listen to someone who got taken prisoner. Or worse.”

Catra looked at Alar, who was still on the floor, stunned. “I guess that means their leader is now their former leader.”

“This wouldn’t happen if this were a kingdom,” Adora muttered. Louder, she said: “Then ask your surviving troops, those who have faced us. You have no chance. The longer you refuse to accept that, the worse your situation will become - if you wait too long, you’ll have to evacuate the entire facility. And not because of us but because it will be a burned-out husk!”

Catra sighed, shaking her head. “If they won’t listen, we’ll have to take out their troops.” That might actually make it easier to stop the war. If the Eurondans had no forces left, they couldn’t fight on. Though after listening to the negotiations, she wasn’t sure if even that would be enough for the Eurondans or if they’d try to mobilise everyone else and send them out as cannon fodder or something. According to her research, a few Earth kingdoms had done that in past wars.

“Please,” she heard Adora whisper with a grimace. She hated this, Catra knew.

Catra clenched her teeth. If they had to take the Eurondans out to save them, she’d personally take care of Kaltur. A leader who

would rather sacrifice their people than their pride couldn't be tolerated.

Kaltur still hadn't answered. During the whole discussion, he had been quick to reply. Was this a good sign? She leaned closer, but her ears weren't picking up anything; they must have closed the channel.

Or they might want to leave them hanging to gain more time or something. Catra eyed the hallway leading to the 'frontline'. Were they preparing more traps? Even after their arson backfired like that?

"We're withdrawing our troops."

"Thank you!" Adora replied, smiling.

That meant they couldn't rely on help from the Eurondan troops to fight the fire. Catra didn't mind, though - she wouldn't trust them anyway.

"Alright! As soon as they have withdrawn, we'll move in," Adora told Kaltur.

"And after we have run a scan for traps," Catra added.

Once burned, twice shy or something like that.

*****

Jack O'Neill couldn't help looking over his shoulder as he followed Adora, Catra, Carter and Entrapta to the evacuated area closest to the fire. He didn't trust the Eurondans. They might have agreed to stop the fighting and withdraw their troops from the area, but that didn't mean they had surrendered. Or agreed to make peace. It was a truce at best, in his opinion. And truces could be and were broken all the time, as soon as it was convenient for someone. Worse, Euronda wasn't Earth, where you needed at least an excuse to break a truce or you might be out of luck the next time you wanted a truce - and you might get some stern looks thrown

your way by the United Nations, but that didn't really matter. The Eurondans had no reason to care for any supposed damage to their reputation. Their local enemies already hated them - attempted genocide tended to get that reaction - and the Alliance wasn't going to let them continue their war of extermination either.

So, as soon as the fire was contained, or looked contained, the Space Nazis would try to double-cross them. Maybe even earlier, if they had a death wish and decided that killing their enemies was more important than surviving; they certainly seemed to have thought so when they started the fire. Or they had been too arrogant or stupid to consider the consequences. That kind of fanaticism, arrogance and stupidity fit the Nazis perfectly.

"Please, save my people!"

Alar, dragged along by Teal'c, on the other hand, was now veering hard into playing the victim. Also something many Nazis had done.

"We're doing what we can," Adoa told him.

"And we'd already be done if you had stopped fighting us sooner," Catra added.

"That was Kaltur's ill-advised decision," Alar said. "There will be consequences for his shortsighted attempt to usurp my leadership."

Jack rolled his eyes. If Alar expected that the Alliance would put him in charge of the Eurondans so he could take revenge on his former underlings who had decided that he was an acceptable sacrifice, he would be disappointed. Probably - the Alliance might not intervene if Alar managed to get back into power since Kaltur had managed to thoroughly annoy even Adora, but the princesses weren't exactly fans of purges and bloody revenge.

"We have to focus on fighting the fire, not revenge," Adora told him.

"Of course!"

Jack rolled his eyes at Alar's toadying up. We should have left him back in the gate room with the others, he thought. But his knowledge of the bunker might be useful, and so they had dragged him along.

"And here's the storage room we need!" Entrapta announced. "We can get the armour plates here! And the glue we need as a sealant. It's too bad that you don't use this particular heat-resistant glue for everything - we would have more than enough to seal off all ducts!"

"It's an essential part for constructing new aero-fighters, and our supplies are limited, so we can't spare any of it for other tasks," Alar said.

They had been waging their world war on a shoestring budget, hadn't they? Jack thought.

"Well, you won't need more aero-fighters," Adora said as she grabbed a stack of armour plates. "That the right size?"

"Yes. Well, larger than we need, but that's better than too small," Entrapta replied.

"Adora can make everything fit," Catra added. "Brute force for the win."

Adora pouted at that. "Let's go. The fire's spreading as we talk."

"We should have enough time to get the planned fire barriers up," Carter said.

"Let's hurry anyway," Catra added. "I can smell the smoke growing worse through the mask."

They double-timed it out of the storage room, Adora leaving two cracks in the door as she manhandled the armour plates through it, and continued toward the fire.

“Are the Eurondans holding their positions?” Jack asked Carter as they approached their goal.

“Yes, sir. I am constantly tracking them,” she told him.

“Good.” Between her magic scanner and Catra’s ears, they probably were safe enough to pull this off.

Jack would still be on his guard. It wasn’t as if he had anything else to do here than watch out for his friends, anyway - he wasn’t a firefighter. Nor could he lift a piece of armour plate over his head like Adora was doing.

“Good! Now bend it a little and push it in!” Entrapta told her. “Not too much, so it fits snugly.”

Adora grunted a little as she bent the plate, then stuffed it into the air duct opening - without bothering to remove the grate there first. Jack winced at the sound of screeching metal and crumbling concrete-like material.

“Great! Now, let’s seal it up!” Entrapta’s hair tendrils wielded two glue dispensers and went to work. A few seconds later, they withdrew. “Done! Off to the next one - we’ve got all the air ducts we need to seal marked down.”

“And then my people will be safe!” Alar said.

“Well, safe for the moment,” Entrapta corrected him as they rushed out again. “Given enough time, the fire will spread anyway as the heat breaks down the glue - though I think your doors will fail first if our material analysis is correct. And it should be unless our scanners were malfunctioning, which I don’t think they did.”

“What?” Alar gasped and stumbled, Teal’c carrying him more than dragging him for a few steps. “But…”

“They will hold long enough for our friends to arrive and put out the fire,” Carter told Alar as they entered the next room.

“Now be quiet, we’re working,” Catra added.

Alar fell silent. Following orders was another trait of Nazis, Jack reminded himself, though he couldn’t tell yet if that was a good thing or not in this case.

*****

“And here we are! On foreign shores, to save the day!” Sea Hawk raised his fist to the ceiling as soon as he had stepped through the portal.

“Ugh. It’s not a shore - Glimmer told us explicitly that this base has no access to the ocean. Or any large body of water.” Mermista scowled at him, then looked around.

“My dear Mermista! It’s the principle of the thing - the symbolism!”

Adora felt relief filling her as Glimmer, Bow and Frosta followed the two down the ramp. Her friends had arrived just in time. Not that she had really doubted them, of course. “Hello!”

“Welcome to Euronda,” Catra drawled behind her.

“Hello.” Mermista nodded at them. She was carrying her trident. “Glimmer said you needed us urgently.”

“Where is the fire?” Frosta cracked her knuckles.

“This way!” Entrapta’s hair pointed towards the door. “And then all the way down the hallway. Oh, and you should wear masks - the air in the burning areas is really bad.” She blinked. “But you need to wait until Adora restores magic to the planet, or you can’t really do much.”

“You haven’t done it yet?” Frosta asked, then looked at her hands, flexing her fingers. Probably trying to use her power.

Adora shook her head. “You were told about the situation here?”

“Yes,” Mermista said, frowning. “Those people here poisoned their entire world to kill everyone else because they wouldn’t submit to their rule. And now they are not only losing the war they started but also in danger of dying to the fire they started to kill you.” She rolled her eyes. “And we’re going to save them anyway. Ugh.”

She didn’t mean it, Adora knew. Mermista was just a little… snarky about such things. She would do the right thing even if she complained about it. Adora was a little more concerned about Frosta. But only a little. Both were here, after all. Adora nodded. “Yes.”

“Even if we have to crush them for that,” Catra added with a smirk.

“Anyway,” Adora went on. “Since we need to return magic to the planet and we also have to purge the poison, it’d be best to do that on the surface so I can, ah, use the magic surge for that, but the Eurondans aren’t cooperating.”

“They don’t believe in magic,” Entrapta added. “They think this is a ploy to discover their aero-fighter bays, even though we already know where those are thanks to our scans.” She pouted. “We showed them the data, but they still didn’t believe us.”

“Charming fellows,” Jack said. “They must be the life of any party.”

“Anyway,” Adora repeated herself. “So, we have to do it here.” And she would have to channel the magic to the surface blindly.

“Just don’t turn the bunker into a plant,” Jack told her.

“Sir!”

“She’s only done that once,” Entrapta said. “So, it’s not really likely.”

“Don’t give her ideas.”

“Let her focus!”

Adora closed her eyes and raised her sword above her head. This was it. She had done this before. Just focus and release the magic. Reach out and do it. She could feel… there!

She concentrated on the familiar feeling of the blockage. Visualised it.

And cut it.

Once again, she felt the magic surge, into and through her, filling her with power. Urging her to release it uncontrollably, on a whim.

She gritted her teeth and fought the urge, even if she felt as if she was about to burst. She would use this power, not waste it! Heal this world.

At the mere thought of healing, the magic reacted, pushing against her, trying to reach out to the others in the room - in the bunkers, seeking wounds and sicknesses.

Once again, Adora held back, groaning with the effort. The pressure was growing stronger, straining her even more. Demanding to be released. But she had to heal the world, not the people here. She opened her eyes and stared at the ceiling. Above her, five hundred yards above her, was the surface. Poisoned. Dead. She couldn't see it, not directly, but she had seen the images on Entrapta's scanner.

She focused on those pictures. The memory of the wasteland above. Imagined the poison seeped into the soil. Drifting through the air. Polluting the world.

And poured magic into it. Through her sword. Through herself.

For a moment, it almost felt as if the magic was cheering as it flowed through her, surged upwards, pushing through metal, stone and earth to reach the surface, then bursting forth like a giant fountain, magic spreading through soil and air.

Purging. Healing. Restoring. Seeding.

Spreading.

On and on it went. Healing. Restoring. Purging. Seeding.

Adora trembled. Panted with the effort. Grunted with the strain and pain of channelling a world's magic far longer than she had before. Guiding it to cover the entire world. Heal the world. Restore it. Purge the poison. She couldn't give in. She couldn't release the power. Not before she was done. It was too important. She had to keep going. Let the magic spread. Cover the entire world.

But she felt the magic slipping from her control. Her focus weakening. Her body shaking.

And then she felt herself falling.

*****

"Adora!"

Samantha Carter gasped when she heard Catra scream and saw Adora collapse. All that magic, all that power, channelled through her, through her dropping sword… Sam threw herself to the ground.

"Adora!"

"Take cover!"

"No!"

Sam clenched her teeth as the room was filled with blinding light and deafening noise, drowning out the screams from the others as She-Ra's magic ran out of control. She should have taken precautions - taken shelter somewhere else instead of staying at ground zero. She closed her eyes. They would all die. Or worse. And just because she had been too stupid to take basic precautions. Stupid. Stupid. Stupid!

The noise cut off. She opened her eyes a tiny little bit, squinting. And wasn't blinded by magic.

"Anyone dead? Sound off if you're dead!"

The General! He was alive!

Sam raised her head and looked around. The General was just getting up.

"You idiot!" Catra was kneeling on the floor, Adora in her arms. "You idiot!"

"Whoa! Half my sensors are fried - Adora released so much magic, the sensors couldn't withstand it! We completely underestimated the stress from prolonged channelling of magic on that scale! Note to myself: Upgrade sensors!"

Entrapta was obviously fine, Sam noted.

"Ugh."

"What a harrowing *Adventure*!"

Mermista and Sea Hawk were fine as well.

Sam turned and checked the rest of the room. The Stargate was fine - as was the D.H.D. It looked like the magic surge had…

She blinked and brushed some hair from her face.

…completely vaporised the ceiling. And everything above it - she could see the sky above them. She-Ra's magic had created a huge shaft reaching the surface. No - a huge *crater*. Sam shivered. If that had happened with the sword pointed in their direction…

"Adora?" Glimmer asked.

"The idiot's still alive. But exhausted."

“Are you sure?” Bow looked concerned. Sam felt concerned as well.

“She hasn’t transformed back. And I know how exhaustion looks on her,” Catra replied.

“Oh.”

Right. Sam nodded and didn’t think about the implications. There were more important things to focus on.

“Oh! Let’s check the surface! And the atmosphere!” Entrapta beamed.

“Check for poison,” Glimmer added. “And keep your masks on!”

Sam quickly picked up her scanner and had to scroll through several notifications about damaged systems. The magic sensors were out. That was… not ideal, given that they were now exposed to the planet’s atmosphere.

But the working sensors didn’t detect any of the poison they had scanned before. “It seems that Adora managed to clean at least our immediate surroundings of the poison,” she reported, turning to the General. Who was, she noted, staring at her. “Sir?”

“Carter? That haircut isn’t regulation.”

She froze for a moment, then reached up to her head. And then behind her back.

Her hair had grown. A lot. It now reached down to the small of her back.

“Oh! That must have been a side-effect of the magic used to restore the surface. Or maybe a stray strand when Adora fell unconscious,” Entrapta said, cocking her head as she ran a scanner over Sam’s head. “Can you manipulate it?”

“No,” Sam replied.

“Too bad! We could’ve been hair buddies. Hair science lab buddies.”

For a moment, Sam didn’t know if she should be happy or disappointed. She settled for being happy.

“So… anyone else got some rapid hair growth? Or some additional limbs? Or got turned into a plant?” the General asked.

“Jack!”

“Just asking. Magic is unpredictable.”

Sam clenched her teeth again and quickly and discreetly checked herself. She should have noticed any change to her body, but she had missed her hair growing, and with magic on such a scale, anything was possible. Relieved, she confirmed that she didn’t have any appendages that she hadn’t had her whole life.

But she would get a thorough medical scan as soon as they were back on Earth. Just to make sure she hadn’t suffered any less obvious change.

“No change here… I think.”

“Not here either.”

“As far as I can tell, I am fine.”

“I can scan you!”

“You’ve doomed us all!”

What? Sam turned. Alar was staring at the sky, pale and shaking. Tralan didn’t look any better, Sam noted.

“Oh, don’t worry - the air and ground above us are safe. I will need some larger sensors - probably hooked up to Emily, once she arrives - to check how much of the planet was affected, but I think we’re pretty safe from contamination - Adora channelled the

magic for a long time. Relatively, of course," Entrapta tried to reassure them.

"No! We're doomed!" Alar retorted, shaking his head - and crying. "The Breeders will not miss this - our base is completely open!"

"You still got your fancy defence field," the General said.

"No." Alar sank to his knees. "There were at least three projectors above us… the field won't be able to last like this. We're doomed!"

Right. The Eurondans were at war. A war fought in the air. And they just created the perfect bomb trap right at the planet's Stargate. While a fire was still raging inside the facility, drawing resources and threatening their military facilities.

"Oops!" the General said, and Sam winced.

*****

Catra was going to kill Adora. After she made sure her love was alright. To exhaust herself like that, channelling enough magic to fry… a small fleet, probably. She glanced up at the sky visible above them. Clearly and easily visible thanks to the crater Adora's magic had created.

Then she looked at Adora. She was limp, laid across Catra's lap, eyes closed, mouth half-open, breathing steadily.

"You idiot," Catra whispered, pulling her closer for a quick, squeezing hug. As much of a squeezing hug as she could manage with Adora still being She-Ra. That, at least, was a good thing - if Adora had really hurt herself, she would have changed back, wouldn't she?

Catra didn't want to know. She just wanted her love to wake up so she could properly scream at her for being stupid.

"You've doomed us all!"

And she wanted to claw Alar's face off to stop him from whimpering and crying. But she would have to drop Adora for that. And her friends wouldn't like Catra killing a prisoner.

So she turned her head instead and spat: "Shut up! You aren't doomed. You just lost the war - but you were losing it anyway!" Really, as if he was the first leader of an evil horde finding themselves in the ruins of their headquarters with the enemy at their gates! Catra knew exactly how that felt, and she hadn't been such a whimpering mess when it had happened to her.

"But he's right - if the Eurondan Alliance forces know what they are doing, they'll spot this little hole quickly and will attempt to capitalise on the opportunity to finish off their enemy for good," Jack said. "And this is one nice bomb trap - even some old World War 2 bombers couldn't miss such a target."

"We're doomed!"

Someone shut him up!

"Although unless they already have a force close by in the air which they can reroute on the fly, we have some time left to fix this. Somehow," Jack went on.

"But… they surely will notice that the poison's gone? And attempt to investigate first?" Daniel said.

"They have been fighting for their lives for decades," Glimmer told him. "I don't think we can count on them stopping their attacks to investigate what they might assume was a reactor blowing up in this base or something. They won't want to give their enemies time to fix things."

Catra nodded. She wouldn't do that either in their place.

"And they might not even notice that the poison is gone," Entrapta added. "If their sensors are not significantly better than the Eurondans', and I don't think they are, or the air battle would probably have been won by them much earlier thanks to superior

sensor ranges, they can't detect poison from afar - or its absence."

Right. Catra looked up. The fact that the crater was perfectly spherical might catch the attention of a scientist, but a military pilot would just see an opportunity. And speaking of the crater… She narrowed her eyes. "How stable are the crater walls?" she asked. If the walls started coming down, the Stargate - and anyone around it - would be buried under tons of stone and earth.

"Good question!" Entrapta beamed and looked at her tool. "Oh."

"The crater's surface wasn't hardened in any way, as far as we can tell," Sam reported.

"That means?" Jack asked.

"The top parts will start to crumble very soon, and the material sliding down into the crater might destabilise some of the material forming the lower parts, sir."

Uh-oh.

"Creating the world's worst landslide. Great." Jack shook his head.

"And it's starting!" Catra hissed - she could see the crater's surface moving. Dirt was starting to loosen and roll down the crater. Taking more dirt with it.

"That's… Something's moving inside the crater walls!" Sam exclaimed.

"What?"

"Yes - the entire wall is… on top of the surface as well," Entrapta confirmed. "That's… Oh."

Green spots appeared above them, rapidly spreading across the bare earth and stone walls.

Green plants, Cara realised. Growing through the walls, covering them. She almost checked if they had taken Perfuma with them - this looked like her going all out. But this was Adora's doing. Shaking her head, Catra smiled at her love. "Showing up the other princesses, huh?"

A clump of Earth hit the ground nearby, followed by another. And more, smaller specks fell down.

"Sir. While the plants are stabilising the crater walls, their rapid growth has shaken loose a lot of material," Sam said. "And it's all coming down."

"And She-Ra can't plug the hole because she's still out," Jack summed up. "Well, we…"

"...don't need She-Ra." Frosta raised her arms, and a pillar of ice rose in the middle of the room, covering the hole. Grinning smugly, she announced: "Problem solved!"

"Until it melts," Catra said, earning her a scowl.

"I'll just maintain it!"

"And, speaking of melting ice… don't we have a fire to fight?" Mermista said.

"Right." Glimmer nodded. "Follow me. Both of you."

Catra watched them leave. Between Frosta and Mermista, they should have the fire covered. And the ice here would hold long enough for the princess to get back and fix it. The sight of that had shut up Alar, too - the man was staring at the ice as if he had gone crazy. Crazier. Probably the straw to break his back after Adora's display. And the Eurondan Alliance might not have advanced sensors, but they wouldn't miss the plants growing in the crater. That should keep them from bombing it.

Should. Catra wasn't entirely sure she could trust anyone on this planet to have a little bit of common sense left. "We better contact the Eurondan Alliance," she said. "And quickly. We can't wait until Adora wakes up."

"Yeah," Jack agreed. "Daniel? How do you feel about arranging a truce between two blood enemies?"

Daniel winced. "Ah… I'll see what I can do?"

*****

Tense Negotiations Part 2

Underground Base, Euronda, December 16th, 1999 (Earth Time)

"No pressure," Jack O'Neill told Daniel. "You just have to get them to put the war on hold for a while so we can let the diplomats hammer out some armistice."

Judging by the way Daniel frowned at him - mirrored by Sha're - Daniel didn't really feel reassured. "I have to get people who have been fighting for their very lives for decades to stop the war right when they are about to win."

"Yep." Jack shrugged with far more nonchalance than he felt. "Maybe focus on the fact that the Eurondans are already beaten?"

"I'll have to get them to listen to us first. Convince them we're not the Eurondans - or their allies," Daniel retorted. He turned to Carter. "Can we communicate with the Eurondan Alliance?"

"We are tapping into their communications," Carter replied. "Their encryption is not as good as the Eurondan's, but they seem to have compartmentalised their communications."

"We've hacked their aeroplanes' comms, but we're still working on the link to their headquarters," Entrapta added. "Their planes are headed this way, by the way. They probably saw the magic surge and want to investigate."

"Or they noticed that the Eurondans' defences are in shambles and want to exploit that," Jack pointed out. He looked up at the ice shield sealing off the big-ass hole in the ceiling. "I don't think that's bomb-proof."

Daniel nodded. "Alright. Let's hope the plants give them pause." He didn't sound very optimistic.

“Here! We put their aeroplane network on channel two!” Entrapta’s hair tendrils handed a communicator to Daniel.

“Thank you.” He cleared his throat. “Eurondan Alliance forces! This is Daniel Jackson speaking. I am a representative of Earth and Etheria, two powers from outside this solar system. We have arrived in the Eurondan Nation through a Stargate to investigate an attack on us and have taken control of the Stargate the Eurondan Nation has been using. We would like to talk to your leader.”

“They’ve cracked our encryption!”

“Communications are compromised. Continue according to protocols!”

“Understood.”

“Uh…” Daniel winced and looked at Jack.

Jack sighed. It looked like the Eurondans - the Eurondan Nation - did enough hacking that the Eurondan Alliance had standard operating procedures for that. Which was kind of a problem right now. “I guess they aren’t changing course?”

“No, sir,” Carter reported. “They are still flying directly at our current position. At their current speed, the estimated time of arrival is five minutes.”

“Please. This is no joke. We are from the stars. We have defeated the Eurondan forces in their base and are currently securing the defence complex. We aren’t your enemies,” Daniel pleased. Please halt your attack for the moment, and let us talk to your leaders.”

Jack pressed his lips together. This wouldn’t work. After decades of war to the knife, the Alliance pilots wouldn’t stop but press the attack. He knew how pilots thought.

“We have restored plant life to the area and are taking measures to restore the biosphere of your planet. Please stop your attack

and let us talk."

Once they saw the plants, they might stop their attack. Might. They might not even notice the plants if they were focused on their sensors and instruments. Jack cursed under his breath. This wouldn't work. They needed something not even a pilot with target fixation could miss. Something to give anyone seeing it pause.

"Keep talking!" he snapped. "I'll get help!"

"What? Jack? Wait! What are you doing?"

Jack ignored him and switched channels on his radio. "Frosta? We need you back at the gate at once!"

"Frosta?" Sha're asked.

"We're busy fighting the fire!" Frosta sounded annoyed.

"Let Mermista take over for a while. We need you to stop the Eurondan Alliance from covering us in bombs!" Jack retorted. "Glimmer! Get Frosta back to us at once!"

"What? What did you do?" Glimmer cut in.

"Nothing. But the Alliance pilots won't stop," Jack replied. "We need her to make a sign even a blind man can't miss!"

"Oh!"

"What? Hey!"

In a shower of sparkles, Glimmer and the struggling Frosta appeared next to the Stargate.

"There you are!" Jack felt relieved. "Create the biggest ice sculpture you've ever done - right on top of us!"

Frosta stared at him with wide eyes. Then she grinned. "Alright! Glimmer, take us up to the surface!"

“Try not to kill off all plants!” Entrapta yelled.

“Bombs will kill them as well!” Jack yelled back.

Glimmer and Frosta disappeared in another cloud of sparkles.

Jack turned to Daniel. “Tell them to watch out for ice sculptures!”

“I’m not even sure if they are listening to me,” Daniel replied. But he did as asked.

“Now we can just hope for the best,” Jack said. “In case this doesn’t work…”

“Dialling to forward base, sir,” Carter anticipated his order.

“Good.”

Jack looked at the ice above them. It must have started to melt, but that wouldn’t be a concern for a while. Nothing Frosta and Mermista couldn’t handle. As long as his idea worked.

“What’s Frosta doing?” Catra asked behind him.

“Oh! Let me check with the scanner!” Entrapta replied. “I should be able to get good visuals of it…”

Jack looked over her shoulder. And blinked. That was…

“Did she just create a sculpture of herself the size of an iceberg?” Daniel asked.

“Yep,” Jack said.

“Almost the size of her ego, I bet,” Catra added with a smirk.

Behind them, the wormhole stabilised.

“It’s still growing,” Entrapta reported.

Well, the Eurondans wouldn't have to worry about water for a while, Jack thought.

"The Alliance Aeroplanes are slowing down."

It was working. Jack softly sighed.

*****

She had to keep channelling the magic. Purge the poison. Heal the land. Purge. Heal. Endure. She had to… She had failed!

Adora woke up with a gasp and sat up. Or tried to - a hand on her face stopped her.

"Don't!" Catra hissed at her. "You've been out for hours!"

Adora was in Catra's lap. Well, her head was. And they were…

"Actually, less than an hour - forty-one minutes, to be exact."

That was Entrapta's voice! Adora turned her head. Entrapta was sitting on the ground, beaming at her while her hair kept pressing buttons on her tool. They were in the Eurondan gate room. She could see Campbell guarding the gate at the D.H.D. But where were the others?

"Close enough." Catra scowled.

"Actually…"

"It doesn't matter," Catra interrupted Entrapta. "The idiot here almost got herself seriously hurt trying to save another world!"

Trying? "What happened? Did I fail?" Adora asked. She had failed - she knew it! "I tried to heal the world…"

"And you did purge the poison from most of the landmass we're on," Entrapta said.

"You also vaporised half of the Eurondan defence complex," Catra added.

"Fifteen per cent, actually."

"Oh." Adora blinked and looked at the ceiling. "Is that… ice?" It looked like ice. A huge patch of ice covering most of the ceiling. No, *replacing* most of the ceiling.

"Frosta plugged the hole. And then created an ice statue of herself the size of Bright Moon," Catra explained. Or not.

"She did what?" This time, Adora managed to sit up.

They explained. Properly, this time.

*****

"...and that's why Mermista had to move the water so the melting sculpture won't fill the crater with water - Frosta already had to reinforce the ice cover here, but the water pressure could make that worse. We really should repair the ceiling here, but we don't have the material to do that."

"We've created a new lake?" Adora asked. That was… OK, not as bad as turning a spaceship into a plant, but it wasn't very responsible. You didn't rearrange the geography of a foreign world like that!

"They're still working on that. But it won't be a big lake," Catra said. "Anyway, that's why Glimmer and the others are up top, trying to prepare a canal for the water before the ice melts."

"They are digging a canal? How?" Adora asked.

"More like blowing a canal," Catra said.

"Jack is using explosives to remove an obstacle between the crater's edge and a ravine."

That made more sense. “And what about the Eurondans?” Adora asked. “You managed to stop the war, you said.” Thanks to Frosta.

“The Eurondan Nation has a truce with us. The Eurondan Alliance hasn’t agreed to a ceasefire, but they have stopped trying to bomb us,” Catra said. “Daniel’s trying to get them to parlay, but they’re stubborn, and I think they don’t really believe we’re aliens even after they saw Frosta’s ego trip up top and you rejuvenating the continent.” She shrugged. “He’s still talking in the next room.”

Adora nodded. If the Eurodans were talking instead of shooting - or bombing - each other, then that was a good thing. Still… “I should talk to them.”

“*You* need to rest! You exhausted yourself - you exhausted *She-Ra*!” Catra snapped.

Adora winced. Even She-Ra’s power had limits. No, she had limits. If she had been ready for this… She got up. “I’m fine.”

Catra narrowed her eyes at her, and Adora half-expected her to try to trip her to claim she wasn’t fine, but her lover muttered something under her breath - probably ‘idiot’ - and got up as well. “Well, let’s tell Glimmer that you’re awake.” She used her communicator before Adora could stop her.

Glimmer appeared with Bow a second later. “Adora! What were you doing?”

“I am fine,” Adora told her friends while they hugged her. “Just a bit tired.”

“Exhausted,” Catra added.

“Well, you’re not hurt according to my scans,” Entrapta said. “Though I don’t have enough data about She-Ra’s power when restoring magic to a planet to be a hundred per cent sure. However, I could compare your hair growth when you change into

She-Ra to Sam's recent hair growth and conclusively prove that they aren't the same."

"Sam's what?"

"You made Sam's hair grow. A lot," Glimmer told her.

"It's not magical, though," Entrapta added with a pout. "That would have been nifty."

Adora suppressed a groan. What else had she done? And how could she fix things?

Well, first, she had to end the war. Then, she could tackle the rest of the problems.

*****

Surface above the Underground Base, Euronda, December 16th, 1999 (Earth Time)

Samantha Carter was a physicist. Not a landscaper. Not that she would say that out loud and invite the General to make a Star Trek reference. She had some experience with demolitions, though not as much as the General himself. A combat engineer would be better here. But they didn't have a combat engineer to deal with what was effectively an iceberg on land, so it fell to her.

"That should do it!" The General sounded pleased. "The charges are set. Now, everyone, get back so we can blow this joint as soon as Carter gives the word!"

The others did move away from the patch of land that separated the base of the colossal ice sculpture Frosta had created - in her image, Sam couldn't help adding to herself - from the closest ravine. She used her scanner again. If the explosives weren't enough, they could probably have Adora dig now that she was awake. Or, as an alternative, have Mermista control the water to carve a deeper canal to the ravine, though that was not too practical.

Neither would be necessary if she did her job well enough, though.

"To stand on the surface again… It's a dream come true."

"Our world, restored. A paradise."

"I've only ever seen it from the air. I've been to other planets, of course, but… it's not the same."

"It isn't. This is our home. Our world."

Tralan and Alar's awed conversation behind her wasn't helping, though.

"To see rivara plants grow again… I've only ever seen them in pictures."

"We have seeds stocked in our vaults, but… It's incredible to see plants as far as we can see."

"And you have She-Ra to thank for this," the General added. "Without her, this would still be a poisoned wasteland."

"And we shall not waste her gift!" Tralan said.

Sam winced as she re-ran the last scans and recalculated the yield. That sounded… not quite as bad as Priest, but there was a touch of fervour in the man's voice that bordered on the religious. She hoped it wasn't the start of another branch of the Church of She-Ra; Adora wouldn't like it.

And it would complicate the peace negotiations they were still trying to start.

"Don't forget Entrapta, who's busy restoring your life support systems back down the hole," the General said.

Systems that had been partially wrecked by Adora's magic, Sam mentally added.

“Of course.” Alar didn’t sound very grateful about that. Then again, that was ‘merely’ engineering and repair work. Not the restoration of the world’s biosphere by magic.

Sam pushed the thoughts away. The calculations and scans were done, and nothing had changed. She looked at the General. “We should be good, sir.”

“Great, Carter.” His grin made him look twenty years younger. “Here we go!” He held up the remote detonator.

A moment later, the ground in the distance vanished in a cloud of smoke and dust. Sam saw various earth clumps and rocks hitting the ground around it - pretty much where she had predicted. That didn’t matter, though. What mattered was whether or not they had blown a big enough crater to reach the ravine.

And according to her scanner, they had. It wasn’t quite perfect - the section that had blown open was a bit smaller than calculated - but it would be enough to keep the Eurondan bunker from getting flooded by Frosta’s work.

“So, Carter?”

“It’s done, sir.”

“Huzzah!” Sea Hawk cheered.

“Looks like you don’t have to stay and keep the statue frozen, then,” Mermista told Frosta.

“Don’t blame me; Jack said to create a huge sculpture.”

“He didn’t tell you to create a huge statue of yourself.”

“Ice is ice and melts the same.”

Sam rose from where she had been sitting, the movement making her feel the unfamiliar weight of her hair as her new ponytail slapped against her back. Maybe she should just cut it off with her

knife? She could have it trimmed properly back home; according to all the scans they had done, it was normal hair. Magically grown, but not magical itself. Which was a relief.

But Glimmer wanted Castaspella to take a look at it 'before doing anything drastic', and even the general had agreed that they should get an expert's opinion before cutting it. 'You can't be too careful with magic, especially magic on this scale', he had put it. She could bear it until then. She might even take a picture before cutting it back to regulation length.

Sam grinned as she looked around. She-Ra's magic had turned the whole area into lush, green fields and hills. No wonder the Eurondans were impressed.

The General joined her. "So, that's one problem solved. Too bad we can't solve the diplomatic problems with explosives."

"I am sure that the Eurondan Alliance will agree to peace talks once they confirm the extent of the changes Adora has wrought," Sam pointed out.

"They still suspect a trap."

She frowned. "That makes no sense. How do they explain this?"

He shrugged. "They don't have an explanation. And that makes them more suspicious. But I'm sure Daniel will convince them."

Sam hoped he was right.

*****

Underground Base, Euronda, December 16th, 1999 (Earth Time)

"...and yes, we are aliens - humans, but from other planets."

"A likely story."

“But a true one. And as you have already seen, we also have other species here with us.”

“Tricks. You cannot fool us so easily.”

Catra snorted. “So much for showing off me and Isa, huh?”

Daniel turned to pout at her. “I didn’t expect that to convince them that we’re aliens. Not by itself. But put together with the other evidence we can produce, it should convince them of the truth of our claims. Eventually.”

“‘Eventually’.” Catra snorted again. “Before or after we arrive with a fleet?”

“No fleet is on the way,” Adora cut in.

“Not yet.” Catra grinned. “It might be faster to send a fleet than talk sense into them.”

Daniel turned back to the communicator. “We can meet in person, and you can have medical personnel examine them.”

What? Catra frowned at him. Getting her examined by some weirdo medic from a backwater planet? “That’s a low blow!” she hissed.

Daniel ignored her, but Sha’re made a sound as if she was suppressing a giggle.

“A meeting would be the perfect occasion for an ambush.”

“They’re paranoid.” Catra shook her head. “Just send some expendable soldiers,” she said, loud enough to be picked up by the communicator.

“Catra!” Adora hissed.

“What?” Catra frowned at her. “They’re fighting a war. They’re sending out people to die with every sortie.” Unlike the Eurondan

nations' aero-fighters, the Eurondan Alliance's aeroplanes were not remote-controlled, as they had found out earlier.

"Every soldier is crucial for the war!"

"You've seen the ice sculpture we created - you've seen it as it was grown. You've seen the crater we blew into your enemies' base. Isn't that enough to at least meet with us to verify our claims before you attack us and risk similar repercussions?" Daniel pleaded. "If this were a trap, what would be the point?"

A different voice replied: *"To get us to lower our guard and then do to us what you did to our enemies so you can conquer us both!"*

That was… actually a new twist, Catra had to admit. Still paranoid, but it made sense in a warped way.

"If you think we want to conquer both you and your enemies, does that mean you accept that we aren't part of the Eurondan Nation trying to fool you?" Daniel asked.

"You could have couped the old leader in a brutal civil war. And now you're trying to deceive us before we finish you off."

"Well, that's not an entirely unreasonable assumption," Catra commented. "They know their enemies." A group that would set their own base on fire or wreck their own world to destroy their enemies wouldn't hesitate to attempt such a ploy. And they had been suspiciously quick to sacrifice their leader in the process.

"How could we do that in a meeting far away from either your or your enemies' base?" Daniel sounded exasperated. "You have seen how we restored life to your world. Do you really think that we would need to trick you if we can do that?"

"Then what do you want?" Another new voice. Older.

"We want to end the war," Adora spoke up. "Stop the dying. Restore your world. *Help you.*"

After a pause, the same voice asked: *"And why would you do that?"*

"Because it's the right thing to do," Adora replied.

"Because we have the power to help you, and you need help," Daniel added. "We're not here to conquer your world."

"But we could if we wanted to," Catra whispered. It would be easy - the Eurondans of both factions had spent decades underground. Even with the restored plant life on the continent, they would be hard-pressed to launch a guerilla campaign. And even if they managed that, the best they could do was hide in the new wilderness. The Alliance could easily take and hold any base, and they could detect and track down any base the Eurondans built anew. Sooner or later, the guerillas would run out of supplies to wage even a limited war.

"Catra!" Adora hissed.

"Just saying."

"That's not helping!"

"Nothing seems to be helping," Catra retorted.

"Some people mistake kindness for weakness and restraint for incapability," Sha're commented in a low voice. "If all the Eurondans have ever experienced for a generation is all-out war, they might not understand that we won't use our power as much as we could."

"And demonstrating our power will be seen as a threat," Adora added.

Catra snorted again. It *was* a threat. But maybe a threat was what was needed to get the Eurondans to agree to a meeting.

"What do you have to lose?" Daniel tried again. "Even if you don't trust us to honour a truce, at worst, you would lose a few

soldiers. And in exchange, you stand to gain more information about us."

The older voice replied again: *"And what do you have to lose? You do not seem to be concerned about potential treachery on our side."*

"No, we are not," Daniel said.

Take that however you want, Catra thought with a grin.

A few seconds passed.

"Very well. We agree to a meeting under truce."

*****

Restored Zone, Main Continent, Euronda, December 16th, 1999 (Earth Time)

"We should have brought a chopper," Jack O'Neill commented as they approached the location for the meeting. "Would've been faster." Certainly faster than the skiffs they had brought through the Stargate as transports. They had been driving for hours - technically flying, but it felt like driving since they had to stick so close to the ground.

"We couldn't have managed to get it up and running in time," Bow disagreed, glancing back from the helm of the skiff for a moment. "With all the preparations needed."

Jack grunted. He knew that - he had checked the facts himself. The gate was large enough to fit a transport chopper through, but the logistics for the trip would have been too much. They would have needed extra transports for the fuel - forget setting up in-air refuelling on a foreign planet without an air base!

"The skiffs will look both less aggressive and more impressive, Jack," Daniel argued. "The Eurondans have nothing like this."

"They don't have choppers either," Jack shot back.

"But they understand the principles. This, though… Magitech is new for them." Daniel smiled. "And the skiffs don't look like military craft."

Which was part of Jack's problem with them - he felt too exposed on the skiff. It was like riding a bus into battle. A strafing attack by an Alliance fighter would… well, the shield projectors would stop it, but Jack would still prefer something visible around him.

"We don't have any advanced transports that fit through the Stargate, sir. They weren't a priority." Carter sounded slightly reproachful. As if Jack had been the one to refuse that project!

He had wanted the things! They were perfect for special ops missions! But the Alliance Command had decided to focus on shuttles. Compared to the proposed 'Gate-capable Advanced Transports', shuttles could haul a lot more cargo or troops, could go much faster - all the way across a solar system - and were much tougher and better armed as well. The Alliance needed shuttles far more than they needed special transports. Especially since most of what the special transports could do could be done with ground or conventional air transports. Unless you needed a space-capable transport that could fit through a Stargate.

"I'll bring it up again," he said.

"Entrapta proposed to modify Death Gliders for the purpose," Carter added.

Jack winced. Those things were barely-decent fighters. To change them into transports… He shook his head.

"We're about to reach the meeting spot," Bow reported. "It doesn't look as if anyone else is present."

They only expected the Eurondan Alliance delegation. "Carter?"

"Linking to Entrapta's scanner… there is an unknown aircraft circling about five miles out, sir. Similar design as their bombers."

Was that a trap? A bomb attack on them? Emily's shield might not be able to withstand that, but the bot supposedly had enough AA-capability to shoot down bombs. But if it were, wouldn't the Eurondans have sent more craft?

In any case, the skiff Adora and the others were on was already setting down, followed by the one transporting Entrapta and Emily. That one wobbled a bit; it was slightly overloaded with the big bot.

"Alright. Let's get ready for diplomacy," Jack said as Bow set down their own skiff.

And find out if this is a trap, he added to himself as he grabbed the tent they had brought with them.

Five minutes later - they had just finished setting up the tent - Catra called out: "They're coming!"

"Yes. They are on a course towards us," Entrapta confirmed.

Jack stood - his back didn't protest at all! - and grabbed his binocs. Indeed, the other craft was coming in low and slow. Not a bombing run, then. It wasn't a big transport - not even close to a C-130. Maybe as big as a C-47. And probably as capable of landing on an improvised runway. Also known as a field. Maybe they should have asked if they should prepare a runway for their guests, unless…

Yes. The plane slowed down even more until it came to a stop, hovering in the air about a hundred and fifty yards from their position, then descended straight down. Like an Osprey, but with jet engines. Jack wondered how they avoided FOD. And how fuel-efficient the thing was.

The plane set down, and the engine noise faded. A moment later, a door in the side opened - like a C-47, Jack thought - and two

armed soldiers stepped out, followed by four more soldiers. Probably officers, Jack thought - they were in uniform but didn't carry longarms.

Behind them, two more guards climbed out of the plane but stayed back while the six approached their position.

"Showtime," Jack said. "Let's see if you can do your magic again, Daniel."

"I'm no diplomat, Jack. I'm only here because I made first contact with them."

His friend was too modest. Jack would trust him over any career diplomat from Earth. Or any princess from Etheria, actually. He clapped Daniel on the back. "Just do your thing. No pressure."

"Tell that to Adora," Daniel whispered back.

Jack glanced at her. Yeah, Daniel was right - Adora looked tense. But that couldn't be helped now.

He put on his best smile as the Eurondans reached them.

"Yo!"

*****

Adora was used to Catra's antics, so her smile didn't slip as Jack greeted the Eurondan Alliance delegation far too casually. They didn't know Earth or Etheria, so they hopefully wouldn't realise it, anyway. "Hello," she said with a nod. "I'm She-Ra, princess of Power and Supreme Commander of the Alliance against the Goa'uld."

"I am Captain Akon," their apparent leader, a middle-aged man, said with a rather brief nod. He also focused on her while the others with him stared at Catra and Isa.

Unlike Alar's people, who all looked similar to each other, the delegation showed more diversity, Adora noted. In skin tone and height, at least - all of them were men, and all had dark hair, though while Akom's hair was curly, one of the guards hanging back had straight, long hair.

Catra rolled her eyes at the scrutiny. "No, you don't get to pull my tail to check if it's real," she said.

Adora cleared her throat as two of the younger Alliance soldiers blushed. "Anyway, this is Queen Glimmer of Bright Moon, Princess Entrapta of Dryl, Princess Frosta of the Kingdom of Snows, General O'Neill, Major Carter, Dr Jackson, his wife Sha're, Tech-Master Bow, Catra and Emily," Adora introduced her friends.

"Lieutenants Kels and Pers. Liou." Akon curtly nodded at the three others with him. He didn't bother introducing the guards. Both Kels and Pers were younger men. The former had darker skin than Bow, and the latter looked like he would fit in the Eurondan Nation if he dyed his black hair. Liou was another middle-aged man with a skin tone similar to Frosta's, but he was rail-thin and taller than anyone else here except She-Ra. He was also focused on Catra and Emily, so he might be a scientist.

"We've prepared a tent for the meeting," Adora said, pointing at it. "And we brought some refreshments and snacks." She was sure that if they had been forced to eat yeast-based food like their enemies, they would appreciate it.

"It should be safe for human consumption - at least Alar's people wouldn't have any problems," Entrapta added. "We can scan you to check if you want to be sure."

"I think…" Akon started to reply, but Liou interrupted him. "How is your hair moving?"

Akon glared at him - scowled, actually - but didn't tell him off, Adora noted. So, Liou might be in charge of the delegation.

“It’s my magic power,” Entrapta told him with a smile - and demonstrated how she could control her hair to hold tools and operate computers. “All princesses have a magic power.”

“Yes!” Frosta nodded and took a step forward. “I control ice.” Before Adora could say anything to stop her, Frosta moved her hands, and a pillar of ice rose from the ground near them.

“And I can teleport,” Glimmer added while the delegation stared at the ice. Then she disappeared and appeared on top of the ice pillar.

“Show-offs,” Catra commented. Adora didn’t have to look at her lover to know she was rolling her eyes.

“It’s the quickest way to prove we’re not from this planet,” Glimmer retorted as she reappeared next to Adora. She turned to face Liou. “Do you want to examine our powers more closely?”

“I think so, yes.” Liou smiled at her. “Although while unprecedented, such powers wouldn’t prove that you’re from another world.”

“Magic powers. Advanced technology.” Glimmer gestured at Emily. “Catwoman.” She nodded at Catra. “And the plant life of most of a continent restored.”

“A compelling collection of arguments in favour of your claim, indeed.” Liou nodded once more. “Still, to have come through a ‘gate’ from another world…”

“Where else would we have come from? Do you think we are from the Eurondan Nation?” Catra scoffed.

“No, I don’t think so,” Liou replied. “As you might have found out, they consider anyone not conforming to their ideals, both biologically and philosophically, unworthy of living - they started a war over this stance. And most of you would not pass muster.”

“We’re aware of that,” Jack said. “We had a disagreement over that, which led to the big honking hole in their bunker.”

“But I think we should discuss that in the tent,” Adora added. “After you finish your examination, of course.”

“This shouldn’t take long,” Liou said. “I only brought a rudimentary set of tools.” He went and took a probe from the ice pillar, then peered at it through some sort of scanner.

“Oh! Spectral analysis!” Entrapta smiled.

Liou let a piece of ice melt in his hand and tasted it, ignoring Akon’s grimace. “It seems to be ordinary water,” he said. “Of course, given your demonstrated powers, that could be wrong.” He looked at Catra, who rolled her eyes again, though, despite her earlier words, she stretched and moved both her ears and tail.

“Intriguing. This is not your ‘magic power’, is it?” Liou asked. “You were not named as a princess.”

“No.” Catra smirked.

“And we’re all grateful for that,” Adora heard Glimmer mumble next to her.

She cleared her throat again. “So, shall we sit down? We have a lot to discuss.”

“We shall.” Liou’s smile didn’t change. “Such as the question of why you seem intent on protecting the same people who wanted to murder us all and would see you dead if they could.”

Adora suppressed a wince and kept smiling politely at him. “Yes, that.”

*****

They were off to a good start, in Samantha Carter’s opinion. Liou had - as far as she could tell - accepted that they were aliens. Or,

at the very least, not from the Eurondan Nation. That he was testing the facts more than any preconception was very promising, as was the fact that the obvious scientist of the delegation was apparently in charge.

Of course, that didn't change that the negotiations would be very difficult. Sam didn't have to be a trained diplomat to realise that ending the war while the Eurondan Nation and its people still existed wouldn't be popular in the Eurondan Alliance. Liou's comment, pointed if politely said, made it clear that they saw any interference that hindered their continuation of the war as help for their enemies.

Or so it seemed. As they took their seats, Sam reminded herself that they didn't know anything about the Eurondan Alliance that they hadn't been told by Alar and his people, who had every incentive to paint the worst picture of their enemies. And even that information had been very scant with regard to their society and culture. Mostly vague propaganda about the Alliance 'breeding uncontrollably'. Even if that were true - Sam doubted it - decades had passed since the war had started. Their society would have changed massively since then.

"Thank you for meeting with us," Adora told them.

"And have some tiny food!" Entrapta added, hair tendrils offering plates with finger food courtesy of Stargate Command's mess hall and a selection of all the drinks of the bases' vending machines to the delegation.

The three others glanced to Liou, Sam noted. Taking their cues from the scientist. Smart.

Liou himself looked at the food, then started sampling it. He hadn't attempted to check for poison, as far as Sam could tell. Perhaps he didn't have the means to do so quickly and in the field - Earth technology was limited in that are as well, after all. Though that was speculation. They might have deliberately held back their best scanners.

“Oh.” Liou’s eyebrows rose after a fist bite from an egg salad sandwich. “This is food from your home?”

“Yes,” Daniel told him. “We brought it through the Stargate in preparation for this meeting. It was made by the cooks on our base.”

“Ah.” Liou nodded. “This is the food your soldiers eat?”

“Sometimes,” Daniel replied. “It was specially prepared, but in a military base. Civilian chefs would have made better food, but the logistics of transporting such food in time for this meeting were too challenging. I hope it’s still sufficient.”

Liou slightly tilted his head. “Are your civilian chefs more skilled than your base’s cooks?”

“It depends,” Daniel told him. “Their general skill level varies, of course. And some civilian chefs are, well, not very good. But the best chefs are civilians.”

“It’s kind of hard to hire the best cooks when we can’t pay them more than a fraction of what a five-star restaurant can offer,” the General added. “But we manage.”

“Ah.” Liou exchanged a glance with Akon. “You call yourself the ‘Alliance against the Goa’uld’. Are you fighting a war?”

“Yes.” Adora nodded firmly. “They are an alien species that can take over a human body as a host and rule an Empire based on enslaving humans.”

Adora and Daniel briefly explained more about the Goa’uld Empire.

Liou and the others listened, but Sam had the impression that they were not convinced. She couldn’t really hold that against them; without proof - and personal experience - Sam would be doubtful of such claims as well. But it would make negotiations more difficult.

That was for the others to handle, though.

"...and that's how we arrived here," Adora finished their very brief explanation of how they had reached Euronda.

"I see. So, the Eurondan Nation allied with your rivals and supplied them with poison to attack your base?" Liou asked. "This sounds familiar."

Akon snorted at that.

"In hindsight, yes. At the time, we didn't know what the Eurondan Nation had done to your world," Daniel said.

"And then, when you met with them under the flag of truce, they betrayed you and attempted to murder you all," Liou went on.

"Yes. After they realised that we, ah, didn't share their views about eugenics and procreation, things deteriorated and escalated," Daniel said.

"We can see that." Liou nodded at Bow, Glimmer and the others. "It's remarkable that they allowed you to visit their base in the first place. They must have been more desperate than we thought."

"Desperate enough to ignore their own ideology and attempt to reach an agreement and trade deal," Daniel said.

"Temporarily," Liou corrected him. "They attacked you anyway."

"Through treachery," Akon added with a deep scowl. "When you had brought civilians to the meeting."

He glanced at Sha're, Sam noted. And at Glimmer. And at Entrapta. All members of the delegation were doing that, actually. Even the guards were doing it. Did they think everyone who wasn't in uniform was a civilian? They had been told that Adora was the military leader of the Alliance, though. And would they

realise what was a uniform and what was the personal outfit of a princess from the few samples they had?

No, she realised - Sha’re was wearing the same fatigues as Daniel was, and they were looking at her. They were also looking at Sam herself, she realised. And she had been introduced with her rank.

Oh. She pressed her lips together for a moment, trying not to scowl when she recognised what they were doing.

They were staring at every woman.

*****

Tense Negotiations Part 3

Restored Zone, Main Continent, Euronda, December 16th, 1999 (Earth Time)

Catra leaned back and stretched her arms over her head. The Eurondan Alliance delegation stared, as expected. But they were staring at everyone - well, almost everyone. That they would be staring at Adora was expected. Who wouldn't, whether she was She-Ra or not? But they were also staring - openly or with an attempt to be not obvious - at the others.

And something was odd.

Catra frowned a little, trying to spot the pattern.

"Do you have many civilians?" Sam suddenly asked. She was leaning forward and looked… annoyed, Catra noted. Which was a surprise.

Liou tilted his head at her. "Why do you ask?"

"You seem to be surprised by the presence of women at this meeting," Sam replied.

Oh! Catra rolled her eyes. That again!

"It's unusual for us," Liou told her. "Our circumstances must be very different, I suppose."

"Don't you have female soldiers?" Sam raised her eyebrows. Definitely annoyed.

Daniel blinked, then slowly nodded. He must have just got it as well.

And Adora was frowning.

“The idea to send women into war, risk their lives, is anathema to us,” Liou said. His group looked pretty uncomfortable to Catra.

Sexist, then. Probably thought women couldn’t fight, like some idiots on Earth. I wonder if they also have some stupid religion favouring men, Catra thought.

“Why?” Adora asked. “We can fight as well as any man.”

“Better,” Glimmer muttered under her breath. Louder, she added: “We’ve proven that in the war against the Horde.”

“Yes!” Frosta added with a sharp nod and a scowl.

At least they haven’t called her a kid, Catra thought. That would have set the princess off.

“As I said, our circumstances must be very different,” Liou said with a polite smile that was about as sincere as Horde Prime.

“You don’t have many women, do you?” Daniel asked.

Liou merely turned his head to face him, but the other three at the table visibly tensed. “What makes you say that?”

“Ah, it seems the most logical explanation,” Daniel explained in his lecturing voice. At least he didn’t raise a finger for each point. “You were fighting a war for your very survival, against a genocidal enemy. Usually, nations mobilise all resources for that. And since the war has been mostly fought in the air, with advanced aeroplanes, one would have expected you to recruit your women as well, so the most talented pilots could be used regardless of their gender. Even if you had strong traditions against such a move, the threat of genocide would likely have outweighed those - as happened to the Eurondan Nation when they made a deal with others not conforming to their ideals. And yet, you apparently didn’t even think about this. So, there might not be enough women in your country to risk any in combat.”

Liou's smile turned rueful, and he slowly nodded. "Your analysis is correct."

"Ah?" Daniel perked up but quickly schooled his features. "Sorry. I got a bit carried away."

"So, what - you don't have enough women to keep your population up?" Jack asked.

Oh. That was… Catra winced.

"You don't have artificial wombs?" Entrapta cocked her head at them before smiling widely. "We can help you out there!"

"'Artificial wombs'?" Liou looked intrigued.

The other Eurondans looked queasy, Catra noted.

"Well, there's also magic alternatives, but artificial wombs are the easiest way to have kids without a woman," Entrapta said.

"My dads used them," Bow added with a smile. "I've got twelve older siblings."

"Your dads had thirteen kids?" Akon shook his head. "That's… No wonder you risk women in combat if you can replenish your numbers so easily!"

"Ah… I'm the only soldier amongst them," Bow said, frowning a little. "They didn't have kids to 'replenish' our army."

"You shouldn't have children just to turn them into soldiers!" Adora blurted out.

"We were almost wiped out!" Akon protested. "The Eugenists struck at our civilians first, killing most of them!"

"They deliberately hit civilians over military targets?" Jack asked. He was almost as tense as the Eurondans had been.

"Yes," Akon said.

“Few civilians were able to reach a shelter when the poison was released,” Liou said. “The military did what they could, but they could barely protect themselves - and had to defend against the Eugenists’ attack at the same time. Civilian casualties were… crippling.”

“What did you do? To deal with that?” Daniel asked a little hesitantly.

“We fought them however we could!” Akon said. “And slowly, with great sacrifices, we drove them back! And now that we are on the brink of final victory, you interfere!”

Daniel winced but didn’t relent. “I meant, how did you handle your, ah, population crisis?”

“We ensured that most of the children conceived after the war had started were female,” Liou said. He glanced at the two younger Lieutenants. “Young men are also rare in our country, though not as critical for our survival as women since they aren’t required to be present - or alive - at conception.”

Oh.

Catra wasn’t the only one who winced at that.

*****

The Eurondan Nation had started by going after the civilian population? Jack O’Neill winced. In hindsight, that should have been obvious. It was a logical move - for genocidal scumbags waging a war of extermination - and they already knew that the Space Nazis had poisoned the entire planet to get at their enemies. Still…. Sick.

Maybe we should let the Eurondan Alliance finish them off, he thought.

“I see,” Daniel said. He looked shocked as well. “That’s quite an extreme measure, although the circumstances were extreme as

well."

The scientist, Liou, frowned. "It was a logical response to the loss of most of our civilian population."

"Most of your military was male, then?" Glimmer asked.

"Yes," Liou replied.

"That had always been the case," Akon added. "Why would we risk women in battle?"

"Because we can fight!" Frosta said.

Liou frowned at the man, Jack noted, if only long enough for the officer to notice and wince. "There were movements to recruit more women, before the war," he said. "Partially in response to the Eurondan Nation recruiting women. But after the war had started and we had lost so many people…" He shook his head. "Our leaders agreed that we could not afford to risk women in combat. Not if we wanted to survive as a people. Even so, many succumbed to hunger and sickness as lost medical infrastructure and food production took their toll, and we struggled to defend ourselves and build the means to sustain our lives in shelters."

Yeah, that would have been horrible. Losing most of their population and their food production? Jack didn't even want to imagine how bad things must have been if they had been caught unaware by such an attack without sufficient food in storage for the population. Every lost soldier probably was also a boon since that meant the food supply would last longer…

"So, the current absence of women in the ranks of our soldiers is a result of our situation in the past," Liou went on.

Jack suppressed a snort. Liou was smart, but his attempt to pander to the Alliance led by a woman was a bit too obvious. By now, Akon's attitude was probably entrenched amongst the entire Eurondan Alliance.

Catra didn’t suppress her snort.

“Well, that’s no longer necessary. We can supply you with artificial wombs, and you can recruit women into your army again!” Entrapta told them with a smile.

Jack winced again - she had completely misread the room.

“Anyway, you won’t have to recruit more soldiers once the war’s over - and it effectively is over,” Adora said. “The Eurondan Nation can no longer wage war against you.”

“So you say. And their last bunker did suffer obvious damage. Yet, even our most optimistic estimate of the extent of their defensive network puts their bunker as far too large that such damage would have annihilated their production capacity,” Liou retorted. “Left alone, they will recover.”

“And they’ll renew their attacks on us!” Akon said. “We cannot let them threaten our people ever again - we have to wipe them out for good!”

“We do not condone genocide,” Glimmer said with narrowed eyes.

“You obviously have never suffered as we have!” Akon spat. “Or you would not say this!”

“We have fought for our very lives as well!” Glimmer retorted. “But we didn’t ‘wipe out’ our enemies when we won!”

“You don’t have to destroy your enemy to be safe,” Adora added. “They can’t hurt you any more - we won’t let them.”

“As long as they are around, we’ll be in danger. They see us as subhumans and claim our very existence threatens them,” Liou pointed out. “You cannot trust them to keep the peace.”

“They tried to exterminate us and almost succeeded. Our soldiers threw them back at great cost!” Akon almost yelled. “How can you

expect us to let them live after all they did to us? They do not deserve any mercy!”

They weren’t entirely wrong, Jack had to admit.

“All of them? Even their civilians?” Adora shook her head. “Their children? Those kept in stasis?”

“Stasis?” Liou leaned forward. “What do you mean?”

“They keep most of their civilians in stasis, cryogenic sleep,” Entrapta explained. “They don’t have the supplies for them.”

“Ah, I see.” Liou nodded. “That answers a few questions we had, thank you.”

“You’re welcome!”

Jack suppressed a sigh. At least it was intel about the Eurondan Nation and not about the Alliance.

“Anyway,” Adora spoke up again, “We won’t let you kill the Eurondan Nation. They cannot hurt you any more. And we’ll ensure that they cannot hurt you in the future either.”

“And how will you be doing this? Will you remove them from our world?” Liou asked, tilting his head again. “Will you take them to your own worlds?”

“That would be ethnic cleansing,” Daniel pointed out with a frown. “It is frowned upon on Earth.”

“So, you expect us to share our world with the very people who tried their hardest to ruin it only so they could murder us all?” Liou shook his head. “That is unacceptable. We have lived too long in fear of them. We have suffered too much to forgive them.”

“One way or the other, they have to be removed from our world,” Akon added.

Once again, Jack couldn't help thinking that they had a point.

*****

Adora clenched her teeth. She understood the Eurondan Alliance's views. They had lost so much! Suffered for so long!

But they were still wrong. And she said so. "You're wrong." Akon and the two lieutenants openly glared at her. Liou was a bit less obvious, but he still frowned. Adora shook her head at all. "You can be safe without *removing* them." They were already safe - they just didn't accept it.

"No, we can't!" Akon disagreed. Vehemently. "You can't live under the same sky as those who murdered your family!"

"If you murder their families, does that make you any better than they were?" Adora asked.

"Yes! We didn't start the war! We didn't try to murder civilians!" Akon retorted.

"But that's what you are trying now," Daniel pointed out.

"What?" Akon spat.

Daniel pushed his glasses up. "You are trying to kill all of the Eurondan Nation's population. Most of them are held in stasis, helpless - civilians."

"They tried to kill us all! Our families! Our world!" Akon shook his head.

"And all of them went along with it!" Kel added. "They are all guilty!"

Pers nodded in obvious agreement, his lips pressed together.

"And we are not arguing for their deaths - merely for their removal from our world - the world they attempted to ruin to kill

us all," Liou added in a - in Adora's opinion - deceptively mild voice.

"That is only an option because you now know about the Stargate," Glimmer retorted.

"And removing people from their homes is still ethnic cleansing," Daniel said. "Some consider it a form of genocide. But it is generally agreed that it is not lawful."

"A general agreement amongst *your* people, maybe," Liou retorted. "My people differ."

"We will never accept that those monsters remain on our world!" Akon said.

"We're here to discuss a truce," Sha're cut in. "We can discuss terms for a peace agreement with your leaders at a later date."

Right. Adora pressed her lips together and hoped she wasn't blushing. They were not talking to the leaders of the Eurondan Alliance. Just to their delegation sent to check if Adora and her friends were liars. Perhaps their leaders would be more reasonable. "Yes," she said. "You've seen that we told you the truth. Do you accept a truce?"

"A truce at this point would seriously hinder our efforts to end the war," Liou said.

"You've already suspended your attacks," Daniel pointed out.

Liou nodded. "Yes, we did. This was a decision that was not taken lightly and has, undoubtedly, allowed our enemies time to recover. Agreeing to a longer truce would compound this."

"Continuing your attacks will endanger our own people currently providing humanitarian help here," Daniel said.

"And we won't let you do that!" Frosta spat with a glare.

“You’re helping our enemies!” Akon blurted out. “Do you expect us to ignore that?”

“We’re helping *everyone* here,” Adora corrected him. “We’ve restored a lot of your world already.” She pointed at their surroundings.

“So you claim!” Pers retorted. “We haven’t seen proof for that!”

“Do I need to create another statue?” Frosta asked, ice forming over her hands. “Maybe of you looking stupid?”

Catra snickered next to Adora.

Liou studied Frosta. “Perhaps not quite as big. But it would be illuminating.”

“What?” Pers gaped.

But Frosta was already moving her hands, and a statue formed and grew right next to her. It was a passable portrait of the Lieutenant, in Adora’s opinion. It also was forming inside the tent. Fortunately, Frosta stopped when it reached the ceiling.

“Intriguing.” Liou peered at the ice.

“It’s my magic power,” Frosta told him with a smirk.

“Magic?” Akon scoffed.

“Yes, magic,” Glimmer told him. “We’ve restored magic to your world as well. Those amongst you with the talent for it will be able to work magic.”

“But we’re here to focus on a truce,” Adora reminded them. “This is just proof that we are already helping your world - all of your world.”

“By introducing magic to the world?” Liou raised his eyebrows.

“By restoring what was destroyed during the war,” Adora told him, narrowing her eyes a little. “We’re here to help you - all of you.” Why couldn’t they see that?

“And yet you wish to protect our enemies. Enemies that conducted a genocide, which you claim not to condone. I think this is a slight contradiction,” Liou retorted.

“We do not condone genocide,” Glimmer told him. “No matter the victims.”

“You would protect the murderers from the consequences of their own actions?” Akon scoffed.

“We’d also protect you from becoming murderers.” Glimmer bared her teeth at him.

“Defending ourselves and avenging our deaths is not murder!” Akon mirrored her.

“That is a false equivalency. If your enemy is helpless and you keep attacking, you’re no longer defending yourself,” Daniel objected. “And vengeance is not justice.”

“We will not allow them to endanger our people again!”

“They won’t,” Adora told him. “You don’t have to murder them for that.”

“After all they have done, we cannot trust them!” Akon shook his head almost violently.

“You ask a lot of us,” Liou added.

“We just ask you to let us help,” Adora told him.

“Yes.” Liou nodded. “That requires trust - and it is hard to trust someone who seems more concerned with protecting our genocidal enemies than our own people.”

Adora clenched her teeth. They did not understand! Why didn't they understand?

"Well, it's not just about trust," Catra said. "It's also about risks." She leaned forward. "Do you really want to risk waging a war against us? All that you've seen here?" She cocked her head at the statue. "The plants outside? She gestured at the tent entrance. "That's just a very small part. You haven't seen our spaceships. Or our armies."

"Do they fit through the Stargate?" Liou asked. His smile wasn't very smug, but a little was there.

"Some actually do," Jack said. "But that's beside the point."

"We're here to help you - we've restored a lot of your world already," Adora repeated herself. "We can offer even more help."

"Artificial wombs! And specially designed plants to finish the planet's restoration. For starters," Entrapta added.

"Yes." Adora nodded.

"Trust me, you don't want the Alliance as an enemy," Catra said with a smirk. "You really don't."

Liou glanced at the others. "I think this meeting has run its course. We have to inform our leaders about everything we've heard."

"Please do." Adora smiled. "And tell them that we would like to meet them."

They had to talk to their leaders to sort this out.

Liou nodded again.

*****

Eurondan Nation, Euronda, December 17th, 1999 (Earth Time)

"Yes, I see it. Yes, I can change the plants to adapt to that - and filter out the poison. Maybe I should have them deposit the poison in some outgrowths for easier disposal? Then the rest of the plant could be used as feed or base for fertiliser…"

Samantha Carter nodded at the suggestion even though she didn't think Perfuma was talking to her right now. Watching the princess work with plants was still slightly unnerving - even more so after working with Loki in Alpha. Perfuma could alter a plant's genetic makeup with a thought. *Drastically* alter it - creating new plant species was child's play for her. What even a team of scientists with Ancient technology took weeks to months to achieve, she could do in seconds. Without any tools, just her magic power. And within her area of effect, fortunately limited, she could use her magic power to make the new plants grow as fast as Frosta could create ice.

Sam didn't want to imagine what Perfuma could do with the power of She-Ra at her disposal. She couldn't help doing it anyway, of course. And she was very grateful that Perfuma was such a nice person.

"Alright, I think that's it!" Perfuma turned and beamed at Sam. Next to her, green plants shot from the ground, wrapping around each other to form a trunk on top of which a slightly red fruit - or berry - formed, quickly growing. "The plants will spread out and focus all the poison into the fruits here. Once you remove the fruit, the plants will wither and turn to fertiliser! Same as when they run out of poison to filter."

"And the fruit?" Sam asked.

"Oh, that won't wither or decay. It will keep so you can collect them - which you should. They're very poisonous, after all." Perfuma frowned. "I tried to find a way for the plant to filter the poison out and turn it into something useful or at least inert, but I

didn’t manage.” She bit her lower lip. “The poison is too powerful for that, sorry.”

Sam was almost happy to hear that Perfuma had more limits. She didn’t let that show, of course. “The Eurondan Nation is very skilled at creating poison,” she said instead. “It’s a great thing that you managed to create a plant that can handle it in the first place.”

“Oh, that was nothing. Just some adaption of the plants I created for the Fright Zone. Once you have it worked out, you just have to adapt the biological filters for other substances.” She nodded, then blinked. “Speaking of that… Have you heard anything about my proposal to create filtering plants for your oceans? They could deal with the plastic and pollution!”

“The United Nations are still discussing it,” Sam said. And would likely keep doing that for some time.

“Ah.” Perfuma nodded with a sigh. “I hope they’ll accept my offer soon.”

Sam managed not to wince. Even several of the members of the Alliance were loath to allow genetically engineered organisms into the wild, much less on such a scale. And other nations hated anything that was related to magic. Or just hated the Alliance and objected to any proposal supported by them on principle.

She changed the subject. “Did you look over the seed samples from the vaults?”

“Yes!” Perfuma perked up. “I can make them grow easily! Although it will take some time to figure out where each species would do best. I don’t think we’ll be able to recreate how things were before their war even if we had perfect records. With the loss of plants, the climate changed, and reintroducing plant life will cause new changes… adapting the restored plants will take some time.”

"And that's not going to cover animals," Sam added. The Eurondans had kept genetic samples but hadn't been very thorough to begin with, and they lacked the technology to grow animals from those samples. And they had focused on livestock, not on all the species crucial for a balanced ecosystem. "We'll have to import several species from Earth."

"Yes. The filter plants can pollinate using wind, but other plants need insects. I could change them, but I think the Eurondans want their original plants back." Perfuma looked around. "Well, I think we're done here. The plants will spread from here to the rest of the contaminated zone on this continent but probably not to the other landmasses. We'll have to drop seeds there."

Sam nodded. She was done with her scans as well. And the sensors she had planted were working as planned - if the Eurondan Alliance sent aeroplanes this way, they'd get advance warning.

They walked back to the skiff, where Emily was waiting for them. The skiff would be overloaded with the two of them and the bot, but it was manageable. And Emily's shield generator made it worth it. Entrapta was planning to adapt similar generators to their skiffs for tomorrow's truce meeting but hadn't managed to finish in time for this trip. Sadly, the shield generators they had installed around the defence complex were too large for the skiffs.

Something they had missed when constructing the things - they fit NATO standards for transportation, but the Etherian skiffs didn't conform to those specs. Logistics wouldn't be pleased.

But that was their problem, not Sam's.

*****

Restored Zone, Main Continent, Euronda, December 18th, 1999 (Earth Time)

"So… any bets on whether or not this is a trap?"

Catra rolled her eyes at Jack's question. If he really thought that this was a trap, he would have argued against everyone else coming along. Even though they should be able to spot a trap thanks to their scanners - and, between Emily's shield and Glimmer, could safely evacuate everyone. This was just small talk, Jack-style.

"I don't think it's a trap," Adora replied honestly. "They seemed to believe us - and they have seen more of what we're doing yesterday."

"Oh, they do believe us, or they wouldn't have stopped their bombing runs and stuck to recon flights," Jack said. "But they want to continue the war."

No surprise there, Catra thought. The Eurondan Nation had killed most of the Eurondan Alliance's civilians. And deliberately, not as collateral damage or something. Not that that made much of a difference for the dead. She clenched her teeth, remembering Thaynor. She had flattened the village as her first mission as Force Captain. She couldn't even tell herself that it had been a mission to root out Alliance soldiers hiding there or to draw out nearby Alliance forces to defend the village in order to engage them. Those were just excuses. They had struck the place with overwhelming forces right away. Well, overwhelming forces until She-Ra had appeared…

She shook her head, trying to force the memories of that confrontation away. She hadn't gone for murdering all civilians. Just let her troops run wild and looked away when needed. But 'not as bad as the people who ruined an entire planet and murdered most of its population' wasn't anything to be proud of - it was up there with 'not as bad as Horde Prime'.

Fuck it. Fuck herself.

She stepped out of the tent with a mumbled 'checking the perimeter'. The air outside was clean, according to the sensors,

but she still smelt a hint of… something that reminded her of the Fright Zone. Or that was just her memories.

She stared at the horizon. Hilly country, there. No mountains - it wouldn't really stop armoured warfare, but it would slow down advances and channel thrusts, allowing defenders to use artillery from cover on choke points and kill zones. Would have to use air or aerospace forces to suppress the artillery and send in light troops to recon and screen the heavy armour. And to clear out any settlements of enemy infantry, of course…

She gasped when she felt an arm wrap around her shoulders. How had Adora snuck up on her without Catra noticing? Because she had been lost in her guilt.

"You're not like them."

Not any more, maybe, Catra added silently. Would she have gone for genocidal attacks like the Eurondans had? Deliberately trying to exterminate the entire population of the Princess Alliance? She hadn't done it. Not even when she had been at her lowest point. But if she had thought it was the only way to win, would she have done it? The Horde propaganda had claimed they were fighting against evil princesses to free the people, but everyone - except for Adora - had known that was a lie. A lie that had gotten some lip service in the field, at most. What if the Horde propaganda had been different? Made the enemy out to be all fanatical, treacherous foes who would never stop fighting and so must all be killed?

"I could have been like them," she whispered. She had risked the entire world to win, after all.

"But you weren't," Adora retorted.

She was so confident. Trusting. Loving.

Catra sighed and leaned into her lover a bit more. "I feel bad about telling the Eurondan Alliance to stop fighting their enemies." Selfish. Like a hypocrite.

“We’re saving them from becoming as bad as their enemies,” Adora said.

“They don’t see it like that.”

“They’re wrong. No matter what was done to them, murdering people in return is wrong. Vengeance won’t make anything right.” Adora nodded firmly.

Catra sighed again. Vengeance might be wrong, but she knew how tempting it was to strike back at whoever hurt you - at whoever you thought had hurt you. To make them hurt in turn. To make them suffer. To make them pay.

She understood them.

“They won’t thank us for this,” she said in a low voice. The Eurondan Alliance might end up hating them. Easily. Catra understood that as well.

“I know. But we can’t let them murder helpless people. That would be wrong.”

And that was what it boiled down to, in the end.

Catra nodded. “We won’t.”

No matter what it took.

*****

Another day, another meeting. That summed up Jack O’Neill’s life as a general. Granted, it was a meeting under truce to negotiate an armistice, on an alien planet, and he was with his friends and not in Brussels meeting with fellow generals, politicians or contractors, and if things went wrong, they’d have to evacuate under fire and try to find a way to save this world and their lives. So, it felt more like a Stargate Command mission with SG-1.

But he still felt ill at ease. He wasn't a diplomat. He was a soldier. And he wanted to remain a soldier. He was good at soldiering. He wasn't that good at diplomacy.

And he really sucked at trying to protect Space Nazis from suffering the consequences of their actions.

He still smiled when the transport plane of the Eurondan Alliance touched down, and a larger group than last time got out. Those weren't the Space Nazis, after all - those were the people who had fought years, decades, against the Space Nazis. And this time, they were meeting their leaders.

Jack wasn't surprised to spot Liou amongst the delegation. Just from the way everyone else had deferred to him, It had been rather obvious that the man hadn't been a low-ranking, expendable scientist. But Jack focused on the new faces. All of them were in uniform, which was expected. All of them were men. That was kind of a surprise - he would have expected them to bring at least one woman with them now that they knew that the Alliance was represented by Adora and the other princesses. On the other hand, they might have realised that just bringing a token woman along would only highlight that the Eurondan Alliance was run by men - and by soldiers.

The apparent leader was in the centre, a step ahead of the rest. Old but still spry - he walked briskly and sure-footed - he was tall, thin and bald, with a wispy moustache, and reminded Jack of a Japanese veteran from the Pacific War whom he had met on leave in Japan when he had been a fresh-faced Lieutenant. Liou was on his right side. To his left walked another old man. This one was stockier, with a bushy mane of white hair, and looked more like someone from the Middle East. Two more middle-aged soldiers walked behind them, and Jack tagged them as officers. They had that vibe. Unlike the two middle-aged guards bringing up the rear.

"Hello!" Adora greeted them with a wide smile. "I'm She-Ra, Princess of Power, and I represent the Alliance against the Goa'uld." She gestured at the others and introduced them.

The Eurondans nodded, and Liou introduced the new people in turn. "Commander Lan, a senior member of our Council. General Faisa, member of our general staff. Majors Kele and Janis, their aides."

Or spooks posing as aides, Jack thought. Analysts, probably - they would be useful for the negotiations and for gathering general intel.

"Please step inside the tent. We've prepared more diverse food than last time," Adora told them.

Liou perked up at that, and his polite smile grew more genuine. Or that was what he wanted you to think - whether he was a politician or a spook in addition to a scientist, Jack didn't know, but he would have to be skilled at hiding his emotions either way. As a scientist as well, of course - the stories Daniel had of the academic scene sometimes made the Pentagon look like it was staffed by straight shooters, and Liou was a soldier *and* a scientist.

Adora was right about the food. They hadn't pulled out all the stops, but they had ordered this food from actual caterers. High-class caterers.

Jack smiled widely as he snatched some choice snacks for himself.

Lan nodded in apparent appreciation and smiled at Adora after his first snack, but that didn't mean anything in Jack's opinion. Faisa grunted, still looking stern. Liou appeared to enjoy himself - and commented about the new selection - and Kele and Janis seemed to spend as much time looking at the food as they spent actually tasting it.

Jack was leaning more strongly towards both of them being intel analysts. On Earth, those could be, and not too rarely were, former field agents. Euronda might not have had much use for recon and spying on the enemy with their atmosphere being poisoned to the point of rendering field ops impossible, but any

country at war would have had spooks watching their own people - especially their soldiers.

Jack kept an eye on both. And the guards, of course. They had been betrayed and ambushed by one group of Eurondans before, and he'd be damned if he'd let it happen again.

*****

As expected after their first meeting, the Eurondan delegation liked the food. They even made some small talk about the different dishes. And Adora didn't have to tell Catra not to hog all fish sandwiches. The Eurondan leaders were smiling - except for General Faisa, but he hadn't smiled at all so far, so he probably didn't count. All in all, they were off to a good start.

However, the real challenge was to get the Eurondan Alliance to agree to an armistice and then negotiate a peace treaty. Adora had no illusions that that would be easy. But they were talking, at least.

She cleared her throat when everyone seemed to have had their fill - with the exception of Catra, who just grabbed another salmon toast, and Jack, who probably thought he was sneaky by snatching bowls of dessert. "So… shall we start the talks?"

Everyone grew serious at once. Liou was the only one to keep smiling but switched to doing so politely rather than genuinely.

"Yes," Commander Lan said. "And first, I want to protest your interference with a matter limited to Euronda."

"Our intervention was a reaction to the Eurondans supplying weapons that were used to attack us," Adora retorted. "We could not ignore that."

"According to your own claims, you stopped that. So, there's no longer any reason to meddle in this conflict." Lan leaned forward. "You achieved your goals."

“Our goal is to protect civilians,” Adora told him. Did he just try to use their own argument against them? “*Any* civilians.”

“The Eurondan Nation has no civilians. All of them are soldiers.”

“The majority of their population are in stasis, not fighting,” Daniel cut in.

Adora nodded. They had gone over that already.

“That doesn’t make them civilians - they are held in reserve,” Faisa spoke up. “They’re soldiers.”

“Even the children?” Glimmer scoffed. “If you declare every potential recruit a soldier, that would make any civilian a valid target.”

“They tried to murder all of our civilians,” Lan said with narrowed eyes. “And they almost succeeded. We are merely retaliating in kind.”

“That doesn’t justify attacking helpless civilians,” Adora objected. “Two wrongs don’t make a right.”

“Do you really want to stoop as low as your enemies?” Glimmer added. “That would make you no better than them.”

“We didn’t start this!” Lan protested with an open scowl. “We are just defending ourselves. As long as the Eurondan Nation exists, we’re not safe. They will try to exterminate us again!”

“That’s not true!” Adora shook her head, “People can change!”

“We have had similar conflicts in our past - on Earth - and the nation that waged a war of extermination did change profoundly. It happened within living memory.” Daniel nodded at the Eurondans. “They were actually quite similar to your enemies in that they, too, had an ideology of racial purity. And they murdered millions of civilians.”

“Damn Nazis,” Jack muttered near Adora.

“But they changed,” Adora said. The Germans were good friends now - and good allies. “Everyone can change.”

“Not the Eugenists.” Faisa shook his head. “They have done too much.”

“And just because there’s a potential for change doesn’t mean that change will actually occur,” Liou said. “When pressed and desperate, people can claim and promise anything, only to go back on their word once their situation improves.”

“The Eugenists cannot be trusted.” Lan nodded slowly. “Nor can they be forgiven.”

Adora pressed her lips together. That attitude was wrong!

“Because they did something unforgivable, you will do something unforgivable to them?” Daniel pushed his glasses up.

“It’s not the same. We need to do this so our people - those amongst them who survived - can be safe again,” Lan insisted.

“Though we do not need to kill the remaining members of the Eurondan Nation,” Liou added. “As I mentioned before, exile from our world might be enough, provided that they are deprived of any opportunity ever to return.”

“As we mentioned before, that would be ethnic cleansing - something we do not condone on Earth,” Daniel said.

“Euronda is not Earth,” Faisa spat.

“On Earth, we consider human rights universal - applicable to any human and arguably any other sapient being, anywhere,” Daniel retorted.

“That’s your opinion, not ours,” Lan said. “Are you going to attempt to force your laws on us?”

“We won’t let you commit genocide,” Glimmer told him.

Adora nodded.

“Would you protect murderers even if it meant fighting their victims?” Lan asked.

“We will do what we have to to protect civilians.” Adora stared at him. He had to understand that they wouldn’t let them murder the Eurondans. Or drive them from their homes. That would be wrong no matter what they had done.

“But we won’t let them hurt you either,” Daniel said. “You will be safe.”

“So you say.” Lan scoffed. “And we should trust you? Trust the safety, the lives of our people, to you?”

“Yes.” Adora nodded firmly.

Daniel cleared his throat. “Not blindly. When our, ah, version of the Eurondan Nation was defeated, they were disarmed, and their country was occupied. A coalition of their enemies controlled their territory until they were deemed trustworthy again.”

“You offer to let us occupy their territory? Which we would take anyway without your interference? How generous!” Faisa snorted.

“Without our ‘interference’, meaning, without us wrecking their base, you would have to struggle to take their territory,” Jack cut in. “And without us, they might have found new resources to turn the tables on you before you managed to defeat them.”

“That’s speculation,” Liou pointed out.

“They had already made deals with some of our rivals for the resources they needed,” Jack retorted. “You’d have a costly war to fight in either case.”

“We only have your word for that,” Lan objected.

“You also have a crater in the Eurondan nation’s base - and a restored continent,” Glimmer said, rolling her eyes. “And we offered you artificial wombs to help you restore your population. What else do we have to do to make you trust us?” She leaned forward. “We don’t want to fight you. We just want to protect the civilians.”

“You’ve won the war,” Daniel added. “And you will be safe from them. You can focus on rebuilding your world instead of on the war.”

“For how long?” Lan shook his head. “We need more than your word to accept an end to the war without the complete destruction of our enemy. We need proof. Guarantees.”

“And you’ll get them,” Adora said. “You can watch as their weapons are destroyed.”

“And I guess we can send a squadron of frigates over,” Catra commented with a shrug. “To keep everyone honest.”

“Cheaper than an occupation force,” Jack said.

Adora nodded. They could do that. They would have to protect the planet from the Goa’uld anyway.

“And we want those who attacked us and murdered our people,” Lan said. “They aren’t civilians. They have to pay for what they did to us.”

“Our dead demand justice,” Faisa growled.

Adora winced. That would complicate things.

*****

Tense Negotiations Part 4

Gate Room, Euronda, December 18th, 1999 (Earth Time)

"You want us to betray our soldiers? Those who fought the hardest for us? Stab our own in the back after all they suffered for our sake?"

Samantha Carter was glad she wasn't standing too close to Alar - the man was literally spitting mad.

"The Eurondan Alliance wants to try the ones responsible for the genocide of their people," Adora told him. "They insisted on that."

They also insisted on complete disarmament of the Eurondan Nation, but Alar either had missed that or didn't care as much about his nation as he cared about his own fate - his name was almost at the top of the war criminal list that Commander Lan had handed over - obviously prepared in advance. Sam wasn't quite sure how much of his insistence had been simply posturing to improve his position in the negotiation, but the man was a shrewd negotiator, and they had already said that this was just their condition to start negotiations, not the sum of their demands.

Of course, Sam perfectly understood and supported his demand for justice. Letting Nazis go free just to facilitate a peace treaty… Well, the United States had done worse in the past, but that didn't make it right.

Alar shook his head. "And you agreed to that? You could easily stop them! Crush their forces as you crushed ours!"

"Well, you see - they didn't supply poison to our enemies and then tried to kill all of us." The General shrugged. "Call me petty, but I think that's a kinda important difference."

Sam did neither smile nor roll her eyes at his comment. But she did smile at Alar's gasp - the former and possibly present leader of the Eurondan Nation seemed shocked.

Unfortunately, he quickly rallied. “But you said you would protect us! We’re helpless in the face of your enemies - most of our people are held in stasis!”

Adora nodded. “And we will protect your people. We won’t let them kill you.”

Alar looked relieved, but before he could say anything, the General added: “That doesn’t mean we won’t let you get punished for your crimes. The death sentence might be off the table, but prison isn’t.”

Alar gasped again. “But… it was war! We only defended ourselves against a threat to the very heart of our nation!”

“By starting a war.” Mermista rolled her eyes. “That’s a very active defence.”

“We had no choice but to launch an attack. If we had waited any longer, we would not have had any chance at victory!”

“Well, you can tell that to the judge,” the General said.

“We won’t accept such a treaty!” Alar shook his head almost violently. “We’d rather fight to our last soldier!”

Glimmer snorted at that. “I doubt that. Your former subordinates were quick to abandon you in order to kill us. I’m sure the first ranking officer not on the list of war criminals will quickly hand you over rather than die for you.”

Alar seemed to have no answer to that.

“How did they know our leaders, anyway?” Tralan spoke up. He hadn’t commented until now. “I didn’t think they had captured any of us. How would they know our names?”

“They didn’t. They asked us,” the General told him.

“What?”

Adora cleared her throat. “They had the names of your leaders at the start of the war. And they also asked for their successors.”

“And we told them,” Glimmer added. “We’re not going to lie for you, and it would have come out anyway - as soon as your next subordinate wants to replace you.”

“But…” Alar blinked and then looked around in the gate room.

Sam didn’t look away when he met her eyes. By any reasonable standards, the man was a genocidal war criminal. And his people had tried to kill her friends and herself.

“We’ll ensure you will get a fair trial and that you won’t get executed if you’re found guilty.” Adora smiled encouragingly at him.

“But…”

Daniel was smiling as well. “You were ready to die for your people, right? To give your life to save them? Losing your freedom instead of your life to save them should be a better outcome.”

“Yes!” Entrapta nodded several times. “Because you’ll be alive. And prisons aren’t that bad - I spent some time in a cell as well. Just don’t break out; they don’t like that.”

Alar stared at her in apparent bafflement.

“And if you ask nicely, we’ll build you a pretty prison with all the best cells.” The General bared his teeth at Aral. “It’ll probably be more comfortable than spending your life in this bunker. At least as a common soldier.”

He had been sarcastic, but Entrapta nodded eagerly. “Oh, yes! We can do that! We have to rebuild much of your planet’s infrastructure anyway, so adding a nice prison won’t be much more work! Oh! Do you want to stay on the surface? We could build a prison in space!”

"If you're found guilty. You weren't in charge when the war started, were you?" Glimmer asked.

"No…" Alar slowly shook his head. "No, I wasn't. That was my father."

The man looked entirely too relieved for Sam's taste.

*****

Gate Room, Euronda, December 19th, 1999 (Earth Time)

"All of the Eurondans responsible for the attack that wrecked the planet's biosphere are dead already?"

Catra snorted - even Adora sounded incredulous.

Alar, though, nodded. Almost eagerly. At least, he managed not to appear smug. "Yes. My father ordered the attack as a preemptive strike. He died ten years into the war - the stress of leading our people through such an ordeal was too much for him. I asked him to step down and go into stasis years before that, but he wouldn't listen. He said that would be like abandoning his duty to our people."

Oh, yes! Catra could totally see Alar asking his dear old father to step down and let him take over. For his own good, of course. She scoffed. The man was a schemer, like many of his subordinates - who had quickly accepted his leadership once again after hearing that their enemies wanted to try their leaders for their crimes.

Alar glanced at her for a moment, then turned back to look at Adora.

"He wouldn't have acted alone. He had others to plan and launch the attack," Adora said.

"Subordinates following his orders," Alar retorted. "Although most of them are dead by now as well, so whether or not they would have been able to stop him is moot."

"'Most of them'?" Adora frowned.

"One is in stasis, though his mental health had deteriorated to the point of being unable to fulfil his duty - he was in charge of our aero-fighters and personally led many strikes. Too many." Alar sighed far too theatrically. "I fear he is not fit to stand trial."

"I think that's what the court will have to judge," Catra commented, earning another glance.

"Yes," Adora agreed. "Whether or not he can stand trial will be up to the Eurondan Court of Justice."

An important-sounding name. It was too bad they hadn't been able to agree on anything else regarding the court.

Alar frowned some more. "Taking him out of stasis will endanger his life."

"We can heal him," Adora said.

"And we can't let him remain in stasis forever anyway," Catra added.

"You can heal him?" Alar didn't sound as happy as Catra had expected. Even counting the fact that he was charged with attempted genocide as well.

"I think so," Adora said. "It won't hurt to try, in any case."

"Healing him only so the Breeders can execute him seems cruel and unusual," Alar pointed out - probably misquoting the law books they had given the Eurondans.

"He won't be executed," Adora said. "We won't budge on that. The death penalty is barbaric."

"I was under the impression that the death penalty was still in use on Earth." Alar looked confused.

Catra snorted. Had the Eurondan expected to understand Earth after an evening reading a few law books? She'd spent months on Earth, immersed in its news and media, and still didn't really understand most of the planet. Then again, Earth had billions of people - magnitudes more than any other planet they knew - and hundreds of countries and distinct regions.

"Some of our allies still have the death penalty, yes." Adora frowned deeply. "But not the military code of justice for the alliance."

"We're supposed to kill the Goa'uld, not each other," Catra added.

"We're supposed to defeat them," Adora corrected her.

Catra nodded, even though she was sure that the Jaffa - the rebels amongst them - wouldn't want to spare any of the snakes. And given that they still hadn't found a way to provide the Goa'uld with artificial hosts that didn't degrade their minds, she wasn't sure if killing them wouldn't be kinder than keeping them in tanks and lobotomised for the rest of their lives. And keeping them all in stasis would only kick the whole thing down the road.

Still better than letting them breed, though - if they didn't eat their young, they would quickly outnumber everyone else. You'd probably needed a von Neumann Swarm, as Entrapta called them, to keep up with making tanks for so many snakes. But that was a problem for the time after the war against the Goa'uld.

"Speaking of the court… We still protest being judged by foreigners and Breeders," Alar said.

Someone should tell him that using slurs like 'Breeders' won't make a good impression on others, Catra thought.

"We haven't finalised the curt's makeup yet," Adora said.

"But since you refused to allow us on the court, it's clear that it will be made up by the Breeders and you," Alar retorted. "At least,

I hope you will not break your word and hand us over to our enemies."

"We won't," Adora said. "But letting you judge yourself is out of the question. We'll be using Alliance laws for this."

"Laws neither we nor the Breeders had ever adopted," Alar protested.

"That's why it's fair," Catra said, flashing her fangs at him.

"If both you and the Eurondan Alliance agree that something shouldn't be punished, we will defer to that," Adora told him.

Alar scoffed. "Even if there is such a case, I doubt they will be honest enough to admit it!"

"We'll see," Adora said. "Earth has a lot of experience with such trials."

That was… not lying, but not entirely accurate either. But Earth certainly had more experience with such trials - or any trials - than the Princess Alliance, much less the Horde. Etheria would still have to send a judge or more, depending on the final numbers, of course. Couldn't completely leave this up to Earth.

But as long as it didn't directly involve Catra or her love, she was fine with that. They had spent too long on this planet already, in her opinion.

*****

Restored Zone, Main Continent, Euronda, December 20th, 1999 (Earth Time)

As Jack O'Neill glanced around the landscape, waiting for the Eurondan Alliance delegation to arrive, movement in the air caught his attention - was that a bird? There weren't supposed to be any birds on the planet. Entrapta and Carter were still working on picking which *bugs* to introduce to the Euronda, and the team

on Alpha had barely begun to study the gene samples from the Space Nazis' vaults to clone animals from.

He narrowed his eyes, trying to track the thing. It wasn't flying like a bird… Oh. Jack snorted - it was a spy bot. He should have realised that at once - they had been spreading them out over the planet. Soon, they'd cover the system as well. And the squadron of frigates making their way over here was dropping spy bots along their route as well. Once the system was linked to the network, they wouldn't need to open a gate to communicate.

But that was for the future. They still had to end the war here. Formally. The Eurondans had stopped fighting, the Space Nazis because they had lost the capability to hold their enemies back, the Eurondan Alliance because they didn't want to attack Earth and Etheria, but Jack was sure that left alone, they'd pick up where they had stopped as soon as they thought they could get away with it.

"Incoming transport," Campbell reported.

Ah. The Eurondans were arriving. Finally. And the others were stepping out of the tent to welcome them.

Jack joined them.

"Let's hope they'll be reasonable," Adora commented as she watched the plane transfer from flight to hovering.

"They are reasonable - from their point of view," Daniel pointed out. "They have different standards and customs."

"And they were almost wiped out by the Space Nazis," Jack added. "They don't want to forgive and forget." Which he fully understood. Hell, in their place, he'd feel and want the same.

"And they don't have to. That's what the trial is about," Adora said. "But executing people is wrong."

They had talked about that before. And he disagreed. “Depends on the crime. We executed the Nazis for what they had done.” That was a precedent he could live very well with. And that hadn’t been a miscarriage of justice, either.

“That was fifty years ago,” Daniel retorted. “Since then, most countries have abolished the death penalty.”

“America hasn’t,” Jack replied. The transport had landed, and the door was opening.

“Actually, the Supreme Court had it suspended for a time in the 1970s.”

“And that didn’t last.” Some crimes deserved the death penalty. What the Nazis had done - and the Eurondan Nation here - certainly qualified.

“And that was wrong.” Adora shook her head. “That the United States is the only country in the Alliance with the death penalty still in effect should show you that.”

“We’re kinda bad about following others’ leads,” Jack told her.

“That kind of ‘American exceptionalism’ is not necessarily a good thing,” Daniel, of course, had to say that right before the Eurondans were close enough to overhear any response Jack would have.

So he smiled through the greetings and then followed the others into the tent. At least the food was great again.

The discussion afterwards, though, not so much.

*****

“...why are you protecting those murderers?”

“We aren’t protecting them. They’ll be tried as you demanded.”

“But you won’t allow us to execute them. You are still trying to deny justice to our dead!”

Jack had to stop himself from nodding along with Lan’s snapped statement. You didn’t stab your own side in the back. Even if you disagreed with them.

“Killing people isn’t justice,” Adora disagreed. “Two wrongs don’t make a right.”

“Shouldn’t the punishment fit the crime?” Liou asked. “You do not treat the thief as you treat the murderer, nor should you treat the murderer as you treat the thief.”

“That doesn’t mean you should kill people.” Adora shook her head. “The death penalty is wrong. Dead people cannot change and become better. Nor can they make up for what they have done. That’s not justice.”

“What those monsters have done is beyond the pale!” Lan thundered. “And even if they wanted to, they could never make up for their crimes - you cannot bring back the dead!”

“Killing them won’t bring back the dead either,” Daniel said.

“But it will give us justice,” Lan retorted.

Sha’re nodded at that, Jack noted.

Daniel didn’t seem to have noticed, though. Or, more likely, he was deliberately ignoring it - Jack was sure that Sha’re had told him what she thought about the death penalty already if in private.

“You’re wrong.” Adora wasn’t moved. “We’re not going to let you kill people just to feel better. That’s wrong.”

She and Lan stared at each other for a moment. Then Lan slowly tilted his head to the side. “That will make it harder for our people

to accept any peace agreement. They have lost too much to forgive easily."

"We're doing what we can to restore what was lost," Adora retorted. "We're going to heal your planet and will help with rebuilding."

"And yet, you will also force us to keep sharing the planet with the people who tried their worst to ruin it and kill us all," Lan said. "It seems as if you're treating them the same as you treat their victims."

Adora frowned, but before she could say anything, Daniel leaned forward. "Is there anything we can do, except for letting you kill or displace people, that would remedy that?"

Lan slowly nodded. "Yes. Without the unprovoked war, without the ruin of our lands, we would have advanced a lot over the last decades. We would have developed better technology and improved our standards of living. All that was lost to us due to the Eugenists. We don't want our world to be merely restored to the status quo, but advanced to the point where we should be."

Ah - they wanted more tech and help as the price for saving the lives of the Space Nazis. A little transparent but not easy to refuse, at least for the Etherians.

*****

Adora frowned. That was… Well, it sounded logical, but it felt wrong to her. "You want us to 'compensate' you for what the Eurondan nation did to you? Beyond restoring the planet's ecosystem and the artificial wombs we promised you?"

"Yes." Lan nodded firmly.

"Just so you won't commit genocide in revenge or execute criminals?" Best to make sure she had understood them correctly.

“So my people will accept the leniency you demand,” Lan replied. “We have lost too much otherwise.”

“And there’s the question of magic. You unilaterally decided to change our world not just once but twice,” Liou added. “Without consulting us.”

Adora blinked. That was…. “I had to restore magic to allow us to save the Eurondans. And that always comes with a surge of magic power, which I have to direct into something like healing. Otherwise, the risk of magic going out of control and causing potentially catastrophic consequences is too high. In this case, I filtered out the poison and restored life to your world - at least, to a big part of it - with the magic power.”

“I don’t think you can honestly claim you mind this,” Daniel said. “While restoring the world could have been achieved without magic, it would have taken - would take; we’re still not done - a lot longer.”

“But it was done without asking what we thought about it. You decided to add magic to our world for your convenience without caring whether or not we wanted this,” Lan retorted. “That was wrong.”

Adora blushed a little. They were correct - she had acted without thinking about their opinion. She had been sure that what she was doing was right. And it hadn’t been wrong - it had probably been the only way to save the Eurondan Nation’s people from dying. And it had been the best, surely the fastest, way to heal their world, though she had underestimated the difficulty of controlling the magic.

But, yes, she had to admit that she had gone over the heads of pretty much everyone who actually lived on this world. And that wasn’t right. “I’m sorry about that,” she said.

For a moment, no one said anything, as if they waited for her to add something else. Then Lan spoke up. “Saying you’re sorry

doesn’t change what you did - or make up for it.”

“No, it doesn’t.” Adora agreed.

“But trying to get free technology as compensation for getting your world healed just because we didn’t ask you if we should save you is a bit much,” Jack said. “Sounds a bit greedy.”

“Greedy?” Lan glared at him. “My people were almost wiped out! My world was almost ruined! And you want us to accept that those responsible for unspeakable crimes will not be punished according to our laws!”

“Yes.” Adora nodded again. “Because your laws aren’t just.”

“How dare you insult us like this!” Lan stood up to glare at her.

Adora met his eyes. She knew she was right here.

“Genocide, ethnic cleansing, the death penalty - Earth, Etheria and the Eurondan Alliance, we all feel strongly about all of it,” Daniel quickly said with a placating smile. “Very strongly,” he added with a nod to the Eurondans. “But we can discuss this and find common ground.”

“We are talking about millions murdered in cold blood,” Lan spat. “Poisoned and starved, often dying right under the eyes of those who barely survived. If you want us to come to an agreement that will hold, you cannot expect us to bow to your demands without getting anything in return.”

“Not counting your world restored and the war ended,” Jack said.

“Something we would have achieved ourselves without your interference,” Liou countered. “Without your, ah, rivals, our enemies wouldn’t have found resources to continue the war for much longer.”

“We’re also doing what we can to restore your world completely,” Adora said. “And we will listen to you about that.”

"And protect your world against the Goa'uld," Catra spoke up.

"Both goals would be served better if we had the technology to do so ourselves," Liu said. "Allowing you to focus on your own worlds and allies."

Adora shook her head. "We only share that kind of technology with our allies and friends."

"And we don't trust you not to take the technology and then use it against the Eurondan Nation as soon as we're gone from your world," Catra added.

"You doubt our word?" Lan had been about to sit down, or so it had seemed to Adora, but he kept standing and glared at Catra.

Catra, as Adora should have expected, was entirely unimpressed. She shrugged and nodded. "You've made it clear that you answer to your people, so if they think you're too soft, they'll replace you with someone else."

Lan clenched his teeth at that. "That is why we need an agreement that will be accepted by my people."

"And why we need a squadron of frigates in orbit," Catra muttered at Adora's side.

Adora shook her head. This was wrong - they shouldn't use force, or the threat of force, to make the Eurondans agree to their demands. But giving in to their demands wasn't right either.

"Well, I am sure we can reach a compromise," Daniel said. "I doubt you can honestly argue that you would have achieved the technology to build spaceships that can travel to other solar systems if the war hadn't happened. Or our weapon technology. But there are examples of advanced technology we could share. Namely, the artificial wombs we mentioned before. And food production. Construction. Media. We can boost your standard of living significantly."

Adora nodded.

"What exactly are you offering?" Liu asked as Lan sat down again.

Adora smiled and tried not to sigh. This would be tiring. Such negotiations always were. But as long as they reached an agreement in the end that they could live with, it would be worth it.

*****

Gate Room, Euronda, December 20th, 1999 (Earth Time)

"...so, we'll still share our technology with them as long as it's not weapon technology? Even though they're not in the Alliance?"

Samantha Carter nodded at Entrapta's question. "Within limits. Mostly the artificial wombs and technology to support their reconstruction and agricultural efforts."

Entrapta cocked her head to the side. "Ah. So, nothing really new."

"Not for us," Sam confirmed. "But we have to ensure it cannot be used to develop weapons before we hand anything over." Daniel had been more than a bit hasty in his attempt to continue the negotiations.

"Ah." Her friend pouted for a moment. "That's going to be hard. You can turn a lot of advanced technology into weapons. The artificial wombs could be used to breed creatures that can fight if you repurpose them. And any construction technology can be used to build fortifications. And any bioreactors could probably produce bioweapons instead of food."

Sam suppressed a wince. Entrapta was a great friend and an incredibly nice person. But she also had a sometimes scary talent for building weapons. That she didn't always understand when one should construct weapons and when not didn't help. "They can already grow bioweapons, I think - they must have

bioreactors to feed their people - and they can construct bunkers. New technology would only speed either process up and not add new capabilities. And I don't think we'll have to worry about animals bred for war."

"Are you sure? When I talked with Loki and the others on Alpha about the genetic samples of Eurondan fauna we've sent them, they noticed that we lacked sufficient predators to keep all the fast-breeding herbivore species in check, and they had several ideas about making a few of the animals we do have samples of into more effective predators to compensate, and some of those would make them good at fighting soldiers as well. Like paralysing tentacles and adaptive camouflage. Or glands to produce aerosolised venom."

Maybe Sam shouldn't have focused on expanding the sensor net on Euronda and restring the life support systems in the Eurondan Nation's defence complex for so long. "I don't think the Eurondans have the capability to genetically engineer species to that degree," she said. I sure hope so, she added to herself. "But we will make sure to install safeguards."

"In the artificial wombs? I thought we wanted to let them build them," Entrapta said. "And given the Eurondan Nation's skills with software that we saw after analysing the programs used to hack Stargate Command, and which the Eurondan Alliance should have as well, or they would have lost the war already, right? - I think they would detect any such programs."

"Yes, that wouldn't work," Sam agreed. "But we can monitor the wombs and the Stargate with our scanners. Though I think they will focus on restoring their world before starting another war."

Entrapta looked sceptical. "Are you sure? It would be logical, but people aren't often logical. The Eurondan Alliance don't seem to like us even though we restored most of their world and ended the war."

“We were a bit heavy-handed,” Sam pointed out. “We started altering their world without consulting them. And we returned magic.” And stopped them from finishing off their enemies.

“But we’re helping them! Their world was dead!” Entrapta protested. “And magic is a natural part of their world!”

“Not everyone likes magic,” Sam said. And she couldn’t help suspecting that part of the reason for the way the Eurondan Alliance had reacted was that their leaders weren’t used to dealing with women in positions of authority. Especially young women. But that could just be Sam’s own biases, based on her experiences on Earth, influencing her.

“That’s stupid.” Entrapta pouted. “That’s like not liking science.”

Sam agreed, though she was aware that many students didn’t like science, at least in school. And the less said about the religious zealots on Earth and their issues with science (and logic and reality itself), the better. “Yes, it is. But that’s what the Eurondan Alliance thinks about it.” Or claimed to think - the General was quite convinced that a significant part of the Eurondan Alliance’s complaints were just to support their negotiations. “Anyway,” she went on, “we’re supposed to go over what kind of technology we can safely share with the Eurondan Alliance to help them recover.”

“Hm. We need to know what they already can do,” Entrapta said. “So we can cover the gaps.”

Sam almost snorted at the thought of asking Lan about their technology and how the man would react. “Even if they already have the technology, their production capacity is almost assuredly very limited, so providing them with tools and machines would still be very helpful.” And, a cynical part of her added in the back of her mind, it would allow some of Earth’s industry to offload soon-to-be-obsolete products on the Alliance’s pay.

“Right!” Entrapta nodded. “And we can check with our scanners where they have the worst deficits.”

That was essentially spying on the Eurondan Alliance, but Sam didn't mind doing it if it helped them reach an agreement. They would be spying on the Eurondan Alliance anyway to ensure that they would not attempt to restart the war.

*****

Royal Palace, Bright Moon, Etheria, December 20th, 1999 (Earth Time)

"Why do we care what those Eurondans want, anyway? We saved their planet, and as thanks, they make demands of us? We should just finish fixing their planet and then leave!"

Frosta had a point, in Catra's opinion. Not that she would ever say so, of course. And the princess was still wrong, anyway.

"We can't! If we leave, the Eurondan Alliance will kill the Eurondan Nation's people!" Adora blurted out.

"Then we evacuate them to another planet," Frosta retorted. "They tried to kill the Eurondan Alliance first, and almost succeeded, so they can't complain about having to move."

"That wouldn't be right either," Adora told her. "Ethnic cleansing is wrong."

"And it would put a strain on our logistics," Mermista added. "We couldn't just drop them on another planet - if we find one, anyway - without any infrastructure. Even if we limit our investment to the bare minimum for them to live, we're talking about building an entire country from scratch - including transportation and industry."

"If we use the Tok'ra's technology, we could quickly build up underground bases for everyone," Entrapta cut in. "That would be much faster than building on the surface. And we could duplicate their bioreactors to produce food." She looked at her multitool. "That wouldn't be a heavy strain on our logistics, actually."

Adora looked taken aback for a moment.

Frosta nodded with a smile: “That would leave them like they were during the war. They’re used to that.”

Oh, for…! Catra snorted. “And you think they’ll change like that? No matter how good their new planet might be, they’d still prefer their own world. And they’ll blame us for losing their world.” And without any help and support, they would be stuck living as if they were still at war for a long, long time. That kind of life would only make them even worse.

“So?” Frosta shrugged and narrowed her eyes. “They started the war.”

Catra clenched her teeth. She knew what the princess was hinting at. The Horde had started a war as well. But…

“And we ended the war,” Adora said, frowning at Frosta. “We can’t turn our back on them. They need our help - both the Eurondan Nation and the Eurondan Alliance.”

“Then they should act like it! Show some gratitude!” Frosta snapped.

“They’re trying to milk us,” Glimmer added.

“We did act a bit… high-handed, I think,” Bow said.

“Yes,” Adora agreed.

“We didn’t have much choice,” Glimmer retorted. “And we did the right thing. They’re trying to make us reward them with the threat of sinking as low as their enemies did. And that is not acceptable!”

“But we need to help them!” Perfuma protested. “Without our help, it’ll be decades, possibly centuries, before their world’s ecology recovers.”

“We will help them.” Adora shook her head. “But we can’t just leave them be, or they’ll never change for the better.”

“We can’t exactly make them change,” Mermista said.

Catra wasn’t so sure about that. There were ways to change a culture - the Horde had done that to the Scorpion Kingdom. Even now, the new Scorpion Kingdom was very different from the kingdom that Scorpia’s ancestors had ruled. It was heavily influenced by the Horde survivors living there. So much, Catra wouldn’t want to live there - she would constantly be reminded of her past.

“That’s another reason why we shouldn’t force the Eurondan Nation off their world; if they learn to live together, they’ll change. Both sides,” Glimmer said.

If, Catra thought.

“So, we’ll bribe them with our tech?” Mermista asked. “And station a task force there to make them play nice with each other, all for their own benefit?”

“Essentially, yes,” Adora told her. “If we share our technology, they can rebuild on their own. Mostly - we still need to help with restoring their world’s biosphere.”

“And Earth will support them with tools, machines and other stuff that is going obsolete but will still work perfectly fine,” Bow added.

Perfuma nodded. “That’s a good thing - otherwise, they would probably throw away all those things, and that would cause a lot of environmental damage.” She frowned. “Earth really should stop being so wasteful.”

“That’s how they do things,” Mermista said with a shrug. “Anyway, what about the proposal for tomorrow’s meeting?”

Adora frowned a little - she was in charge of the meeting, and Catra knew that her lover didn’t like it when others tried to do her

job for her - but nodded. "Yes. We've collected a list of supplies and technology that we think can be safely sent to Euronda. Mostly old agricultural and industrial tools and machinery from Earth and our artificial womb technology. We'll have to build the wombs first, though, until the Eurondans can build their own."

"And what about magic?" Scorpia asked.

Adora winced.

Glimmer scowled. "We don't have enough teachers for our allies; we surely can't spare them for the Eurondans."

Catra agreed, though she was sure that the Eurondans wouldn't like that. Although she wouldn't put it past them to be glad that no 'foreigner' tried to teach them how to work magic on their world. Actually, that would be a good way to make them refuse such an offer - make it patronisingly enough, and Lan would probably refuse out of principle just to avoid more 'foreign meddling'.

Which brought up another question. "What about religion?" Catra asked. If the task force sent there came from Third Fleet - and they were closer than Second and First Fleet - then that meant Priest would send his best, so to speak.

Adora grimaced. "I'll tell them that they can't proselytise."

Everyone nodded, but Catra was sure it wouldn't help much. Priest was good at getting around such orders. Probably by avoiding open proselytising but having the Clones 'honestly answer questions' or something like that.

And then Adora would frown but accept it.

*****

Restored Zone, Main Continent, Euronda, December 21st, 1999 (Earth Time)

Jack O'Neill was really sick of these meetings. To think a few of his fellow generals, and a number of people from the State Department, were complaining about him 'involving himself with diplomatic ventures that aren't the concern of the military'! It wasn't as if he *wanted* to meddle in these affairs.

But he wasn't about to leave it all to the Etherians and Daniel. They were both a bit too idealistic and a bit too… nice was a good word, in Jack's opinion. Sometimes, you had to be a bastard if you wanted to do your job as a leader. Every officer worth their salt learned that. And Jack would rather take that role than foist it on any of his friends.

And he had grown to dislike the Eurondan Alliance. At least their diplomats. They weren't as bad as the Eurondan Nation, not that that was hard since Alar's bunch were genocidal Space Nazis. But Lan was, as Cambell had put it, 'a right sort of prick', and Liou was far too smooth and smug for Jack's taste.

Sure, they had more than enough reasons to want the Space Nazis gone - something Jack agreed with - but the way they went about it was annoying. It was as if they were using their dead as arguments to get more technology. Like selling out, in a way. If they couldn't get justice, then money would do nicely.

"Let's hope they never meet an ambulance chaser," he muttered as he studied the horizon.

"Hm?" Catra made a questioning sound next to him.

"Nothing," Jack replied. "Just thinking out loud."

"Mh."

They stared at the hills in the distance in silence for a bit. Then Carter reported that the Alliance transport was approaching, and Jack sighed. Time to deal with the pricks again.

And to try to ignore all the 'concerns' and 'suggestions' he had heard in all the meetings he had had to attend back on Earth

when he should have been taking care of his unit instead. It was kind of fitting that actual combat missions and operations didn't draw a tenth of the attention from that crowd compared to the hint of potential profit for their lobbyists.

On the other hand, that was actually a good thing. If they tried to interfere with the war, it would be a debacle.

*****

"Those designs do not look very advanced. We had similar machines before the war," Liou complained.

"They aren't advanced at all, so your people won't need a lot of training to use them."

Jack O'Neill grinned at Glimmer's reply. It was evasive and misleading but technically correct. "We can't exactly send an army of instructors while we're waging a war against body-snatching aliens," he added. "We need them ourselves." Hell, sparing the ships and Clones to watch over the planet and keep the Eurodans from genociding each other would already be a bit of a strain. Tough just a little bit, as long as the Alliance didn't actually occupy the planet. That would be a mess.

"So you foist your outdated equipment on us?" Lan scoffed.

"You can use it, can't you?" Glimmer's smile showed all her teeth.

"We could use more advanced machinery as well," Liou retorted. He made a point of looking at Emily standing guard in the back. "Especially if they were autonomous."

"You'd have trouble maintaining, much less replacing them," Jack said.

"They look rather rugged. By the time they would need replacement, I think we would have learned how to maintain and build them." Liou smiled. "Our weapons are more advanced than the tools you offer, after all."

“As I said, we need the advanced technology ourselves,” Jack repeated himself before Entrapta could offer to build some agricultural bots that not even Etheria had yet.

“So you say,” Lan said. “Yet you can spare the time and supplies to save our enemies.”

“And your world,” Glimmer said. “We prioritise saving lives.”

Daniel nodded. “And with your war won, you can focus on rebuilding. You won’t need to concentrate on military industry any more.”

Lan scoffed. “With an Empire of hostile aliens waiting in the skies, who, as you told us, would turn us into primitive, uneducated slaves? We need advanced weapons more than ever!”

“We’ll station a task force in your system to protect you,” Adora told him.

“And what if that’s not enough to defend our world?” Liou asked.

Glimmer shrugged. “Even if we handed over all our technology to you, by the time you could manage to build enough spaceships and advanced weapons to actually make a difference, the war will likely be over.”

Lan ground his teeth at that, but Glimmer was right. Earth, with magnitudes more industrial potential and people, was already struggling to catch up. Euronda wouldn’t meaningfully contribute to the war against the Goa’uld in time to matter. Not even if, by some miracle, all the survivors on both sides decided to unite and work together with all their might.

Of course, they couldn’t be trusted anyway.

“That seems optimistic,” Liou said. “Wars rarely go according to plan, as our enemies found out. Wouldn’t it be wise to at least have contingency plans in case your war will last for several decades?”

“Yes,” Glimmer told him with another toothy smile. “But if the war lasts for so long, then the last thing we would want was to send your people to the frontlines. You already suffered so much and barely survived your own war.”

“We could still provide you with war materials if we had an automated industry set up.”

“Oh, we can do that ourselves,” Entrapta cut in with a wide and honest smile. “We’ve been working on automated production facilities, like for our spy bots. Don’t worry about that. In the long term, our main bottleneck is manpower, though, in a pinch, we can ramp up cloning, I guess.”

The Eurondans didn’t like hearing that. Not at all. Hell, Jack wasn’t sure he liked it, though for different reasons - more Clones? Or, even worse, cloning humans? That was a can of worms he’d rather shoot into the sun.

Adora nodded. “So, thank you for your offer, but we won’t burden you with such demands. You can focus on rebuilding your world with our help.”

Her smile wasn’t as smug as Catra’s, Jack noted, but she was clearly - at least in his impression - at least a little glad to tell off the Eurondans.

As was he. Though not as much as he was relieved that with this done, he could finally focus back on his actual job.

*****

Holiday Season Part 1

Gate Zone, Euronda, December 22nd, 1999 (Earth Time)

"So, you have sold us out."

Adora wanted to sigh and roll her eyes at Alar's words, but that would have been… not appropriate for the occasion. Which didn't stop Catra from doing exactly that, of course, but Adora was She-Ra, and she had to maintain her dignity. This was, after all, an official meeting. And she had to set a good example for the Alliance soldiers guarding the gate room and the rest of the defence complex. Even though, or perhaps especially, since most of them belonged to Jack's command.

So she slowly nodded instead of telling Alar that they didn't owe him anything in the first place. "Yes. We've finished a treaty with the Eurondan Alliance. In exchange for various concessions from the Alliance against the Goa'uld, represented by us, and the complete disarmament of the Eurondan Nation, they have agreed to end the war with the Eurondan Nation without forcing you off-world. They have also agreed that the death penalty will not be available in the trials of suspected war criminals. Trials which will be conducted by a mixed court with judges from the Eurondan Alliance and the Alliance against the Goa'uld."

Alar looked relieved for a moment - had he expected them to sacrifice his life to placate the Eurondan Alliance? But he quickly scowled and sounded even more defiant. "We fought a war. You kill your enemies in war. If what we did was wrong, then so was what the Breeders did."

Adora narrowed her eyes at him. "You don't murder civilians - not even in a war! That's a law that applies to everyone." She walked up to him and leaned forward, looming over him. "You attempted a *genocide*!"

Alar cringed, taking a half-step back, but then straightened. “We struck at our enemies! If we hadn’t struck first, they would have attacked us sooner or later under a pretext to erase us and our culture!”

“Come on, save this for the judges,” Jack said. “They might buy it.”

Alar glared at him. “As if the judgement wasn’t decided already!”

“You’ll get a fair trial,” Daniel told him. “We've had such trials before, trust us. We’ll ensure that you receive a skilled defender and that everything follows procedure.”

“Your laws and procedure!” Alar shook his head. “Why bother with this farce? We all know how this will play out.”

“That’s how we do things,” Jack said with bared teeth. “Even genocidal Space Nazis get their day in court.”

Daniel cleared his throat. “Well, it’s not as cut and dried as you claim. If you weren’t in a position of authority - if you had no part in the decision to launch a genocidal attack against the Eurondan Alliance - then you will not be held responsible for that. There are many precedents in our history. We don’t punish people for merely waging war.”

“So, you come and crush us, hand our enemies the victory in our war, and then expect us to be grateful to you for not letting the Breeders murder or exile every one of us?” Alar scoffed, but he sounded closer to crying. “What did we do to you to deserve this?”

“Well, for starters, you supplied our enemies with weapons to attack us,” Jack said with a shrug. “We take a dim view of such things. And then we found out that you tried to murder everyone on your world who disagreed with your customs. That’s kind of a red flag for us. That you also ruined your planet is kind of just gravy.”

Adora nodded. The Eurondan Alliance was annoying with their wheedling and demanding more concessions - though Adora and her friends had stayed mostly firm and wouldn't hand over weapon technology, magitech, or advanced aerospace technology - but they hadn't started this war. Or tried to kill her friends. "We'll take you and the others on the list in custody now."

"But… that will leave our people leaderless!"

"I'm sure someone else will step up and take over," Jack said. "They've probably been preparing for that ever since they heard the news from us. It's kind of what Nazis do."

Alar shook his head but didn't say anything else. Not even when two soldiers stepped up to him and cuffed him before leading him to the Stargate. He and the others would be held in a prison on Earth, to keep them safe from revenge.

Jack watched him go and sighed. "We really should install a democracy here. If we let them continue with their system, they won't change."

"We're not here to force your system on them," Glimmer disagreed. "Or ours," she added. "We're just here to stop them from destroying each other and their world."

"Then this won't be peace but just an armistice for twenty years," Jack retorted.

"We'll see." Adora knew people could change. And the Eurondans had to change, anyway, to adapt to the end of the war and the restoration of their world. "At least they won't have to fight a war any more. Both the Eurondan Nation and the Eurondan Alliance can now focus on rebuilding their countries in peace."

"Lan didn't act like it," Glimmer pointed out. "He kept trying to get more weapon technology from us. What did he think, that we would give him more weapons so he could launch an attack on the Eurondan Nation as soon as we turn our back to them?"

Daniel cleared his throat again. "I don't think it's that - or just that, I suppose. The Eurondan Alliance was fighting for their lives for decades, knowing that if they lost, it would be the end for their entire people, culture and history. That kind of conflict would have shaped their Society. It's quite understandable that they will want to arm up until they feel they can fend off any attacker."

"We will protect them. We told them so," Adora said.

"But they don't trust us. Which is also understandable - from their point of view, we protected their enemies," Daniel said. "It will take time for them to come to terms with the situation."

"Whatever!" Glimmer scoffed. "Let's leave now. We've ended the war and restored most of their world. That's enough."

It wasn't, not really. There was so much still wrong in this world. But they had far more worlds to save than this one, worlds far worse off than this one, too.

And they hadn't finished restoring the world's biosphere yet. But that was not something Adora could help with.

"Yes, let's go."

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 23rd, 1999

Samantha Carter watched as yet another transport carrying a standard freight container drove up the ramp of the Stargate. The transport used an electric drive - the ventilation of the base could have handled the exhausts from internal combustion engines, but it would have been an additional strain on the system, and the engines could just be hooked up to the base's reactors to be recharged, which was both easier and safer than refuelling outside or transporting more fuel into the base. Less fuel meant a lessened fire risk - something she could appreciate after her visit to Euronda.

Even with the additional security added after the attack by the Russians and Chinese, the whole process went smoothly - as one transport drove through the gate and vanished, the next one lined up behind it. Optimising the gate schedule for efficiency and costs, taking into account the space available for parking and storage and leaving enough windows for other gate missions - both planned and unplanned, was a challenge, but the best logisticians of the planet were working on it and had it down to science.

Sam had checked. Just in case. There wouldn't be another sabotage attempt on her watch. And this was an Alliance mission, anyway.

"Carter! There you are!"

She turned around and straightened. The General had arrived! "Sir. I thought you were expected in Washington." She had checked his schedule, as usual. She wasn't his Second-in-Command any more, but old habits died slowly.

"Ah, the meeting had to be cancelled so the general responsible could do his Christmas shopping." He grinned, and Sam couldn't tell if he was serious or not.

So she nodded. "I see."

"So, I decided to check up on our latest deployments," he went on. "Make sure everything's alright on our favourite new planet."

She frowned at that. With the holidays coming up, and after he had been absent for so long from his command to deal with the Eurondans, the paperwork must have been piling up on his desk.

He snorted. "I'm up to date on paperwork, Major."

She managed not to blush; he knew her too well after years of working together so closely. "Of course, sir."

“I’ve got actual aides for that, you know? Perks of being a general.”

“Yes, sir.”

“Anyway, I’m just going to hitch a ride on the next transport for a surprise inspection.” He hesitated a moment. “Want to tag along and check up on the restoration stuff?”

She was tempted. Only to check that the team headed by Perfuma didn’t need any technical assistance, of course. They were supposed to call either Entrapta, Sam or Bow if they had trouble with the bots helping them deploy the next wave of plants. The animals were still being cloned in Alpha, but the first batch would be ready before the new year.

But she had her own tasks to deal with - and she didn’t have an aide to handle her paperwork. So, she sighed softly and shook her head. “I’ll have to pass, sir.”

“Alright. See you in an hour or so?”

By then, she would still be here, handling the bits of advanced technology they were shipping to the Eurondan Alliance. “Yes, sir.”

He smiled, waved, and then stepped forward as the next transport drove up to the ramp. As soon as the transport stopped for the go-ahead from the traffic controller, the General opened the door and slid inside with smooth grace befitting a man twenty years younger.

She suppressed a sigh and turned back to her scanner. The artificial wombs were not yet ready - construction facilities had still to be set up, and since several countries were very interested in hosting those, and even more in the products, things had been delayed a bit. But the advanced bioreactors they had promised the Erondans to increase their food production were ready; Priest had delivered a few spare units from Third Fleet. He had also sent a team of Clones to install them and instruct the Eurondans in their use - and to spread the word of She-Ra or something on the

sly. Not that Sam really cared. A number of Eurondans converting might make handling the whole planet easier, especially if people from both sides converted. On the other hand, that might create the first schism in the Church of She-Ra…

But that was a problem for Priest and Adora. And probably Daniel. Sam had to ensure that the safety features on the bioreactors were intact. No one wanted the Eurondans to use the reactors to manufacture bioweapons. Not after seeing first-hand what Alar's people had done to their world.

But so far, all the systems checked out. She signed the forms for this batch and then watched as they were packed into containers. As they were loaded on the next transport, she noticed General Hammond walking toward her.

"General."

"Major." He smiled. "Everything alright?"

"Yes, sir."

"I guess I missed General O'Neill?"

Sam nodded. "He just went through the gate, sir."

"Ah. Well, I can ask you, I think."

She wasn't in the General's chain of command any more, not officially. But she probably could answer what question General Hammond had anyway. "Yes, sir?"

"Will SG-1 - well, the former SG-1 - attend Stargate Command's New Year's Party?"

Ah. Sam blinked. Right. The holiday season meant parties. Christmas and New Year's parties. With the Eurondan Affair, she hadn't even thought about that. And neither had her friends, she suspected. "I don't know yet," she said. A safe answer.

"Well, you're certainly invited." General Hammond beamed at her. "We all owe you for saving our bacon once again."

"Thank you, sir."

Sam was already trying to remember which parties she could miss and which she couldn't. Between the General and her Etherian friends, she probably wouldn't be able to skip as many as she would prefer. But she knew she didn't want to miss Stargate Command's New Year's Party. That was a tradition, after all. Even if she had been dragged to most of them in the past.

*****

Bright Moon, Etheria, December 24th, 1999

"It almost looks like we're on Earth," Catra commented as she walked at Adora's side towards the palace gates.

Adora looked around, frowning a little in that cute way of hers, then shook her head. "On Earth, the whole street would be decked out in Christmas decorations. Not just a few shops."

It was more than a few shops, actually - about every third shop was sporting tinsel and green and red ribbons or plants. And all of those shops had displays like on Earth. "Close enough," she said.

Adora nodded. "It looks like we missed a big smuggling ring."

"Those aren't wares from Earth," Catra corrected her lover. "Those are *'Earth-style goods'*. Copies made here." One of the shops even advertised as that. Although she had no doubt that the shop would sell actual contraband under the table if the owner had access to a smuggler. Not to them, of course - the clerks would know that Adora would report them. But if Catra were alone… Hm.

"Well, it's only natural," Adora said. "Earth media are very popular, and people watching the shows and movies will see a lot of Earth

products. Of course, they'll be curious about them. Daniel said similar things happen on Earth all the time."

Catra knew that Etherian goods would fetch a premium on Earth - and did whenever someone managed to smuggle something through the Stargate, though that would be even rarer after they had improved security. But she'd never seen - or heard of - a similar 'Etherian-style goods' fad. "What does Glimmer think about this?" she asked as they passed a bakery with 'original French croissants' that looked pretty similar to the ones she had eaten in Paris.

Adora winced a little. "Ah, she said she wanted to look into encouraging local businesses."

"So, she's not happy with everyone being crazy for Earth stuff." Catra snorted. She could understand that - if she were a princess, she would be a bit worried about that as well.

"It's not that," Adora said. "It's the whole difference between our population and Earth's. That's why the trade deals are stalled as well."

"Well, duh." Catra scoffed. "If we opened trade, the Stargate would be blocked for years with all the stuff Earth would ship to us." Most of it junk or obsolete stuff, but it would still sell.

"Yes. But they are pushing - and complaining about, well, that." Adora pointed at a shop advertising Earth media and assorted merchandise. "They still want us to 'respect copyright'."

"Good luck with that." Catra shook her head. Etheria didn't work like that.

"Some of the princesses were debating whether or not they should agree," Adora said. "But mostly because the don't like Earth media being so popular and think by cracking down on smuggling, it would become more expensive and less common."

Catra snorted. That wasn't how things worked. You couldn't stop smuggling, not even the Horde had managed, and media wasn't bottlenecked by the Stargate's capacity. You could transport a whole library on a single memory crystal.

"Mermista didn't think it would work either," Adora said.

"She would know." Both from Sea Hawk and her experience with smuggling on the sea. "Well, it's not our problem," Catra said. She narrowed her eyes at Adora to remind her lover of that.

"I know!" Adora blushed a little. "Though cultural exchange is."

Catra rolled her eyes. That again! The Asgard's visit had been bad enough, and Earth's would be worse - a lot of Etherians were crazy for Earth culture, especially their artists. "You'll have to assign a company or more for crowd control once the stars arrive," she said.

"That's up to the ruling princesses," Adora said. "Not all of them were, ah, enthusiastic."

"I bet they're just jealous they are less popular than Earth artists." Catra grinned.

Adora cleared her throat and didn't comment.

Catra's grin widened. "Well, you don't have that problem. You're the most popular princess. Here and on Earth."

That earned her a frown. "I don't care. I just… oh, no!"

Catra quickly followed her lover's gaze. "Oh!" She chuckled. "Priest must have taken notes."

In front of another shop, three Clones stood in a booth with a life-sized cardboard cutout of She-Ra, sword raised and shining with blinding light. Next to it, they had placed a box for donations and stacks of flyers, books and crystals. "It's really like Christmas on Earth. Be glad they didn't dress you up as Santa," she said.

Adora muttered a curse under her breath.

"Cheer up - it means Etheria has at least one celebrity who's popular in the rest of the Alliance," Catra told her with a snicker.

"I'd rather see Sea Hawk become a star on Earth with his shanties," Adora snapped.

Catra laughed as they took a detour so they wouldn't pass in front of the stall. Then she frowned as she had another thought. "If they're doing that on Earth, that could cause trouble." Earth took their weird religions seriously, and it was holiday season for the Alliance.

Adora sighed.

*****

Pentagon, Washington D.C., United States of America, Earth, December 24th, 1999

"That's very interesting, General. I'll be sure to keep that in mind when we're training in Germany."

As an example of how not to conduct a landing operation on another planet, Jack O'Neill added to himself when he turned away to refill his glass. That was an insane proposal, and from a fellow Air Force officer to boot! Really, it sounded as if the man had never considered that a planetary invasion was focused on securing the *orbitals*. You couldn't establish air superiority if the enemy could bomb you from space no matter how daringly you dropped on the planet. And if you had control of the orbitals, you did the same to the enemy.

With people like that working at the Pentagon, it was no wonder that the Navy pukes had won the battle for the US space forces!

Besides, Jack ran Alliance Special Forces Command, not the Space Marines. He wasn't in charge of invading planets, he was in charge of taking out key objectives for invasions, running ops

behind enemy lines, search and rescue and all the fun stuff SG-1 had gotten up to in their days.

His glass refilled with excellent whisky - the Pentagon didn't skimp on food and drinks for their general staff mixers - he made his way to the corner of the room closest to the door. He had been here for almost an hour; it was time to slip out as soon as the opportunity presented itself. Before he drank too much and started to hurt some of the idiots here.

Like Admiral Kearsy. Jack hadn't forgotten the debriefing of the Saqqara mission. The man was talking to the Secretary of Defense near the other end of the bar. Jack considered cutting in if only to see if he had to heed off another blatant powerplay by the Navy to cripple the funding for the rest of the branches so they could design another death trap to show off the limeys.

He decided against it. If the Navy tried anything, it would go through Alliance Command, and Adora would inform him. And they could get Carter to dissect the latest issues with the Navy's ship design.

At least the British ships were coming along according to schedule. If the Navy pukes kept messing up their homebrewed all-in-one-designs, the Marines might be ferried to the first landing zones on British transports escorted by British corvettes.

Which wouldn't be all that bad, actually, in Jack's opinion.

"General O'Neill!"

Damn! Jack forced himself to smile. "General Naird."

"I was wondering if you knew if Major Carter was going to attend this mixer."

Jack narrowed his eyes. Why did Naird want to speak to Carter? At a mixer? The man was married! "Unfortunately, she is busy with critical work for the war." Also known as doing science with Entrapta instead of suffering here with him.

“Oh.” The man’s face fell. “I was hoping to discuss a few things I discovered. As you certainly know, I was assigned to command our Space Signals Corps, and since that relies heavily on the spy bot network Major Carter and Princess Entrapta have developed…” He trailed off with a hopeful smile.

Jack was tempted to mention that ‘Space Signals Corps’ basically was just handling the interface with said network. But everyone knew that, even Naird. And it was Christmas Eve. So he shrugged. “I can’t help you there - I just push the button on the radio. And if it doesn’t work, I call Carter.”

“Err, yes, that’s basically the problem. It works, but we - that is, my command - don’t have the capability to fix anything if it doesn’t work. My aide and my technical advisor have, therefore, formulated a plan for a backup system in case the main network is damaged.”

Ah. Tech talk. “Oh, just mail her your proposal. She will get back to you.”

“We did. Two weeks ago.” Naird pouted. “But we haven’t heard back.”

Really? “Well, I can’t speak for Major Carter, but between the attack by Russia and China and then the mess with the Space Nazis, I think she might have been a bit too busy to give your proposal the attention it deserves.”

“Ah. Maybe I should send a reminder.” Naird nodded.

“Yes.” That wouldn’t endear him to Carter, but that wasn’t Jack’s problem. On the other hand… “Or I could do it. Communications are a critical part of modern warfare, after all, and it’s always good to have backup systems. In fact, I think I’ll go call her right now. Merry Christmas!”

“Ah…” Naird opened his mouth, but Jack was already finishing his drink on the way out.

An excuse to leave the mixer early and to call Carter? That was almost a Christmas present in his book.

But just as he reached the door, it was opened by a concerned-looking captain - Air Force, Jack noted - whose eyes widened when she saw him. "General O'Neill! Captain Brown. We've got a situation."

Damn. Well, he hadn't heard any sirens, so it couldn't be too bad.

"There was an altercation involving several Clones and Alliance soldiers."

Scratch that thought.

*****

"So, fill me in?" Jack O'Neill asked a minute later as they walked through the hallway - toward the exit leading to the landing pads, he noted.

"At the Christmas Party at the Washington Navy Yard, a religious dispute occurred between a group of Clones and Navy personnel. The dispute escalated to violence," Brown replied. "All involved are now either in lockup or in the hospital."

A brawl between Clones and Navy pukes? So, none of his people were involved? "And I was the only general available, I guess?" he half-joked.

"The Supreme Commander is not on Earth nor on duty. The leader of Third Fleet was already informed, and Admiral Brown-Emerson requested your presence since you are on location."

"Ah." That explained why Jack was left holding the bag. Not because he was already in Washington, of course - Priest could probably arrive faster at the Naval Yard from orbit than Jack could make it through Washington D.C.'s traffic. But Jack was a close friend of Adora and so the wily Brit probably figured he could

handle Priest. Well, he wasn't entirely wrong. Jack certainly could think of worse officers being involved in this.

He narrowed his eyes at the thought. "Was Admiral Kearsy informed?" He was the ranking US Navy officer on the council. And he was in Washington as well.

"I don't know. I received a direct call from Admiral Brown-Emerson and immediately went to fetch you, sir. Should I call him?"

"Let him enjoy the party," Jack said as they left the building. "Ever flown in a shuttle?"

"Yes, sir."

"Ever flown in a stealth shuttle?"

"No, sir."

"It's like a shuttle, but better." He grinned again. "Although we won't be using the stealth generator this time."

"Yes, sir."

Jack refrained from making a comment on being too formal. The captain wasn't one of his people. And when working in the Pentagon as a junior officer, especially as a young woman, it was better to be as formal as possible when interacting with your superior.

"Strap in," he told her as they boarded the shuttle, followed by the bot guarding it - the encrypted locks on the shuttle had been built by Carter and Entrapta, but you couldn't be too careful with your personal stealth shuttle around other generals. Doubly so in Washington.

He quickly ran through the pre-flight checks. "So, how bad are the injuries? And how much alcohol was involved?"

“None of the injuries were reported as life-threatening, sir,” Brown replied. “No alcohol was served at the party.”

Jack snorted. “Blood checks on all.”

“Yes, sir.” She made a note on her pad while Jack informed air traffic control of his flight

As soon as he got the clearance, he took off. Five minutes later - mostly because he had to avoid a police chopper - they touched down at the Naval Yard. Next to another shuttle with familiar markings. Third Fleet.

Jack was pretty sure he knew who had arrived with that shuttle.

He was proven right five minutes later when they reached the area where the uninjured participants of the brawl were held in detention. “Hello, Priest. Lieutenant.” He nodded at the Navy officer next to Priest.

“General O’Neill!” The Clone smiled at him. “Merry Christmas, and may Her Divine Highness’s grace bless you as well. And to you,” he added with a nod at Brown.

Ah. Jack was starting to get an inkling of the reasons for the brawl. “Thanks, I guess,” he replied.

“Sir.” The Lieutenant looked as tense as you’d expect from anyone in his position - Priest commanded a fleet with enough firepower to turn Earth into a wasteland, after all.

“So, I heard a couple of people got into a brawl at a party,” Jack said. “I guess someone broke out the booze early.”

“We’re still investigating,” the Lieutenant said. “NCIS was informed. A special agent is on the way.”

“NCIS? Really? Do you do that every time there’s a drunken brawl?” Jack raised his eyebrows. Someone was escalating. Sure, technically, this could be worth a criminal investigation, but

generally, people didn't want to escalate from a disciplinary matter to a criminal one. Especially if it involved foreign service personnel. It looked like someone was playing games here. Wait - he had his own special agent on call. Sort of. "I guess we'll cooperate on this, then."

"Sir?" The Lieutenant looked confused for a moment.

"In investigating this," Jack said. "I'll call my team."

"Special Agents Wilkinson and Paris?" Priest smiled.

The Clone was well-informed. Jack reminded himself not to underestimate him. Religious fanatics could be quite subtle and sly. "Yes. I guess this is straight down their alley. They can talk shop with their colleagues from NCIS."

"Third Fleet will, of course, lend any assistance you need," Priest said.

At least he didn't offer to add his own people to the team. Good. If Jack could keep this from escalating further, he should be able to settle things without too much trouble.

"So, what exactly happened?" Jack asked. "Getting into a brawl on Christmas Eve isn't exactly in the spirit of the holiday, is it?"

"We're still investigating, sir," the Lieutenant replied stiffly. Stalling?

Jack cocked his head. "Exactly. And what do you have so far?"

"We're waiting for NCIS, sir."

Someone really wanted to escalate this. But who? "Let me call my investigative team, then," Jack said. And inform them that they were his investigative team, of course.

He'd get to the bottom of this. And if anyone was playing games involving Third Fleet, he'd take them down. Some things were off-

limits. Especially during a war.

*****

Washington Naval Yard, United States of America, Earth, December 24th, 1999

"No, that's alright. Merry Christmas, Agent Paris!"

"Merry Christmas, General."

Jack O'Neill sighed as he switched off his comm. Apparently, Wilkinson and Paris both had plans for Christmas Eve. He could have pushed - not quite ordered; they were still ironing out how exactly the two would officially fit into his command; the FBI was proving a bit obstructive - but he hadn't. Getting his own special agents would have been a nice way to show up the NCIS special agent, but Jack didn't really think he'd need them to settle a drunken brawl. He'd let the Navy pukes ruin their own holidays instead.

Besides, he might not have two special agents on the way, but he was in charge of Alliance Special Forces Command. That gave him a lot of clout. Hell, if the Navy felt uppity, he could just mention, casually, that the shuttles assigned to his unit had more firepower than the entire Navy, at least until they managed to convert their squadrons to space fighters. Of course, Priest had an actual fleet in orbit…

"So, when will you let me talk to my men? I was under the impression that anyone detained in your country had the right to arrange legal representation and contact their embassy if they were a foreigner," Priest asked.

"I'm sorry, sir, but I don't have the authority to decide that. That is under the purview of the NCIS special agent assigned to this case," the Lieutenant in charge of the detention area replied.

Jack suppressed a snort at the officer's expression. You had to be a screw-up or terribly unlucky to get assigned to this post on

Christmas Eve, and he wondered which was it here. “And when will the special agent arrive?” Jack asked, leaning forward and putting his hands on the man’s desk.

“He’s on his way,” the Lieutenant replied. But traffic is bad at this time of day.”

“We can fetch him with a shuttle,” Priest offered at once. “Just give us his location.”

“Ah… that’s… not my call, sir,” the Lieutenant not-quite-stammered.

Jack frowned. Someone must have given him instructions to stall. But who?

“What’s going on here?”

Ah. Jack had his answer. Probable answer, at least. He smiled - politely - as he turned. “And good evening to you, Admiral Kearsy. Fancy meeting you here.”

The Admiral gave him the barest of nods. “I came as soon as I was informed that there was an incident involving my men.”

“You could have called us, Admiral. We would have sent a shuttle to pick you up.” Priest beamed at him.

“Or you could have flown with me,” Jack added. It was a good thing that Brown wasn’t here, or Kearsy would probably try to blame her.

“Whatever. What’s the status?” Kearsy barked, glaring at the Lieutenant.

“We’re waiting on the NCIS, sir.” the young man looked even more nervous.

“NCIS? Who called them?”

“That’s standard procedure, sir. Especially if it involves foreign soldiers.”

Kearsy scoffed. “That’s a waste of time. Why run an investigation when the results won’t matter?”

Jack narrowed his eyes. “Really? What are you insinuating, Admiral?”

Kearsy scoffed again. “As if you have to ask. No matter what they did, your aliens won’t be punished. Politics will ensure that!”

“I can assure you that my people will be punished for any rules they broke, Admiral,” Priest said. “Whether they actually broke any rules in the first place has yet to be determined, of course.”

“Punished by you.” Kearsy shook his head.

“With Her Divine Highness’s permission, of course,” Priest said. “We all follow her command. If she desires differently, then we shall obey.”

“The United States Navy is not in the habit of idolatry!” Kearsy spat.

Damn! Jack clenched his teeth. What was this fool thinking? Was he drunk? The last thing Jack - or Earth - needed was Priest starting a brawl because an idiot insulted Adora. Or a crusade.

But Priest smiled. “I was talking about the fact that as officers of the Alliance against the Goa’uld, we both answer to the Supreme Commander of said Alliance, Admiral. Though, as far as I am aware, the United States Navy is, like the United States as a country, not beholden to any religion, so I do not quite understand why you are stating the obvious. Even if a majority of your soldiers should decide to follow Her Divine Highness’s teachings, that would not change. Our church perfectly understands and supports this policy.”

"You…" Whatever Kearsy had been about to say, he managed to stop himself.

"Yes. We're all very tolerant of each other's faith here," Jack said. "And we have a drunken brawl to sort out."

That NCIS special agent couldn't arrive too soon, he thought. If only to distract Kearsy.

*****

Washington Naval Yard, United States of America, Earth, December 25th, 1999

Jack greeted them on the landing pad - which was a bit crowded, Adora noticed, with three shuttles parked next to each other, including the one that brought Catra and her here. "Supreme Commander." He saluted.

"General." She nodded at him.

"Sorry for ruining your holidays."

"Don't worry. We're not celebrating Christmas," Adora told him.

"Not yet," Catra added with a grin. "But we're working on it."

"Oh?" Jack looked surprised.

Adora softly sighed. "Several shops in Bright Moon have Christmas decorations."

Catra nodded. "Earth cultural imperialism is making progress."

Adora frowned. She knew Catra wasn't serious, not really, but some princesses were concerned.

"Soon, the entire galaxy will know the joys of Christmas shopping!" Jack commented as they walked into the building.

“So, where are our missionaries?” Catra asked after she stopped giggling.

“They weren’t actually missionaries,” Jack said. “According to the interviews I saw, the Clones didn’t try to convert anyone.”

That was good to hear. Adora had feared the worst when she had heard about the ‘altercation’.

“I sense a ‘but’ coming.” Catra cocked her head to the side.

Jack sighed. “Yep. While the Clones weren’t trying to convert anyone, neither did they hold back when a drunk sailor asked them what they thought about Christmas. And they didn’t back down when challenged, so…”

Adora winced. “‘Be polite but don’t lie’.”

“Huh?”

“That were their instructions when asked about their… faith,” Adora explained, clenching her teeth a little. “According to Priest.”

“Who wouldn’t lie to his goddess?” Jack looked at her as they waited before the lift.

“He wouldn’t lie,” Adora told him with a firm nod.

“He would interpret orders to suit him and be vague when necessary, like any good subordinate officer showing initiative, but he wouldn’t lie to Adora,” Catra confirmed.

Jack snorted, probably at her view of what made a ‘good subordinate officer’, when the lift arrived. As soon as the doors closed behind them, he said: “Someone’s playing games. They called in NCIS. The Navy Criminal Investigation Service.”

“Yes?” Adora frowned. “Several people were hurt in the brawl, weren’t they? And hurting people is a crime, isn’t it?”

“Yes, but there’s a certain leeway. This kind of incident is usually handled without calling in NCIS,” Jack explained. “I wouldn’t say it’s normal for sailors on leave to brawl, but it’s not exactly rare. And we have a lot of sailors.”

“And who’s playing games, and what do they want?” Catra asked. She looked alert now - tense, even.

Of course, Adora thought, that would remind her of Horde politics.

“Ah, that I don’t know. Not yet.” Jack frowned. “With the brawl happening at a party, news spread quickly.”

Adora nodded. Then the lift stopped, and she straightened and raised her chin a little. This was serious.

“Your Divine Highness! Your most faithful servant is at your command!”

Adora pressed her lips together. Priest didn’t have to bow - they were on duty. Not that he had to bow even if they were off duty, anyway. “Greetings, Priest.” She nodded at him. “Admiral Kearsy.”

The Admiral saluted her with a deep frown and a glance at Priest. Almost a scowl, actually.

Adora wasn’t surprised - Priest could be annoying. Very annoying. She looked at the middle-aged man in a suit next to the Admiral.

“Adora, Cara, that’s Special Agent Banks,” Jack said. “Special Agent - Supreme Commander of the Alliance Princess She-Ra. And Catra.”

“Ma’am.” He nodded at her.

“Special Agent.” She smiled at him. “So, you’ve interrogated the people involved. What happened?” Straight and to the point. Get the intel you needed to make a decision, as she had been taught in cadet training.

“Ah, we’re still at the start of the investigation,” Banks said. “We have wildly differing testimonies that we need to sort out and compare with other pieces of evidence. I cannot yet say with any certainty what exactly happened last evening.”

“We do have records from security cameras, though, that show that my people were attacked and defended themselves, Your Divine Highness,” Priest cut in. “As befitting your faithful, they did not escalate what might have been a mere cultural misunderstanding to violence.”

“So, the sailors threw the first punch, huh?” Catra asked.

“They were provoked!” Admiral Kearsy blurted out. “You cannot fault a man for losing his temper when his religion is insulted on the eve of our most holy celebration!”

Adora winced. So, it was about religion.

“Actually, you can,” Jack cut in. “I do remember orders to that extent. And laws.”

“I find that claim implausible, Admiral,” Priest said in a mild tone. “As Her Divine Highness taught us, other religions are to be respected. Even if their adherents might not respect ours.”

“Your people claimed that the birth of Christ was made up!” Kearsy bellowed.

Adora winced again.

“That is incorrect. My people merely remarked that it was unlikely that Christ was born on this exact date but that it was claimed so by the early Christian Church to coopt another religion’s holiday,” Priest retorted. “Which is generally considered a smart move for spreading the faith, as far as I understand, and, therefore, could be considered a compliment, provided your faith, unlike ours, does not stipulate honesty.”

“Don’t mock my faith!” Kearsy spat. “Your people were also comparing your…” he trailed off and glared at Adora. “...your commander to *Jesus our Lord and Saviour*!”

Adora froze.

Priest didn’t. “Yes?” He cocked his head in apparent - and fake, Adora knew it! - surprise. “Why wouldn’t we?”

“You cannot compare our Lord to… a mere person!” Kearsy bellowed.

“Please do not insult Her Divine Highness,” Priest said. “Her Divine Power and Grace has been proven countless times. In living memory, no less.”

“I’m no goddess!” Adora blurted out.

“And her humility is without equal as well,” Priest said.

Adora closed her eyes so she didn’t have to see Catra’s wide grin.

*****

Holiday Season Part 2

Washington D.C., December 25th, 1999 (Earth Time)

The house hadn't changed since Samantha Carter had visited the last time. Which had been quite a while ago, before her father had been healed by Adora, actually. Before they had made up. Sam was happy about that, of course. Her Dad was alive, and the rift between them had been healed. And they could celebrate Christmas together. Which also is a good thing, Sam told herself firmly as she walked up to the door.

Unless there was an emergency, she wouldn't be able to spend Christmas in her lab, anyway. The General would probably check on her. Not that she wanted to spend Christmas in her lab. Not really.

Taking a deep breath, she rang the doorbell.

"I'm coming!"

She blinked. That wasn't her father's voice. That was…

The door was pulled open, and Sam found herself looking at her niece, Lisa. "Aunt Sam!" Before Sam could say anything, the girl turned her head and yelled: "Dad! Gramps! Aunt Sam's here!"

Her brother and his family were here? Sam blinked.

"Come in!" Lisa grabbed her hand and started to tug on it, and Sam followed her inside.

"Aunt Sam! Did you bring us presents?" David, her nephew, asked.

"David!" Mark's wife appeared in the door leading to the kitchen, an apron covering her front. "What did I tell you about being good?" Then she smiled. "Hello, Sam. Merry Christmas!"

“Hello, Marian.” Sam nodded at her. “I didn’t know you were visiting Dad.”

“Oh! You don’t have presents, then!”

“David!”

“We’ll take money, too,” Lisa said, smiling impishly. “You have money, right? Dad said you live for your work, so you can’t be spending much, right?”

Sam raised her eyebrows. “He did?”

“Hello, Sam!”

And there was her brother, standing in the hallway leading to the backyard. Behind him, just closing the door, was Dad. Both were wearing winter jackets.

“Sam!” Dan beamed at her. “You made it.”

“It’s a Christmas miracle,” Mark commented.

Sam frowned, and he grimaced. “Sorry.”

“‘Christmas miracle’?” David asked in the sudden silence.

“Nothing,” Mark told him. “Just a stupid joke.”

“Yes. Very stupid,” Marian told him.

“Anyway,” Dad said. “Come, join us in the living room!”

Sam was tempted to comment on the fact that Marian was going back into the kitchen, but like her and Dad’s military career, that was a touchy subject.

“So, do you have money?” Lisa apparently had clear priorities.

“I already sent your parents the money for your gifts,” Sam told her. “I didn’t know you would be travelling to Washington.”

“It was a rather spontaneous decision,” Mark said as he sat down on the old and worn couch in the living room. Next to it, a Christmas tree with familiar decorations stood. It was a bit too tall for the room’s ceiling, and the tip was bent to the side, the star meant to be mounted on its top dangling from it instead.

Sam joined him on the couch while her nephew and niece sat down on the carpet, grabbing the toys spread out there.

“I told Mark that both of us would be in Washington for the holidays,” Dad added as he sank into his favourite seat. “Barring an emergency.”

Mark snorted. “And it might have been the last opportunity to catch a flight on an aeroplane. I didn’t want David and Lisa to miss out on that experience.”

David nodded. “We watched ‘Star Princess and the Snake Empire’ on the flight! We wouldn’t have had the time to do that on a shuttle!”

Sam nodded, suppressing the urge to correct her brother about the odds that commercial travel would switch to shuttles in the next few years.

“Have you seen the movie?” Lisa asked. “Dad said you live it!”

Sam narrowed her eyes at her brother, who grinned in response, before smiling at her niece. “No, I haven’t seen the movie. I rarely have the time to watch movies.”

“Ah!” Lisa nodded and smiled at her, sitting cross-legged in front of Sam. “So, the movie starts with the Star Princess and her friends on their planet, Eternia. They’re having fun with all the animals, but then the Snake People attack, and the whole forest - they have a magical forest where the trees have chocolate fruits - is set on fire! But Star Princess’s friend Aqua can control water, and so she…”

Sam felt her smile freeze a little bit as she realised that her niece apparently was going to tell her the entire movie's plot - a plot that sounded very much like it was 'inspired' by the Horde War, with the Horde replaced by obvious Goa'uld expies.

Someone at Disney must have commissioned that movie as revenge for the Etherians' refusal to respect their copyright, Sam thought. She could only hope the General didn't hear about this - he'd use it for a mandatory movie night.

Why did she decide that she couldn't spend the day in her lab, anyway? Because she hadn't seen her family in months, she reminded herself.

"...and then Star Princess rode her pegasus to the Horde sky fortress, and…"

"It's actually an alicorn," Sam said before she could help herself. "Sorry," she quickly added.

Mark snickered. "You'd know the difference - you met the real thing, right?"

Both Lisa and Davis gaped at her.

"That's classified," Sam said, frowning at her dad. He was the only one in the family who was aware that she was a close friend of the Etherians. Of course, her friendship wasn't that much of a secret, considering how many knew about it…

"Classified?" Lisa asked.

"That means Aunt Sam goes to prison if she tells us," David told her.

"I didn't spill," Dad claimed.

"I figured it out from how often you were in the news," Mark said with a satisfied smirk.

Her brother wasn't stupid, Sam reminded herself. She sighed. "It's classified. We're at war."

"Oh! Are you going to ride alicorns into battle?" Lisa asked.

"Or dinosaurs?" David added.

"No," Sam said. "That's just the show, not reality." Riding Swift Wind into battle? She wasn't Adora. And she doubted Adora would ride him into battle, either.

"Aw." Lisa pouted. "And will you attack the Horde Sky Fortress?"

"The Etherians already defeated the Horde, duh," David said. "Now they are fighting snakes!"

"The Alliance is engaged in a war with the Goa'uld Empire," she corrected him. A war that the Goa'uld were not yet aware of, actually.

"Yes, the snakes!" David nodded.

"A war that keeps your aunt very busy," Mark added. Sam could hear the 'too busy to visit her family' clearly even though he didn't say it out loud.

And so could Dad. He frowned. "Sam's essential for the Alliance."

Sam, not her work, Sam noted.

Fortunately, Mark didn't pick up that nuance. He slowly nodded. "But at least you managed to visit over the holidays." He tilted his head and frowned slightly. "You're staying over the holidays, aren't you?"

"I'll visit in my free time," Sam told him. "But I don't have leave over the holidays." And she didn't want leave anyway. She had too many projects to tend to, and her friends needed her.

“You have to work on Christmas?” Lisa stared at Sam as if she had heard that Christmas was getting cancelled.

“We’re at war,” Sam said.

“And you’re doing your duty,” Mark said.

Sam ignored the familiar hint of bitterness in his voice. She wouldn’t start that old argument again.

Fortunately, neither did Dad. “Well, at least you can travel around the world faster than you can drive through Washington these days.”

“What?” Mark looked surprised, even though he had commented about shuttles rendering planes obsolete before.

“Shuttles are far faster than planes,” Dad said.

“I didn’t know they were that fast…”

“I don’t have a personal shuttle,” Sam pointed out.

“General O’Neill does, though.” Of course, Dad would have heard those rumours!

“Which he uses,” Sam said. She didn’t bother denying the rumours. That would only make her brother tease her. Or make assumptions that were completely inappropriate and wrong.

“Who’s General O’Neill?” Lisa asked.

“My former commanding officer,” Sam told her.

“And you can use his shuttle?” Lisa looked impressed.

“If I need it, I can require a shuttle for transport,” Sam said. She needed one every time she visited the Spacelab in person or had to move between different bases.

“To visit us?” Lisa asked.

“That wouldn’t be a need,” Sam corrected her. “But if my duties lead me to Washington, I will visit. You’re staying the whole holiday?” she asked Mark.

“Yes. Marian’s family was not amused, but since we stayed with them every year…” He shrugged. “They can’t complain.”

Neither Dad nor Sam commented on the reasons why Mark and his family had visited Marian’s parents every holiday and not them.

Sam tried to change the topic again. “I might need to get a copy of that movie,” she said. And watch it so she would know if it could cause problems with the Etherians.

“Can we have it when you’re done?” Lisa looked hopefully at her.

David nodded with the same expression.

“Well… it’s a bit too late to get a copy today,” Mark said with a glance at the clock on the wall. “But we can get one tomorrow. And watch it together. Consider it a late Christmas present, Sam.”

“Yes!” Lisa cheered.

“Yay!” David nodded so rapidly, Sam was briefly worried for his health.

She thought about bowing out - she had only planned to visit today for the big dinner - but faced with her niece and nephew’s beaming faces, she couldn’t disappoint them.

It really is a potential problem for our relations with Etheria, she told herself to soothe her guilty conscience.

It didn’t quite work.

*****

Pentagon, Washington D.C., December 25th, 1999 (Earth Time)

"So, has the special agent finished their investigation yet?" Catra asked as she leaned back in her seat and put her feet on the table.

"Catra!" Adora hissed next to her.

Catra rolled her eyes. "It's not as if this is a serious matter," she said, loud enough to be overheard by the others in the meeting room. "Someone just wanted to feel important."

"This is a serious matter!" Kearsy bellowed, as expected.

Catra snorted. Really, didn't the man realise that he had been set up? A bunch of soldiers brawling was a matter for their officers to settle. It wasn't as if anyone had died - they hadn't even been hurt seriously. Not enough for needing Adora's healing magic, at least - which disproved Catra's earlier (and far-fetched) suspicion that someone suffering from a disease or whatever had arranged that to get Adora involved, hoping she would heal them. In any case, Kearsy shouldn't have become involved in the first place or, at least, should have dropped the matter when the Navy police had taken over. He should have followed Jack's example, who had dropped the thing on Adora as soon as he had an excuse and must be enjoying the holidays right now.

"I fail to see why this investigation should persist," Priest cut in. "The records we saw were clear - your sailors attacked my people first. And since I, following the example Her Divine Highness set, agreed not to pursue punishment of the attackers, the matter should be settled already."

Adora nodded. "Yes. There's no need to punish anyone if their victims forgave them."

Catra doubted that any of the hurt Clones would have dared refuse to forgive their enemies when Adora asked them, but that wasn't her problem.

“We still don’t know the exact circumstances of the brawl, so any assumptions about guilt seem premature,” the base commander, Admiral Jeffries, apparently called back from a vacation with his family, said, glancing back and forth between Kearsy and Adora. The guy didn’t want to be here any more than Catra did.

“As my people told me, they merely answered honestly when asked about their opinion of this holiday,” Priest said. “All in accordance with Her Divine Highness’ orders,” he added with a deep nod toward Adora. “That this was taken as an insult by your sailors was not their fault. But even if it were, that would not excuse an assault on them.”

“You cannot expect a man to suffer such an insult without reacting!” Kearsy snapped.

Priest tilted his head slightly in apparent - and, Catra was sure, fake confusion. “I was under the impression that this was a core tenet of your religion. To turn the other cheek instead of defending yourself, much less counter-attacking, even when you are physically assaulted.”

Kearsy ground his teeth. “That’s not what it means!” he spat. “And they attacked their faith, not the sailors themselves!”

“I bow to your expertise,” Priest replied in a mild tone that left Kearsy even more furious. “My own faith does not require us to react with violence when questioned - quite the opposite, actually.”

Admiral Jeffries cleared his throat. “I think that a thorough investigation would help us to decide what punishment is appropriate for the attack on your soldiers.”

“And you are free to do so,” Catra said. “But that doesn’t mean we have to stay involved with this. We’ve got better things to do.” Hell, even watching paint dry would be better than this - at least she’d be able to take a nap without Adora feeling embarrassed.

“We trust that your judgement in this matter will be fair,” Priest added with more fake sincerity that once again riled Kearsy up.

“Do you expect us to sacrifice good sailors for politics?”

Catra couldn’t resist. “Isn’t that a tradition for your country?”

“Catra!”

“What? I’ve read their history,” Catra said, shrugging. “They sent their Navy to open other countries for their trade.”

“Are you insulting the US Navy?” Kearsy glared at her.

Admiral Jeffries cleared his throat again. “I think we should focus on the matter at hand. Which is, if I understand your stance correctly, a disciplinary matter left to the involved sailors’ commander.”

“Yes,” Adora said, nodding emphatically.

“As Her Divine Highness mandates,” Priest added.

Kearsy managed to nod without blowing up.

“Great. The matter’s settled then,” Catra said, taking her feet off the table and standing up to stretch. “Let’s go back home.”

But as they filed out of the room, an aide approached Admrial Jeffries. Catra’s ears twitched as she listened to their whispered conversation.

“Sir, there’s been a complication.”

“What?”

“The press is covering the incident.”

“What?”

Catra muttered a curse under her breath. "Someone must have leaked this to the press." This would greatly increase the pressure on anyone involved.

Then again, that was probably their goal, she added to herself with a glance at Kearsy.

"What are they saying?" Adora asked.

The aide winced. "Uh…"

"Spit it out!" Kearsy growled.

"Most call it 'the Christmas Brawl'," the man replied. "But some of the more conservative media are calling it an 'attack on Christmas'."

Catra could imagine what those news agencies said about this and clenched her teeth. She was really, really sick of that part of Earth's media. "So much for this being settled," she said.

They had to discuss this with Jack and the others.

*****

Alliance Headquarters, Brussels, Belgium, Earth, December 25th, 1999 (Earth Time)

"...and while the Pentagon refuses to comment on the issue and the Alliance spokesperson has claimed that an investigation is still underway, sources usually in the know claim that the Supreme Commander of the Alliance herself, She-Ra, Princess of Power, was called to heal the personnel involved. That means this wasn't merely a brawl amongst drunken soldiers, something anyone living near a base is probably familiar with, but a serious fight. James, what do you think the consequences of this will be?"

"Well, Bob, such a bloody, if you'll pardon the pun, altercation means that there's serious tension between the different factions of the Alliance."

"Which factions do you mean? We've heard allegations that many Earth soldiers resent the Etherians for their favourite treatment. Some claim that Earth soldiers are used as cannon fodder on the ground while the Etherians stay safe in orbit."

"Ah, I cannot comment on the validity of such claims, but given the technological and population difference between Earth and Etheria, it's only natural that we - Earth - would mainly fight ground battles. Don't forget that Etheria in total has less than a fifth of the population of the United States."

"But that's math. For the soldier on the ground, sitting in the trenches while others stay safely aboard spaceships, that won't mean much, will it?"

"Indeed, Bob, while that perspective is limited, and possibly misleading, it's still a valid point to be taken into account."

"And there's more. While it would be reaching to claim, as some of our less integer colleagues do, that Etheria is waging a 'War on Christmas', it is commonly known that the Etherians are rather aggressively spreading their religion on Earth and in space. I could imagine that such proselytising would not be received well by devout Christians."

"Once more, I have to agree. There's a saying that there are no atheists in foxholes, as you might know."

"I didn't, James, but it's kind of fitting, isn't it?"

"Yes. Anyway, we've heard complaints about Etheria's religion spreading on Earth for months now. While most of its followers are, unsurprisingly, located in India, the Church of She-Ra is also growing in the West, and that causes tension. This incident might just be the tip of the iceberg, so to speak, an indication of a lingering and growing rift inside the Alliance."

"That sounds daunting, James."

"That's because it is daunting, Bob."

Jack O'Neill switched the TV off and turned to look at the others in the room. "Sounds like a bunch of hot air to me," he said. "Just people stirring up emotion for ratings."

Catra nodded, but Adora was shaking her head. "Admiral Kearsy seemed to share this view."

"Kearsy is an idiot," Jack said. "And he'll probably be removed from his post over this." Someone had to take the fall for this, and Kearsy was the most exposed - and the most expendable - amongst the higher ranks involved here. Although the yard commander might be sacrificed instead, if Kearsy managed to shore up enough support. Unless Adora personally intervened, which she wouldn't do. Probably not.

"Do you think someone set him up?" Catra asked.

Jack shrugged. "Someone used the opportunity to let him step into this, at least." Staff politics, how he loathed them!

"So, someone's risking the Alliance to get rid of a rival?" Catra asked.

"Or someone's trying to prevent Kearsy from risking the Alliance for his beliefs," Jack said. "You met the man - he sounded like he was all-in for the whole 'fire and brimstone' stuff." Hell, Kearsy had made Priest look like a moderate or sceptic.

"'Fire and brimstone'?" Adora asked.

Daniel pushed his glasses up. "It's referring to the threat of hell and damnation in Christian dogma. Jack is, I believe, using it to refer to more extremist churches and views."

"Yes." Jack nodded. "People who talk about your immortal soul being in peril whenever you do something they don't like."

"Idiots and bigots, you mean," Catra said.

"Well… mainstream Christianity focuses on love and compassion, both divine and, ah, mortal," Daniel said. "But there are extremists in every religion."

"Like Priest." Adora sighed.

"He's actually quite… restrained for the leader of an expanding religion," Daniel said. "Or maybe diplomatic would be more precise."

"Smooth," Jack said. Priest knew how to play others and exploit the rules and regulations. Jack couldn't even tell if the Clone was sincere in his belief or merely used the adoration people held for She-ra for his own goals. Though even if he were, there were worse messages to spread than 'be more like She-Ra'. Far worse ones.

"So, what do we do about this?" Adora asked, pointing at the TV.

"Nothing," Jack said.

"Nothing?" She frowned at him.

"Ah, you think this will blow over?" Daniel asked him.

Jack nodded. "It's a bunch of hot air," he repeated himself. "There's no such 'rift'. Soldiers complain all the time, and everyone thinks the other branches have an easy job. You know, like they call us the Chair Force?"

Catra snickered.

"Anyway, I like to think I know my soldiers, and they don't have a problem with each other like those idiots claim," Jack went on. And, of course, anyone who actually fought on the ground knows you were in the thick of it." That meant a lot more than what some idiots said on TV or preached in church.

He didn't miss how both Adora and Catra looked at Daniel.

"Yes, I would concur. While there are bound to be some religious tensions, that's nothing unusual for such a large force as the Alliance. And, so far at least, the media attention focused on this seems limited to the United States—none of the European news agencies is paying a lot of attention to the entire affair. So, I think this is an isolated incident and not indicative of a larger problem."

Adora seemed relieved. The girl really needed to stop feeling responsible for everything, in Jack's opinion. It wasn't as if she were an actual goddess.

"So, you see, there's no need to worry about your faithful," Catra said with a grin.

Adora frowned at her in return.

"Indeed," Teal'c spoke up. "On the contrary, your church has great potential for turning the false gods' followers into our allies. Its ideals may appeal to many amongst the Jaffa who would scorn your other religions. If you have the time, a visit to the Jaffa currently held by the Alliance could prove helpful."

Adora blinked.

Jack looked at his friend. "Is there something you'd like to tell us, Teal'c?"

"I have been working with the captured followers of the false gods, as have members of your church," Teal'c replied. "We have made inroads with many of them, especially after you released the synthetic symbionts. That you visited daily before that to ensure those who had lost their symbionts didn't die also left a favourable impression on many."

That was good news, Jack decided. Even if the image of a bunch - or an army - of Jaffa fanatically devoted to Adora was a bit concerning as well. "Merry Christmas?" he said with a wry grin.

Adora didn't grin in return.

*****

Royal Palace, Bright Moon, Etheria, December 25th, 1999 (Earth Time)

"...and that's why we aren't going to visit the prison camp this week."

Adora frowned at the grinning Catra. It wasn't funny at all! She looked at her friends for support. Bow winced and avoided meeting her eyes. Either he was embarrassed or felt guilty, which wasn't good. And Glimmer…

…stared directly at her with a serious, determined expression. "You should visit them. They're your people."

"What?" Adora blurted out. "They aren't! I am no goddess!"

"But they follow you and look to you for guidance," Glimmer, standing behind the desk in her office, told her. "And you have visited the prisoners before."

"When I had to heal the wounded and Haken," Adora retorted.

"And they worshipped you back then already," Bow pointed out. "Teal'c didn't tell you anything new."

"Yes, but…" Adora trailed off. What could she say? That she had hoped they would stop worshipping her if she stopped visiting? That if she hadn't wanted to deal with them? "I didn't think it would spread."

"But it did." Glimmer shook her head. "And you can't ignore that."

"You don't owe them anything," Catra said, sitting on the edge of Glimmer's desk. She put down one of the crystals serving as paperweights that she had been playing with. "If they decide to worship you, that's on them. It doesn't make you responsible for them!" She turned to glare at Glimmer. "That's not how it works."

“I wouldn’t turn people away who wanted to become my subjects,” Glimmer told her. She frowned for a moment and added: “Not unless they were dishonest or tried to use me or something, of course. But people honestly wanting to join Bright Moon?” She shook her head.

“I’m not a ruling princess,” Adora said. “I don’t have a kingdom.”

Catra nodded.

“You don’t have a kingdom, but you have people who follow you,” Glimmer retorted.

“That’s not your fault or responsibility,” Catra said. She didn’t look amused any more.

Adora bit her lower lip. “I’m no goddess. But they won’t believe me.”

“And that’s their fault,” Catra said.

“It doesn’t matter whose fault it is,” Glimmer said. “The fact is that people follow you. If you don’t lead them, others will - and in your name.”

Priest. Adora clenched her teeth. The Clone was… infuriating was the word. He claimed to worship her, to obey her every word, as he put it, and yet he wouldn’t listen at all when she said she wasn’t a goddess!

“You could disavow them,” Catra said.

She could. She might not be able to convince everyone that she wasn’t a goddess, but she could convince people that Priest or anyone else claiming so didn’t speak for her.

“You should only do that if they betray you,” Glimmer objected. “Not if they’re just annoying.”

Adora looked at her friend. “I don’t want to be worshipped.”

"There's a lot of stuff I don't want to do or deal with," Glimmer said. "But I do it because someone has to, and I am the Queen of Bright Moon, so it falls to me."

"You aren't the queen of Bright Moon," Catra pointed out to Adora.

Bow cleared his throat. "But is it that different from being the Supreme Commander of the Alliance?" He held up a hand before Adora could tell him that people didn't worship a commander as a goddess. "You do give orders and lead people, and do your best to fix things if they need fixing and that people do the right thing. Whether they call you commander or goddess doesn't really change that, does it?"

Adora opened her mouth, then closed it again. That… wasn't wrong.

"And Priest and his people would answer to you anyway as the leader of the Alliance," Glimmer added.

Adora pressed her lips together. Would Priest actually be in the Alliance if he didn't worship her? Sure, WrongHordak and his people didn't worship her and had joined the Alliance, but that didn't mean every other Clone would act the same. Like Hordak, who led First Fleet's remains, WrongHordak had his own reasons for joining the Alliance. Reasons Priest and others might not share.

On the other hand, letting people worship her as a goddess so they would help you fight the Goa'uld felt wrong. It was like exploiting their faith - like something the Go'auld did! "I don't want them to follow me because they think I am a goddess!" she blurted out.

"But they do think you're a goddess," Glimmer retorted. "That's not your fault - you never claimed to be a goddess. But it's a fact we can't just ignore. Not without serious repercussions."

Bow nodded. "I've looked into Earth's religions. All of the major ones have had problems with their followers becoming radicalised.

And the most radicalised are often those who converted from another religion."

Oh. "Like those who start worshipping me?" Adora asked.

Bow nodded with a grimace.

Catra hissed a curse.

And Glimmer nodded.

Adora sighed. She didn't want this, none of this, but she couldn't ignore it. If she left her… followers to their own devices, who knew what they would end up doing? And in her name? Unwanted or not, it was her responsibility. She couldn't, wouldn't run from that. "I won't act as a goddess," she said. "I won't lie to them. But I will visit them." And keep a close eye on Priest. A closer eye.

Catra sighed as Glimmer and Bow nodded with sympathetic smiles.

The sudden silence was broken by the guards announcing that Entrapta had arrived.

A moment later, Entrapta entered the office with a wide smile.

"Hey!" Entrapta beamed at them, holding up a disc. "Sam just told me that Earth made a movie with us!"

What?

*****

Royal Palace, Bright Moon, Etheria, December 26th, 1999 (Earth Time)

"No! I can't end like this! I was so clo…AARGHHHHH!"

"Let that be a lesson to you! Love, not might, conquers all!"

"Yes, meow love!"

Samantha Carter winced while the ending credits scrolled over the holoprojected screen, and everyone else in the room turned to look or glare at her. In hindsight, she should have called Daniel and told him about this movie so he could handle breaking this to her friends instead of sending a copy to Entrapta.

But after a whole day at her family, being badgered by her niece and nephew with questions about 'the real star princess', demands to meet 'the real alicorn' and wide-eyed pleas for stories about space and trying to ignore her brother's passive-aggressive sniping at her career and the duties that entailed and her sister-in-law's questions, encouraged by her traitorous dad, about her love life, she hadn't really been thinking clearly.

And now she was facing a bunch of magical princesses and former alien warlords who didn't seem to be enamoured by their portrayal in the movie.

"I do not have horns or a tail. And *I* threw Horde Prime into a shaft - I didn't fall into a shaft by tripping over a cat-shapeshifter!"

"I *am* a cat - I don't change into a cat! And I would have *kicked* you down a shaft."

"I don't sound like that at all! And I cannot fly, whether it's the full moon or not!"

"I don't have a curse that makes me burn if I cover up my chest - I just like having my midriff free!"

"I didn't conquer Etheria! Much less the galaxy! And I don't want to!"

The only one who didn't seem to be annoyed by the movie was Entrapta, Sam noted. A silver lining, at least.

"Being a bot would be so cool! I think I could adapt metal tentacles like that!"

Or not. Sam winced. "I don't think you should replace your body with a bot body," she said. "And I think your hair already does everything the tentacles in the movie did."

"Oh, right." Entrapta pouted. "Forgot about that. But I could build a bot that looks just like the movie-me!"

"Ah… that might violate copyright," Sam said.

"Copyright?" Glimmer snarled. "What about *our* copyright? Whoever made this movie…"

"Disney did," Catra cut in.

Disney distributed it, but it had been made by a new and nominally independent production firm, Sam knew. Probably in an attempt to shield the corporation from any backlash. Or to reduce taxes somehow. But this wasn't the time to bring that up.

"...Disney used us for their movie!" Glimmer went on. "Why didn't we hear about his before… this?" She gestured at the screen, which was fading to black. "Someone should have told us about people making a movie like that about us."

Sam winced again. "It's not the first such movie or series. It's just the most successful." Thanks to her niece and nephew's enthusiasm, she now knew far more about cartoons than she had ever wanted to know. "And probably the one that is the most obvious about its, ah, 'inspiration'."

"Really?" Adora frowned.

"And no one stopped them?" Glimmer glared at Sam as if that was her fault. "And what did Julie and Mr Brown do? They're supposed to help with our image!"

Sam was a scientist, not a PR specialist. And the relations between the Etherians and their PR consultants were none of her business. But she spoke up anyway: "The movies and series are

quite popular amongst children." At least amongst the children in her family. "They probably didn't think that this would hurt you."

"It hurts my image," Hordak complained. "I was a competent warlord, not such a clumsy oaf! And it claims I was Horde Prime!"

"And it claims I defected over a can of tuna," Catra added.

"Well… you love fish?" Adora smiled weakly.

"Not the point."

"It takes a lot of liberties with what actually happened," Bow said. "I know it's not meant to be a documentary, but they could have stuck a bit closer to the real story."

Glimmer turned to frown at him. "They should have changed more things! They made me out to be a figurehead! All I do is fly in the moonlight and hold speeches! And I get shot down in every battle so Adora can rescue me!"

Catra shrugged. "Someone paid a lot of attention to our history," she said with a grin. "They even have the cat defect and sneak into the prison to save you."

"Could we have a leak?" Adora asked.

"None of the, ah, information in the movie was classified," Sam said. She had checked.

"It's still a lot of detail," Adora retorted. "Someone must have collected a lot of information for this."

"Disney is a big corporation. And they might have wanted to make a point," Sam suggested.

"Do they really expect that we agree to protect their copyright claims on Etheria if they stop this movie?" Glimmer scoffed. "So, what do we do about this?"

"Can we do something about this?" Bow asked.

Sam wasn't a lawyer, but she doubted that. As persons of public interest, her friends were, as someone had called it, 'fair game' for the media.

"Why would we want to do something about it?" Entrapta asked. "It's a fun cartoon!"

If Sam liked such cartoons. And hadn't been forced to watch it with two enthusiastic kids commenting on every scene.

"But it makes it look as if I - as 'Star Princess' - saved Etheria by myself," Adora said. "That's wrong."

"Well, Priest will love the movie," Catra commented. Then she blinked. "Wait a minute…"

"...do you think he had something to do about this?" Glimmer sounded sceptical.

Sam doubted that herself. If Disney were working with aliens, that should have been noticed by someone. People were supposed to keep an eye on such 'business ties'.

"Oh, his book." Catra sighed. "The writers must have read his collection of She-Ra's heroic deeds."

Adora groaned. "Does that mean the movie's protected by religious freedom? I mean, I don't think we should try to ban it anyway, that would be wrong, right?"

Glimmer's expression made it clear that she disagreed, but the others nodded, to Sam's relief.

*****

Royal Palace, Bright Moon, Etheria, December 27th, 1999 (Earth Time)

"We were aware of the movies inspired by you, yes."

Mr Brown smiled as if there was nothing wrong with that, Catra found. And unlike Julie, who was wincing a little, he was unfazed by the frowns from the princesses present.

"And you didn't tell us?" Glimmer asked.

"We thought you knew about them," he replied. "Etheria seems to be importing all mainstream media from Earth - at least based on the complaints about copyright violations we passed on to you."

They hadn't seen those shows and movies, though. At least Catra and her friends hadn't. She really needed to check the black market herself to see if there were other things they were missing. Stuff that many might not dare to mention to them, but others might want to use against them.

"Why would you get complaints? We have diplomatic channels for that," Adora asked, interrupting Catra's plans.

"And we get complaints there," Glimmer added. "They don't seem to understand that we don't have any copyright on Etheria."

"Oh, they understand that," Julie said. "But they don't accept it. It's why we have been 'finalising the last details' about the cultural exchange program for so long. Pressure from the labels and studios on the actors and performers."

"Oh."

Well, that made sense. "Sounds like Horde politics," Catra commented.

"What?" Hordak seemed surprised.

Catra sighed under her breath. "If the Force Captain in charge of supplies wanted a favour from you, you helped them out if you wanted to get your supplies on time."

“That’s… corruption!” Hordak shook his head. “Sabotage and treason, even!”

Catra shrugged. “That’s how things worked for those who weren’t in command of the Horde.” Like she had been, or Shadow Weaver. And Hordak, of course.

“Are you sure? I don’t think I ever had to deal with stuff like that,” Scorpia said with a frown. “And I was a Force Captain for years. They never said anything about that in Force Captain Orientation, either.”

Catra snorted. “That’s because you always did whatever favour people asked for.”

“Well, we were all on the same side, so why wouldn’t I help the other Force Captains out if I could?”

Glimmer cleared her throat. “Can we talk about the corruption problem in the Horde later? We have a problem at hand.”

“Do you mean the copyright complaints or the movies?” Mr Brown asked. “Because the movies and assorted media aren’t a problem for your reputation. All the movies and series that we watched display you in a very positive light - and we watched a lot of them with the kids. We would have to spend a lot of money to get that kind of coverage.”

“‘Positive light’?” Glimmer spat. “I look useless and clumsy!”

“I sound like a fool,” Hordak joined in.

“They wrecked my outfit. Have you seen the action figures? That bow would never work!”

“They make me look like a goddess!”

Those were all perfectly on the nose, in Catra’s opinion. The speech impediment she had in half the series was a bother, but at least all cast her as a cat. And teasing Adora about the cartoon

series where she was a tiger Adora rode to battle hadn't gotten old yet.

"They styled a bot and an octopus after me!" Entrapta, of course, was happy with the media featuring her.

"I think I'm far too scary in the shows," Scorpia said. "My stinger doesn't have deadly poison!"

"I remember you throwing tanks at us," Adora told her.

"Well, yes?" Scorpia tilted her head. "I didn't hit anyone, did I?"

Catra rolled her eyes. "Anyway, I gather the copyright violations are the real problem?"

"Yes." Julie nodded. "And they are the reason that even if we wanted to stop such 'inspired media', we wouldn't succeed. Even if the shows hadn't changed the characters modelled after you significantly, at least where their visuals are concerned."

"There's also the fact that as persons of public interest, you wouldn't have good chances to win a court case even if the media used your likeness and names - at least with the Saturday morning cartoons we saw," Mr Brown added. "Adult entertainment would be different, of course."

Catra clenched her teeth and hissed. She hadn't thought about that. That changed things. If anyone tried to…

"'Adult entertainment'?" Scorpia looked confused.

"That's media aimed at adults, usually with sexual content!" Entrapta cheerfully explained before anyone else could say anything. "Also known as porn."

Scorpia blinked. "Oh. Like the dirty pictures soldiers hide in their barracks?"

"Yes. And movies. And I guess some live performances qualify as well."

"Is there porn with us?" Glimmer looked shocked.

As did Adora and most of the others, Catra noted.

"We haven't seen any such, ah, productions related to your likenesses," Mr Brown quickly said. "If we would encounter any, we would take measures to stop it." He smiled weakly. "And while there are strong precedents against censorship, at least in the United States, we're all too aware that the crews of the fleet protecting Earth hold you in high regard and might not react well to any such media."

Right. The Clones would not like porn featuring Adora. Not at all. And they wouldn't really care about any anti-censorship laws at all. At least Priest was unlikely to react violently, but Catra had a feeling that that might not help whoever might be responsible for such media much.

That Clone was a bit too sneaky for her taste.

*****

Holiday Season Part 3

Alliance Headquarters, Brussels, Belgium, December 28th, 1999

Jack O'Neill stared at his friends. He couldn't have heard correctly, could he? "Cartoons nearly caused a diplomatic issue?"

"Those are cartoons 'inspired' by the Etherians," Carter explained. "The Etherians have recently become aware of them."

"Ah." That made sense. Sort of. "And they don't like them?"

"Most of them disagree with how they - well, the characters inspired by them - are portrayed," Daniel said. "Even though the portrayal is very positive, especially considering that the cartoons are meant for children."

"Entrapta likes them. Though she might consider them as inspirations for new projects," Carter added.

Jack winced. He wasn't an expert on cartoons - except for The Simpsons - but he had seen enough Saturday morning cartoons as a kid to know that could be a problem. But the others? "You said 'nearly caused a diplomatic issue'. So, they calmed down?"

"Yes, sir." Carter nodded. "Although there are concerns about porn using their likeness."

Daniel nodded as well. "There already is, ah, *erotic fanart* found on the internet, although it has been more or less limited to a subculture. And unlike porn with actors, it's rather hard to find the creators of such pictures."

"We could probably track down individuals if we tried, but it's not worth the effort."

Carter's pride must have been stung by Daniel's comment, Jack noted.

“And it would break several laws,” Daniel added with a frown. “Though I assume that the potential problems with Third Fleet such, ah, oeuvres could cause would have to be taken into account.”

Jack winced. “Right. The religious fanatics crewing spaceships with big honking guns orbiting Earth might take offence to porn depicting their goddess.” God knew that religious fanatics had killed people for less on Earth.

“They haven’t actually complained about the, ah, erotic art,” Daniel pointed out. “So, they might not care about porn either. But if they think Adora hates it…”

Jack frowned. “Why hasn’t there been such porn, anyway? Don’t they love making porn parodies or something?” Noticing the looks he got from everyone - even Teal’c and Sha’re - he quickly added: “I am commanding a multi-national unit of special forces. What do you think I find when I inspect their quarters?”

Teal’c, Daniel and Sha’re nodded, but Carter was still frowning. Well, it was the truth!

“Anyway,” Jack went on, “I would have expected some of that stuff to appear by now.”

Carter switched from frowning at him to staring at her laptop. Which probably had more computing power than the SGC main computer by now if the glimpse of glowing crystal stuff Jack had caught once when she had opened the frame was any indication. “Carter?”

“One second, sir… It seems that there was a recent crackdown on porn studios in Los Angeles. Several porn studios and independent producers are under investigation for various crimes. A number of them were known for producing ‘porn parodies’.” She grimaced at the words, Jack saw. “I would have to verify the information, though - this was only a casual search. And I haven’t investigated foreign countries.”

He snorted. “Someone probably tipped off the cops.” And Jack would bet a week’s worth of jello that this was the NID at work.

“Do you want me to investigate this further?” Carter asked.

Ordering her to investigate porn studios? Jack shook his head. If that ever got out, his fellow generals would try their damnest to get him relieved for that. “No. It’s not a problem, is it?”

“Not currently, sir,” she replied.

“Though it could become a problem,” Daniel objected.

“Didn’t Adora impress on Priest that there wouldn’t be any orbital bombardments without her explicit permission?” Jack asked. “Do you think he’d disobey her?” The Clone was too smart to try anything like that, at least.

“I wasn’t worried about the Clones, Jack. But the Church of She-Ra is growing on Earth. And also in regions where religious riots have broken out in the past,” Daniel said.

“Then Adora should address that,” Jack said. “Unlike other gods, she can tell her followers that violence isn’t the answer in this case.”

“It’s not a joking matter, Jack!” Daniel blurted out.

“Who said I’m joking?” Jack tilted his head at his friend. “People worship her as a goddess. So, why not use that when needed?” They were at war, after all. And it wasn’t as if She-ra would make a worse goddess than any other god or goddess. Quite the contrary, actually.

“It feels a bit manipulative,” Daniel said.

“That’s religion for you, Daniel.” Jack shrugged. “Now, is there anything else we need to discuss before we talk about our holiday plans?”

Daniel blinked. “What do you mean?”

“I believe this is a reference to the holiday events we are planning to attend,” Teal’c said.

“Yep.” Jack grinned. If he had to mingle with generals and politicians, then he needed some help from his friends to endure that. You couldn't always count on an emergency to get you out of such parties, after all.

*****

Alliance Headquarters, Brussels, Belgium, December 31st, 1999

Adora wasn’t exactly an expert on parties, but she had attended her share over the years, both on Etheria and on Earth, and the Alliance New Year’s Eve Party wasn’t a fun event. Sure, lots of generals and politicians attended, and a lot of her friends from the Princess Alliance and the Alliance, but… It felt more like the Princess Prom when Catra and Scorpia had shown up than a real party. More like work. Duty.

“You’re worrying again. Stop that.”

Adora turned to frown at Catra. “I’m not…” she pulled her head back when Catra pushed a pastry to her face.

“Try that! It’s an éclair - you’ll love it!” Catra grinned at her.

“You said that about Vegemite.” But Adora still took the pastry - carefully, though she got cream on her fingers anyway - and then carefully bit in it. “Oh!”

“See? It’s great! And so’s Vegemite - you just have no taste!” Catra scarfed down another éclair.

“How can you say that I have no taste?” Adora pouted before she grinned. “I do love you, don’t I?”

Catra blinked, apparently surprised for a moment, then grinned. "Well, I'll chalk that up to dumb luck."

Adora snorted and finished off her own pastry.

"But seriously, just enjoy the food and tell the idiots off if they bother you."

Adora drew a sharp breath. "I can't! I'm the Supreme Commander, and those are our closest allies! We work with them!"

"All the more reason to tell them off if they annoy you - they have to work with you, not the other way around. Besides, as a goddess, you outrank them."

"I am not a goddess!" Adora hissed.

"Well, Priest disagrees." Catra shrugged. "Anyway, just enjoy the party for another…" She checked the clock on the wall. "... twenty-eight minutes. Then we're off to Stargate Command for the *real* New Year's Eve Party!" She grabbed another pastry, something fluffier, and swallowed it whole. "Mhhh. Until then, we can enjoy the food here. Get our money's worth."

Right. The Alliance budget was paying for this party. Adora nodded. "So we should…" She trailed off when the Secretary General of NATO approached her, glass in hand. "Have you tried the wine yet?"

"Ah…" Adora smiled a little weakly. "I…"

"Adora's more of a champagne girl," Catra said. "You know, blonde and bubbly."

"I'm not!"

But the Secretary General laughed. Was he a bit tipsy? Probably. He was usually such a serious man. Although with almost all of NATO in the Alliance, his position was… Adora wouldn't call it redundant, but it was not as important as it had been in the past.

And as Catra had said, it hadn't been all that important in the past either, what with the US calling the shots.

"Well, the food's great," Catra said. "Better than Princess Prom."

"Ah, I've heard about that." He nodded. "The most famous diplomatic event of Etheria. Limited to princesses, though, right?"

"Yes. And their plus ones," Adora said. Those were the rules.

"No Disney Princesses allowed, though, right?" He laughed again, as did Catra.

Adora frowned. "They're not Etherian princesses," she said. Even if Disney weren't lobbying hard to get some sort of copyright protection in Etheria, they wouldn't be allowed to attend the Princess Prom.

"Right." The Secretary General nodded, growing more serious. "At least, that's a trade dispute and nothing that affects the military."

"Yes." Adora frowned again. Was that a subtle hint? Disney wasn't involved in the military.

"Well, not unless smuggling grows even worse," Catra said. "So far, we haven't found anyone trying to replace military supplies going through the gate with contraband. But I think it's just a question of time before it happens. We couldn't even stop that stuff in the Horde."

"Well, that was the Horde," Adora pointed out. There were a few reasons that the Horde hadn't won the war against the Alliance even before She-Ra had appeared.

Catra snorted.

The Secretary General slowly nodded again. "Well, as long as this stays a trade dispute…" He trailed off.

Adora narrowed her eyes. That definitely wasn't just a random comment. "What do you mean?" she asked.

"Ah, well, I've heard that there are efforts to bring up such matters in the Alliance as part of the military technology transfer." The man shrugged. "I don't think I agree that intellectual property is the same whether it's about media or weapon designs, but some people think so. Or claim to think so."

"What?" Catra blinked. "They want to spread our military technology unless we agree to protect their copyright?"

"We've covered technology transfers in the Alliance treaty!" Adora snapped.

"Yes, of course. But many think any treaty can be renegotiated."

"Over Disney?" Adora shook her head. That was… crazy. Meddling with the Alliance in the middle of a war?

"Disney is merely the most famous such firm, but all media companies have voiced concern over the lack of a treaty regulating intellectual property. And they have the ears of many politicians who depend on their support for their reelection, especially in the United States."

"Back home, we'd call that corruption," Catra commented.

Adora nodded.

"Here, it's politics." The Secretary General shrugged. "In any case, I wanted to let you know, informally, about this."

"Thank you." Adora smiled. She wasn't sure if this was a friendly warning about a potential problem or an attempt to influence her, but now that they knew about this, they could plan how to deal with that.

She looked around for Glimmer and Bow. Ah, there. They were talking with some European politicians - Adora recognised the

German and French foreign ministers. Well, she didn't think Glimmer would mind getting dragged away from the talk there - her friends didn't look like they were enjoying themselves too much.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, December 31st, 1999

"We made a treaty, and they are trying to go back on their word already because of their elections! That wouldn't happen on Etheria!"

Samantha Carter took a sip from her glass while Glimmer complained. So much for escaping the politics by skipping the Alliance New Year's Eve Party in Brussels. The General must be feeling smug about this.

"Actually," Bow started, "princesses going back on their word isn't unheard of."

"Not when you have a formal treaty!" Glimmer disagreed.

"Well, not on the letter of the treaty, although there are several accounts of treaties being dissolved after the circumstances that caused the treaty to be made changed significantly during the rule of the princesses who made the treaty. But there's often quite the squabbling over things that were not clarified in a treaty," Bow said.

"We made it very clear that our technology was going to be restricted to the Alliance!"

That was true. Sam had studied those parts very thoroughly.

"Well, it's not as if they can actually share our technology," Adora said. "Everyone we talked to in Brussels was clear about that. It's just a way to put pressure on the Princess Alliance about copyright."

“It’s the principle of the thing!” Glimmer shook her head. “They shouldn’t even try that! We’re in an alliance - a military alliance. We didn’t agree anything about trading.”

Daniel cleared his throat. “Well, while that’s technically true, trade is happening - albeit limited to smuggling at the moment. And a lot of the, ah, contraband is media. It’s not surprising that the owners of intellectual property would attempt to stop what they see as theft. You would do the same if, say, stolen goods from Etheira would be sold on Earth, right?”

“Only Earth thinks that copying media is stealing,” Glimmer retorted.

“It’s not like you lose the data you share,” Entrapta chimed in. “Information wants to be free!”

Sam winced. Her friend sometimes picked up the wrong things, or things missing their context, from Earth’s culture. “But not everyone wants to share their data,” she pointed out.

“That’s selfish of them, though.” Entrapta pouted. “I mean, I understand that we can’t share military technology or secrets, but this is media - everyone on Earth has access to it!”

“In theory, maybe,” Daniel retorted. “But not everyone can afford all the media they want.”

“Just like not everyone can afford all the food they need?” Glimmer scoffed. “It’s not a good argument for having copyright. Or for messing with the Alliance to get copyright. Etheria doesn’t do things that way.”

“But Earth does,” Daniel said. “And our system is built on intellectual property being protected - in principle, at least - and copyright protection varies across the world, but a lot of the Earth media wouldn’t be produced if there was no copyright. The investments wouldn’t work out.” He grimaced slightly. “If we returned to the patronage system that we had in the past, we would see a drastic loss of variety in media content. Many patrons

also would only support media that appealed to them or furthered their interests - not an altogether positive change, I think."

That was putting it mildly, in Sam's opinion.

"I've heard complaints that this is happening already as studios and companies limit the creativity of the artists working for them," Bow objected. "And I don't see a significant difference between patrons paying artists for their works and people employing artists to work for them."

"Well, that might have been the case in the studio system in Hollywood, in the past," Daniel said. "And arguably, that is still a valid point for parts of the media business. But not for everyone - between movies, TV shows, literature and music, and arguably video games, you cannot assume everything works the same. Those are different markets."

"And yet, that's what people claim - they say without copyright, everything would crumble," Bow said. "That artists couldn't profit from their works."

"Artists? Disney is a business, not an artist. They just want to make more profits," Glimmer said with a scowl.

"Ugh." Mermista scoffed. "I don't see their problem, anyway. Etheria has fewer people than most of the countries in the Alliance. Why do they care so much about our market?"

Sam took another sip from her drink so she wouldn't correct Mermista. The majority of the Alliance member states were smaller than Etheria's population.

"Fifty million people are still a significant market. And, well…" Daniel smiled. "It's a new market, not saturated, and Earth media is very popular on Etheria."

"And they want magic and magitech," Catra added.

“So, it’s just greed?” Entrapta asked. “They have enough money but want more?”

If the General were here instead of talking with General Hammond, General Haig and General Petit, he would likely make a comment about communist magical space princesses, Sam knew.

“I wouldn’t say that it’s just about money,” Daniel said. “If they tolerate the proliferation of their media on Etheria, some countries on Earth might do the same.”

“Aren’t they doing that already? At least according to what we heard,” Adora asked.

“But in negligible numbers,” Daniel said. “Although that could change now following the development with Russia and China. Trade is one area where both countries could still put pressure on the Alliance - especially if other countries outside the Alliance support them. Such a move could hurt many businesses in the Alliance.”

“Ugh!” Mermista huffed. “If Disney and other businesses try to put pressure on us to avoid pressure from hostile countries, then that sounds like treason to me.”

“I don’t think that would be treason,” Daniel objected. “Certainly not in the USA.”

“Whatever!” Glimmer scoffed again. “It’s clear we need to do something about that. Any ideas?”

Sam winced when she realised that she was being roped into a political planning session. If the General again complained about office politics because of his promotion…

*****

“Ugh. We should ignore it. They can’t actually force us to do anything; this is just posturing. A tempest in a teapot.”

Mermista had a point, Catra thought. But not much of one. Sure, the Princess Alliance could ignore the complaints from Disney and the other media companies, but as Catra had found out the hard way, ignoring complaints and using force to get what you want was going to end up with you abandoned as soon as people saw an opportunity. "In the short term, yes," she said. "But what happens once the war is over and Earth has adapted to advanced technology?"

Most winced. Entrapta looked confused. "What do you mean?"

"If the threat of the Goa'uld is the only thing that holds the Alliance together, then once that threat is gone, so is the Alliance," Bow said.

"We already knew that," Frosta chimed in. "And if they don't want an Alliance anymore, so what? The Goa'uld will be done by then."

"And we're faced with a planet outnumbering us more than a hundred to one. Half of them already don't like us," Glimmer added with a scowl.

"That's the half that hates the other half, the one in the Alliance, though," Bow said.

Adora nodded.

"There are enough people in the Alliance who dislike us and only go along with the Alliance because the Goa'uld are a threat, and we have the technology they want," Catra said.

"Yes. And we can't count on personal ties to their leaders because they'll be replaced by the next elections," Glimmer added.

"Well, countries often change their leaders without changing their foreign policies," Daniel spoke up. "The United States proved that during the Cold War."

"But they change their policies in response to lobbying and bribes," Catra retorted. "And when it comes to trade, a lot of

money is involved." She might not be an expert on democracy, but that much was clear to anyone who followed Earth news.

"Err, yes, though it's not as clear-cut, and there are many different interests influencing government policy," Daniel replied.

"And how many of those interests are already unhappy with us?" Bow asked. "The bigots. And the religious extremists."

"Those are the same," Glimmer interjected.

"There is some overlap," Bow agreed, "but they are diverse groups."

"And we shouldn't bow to such pressure!" Frosta cut in. "We didn't when we made the Alliance - we drew a line, and anyone who wanted to join us had to respect it! We shouldn't give in now! We have our standards!"

"That was about respecting rights and ending discrimination," Perfuma retorted. "This is just about money. Is that worth making people hate us?"

Adora shook her head. "We can't assume that people will hate us. Many love us."

"Some people worship you. But some people hate us," Catra pointed out. "They just are too weak to hurt us." You couldn't win everyone over.

"Do you honestly expect the rest of the Alliance to turn on us after the war?" Adora asked.

"Attack us? No. But they won't play as nice as they have been playing so far once they don't need us as much any more," Catra replied.

"But we're friends!" Entrapta protested. "Friends don't attack each other. Right, Sam?"

Sam winced at that. “We’re friends, yes. But we’re not leading our country.”

“Your leaders are elected. That’s why we’ve hired Julie and Mr Bown,” Glimmer said. “To show your people that they don’t have to fear us.”

“Yes!” Perfuma nodded emphatically. “And we’ll help Earth with their other problems!”

“Past favours don’t translate into future friendship,” Sha’re said. “Once you are no longer essential to their survival, you become a rival.”

Daniel cleared his throat. “Earth countries don’t really act like the Goa’uld, dear.”

Sha’re shrugged. “Close enough. Who said that countries have interests, not friendships?”

“Probably a democratic leader,” Glimmer muttered. “Freshly elected.”

Catra snickered at that.

“But the Etherians are very popular in key demographics,” Daniel objected. “Even a new government could not ignore that - especially after a victory against the Goa’uld.”

“How many movies with evil princesses will it take to change that?” Catra asked. Propaganda was a thing, after all.

“They wouldn’t go that far, would they?” Perfuma asked, biting her lower lip.

“Not all the way. But a more critical portrayal could be easily done,” Daniel said.

Glimmer scoffed in return. “Whatever. The thing is, we can’t count on the current situation to stay the same. So, we have to do

something about this. Preferably before it turns into a problem."

"Well, the first step to reconcile differences is to talk to each other, find out what everyone wants and see if there's a possible compromise," Daniel said.

"You want us to talk to the media businesses?" Frosta scoffed. "Visit Disneyland?"

"They don't actually do such business in Disneyland," Daniel said. "I think."

"It wouldn't hurt to talk to them. Explain why we don't have copyright," Adora said. "And we need to settle things for the cultural exchange anyway."

"Invite them to a frigate in orbit," Catra said with a grin. "Let them talk to Priest!"

"Catra!" Adora pouted at her.

Catra shrugged. "Not Priest. But they probably haven't been to space yet. It might impress them. Or invite them to Etheria."

"That might set a precedent - annoy us enough and you get preferential treatment," Bow pointed out. "Do we want to risk that?"

"If we start negotiating with Disney, that precedent will be set anyway," Glimmer retorted.

"To be fair, that's a pretty normal thing in business and politics," Daniel said. "The squeaky wheel gets the grease."

"Whatever!" Glimmer repeated herself. "So, we'll talk to a delegation of them, I guess."

Adora nodded, as did the others.

"So… let's rejoin the rest of the party?" Perfuma asked.

"Good idea," Catra agreed. The food wasn't as good as in Brussels, but it was good anyway.

*****

"It seems our Etherian friends have finished their impromptu meeting," General Haig commented.

Jack O'Neill turned his head and saw that the man was correct. The Etherians, who had secluded themselves with Carter, Daniel and Sha're in a corner of the mess hall in Stargate Command - far more fitting for such a party than the one in Cheyenne Moutain had been, if he was honest - were spreading out again, most of them heading to the buffet. "Looks like it," he said.

Carter and Entrapta were talking animatedly, but judging by their expressions, it wasn't about some new technological marvel (or terror). Entrapta looked upset, and Carter looked guilty, so it was probably something about society - probably Earth's.

Better you than me, he thought as he turned back to the Stargate Command Council. It still felt a bit weird to have the same rank as Hammond. Sure, Jack had thought - with apprehension - about the possibility of ending up in charge of Stargate Command, sometime in the far future, shortly before mandatory retirement, when he wasn't fit to run missions any more, but that had been under the assumption that Hammond would have retired or been promoted away. Not that he minded how things had turned out, of course.

"I wonder what this was about," Petit mused. Though his raised eyebrow clearly showed that he expected Jack to know.

"I wonder why you weren't in the middle of that," Hammond added, rather bluntly, staring at Jack as well.

Because I had the good sense to hide with you lot when everyone was being gathered up, Jack thought. Out loud, he replied: "It's not about military matters, so I wouldn't have been any help." That was his story and he was sticking to it.

"What was it about then?" Haig asked.

"Cartoons," Jack said. "They found out that Disney made a movie about them."

"Ah." Haig nodded

Hammond sighed. "Ah, yes. My grandchildren love it."

"And they probably keep asking you to sneak them to Etheria?" Jack grinned.

Hammond snorted. "They tried to sneak into my shuttle when I visited."

"Bold of them." It seemed his grandkids were quite determined. They might make good special forces recruits in a decade or two, not that Jack would voice that thought. Damn, I shouldn't be thinking about recruiting kids for the military! he added to himself when he saw Frosta grab a drink at the bar. Jack hoped people were, as ordered, watching the teenager's intake, or they might end up with ice sculptures on the runway again. Though, to be fair, with the Russians and Chinese off Stargate Command, traffic to and from the base was dominated by shuttles these days, and they didn't need a runway. Though if she blocked the railways and streets to the port…

Well, it wasn't his problem. He wasn't responsible for drunk princesses. Or for Stargate Command. Just for Alliance Special Forces Command and the war against the Goa'uld.

"I am fortunate that my own family is not quite as brash," Haig said. "Though that might change as they grow older."

"I wouldn't be able to tell." Petit shrugged and glanced at Jack.

Jack returned the shrug. Technically, he had nephews and nieces, but he wasn't really close to his family. 'Don't need an excuse to skip the holiday visit'-'not close', actually. And that was perfectly fine. They had their lives, and he had his.

“Good party,” he commented to change the topic. “Really pulling out all the stops.”

“Within our budget,” Hammond said. “I don’t doubt that the Alliance party was more impressive.”

“It was certainly stuffier,” Jack said. “Too many politicians.” At least he hadn’t had to deal with Kinsey. Apparently, the senator was too busy shmoozing in Washington to attend.

“We answer to them,” Haig said. “So, a good relationship is crucial. Though, as far as I heard, the Tok’ra didn’t attend the party?”

Was everyone pumping him for information? Well, that the Tok’ra were relocating their main base, again, was classified. But there were things he could share. “They had other concerns but sent gifts.” Official ones for the Alliance leadership. And a personal one for him. From Anise. Jack would have to have that thing scanned by Carter to check for anything shady.

“Ah. That was that special delivery, then.” Petit grinned. “Our people scanning the contents looked surprised.”

Jack suppressed a wince. The official gifts had been quite normal - food and artwork. Maybe he should reconsider letting Carter scan his gift. If it was something spicy rather than shady, she might not let him forget it for a long while.

“Aliens have different standards,” Haig said. “Though not too different. Stargate Command received a small sculpture, a carving representing all three of our countries. Quite appealing.”

If you liked wooden animals, Jack thought. They could probably drop it on some display stand in a corner without causing a diplomatic incident. Maybe he should return the favour. Give the Tok’ra something weird that they had to honour lest they insulted their allies…

“It has a certain style,” Hammond politely disagreed. “Although…” he trailed off, frowning. “Are they eating flowers?”

Jack turned and frowned as well. Next to the buffet, a bunch of soldiers were indeed eating flowers. Flowers that Jack was sure hadn’t been present a few minutes ago. But then. Perfuma hadn’t been at the buffet then either, and now she was, beaming at the soldiers.

Soldiers who were quickly going from hesitantly biting the large flowers to enthusiastically munching them. And the flowers kept multiplying.

Jack sighed. He didn’t know what exactly those flowers were, but he knew it was going to be a problem.

*****

“What did you do?” Adora asked, looking at the brightly-coloured flower in front of her face.

“I changed the flowers here!” Perfuma beamed at her.

“Yeah, we noticed,” Catra commented. “Earth doesn’t have such flowers.”

Adora agreed. The flower was moving, matching her head’s tilting, but that was normal - for an Etherian plant. What wasn’t normal was people were eating those.

“It’s a shame, yes. But maybe we can change that as well.” Perfuma took a bite from the flower she was holding and pouted, then tilted her head, and the flower changed colours. Another bite later, she nodded with a wide smile. “Better!”

“What did you do?” Adora repeated her question. “I mean, what exactly did you do?”

“I made them edible!” Perfuma replied. “And I added all sorts of flavours - colour-coded!”

Catra bit into the yellow flower wriggling next to her, chewed, then blinked. “Beer?”

“Yes! A very popular flavour here!” Perfuma bopped her head.

Adora looked at her friend, then at the various flowers slowly filling the corner next to the buffet - and the soldiers eating them. “How many of the flavours are alcohol?” she asked with a sinking feeling in her stomach.

“Many!” Perfuma was still smiling brightly - and took another bite of her own flower - which had changed colours again when Adora hadn’t been paying attention. “Drugs are illegal, but alcohol isn’t!”

“Hey!” Scorpia approached them, pincers holding a massive flower with a barrell-like blossom. “This is great!” She tilted the flower, and red liquid sloshed inside. “Fruit Punch Flowers!”

“Are there any flowers that aren’t alcoholic?” Catra asked with a snort.

“Yes! I made a soda flower as well! But I can’t make most flavours since those are copyrighted.” Perfuma pouted. “But alcohol is fine! It’s natural!”

Adora took a bite from her flower. It tasted like… whisky. Strong whisky - she coughed.

Perfuma held out her flower - now white - to Scorpia. “Check it out! I made an Ice Liquor Flower!”

“Really?” Scorpia took a bite. “Oh, perfect! Did you show it to Frosta?”

“Not yet! Let’s go find her!”

The sinking feeling in Adora’s stomach, temporarily replaced with the booze she had eaten, returned with a vengeance. Drunk Frosta? They would be lucky if they could recognise the base in the morning! “Wait!”

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, January 1st, 2000

Samantha Carter had expected to spend January 1st dealing with obsolete computer systems suffering from the Y2K 'bug'. A lot of effort had gone into identifying and fixing such systems, but you never got all of them, and the military was rife with old machines that had been kept far longer than expected when they had been installed decades ago.

She hadn't expected that she'd have to delay fixing computer systems in favour of fixing damage to Stargate Command's main base because the New Year's Eve Party had been wilder than expected. A lot wilder.

Apparently, Perfuma had been holding back a lot during her previous visits. And Plumeria's reputation for partying wasn't overblown at all. And Sam had to remember that while Frosta might have been the most obvious concern when it came to drinking due to her age, her temper and her stunt at Thule, she wasn't the only concern when it came to drinking and powers.

"I'm really sorry. It sounded like a good idea at the time."

Sam nodded. Entrapta had meant well. But she had been drunk. "Drinking and science don't mix well."

"So the data indicates. Though we didn't run a blind test."

And they wouldn't do that. Trying to understand what Entrapta had coded after eating half a dozen plants from Perfuma was worse, much worse, than dealing with legacy systems from the 60s. Old computers didn't control construction bots.

As a silver lining, if Sam managed to sort out the coding, Stargate Command's security would be significantly improved. Provided the Generals in charge approved - some of them had looked a bit wary of the automated defences when Entrapta had demonstrated

them last night. Even though that had also ended the question of whether or not they should preserve the flowers Perfuma had created.

"What's done is done," Sam said. Perfuma could recreate the flowers anyway. However, her plans to help Earth by changing plants to improve food production would likely suffer a setback after this.

As would the careers of several soldiers who had started the whole thing by asking Perfuma about parties in her kingdom - Sam was quite sure that they had already been aware of her kingdom's reputation.

But she had a job to do. Sighing, she focused on the screen in front of her again.

"I'm really sorry."

"I know."

At least Adora had taken care of any headaches.

*****

Washington D.C., United States of America, Earth, January 3rd, 2000

"…and as you can see, protecting intellectual property is the key to ensuring a wide range of creative, diverse media. Just as no one would invest in a factory if they could not be assured that its output would not be stolen from them by anyone, no one with a modicum of sense would invest in the production of media if they had no assurances that they would reap the profits of a potential success. Who would spend years working on a book if they would have to watch others steal their work and publish it without remuneration? Intellectual property is property, and violating copyright is theft!"

“We really should have invited them to a frigate in orbit,” Catra muttered as Disney’s lawyer - Mr Patridge or something - rambled on.

“I don’t think that would stop them,” Adora replied in a whisper before she winced a little.

She is probably feeling guilty about not paying complete attention, Catra thought.

“Yes, yes, we've gone through that before. Multiple times,” Glimmer replied. “Etherian legal tradition doesn't agree with that stance. We don't consider it stealing if someone performs a play written by someone else. Or a song. Certainly not if they don't claim to have invented the play or song. The actors and musicians still have to perform.”

“But that leaves the author out in the cold!” the other lawyer protested. “How can they make a profit if everyone can copy their work?”

“Authors generally are paid by their patron,” Bow cut in before Glimmer could snap at the man who had interrupted her. “Some also run plays themselves.”

“Like in the dark ages,” Catra heard the first lawyer whisper. “Shakespeare would feel at home in their world.”

“And as we heard, the publisher or the studio generally profits the most,” Glimmer said.

“They take the financial risk when creating movies and TV shows, so they should also be able to get their fair share of the rewards.” Disney's lawyer smiled. “It's the cornerstone of our industry.”

“Your *industry*.” Glimmer snorted.

“Yes.”

Disney's leader - their CEO - cleared his throat. “I think we've gone over the legal differences more than enough to know where we stand.”

“We knew that before we met today,” Catra said. Why was she here? Except to support Adora and watch Glimmer fume, this was pointless. It wasn't even amusing.

“It is always useful to lay out exactly where each party stands during negotiations,” the first lawyer added.

“Sometimes that's counter-productive,” Glimmer retorted with a toothy smile.

The CEO met her smile. “Indeed. In any case, I don't think we can change our respective legal systems - both seem too entrenched in our respective cultures. But different legal traditions have not been an impenetrable barrier to trade and cultural exchanges on Earth. We have found ways to reach fair agreements despite such obstacles.”

For certain definitions of ‘fair’, Catra thought.

“And you adjusted your own copyright laws when it profited you,” Glimmer said.

“Special cases deserve special treatment,” the second lawyer said. He winced a little when the CEO frowned at him.

“So, what do you have in mind?” Adora asked. “You must have some ideas since you agreed to this meeting.”

“And have yet to offer any sort of compromise,” Catra added under her breath.

“Indeed. While you do not have copyright in Etheria, I believe you do have royal charters and monopolies in many of your kingdoms,” the CEO replied. “For various ventures.”

“Yes.” Glimmer glanced at Adora, Catra saw. That was something they had been discussing. “Like a royal charter to operate certain services. Though while that might be applicable for theatres, it wouldn't help with limiting copies of your media being distributed.”

“We're aware of that. But we have such piracy on Earth as well.”

“Don't let Sea Hawk hear that you call sharing songs piracy,” Catra said. “He might take offence.”

The CEO laughed at that. He obviously didn't know about Etheria's pirates. Some of them might consider this an insult worth drawing steel. Well, not her problem.

“We can tolerate a certain amount of such piracy,” he went on, “as long as it's not too much.”

“The way your media is spreading, I think we're past that point,” Glimmer said. She didn’t seem to be sad about it.

“That depends. You mainly consume our media on tablets like this one, right?” the CEO pointed at Bow's tablet.

“Yes?” Bow tilted his head.

“While certainly a fine piece of technology, the experience it offers is still somewhat… limited compared to a theatre or a live concert.”

Ah. They had gone over that in preparation for this.

“You want a monopoly for such concerts and theatres?” Glimmer asked.

“It would be one way to provide us with fair compensation. Though we do not need a monopoly as long as we're allowed to operate - I am confident that we can provide experiences that will outshine any competition.” The CEO smiles. “Our parks and other venues are quite unique.”

“That would help Disney, of course, but many of my clients would not profit from that,” the second lawyer objected. “Authors and songwriters, for one.”

“Well, those could be compensated by a copyright collective collecting and distributing tariffs on certain media or devices. We have such collectives in many countries to handle similar situations - it's one way to counter the effects of piracy.”

Glimmer frowned. “You want to *tax* our people?”

Catra whistled. That was a hot button for any princess. Well, for Earth as well - they had started revolutions over that.

The CEO raised his eyebrows, seemingly surprised by her reaction, then glanced at the wincing lawyer once more.

“I don't think ‘taxes’ would be the best word for it. It's more like an additional cost added to devices that facilitate the sharing of copyrighted media,” the lawyer said.

“That's effectively a tax!” Glimmer retorted.

“Or think of it as the kingdom paying a flat sum to the authors and musicians whose works are shared freely amongst your people - like a patron supporting an author,” the other author suggested. “Just many authors in this case.”

That was a smoother way to word it, but it didn't change the proposal - Disney and the other firms involved wanted someone to pay for the media everyone back home was sharing.

“And in exchange, you would officially void any further copyright claims?” Glimmer asked.

The CEO inclined his head. “We wouldn't pursue further financial claims, provided we can get a fair agreement.”

“That's just one part of the issue,” Bow pointed out. “What about our artists using copyrighted media?”

The CEO didn't wince, but his expression grew rather stony.

Catra sighed. This was going to take a while.

*****

Holiday Season Part 4

Alliance Headquarters, Brussels, Belgium, January 4th, 2000

Jack O'Neill frowned at the 'no plants allowed' sticker on the door to his office. "Someone's trying to be funny," he muttered while he ripped it off. He wasn't planning to have plants in his office - he wasn't the kind of officer who would have his aide water his plants as part of their duties, and he couldn't bother with caring for plants himself. But this was about the Stargate Command New Year's Eve Party.

Shaking his head, he entered.

"Good morning, sir!" His aide nodded at him.

"Morning, Brown."

"The urgent paperwork is on your desk, sir."

Jack frowned and suppressed a sigh. "Anything important?"

"General Naird wanted to know what measures are being taken to, I quote, 'prevent another drug-fuelled diplomatic incident'," Brown went on.

"Tell him that that is up to Stargate Command. The Alliance isn't responsible for the Stargate."

"Yes, sir. Admiral Kearsy filed a complaint about the incident as well."

The jerk was probably just jealous that he hadn't been invited to the party. Jack knew those hypocrites too well. "So, he's even dumber than I thought."

"Sir." Brown's slow nod showed he didn't quite agree with Jack's comment.

“I am aware that he’s trying to save his butt by blaming me for everything that went wrong, Lieutenant,” Jack told him. “But this is stupid. I am not a member of Stargate Command any more. I was just a guest at their party.”

“He is blaming Major Carter, sir.”

“What?” Jack narrowed his eyes. That idiot was going after Carter? Jack would bury him. Alive, if he could pull it off.

“He claims she was present in an official capacity since she was helping with their computer systems, temporarily dispatched, and so should have upheld regulations.” Brown handed him a file.

“The guy’s losing it. Blaming a major for not doing a general’s job?” Jack shook his head. “That’s not how we do things in the Alliance.”

“Should I schedule a meeting with the Supreme Commander?”

“What? No, no! I’ll handle that myself.” They couldn’t have Adora squash every petty officer plotting against them. That would only give more ammunition to such people. And she was busy supporting her friends with that copyright stuff. No, Jack would have to do a little character assassination himself. Fortunately, he knew where a number of bodies were buried. “Hold my calls for a while unless it’s an emergency.”

“Yes, sir.”

Jack nodded again and entered his office. The coffee maker was, as expected, running already, courtesy of Brown. Jack took a cup and sat down at his desk. First, do the urgent paperwork so his people were taken care of. Then he’d deal with Kearsy.

*****

“...and yes, I agree that Admiral Kearsy’s behaviour has cast doubt on his ability to fulfil his duties,” Jack said. “Though I wouldn’t presume to judge the impact of his appalling attitude on

our diplomatic relations with our allies, I can say that he seems to have trouble respecting our chain of command," Jack said.

"I see. I'll look into this. We can't have our officers overreaching like that - it's already incredibly difficult to run the Alliance! Thank you, General."

"Yes, sir."

"Have a nice day, General."

"You too, sir."

Jack leaned back and stretched his arms while he sighed. That had taken longer than expected. Mostly because everyone he had called had used the opportunity to discuss something else. But between the brawl incident and Kearsy's doubling down on his religious attitude and the recent attempt to attack Carter - Earth's best scientist, which meant the moment she quit the service, she could write her own ticket pretty much everywhere, including Etheria - the idiot's career should be done for. And Jack hadn't even had to use some of his blackmail material.

He grabbed a soda from his fridge and switched his TV on - he had earned a break before he dealt with the regular paperwork.

"...and, and I am just speculating here, mind you, but… What if the pagan religions weren't the only religions founded by aliens, Joe?"

"Ah, Frank, I don't think it was established that the Goa'uld founded the Egyptian religion. Dr Jackson was clear about that - they might have impersonated native gods; we just lack documentation of that time period."

"We can ask the Goa'uld who were around back then."

"I don't think we can trust them."

"Good point. Anyway, it doesn't matter since we have records going back two thousand years. And we know there's some Goa'uld masquerading as the devil out there. So, what if Jesus was a Goa'uld as well? What he did in the Bible could have been replicated by alien technology.

"But the Goa'uld were driven out thousands of years before Christ, Frank!"

"I guess the snakes that were captured on Earth didn't get the memo, then, Joe."

"Those are rumours, Frank."

"They were confirmed by our Supreme Commander, She-Ra."

"She said she couldn't comment."

"Exactly! If there were no snakes captured on Earth, wouldn't she have said that? You think that woman can lie worth a damn?"

"Well…"

Jack turned the TV off and cursed. He really didn't want to deal with this right now. Or ever.

Before he could finish his soda, someone knocked on the door. "Yes?" Jack asked. This better be good.

Brown stuck his head inside. "General, the Tok'ra have contacted us. They claim to have crucial information that requires urgent action."

Jack blinked before he grinned. If the Tok'ra wanted urgent action, then it had to be good.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, January 4th, 2000

The soldiers standing guard in the gate room snapped to attention when Adora walked down the ramp, and General Hammond saluted her. “Supreme Commander, welcome to Earth.”

“General.” She returned the salute. The troops guarding the Stargate were not in her chain of command, but that was rapidly becoming a technicality, now that they were exclusively made up of American, British and French forces - all members of the Alliance. “Have the Tok’ra arrived yet?”

“Not yet,” he replied as he fell in at her side. “It seems you’ve beaten them here.”

“Hah!” Catra snorted behind her.

“We can’t exactly start without them, so it’s meaningless if we’re here first,” Glimmer said.

“But they could start without us. Don’t tell me you’d like that,” Catra retorted.

“If they’re early, Anise will just spend the time trying to convince Jack to donate his genes,” Glimmer shot back.

General Hammond looked surprised - and perhaps concerned; Adora didn’t know him well enough to tell. She cleared her throat. “They’re joking about that. Anise has accepted that Jack doesn’t want to, ah…”

“...make a baby with her,” Catra finished for her.

“That’s not an euphemism for sex, by the way!” Entrapta chimed in. “They could have a baby with one of our artificial wombs if they wanted. Which Jack doesn’t.”

“And Anise does,” Catra added.

They reached the meeting room reserved for the Alliance. Isa and Campbell were standing guard outside, Adora noted. Both stood at attention as well, though Isa’s stinger almost scratched the

ceiling as she did so - the base wasn't really built for people her size.

Inside, Jack and the others - Daniel, Sha're, Teal'c and Sam - were already seated at the table, together with General Naird and Admiral Brown-Emerson. There was no sign of Admiral Kearsy, even though Adora hadn't spoken to anyone yet about the man.

"Sam!" Entrapta pushed past her and beamed at her friend.

"Supreme Commander." Naird nodded at her. "We've received a message from the Tok'ra about wanting to meet us earlier today for an urgent matter. They didn't choose to add any specifics."

Adora knew that already. And she had received the message on Etheria through the network, probably before Naird had. But it would be rude to point that out.

"Yeah, we've already been informed." Catra, of course, had no such qualms. She sat down in her usual chair next to Adora while Naird seemed to deflate.

"Yep," Jack added. "So, anyone want to bet on what it is? Rescue op, sabotage or planetary invasion? I've got five bucks and a jello riding on rescue op."

"General!" Sam hissed.

He grinned in response while Naird looked shocked, and Brown-Emerson… barely reacted. The British officer remained unflappable.

"Whatever it is, the Alliance Navy is ready to do its duty," he said. "Though if it's a planetary invasion, we will have to do with repurposed Horde frigates as transports since our dedicated transports are not yet ready."

"We'll manage," Jack replied.

He was pretty optimistic, Adora thought. Then again, they had liberated one planet already, so they had done this before. Still… She couldn't help worrying a little. They were still building up various units and weapon systems. They could launch an offensive, of course, but they would have to rely on the Horde fleets and NATO ground forces almost exclusively. And that would mean more weaknesses to cover. More casualties being taken.

"I think it's a sabotage mission," Glimmer said. "Probably another research station we need to take out and blame someone else for."

That sounded plausible as well.

"Naw. They could do that themselves," Catra disagreed.

"Do you think it's going to be a bigger operation?" Bow asked. "An invasion?"

Catra shrugged. "Could be anything - the Tok'ra are good at spying, but they don't have the numbers for anything bigger. But if it's urgent, I think it's not going to be an invasion. On the other hand, any raid runs the risk of exposing the Alliance, and the Tok'ra are big on secrecy."

"We don't have enough data to tell!" Entrapta piped up.

"Whatever it is, we can handle it," Glimmer said.

"And it's going to be easier than dealing with copyright and media corporations," Catra added with a snort.

"Whoever gave businesses the same rights as people made a huge mistake!" Glimmer muttered.

"Well, it's actually…" Daniel began before he was interrupted by General Hammond escorting the Tok'ra into the room.

Garshaw of Belote/Yosuf, Anise/Freya, Lantash/Martouf and Jakar/Mats.

Yes, this was going to be big, Adora knew.

*****

"After his humiliation at the hands of the Alliance, Apophis is trying to recover his standing - but so many rivals are moving against him, his forces are stretched thin. And the loss of his queen has hurt his reputation even more, as he needs a new source of Prim'tas for his Jaffa."

Samantha Carter glanced at Sha're when Garshaw mentioned Amauntet. The woman was staring straight at the screen in the meeting room, but Sam could see that Daniel was squeezing her hand. Sam knew exactly how the other woman was feeling - Lantash/Martouf's presence reminded her of her own possession.

"And to snack on," the General added with a scoff.

Sam didn't know if he had said that to draw attention from Sha're - Sam hadn't been the only one looking at her - but if he had, he had succeeded; most of the room was frowning at him.

And Catra made a retching noise.

Garshaw cleared her throat and continued the briefing. "Yet, according to our best operatives, Apophis has already managed to replace his queen. He struck a deal with the Goa'uld queen Taweret."

Sam clenched her teeth. That was bad news - she had hoped that Apophis would take longer to replace his queen.

"What kind of deal did he offer her?" the General asked. "Did he make her an offer she couldn't refuse?"

"We don't know the details - that was between him and her, apparently," Garshaw replied. "But we do know that he has, despite the pressure on his realm, dispatched a sizeable part of his reserves to serve and protect her while she is building a new base in secret."

“And you found the secret base?” Glimmer sounded eager.

“We have operatives in that fleet. As soon as they manage to report back, we’ll know where Tawaret is hiding. We do know the general area in which they departed, though.”

A map appeared floating above the table with a highlighted section near Apophis’s realm.

“That could be a ruse, though,” Catra said.

“Yes, it could. But Apophis is under great pressure. He cannot waste too much travel time.”

“It seems strange that he would send so many of his ships to protect a secret base,” Teal’c commented. “It would be more effective to keep her at his side and have his personal guard protect both of them. Doubly so with his rivals coming at him from all sides.”

“Exactly,” Garshaw said. “While this could be an attempt of Tawaret to emphasise her worth to him, she would be aware of his current circumstances and know that those would weaken her new partner. So, whatever they are planning likely goes beyond mere protection and is worth the risk of losing more worlds.”

“He could be using this to make his rivals fear a deep strike into their territory,” Adora pointed out.

“That is a possibility, but given his enemies’ past behaviour, they are more likely to retaliate with such strikes themselves. And some might think it’s a bluff and test him if they hear about it. Our operatives believe that we cannot ignore the potential threat of this secret operation.”

“Great. Even when he’s losing, he’s making trouble,” the General muttered.

“Do you have an estimate on the composition of this force?” Adora asked.

“Predominantly Ha’taks in sizeable numbers,” Garshaw said. A moment later, more data appeared on the screen.

Catra whistled. “That’s enough to take a planet.”

“Indeed. But it is not a raiding force,” Teal’c added.

“Yep. So… we need a bigger task force. Just in case,” the General said.

“We don’t need to match them ship for ship, though, not with the gap in capability,” Admiral Brown-Emerson pointed out.

“Overwhelming force reduces our own casualties, though,” Nairdobjected.

“That depends on the operation’s goal,” Garshaw said. “Each world we liberate risks exposing the Alliance to the Goa’uld Empire.”

“And you just want to wreck whatever they are planning and take out Taweret,” Catra said.

“Yes. If we can destroy both the fleet and the queen, Apophis might not recover from the blow,” Garshaw said. “And if he loses a costly project…”

Catra flashed her teeth in a grin. As did the General, Sam noted.

“Unless it’s a bluff, and he’s just setting up his new queen on a deserted planet in the middle of nowhere while everyone prepares for a sneak attack that never launches,” Glimmer said. “How many of his rivals will risk being left open to such an attack by striking first?”

“Heru’ur would,” Jakar cut in.

“Indeed. Though since he would be leading the attack, he would not be at as much risk as a System Lord staying in his capital,” Teal’c added. “Something Apophis will take into account.”

“And their shared defeat during their false flag operation has made all System Lords involved more cautious,” Anise added.

“So, we need to send a task force to Apophis’s realm so it’s ready to strike as soon as we get the word,” the General summed up.

“Yes,” Garshaw said. “The sooner it’s in position, the smaller the chance that we lose our window of opportunity. Our people are risking their lives for this.”

“And we won’t let them down,” Adora said, nodding firmly.

*****

Earth Orbit, January 7th, 2000 (Earth Time)

“I feel guilty for not helping with the Earth media companies. If only the cultural exchange program weren't stalled! The artists we contacted must feel so disappointed by us; all that talk and planning, and now it's not going forward until we've sorted out the copyright issue.”

Looking through the shuttle window down at Earth below them, Catra rolled her eyes at Adora's comment. Leaving that mess to others - not that it was Adora's mess to begin with, anyway; she wasn't a ruling princess - was a great thing in Catra's opinion. “You've slept maybe ten hours in the last three days organising this deployment,” she pointed out. “If anyone has no right to feel guilty, it's you.”

“I wasn't alone!” Adora protested. “Jack and the others worked as hard! You didn't sleep much either!”

Catra shrugged. “I could take naps anytime I wanted.” One of the perks of being a cat. Next to looking hot, being agile, flexible and graceful, and having claws to rip anything short of a spaceship to shreds.

“That's not enough to replace a good night's sleep,” Adora retorted. Catra lifted her eyebrows at her lover, and Adora blushed

in embarrassment in return. “I'm the Supreme Commander. The buck stops with me, as Jack said.”

“He said that about himself when you asked him to take a break,” Catra corrected her.

“The principle is the same!”

Catra snorted. Adora was a work in progress. Too responsible for her own good. At least Catra had had the good sense not to take an official position in the Alliance. She could help out where she was needed without being bogged down by duties.

And she had had to help out a lot during the last three days. Moving an entire landing division’s worth of troops and Jack's Special Forces on a moment's notice had thrown the Alliance staff into chaos. For all the Earth armies’ training, they hadn't been quite ready for such a move. Jack had called it a ‘learning experience’. Next time, things would be better - provided they could keep a reaction force ready to get going at all times. That kind of readiness would tie up a decent chunk of their forces, including logistics, and affect training times as well - the time a unit spent getting ready for instant deployment to relieve the current reaction force was time spent not training other things, after all. On the other hand, it was good training for their logistics…

Adora was pouting, Catra noticed. “Hm?” she asked her lover as innocently as she could - some lessons had to be driven home, after all, if she was to keep Adora from working herself sick.

Adora frowned at her in return. “I also feel it's a bit unfair that we won't be travelling with the task force.”

“We'll join them through the closest Stargate once they are in the area of operations,” Catra pointed out. As they had agreed to days ago.

“But the entire force will be stuck in the ships for weeks while we just… skip it all.”

“And we worry about the war, politics and the economy while they get to laze around in their transports,” Catra shot back. Then she cocked her head to the side and grinned. “You know what? Going along with the force sounds like a great idea!”

“Catra!” Adora frowned at her. “It's not about that! We can't just leave for weeks. But those people won't be able to visit their families for months!”

“They knew that when they signed up for this.” And the soldiers were volunteers. At least the American and British troops. The French and Germans still had conscription, but they were still better motivated than the average Horde troops, in Catra's experience.

Meanwhile, their shuttle had reached the task force gathered in orbit and was flying past the rows of frigates towards their flagship.

“Still…” Adora glanced at the pad in her hand.

“You don't have to read the whole speech,” Catra told her. “Just tell them to do their best or something.” Adora was best when speaking honestly, anyway.

“But my staff worked hard on this.”

“And you don't feel comfortable reading it. So don't.” Catra shrugged. Adora needed to be more selfish - and more honest - to be happy.

Adora frowned some more, then slowly nodded. “You're right.”

“Just blame me when the paper pushers complain,” Catra told her with a grin.

“Catra! I won't let you take the blame for my decisions!”

“I told you to do it, didn't I?”

“But it was still my decision! My responsibility.”

Never change, Adora, Catra thought as they set down in the frigate's hangar, where the commanders of the various units making up the task force were already waiting for them. Well, for the Supreme Commander of the Alliance.

Catra thought about taking a nap in the shuttle, but only for a moment. She wasn't going to leave Adora alone here.

Besides, hearing her improvised speech should be interesting.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, January 15th, 2000

As he stood in the lift carrying him down inside Stargate Command, Jack O'Neill couldn't help feeling a little conflicted about the whole situation he found himself in. On the one hand, it was a good thing that the Tok'ra had come through with more intel - an actual breakthrough - so quickly, barely a week after their first revelation about Apophis's mysterious troop and queen movement. Thanks to some careless Goa'uld underling in charge of logistics who had been a bit too clever with anticipating supply runs and had tried to pre-position a freighter for the fleet before Apophis had squashed that and the underling, they now knew the task force's destination: PU-9624. Apparently, not even the Goa'uld had named the system yet.

On the other hand, the Alliance task force would take a few more weeks until it could reach the planet. Jack would have really preferred if they could actually act on the so conveniently actionable intel they got. They didn’t even have spy bots in the system yet, though those little buggers were closer than the flotilla and should make contact in ten days.

Then there was the fact that the system wasn't as close to Apophis's realm as they had expected - it was pretty far away, actually. Past the fringes of the Goa'uld Empire, in what had been

a buffer zone between the snakes and Horde Prime. There was nothing about it in the data banks of all three former Horde fleets in the Alliance, but that didn't have to mean anything; Horde Prime apparently kept far too much information to himself. For a ruthless dictator with an army of clones made in his image and conditioned from birth - if you could call popping out of a pod birth - to be utterly loyal to him, the man had been very paranoid. Not unjustified, given Hordak's example, but still.

In any case, it meant that the closest Alliance assets to PU-9623 were actually the combined First and Second Fleet forces on Etheria, a mere two weeks away from the system. Which was good for a rapid reaction, but entirely too close to Etheria for Jack's comfort.

However, that also meant that they could wipe out the entire snake force and have decent odds that Apophis would blame it on some Horde attack and not the Alliance and hopefully stay away from the former Horde Empire, which was good news. And yet, that the damn snake risked a sizeable part of his fleet in what the analysts agreed was an area of space the snakes generally avoided was not good - Jack wasn't an analyst, but he was sure the snake hadn't picked the system just because it was obscure and his rivals might be scared off.

There was something there. Something important. But not important enough to have a Stargate, apparently - Carter had looked through all their data and hadn't found an address. So, the Alliance scouting force would have to travel to the system by ship from Etheria.

And without much ground support. In theory, they could send another division through the Stargate to Etheria and load it up in the frigates there. But just transporting everything to and through the gate and then loading it all up in ships and flying to another planet would take so long, the force already underway would reach the system faster than that.

The Alliance really needs more fast reaction forces at brigade or division size, Jack thought as he stepped out of the lift and saluted the guards there. The Navy pukes had been quick to propose stationing marines on all ships for such situations, but Jack had managed to shoot that stupidity down. This wasn't 1812 any more; soldiers needed far more supplies and support on the ground to be effective in war. Light infantry wouldn't cut it - and for situations where light infantry was good enough, they already had Jack's people who could be deployed through the Stargate and on any ship that could carry them. All the Navy's proposal would do was waste manpower by having marines twiddle their thumbs on Horde frigates on the off-chance that they might be needed one day.

He entered the gate room. The sight of the Stargate brought back memories. Once more, Jack and his friends would step through the gate and risk their lives scouting alien planets and foiling the plans of snakes. But this time, it wouldn't just be SG-1.

"Jack!" Daniel smiled at him. Sha're and Teal'c both merely nodded. "We're ready. Sam's already on Etheria."

He knew that already. Carter was helping to set up the transports on Etheria - and, most importantly, the stealth shuttle they would need for the final leg of the mission.

"General." Burke's grin turned the rank into a slight tease. He was standing with his team - Jones, Müller and a new guy, Dupont. Good people. Jack had trained them personally. They would do well.

But Jack wasn't quite so sure about the other addition to this mission. "Jakar." He nodded at the Tok'ra spy.

"General O'Neill." The snake smiled at him and nodded back.

At least Jakar wasn't Anise. That would have been creepy.

Jack looked at everyone, then nodded once again. "Alright! Dial Etheria! We've got a mission to run for the Alliance."

*****

Outside the PU-9623 System, January 28th, 2000

"...and our spy bots have tracked the enemy ships. Their numbers closely match up with our intel, though we're missing one Ha'tak in the system - it's not on the planet, either."

Adora nodded at Sam's explanation as she looked at the holoprojection floating in the middle of the briefing room in WrongHordak's flagship. It was a simple system, as Entrapta called it - three planets, one of them habitable, the other two gas giants. No pretty rings around either of them, though they were useful to gather resources to build spy bots here

"But! There are a few debris fields in the system," Entrapta cut in. "We haven't run detailed scans yet to check if one of them matches the missing ship's mass since the spy bots couldn't get close enough without showing up on the Goa'uld sensors. We really should have covered this with stealth bots, but they wouldn't have arrived before us, so it was deemed pointless to re-route the closest ones."

"Debris fields?" Jack asked with a frown. "Multiple ones?"

"Yes!"

"Potential remains of a space battle, General," Sam said. "Though we don't have enough data yet to tell how old they are."

"We have no records of this system in our memory banks," WrongHordak said. "But it's close to the border of Horde Prime's old empire, so it should have been visited at least once by a scouting force."

Adora nodded. And couldn't help thinking that it was nice to talk to Clones who didn't literally worship her.

"Yes," Entrapta said, frowning. "Horde Prime really should have shared all his data with all of you. That was very inconsiderate of

him!”

“Never expect your enemy to be stupid,” Jack commented. “So… any signs of battle damage on the rest of the fleet?”

“Nothing that we could detect, sir,” Sam replied. “Although there seems to be exotic radiation in the system that degrades the performance of our long-range sensors.”

“That might be the reason - or one reason - that Apophis picked this system,” Bow speculated. “It would make detecting his fleet even harder.”

“It also makes detecting enemy scouts harder since his sensors would be affected as well,” Sam objected.

“What kind of exotic radiation, Carter? I am not looking forward to becoming a mutant,” Jack joked. Probably joked.

“We have yet to identify the radiation, sir.”

“It’s a mystery!” Entrapta beamed. “We need to get closer to get better readings, anyway - of the ships and the radiation. So far, we've only managed to confirm that it exists because of its effect on our sensors, but no direct readings.”

“So, we could develop mutant powers if we fly into the system?” Jack asked, raising his eyebrows. He was still looking serious, Adroa noted.

“That is very unlikely,” Sam told him. “Apophis’s fleet would have been exposed for weeks, and his Jaffa should have been affected by it.”

“Maybe that’s why he sent them here.” Jack grinned. “Create mutant super-Jaffa.”

“Apophis would not risk a sizeable part of his fleet for such an experiment, though,” Teal’c spoke up. “He would send chosen

volunteers to be exposed and withdraw his ships to wait for the results."

"And he wouldn't risk his new queen like that," Sha're added. "He would not want to have offspring with mutations."

"We'll still proceed slowly and carefully," Adora said. "Send in a stealth shuttle with more sensors first to take detailed scans. Without a crew," she added. WrongHordak's fleet wasn't worshipping her, but she wouldn't put it past some of them to volunteer as test subjects, so to speak, if it meant they could distinguish themselves.

"Yes!" Entrapta nodded. "The stealth system will affect the readings, but we're still going to have more data!"

Everyone seemed to agree, so Adora finished the meeting and let her friends work. Or nap, in Catra's case.

*****

An hour later, the stealth shuttle was approaching the first gas giant with its scanners primed and its stealth system active. Bow, Sam and Entrapta were practically glued to the screens linked to the sensors while everyone else watched on the big screen in the briefing room.

"Still no sign of the missing ship. But we're closing on the first debris field! Scanning!"

"It looks like… Yes. Those are processed materials. Although they do not match a Ha'tak's hull - they match a Horde frigate's hull."

"So… how old are they?" Jack asked.

"Several hundred years at least. With the system's background radiation, anything more precise will require physical samples," Sam said.

"And what about the radiation?"

“Checking!” Entrapta grinned. “Oh… interesting readings! Very interesting. Oh! We’ve got a match! A partial match! It’s…” She trailed off, and Adora saw that she was biting her lower lip.

“What’s it?” Catra asked.

Entrapta looked actually embarrassed. Or guilty. “It’s the same, well, same-ish, kinda, radiation left behind by the portal experiment we kinda tried back in the Horde.”

Oh.

Adora heard Catra hiss under her breath.

And Glimmer had grown very tense.

The portal experiment that had almost destroyed Etheria, back in the war. The experiment that had needed Queen Angella’s sacrifice to stop.

“It looks like this was the site of an interdimensional displacement,” Sam said, breaking the sudden silence.

*****

Samantha Carter focused on the screen in front of her. She didn't have to glance at the others in the briefing room to read the mood. She wasn't privy to every detail involving that particular incident, but she had caught enough from Entrapta's casual remarks, and from her friend's silences and changes of topics following any such remark, to know the gist of it.

Queen Angella, Glimmer's mother, had sacrificed herself to seal a dimensional portal that had been meant to reshape reality and had ended up threatening to destroy it. It had been a Horde Wunderwaffe, not quite a Hail Mary attempt to win the war - the Horde's position hadn't been that bad yet back then - initiated by Hordak, finished by Entrapta and pushed ahead by Catra, who had been so fixated on it that she banished Entrapta to some death prison island for refusing to continue.

Catra very obviously blamed herself for it, but Entrapta blamed herself for not stopping it (or managing to convince Catra that it was too dangerous), and Sam suspected even Hordak felt guilty about starting the whole project to contact Horde Prime, at least in hindsight.

But she was sure that Adora blamed herself for not stopping the project before someone had to sacrifice themselves to seal the dimensional rift. Even though she probably hadn't had any realistic chance to know, much less reach it in time. Sam hadn't asked - she knew better than poking at such topics - but she was also sure that Adora felt guilty for not sacrificing herself in Angella's place.

And Sam knew that Glimmer's relationship with her mother had been what most people would call 'complicated'. Not too unusual for a teenager, but add the war and survivor's guilt to it…

It was a huge mess, and Sam really didn't want to discuss it. But there was no choice - they couldn't continue with the mission without talking about this. And leaving Apophis to dabble with such forces was entirely out of the question.

She cleared her throat. "We have no idea yet what kind of dimensional displacement, and if successful, took place here. The readings are similar to those gathered by Entrapta in the past, but this might be typical for any such event."

"It doesn't matter," Adora said. "Just the risk that Apophis is building a reality-altering portal is too much. We have to stop him."

"Yeah," the General agreed.

Neither Catra nor Glimmer said anything, nor did Entrapta comment on the science involved - she must be feeling even worse than Sam expected about this. Suppressing a sigh, Sam went on: "We need to gather more data to pinpoint potential sources of this radiation."

“Can this dimensional radiation thingie affect combat operations in the system?” the General asked.

“Not the residue we're picking up,” Sam replied. “But if Apophis's forces are running an experiment that tampers with dimensions, then they might attempt to use that in battle.”

“Like we did,” Catra muttered.

“So, we need to wipe them out before they have the chance to do that - or anything like it,” Glimmer said with a grim expression. “Attack them with overwhelming force.”

Bow cleared his throat, then smiled almost sheepishly. “We should gather more intel first, I think. So we know more about, ah, our targets.”

Glimmer glared at him. “We just crush everything.”

“We should at least find out where Taweret is before we launch an attack,” Sha're added. “We came here to deal with her.”

“That was before we found out that Apophis is trying to mess with dimensions,” Glimmer retorted. “This is more important.”

“We, ah, don't know yet if he's actually experimenting with that technology,” Daniel pointed out. “This might have been an accident or just a coincidence.”

An accident wasn't impossible - hyperspace travel was distantly related to dimensional displacement technology - but unlikely. And the odds of a naturally occurring event that spawned such radiation? Sam wouldn't bet on that, either. Though it would be a fascinating discovery - akin to a weakened spot in the dimensional fabric some people had speculated might exist.

She nodded. “I think we should gather more data before we proceed with any action. We have the enemy fleet under surveillance, and I believe that with the sensors we have in place

now, we should detect any dangerous experiments in time to intervene." Probably.

Glimmer didn't look convinced. "It's still a dangerous risk."

Catra nodded.

But Adora shook her head. "We can't just rush in. We might make things worse by accident. Let's gather more data."

"Alright," Entrapta said. She didn't sound as enthusiastic as she usually did, though, and Sam bit her lower lip.

*****

Outside the PU-9623 System, January 29th, 2000

Samantha Carter glanced at the clock on her screen. It was past midnight. Technically, a new day. And they were still at work. If they were back on Earth, at Stargate Command, the General would check in and tell her to get to bed.

But they were on a mission. A mission that had turned out to be a bit more dangerous, at least potentially dangerous, than they had expected.

And also far more personal than they had expected.

Sam glanced at Entrapta, who was still uncharacteristically silent and serious. She clenched her teeth—she couldn't let this go on.

"So…" she started to say, then trailed off for a second when Entrapta didn't react. "You know it wasn't your fault, right?"

"What wasn't my fault?" Entrapta asked without taking her eyes off the screen.

"The portal on Etheria."

"I built it - well, I finished it after Hordak designed the concept. But I made it work."

Sam shook her head. “But you realised the danger and tried to stop… others from using it.”

“But I failed! I couldn't convince Catra how dangerous it was.”

“I don't think anyone could have,” Sam said. Not according to what she had heard.

“I should have sabotaged the portal in advance! I should have considered this!” Entrapta finally turned to look at Sam, blinking rapidly. “It was my fault.”

You didn’t understand people well enough to know that. Sam didn't say that. That would be unfair. That wasn’t Entrapta's fault either. People without her… issues… were routinely fooled by unhinged but charismatic leaders. That was a common foible of humans. “You did what you could. I doubt anyone else could have managed it either,” she said instead.

Entrapta shook her head. “I’m still responsible! I…”

A beep interrupted her.

Both of them turned to look at the display. New data from a stealth shuttle. Flagged as important.

Sam quickly checked it - and drew a sharp breath. There were large concentrations of Naquadah on the planet. A ship that had landed or crashed? No - all of them were underground. A hidden gate site? But the amount of Naquadah was far too large for a gate.

Sam pressed her lips together and quickly checked other sensors. Power readings. Ground density.

The data matched.

“There's a base on the planet. A large one. And it's active.”

*****

The Secret Base Part 1

Outside PU-9623 System, January 29th, 2000 (Earth Time)

Catra stared at the display floating in the middle of the room. "That's not really detailed," she complained. It really wasn't. It was a very rudimentary 3D-model.

"That's the best we can do with our scanners from orbit," Sam replied. "We extrapolated some structures, but… we'll need a magic scanner close by to get more details." After a moment's pause, she added: "We only got those results after we adjusted the bot's sensors with the data from Alpha."

Catra hissed again. "That's a First Ones base?"

"It's a possibility," Sam replied.

"I don't know what would be worse," Jack said. "Apophis having technology to block our sensors, or Apophis having access to an Ancient base."

"The second," Jakar said. "I consider it most urgent that we take out both his fleet and his base. This takes priority over confirming Taweret's position."

"Yes," Glimmer agreed. "We can't let Apophis get his hands on such a base."

"He might already have his hands on the base," Jack said, pointing at the structures directly above the underground's base. Those were standard Goa'uld fortifications. "You don't throw up that kind of base in a day or two, and that mound next to the base doesn't look natural or old."

"Our scanners don't show a shaft leading to the base," Entrapta objected. "And that would show up - unless he managed to build them using First One materials. Though even then, we should

have detected the effects of such a structure on the surrounding earth and stone."

Jakar nodded. "Yes. Even with our digging technology, we cannot build our bases without leaving such traces. Though detecting them is beyond the standard Goa'uld sensors."

Or so you think, Catra added silently. But that was a discussion for another day.

"They could be using a ring transporter," Sha're pointed out.

"Yes," Sam agreed. "We have to assume they have access to the base, and for a while at least - we don't know when he first discovered this system."

"That makes it even more urgent that we strike as soon as possible," Glimmer said.

"The task force stands ready to launch an attack on the enemy fleet at a moment's notice, Supreme Commander," WrongHordak said. "We are plotting their courses and adjusting our calculations so we can drop on them from hyperspace."

That would ensure they would surprise the Goa'uld - since they could only jam their comms for a short while and couldn't block them from entering hyperspace, that was essential if they wanted to take the Goa'uld out without allowing them to alert Apophis by comms or couriers. But it was dangerous. The risk of colliding with an enemy ship upon exiting hyperspace was low - though not zero - but the task force would be dropping into knife-fighting range. Even technologically inferior ships were dangerous at such ranges.

But that wasn't Catra's primary concern. "Even if we take out the fleet in the system, the base will be able to react."

"We can destroy them from orbit," Glimmer retorted.

“Quickly enough to stop them from contacting Apophis? Or activate a Stargate they might have?” Catra shook her head.

“We don’t have the planet in our data banks,” Sam said. “But they could have brought one to the planet.”

“Apophis probably doesn’t want to spend weeks on every booty call,” Jack said.

“He would not want to leave Taweret so far out of his reach, lest she might turn the forces guarding her,” Teal’c agreed. “He would want to be able to reach her - or have her reach him - through a Stargate. Though that could be inside the base or in the flagship of the fleet - either offers advantages and disadvantages for him.”

If he had the Stargate on a ship, it would allow him better control over it - and over the ship’s crew. But he would need a shuttle or a ring transporter to reach the base. And more people would know when he arrived - or Taweret took off. And Catra had a feeling that Apophis would want direct access to the base. It just seemed to fit the snake better.

“Even if they do escape, they’ll report that a Horde fleet attacked them. Apophis has no reason to suspect the Alliance,” Glimmer pointed out.

“Yes. But if we just destroy the base, we won’t know what they worked on there - and whether or not they managed to flee with completed projects,” Catra said.

“And Taweret would escape,” Sha’re said.

Jakar slowly nodded. “Yes, I think we should ascertain what kind of research they are doing in the base. And whether or not it is functional.”

Adora nodded. “Yes. We don’t want them to panic and open a portal to another dimension.”

Catra clenched her teeth. That had been her lowest point. She had almost destroyed Etheria - killed everyone - through her obsession. If there was a risk that Apophis was working on a similar project… "We need to find out what they're doing there - and stop it." Permanently.

Adora nodded again. "And we need to take the base and destroy their fleet at the same time." She looked at WrongHordak. "This will require close coordination."

"And a trip in a stealth shuttle," Jack added as WrongHordak saluted Adora.

*****

PU-9623 System, January 29th, 2000 (Earth Time)

"Enemy patrol approaching."

Adora turned her head to look at the screen in front of her at Sam's report. Yes, there was a patrol of two Death Gliders on a course that would take them closer to the shuttle. Not very close, though - certainly not near enough to risk a collision. And with the stealth generator active, they had no chance to spot the shuttle either.

She still tensed up for the next few minutes while the two Death Gliders passed the shuttle. She trusted her friends with her life, and she knew the stealth shuttle worked, but you could never be completely sure.

"I feel like I'm in a submarine with a destroyer passing above us on the surface," Catra whispered.

"We're not in a submarine," Jack, predictably, complained. "This is a stealth shuttle."

Adora frowned at Catra - she was sure that her lover had just said that to rile up Jack.

“Feels like a submarine running silent,” Catra retorted.

“It’s more like a stealth fighter. Submarines don’t fly,” Jack said.

“Stealth fighters generally don’t transport more than a pilot. Unless it’s a movie,” Daniel pointed out.

“We don’t talk about that movie!” Jack snapped.

“What movie?” Sha’re asked.

“A stupid action movie made by a guy who had no idea about planes!”

“A popcorn flick.”

“I believe they are talking about ‘Executive Decision’.”

“We aren’t talking about that movie, Teal’c!”

“My mistake then.”

Catra snorted. “We really need to watch that at the next movie night. It sounds like a riot.”

“No, we don’t!” Jack protested.

“I believe I can acquire a copy for such an occasion.”

“I think we have that movie on file somewhere,” Bow added. “We have a lot of military movies on file to, ah, study.”

“It’s not a military movie. It’s a disgrace.”

Adora looked at Catra. “What kind of movie is it?”

Catra shrugged. “I never watched it. I only know Jack hates it.”

“Any Air Force member hates it!”

"Ah, Jack, I don't think that's correct. I am sure there are at least a few airmen and officers who like the movie despite any, ah, artistic liberties the producers might have taken." Daniel smiled a bit apologetically.

"There's nothing artistic about that movie! They…"

"The Death Gliders have passed," Sam reported.

"...right. Continuing towards our destination."

Adora looked at the screen again. The system's habitable planet was coming up. Too far away still to spot with the naked eye, but the sensors were covering it already. And updating their information.

"Two Ha'tak's in orbit. One geostationary over the base, the other above the planet's north pole," Sam summed up.

"Weird arrangement," Catra commented. "What good is the one at the pole?"

"We don't know. There's nothing on our scanners in that area," Entrapta said. "It's… Oh!"

"'Oh'?" Adora winced. When Entrapta sounded like that, it usually wasn't good news.

"Look at the power readings, Sam!"

"Oh! Those are… I didn't think a Ha'tak had so much power available," Sam said.

"They don't," Entrapta said. "At least, they can't generate so much power. But…"

"...they can receive so much power from the ground," Sam finished for her. "From the base."

“Microwave-based power transfer? But our scanners would show that…”

“Something similar, probably. There is feedback on another frequency… Look at this readout!” Bow cut in.

“Oh!”

Again! Adora twitched.

“So, what is going on?” Catra bluntly asked.

“Oh! It looks like the base is feeding a lot of power to the Ha’tak above it. The readings are getting clearer as we close in,” Entrapta replied. “Look at the stress the ship’s suffering!”

“Those vibrations aren’t good for its structural integrity,” Sam agreed.

“But why are they doing this?” Bow asked.

“It’s a test,” Sam said. “They’re testing power transfers.”

“What for?” Jack asked before Adora could ask the same.

“Possibly as an experiment, sir,” Sam told him.

“Related to the dimension travel thing?”

“We have yet to confirm that, sir.”

Bow nodded. “They’re testing power transfer. What are the odds that they are testing a new weapon system as well?”

“Oh! Like a dimensional cannon? Ripping open a dimensional rift to damage your target? Or move it into a pocket dimension like Despondos?” Entrapta perked up.

“If they are experimenting with a weapon like that, we must stop them at all costs!” Glimmer snapped.

“And we need their data to know what they have done so far.”

“Proceed,” Adora said. “But avoid the Ha’tak - and don’t fly through the area below it.” She didn’t feel like risking being imprisoned in another dimension. Like Angella…

“Yeah, that wouldn’t be a smooth ride,” Jack said as he changed course. “Would be damn embarrassing if we get taken out by accident without the snakes meaning to attack us. We could never live that down.”

“I think the more important problem is that we wouldn’t survive it in the first place, Jack.”

“Power spiking!” Sam snapped.

A moment later, the shuttle’s alerts went off, and Adora’s screen flickered - followed by the entire shuttle shaking.

“That was… a multidimensional release of power,” Entrapta reported. “I think.”

“A what?” Jack asked with clenched teeth. Several of the alerts on his display were still lit, Adora saw.

“They vented that power into what might have been an attempt to create a rift, sir. That’s only a hypothesis, though.”

“Great. Whatever it was, it played haywire with our systems. The Stealth generator was just flagged as damaged. Won’t last much longer.”

Adora drew a sharp breath. They were too close to the enemy to withdraw easily. Too close to the planet to survive another. She could call in the task force, but that would leave the base untouched during the attack. And they were so close… “Take us down in the target area. Quickly.”

They would continue with the mission.

*****

PU-9623, January 29th, 2000 (Earth Time)

They entered the atmosphere at high speed. Not quite dangerous, not fast enough to risk losing control, but it was a rougher ride than recommended and would require a thorough maintenance check afterwards, according to the manual even though the inertial compensators of the craft did their job.

Samantha Carter knew that very well since she had written part of the manual for the stealth shuttles and knew its specs by heart.

Not that the craft wouldn't have gone into maintenance anyway, what with the damage it suffered because of its proximity to whatever experiment Apophis - or Taweret - was running on the planet. Entraptra, Bow and herself were struggling to keep the stealth generator running while they plunged towards the planet's surface. Between the stealth field and the effect from the radiation released by the dimensional venting on all sensors, they would hopefully remain undetected - Sam had charted a course that had them on the side opposite to the base for the re-entry and on the southern half of the planet so the thermal effects of the manoeuvre would not be too obvious to any close observer.

But there was always a risk, and they would have to find a hiding spot for the shuttle - one close to the base so they could reach it on foot. The special coating and shielding could only do so much, and Sam didn’t think that Apophis had sent Jaffa to this planet who were lax in their duties.

So, while the General brought the shuttle down, she left handling the sputtering systems of the shuttle to her friends and focused on the sensors, scanning the area near their target for caves and valleys with cliffs. Anything big enough to hide the shuttle from above. She already had an earlier overview from the spy bots and the shuttle's sensor readings on approach, but that was not up to date and left a lot of area to cover,

The shuttle levelled out a few yards above the surface of the planet's main ocean when she found a narrow gorge with dense vegetation that should fit their shuttle. She plotted a course that would lead them over rougher terrain to make them harder to detect with sensors and sent it to the General. “This is our destination, sir.”

“Good work, Carter!” He flashed her a quick smile as the shuttle shifted and adjusted its heading.

She nodded, hiding her own smile, and went back to helping the others keep the shuttle's system working. It wasn’t looking good. Whatever backlash that experiment had created had overwhelmed their shields, and even hardened systems had suffered. She ran a quick calculation. It wouldn't have affected a frigate or other capital ship, even the Flower II classes entering the Royal Navy would be fine, mostly, but it would wreak havoc on any smaller craft, such as shuttles and fighters. And destroy spy bots.

She checked the network. Yes, most of the bots near the planet had been destroyed or rendered inoperational.

“The stealth system is not going to hold for much longer!” Bow called out from the aft. “Its power supply is fluctuating. I'm manually compensating, but I can't keep that up forever!”

“I'm switching the system to the main power. It'll slow us down some, but the fluctuations will stop,” Sam retorted. They were still too far from the target area to lose their stealth. Rerouting the connections didn't take long. “Switching in three… two… one!”

Done.

“The fluctuations stopped. Stealth field holding.”

But it was weakening anyway - the projectors had to be damaged. It could be just some misalignments from vibrations, but the power fluctuations likely had done more serious damage. Sam would have to check later. And think of a way to harden the

systems further. A lot of missions would be affected if they couldn't trust the stealth shuttles.

“Alright, folks!” the General called out. “It's not going to be the Beggar's Canyon, but it's going to be close enough, so hold on tight!”

“What do you mean, ‘close enough’?” Glimmer asked just as the shuttle sped up again - and entered a narrow gorge for the last leg of their trip.

The General was a good pilot. Even though he spent most of his time on the ground, he requalified regularly. And ever since he had received his personal stealth shuttle, he had taken it out whenever he could find the time. He knew the shuttle probably better than most pilots.

Sam told herself that, repeatedly, but she still felt her stomach sink when she glanced out through the cockpit and saw the steep walls of the gorge loom far closer than she was comfortable with while the shuttle wove through tight turns with more speed than she thought was safe.

She had to trust the General. And even if they hit the walls, the shuttle was sturdy enough to survive a glancing contact. And the inertial compensators should let them survive a frontal collision as well, provided the General managed to slow down enough in time…

It doesn’t look as if he’s even trying, a small voice in the back of her head added as she looked away and focused back on her screen and data.

Minutes that felt like hours later, the noise from the engines changed - they were finally slowing down. Sam looked up again and saw that they were hovering, slowly gliding below a slight overhang, brushing aside dense foliage until they were above solid ground. Right on top of the marker she had set on the map.

“Welcome to yet another snake planet!” the General called out with a smile that almost managed to hide his own exhaustion.

“Switching off the stealth system and powering down,” Sam announced before she took a deep breath.

They had arrived. Now, they had to reach the base and deal with whatever was going on inside. Without being spotted by the guards. But at least they weren't depending on a failing shuttle any more.

*****

Near Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

Catra glanced up, checking the sky - or the canopy of dense foliage, in this case - above them. “Sloppy,” she commented as she jumped over a fallen tree trunk, landing lightly on the soft soil behind it.

“What is sloppy?” Adora asked as she - with slightly less grace - jumped over the trunk as well, her boots leaving deep imprints next to Catra.

“This.” Catra motioned with her head at the trees around them. “In Apophis's place, I would have cleared the entire area of the jungle around their base. Clear the lines of fire and remove cover.” Sure, it would make it obvious where the hidden First Ones base was - unless it was a hidden Horde base - but Apophis had built a damn base above it, so that was no concern any more.

“Ah.” Adora looked around as well as their friends caught up.

“Are you having flashbacks to the Whispering Woods?” Glimmer asked while she struggled to get over the tree herself until Bow gave her a boost. “Ugh. We should restore magic to the planet.”

“Just so you can teleport past a tree?” Catra snorted.

“We're gonna save the magic light show for emergencies,” Jack said as he quickly climbed over it. “Like turning a dangerous snake or Ancient contraption into a potted plant before it destroys reality.”

As it had almost happened before. On her orders. Catra pressed her lips together.

“I'm not sure feeding so much magical power into a potential threat is a good idea,” Glimmer retorted. “We don't know how it would react. It might trigger the very effect we want to avoid.”

“Yes. We had to use magic to power the gate on Etheria!” Entrapta had no trouble having her hair carry her over the trunk. “It wouldn't have worked otherwise. On the other hand, without magic, it shouldn't be threatening reality as we know it. Probably.”

That wasn't very reassuring, in Catra's opinion.

“The Ancients were magitech users,” Sam added, climbing with the help of Entrapta's hair. “So, they might have left artefacts able to power whatever experiment they are doing with magic or similar energy.”

“If you tell me that we can't blow it up because it could absorb that power, too, I'm going to be annoyed,” Jack said.

“Wellllll…” Entrapta cocked her head and shrugged. “We don't know? We need more data!”

“Great,” Catra heard Jack mutter. “I'm not carrying all that C-4 back to the shuttle.”

“I’m sure we can find a use for it, Jack,” Daniel said.

Catra snorted and went ahead again. She had a base to sneak up to - they were halfway there, so they had to look out for patrols now. Their Naquadah-scanner might show every Jaffa and Goa'uld, and the odds of Apophis using humans on patrols were very low, but that didn't mean Catra could be sloppy.

Moving through the woods as if it was an obstacle course, jumping from trunk to trunk, her claws leaving gashes for the others to follow, she quickly put some distance between herself and the rest of their team.

The planet apparently had no birds or other flying animals, so she didn't have to worry about giving away her presence by disturbing a flock of those, but several small tree-dwelling animals scattered at her approach. She managed to grab one as she landed on a larger branch and quickly studied the squirming beast. It looked like a squirrel with longer claws. On Earth, no one would bat an eye except, perhaps, a biologist. It was nothing like the vermin she had seen in the Whispering Woods.

Probably a clue that this world hadn't been used for genetic engineering experiments, but Catra wasn't an expert.

She released the animal, waited until she spotted Adora catching up to her, then moved ahead again.

Half an hour later, she encountered the first sign of a patrol - tracks left in the dark soil. She didn't know how old they were, but Bow would be able to tell. But it meant they were now in the area the base guards patrolled.

Her ears twitched but caught nothing but her friends behind her.

Once more, she waited for them to catch up, then pointed the tracks out. Jack, Teal'c and Bow all knelt down to take a look.

“This was made by a guard wearing standard armour for Apophis's Jaffa,” Teal'c said.

“Four of them, a day ago,” Bow added.

“I'll take your word for it,” Jack said. “So, how often do they run their patrols? And how often do they vary their routes?”

“Warriors are supposed to take different routes each day and have one patrol out in every sector at all times, based on the size of the

garrison," Teal'c said.

Catra could hear the 'and woe to anyone who failed his false god' added without it spoken aloud. Teal'c had probably punished more than a few in his time as Apophis's Prime. "But this is a safe world, unknown to anyone, they have a fleet in the system and two Ha'taks in orbit. What are the odds they feel safe enough to get sloppy while slogging through the jungle?"

"I doubt Apophis will send any but his best, most loyal troops to guard his queen," Teal'c replied.

"For several reasons, not least because he wants them to guard him against betrayal by her," Jakar added. "But even so, in my experience, even the best troops tend to follow the same routes."

Catra shrugged. "I'll hear them before they spot us. Let's go."

She did spot a patrol on the last leg of the trip, but it was easy to keep out of their way - the Jaffa were limited to their eyes and ears, and those were not nearly as good as hers. Catra watched them from a hiding spot in the canopy while her friends hid a bit away. The Jaffa did look smart, all clean and tall, but they also looked a bit… tense. Not as tense as Horde scouts in the Whispering Woods, but those were warriors on a routine patrol where they didn't expect any trouble. Something had them on edge.

But Catra couldn't think of what that might be - there were no monsters in this jungle. At least none that she could spot.

*****

Jack O'Neill couldn't help grinning while he studied the base in front of him through his binoculars. How he had missed sneaking up on a snake base, hiding under their very noses while plotting to blow it up! He had been behind a desk for far too long!

He inched forward a little more, a number of the thorns of the bush he was using as cover snagging on his fatigues, and used

the button on the side of the binoculars to zoom in. Built with some fancy tech by Carter and Entrapta as a prototype, the binoculars allowed him to zoom in to almost magnifying glass level and switch between different vision modes, including thermal and low-light. And they were working great - he would have to light a fire under procurement's butts so they approved it for manufacturing at once. His troops needed this!

But that could wait. The mission came first. He studied the base. Massive walls that looked like they were taken from the set of Cleopatra, Jaffa in heavy armour patrolling on top of them between staff cannons mounted for air and ground defence, Death Gliders waiting on the pads inside… pretty standard snake stuff, except for the palace in the centre.

He zoomed in on it. It was a blocky structure, looking more like a bunker someone had gilded than an actual palace, rising higher than the walls around it. It was prime bombardment bait. But it also had balconies built into the front wall, and the top was covered by a pavilion, including a pool and lounge area. "Talk about lipstick on a pig…" he muttered.

He heard a snort from his left, where Catra was studying the base as well. "It makes Horde construction look fancy," she said.

Daniel would say something about different cultures having different styles and aesthetics, but Jack nodded. "I bet some billionaires without taste would love that style." And would probably add more gold to it.

Catra snorted again. "Good defences, though. And it's sitting right on top of the First Ones base."

As they had expected - the snakes preferred to keep tight control over crucial assets. Jack flipped through a few modes on his binocs until he reached the one he wanted. "Ah! There's the big reactor!"

"We already knew that from the orbital scans," Catra commented.

“But now we know where it's relative to the rest,” Jack shot back. “And we can see the shield projectors. Now, if I were a ring transporter, where would I be?”

“You? In the living room so you didn’t have to move to get a beer from the fridge,” Catra said. “But a snake's transporter?”

“Taweret would want it close to her personal quarters but not inside them. She would not tolerate others walking through her rooms every time they needed to enter the base beneath.” Jakar the snake commando cut in. “And her quarters will be near the top. She will want private access to the roof.”

There spoke the snake expert. Though Jack had come to the same conclusions. Placing your quarters underground would be safer, but that wouldn't allow the snakes to look down on everyone else. He zoomed in on the roof. “Yeah, there it is - door in that fake tent on the side. I bet if we wait long enough, we would see her making a big entrance there.” A bit far for a sniper, but Jack was sure he could do it. Not that he would - the odds of hitting the actual snake were slim, and killing the host wouldn't do anything but warn them of their presence while they possessed the next spare host. But it was a nice thought to have.

“You want to enter through the roof?” Catra asked.

If the stealth shuttle still worked, that would be ideal. Fly in, hover above the roof and drop down. “Unless Adora restores magic and Glimmer teleports us there, Or Carter and Entrapta somehow find a way to get the spare parts they need to repair the stealth system, I think we'll have to pick the side entrance,” Jack replied.

And that meant getting through the gate - or over the walls.

“I guess we can't ambush a patrol and take their armour,” Catra joked.

“Nope.” There were few slaves around, Jack noted. The base didn't look old - he could see signs of recent construction, actually - and it must have been built quickly, meaning with lots of hands,

so where were the workers responsible? Jack pressed his lips together. Apophis wouldn't move the workers constructing his secret base back to his other worlds. That would risk the base being revealed. So… What would a megalomaniac snake with no morals do to keep such a secret?

The answer was obvious and nauseating. Jack quickly scanned the area, but he didn't see any signs of mass graves. Or other possible disposal facilities.

And that was even more worrying.

“Let's look for blind spots and other weaknesses,” he said. Before they looked for unconventional solutions. Jack would prefer to do this without magic. If they had to restore magic, Adora would probably wipe out the Goa’uld base by accident anyway, and while that wasn't exactly a bad thing, it would also alert the Ha'taks in orbit and the rest of the fleet - and the Ancient base deep underground.

No, they needed a more subtle way inside.

Fortunately, Jack thought as he zoomed in on a small ditch near the base of the walls, I might have found our way inside.

*****

“You want to sneak in through the sewers?”

Adora winced at Glimmer’s comment. They were out of earshot - Apophis’s Jaffa had cleared a lot of the area around their base - but they were trying to stay hidden.

“It’s not actually a sewer,” Jack replied. “More like… a stream flowing out of their base.”

“It’s still a sewer - it carries all their waste away!” Glimmer retorted.

“And it is fed from a spring inside their base,” Sam added. “There’s no stream entering the base.”

So much for using a clean body of water to sneak in, Adora thought.

“Can’t be worse than infiltrating the Fright Zone,” Catra said. “Or sneaking around there.”

Glimmer glared at her. “We didn’t sneak through the sewers when we did that!”

“We did, actually. When we went to rescue you and Bow,” Adora corrected her.

“You didn’t actually *swim* through the sewers!” Glimmer shot back with a glare.

“You couldn’t have - some of the sewers there were so toxic, you needed protective gear,” Entrapta said. “That’s why the standard Horde uniform included a fully enclosed helmet.”

Adora nodded. “And uniforms were resistant to environmental dangers.”

“Is that why you’re still wearing your old uniform?” Jakar asked.

“Ah…” Adora smiled at him, feeling a bit embarrassed. She didn’t actually need that kind of protection as She-Ra. “They’re also very durable and comfortable!”

“If you match the general body type they’re made for,” Catra added. “I always had to customise my uniforms.”

It had been more a want than a need, as Adora remembered it, but that wasn’t important right now. “So, infiltrating through the stream.”

“Open Sewer,” Glimmer said. “Perfuma would loath this.”

“Anyone with a bit of common sense would loathe it.” Catra snorted. “That’s a disease outbreak waiting to happen.”

“And you want to swim through it to get into the base?” Glimmer asked Jack.

“Well…” Jack shrugged. “We’ve got these fancy new fatigues, with masks that double as diving masks…”

“Not all of us have those,” Glimmer said.

Adora wouldn’t have any problems thanks to She-Ra’s armour, but the others… Not everyone had the new fatigues, and even there, the masks wouldn’t cover more than their faces. They were meant to be worn with a hood for full NBC protection.

“You’ll survive,” Catra commented.

Adora glanced at her lover. Catra’s feet, hair, ears and tail would be exposed. And she knew that.

“It’s not going to be worse than sneaking around in the seedier parts of the Fright Zone as cadets,” Catra said with a snort.

Glimmer glared at her before scoffing. “Let’s go then.”

“Alright. We’ll have to deal with sensors in the stream and the grate at the wall,” Jack said.

“We can handle that!” Entrapta beamed. “We can hack the sensors - if they have any that resisted the effects of their experiments - and bypass the alerts when we cut through the grate. As long as we’re not seen.”

“Fortunately, the water’s muddy,” Jack said. “And we’re going in at night.”

“Muddy? More like shitty,” Catra commented with another snort.

Adora didn’t think it was funny, but Jack laughed at it.

*****

The stream was shitty. Adora didn't want to take a closer look at what exactly floated on the surface as she approached the stream and watched the bot Entrapta, Sam and Bow had rigged up disappear in it. Peeking over Bow's shoulder, she could see the feed from the bot - or the sanitised overlay from its sensors depicting the stream's bed as it started moving upstream.

"Alright… now… where are the sensors?" Entrapta mumbled as she stared at her own tool.

"It doesn't seem that there are any," Sam said.

"So, they cannot protect their own sensors from their own experiments?" Jack shook his head. "I don't think Apophis will accept that."

"I concur," Jakar said. "Though that won't keep him from deploying a new weapon system if he deems it effective enough."

"We'll stop him before it comes to that," Adora said.

"We've reached the wall - well, under the wall," Bow reported. "Doesn't look like there are sensors either."

"But the grate itself is powered - a low current, but if it's cut, that will be noticed," Sam added. "Scanning the array."

"We need to cut here to reach the control module."

"Yes. But that's hardened material. We should access it from the side."

"Yes! Like that!"

"Drilling."

"Oh, look at that - it's a simple but working design! Tiny crystals!"

"Easy to circumvent, though. Just let me run a few calculations on my tablet… Yes. We'll need two of the thicker wires, and about… this long."

"Yes, I concur with Bow."

"Me too!"

It didn't take the three more than a few minutes to bypass what security there was and fix the cable the bot had trailed to the grate. And then it was time for them to start swimming. In the 'muddy' stream.

Just dive down and try not to think about it, Adora told herself, trying not to grimace. This was important. She had to do this. She was She-Ra.

She took a deep breath, grabbed the cable the bot had laid, and entered the stream. As soon as she was completely underwater, she started pulling herself forward, following the cable to the grate.

Five minutes later, she reached the grate. "I'm there!" she said through her communicator.

"Good! Cut the grate along the sides we marked!" Bow told her.

She summoned her sword and did so. "Done."

"No alert. We should be safe to follow you then." Catra said.

"OK."

Adora just had to wait for her friends now. And try not to think about what kind of stuff was floating in the stream.

*****

Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

While their small infiltrator bot went ahead to explore the rest of the base and they waited in the stream, Samantha Carter made a mental note to build a prototype uniform that doubled as a drysuit with full-body protection as soon as she found the time. The odds of it getting approved were zero - the cost alone doomed any such proposal; the new spacesuits had been a struggle to get through procurement even though the need for such suits was obvious - but Sam would be able to use the prototype herself next time she had to swim through a sewer.

She shuddered and suppressed the urge to run her gloved hands through her hair. Focus on the mission, she told herself. This was just like having to crawl through mud in basic. Only worse.

The spy bot was circling the central bunker - or bunker/palace, as the General called it - and Sam was, hidden by the thick wall above them, watching its feed to mark potential entry points. Main entrance - too big to open without anyone noticing even if the squad of Jaffa guarding it were dealt with. Goa'uld megalomania working for them this time. Side entrance - small, heavily armoured, likely an air lock. And two guards in front of it. Second side trnance, other side… That one was a bit larger, with tracks of heavy machinery left on the ground in front of it. Still guarded, though. The roof was a possibility. But scrambling up the walls would leave them exposed to any guard watching from the perimeter or yard. There were gaps in the coverage by the patrols - she had analysed the pattern already - but they were not long enough to allow the group to reach the roof in time.

That left the balconies. Without sensors on them, they would provide cover and concealment while they dealt with the doors, and they were close enough to the ground to be reached quickly. Adora could probably throw people up to speed things up, and Entrapta's hair, while not long enough to reach the balcony from the ground, would further facilitate this.

Entering the private quarters of Taweret was a problem in itself, but securing or neutralising her was a mission objective, so they would have to deal with her anyway at some point, even if the

Ancient base was more important. If the best way inside was through her?

Well, Sam had no problem with that. And there was the possibility that, Goa'ulds being Goa'ulds, they could access the ring transporter from her quarters, or close enough, to achieve the primary objective of the mission as well.

The final decision was Adora's - and the General's - of course, but Sam was sure they would agree with her reasoning when she motioned and held her screen out to the others to check.

She wasn't wrong. A few minutes later, with the spy bot tracking the guards, they rushed to the wall below the balcony, Adora in the lead. A running jump took her to the top of the balcony, trailing lines behind her. Lines Sam and the others attached to the harnesses built into their fatigues. Or just held onto, in some cases.

"Everyone ready?" The General asked in a whisper through their communicators. "Go!"

And the line went taut, then dragged Sam upwards as Adora heaved. Sam barely had the time to get her feet against the wall and push off before she was pulled over the railing and rolled over the balcony's floor. Entrapta had an even worse time - Sam's friend would have hit the floor head-on if not for her hair, legs twitching for a moment before she managed to straighten herself. She was smiling widely, though, and already reaching for her tool when Teal'c, the last of their group, smoothly slid over the railing.

"Clear!" the General announced.

"Working on the door," Sam replied.

"No sensors here either," Bow whispered.

But the door was armoured. They would have to work to crack the locks. At least it was an automatic door. If the Goa'uld had

skipped any servos and just relied on servants to pull it open, this would take far longer.

As it was, thanks to Jakar's help - the agent had the most experience with the electronic locks on such doors - they cracked it in less than five minutes.

The quarters behind it were as luxurious as Sam expected. Not quite an exact copy of Amaunet's quarters on Saqqara, but they came close enough.

They quickly spread out through them, covering all rooms. There were no guards, and they found only two servants working in a side room. Teal'c and Catra stunned them before they could react.

And no Taweret.

"Aren't queens supposed to laze around and have grapes fed to them in their rooms?" the General asked.

"If she's not here, she's either somewhere else in the bunker - or in the base below us," Jakar stated the obvious. "We would have noticed her guard detachment moving outside."

"Unless she's in a ship," Teal'c objected.

Jakar inclined his head. "True."

"Well, wherever she is, we need to get a move on," the General said. "Where's the ring transporter?"

"Outside the quarters!" Entrapta announced. "Well, that's where our scanner shows an amount of processed Naquadah that matches the amount used in a transporter."

The General nodded. "Good enough for me. Let's go. We have a base to take over. Or blow up. Whatever it takes."

Catra was already moving towards the exit.

*****

The Secret Base Part 2

Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

Catra stopped and cocked her head at the door, but she couldn't hear anything from the area outside Taweret's quarters.

"Anything?" Adora asked.

Catra shook her head. "She's got good insulation. Probably paranoid about spies overhearing her," she said. "Any cameras you can access?" she added, looking at Entrapta, Sam and Bow.

"Nothing," Entrapta replied. "The electronics they use here are pretty simple."

"Anything more complex probably does not survive the experiments," Sam said.

Right. This feels like infiltrating a Princess Alliance stronghold, Catra thought. Just without the magic defences. "So… we just open the door then and deal with whatever guards are placed outside?" She flexed her claws in case anyone had any doubts about what she meant.

"There will be guards outside," Sha're said. "And they will be familiar with Taweret's servants. We can't fool them with a disguise, either."

"Yes," Jakar agreed. "I fear subtlety won't help us here."

"Then blunt measures will." Jack grinned. "That's more my style, anyway. But we should try not to alert the entire base."

Catra looked at Adora, then flashed her fangs and nodded. "No problem."

They positioned themselves, Jack and Bow behind them, zat ready respectively arrow notched, and waited for Sha’re to operate the door. The servos whined - Entrapta mumbled that they were just a tiny bit underpowered - and the door started to slide open.

Catra dashed forward as soon as the gap was wide enough, then jumped to the side, vaulting over the guard to the left of the door. She twisted in the air, head pointed down, and lashed out, slicing into the man’s throat with her claws, and whatever he had been about to scream turned into a wet gurgle as blood shot out of his mouth.

On the other side, Adora tackled the guard into the wall, knocking the breath out of him, then smashed his head into the floor, helmet still on.

Catra landed on the floor, legs bending, gathering power to pounce - but an arrow hit the third guard, glue covering his entire head, and he stumbled, trying to rip it off, only for his hands to get stuck. A moment later, he dropped, shot with a zat - like the fourth guard.

“Clear,” Jack whispered.

Catra nodded and moved ahead, jumping over the growing pool of blood around her target. Her ears twitched, but she didn’t hear any alerts going off or anyone moving nearby. That was… suspicious. Shouldn’t the ring transporter be guarded as well if it was nearby? She reached the corner and stopped, crouching low on all fours to peek around it.

There was a door, armoured, but she couldn’t see any guards. Was Apophis trying to hide it in plain sight? She moved past it to check the next corridor but found no guards there either - though she could hear a patrol below her.

The others had reached the door in the meantime, so Catra doubled back. “Careful,” she hissed. “There should be guards here. And if they aren’t outside…”

"...then they are inside," Jack finished.

"Peekablue would be very useful right now," Glimmer commented. "But we can't linger. Let's go in before we draw more attention. We can take out any guards inside."

Probably. Catra still had her suspicions.

But Jakar was already cracking the lock, so she moved to get ready for another charge.

When he stepped back and to the side and she heard the servos starting to work, she tensed, ducking low so the others would be able to shoot over her head. Almost… now!

She launched herself forward, landing on all fours, claws digging into the floor as she whirled, ready to launch herself at… nobody? She sniffed. The air had a touch of… locker room smell?

Before she could narrow it down, the others rushed in, weapons aimed, and came to a stop as well. The room was, but for the controls for a ring transporter, empty.

"Well…" Jack shrugged. "I guess even we get a break sometimes. Unless it's a trap. It's probably a trap."

"Scanning!" Entrapta announced. "I don't detect any explosives. Or poison. Or anything else."

"The controls are secured with a code, but I can crack it," Jakar announced. "It's not very sophisticated."

Catra expected that. Any security measures on stuff you used every day had to be easy to use, or half the troops would end up skipping them just for convenience.

"And done… It's set to automatically pick one pre-programmed location," Jakar said.

“Alright. First wave: Me, Adora, Catra, Glimmer and Bow,” Jack said. “The rest of you come down once we give the clear.”

That sounded reasonable to Catra, and she stepped into the transport area. The others followed. Sam looked as if she wanted to argue, but she held her tongue.

“Beam us down, Scotty!” Jack said.

Catra snorted, and Jakar nodded. A moment later, the transporter started. Rings rose around them, and Catra felt a tingling sensation while her surroundings faded away.

And then she had to suppress a sudden urge to retch. It *stank*. Worse than a cadet barracks a month without any inspection. Glancing around, she saw the source - they were in a large room packed with people. People who shied away from them. People dressed in rags.

“I guess that’s where the slaves disappeared to,” Jack muttered next to her. “Should have taken Daniel with us.”

“Yes,” Adora agreed. She smiled at the slaves, but they looked even more scared. “Let’s call the others and…”

A rumbling noise, quickly replaced by a whining sound that kept growing stronger, drowned her out. Then, the entire room trembled, and Catra’s ears were assaulted by shrieks of panic. She clenched her teeth and slapped her hands over her ears, hissing with pain. What the…

It stopped as soon as it had started. Replaced by a buzzing in her ears - no, near her ears.

Her communicator had frizzed out.

“My tablet!” Bow complained. “They must have run an experiment!”

Hell! Catra bared her teeth. That meant half their gear - if they were lucky - just got fried.

"Carter? Carter?" she heard Jack snap.

No answer.

They had lost contact with the rest of their group.

*****

Holding Area, PU-9623, January 29th, 2000 (Earth Time)

Jack O'Neill stopped trying to use his communicator. It was obviously broken. As were all the communicators on them. It wasn't a catastrophe, though - they might have lost contact with half the team, but Carter and the others were at the ring transporter controls. They could just get them out again. And would as soon as they figured out that their comms had been wrecked. Which would take Carter about a fraction of a second.

Actually, she should have already used the transporter to get them out again. She would have tried to contact them after they had arrived - certainly after the experiment went off. That meant…
"What are the chances this wrecked the transporter?" he asked.

"Uh…" Bow sounded evasive. That was a bad sign. "I don't think it would be destroyed. They wouldn't risk that, I think, would they?"

"I don't think they would keep doing those experiments if they wrecked their transporters every time," Catra said.

Jack agreed with that. But why hadn't the others transported them back yet? Had something happened to them?

"They're afraid of us," Adora whispered.

Right. They were surrounded by slaves. Jack looked around. The people were trying to put as much distance between them and Jack and his friends as possible - pressing themselves against the

walls in some cases. At least there were no kids here - just adults. No older people, either. Yes, those were the missing workers. And they looked maltreated - gaunt in most cases. Starved.

“You don’t need to be afraid of us!” Adora spoke up before Jack could think of the best way to handle this. “We’re here to help you!” She smiled at them.

But the slaves just cringed and looked even more afraid.

That didn’t deter her. “We’re here to save you!” she went on.

Jack suppressed a groan. They had to find a way to save themselves first.

“I am She-Ra, Princess of Power. These are my friends: Queen Glimmer of Bright Moon, General Jack O’Neill of the Tau’ri, and Bow and Catra. We’ve been fighting the Goa’uld.”

Jack winced. That could backfire - had backfired in the past. Some of the snakes’ slaves took their religion seriously.

But there were gasps.

“She-Ra? The goddess?”

Adora winced at that. But before she could deny that, Jack whispered: “Don’t deny it. They need to trust us.” If they suddenly swarmed them…

One of the slaves - a young woman - slowly approached, almost crawling on her knees. “We’ve felt your blessing, goddess! You healed us!”

And speaking of healing… She had a barely healed wound on her leg, Jack saw.

“Please help us!” A middle-aged man added. He was cradling his left arm.

"We will," Adora said. " Ah… you don't need to kneel. We'll get you all out of here."

"As soon as our friends get the transporter working," Catra muttered under her breath.

"I still can't reach them," Bow said. "And my tablet is…" he trailed off with a grimace.

Broken beyond fixing, then. Jack nodded. Most of the slaves still looked afraid. Or knelt. Or both.

"If needed, Adora can restore magic to the planet, and then I can teleport us back to the others," Glimmer whispered.

Jack nodded. And Adora could blast a way to the surface with all the magic.

"Uh, that might not be the best idea, guys," Bow whispered. "That experiment broke my tablet and our communicators."

"Yes?" Jack looked at him.

"It broke the magitech in both," Bow said. "I checked."

Jack frowned. That meant…

"But the magic hasn't been restored to the planet yet," Glimmer said.

"They're experimenting with magitech," Bow confirmed. "Must be First Ones technology."

"Like the portal in the Fright Zone," Catra whispered.

"But… magitech works well with or without magic on a planet," Adora said.

"Yes. Normal stuff. But these are dimensional experiments…" Bow bit his lower lip again. "We don't know what they'll do with magic available. If the First Ones built whatever the Goa'uld here use

with magic in mind, the experiments could have vastly different effects."

Jack grimaced. Things were already dicey enough without such a boost. "Let's save that for our Plan B."

"Yes." Adora nodded. "But we need to get those people out. We can't leave them here to suffer."

Jack looked around for a door or anything. They wouldn't just use a transporter to access this room, would they? Sure, it would improve security and make escaping all but impossible without outside help, but… None of the slaves were avoiding parts of the walls. They would, if they had ever seen such a door. "It looks like the snakes really limited access to the room to the ring transporter." Damn. Jack hated it when his enemies played it smart.

"Yes, they did," Catra agreed. She looked around as well. "But this doesn't look like First Ones style."

She was right! The walls were built in the same style, from the same material, as the base. "This was built by the snakes," Jack said. "And I don't think that they worked through the transporter for that." He didn't think they would have been able to start working in the middle of the solid rock and soil here. So… "They must have dug a tunnel from which they excavated the room," he said.

"And that might still be around - just sealed off!" Catra grinned and looked at the walls. "Time to check!"

*****

Adora clenched her teeth and tried not to show it; these people were looking to her to be saved, and she couldn't do anything for them. Some were even praying! And their expressions… She didn't know what was worse, the fear or the hope.

She was such a fraud!

“Adora! Come here!” Catra called out, interrupting her thoughts. Her lover was standing at a wall, waving, while the poor people nearby were moving away - slowly, on the ground, as if they were afraid to stand.

Which they probably were. Adora clenched her teeth again and joined Catra. “What did you find?”

Catra grinned, flashing her fangs, and rapped her knuckles against the wall. “There's a hollow space behind this wall!” she announced with her ears twitching.

Oh. Adora couldn't hear anything like that, but she trusted Catra. “So Jack was right.“

“I knew it!” Jack grinned and walked over to them, followed by Bow and Glimmer. They caused more movement amongst the prisoners - some cringing away, others slowly following them, shy, scared smiles on their faces as if they didn't dare to hope.

Adora had the sudden urge to crush every Goa'uld here for doing this to them. She struggled not to show her anger, though - the prisoners would be scared even more.

“So, do your thing, holder of the holy drill!” Catra quipped.

But the prisoners around them gasped, repeating ‘holy drill’, and more started kneeling.

Adora shot her lover a glare. That was her fault!

Catra snorted in return, apparently unimpressed.

Sighing, Adora changed her sword into a pickaxe, prompting even more gasps and prayers. She ignored them and stepped up to the wall. Glancing around, she made sure everyone was far enough away so they wouldn't be in danger of being hit by fragments, then raised her pick and hit the wall. Hard.

The wall all but exploded in a cloud of dust, and she felt shards and pebbles hit her. She drew her weapon back and watched the dust settle, revealing a crater almost a foot thick.

Behind her, Catra whistled, Jack made a comment about anger management, and the prisoners' prayers increased in volume.

Sighing, Adora swung her pick a few more times, opening a hole to reveal a wide tunnel. Wide but rough, she noted.

"That doesn't look very structurally sound," Jack commented.

"No, it doesn't," Bow agreed, moving forward to peer into the tunnel. "Most of the support struts look haphazardly placed."

"Guess they weren't meant to last long," Catra said. She cocked her head, frowning. "I think I heard some crack from them."

"Maybe Adora opening the hole has put more pressure on them," Bow guessed. "Or the experiment - the tremors we felt might be building up tension in the rock."

"And they probably have been running a lot of them - this was the second in a day," Jack added. "Better hurry up and get us out of here."

"And them," Glimmer said, nodding at the room.

Of course. Adora nodded, then turned to face the prisoners. "Stay here. We'll open a way and then get you out."

"Yes, goddess!" a young woman said, bowing her head amongst whispers and murmurs.

Adora wanted to correct her, but this wasn't the time for that. Instead, she turned and looked at the ceiling. If she restored magic and used the power it granted her, she could blow a hole to the surface. Like she had done in the Eurondan bunker. But that would endanger everyone above them, and if the whole thing

collapsed… Better save that until they had no other option. She nodded, pressing her lips together. “Let's hurry!”

She stepped into the tunnel, but Catra dashed past her, leaving small tracks in the dust on the ground. Ahead of them, the tunnel turned, and Catra stopped at the corner, kneeling and touching the ground.

“It's wet,” she said, rubbing her fingers and looking back at them.

“That’s probably why they changed their heading,” Bow said. “If there's a water vein ahead, they could have flooded the tunnel if they had kept going straight ahead. They also treated the walls here with some sealant.” With an almost sheepish smile, he added: “My brother Dig is a miner.”

Ah. Adora nodded and eyed the walls of the tunnel there. Yes, she could see some sort of coating there - but some water was still seeping through. On the other hand, there was no pool on the ground. Maybe it evaporated? The tunnel was pretty warm.

Catra, meanwhile, was already moving around the corner. “Damn! They collapsed the tunnel!” she hissed.

Adora followed her. She was correct - debris, rocks mostly, filled the tunnel. They were trapped! She would have to use magic to get them out!

Catra moved forward, picking up a rock and looking at it. “Blast traces.”

Jack peered at it as well. “Yeah. Looks like from a staff weapon.” He glanced at the ceiling, then at the rocks ahead of them. “If they shot the ceiling to collapse it, and the rock ended up here, then the blockade can't be too large.”

Adora nodded. That made sense. “So, I could dig through it.”

“You might bring down the ceiling if you do it, though,” Bow pointed out. He glanced around. “We need to support the ceiling

before you start digging."

"With what?" Jack asked. "Adora can't keep it up if she's also supposed to dig."

Bow smiled. "We can build stone arches. Like for bridges. Adora can cut the pieces from the walls of the prison."

That sounded doable. Jack looked sceptical, but Adora was already headed back to the prison. She trusted her friend.

And they had to hurry. People depended on them. The prisoners. And their friends back in the base.

She wouldn't let them down.

*****

Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

Samantha Carter resisted the urge to once again try to raise the General on the comm. The communicators were fried - she had checked herself. Crystals shattered by whatever exotic effect those multidimensional energy experiments caused. It was almost certainly a magical effect - based on magitech, of course, since there was no magic available to directly power the technology used - to affect the crystals like that, although it was theoretically possible that a wave interacting with the crystals on just the right frequency would have worked as well. Theoretically. But that wouldn't have affected the other crystals in their gear, which had also broken when the entire room shook.

Maybe Apophis had realised that they used magic and was working on a countermeasure to counter their magitech-based weapons and sensors? And not merely their magitech gear, she added silently as she looked at the controls of the ring transporter.

"The transporter is out of action," Jakar said, straightening from where he had been bent over the console. "According to the

readings, it’s ‘resetting’.”

“Yes!” Entrapta nodded emphatically, her hair fanned out, holding up panels from where she was looking at the interior components of the transporter. “The crystal matrices have been knocked out of sync. Resynchronising will take some time, but I didn't find any critical damage. Except for serious wear on many components, though that’s still within safe parameters. Just that they could really use some maintenance and replacements soon.”

“It seems that the multidimensional energy discharges are severely affecting their own technology as well,” Sam said. That wasn't a sign of a mature - or safe - technology.

“We knew that already from the way they avoid using sensors in the base,” Jakar said.

“We suspected. We still suspect - this is just more support for that hypothesis,” Entrapta told him with a grin. “But it looks sound. Although we still don't know what they are trying to do! We really need to sneak into the research base!”

We really need to contact the General and the others, Sam mentally corrected her friend. They were cut off, their only way back disabled - temporarily disabled. But they just had to wait, she reassured herself. As soon as the transporters finished resetting, they could get them back.

As long as the group stayed within the transporter area - the ring transporter swapped the entire area between the rings with the target area. But what were the odds of the others staying put? Sam clenched her teeth. After losing contact for too long, they would assume the worst and try to get back on their own. Probably fearing that Sam's group needed help. Any second those transporters took longer to reset increased the chance of their friends leaving the transport area. “We need to prepare a message in case they have left the area,” she said. If only they could repair their communicators - or their radios. Those hadn't survived either. They needed tougher, hardened comms. With

more redundancy. Keep backup systems turned off. That should render them more resistant to such attacks.

“Someone is coming,” Teal'c interrupted her thoughts.

“Guards?” Sha're asked, zat'nik'nel ready.

“I presume so.” Teal'c cocked his head. “Several walking in step.”

A squad, then. Sam clenched her teeth. They should hide - if they were discovered right now, the mission would fail. And they would be caught in the middle of a base, with half their group missing, including their strongest. But hiding would mean abandoning the others… She pressed her lips together. She hated it, but they had no choice. “We need to leave,” she whispered.

“But…” Entrapta started to say.

“Now!” Sha’re cut her off. “We cannot get caught.”

No one else argued. Jakar was already moving to the door where Teal'c stood. Sam could hear the steps herself as she joined them - still a bit away but closing in.

“This way.” Teal'c led them into a side corridor.

Sam let the others pass, then followed them. Right before she turned the corner, she caught a glimpse of a Jaffa patrol walking past the side corridor towards the transporter room.

That had been close. Too close.

She could hear them talking but couldn't make out the words.

“One is complaining about the smell,” Teal'c said in a whisper next to her.

Her eyes widened. The smell? They had cleaned up some, enough not to leave tracks on the floor, but… She felt herself blush, silly as it was.

“They blame it on the ‘prisoners’ - and someone not airing the room after the last transport,” Teal'c went on.

Oh? Sam blinked. That smell - the stench of the air that the transporter had brought back when she had sent the General's group down! After swimming in an open sewer, it hadn't seemed too bad, but the Jaffa had noticed. And if there was no transport scheduled…

“They might blame it on a lazy slave,” Jakar whispered.

Might. Or, if they were diligent, check the transporter logs. What were the odds for either? Should they take the guards out? Sam tensed.

Teal'c shifted next to her. “They said the transporter is now working again.”

Sam gasped. That soon? “We have to take them out and secure the transporter!” she hissed. And then save the others!

But she could hear the transporter activating on the way to the room, and when she entered, the last ring was just vanishing into the floor. There was no sign of the guards.

“It smells different,” Teal'c commented.

Then the Jaffa had chosen a different destination than the one the others had gone to. Well, that didn't matter - they still had the old destination in the memory banks of the transporter and could…

She blinked, drew a sharp breath and rushed over to the console. A quick check confirmed her fear: The memory banks had reset as well. They had lost the transporter's addresses!

Sam felt the sudden urge to shoot whoever was responsible for running these experiments under such conditions.

*****

Holding Area, PU-9623, January 29th, 2000 (Earth Time)

Bow's idea had worked out. Or was working out - Catra watched as Adora finished the last support arc under his direction. Glimmer, holding a flashlight to illuminate the entire operation, was beaming as if she had come up with the idea, of course, but that was to be expected.

Catra glanced back towards the holding area, where a few of the slaves were peeking in. From their spot, they couldn't see anyone except Catra since she was standing at the corner - the perfect place to keep an eye on them and her friends. Well, almost perfect place; the wall was a bit too wet to lean comfortably against.

Two of the slaves realised that she had seen them - they must have good eyes since Catra was quite a bit away from them and the tunnel didn't have lighting installed - and ducked out, but the woman who had greeted Adora first stayed, staring straight at Catra.

Catra grinned and waved, and the woman bowed her head. She didn't try to enter the tunnel, though, so she wasn't about to disobey Adora's orders. Good. They couldn't fight whatever guards were in the area ahead with a bunch of poor slaves behind them.

On the other side of the corner, everyone took a step back as Adora started on the last part of the mass of gravel and rocks blocking the tunnel. A few hits with her magic pick reduced the stuff to rubble, which she scooped up after changing her pick into a huge shovel and spread it along the tunnel's walls, leaving a narrow path in the middle free. Catra would have to tease her about being a magical construction worker later. Once they were out of this pit.

She moved forward before Adora had finished fully clearing the blockade, quickly climbing over the remaining rocks and squeezing through the narrow opening on top.

“Catra! We don't know what’s on the other side!” Adora complained.

“That's why I am going in,” Catra replied, looking around.

“It's not safe! It could collapse!”

Catra eyed the ceiling. It didn't look particularly unstable or stable, so that was good enough for her. And it was only a few yards to a door - Goa'uld style, she noted - in front of her.

It should be safe enough.

She slid down the rubble on this side and approached the door. It was covered in dust and apparently hadn't been opened since the roof had collapsed. She could see where whoever had closed it had pushed back more rubble and rocks that must have fallen into the area behind the door. That was a good sign - it meant this part hadn't been abandoned. And the walls next to the door looked different. Familiar. She had seen that kind of metal before.

Behind her, she heard magic metal strike rocks, followed by a familiar grunting noise, then some huffing. Adora must have cleared away the last of the big rocks blocking the way and was squeezing through as well.

“Catra!”

“Just doing some recon,” Catra told her with a grin before nodding at the door. “Look at the walls.”

Adora peered at the metal, her armour shining brightly enough so even her eyes could see it, and frowned. “First Ones architecture.”

“Yeah.” Catra nodded. “Looks like we're at the underground base.”

“Let's hope it's the right one!” Jack joined them, followed by Bow and Glimmer.

“Ring transporters don't have the range to reach other systems, and we didn't pick up any other potential bases in the system,” Bow pointed out.

Jack grumbled in return. “So, can you crack this, or do we have to use my universal door opener?”

“Uh…” Bow smiled weakly and glanced at the ceiling. “I think we better don't use explosives.” He moved to the lock. “I should be able to open this even without my tablet. It's pretty simple. Like the ones above.”

Catra frowned. “So simple, the dimensional effects didn't wreck it?”

“Probably, yes,” Bow replied, fiddling with the lock before he pulled off the dusty cover. “Yeah, definitely.”

“So, they installed this after the experiments started?” Glimmer asked.

“Or they just didn't want to waste a better lock on a door leading to a tunnel they would collapse anyway,” Jack suggested. He shrugged. “Whatever. Let's go through and see what we can do to ruin some snakes’ day.”

“And save their prisoners,” Adora added, nodding firmly.

“Right.”

“Let me check first if I can hear anything,” Catra said, leaning forward to brush the dust off the door before pressing her ear against it. “No, nothing.” Again, good insulation.

“Guess it’ll be a surprise, then,” Jack said.

Hopefully, for the snakes and not for us, Catra thought as Bow pulled out some more tools from his belt and started working on the lock.

A minute later, the door chimed and started sliding to the side - only to get stuck almost immediately. Catra heard the servos moving it whine as they strained.

"Ah… it looks like they blocked the door as well…" Bow said.

Adora scoffed and stepped forward. She grabbed both parts of the door, clenched her teeth and pulled.

Screeching, the metal bent as she tore it open, revealing a corridor behind it that looked very familiar indeed. First Ones style.

Catra cocked her head, listening. That noise would have alerted all guards in the vicinity. Though, depending on how big the base was, they might have gotten lucky and escaped notice.

Or not, she corrected herself when Adora stepped inside, and a figure appeared in front of her - no, a hologram. She scowled at the sight.

"Greetings, visitors. Please identify yourself," the hologram said in Light Hope's creepy voice.

"Ah, damn, here we go again," Jack muttered behind her.

*****

Jack O'Neill was a human. Not an alien. That he had some alien genes that made some broken-down robot think he was an alien didn't change that. He wasn't a witch, either, but that didn't apply here. He had known meeting another Ancient AI was a possibility, but he had hoped it wouldn't happen.

Adora, though, was smiling. "Hello! I am Adora - She-Ra. These are Catra, Glimmer, Queen of Bright Moon, Bow, General O'Neill and Jakar/Mats."

The hologram bowed. "Greetings, Adora, General O'Neill. Welcome to Research Station Beta."

Jack sighed. Once again, the damn robot was ignoring everyone else but Adora and Jack. Wait… unlike Alpha, this bot hadn't told them that the station was at their disposal. "Who is in charge of the base?" he asked.

"That information is classified, General O'Neill."

Damn. Jack glanced at Adora, who was frowning. As were the others. Someone else had already taken over the base?

"There's a First One here?" Adora asked.

"That information is classified," the bot - presumably Beta - repeated itself.

"I'll take that as a yes," Jack said. "Whoever's in charge is working with the snakes," he said in a low voice.

Catra nodded and whispered: "Can't trust the bot."

Adora cleared her throat. "What about the prisoners in the room behind us?"

"Those are test subjects."

Test subjects? Jack clenched his teeth. So that was how Apophis was disposing of the slaves who knew too much!

"Test subjects?" Adora sounded livid.

"What experiments are they running here? More genetic engineering?" Catra asked.

The bot didn't react until Adora repeated the question: "What experiments are you running here?"

"That's classified as well."

"I don't think this is going to get any better," Jack said. "We should…"

“We want to talk to whoever is in charge,” Adora said, taking a step forward. “I assume you have already informed them of our arrival.”

“That is correct.”

“How long until the guard spider bots arrive?” Catra mumbled, looking around. Before Jack could say anything, her ears twitched, and she hissed: “Incoming!”

“Take cover!” Jack waved, falling back to the door.

Adora, of course, took a step forward, sword changing into a shield. “We haven’t attacked them,” she said.

The hologram tilted its head to the side. “I’m following my orders.”

“It’s Light Hope all over again!” Catra snarled, moving to the side as Bow and Glimmer fell back.

Jack could hear running steps now - several of them. He crouched down and aimed his gun down the corridor.

“This is not necessary. We just want to talk to whoever is in charge of the base!” Adora said, raising her voice. “We don’t want to fight you!”

The bot didn’t reply.

A few seconds later, the first rank of the Jaffa rushed around the corner, and Jack greeted them with a burst from his carbine that struck the leading Jaffa in the chest, punching through the armour.

The Jaffa went down while his comrade fired his staff weapon.

Adora caught the blast on her shield and charged. She crashed into the Jaffa in the lead, sending him flying back - and into the second rank, who was just getting over the fallen Jaffa. All went

down, and before they could get up again, Bow hit them with a glue arrow.

Then Catra landed next to them, claws slashing down. Blood flew, and she dropped to the floor a moment before a volley of blasts flew over her head. One blew a hole into the wall behind her, the others were caught by Adora.

Jack snapped off another burst but then had to hold his fire while Adora made short work of the rest of the Jaffa in close combat.

"I think we need to have a talk with the guy in charge about his hospitality," Jack said. A quite serious talk. Probably dead serious.

"Yes. And about their treatment of prisoners," Adora agreed, then turned and started running down the corridor.

As the rest of them followed her, Jack hoped she had an idea of where she was going.

He caught the bot's hologram fading out, smiling in that creepy way of hers, when he glanced over his shoulder to check their rear.

That rust bucket also needed a serious talking-to.

*****

Research Station Beta, PU-9623, January 29th, 2000 (Earth Time)

The centre of the base had to be somewhere ahead of them. And there would be its current commander. Adora was sure. Pretty sure. She knew the layout of the base from their scans - approximately, at least; First Ones technology made scans from a distance a bit tricky - and Research Station Alpha was built similarly.

It didn't matter that much, anyway. The base wasn't that big, and as long as they kept moving, they would reach the command

centre sooner or later. As she had been taught in cadet training, it was better to make a decision and act than do nothing.

She turned around the next corner, shield held in front of her - and caught a volley of staff blasts from a squad of Jaffa waiting in ambush on it. Clenching her teeth, Adora rushed them. They got off another, more ragged volley before she bowled them over.

Behind her, she heard a scream cut short, followed by a zat going off twice, and then Catra was at her side. “More incoming.” She nodded at the corridor to their right.

“How many Jaffa are down here?” Jack complained as he joined them.

“As many as Apophis thinks are needed to keep our mysterious First One in line,” Glimmer replied.

“Well, he's rapidly losing his safety margin,” Jack commented, crouching to aim down the corridor.

“They've stopped!” Catra hissed. Her tail swished behind her.

Adora sighed and moved forward. If the Jaffa didn't charge in screaming praise for Apophis, they would either prepare an ambush or throw grenades around the corner. Neither would help them. This was a senseless waste of lives, and once Adora met whoever was responsible for this…

She heard a staff weapon going off, and a Jaffa was thrown out of cover, crashing against the wall to her side - hit in the back, she realised.

More shots followed, and she ran forward, turning the corner - just in time to see one Jaffa smash the face of another with the butt of his staff weapon, sending the warrior reeling, before flipping the weapon and firing point-blank into the man's chestplate.

Most of the gore and blood splattered against her shield. A few shards of the Jaffa's armour bounced off her own as the victim collapsed - on top of another corpse on the ground.

Before she could say or do anything, the remaining Jaffa dropped to his knees.

"Goddess! Please spare me! I have rejected Apophis for your wisdom and mercy!"

What? Adora blinked.

"I have seen your fury and felt your blessings on Saqqara when you showed your might against Apophis!" the warrior continued with his face pressed against the floor - halfway into a pool of blood, she realised. "Please accept me in your service!"

"Ah…" Adora hesitated, then forced herself to smile at the man even if he couldn't see her. "What is your name, warrior?"

"Atak, Goddess!"

"Killed his own squad," Catra commented in a low voice behind her.

That was true. Could they trust him? Could this be a ploy? Adora didn't know. But if he was genuine… Would Apophis really try such a trap? After going to such lengths to hide his defeat? And would the Goa'uld think of such a plan when they didn't trust each other at all? She didn't think so.

She slowly nodded. "Welcome to the Alliance, Atak."

"Thank you, Goddess!" the Jaffa loudly said.

Adora heard Jack groan behind her but ignored him. "Stand up and face us, please."

"As you command, Goddess." Atak slowly rose, averting his eyes.

“I am She-Ra, Supreme Commander of the Alliance,” she told him, trying not to wince at the blood on his face. She could sort out that she wasn't a goddess later. “These are Glimmer, Queen of Bright Moon, Bow, Catra and General Jack O'Neill.”

Atak bowed towards her friends. “Your chosen companions. I saw them fight at your side against Apophis.”

So, he must have been among the guards they fought on Saqqara. And she probably healed him afterwards, when she restored magic to the planet.

“Yep. Our little dust off with dear old Apophis. How is he doing, by the way? And what are his people doing here?” Jack asked.

“And who's in charge here?” Catra added.

“The Goddess Taweret has joined Apophis as his queen,” Atak replied. “She rules this world - and commands this base.” He bowed again. “Apophis bade us to obey her as we would obey him. I have rejected her as I rejected him.”

“Good,” Adora said. But Taweret was in command here? She was a Goa'uld, not a First One. That made no… She blinked again. “Does the base - Beta - answer to her?”

“That’s the blue glowing hologram,” Jack added. “Talks about orders a lot and is generally annoying.”

Atak nodded. “Yes, Goddess. The base answers to her.”

Catra cursed next to Adora, as did Jack.

Adora wanted to curse as well.

Taweret must have a host with the First One gene. Or a First One.

Things were far worse than she had thought.

*****

The Secret Base Part 3

Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

Samantha Carter faced her situation in a calm and logical manner. They had lost the address of the transporter to which the General and the others had gone. And they had no means to reestablish communication with them. In addition to that, Sam's group was currently trying to avoid detection in a Goa'uld base manned with elite troops since, with the absence of Adora, they didn't have the means to fight their way out of the base, much less take it over. And the multidimensional energy experiments the Goa'uld were running on the planet had wrecked half their electronics and all their magitech gear, making it impossible to call for help from the fleet outside the system and severely hampering their ability to subvert the enemy systems. Those were the negatives.

On the positive side, between her and Entrapta, they should be able to come up with ways to compensate for their current technical difficulties. If their own gear and tools didn't work, they would appropriate the enemy's, which, presumably, would still work. Even though, Sam had to amend that thought, not perfectly, as the wiped memory of the ring transporter had illustrated. Further, they weren't completely helpless. Teal'c was one of the deadliest fighters Sam knew and, as importantly, intimately familiar with the enemy’s troops and tactics. Sha're had inside knowledge of the enemy's strategy and planning habits, and Daniel was not only an expert in Goa'uld history and culture but also a savant when it came to interacting with different and alien cultures. Although Sam wasn't quite sure yet how that would help them in their current predicament, she had been surprised by him before. Positively. And they were currently in the ring transporter room of the base, without guards to worry about.

All in all, their situation was far from the worst Sam had ever experienced. Critical, no doubt, but they weren't doomed. Of

course, as a member of SG-1, her standards were probably a bit skewed…

“Do we have any clues to find potential addresses in the memory banks?” she asked. Randomly trying addresses had been a staple at Stargate Command at the beginning, and even after they had acquired lists with the coordinates of gate systems, they had been looking for more systems - especially systems unknown to the Goa'uld, in the hope of finding allies against them. Which actually had worked out beyond their wildest hopes when they had stumbled upon Etheria’s Stargate. But that didn't work with ring transporters - the coordinates for those had to be much more precise than those for a Stargate, where you just had to ‘hit’ the stellar system, and the Stargate would do the rest. Which could cause problems by itself if there were more than one Stargate in a system, but… She focused on the problem at hand.

“No,” Entrapta replied. “The energy used by the transporter could narrow the potential destinations down, but we don't have enough data to correlate anything. We would need to observe a lot more uses. And compensate for the energy loss caused by the slight damage to the transporter. So…” She pouted. ”... it's not going to work well enough for this mission.”

“And we can't follow the smell,” Daniel said with a rueful smile.

Sam snorted, more to reward his attempt to replace the General's dark humour than because it had been a good joke. “Let's bug the transporter so we can record the next addresses,” she said.

“But didn't you lose most of your tools?” Daniel asked.

“Most but not all,” Sam replied.

“Yes!” Entrapta beamed. “And we're limited to very simple, sturdy systems. But if we make them tiny enough, and add a non-crystal or chip-based way to store data, it should work!”

“‘Non-crystal or chip based’ data storage?” Sha're asked.

“A tiny printer!” Entrapta was already bent over the open console controlling the ring transporter. “I saw an ad for a printer and bought one to check the mechanics. If we use thermal printing - well, the principle, it'll be more like branding - we should be able to rig something up to transcribe the addresses and coordinates the transporter uses!”

“Yes.” Sam smiled. It would be a challenge, but if they repurposed a soldering tool and constructed some sort of controls from composite metal that bent when heated, they could make this. They just had to…

“If I may make a suggestion,” Teal'c interrupted her thoughts. “Since the Jaffa working for the false gods have used the transporter after its memory was wiped, they must have known the address and entered it.”

Sam grimaced as she finished his suggestion. “And they will have that written down so it won't get erased when the transporter's memory bank suffers another wipe due to accumulated damage. We just have to find those notes and take them.”

“Indeed.” Teal'c inclined his head.

Sam tried not to feel stupid for missing the obvious solution to their main problem. At least the General wasn't here to tease her about it.

On the other hand, if the General were here, she wouldn't have had to come up with such a plan in the first place.

*****

Research Station Beta, PU-9623, January 29th, 2000 (Earth Time)

Great. Just great. A Goa'uld with a First One as host. In full control of a First One research station, aided by a crazy bot. “That explains the stupid experiments,” Catra muttered. “But why haven't they released their guard bots yet? We've just been facing

Jaffa.” And they could handle the Jaffa in their sleep. Maybe even without Adora.

Adora looked at Atak, but the Jaffa defector shook his head, bowing deeply. “Forgive me, Goddess, but I do not know what Taweret is planning. I am merely a guard; I was never taken into her or Apophis's confidence. Not even before the defeat he suffered at your hands.”

Catra snorted. With two of Apophis's Prime going rogue, it made a lot of sense that Apophis wouldn't trust them, much less the rest of his guards.

Adora smiled at the Jaffa. “There is nothing to forgive. You did not offend me - in fact, I am proud that you rejected Apophis and Taweret. I don't expect you to know all their plans.”

But it would have made things easier if you did, Catra silently added.

“Thank you for your mercy, Goddess!” Atak bowed so quickly, drops of blood were sent flying from his face.

Catra leaned into Adora and whispered: “Maybe add some divine decree about washing your face?”

“Catra!” Adora shook her head. “But we need to find Taweret. Do you know where she is?”

Atak straightened immediately. “Yes, Goddess! In her command centre! I can lead you there!” he said, nodding.

He didn't move, though. What was he waiting for, a written invitation? Catra blinked. Damn - he *was* waiting for orders from his goddess! She glanced at Adora.

Her lover was nodding. “Please do so!”

“As you command, Goddess!” Atak turned and started marching back from where he had come.

“I can’t wait for him and Priest to meet,” Jack muttered. “They'll probably debate the proper titles of their goddess for days. Or have a schism over it.”

“Jack!” Adora hissed while Catra chuckled.

But she was already moving faster to catch up with Atak. He seemed genuine, but as the humans said, better safe than sorry. If this was a trap, then she wouldn't let him lead them into an ambush.

Though as loud as his steps were, he might lead them into an ambush anyway without wanting to. On the other hand, the Jaffa would expect them to sneak, so this might actually be quite cunning - if he had thought about it. She would have to ask him later.

They reached another T-junction. No guards here - but Atak stopped before leaving their corridor. “The command centre is to our right. It is heavily guarded.”

Catra cocked her head. She couldn't hear anything from that direction… Wait! That sounded like metal faintly creaking. Someone must be shifting in their armour.

Behind them, the others arrived. “Command centre to the right,” Catra whispered. “Probably guarded.”

“Goddess!” Atak bowed again.

“Let's take them down.” Adora was mad, Catra could tell.

But Catra also knew her lover could control herself. At least enough not to kill Taweret's host, who was, probably, innocent. Though if they were a First One, that was more of a maybe - Between the Heart of Etheria and Research Station Alpha, Catra had seen enough to know that the First Ones hadn't been nice people. Or good people. She-Ras were the exception, of course.

“Let's go!” Adora nodded, changed her sword into a shield, and stormed around the corner.

Catra was hot on her heels. She heard cries of surprise and alert a moment before the first staff weapons fired, clenching her teeth as the wall next to her exploded from a hit that had missed Adora's shield.

They never learn, she thought as Adora crashed into the Jaffa formation, sending them scattering. One spun away and crashed into the wall next to her from the impact. Catra quickly veered off, slashing her claws through his neck guard and kicking the staff weapon he was still holding away.

Another had managed to keep standing even though he had been pushed to the door at his back and was swinging his staff to aim at Adora. She simply moved her shield, and the explosion from his own shot took the idiot out.

It barely scratched the door, though - obviously, the First Ones had taken care to protect their command centres.

“Let me check if there's…”

But before Bow could finish, Adora had stepped up to the door, pushed the slumped-over body of the Jaffa aside and rammed her newly changed sword through the gap in the middle.

Yeah, she was mad. Using - and killing - slaves as ‘test subjects’ would do that to her, Catra knew.

But just when Adora was starting to twist her blade to open a gap in the door, Catra heard a humming, steadily increasing noise again, and the whole room started to tremble. “Another experiment!” she spat.

“But… there was none scheduled!” Atak blurted. “I heard no order to fetch more test subjects, either, since the alert.”

They were using the slaves for experiments when their base was under attack? Catra shook her head. That went beyond stupid! Even for Goa'uld. But maybe not for First Ones.

“We have to stop them!” Glimmer gasped.

“We will!” Adora spat as the sound grew louder and the vibrations stronger. With a guttural grunt, she leaned in, reached into the gap - and tore it open.

And Catra jumped on her head, then pushed off, to the side, into the room. There was a line of Jaffa firing at Adora and behind them a woman wearing more gold than fabric - Taweret!

Catra flashed her teeth as she twisted, touching the ground, launching herself at the Goa'uld, her claws digging into the ground. This was…

Everything turned white.

*****

“CATRA!”

Jack O’Neill was still blinking, trying not to get blinded by the sun that had suddenly lit up the room or hit by the staff weapons he heard firing when Adora's scream made his ears ring.

“CATRA!”

Jack heard heavy footsteps, followed by more shots and screaming. And screeching metal.

He should have expected this. Or something like it. Still blinking rapidly, he cursed himself as he followed Adora into the room - just in time to see her grab the last Jaffa standing and lift him over her head.

The snake - Taweret - shot her with a ribbon device, repeatedly, but Adora just snarled, then hurled the struggling Jaffa at the

Goa'uld with enough force to throw her several yards back, into and over a console.

“Where is Catra?” Glimmer asked next to him.

Jack glanced around. He saw a snake and a dozen Jaffa on the ground, dead or unconscious, several weird Ancient devices, but no cat woman.

“Where is CATRA?” Adora screamed. She strode forward, grabbed the dazed snake by the throat and lifted her up. “What did you do to her?”

“Adora!” Glimmer blurted out.

“What did you do to her?” Adora repeated herself, shaking the snake like a ragdoll.

“Adora!” Glimmer ran towards her. “Stop!”

Jack clenched his teeth. That was why you didn't date your fellow team members. Adora was losing it in the middle of their mission. “She can't answer if you choke her to death,” he said - and tried not to flinch when Adora turned her head and glared at him with an expression that made a shiver run down his spine.

This is Adora, he told himself. She won't turn on her friends even when mad with grief. Or so he hoped.

“Please, Adora. Jack's right,” Bow said.

“Don't kill her - you'd kill her host,” Glimmer added.

Adora froze for a moment, then drew a sharp breath and released the snake.

Taweret fell down to the floor, wheezing and coughing, collapsing to her knees. Before she could recover, Adora grabbed her arm and tore her ribbon device off, crushing it in the process.

The research heads back home won’t be happy about that, Jack thought. He pushed the thought away. He had to focus. “What did you do?” he asked.

Taweret didn't even look at him. She was staring at Adora, who was towering over her. “Who… who are you?” the snake asked, then coughed. “What are you?”

“This is Adora.”

Jack whirled, raising his gun to his shoulder. Beta’s hologram was floating there, smiling.

“She is the new commander of Research Station Beta,” the bot went on. “The station is at your disposal, Adora.”

“What?” Jack blurted out together with everyone else - even the snake.

“You are no longer in charge of this research station, Queen Taweret,” the bot said.

“Traitor!” the snake spat. “I am your commander! A First One! You said so!”

Beta’s smile didn't change. “Your mental state is in doubt. Adora is the obvious replacement.”

“I am your goddess!” Taweret screeched before starting to cough and holding her throat.

“What are your orders, Adora?” Beta asked.

“Ah…” Adora blinked. “What did she do to Catra?”

“The subject used the station's experimental dimensional gate projector in a misguided and fairly desperate attempt to trap you in another dimension. Predictably, it failed, but your friend was caught in its effect.” The bot lowered its head. “I attempted to

stop her, but I could not countermand her orders no matter how wrong. I am sorry.”

Jack narrowed his eyes. The bot tried to stop the snake? Yeah, right.

The others looked shocked, though.

“Catra's trapped in another dimension?” Adora gasped.

“Like…” Glimmer trailed off.

Jack winced. Yeah, that would hit a nerve.

Taweret tried to scramble away, but Adora grabbed her head before she could scoot more than a yard. “Where did you send Catra?”

The snake must have found her spine again since she spat at Adora. “You'll never find her! None of the slaves ever got back!”

For a moment, Adora looked like she would murder Taweret on the spot. But she shook her head and scoffed. “That's what you think.” Turning to Beta, she said: “How many Jaffa are still active in the research station?”

“Two squads of four each are securing the power generator and the dimensional gate projector, Adora,” the bot replied.

“We need to take them out. And we need to secure the entrances,” Jack said.

Atak nodded. “We can turn off the ring transporter we installed in the base, Goddess.”

“That would cut off our friends as well,” Bow said.

Jack pressed his lips together. What were Carter and the others doing, anyway? They should have gotten the transporter working by now.

Adora hesitated a moment, then nodded. “Let's secure the base and lock Taweret up somewhere. Then we'll find the others and take out all Goa’uld forces in the system.” She turned to Beta. “And then we'll get all our friends back. No matter the cost.”

Beta beamed. “Research Station Beta is at your disposal, Adora.”

Jack couldn't help thinking that she looked like a scientist who had just gotten an unlimited research grant from the government. And why was she ignoring him? It wasn't as if he was an alien, but she had addressed him as one before, like Alpha, hadn't she?

*****

“The research station is secure. The transporter has been deactivated.”

Adora nodded at Beta’s report. She had taken out the remaining Jaffa while Bow had disabled the ring transporter with Glimmer and Jack. The survivors were now secured in a ‘holding area’ Beta had opened. Taweret herself was locked in what Beta had called a ‘containment field’ - force fields like those the Horde had used in their cells, just without actual walls. They had stripped the Goa’uld of all jewellery beforehand, of course - Goa’uld liked to hide their weapons and tools as jewellery. Or they liked using their weapons and gear as decorations. It was hard to tell.

Adora glanced at the woman glaring at her from her ‘cell’ in the corner and sighed. She had almost killed - murdered - Taweret’s host. A victim of the Goa’uld - and a prisoner of war. Technically, at least. Adora shook her head at her own… lapse. She should have known better than that. She was the Supreme Commander of the Alliance. She would have to do better than that. Even after what the Goa’uld queen had done to Catra.

She clenched her teeth, struggling with the rage and desperation filling her. Catra was… *trapped* in another dimension. And it was all Adora’s fault - she should have expected a trap instead of rushing in.

But she would save her love. And everyone else that Taweret had used in her evil experiments. She would get Catra back! She had done it before, she would do it again!

But you haven't been able to save Angella, a small voice whispered in the back of her head. It sounded like Shadow Weaver.

She pushed the thought away. She couldn't dwell on that. Not now.

"We've disabled the transporter," Bow announced when he returned with the others. "Temporarily. I can easily turn it back on, but I can't do it by remote - not without my tablet."

Which had been damaged by the multi-dimensional experiments. Adora nodded. "That leaves the ring transporter in the holding area." Where the slaves were.

"That's where the others will head to," Jack said. "We can't disable that."

"They would have reached us already if they could," Glimmer said. "They must be unable to use the transporter."

Adora pressed her lips together and looked at Atak. "You said it usually takes a few minutes for the transporter to reset after an experiment."

"Yes, Goddess!" Atak bowed his head instead of nodding. "But it doesn't usually take this long."

"It might have been damaged by the experiments," Bow said. "If it gets reset by the effects, then it is affected. It could have accumulated minor stress damage with each experiment until something serious got broken."

If the transporter was damaged, Sam and Entrapta should be able to repair it. It might take them a bit of time, though, depending on how severe the damage was. That was the best case. "We

need to contact them. Can you control the ring transporters here?" she asked Bow.

"Once I crack Taweret's controller, yes," he replied. "But that will take a while."

"So, we'll disable the ring transporter in the holding area until you can control them," Adora said. "And evacuate the slaves to the station here." She turned to Beta's holographic projection, which was floating nearby. "Do we have sufficient quarters for them?"

Beta nodded. "Yes, although with limited comforts."

"What does that mean?" Jack asked.

"They will have to stay in crowded quarters with limited supplies."

"Is it better than their current, ah, quarters?" Adora asked.

"Yes."

Adora nodded. "Good. Prepare the rooms. We'll fetch them."

"As you wish, Adora." Beta faded away.

Adora turned to the others. Bow would have to come along to disable the transporter. And she wanted to keep Atak close to her. Just in case. But someone would have to stay here and both guard Taweret and the control room of the station."

"I'll keep an eye on the snake," Jack said with a wry, humourless smile.

He was the best choice - he had the Ancient gene. Although…
"Beta," Adora spoke up.

Beta's projection reappeared. "Yes, Adora?"

"Jack's in command until I return."

“I assumed that already, Adora.” Beta glanced at Jack. “But it is good to have confirmation about your chain of command.”

“He also outranks Taweret,” Adora added. “Actually, she has no authority over you.”

“I also assumed that.”

Jack frowned. “Speaking of Taweret, are you aware that the real Taweret is a parasite controlling a First One host and not a First One?”

“Yes.” Beta nodded.

“And you let her take over the station?” Adora blurted out. How could Beta have allowed this?

“I surrendered the station to the First One Zahra. She then voluntarily surrendered her body to Taweret,” Beta said. “Apparently, she considered that a great honour and ordered me to obey her religious figure as if she herself were giving the order. Since that order was given before she became a host and I lacked any other legitimate authority figure to countermand it, I was bound to obey her.”

That explained it. Zahra must have been a slave conditioned to worship Taweret.

“Just following orders, huh?” Jack commented.

“Yes.” Beta smiled. “That was what I was built for.”

Adora grimaced. On the one hand, she knew that blind obedience was a terrible idea for any organisation. Especially if the First Ones were involved. On the other hand, having the bot in control of a First Ones research station acting on their own wasn’t a good idea either. Not at all. And if Taweret’s host was a true believer in the Goa’uld’s divinity… Well, that could wait for a moment. They had to finish securing the station,

She nodded. “Let’s go. And once we’re back, you’ll tell us everything about those experiments.”

“Yes, Adora.”

*****

Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

“Alright! We’ve hacked the security system! As far as you can call it a security system, of course. It’s more like a bunch of sensors that all report to one central authority, though as far as we can tell, at least, the readings aren’t integrated there.”

“It’s probably just guards watching screens,” Samantha Carter summed up Entrapta’s explanation for the others.

“Yes. Their experiments must really handicap their security,” Entrapta agreed. “That’s why setting up a proper lab and testing grounds is so important!”

“Their loss is our gain,” Sha’re said.

“Indeed.” Teal’c nodded slowly. “But it behoves us not to underestimate Apophis’s guards. They will be very alert - as soon as they suspect our presence, they will put the base on alert and mobilise all available warriors.”

“So, we best not get noticed.” Daniel smiled, but it looked a little forced.

Sam could understand that - they needed to either steal the coordinates the guards used from under their noses or ambush a patrol with them. Either was a challenge. Ambushing a patrol without alerting anyone might be easier, especially with the security sensors under their control, but sooner or later, the rest of the guards would notice the missing patrol and react accordingly. Sam would really prefer to avoid that until they had linked up back with the rest of their team.

She looked at the feed on the screen Entrapata and she had cobbled together - ‘sturdy enough’, according to her friend, to survive the next experiment. Unfortunately, the security centre wasn’t covered by the cameras. But the two corridors connecting to it were, and when the doors opened, parts of the interior were revealed.

And that didn’t look promising. Sam had spotted at least three guards inside. Probably more - the room was large, and a decent part of it was not visible from the cameras’ angles, even with the doors open.

“They might be keeping the guards ready at the security centre,” Teal’c said, “in order to direct them to any possible security breach at once without interference.” He looked at Sam. “Taking all of them out without raising an alarm might be difficult.”

And if Teal’c said that, it meant impossible - at least for the team they had available. Unless… “The security centre is supposed to be protected against gas attacks, right?” Sam asked.

“It’s a standard precaution,” Teal’c replied.

“Yes. Poison gas used to be a staple for assassinations and coups in the past until most System Lords adapted,” Sha’re agreed. “It hasn’t been used much lately, as far as I know.”

“That means they will have an internal oxygen supply,” Sam said. “But will they have adjusted that for the interference from the experiments?” The base was rather new, after all, and people tended to cut corners when rushing things. The security system showed that already.

“Oh!” Entrapta smiled. “But where do we get poison gas?”

“We don't,” Sam replied. Not technically, at least. Then she started to explain.

*****

Samantha Carter looked up at the ventilation duct's opening. Entrapta's hair was waving at her. So, everything was ready. Good. She checked her screen. She couldn't see any patrols in the area. And they couldn't wait any longer any more - the risk of being detected was too great. She tugged twice on the strand of hair and watched the screen again.

For a few seconds, nothing happened. Then the doors flew open and a dozen Jaffa rushed out of the centre, followed by a cloud of smoke before the doors closed again. An alert sounded in the base as well, and Sam tensed. That was the largest weakness of their plan. If the Jaffa were too stubborn or suspicious…

On the screen, she saw two patrols rushing towards the service centre. They were carrying firefighting gear. She smiled and took a deep breath - it seemed their plan was working. Now, if everything else worked out…

She pressed her lips together as the seconds passed. On the screen, the Jaffa gathered in front of both doors, extinguishers ready. Sam made a mental note to study the gear afterwards - this would also give them intel about the damage control skills of the enemy fleet.

Then the doors opened, and the guards, wearing full-face helmets, rushed in to fight a fire that had never been real. And as she had hoped, the Jaffa seemed to assume that the life support unit had simply broken down - at least they acted like that was the case; Sam was sure that if they suspected enemy action, they wouldn't stand around complaining.

“All done!” Entrapta's voice sounded above Sam's head. “The unit was easy to sabotage!”

She looked up and saw Entrapta wriggle out of the ventilation duct. Even a person as small as her friend had trouble fitting through them. Without her hair, she wouldn't have been able to move quickly enough through the ducts - or at all. But she had

managed. And now the Jaffa would be busy airing out and repairing their security centre.

"I got pictures off their sheets!" Entrapta announced as her hair tendrils set her down on the floor. "It felt like back in the Fright Zone! We should travel through ventilation ducts more often! It's efficient and fun!"

Sam smiled. "I'll take it under consideration. But let's head back to the ring transporter." And get the others back, she added to herself as they quickly moved along the planned route back to the others.

Her good mood vanished as soon as she tried to use the transporter, though.

The receiving transporters were not active.

*****

Unknown Location, January 29th, 2000 (Earth Time)

When Catra finally could see more than blurry spots, she found herself floating and staring at nothing. "Adora?" she asked, turning around. Adora had been right behind her. And a bit to her left.

But Adora wasn't there. Her head swivelled frantically while she looked around and above and below. Nothing. Just white emptiness. She was floating in…

She drew a sharp breath when she realised what had happened. She had charged into a trap, foolishly thinking she had the drop on the enemy, and now… Was this the afterlife? Dying was supposed to hurt, though. On the other hand, if she had been killed so fast, she didn't realise it until now, would it have hurt?

But what would have killed her? Some disintegration ray? The Goa'uld had the technology, zat'nik'tels proved that, but they took three hits to completely dissolve your body. But they might have

improved on that - this was a research station. And they had used slaves as test subjects…

Her eyes widened. This wasn't a Goa'uld research station but a First Ones! And one dealing with multidimensional energy discharges or whatever Entrapta and Sam had called it. And she had heard the sound of another such experiment when they had breached the room, and so…

She closed her eyes and hissed through clenched teeth.

…she was probably in another dimension. Or dead. Couldn't exclude that.

Not that it mattered, Catra guessed. Not when she was stuck floating in nothing. At least it was bright and not dark. Being lost in total darkness would be worse. Much worse.

Not that she had much to look at - just herself.

She looked down at her body, wriggling her toes for a moment, unsheathing and sheathing her claws. She didn't feel dead. Or weird. She cocked her head, moved her ears and tail, stretched. Everything felt like it should.

And yet… She sniffed the air. She smelt her sweat, but only traces of smoke, dust and the stench from the slave area. But nothing else. This weird space where she was floating had no scent of its own. And no sound - her ears didn't hear anything.

Maybe she was dead, and this was the light you supposedly saw when dying. And the afterlife was an eternity floating in nothing.

She hissed again and forced the thought away. She wasn't dead. She was just… trapped in some dimension. The others would come for her. Adora wouldn't abandon her. She would do everything to get Catra back. They would have taken control of the research station now. Soon, they would bring in Entrapta and Sam. And call in Hordak - he had experience with dimensional travel.

No, it wouldn't be too long before Catra would be saved. She just had to be patient and wait. She could do that. Just do nothing. Enjoy the quiet. Relax. Rest.

She closed her eyes and took a deep breath. Still no scent. No sound other than her breathing. It was peaceful. And the temperature was fine. Not warm, but not cold either.

She stretched again and shifted around. It was like being out in space. Just without a spacesuit. But the lack of gravity was the same.

Still, it wasn't the best spot for a nap. She didn't need a bed, but a patch of sunlight would be nice. Floating in the sun, warm and comfortable… She sighed at the thought.

And felt her skin grow warmer.

She opened her eyes with a gasp. What the… There was a sun? She turned her head, then had to jerk away, closing her eyes. Yes, there was a sun. But how? Had she been moving all this time? Or had she travelled into another dimension? Or…

A soft sound made her ears twitch, and she turned. Another light, a bit away, not nearly as bright as the sun, had appeared - and was fading. Replaced by… a glowing person?

She squinted. The person was floating like Catra was - and turning around. As soon as they saw Catra, they flew straight at her.

Catra blinked. That was… Her eyes widened. That was… "Adora!" She had found her! Just as Catra had known she would.

Adora came to a stop in front of her. "There you are! Don't be afrai… Catra?"

"Adora!" Catra beamed at her. "You found me!" It was her. Although she was wearing her old outfit, Catra noticed. The one with the skirt and shorts.

And she was glaring at Catra with an expression that made her flinch.

*****

Research Station Beta, PU-9623, January 29th, 2000 (Earth Time)

Carter and the others were still out of contact. Not *missing* - they were probably raising hell in Apophis's base on top. Just unable to contact them for technical reasons. Jack O'Neill was sure of that. Pretty sure.

Besides, if the Jaffa had fought the others, or even just detected them, they would have contacted her scaly majesty at once, and they hadn't received a call on the station's comm so far. Unlike the snake's comm, or the Etherians', the station's FTL comms had been 'specifically hardened to resist the experiments' side effects', as the bot had described it, and Taweret had had a set of those comms moved to the base on the surface. Unfortunately, it was in the security centre there, so the odds of Carter and the others being able to use it weren't great - and if they managed to get control of the comms, they wouldn't take the risk of trying to contact the underground station and alert Taweret.

It was really annoying that they had comms back and still couldn't reach the others. At least they had been able to use the station's FTL comms to reestablish contact with the task force outside the system.

"...so, stay ready to launch the prepared attack on our signal," Jack heard Adora order in the background.

"As you command, Your Divine Highness!"

"It is remarkable that you have been able to subvert our ancient enemies." The Bot's projection appeared next to Jack, almost startling him.

"They've seen the light," he replied with a twisted grin.

“The task force is ready to take out the Goa’uld forces in the system,” Adora announced, walking over to them. “Now, Beta, tell me everything about the experiments you were running here!”

“Yes, Adora.” Beta nodded. “As you are already aware, this station - and myself - were built to conduct multi-dimensional research. As you likely know, bridging alternate realities is possible, but travelling there is quite dangerous due to the entropic cascade effect. Because of this, this station was tasked with finding safer ways to reach alternate universes and came to build the Dimensional Gate Projector.”

“Yep, of course, entropic cascade stuff, we know everything about that.” Jack nodded, then glanced at the others. They seemed as lost as he felt.

“Good.” Apparently, the bot wasn’t programmed for sarcasm.

Wait! Jack blinked. “Are you talking about the Quantum Mirror?”

Beta cocked its head, looking confused. “I am not familiar with that designation.”

“That alien device that allows travelling to an alternate reality,” Jack said. “Daniel used it once and went to a universe where Earth had fallen to the Goa’uld. That was why he could warn us about Apophis’s attack. It kinda looks like a mirror. Sort of.” He made vague motions with his hands to show the outline.

“I am not familiar with such a device,” Beta said.

That was weird. Shouldn’t an Ancient bot know about that device?

“Where is it? This could significantly advance our research!” Beta had an almost eager expression.

Scratch that, Jack amended his thoughts as the bot leaned in, definitely eager. He had seen housewives looking more distant while pressed against Target doors on Black Friday.

"It was destroyed, actually," Bow said. "*Because* it's so dangerous. The energy needed to breach the dimensional barrier is so massive, a containment failure could have wrecked reality itself."

Beta glared at him. "That's not a reason to dismantle it! That's a reason not to fail an experiment!"

Jack couldn't help thinking that he wasn't really sad that the people who programmed this bot were gone.

"What's done is done," Adora cut in. "What exactly were you doing here? What did happen to Catra?"

"Your, ah, friend was targeted by a portal that was part of an experiment using unstable dimensions as a travel medium to reach alternate realities," Beta replied.

"Unstable dimensions?"

"Proto-pocket dimensions," Beta explained. "Generated but not yet completed. The theory is that they will be able to bridge alternate realities that are so close to ours, that the entropic cascade effect will not appear. Unfortunately, we haven't been able to verify this so far." The bot frowned. "But recently, Taweret had changed the parameters of the experiment. Instead of retrieving test subjects to refine the mechanics of safe dimensional travel, she wanted to focus on its use as a means to remove starships and other objects from our universe - even though this had already been demonstrated successfully during the war against Horde Prime."

Jack blinked. They wanted to weaponise this? Wait - the debris they had analysed earlier! "You've blown up Horde frigates?"

"Yes." Beta nodded. "Although it was an unsuccessful test for transporting starships, it worked as a weapon and removed a threat to this station."

Damn! Jack clenched his teeth. If they had attacked right away with the task force, they would've run straight into this…

“If it already worked as a weapon, why were you doing more experiments with it?” Glimmer asked.

“The power requirements and side effects of dimensional travel prevent its use as a ship-based system, especially when installed on a vessel using inferior technology such as a Ha’tak, though Taweret was determined to change this. So far, she hasn’t succeeded.” Beta sounded actually smug about this.

“The power transfer to the Ha’tak in orbit!” Bow exclaimed.

“Yes. The damage to the ship has been more limited than in her first attempt.”

First attempt? The missing Ha’tak! Taweret must have blown it up in an experiment. So, they didn’t have to worry about Ha’taks sending Horde frigates into other dimensions. And if Jack had anything to say about this, they would never have to.

“This ends now. Your only goal is to find Catra - and the others - and take them back!” Adora ordered.

“This will require more experiments, Adora. With test subjects as before.”

Beta sounded too eager again, in Jack’s opinion.

*****

The Secret Base Part 4

Research Station Beta, PU-9623, January 29th, 2000 (Earth Time)

"We're not using people as test subjects!" Adora snapped at Beta.

The bot's projection frowned. "But how else do you suggest we develop the technology necessary to recover your friend? As I explained, since Queen Taweret had ordered the experiments' parameters changed, we have made no progress with the recovering part of the project."

"We'll find another way!" They had to! And they would! "We'll get Entrapta and Sam working on this. And Hordak."

"I am not familiar with any of these people," Beta replied.

"Smartest women in the galaxy," Jack commented. "Except for Hordak, of course."

Beta cocked her head sideways and looked at Jack. "If Hordak is not as smart, why would she be included in the research?"

"I meant he's not a woman," Jack explained.

"Ah."

"He has experience with transporting people into other dimensions," Adora said. That was how Hordak had arrived on Etheria while it had still been trapped in Despondos. Oh. "We'll also have to go through the databanks on Etheria that remained from Light Hope." She clenched her teeth at the thought of Light Hope's actions, Mara, and everything else that had gone so wrong.

"Light Hope? I am not…"

"...not familiar with that person, yes, yes," Jack cut in.

“She was a bot like you,” Adora explained. “She transported me from this dimension into Despondos when I was a baby.”

“Oh. Another like Alpha and myself?” Beta perked up. “And you have access to her data about dimensional travel?”

“We don’t know. She was destroyed during the war against Horde Prime,” Adora said. “But she wasn’t in control of a research station like you and Alpha are.”

“And yet she managed to transport people to and from other dimensions? We must recover as much of her data as possible! This could massively advance our research here!” Beta nodded eagerly. “And, of course, this could be crucial for recovering your friend.”

Yes, of course - Adora should have thought about this immediately! Mara had been able to transport the entire solar system of Etheria into Despondos! Adora should be able to recover Catra. Especially if she had the power from restoring magic to this world at her disposal.

But she didn’t know how to do it. She bit her lower lip. If she tried this and failed, wielding the power of a world’s magic, the consequences could be catastrophic.

Then I can’t fail, she thought, nodding again - before remembering what Beta had said about not failing experiments. Maybe…

“Adora?”

She blinked. “Yes, Glimmer?”

“You were kinda… zoned out.” Glimmer smiled a little weakly.

“Sorry!” Adora matched her smile. “I was… thinking about alternatives.” She shook her head. “First, we need to contact the others. And quickly.” Before something else went wrong.

“You could use the dimensional gate projector to deal with Taweret’s guards,” Beta suggested. “The coordinates of their base are known. And this would net us more data about dimensional travel, potentially facilitating your friend’s recovery.”

What? Send more people into another dimension? Even if they were working for Apophis, that would be cruel. Even if, once they could save Catra, they could save everyone, it would be…

“Our friends are also in that base,” Jack reminded her. “We don’t want to accidentally transport them into another dimension, do we?”

Right. Adora shook her head. “We’re not using the dimensional gate projector on anyone.”

“That will severely hinder our research into recovering your friend,” Beta said.

“We’ll manage,” Glimmer told her.

“Yes, we will.” Adora looked at the others. “If we can’t contact the others, then we’ll have to clear the base ourselves. The guards still haven’t tried to contact Taweret, so they haven’t been caught.”

“Using a transporter requires an active transporter as a destination,” Beta told them. “Otherwise, the energy used will be released in an uncontrolled and usually highly destructive manner.”

“We’re aware of that,” Jack said. “Don’t worry.”

His smile was a little too toothy. It reminded Adora of… She didn’t want to go there. “Let’s go,” she said. “Jack, stay here.”

He didn’t like that. Not at all - his expression told her that. She understood, of course; she wouldn’t want to stay back when they were going to save Catra. But he was the only other ‘First One’

here with them, and while Adora didn't think Beta would betray her, there was just something about the bot that made her wary.

And judging from the glance Jack sent at the bot before he nodded, he felt the same.

"Yeah, right, sure."

"Let's go!" Glimmer was already moving.

Two minutes later, they were at the ring transporter, and Bow was checking the controls.

"The transporter in the Goa'uld base is active," he reported.

Adora nodded and drew her sword. "Send me up first." She could handle staff weapon blasts from an ambush. The others couldn't. "Give me a minute to get clear before you follow." And to clear the room if necessary.

Glimmer frowned at her but didn't argue. Bow nodded, and Atak straightened. "Yes, Goddess!"

Then Bow pushed a button, and the rings rose around Adora. She took a deep breath and tensed. If this was a trap…

The world shifted, and she appeared in the base transport room - surrounded by her friends, all of them aiming their weapons at her.

"Uh… Hi! Sorry for being late!" She smiled at them.

*****

Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

Samantha Carter lowered her weapon and nodded at Adora. And tried not to feel slightly annoyed at the fact that her plan to get

the coordinates for the transporter had just been rendered redundant. “What happened?”

“Adora! You’re back!” Entrapta. “How are the others? Did you find the base?”

“Yes, we did,” Adora replied. She lost her smile, though, Sam noticed. “We captured Taweret, dealt with her guards and secured the research station. But we lost Catra - Taweret used an experimental gate projector to transport her into another dimension, and we need to get her back!”

Sam drew a sharp breath. Lost in another dimension? The odds of Catra surviving that weren’t good. Not at all.

Entrapta gasped. “Like Angella?”

Sam winced. Glimmer’s mother had sacrificed herself to stabilise an interdimensional portal that had threatened to unravel reality.

“We don’t know. Not yet. Things are different,” Adora said as she left the transport area. “The others are fine. Ah! We also met Atak - he’s a former guard for Apophis who deserted them and joined us.” She winced. “He, ah, worships me.”

Sam glanced at Teal’c. That was his area of expertise. Well, Jaffa deserters, not the religious part.

“I see.” Teal’c slowly nodded. “He was on Saqarra then when we raided Apophi’s palace?”

“Yes!” Adora nodded, then checked her watch. “The others should arrive shortly.”

As if they had waited for a cue, the rings rose again, and the rest of Adora’s group appeared. Except for the General, though.

“Jack’s, ah, keeping an eye on Taweret and Beta, the bot controlling the station” Adora must have noticed Sam’s reaction.

“Like Alpha?” Daniel asked.

“A bit too much like her, yes,” Adora said, wincing. Then she straightened. “So! We’ve reestablished contact with the fleet. We can coordinate our attack on the base with the strike at Apophis’s ships in the system.”

“We’ve temporarily sabotaged their security centre,” Sam informed them. “But that won’t last.”

“We don’t need much time.” Adora checked her watch again. “We’ll take over the security centre; there should be a working FTL communicator there so we can contact Jack and the fleet and coordinate our attacks.” She looked at Atak. The Jaffa was staring at Teal’c. Both nodded after a second. “Teal’c and Atak take the lead. Once we have taken the security centre, Sam, Entrapta, Daniel and Sha’re guard it while we attack the rest of the base,” Adora went on. “Everyone got that?”

“Yes,” Sam said in unison with the others.

“Alright! Let’s go!”

They followed Teal’c and Atak out of the room and quickly reached the security centre from which some smoke was still escaping. Despite that distraction, one Jaffa noticed them. His alert was cut down by Teal’c shooting him with a staff weapon, but the rest of the guards whirled and grabbed weapons.

It didn’t do them any good, though - Adora charged ahead and smashed into them before they could form a line, continuing into the security centre.

Atak and Teal’c finished off the survivors before Sam could line up a shot. Adora had been more brutal than usual, Sam noticed as she stepped past the crushed and blown-up bodies. Sam did not doubt that Catra missing was the reason for that.

Inside the security centre, the smoke was on a nuisance level.

Adora finished the last guard as they entered and turned toward them. “Contact the fleet and Jack. Tell the fleet to initiate the attack so they strike in three minutes.”

Sam didn’t quite run, but she made sure to get to the comms first, then opened channels to the General and the Task Force.

She reminded her to stay professional when talking to the General and informed him of the plan before contacting the fleet.

Meanwhile, Entrapta had taken over the FTL scanners, and while Adora led the others out and Daniel and Sha’re stood guard at the entrances, Sam watched the display of the system and Apophis’s guard fleet while she mentally counted down.

Almost on the mark, the first wave of the frigates dropped out of hyperspace and immediately engaged the enemy. A few seconds later, the display was filled with emergency alerts and damage notices, followed by Ha’taks disappearing.

No surprise there - a Horde frigate outclassed a Ha’tak, and even with the frigates serving as troop transporters and their escorts hanging back, the task force significantly outnumbered the enemy. The outcome was never in doubt. One by one, the Goa’uld ships blew up or were crippled under the coordinated fire.

The two Ha’taks in orbit were no exception - the one in geostationary orbit over the base was literally shot to pieces that burnt up in the atmosphere while the remains of the one above the pole crashed into the main landmass of the planet.

And then the second wave, transporting the troops, moved in, entering the planet’s orbit, shuttles detaching and heading down.

Sam didn’t think they would arrive in time to contribute to the taking of the base. But they could secure it so Sam, Entrapta and Bow could start looking into what experiments the research station had been running - and figure out how to undo them and get Catra back.

*****

Unknown Location, January 29th, 2000 (Earth Time)

"Catra!"

Catra's ears twitched, and she drew back a little at the venom in Adora's voice. Her lover didn't show any relief at having found her - or any worry. "Ah… yes?" She managed to smile a little and started to raise her hand to wave. "It's…"

In the blink of an eye, Adora was in her face, one hand gripping her wrist like a vice.

"...me-OW!" Catra hissed through clenched teeth and resisted the urge to claw at Adora's arm. "Adora! What are you…"

"No more!" Adora buried her fist in Catra's stomach.

Eyes wide open, Catra coughed, almost folding around the blow. What the…?

"No more talking!"

The hand that had been holding her wrist now closed around her throat, preventing her from breathing. Catra gripped Adora's wrist with both hands but couldn't budge it.

"No more hurting!"

I don't know - I'm hurting badly right now. Catra would have laughed at her own thought if she'd had the breath for it.

"No more fighting!"

Don't claw her! Catra told herself as she struggled to loosen Adora's grip enough so she could breathe.

"It's over! You lost!"

No. Please. Adora… Catra moved her lips but couldn't talk. Couldn't get her throat free. Could only stare at Adora's furious - no, scornful - expression as she slowly started to fade.

And she couldn't help wondering if she deserved this.

*****

When Catra woke up, her first reaction was surprise that she was still alive. Or was she? Then she felt the pain. Her throat, stomach and wrist hurt. *Breathing* hurt. She coughed, which hurt some more, and tried to breathe as softly as she could as she gingerly touched her throat with her good hand. Damn, Adora had really put the hurt on her.

She looked around. She was in a large room. In a force field inside a large room. And the style of the room…

"Bright Moon," she whispered, wincing at the pain.

She was in a cell in Bright Moon.

But how? And Adora… She had been wearing the wrong uniform. And… she had acted so… Was she in some alternate universe, as Sam and Entrapta had speculated about sometimes? Or… Had she somehow been transported back in time to the Horde War? And displaced to Etheria? Was that even possible?

Of course, it is possible! This was a First Ones research station. She scoffed at her own doubts, then clenched her teeth at the pain. Damn. If she wasn't dead - she still wouldn't rule that out - then she had come damn close. And at the hands of Adora. An Adora, at least. Not her Adora. Her Adora wouldn't do that to her. Not even if Catra deserved it.

She slowly got up, wincing at the pain in her lower body. Her fur would hide bruises, but she would still feel them. She hoped she wasn't bleeding internally. Though… If she had been taken prisoner, wouldn't Bright Moon's healers have looked her over? If

only to ensure she didn't die before she was interrogated? Or judged?

But wouldn't they have fixed her throat, at least? She used her good hand to check her uniform. Of course, they had taken all the gear she'd been carrying. But they had left her the armoured uniform. Not that it would do any good against Adora.

She almost snorted but managed to control herself before she hurt her own throat some more. She was standing on a mattress. Just like she liked it - thin and solid, not like the fluffy pillows that Bright Moon's people called beds. But was that a kindness, or did her captors think it would be uncomfortable for her? Adora should know better than that, should she?

If this was a sign that her lover still cared about her… She smiled at the thought. Then frowned at her own foolishness. That expression on Adora's face… There had been no love. No care. No regret. Only judgement.

And Catra deserved to be judged. Especially if she was back in the Horde War. The things she had done…

The door sliding open interrupted her thoughts. She turned, clenching her teeth at the pain in her stomach and trying not to show it as she faced whoever had entered.

Adora. Or maybe She-Ra was more appropriate.

Catra swallowed - which hurt - as the other woman approached the force field. "Hey, Adora," she said without thinking.

She earned a glare and a deep scowl in return. "The Queen will see you. Don't even think of trying to escape."

She wasn't stupid. This might not be a dungeon, but the odds of escaping She-Ra here, and in her present state, were too low to risk it. If she was even going to try, of course. It wasn't as if she was innocent. And she had nothing to flee to - certainly not the Horde.

“The Queen? Glimmer?” Catra asked as Adora reached out and deactivated the force field.

“What? No. Queen Angella, of course!”

Oh, fuck!

*****

Research Station Beta, PU-9623, January 29th, 2000 (Earth Time)

“Enjoyed taking over the base, Carter?” Jack O’Neill grinned when he saw her enter the command centre, hiding his relief. Getting split up - unintentionally, even - was always bad. If Carter had gone missing… Well, she hadn’t. But if she had, Jack would probably have reacted… badly.

“Sir.” She nodded at him. Curtly. But he thought he caught a smile there. Good.

“Oh! This is a nice laboratory!” Entrapta said as she joined them. “Like Alpha! Did you standardise your research stations, Beta?””

The projection slightly turned. “Within reason. Depending on a station’s purpose, customised equipment and layouts are required.”

“Of course!” Entrapta nodded. “And this station was made to research interdimensional travel! How fascinating!”

“Yes.” Beta barely nodded. “I hope that with the change of command, serious research can finally be resumed.”

“Of course! We will do science to save Catra and the others!”

Jack winced. Entrapta’s enthusiasm paired with Beta’s attitude was a concerning combination. They’d have to keep an eye on them. Carter would be on the ball, though - he could trust her.

“Jack!” Daniel smiled at him. “Troops are landing and taking control of the base.”

“I know, Daniel,” Jack replied, nodding at the communication console. “I’m following the chatter.”

“Oh, of course.” Daniel looked a little sheepish for a moment. “You’re going up, then?”

Jack hesitated a moment. He wanted to go up and handle the landings, but someone Beta accepted as its superior had to stay here. Just in case. “When Adora relieves me.” On the other hand, Adora wasn’t completely herself right now, with Catra missing. If the bot pushed the right buttons, things could turn bad as well. He’d have to trust Bow and Glimmer to handle her if that should be the case.

“Taweret.” Sha’re walked towards the force-field-thingie that kept the snake prisoner.

The snake glared at her. “Amaunet. You’re working with the Tau’ri.”

“No.” Sha’re’s smile reminded Jack that she wasn’t the sweet girl who had fallen for an awkward archaeologist on Abydos any more. “I am Sha’re.”

The snake bared her teeth. “That won’t fool…” She trailed off as her eyes widened, glancing at the others in the room. “You’re the host?”

Sha’re nodded. “I am free once more.”

The snake drew back a little before narrowing her eyes. “How? You would be… The Tok’ra!”

Jack pressed his lips together. That was the kind of information the snakes really shouldn’t have. If Taweret escaped and told

Apophis that they were working with the Tok'ra, that would complicate things. Although Taweret had also seen She-Ra in action and knew that she was a First One. Well, the snake wouldn't be allowed to escape anyway.

"Amaunet is still alive. If you wish to survive, you will cooperate," Sha're said. "If you kill your host, you will share their fate."

"The Tok'ra don't take prisoners - they kill us!"

Sha're shook her head. "You can see Aumanet yourself."

And now the snake would know that the Tok'ra weren't calling the shots in this alliance. Well, if it was to save the poor girl serving as the host of the snake, that was OK.

Jack ignored the small voice in the back of his head telling him that the host was apparently a true believer and might turn traitor on them. This wasn't how the Alliance did things.

"Can you modify the force fields so Taweret cannot hear us?" Carter asked.

"I can," Beta replied, then looked at Jack.

Right. Of course. Jack rolled his eyes. "Yeah, do that."

A moment later, the force field turned slightly opaque. "The prisoner cannot hear or observe us any more," the bot announced.

Beta could have done that before, Jack knew. And he was sure that the bot was smart enough to think of it - or suggest it, just as it had made suggestions before. So, why hadn't it done so? Was this a ploy to ensure Taweret knew too much to be allowed to live? Or some sort of twisted test to judge how smart they were? In case Beta had another option to take over the lab?

Whatever the answer, they couldn't trust the bot. Not too far, at least. It had an agenda.

“So…” Entrapta glanced up from where she had been staring at one of the holoprojectors serving as screens. “You have a projector that transports a target area into another dimension. And you can vary the size of the target area and deploy it within a long range - not enough to reach another planet in the system, but if this planet had a moon, you could reach it.”

“That is correct,” Beta said.

“And you have been using it as a weapon against ships and were researching a way to install it on a ship,” Carter added.

“Yes.”

“But you’re struggling with the side-effects destabilising the ship itself as the dimensional breach weakens the fabric of reality.” Entrapta nodded. “It’s not much of a structural problem unless you dial up the power used, but it wrecks the crystal matrices controlling the portal - and most electronics. And since the target area is variable, you can’t install fields to block that interference because the field projectors don’t have that range.”

“Yes.” Jack wasn’t sure, but Beta looked more attentive now. “You have experience with this technology.”

“Well… kinda? I helped build an extradimensional portal. But it wasn’t stable, so the first test run kinda almost destroyed the entire world.” Entrapta looked a bit sheepish. “We haven’t done much work in that area since that. It was deemed too dangerous.”

“Until now.” Beta smiled.

Jack frowned. He really didn’t like that smile.

*****

Apophis's Base, PU-9623, January 29th, 2000 (Earth Time)

“We’ve finished taking control of the base, Ma’am!”

“Thank you, Major.” Adora nodded with a smile. Her smile slipped at the thought that if Catra were here, she’d make a comment that the base was already secure and the landing forces had just to walk into the base and reach the key locations. Depending on her mood, it would be a quiet whisper to Adora or a comment to the Major in charge of the troops - well, under Jack, of course; those were his people.

But since Catra was missing, Major Martin merely nodded again - Jack had drilled all his people to avoid saluting in the field even though anyone could pick out Adora as the leader here - and left for his command post.

That left Adora to check the reports from the task force. They had secured the planet’s orbit and finished boarding the enemy ships that hadn’t been destroyed outright in the battle. Fortunately, the Jaffa in the crippled ships hadn’t managed to blow up their vessels to deny them to the Alliance, but as far as Adora could tell from the first reports, the reason for that success was that the task force’s frigates had destroyed the main reactors of the ships in question at the same time the engines had been hit. That probably meant that repairing the ships wouldn’t be cost-efficient unless the Alliance wanted a Ha’tak for a special operation. Operating Goa’uld ships would also strain logistics for no real gain, and if you refitted them with Alliance tech, you might as well just build a new ship.

But that wasn’t important right now. The system was under Alliance control, as was the planet - not that there was anything to control except for the base and the research station, anyway. And the camp they were setting up for the freed slaves, though that would take a while.

Still, things were in hand. And communications had been restored as well, though as soon as they used the portal to get Catra back, their comms would be down again. Well, if they didn’t figure out a way to shield their regular communicators from the effects of the projector, they would just have to replace them again.

Anyway, it was time to get Catra back. Or, Adora corrected herself, to start getting her back. She looked at the soldiers in the security centre. “I’m returning to the research station. Major Martins is in command.”

“Yes, ma’am!”

She walked - even though she wanted to hurry, running would have sent the wrong message to the soldiers - to the transporter room and told the officer in charge there: “Take me to the research station.”

“Yes, ma’am.”

A moment later, she was back in the station and on the way to the command centre. She passed a set of guards - Campbel and Isa - and entered the room.

“Supreme Commander Adora, you’ve returned!” Beta addressed her. “Research Station Beta is at your disposal.”

Adora frowned. The way everyone else was glaring at Beta before looking at her was a sure sign that something was wrong. “So… what’s going on?” she asked.

“Beta insists on using people as test subjects!” Sam blurted out.

What? Hadn’t Adora made it clear that they wouldn’t use people for their experiments?

Beta nodded. “Without using appropriate test subjects, the odds of recovering your friend are significantly reduced. I’ve explained this, but your subordinates do not accept it.”

“We can use bots as test subjects. And animals,” Sam said.

“Neither bots nor animals are an adequate substitute. The experiment requires a sapient mind to align with the target dimension,” Beta retorted.

“What?” Adora also stared at Beta. “But you’ve used it on ships!”

Beta nodded. “When used as a weapon system, such as against ships, recovering the targets afterwards, or ensuring that they were not destroyed in the process, wasn’t a consideration. Unlike when transporting people.”

“Doesn’t sound as if recovering the ‘test subjects’ was a priority either,” Jack commented.

“Not under the prior commander,” Beta said.

“But why do you need a sapient target?” Entrapta asked. “Don’t you just connect two dimensions? We didn’t need anything like that when we created the Portal.”

“And Mara transported an entire solar system to an alternate dimension,” Adora pointed out.

“That is very impressive. Any data from her experiment would be critically important for our research here,” Beta commented.

Adora shook her head. “All the data was destroyed in the process. Now explain why you need people as test subjects.”

Beta hesitated a moment, and Adora narrowed her eyes. That was suspicious! Then Beta inclined her head. “The projector does not target alternate dimensions directly. It uses a different dimension to reach them. One that is very receptive to alterations caused by people’s thoughts. Only sapient beings can be prepared for this.”

“That makes no sense!” Sam objected. “Why would you set things up like this? We’ve checked the data - the computer controlling the projector is perfectly capable of selecting alternate dimensions. You don’t need to go through this hypothetical transfer dimension.”

“The First Ones who built this station set the parameters for the experiment,” Beta replied. “I lack the authorisation to change them.”

“Well, so Adora can change them, right?” Jack said.

Beta turned to look at Adora. “Doing so would render the goal of recovering your friend impossible since she went missing in the original target dimension.”

“Oh.” Entrapta blinked.

Adora clenched her teeth. She couldn’t abandon Catra. But she couldn’t sacrifice others to save her, either. What should she do? What could she do?

“Why did the First Ones pick that special dimension?” Bow asked.

Beta didn’t answer him.

Adora frowned. “Answer the question, Beta.”

“Very well.” Beta almost seemed to sigh. “This research station was built to find an alternate way to *ascend*.”

Adora blinked. What?

*****

Research Station Beta, PU-9623, January 29th, 2000 (Earth Time)

“Ascend?” Samantha Carter hadn’t heard this term before - not in relation to alternate universes.

“What is that?” Adora asked a moment later.

“To ascend is to reach a higher plane of existence, leaving this universe behind. According to my data, ascension grants the subject undergoing it great knowledge and power and eternal life,” Beta replied. “However, the process has strict requirements - mental, spiritual and evolutionary. And once ascended, the subject cannot interact or influence this universe ever again.”

“That sounds like the kind of promise made by a cult leader - if there’s no way to report back, no one can prove it’s a scam,” the General commented.

Sam had to agree - this seemed to be a rather questionable process.

“It doesn’t sound very different from what several major religions on Earth proclaim,” Entrapta pointed out.

“That’s different,” the General snapped.

“How so?” Entrapta asked. “Many of them seem to promise a life in paradise after death.”

“The existence of Ascension has been proven, and the process has been observed many times - most of the Ancestors of the First Ones ascended,” Beta said.

“If it exists and works, why do you need an alternative?” Daniel asked.

“Fulfilling the requirements is challenging, and the Ascension itself is a lengthy process,” Beta told him. “My creators wished to facilitate it. Another goal was to find a way to reach the higher planes without eliminating the possibility of returning to this universe.”

That sounded like the Ancients might have had doubts about the entire process despite Beta’s claim that it was proven to work, in Sam’s opinion.

“Well, according to one of Earth’s religions, finding enlightenment is supposed to be a process that takes several lives,” Daniel said. “And, err, this sounds like a similar process. There might be shared roots, actually, for the concepts.”

The General snorted. “So, the First Ones didn’t want to abandon all earthly desires to ascend, huh?”

"I cannot comment on my creator's goals except for what I was told," Beta replied.

"I'll take that as a 'yes', then."

"Jack!"

"I'm calling it like I'm seeing it."

Daniel shook his head at the General. "You can't just assume that the Ancients were like us - they had a vastly different and more advanced culture. You shouldn't project our own morals and way of thinking on them or you'll make incorrect assumptions."

"Didn't seem like they were too different from us," Glimmer commented.

"Well, technologically, they were far ahead of us," Entrapta said.

"We're talking about their morals," Glimmer retorted. "They were willing to destroy Etheria to beat Horde Prime."

That was something many humans would have done as well, Sam had to admit. Some would have done it just to deny the world to the enemy. But Daniel was also correct - they couldn't just treat the Ancients as humans with better technology.

"Did you send Catra to those 'higher planes of existence'?" Adora asked.

Sam glanced at her and winced - her friend looked like she wanted to break something. Maybe Beta.

"No," Beta replied, seemingly unaware of the tension. "The experiment is still in the early stages. The dimension focused upon shares some characteristics with the higher planes of existence, according to our data. Mainly, that sapient minds can easily influence and shape it when exposed to it."

Sam frowned. She couldn't help doubting this.

Bow asked: “Why would sapience be required for that?”

“Lesser life forms are ruled by instincts and emotions. In order to ascend, you have to overcome both,” Beta said.

“That sounds like straight out of a self-help book,” the General said.

“It has been verified through experimentation, General O’Neill,” Beta told him.

“I wonder what kind of experimentation that was,” he retorted.

“Do you wish to access the data?”

“Ah… maybe later.” And now he looked sheepish.

But Sam understood the reaction - some of the Ancients’ experiments were beyond the pale. And she still hadn’t heard a good reason for not using animals as test subjects. “But even if you need sapient minds to influence the dimension, you could use animals to test the transporting process.”

“They would not deliver any new data. In order to retrieve a test subject, the projector relies on finding them through the changes they effect in the dimension compared to the base parameters.”

“You’re using their effects on the environment to find them?” Bow asked. “Like, tracking their steps?”

“It’s a crude approximation, but essentially, yes,” Beta replied.

“Well, finding Catra shouldn’t be hard then - she tends to leave a huge impact wherever she goes,” Glimmer joked.

Adora didn’t laugh, though. “What is the problem then? Why do you need more test subjects?”

“While we have managed to track such changes, we have not yet managed to find a test subject to recover. The current hypothesis

is that the process of tracking them takes too long to lock on to them."

Entrapta cocked her head. "I think we need to see the data for that."

Sam nodded in agreement.

*****

Unknown Location, January 29th, 2000 (Earth Time)

"You know, I'm not going to run," Catra commented, trying to sound far more confident than she felt, when Adora grabbed her upper arm and all but dragged her towards the throne room.

"Yeah, right."

Catra suppressed a wince at the cold tone. "It would be pointless, wouldn't it? With you here, surrounded by guards, in the middle of Bright Moon…"

"That never stopped you before!"

That was true. The stupid things Catra had done in the past… "I've changed," she replied.

Adora scoffed in return. "I know you. You won't ever change."

Catra pressed her lips together and tried not to show how that hurt. This wasn't her Adora. She had to remind herself of that. She was in some alternate dimension or whatever. Her Adora knew her. Loved her.

She tried to shrug while they turned a corner. "I changed my hairstyle."

Catra almost stumbled when Adora stopped walking and turned to look at her. "That doesn't change anything!" she spat before turning away and continuing on.

That's weird, Catra thought. Adora had acted as if she hadn't noticed Catra's hairstyle before. Of course, it was just a new hairstyle - and she had lost her Horde headgear, couldn't forget that - but still… Catra would have noticed any change in Adora right away. And had as soon as she had seen this Adora.

Maybe this Adora didn't care enough about Catra to pay attention to such details. That hurt a bit more.

Maybe she's not as obsessed with you as you are with her? Maybe she has finally realised how worthless you are? a voice that sounded like Shadow Weaver whispered in the back of her head.

Catra clenched her teeth and hissed under her breath. She wasn't worthless! And Adora wouldn't do that!

Adora snorted. “Realised you can't escape, huh?”

Catra pressed her lips together. Adora had misunderstood her reaction. But she wasn't about to correct her. “I realised that from the start,” she replied.

Adora just sneered in return.

They reached their destination before Catra could think of anything else to say. The guards at the entrance stepped to the side and opened the doors, revealing the throne room, and Catra had to suppress another hiss.

Angella was sitting on her throne, Glimmer standing at her side, both wearing… full regalia, was the term, probably. A dozen guards lined the carpet leading to the throne. And most of the Princess Alliance seemed to be clustered on both sides of the throne. Bow, Perfuma, Mermista, Spinnerella, Netossa and Frosta, who was still a preteen brat. No Entrapta, though. No Scorpia, either, but that was to be expected. Yeah, this must be before the portal. So…

Catra froze as she spotted another figure there, back in the corner to the side, flanked by two guards.

Shadow Weaver.

“What's *she* doing here?” she hissed halfway to the throne.

“Silence!” Adora spat.

She wasn't going to stay silent! Not with that snake in the room! But Adora tightened her grip on Catra's upper arm and pulled her along.

As soon as they reached the throne, Adora pushed Catra ahead. “I’ve brought the prisoner!”

“Thank you!” Angella smiled at Adora before scowling at Catra. Like everyone else here.

Catra clenched her teeth and straightened. She couldn't lose her temper. Not here. She had weathered worse. Those weren't the princesses she knew, anyway. Unless this was the past, of course. She focused on Angella and bowed her head. “Your majesty.”

“Catra.”

Catra suppressed a wince at the icy tone. So much scorn in a single word! “Yes.” She swallowed a quip about not wearing out her name. She had to be diplomatic. This wasn't her world. Not her Adora.

Angella sniffed and went on. “The leader of the Horde. The woman who commanded the invasions of our kingdoms. The fool who almost destroyed the entire world in her crazed lust for power!”

Catra flinched - she had done that. And more. She swallowed, then straightened again, She could man up to her past. “Yes.”

“You admit it.”

“No point in lying.” Catra managed to shrug. “I know what I did.”

“And you're proud of it!” Angella spat.

“What? No!” Catra shook her head. “I'm not proud of it.”

“Liar.”

Catra jerked - Shadow Weaver had spoken up. She had forgotten about the woman's presence for a moment.

“I know you,” Shadow Weaver went on. “You're full of pride even if the only thing you've achieved is hurting people.”

“You don't know me!” Catra spat.

“I raised you.” Shadow Weaver glided forward. Even with the mask, Catra knew she was sneering at her. “I know you better than you know yourself. I know what a failure and disappointment you are.”

“I’m not a failure!”

Catra only realised that she had taken a few steps towards the miserable old witch when Adora's hand closed around her arm again. It took all of Catra's self-control not to curse at Shadow Weaver. She was better than that.

“Enough. You've admitted your guilt. We will decide on your punishment.” Angella nodded at Adora. “Please take her back to her cell.”

Catra's eyes widened. That was far too quick! “Wait! I'm not the Catra you know!” she blurted out. “I’m from another dimension!”

Adora didn't stop dragging her away, but when Catra looked over her shoulder, she saw Angella gasp and stare at her.

“You've got the wrong Catra!”

Adora snorted at that. The entire Alliance present laughed. Except for Angella. The woman didn't say anything and just kept staring

at her until the doors closed behind Catra and Adora.

*****

The Secret Base Part 5

Research Station Beta, PU-9623, January 29th, 2000 (Earth Time)

The more he heard about the Ancients, the less Jack O'Neill liked them. Well, it would be more honest to say that he liked them even less - he hadn't had a good opinion of them for a long time now. That some of their robots thought he was one of them didn't change that. Quite the contrary. Between their crazy experiments and dangerous tech thingies that they just kept lying around, it was a wonder that the Galaxy was still standing.

And he couldn't help feeling that Beta here was working on changing that. "So… if I remember correctly, the last time someone tinkered with a portal like that, they almost blew up reality, right?"

Judging by the looks from Carter and Daniel, his Columbo impression needed some work. Or it was because Entrapta cringed at his comment, he realised with a wince. He hadn't wanted to hurt her - criticising her, even when it was perfectly justified, made Jack feel like he shot Bambi's mom. Well, when she actually took his criticism to heart and didn't misunderstand it.

"Well, it's debatable how far the effect would have spread, but as far as Etheria in Despondos was concerned, reality would have been destroyed, yes," Entrapta said after a moment. "Though since that was an alternate dimension, it might have been contained." She blinked. "Actually, if we take the new data from Beta into account - though we still need to study it; we just got the synopsis from Beta, so to speak, even though I trust her - then this might not have been the end of reality but more a merging of the two dimensions and the aspects of the other dimension dominating Despondos's reality. Of course, that would require that we connected to the same or a similar dimension as the one Beta is targeting."

Jack almost snapped that experimenting further was too dangerous and they should destroy the lab. The only thing that held him back was knowing that Adora wouldn't abandon Catra. And suspecting that Beta would use that to influence Adora and sideline Jack. Also, taking risks to save a friend was not the same as risking the galaxy to become gods or whatever - he wasn't Daniel, but Jack knew what Ascension meant in that context. And Carter would probably never forgive him if he destroyed the lab here.

Still, someone had to point out the danger. "So, what are the odds that we get another such merge here?" Jack asked.

"We don't know if that happened back in Despondos!" Entrapta pointed out. "It's just a possibility. Of course, we did use a lot of First Ones tech there, which probably came from this lab, but we also used Horde tech, so we need to examine the data here and compare it to what data we have left from the Horde to tell!" She perked up. "Oh, we really need to get my science buddy here! He might remember more because it was his project at the start!"

Yeah, the clone of a warlord with a god complex is just the thing a laboratory where aliens planned to get an easy way to become gods is missing, Jack thought.

"Yes!" Adora nodded firmly.

"Indeed," Beta agreed. "Horde Prime displayed and deployed very impressive technology in the war against our people. It would be only fitting if that technology would be used to continue the experiments here."

So much for Jack's hope that the Ancient bot would make Adora and Entrapta mad by trying to oppose Hordak coming here. That would have made Adora distrust the bot, at least. "That might take a while," he said. "We shouldn't run experiments without him, then."

"We need time to review the data here anyway," Carter added.

He could see Adora biting her lower lip. She obviously didn't want to hear that but didn't want to object. Good. The last thing they needed was a crazy bot running experiments that could ruin reality itself. Jack liked his reality being real.

"Yes!" Entrpata nodded emphatically. "Let's start on that! Beta, can you point us to a data terminal with enough workspace?

"Yes. Please follow me." The projection turned and led them towards one of the doors in the back.

Jack looked at Bow, but the boy was already following them. Good. Jack trusted Carter, of course, but she could get caught up in her work sometimes. Another grounded tech head helping them wouldn't hurt.

"Don't worry - we'll get Catra back," Glimmer told Adora.

"Yes." Adora nodded, but her expression belied her words.

"We're like the Marines in that - we don't leave anyone behind," Jack added. And hoped he wasn't lying through his teeth.

Though he hoped even harder that the whole thing here wouldn't end in a catastrophe.

*****

Captured Base, PU-9623, January 30th, 2000 (Earth Time)

Adora had to be patient. Rushing things would not help anyone - would even endanger everyone since they were working with dimensional portals. Entrapta and Sam were geniuses who knew what they were doing, but they needed time to study Beta's data before they could start the recovery operation.

Adora knew that. Knew that very well. But the longer they waited, the longer Catra was missing, the greater the danger was that something would happen to her. Something else. Something more

dangerous than being transported into a weird dimension. They had to save her, as quickly as possible.

But she also knew that Beta had lost track of every test subject the bot had sent into the other dimension - and had lost track of Catra as well. Even if they were willing to risk it, they couldn't just start the recovery attempt. It wouldn't do any good.

And yet, waiting, unable to do anything for Catra, was unbearable.

Adora clenched her teeth. She should sleep - it was past midnight, at least according to Alliance Time on Earth, and Glimmer had already taken over Taweret's bedroom while the others, except for Bow, Entrapta and Sam, had found places to sleep themselves - but Adora knew she wouldn't be able to rest. Not with her lover missing. She had to keep busy until her friends finished - there was no time to lose. And she was She-Ra; she could handle an all-nighter.

Also, it wasn't as if there was nothing to do - as Supreme Commander of the Alliance, she always had paperwork to do. And thanks to the spy bot network, it followed her onto missions such as this as well - sometimes even in actual paper form when they used Stargates.

But having the work and doing the work were not the same. Leaning back in what apparently had been Taweret's office in her quarters, Adora sighed. Reading reports that were mostly updates of earlier reports, and generally confirmed the projections, wasn't helping much. Especially since the lack of scathing commentary reminded her of Catra's absence with every report she read.

There were several important - or more important - reports, of course, some concerning the latest fleet trials, but none of them required immediate action except for referring them to her staff for analysis. The British were making more progress, the Americans were still dealing with problems with their 'light battle carriers' - a designation for the design Adora didn't think would

last much longer than its predecessor 'light multirole cruiser' - and the French were a bit behind because they were leading the shared European design for a frigate and just coordinating half a dozen requests and requirements apparently took a lot of time even if they were mostly copying the British designs.

Perhaps she should have insisted on launching more Horde frigates instead of everyone designing their own ships. But everyone wanted the ability and knowledge to build spaceships on their own, so…

A beep announced another E-Mail. She checked it - ah, the first formal after-action report from the task force had arrived. A bit of skimming later, she winced. She would have thought that any of the mistakes made in the first landing operation wouldn't be repeated, but she had been wrong. The need for more training, especially coordinating between different forces, was evident.

She wrote a quick memo and sent it to her staff to check, then went over the supply requests - just to check that nothing was being forgotten; Jack's people were handling that.

And as expected from Jack's force, everything was in order. Maybe she should check up on the news from Earth…

Or she could check on the prisoners. The Jaffa, as expected from the most loyal and fanatical of Apophis's forces, had usually fought until death, but there had been exceptions. Some were knocked out, but others had surrendered when facing her. Adora should see how they were doing.

But what were the odds that some of them would pray to her? Atak did, and the way a few of the prisoners had looked at her when they had been taken, Adora didn't think Atak was the only one mistaking her for a goddess here. Maybe she should sleep on that before meeting them.

Stifling a yawn, she started on the rest of the paperwork - mostly informative, non-crucial messages and memos. Like the food

consumption reports - with the usual complaints about the MREs that made her roll her eyes; if those people had ever eaten Horde rations…

Another message interrupted her. Oh! It was from Sam - they had finished reviewing the data!

Adora jumped up and rushed toward the transporter room.

Catra, we're coming to save you!

*****

Research Station Beta, PU-9623, January 30th, 2000 (Earth Time)

"You finished going over the data?"

Samantha Carter turned and looked at Adora - her friend had blurted her question out as soon as she had entered the main laboratory of Beta. "We have finished our preliminary review of the research data," Sam corrected her.

"Oh."

"Yes. But we already have a lot of ideas!" Entrapta added, nodding with a slight smile.

"Speculation," Beta said. "But well-reasoned speculation based on the analysis done. I cannot disprove the conclusions."

"It's fascinating data." Entrapta grimaced. "Although there are also a few concerning data points. Kinda."

"Concerning?" Adora's eyes widened as she approached them at a fast pace. "How concerning?"

She must not have been resting, Sam realised. Not that Sam could throw stones here - she had worked through herself, as had Entrapta and Bow, who had gone to personally wake up Glimmer.

“Well…” Entrapta started to say, wincing under Adora's stare.

They should wait for the others, in Sam's opinion, but with Adora in such a state… “We analysed the data of the past tracking attempts, and there might be outside interference,” she explained.

Adora gasped before pressing her lips together for a moment. “Outside interference?”

“Yes,” Beta said with a deep scowl. “They're interfering with the experiment!”

Sam rolled her eyes at the bot's apparent priorities. “The data indicates that tracking - albeit indirectly - works at the start, I mean, shortly after arrival at the destination. And there's no sign of the compiled tracking data deteriorating over time - while the original effects on the environment recorded by the station’s sensors seem to fade in time, they are continually renewed and partially replaced.”

“As predicted,” Beta cut in. “Though due to outside interference, we lack the data to track long-term effects of sapient minds - where the effects can stabilise or even become self-sustaining is still in doubt.”

“The data tracks until it stops and vanishes,” Entrapta added. “And it always happens after about the same time has passed there - except for the first few attempts, where it took longer.”

Adora didn't look reassured. “But you need a sapient mind to affect the dimension, right?”

“Yes.” Beta firmly nodded.

Sam had her doubts that this was entirely correct, but this wasn't the time to discuss this. But Adora had raised another point or seemed to be about to. Best nip that in the bud. “We don't think that this means the people transported there die at that point,” she said. “They disappear too quickly for environmental influence.”

“And there's a spike right before the effect ends and starts to fade - a very distinct spike,” Entrapta added. “One that looks almost identical in over a dozen cases. The pattern is clear and nearly identical, while the patterns generated by the test subjects often vary significantly.”

“The most probable explanation is that someone is removing the people from the dimension we're tracking or from their location there,” Sam took over again. Or, though she didn't say that, someone was hunting down new arrivals and killed them very quickly.

Even so, Adora looked grim. “Removing them - for what reason?”

“Perhaps they want to save them?” Entrapta’s hopeful smile slowly died as Adora looked at her.

“We don't know yet. But barring some truly exotic environmental effect, we believe this is outside interference,” Sam said.

“And it shows that recovering people from that dimension is possible.” Entrapta was really trying to console their friend.

Adora slowly nodded. “Did that happen to Catra as well?”

“Yes. We've analysed the data from the attack, and while it's not as detailed as the other readings, it tracks as well,” Entrapta said.

“I couldn't use the sensors to the best of their capabilities since I lacked the necessary preparation time for the experiment.” Beta inclined her head. “The prior administration was not overly interested in proper documentation.” Her tone made this sound like the worst of Taweret's crime, Sam noted.

“So, what can we do with this?” Adora asked. “How can we get Catra and the others back?”

Sam suppressed a wince at her friend's expression. Adora looked both hopeful and desperate.

“Now that we have identified the interference, we can plan to deal with it,” Beta said.

“We haven't actually identified the interference,” Entrapta pointed out. “We just know that something is interfering.”

“And we need to recover the people who vanished from wherever they happened to be taken to,” Sam reminded Beta.

“Yes, of course.” Beta nodded. “But that will require dealing with the interference as well. I suggest sending an armed test subject next, to see if they can fend off the interference. Even if unsuccessful, the data should reveal if they can temporarily delay the interference.”

“We're not using people as test subjects!” Adora snapped.

Beta looked puzzled, cocking her head to the side. “I was under the impression that volunteers would be acceptable. And from what I gathered, many of your followers would volunteer to help recover your consort, Adora.”

Adora gaped. “That's… That's… I won't ask that of them!” she blurted out.

Beta looked confused. “Would you refuse their help to save your consort? Even if freely offered?”

“That's… why would they offer in the first place?” Adora asked.

“It's an obvious solution to the lack of test subjects,” Beta replied.

Before Sam could think of what to say to that - and how to deal with her suspicion that Beta had been busy gathering as much information about Adora as possible - the others arrived, led by Glimmer.

“You finished going over the data?” Glimmer blurted out, mirroring Adora.

“I told you that!” Bow said behind her.

“We did,” Sam told them.

“But we have a problem,” Adora said. With a glance at Beta, she added: “A bunch of them.”

*****

Unknown Location, January 30th, 2000 (Earth Time)

“Look, I'm not your Carta! I'm from another universe - or another dimension!”

A scoff answered her. “Really? That's the best you can come up with?”

“It's the truth!” she insisted.

“Is that why you cut your hair? To make us believe you?”

“My hair was cut by Horde Prime!” She shivered at the memory. Or not-memory - it was a bit hazy.

“Horde Prime?” Another scoff. “Making up Horde members now? It's not working.”

“Horde Prime was Hordak's leader - his commander. He was the leader of the entire Horde. He had a fleet of spaceships and tried to destroy Etheria. In my universe.”

“Really, Catra, this is just pathetic. Bad lies and a bad haircut won't save you from the consequences of your actions.”

“Bad haircut? Adora - my Adora loves it!” She did! She knew it.

Laughter. They were almost back at her cell now. “It's ugly. And you claim ‘your Adora’ loves it? Is she a Horde Adora, huh?” The eyes narrowed into a glare. “Wait… Are you talking about your perfect world? The world for which you almost destroyed Etheria? That's pathetic, Catra.”

“No!” She shook her head and clenched her teeth. She wasn't pathetic! “In my universe, things went differently. We defeated the Horde. Adora saved us all. She saved me!”

More scoffing followed. “Now you claim you fought the Horde? While still wearing their uniform? Catra, Catra, Catra… No one would be so foolish as to believe this. Just stop and show some dignity.” Laughter briefly filled the hallway. “No lies will save you. No one will save you.”

“Adora will,” she spat. She would! “She loves me!”

Wide eyes stared at her before the surprised expression turned into a sneer. “No one loves you, Catra. You're a monster without a conscience. And you will be punished for what you did!”

She gasped at that. It wasn't true. It wasn't! Adora loved her! “I'm not your Catra!”

But they were at the cell, and she was pushed inside with enough force to send her stumbling into the marked area in the centre. She looked over her shoulder, turning, as the force field sprang up around her, to appeal to Adora again, but she only saw the back of her as Adora walked out the door, leaving her behind.

Sitting in a corner of her cell, Catra took a deep breath. She should sleep instead of running through this in her mind. This hadn't been her Adora. She had to remind her of that. Her Adora would have listened. Her Adora loved her. She knew it. Her Adora would do everything to save her.

Catra just had to wait until she did. And survive. And she would. She could take whatever this world threw at her. She would. She would…

Her ears twitched, and she turned - the door was opening. In the middle of the night? She suppressed a gasp as hope filled her. Adora? Had she reconsidered Catra's claims? “Hey…”

She trailed off, her forced smile vanishing. It wasn't Adora who entered. It was Angella. Alone, without guards. And staring at her with a cold expression.

Catra had weathered worse, though. Much worse. Like Shadow Weaver. Or… Whatever! She rose and cocked her head to the side. "Visiting prisoners in the middle of the night, Your Majesty?"

Angella didn't say a word. Instead, her mouth twisted into a slight sneer for a moment as she approached until she was standing directly before the force field.

Catra frowned, pressing her lips together, and raised her head to meet Angella's eyes. The queen was far too tall for Glimmer's mother. "Come to pass the sentence? I thought you would have wanted to do that in the Throne Room. Make a spectacle," she said as dismissively as she could. She wouldn't beg. "Maybe followed by a public execution?" she added in a mocking tone despite the fear making her stomach clench. If they killed her… Bright Moon doesn't kill their prisoners, she reminded herself. Not even this Bright Moon - not when they didn't have actual dungeons here, either.

Angella still didn't answer. The queen walked around the force field, and Catra turned her head to follow her. Her back itched when the queen was directly behind her, but Catra didn't move except turning her head. She had to stay calm. Collected. In control. Even though she wasn't.

Angella completed the full circle, facing her again, then scoffed and slightly shook her head. "How did *you* end up here?"

Catra almost said: 'You had Adora lock me up here. Did you forget already?' before she managed to hold her tongue. She frowned instead - something was odd here. Wrong. But she couldn't tell what. So, best play along. Shrugging, she said: "I was shot with some First Ones weapon that threw me into this dimension. By an alien."

“Fitting.”

Catra shrugged again. “I got a bit too cocky. We've been rolling up their forces easily, too easily. Charged straight into their trap.” Better her than Adora, though. But she would have to do better next time. She couldn't get sloppy.

“Typical.” Angella sneered.

Catra suppressed a scowl. She was better than that - she wouldn't lose her temper at some petty comments. She had taken much worse from Shadow Weaver. “I blame hanging around with the Alliance for too long. It wouldn't have happened when I was still leading the Horde. But you know Adora - always charging in headfirst and making it work somehow. She's going to save me, by the way.” She had to.

“Adora? Save *you*?” Angella sneered even more.

“Yes.” Catra nodded and tried to show as much confidence as she could. “She saved me from Horde Prime before. You know her - she never abandons her friends.”

“You? Her friend? Liar!” Angella spat. “You hurt her - you hurt all of us. You are no one's friend.”

“That wasn't me!” Catra snarled. “I hurt my Adora, not yours. I'm not your Catra!”

“So you claim.” Angella drew back with a haughty expression. “And yet… You are the same, aren't you?”

Catra narrowed her eyes. “What do you mean?”

“You said you hurt ‘your Adora’. You did the same deeds, didn't you? You didn't deny it earlier, either, did you?”

Catra clenched her teeth. “That was in the past. I changed.” She had. She really had. Even if Angella wouldn’t believe her.

She frowned. Why was Angella here, alone, anyway? Why hadn't she taken Glimmer with her? Or Adora? Adora knew her - or the other Catra - best. She would have helped a lot with the interrogation. Why had the Queen of Bright Moon come to her cell at night, alone, like… Her eyes widened for a moment. “You are hiding something! From everyone! That's why you're here alone, at this time of the night!”

For a moment, Angella looked surprised. Then she straightened, and her lips twisted into a tight smile. “You are different. You aren't from here.”

“I told you that,” Catra spat. “I’m not your Catra!”

Angella's smile widened. “That still remains to be seen.”

Catra stared at her. What? What did she mean? This was… She drew a sudden, sharp breath. It couldn't be! But the woman hadn't doubted her about the First Ones weapon… “You stepped into the portal, didn't you?” she whispered.

Angella flashed her teeth at her as she nodded.

Damn. Catra felt a shiver run down her spine as her fur bristled. If this Angella was the one from her universe, then Catra was the one responsible for sending her here. “But the others…” She trailed off. This Adora wasn't *her* Adora.

“They're native to this dimension,” Angella replied. She narrowed her eyes. “But they have suffered at the Horde's hands as well.”

Catra flinched at that. Yeah, she wasn't proud of what she had done in the past. And yet… She frowned. “But what happened to the Catra from this dimension?” Her eyes widened. “And what happened to the Angella from this dimension?”

“They're gone,” Angella replied. “The entire Horde is gone. Only the memories of the war remain.”

“Gone? You defeated them?” Catra leaned forward, almost touching the force field. Sure, the Horde had been in a bad spot after the portal, but they had recovered and almost beaten the Alliance. “How did you do that? What about Horde Prime?”

“Who?”

Damn! “Horde Prime. I told Adora about him - he's the one who created the Horde in his own image - Hordak is a clone of him. He destroyed the First Ones,” Catra explained. “The portal alerted him to Despondos, and he invaded.” Right after everything had gone to hell. Right after the Alliance had taken the Fright Zone. “He didn't arrive here?”

“No.” Angella shook her head.

“So, you beat the Horde and the war was over? What happened to Scorpia and Entrapta?”

“The Horde is gone,” Angella repeated herself in a flat voice. “Only the memories remain.”

Catra flinched. That sounded bad. Really bad. “Did Adora…?” She trailed off. If this Adora had completely wiped out the Horde using her power... “What about the Heart of Etheria?”

“What is that?”

Catra tensed and wanted to curse some more. They hadn't dealt with it yet? “It's the First Ones superweapon meant to be used against Horde Prime. It would destroy Etheria when used - and it's controlled by She-Ra's sword. And it has been gathering magic power from the entire sector for a thousand years. If it's not stopped, it will destroy Etheria. It's activated when all of the Elemental Princesses connect to their runestones.”

Angella looked as if she didn't believe her. “That's not a problem in this world.”

“What? All it takes is the Princess of the Scorpion Kingdom connecting to the Black Garnet, and everything goes to pieces!” Catra blurted out.

“There is no such princess. The Scorpion Kingdom was destroyed by the Horde.”

“You haven't restored it? But…” Right. ‘Gone’. Scorpia was gone. But her family! “What did you do to the people? In the Horde? In the Fright Zone?” Catra asked.

“I told you - they're gone.”

Catra found herself kneeling on the floor, staring at Angella. “You… you killed them all?” That was monstrous! How could they do this?

“They're gone,” Angella said again. Catra could see her jaw muscles twitch as she clenched her teeth. “Only the memories of the war remain.”

Catra shook her head, blinking. “No wonder this Adora's so different. She must be traumatised by this.” Her Adora would have never done that. To kill so many people… She gasped. “Entrapta! What happened to her? She was on Beast Island, not in the Fright Zone!”

Angella frowned but didn't answer.

Catra blinked again to clear her eyes. They couldn't have wiped out the island if they didn't know about it, could they? “Beast Island! The place where the Horde banished the worst prisoners! Entrapta's there - and Micah!”

Angella recoiled as if Catra had struck her. “Micah's dead!” she yelled. “Killed by the Horde! Killed by you!”

“No! He's on Beast Island. Adora and the others found him there when they rescued Entrapta!” Catra retorted. “Send them there and look for Entrapta and Micah!”

“You lie!” Angella spat. “Micah's dead! You killed him!” She turned around and quickly walked to the door.

“They're on Beast Island!” Catra yelled after her. “Save them!”

Angella didn't answer and didn't look back.

*****

Captured Base, PU-9623, January 30th, 2000 (Earth Time)

Jack O'Neill felt as if he was back at Stargate Command during a crisis. He was trying to keep busy while Carter worked desperately on alien technology to save the day. Only, he wasn't the leader of SG-1 any more, hovering around her lab and trying to ensure that she didn't work herself to death. He was a general in charge of Special Forces Command of the Alliance - and the second-in-command of the entire mission to this planet.

Of course, back in Stargate Command under General Hammond, he would have been in charge of the entire mission as leader of SG-1, but the mission here was a tiny bit bigger. SG-1 hadn't done any planetary invasions.

Well, it meant he didn't have to feel completely useless while he waited for Carter, Entrapta and Bow to find a way to get Catra and the ‘Test Subjects’ back from another dimension. He had to turn the fortress they had taken from Apophis's forces into an Alliance base that could protect the research station below it. At least until the Alliance found some other general to take over. Jack and his people were Special Forces, not garrison troopers.

Still, watching as combat engineers tore out the snake queen's luxury furnishings to install proper quarters and offices was satisfying. All the pomp and waste finally… “Hey!” he snapped. “Put that into the crate! No souvenir hunting!”

The soldier who had been about to palm a golden trinket flinched. “Yes, sir!”

“That goes for everyone!” Jack snapped. He had said that before! “Don't take anything here! First, you never know if it's trapped. Second, thanks to our magic scanner, we’ll find out anyway, and then you'll be in trouble.”

He turned around to watch the balcony for a moment and pretended not to hear the sounds of more trinkets being thrown into the closest crates. Soldiers were the same whatever their nationality or age. Send them into a palace, and they'll try to loot it.

After a bit, he turned back to watch them work again. Some idiot would still try to sneak something past the scanner, Jack was sure of it, but that was better than half the soldiers. He'd still feel better once all the gold stuff was safely stored on board a transport.

And, speaking of transports… He cocked his head when he heard the sound of a shuttle descending on the base, then quickly ran the numbers in his head. Yep, unless this was some unscheduled supply drop that no one had bothered to tell him about, this would be Hordak, ferried here by a frigate from the closest Stargate to help with the whole portal stuff.

Jack just hoped the clone wouldn't blow up the planet.

*****

Research Station Beta, PU-9623, January 30th, 2000 (Earth Time)

“Hello.”

“Science buddy!”

Adora wasn't jealous - or envious, or whatever. She shouldn't feel bad watching Entrapta’s face light up when Hordak entered the research station just because Catra was still missing.

But she did. She missed her lover. Dearly. And seeing others reunited with their loves didn't help. She reminded herself that Hordak was experienced with portals to other dimensions and should be able to deal with the problems they were having here and managed to smile somewhat honestly when she nodded at him. “Hello. Good to have you here.” Neutral. Professional.

“I came as soon as I heard,” Hordak said, nodding back.

“And we need you!” Entrapta said, voice slightly muffled since she was still hugging him, and her face was buried in his chest. “I missed you!”

“I see,” Hordak said in a bland tone, but Adora could see he was blushing slightly.

“Fascinating.” Beta had appeared, peering at the couple. “I was not aware that different species felt attracted to each other. Or that Horde clones actually felt attraction. None of the data we gathered during the war indicated any such inclinations.”

Entrapta frowned as she released Hordak - somewhat; one hair tendril stayed wrapped around his waist - and turned to face Beta. “You didn't really gather enough data then! Once freed from their mental conditioning by Horde Prime and given enough time to grow, the clones are just like everyone else!” She blinked and cocked her head to the side, scrunching her nose. “Which should have been expected since Horde Prime was an Asgard, kind of.”

Beta looked surprised for a moment. “But the Asgard have abandoned sexual reproduction long ago. Why would one of their offspring develop such instincts?”

“Well, Loki wanted to revert the damage the Asgard genetics had suffered, and so it makes sense that that also included the capability for sexual reproduction,” Entrapta replied.

“I see.” Beta nodded. “Although I think I should exchange data with Alpha to update my memory banks about the biological sciences. While not essential for my own research, biological

aspects could play an important role in the project, and Alpha should have the most advanced data on the subject."

"Yeah, that's just what we need - a network of mad scientist bots," Jack muttered next to Adora.

She winced a little. Jack wasn't exactly wrong - Alpha and, apparently, Beta had some slightly worrisome tendencies when it came to their research. Loki, too, of course. But calling them mad scientists was a bit much. They were more like Entrapta - sometimes, they went too far in the pursuit of their research because they didn't consider all the consequences, but not maliciously so. Of course, they were a bit worse at weighing the consequences than Entrapa was, but that was a work in progress.

So… "We can do that once we have recovered everyone," Adora said.

"Right!" Entrapta nodded and turned back to Hordak. "I sent you our data. Did you find anything?"

"I went over it during transit - I could have done more if the vessel had had a dedicated laboratory," Hordak replied. "Unfortunately, despite his heritage, Horde Prime did not deign to add such a functionality to his fleet."

"Yeah." Entrapta nodded. "We should design a science vessel. Or maybe a science module we can add to a frigate - if we replace a shuttle with it, it should fit into a hangar bay. Oh! A science shuttle! Every ship could carry one if it were needed! Maybe we could make them specialist science shuttles, one type each for all the various fields!"

Adora cleared her throat. Case in point, as Mermista would say. "That sounds like a project for later," she said.

"Ah, right." Entrapta nodded. "Saving people first, then pushing science!"

"Yes." Adora nodded firmly - just in case Beta might disagree.

*****

"...so I found no fundamental fault in your methodology and came to the same conclusion as you did after analysing your data: Someone is removing the test subjects faster than you're tracking them."

Samantha Carter nodded as Hordak finished his summary. Part of her was disappointed that Hordak hadn't found anything that would allow them to recover the missing people, but another part of her felt vindicated for not having overlooked a solution. "That leaves us with the problem of finding out where they have been taken," she said.

"Yes." He nodded. "And it is doubtful that not enhanced sensors and searching methods will be enough for that - we would have to search an entire dimension, potentially an alternate universe, for that."

"Light Hope managed to find and snatch Adora from our universe while Etheria was still in Despondos," Entrapta pointed out. "And we have all the technology she had access to, and then some more!"

"She did," Hordak conceded. "But she might not have been searching for Adora specifically but merely for anyone who matched her criteria."

"That still means she could search another universe for such an individual," Sam said.

"But we don't know what exactly she did to achieve that," Hordak retorted. "The data died with her. Although I consider it likely that she used She-Ra's magic to find her - She-Ra's power would have been seeking a worthy vessel, and as Mara's moving of Etheria to Despondos proves, She-Ra's power can cross dimensions."

"Well, we have Adora here!" Entrapta said.

“But she already has She-Ra's power,” Sam retorted.

“Well, yes. And she can wield it.” Entrapta beamed.

Oh. “You want her to use her power to track Catra?” Sam asked.

“Yes! If she restores magic to this world, she should have enough power to cause a portal into another dimension.”

Sam bit her lower lip. That could work… or it could cause a lot of damage to the world - and to reality itself. But were there viable alternatives?

Sam couldn't think of one. “We'll have to be very careful with this,” she said. “We'll only have one shot for this. We can't afford to miss.”

Entrapta nodded emphatically. “Right! Let's gather more data, science buddies!”

*****

Unknown Location, January 31st, 2000 (Earth Time)

A nice cell was still a cell. Catra was very aware of that. Most of the ‘guest room’ was cut off by the force fields, anyway. And from her spot, she could only see part of the sky outside - the angle to the window didn’t allow her to see the walls or the ground. If she didn’t know better, she would have assumed that this was by design, to prevent prisoners from gathering intel - or snipers to silence them.

But she knew it was mostly coincidence - she had asked Glimmer after the war was over. Bright Moon just wasn’t really used to holding prisoners. Catra’s Bright Moon and this Bright Moon seemed to share that.

Though this Bright Moon was far more ruthless than Catra’s. All of the Horde, the entire Fright Zone, gone?

She shivered. It was almost ironic that she had thought Glimmer was ruthless and brutal compared to Angella. This Angella… She closed her eyes and leaned back against the force field. Was this Catra's Angella? She didn't know. But did it matter? This Angella had perfectly inserted herself into this world despite knowing that she wasn't their Angella - she had said she wasn't native to this dimension, unlike the others. Had she even told them? Or was she pretending to be their Angella?

Pretending to be someone's mother - or lover - without telling them that the real person was still missing… Who would do such a thing? Well, Double Trouble would, of course, that piece of scum would find it amusing, but who else would be able to do that? Just thinking about talking to this Adora, or kissing, or having sex, pretending to be their Catra made Catra feel sick. Angella couldn't be doing that, could she? She was supposed to be that great Queen, all noble and self-sacrificing, a bit too protective, and a bit too afraid of losing people, but to lie to this Adora, to this Glimmer, and pretend to be their Angella?

Catra shook her head. She couldn't believe it. But she couldn't believe the Angella she had heard so much about would wipe out the entire Fright Zone with everyone inside and be proud of it.

And this person was now deciding Catra's fate - and had made no secret of her hatred for Catra. Damn.

Even worse, if this Angella was lying to everyone else here, she wouldn't want Catra to reveal that both of them were from another dimension. Certainly not to Glimmer, her 'daughter'.

Catra clenched her teeth and couldn't help looking at the windows. If this Angella wanted to keep this secret, the best way would be to silence Catra permanently without giving her the chance to tell anyone. Was that why she had visited last night without anyone with her? If Catra hadn't mentioned Micah, would Angella have killed her?

Too many knew about Catra - the entire Princess Alliance - to disappear her, but if Angella could pass for this dimensions' queen, framing someone else for her death or arranging an accident or suicide wouldn't be difficult.

And Catra was helpless to stop her. She couldn't escape this force field - not even her claws would cut it. But the floor? She looked down, hesitated a moment, then pulled the thick carpet up and stared at the stone below. Marble. Her claws could cut it - a quick test confirmed it. Depending on how thick the floor was, she could escape. At least to the floor below. And she knew Bright Moon - once she was out of the cell, she could flee. Not even Adora would be able to catch her if she had enough of a lead.

And they would be looking for the Catra they knew - a person Catra wasn't any more. They would be working from all the wrong assumptions. Evading them would be child's play.

So she could escape. Unless there was another force field below the stone. Even so, if the floor was thick enough, she might be able to squeeze through between both force fields if she removed the stone - like digging a tunnel. That would take longer, of course. Something best left for the night.

Of course, the question was: Did she want to escape in the first place? That would make it harder for Adora - her Adora - and the others to find her. And kind of sour relations with this Bright Moon. If they just imprisoned her, Catra could stand it. She had been a prisoner before. And Adora and the others wouldn't take too long to find her. Probably.

They haven't found Angella in years, a small voice whispered in the back of her mind.

That was different! She told herself. They couldn't replicate the portal - but they had surely taken the base with the weapon that had hit Catra. Entrapta, Bow and Sam would be able to use that to find Catra.

She just had to wait. Survive and wait. She could do that.

But if Angella wanted her dead…

Catra clenched her teeth. She wasn't going to let herself be killed here. Certainly not so Angella could keep lying to everyone.

Maybe she should just risk it. Better safe than sorry? She had received breakfast a bit ago, so she wouldn't get lunch for a few more hours. Plenty of time to cut through the floor. In a pinch, she could cover a hole with the carpet. So…

The door opened, and Catra hastily dropped the edge of the carpet and stood up to face whoever was entering.

It was Angella. And… Micah and Entrapta! Angella must have rushed to the island right after leaving Catra to have made it back with them so quickly.

Catra wet her lips and drew a deep breath. "I told you they were alive and on Beast Island." Then she nodded at Micah and weakly smiled at Entrapta. "Hello."

All three glared at her, and Catra winced. That wasn't how her Micah and Entrapta would have reacted. "I guess you were right about the portal's danger," she told Entrapta.

Instead of agreeing - or sneering at her - this Entrapta looked confused. "What do you mean?"

That was… Something was wrong here. "You warned me not to open it," she said.

"I did?" Entrapta cocked her head to the side.

Catra clenched her teeth. "That was why you were sent to Beast Island," she said, her stomach twisting with guilt at the memory.

"But… I was banished to Beast Island because I tried to sabotage the portal."

That wasn’t how it happened. But had that happened here? Had Entrapta gone further than in Catra’s dimension? Were there other differences?

She glanced at Angella. How was Angella able to fool everyone else if there were more such differences?

The woman scowled and turned away. “Let’s leave the prisoner. She will get her just punishment soon enough.”

“I’m not your Catra!” Catra snapped. Should she accuse Angella of not being their Angella? Would Angella kill her with witnesses here?

She hesitated, and then the door closed, and she was alone again.

*****

The Secret Base Part 6

Research Station Beta, PU-9623, January 31st, 2000 (Earth Time)

Jack O'Neill liked watching Carter work. Especially if she was so focused, she forgot that she was being watched - in a way, the tension and complete focus on the task emphasised everything about her. It made her more… honest. There was no room for her polite, professional act. Just her and the task.

And she looks hot when she…

He pushed the utterly unprofessional voice away and ignored it. Carter was a fine officer, and both of them were members of the United States Air Force, anyway. Chain of command or not.

He leaned back against the wall in the main lab of Beta and watched Carter work on the laptop she had connected to the crystal array thingie. She was a faster typist than anyone else he knew. Well, except for Entrapta, but having magic hair that could use half a dozen keyboards at the same time, as she was demonstrating right now, was cheating, in Jack's opinion.

"OK! If we extrapolate the data gathered with this setting, then we should be able to narrow down the specific frequencies resonating with the background of the target dimension. And based on that, we should be able to detect frequencies that differ in crucial patterns from that," Entrapta announced.

Jack looked at Carter and raised his eyebrows.

"We will be able to detect people who aren't native to the target dimension, sir," Carter explained.

Jack nodded. He had suspected that - he wasn't a dumb marine; he was Air Force - but it was best to check.

“So, you’ll be able to find Catra!” Adora leaned forward. She looked almost feverish - she hadn’t really rested enough since this whole mess had started, in Jack’s opinion. But good luck trying to tell her that when others - like Carter - were pushing all-nighters as well.

“In theory, yes. We still need to test it,” Bow cut in. “It’s not that easy.”

“It would be easy if we were dealing with an actual parallel universe - the beginning of entropic cascade failure would give off specific radiation that we could detect,” Carter added. “Although that’s only if that theory about entropic cascade failure is actually correct. Of course, Beta’s data supports that.”

“Ancient records mention such cases, yes.” Beta had popped up next to them, and Jack barely managed not to jerk. “That’s why we were using a specific transfer dimension as a target. The fact that the dimension is influenced and even formed by sapient minds guarantees that you will not meet a dimensional analogue, reducing the risk of fatal consequences related to dimensional travel. Of course, that is merely for research; the actual value of travelling to such dimensions is debatable. There are no resources to be extracted or knowledge to be gained since everything depends on someone imagining it.”

“Not a good spot to found new colonies, huh?” Jack asked.

“Exactly!” Beta smiled at him - he had to work on his sarcasm. “Nothing created in such a dimension could survive the return to our dimension - the central laws of nature work differently there. Even the simplest material gathered in such a place might suffer rapid entropic decay once introduced to a less metaphysically unstable universe.”

“Is that the kind of decay that makes it crumble to dust or go critical?” Jack asked.

The way Carter, Entrapta and Bow blinked and glanced at each other wasn't very comforting.

"That's an excellent question." Beta nodded approvingly in that condescending way of hers. "We should find out."

"Only under the strictest security, of course," Carter added.

Entrpata nodded in agreement, but Jack still didn't trust the glint in her eyes.

"No blowing up the planet by mistake!" he told them with a frown.

"Of course not!" Beta frowned at him in return. "That would threaten the research station itself and all our work!"

"And kill us all," Jack added in a flat voice.

"And prevent us from saving Catra and the others!" Adora glared at everyone. Or she was trying not to fall asleep - it was hard to tell.

"Right!" Entrapta nodded. "We'll have to do that in space then - and on the other side of the planet so any exotic radiation generated by such a decay won't affect the base."

"But first, we need to test our new sensors," Carter said, bringing everyone back on course.

"Yes!" Once more, hair tentacles flew out, and keyboards started to sound like automatic weapons.

Jac slightly shook his head. Before he could make a comment - or tell Adora to catch some sleep - his communicator vibrated, indicating someone wanted to talk to him. "Work calls," he said, leaving the lab to check who thought they had a problem only he could with this time.

Some people really needed to show more initiative. As long as they weren't researching potentially planet-wrecking

superweapons, of course.

*****

Research Station Beta, PU-9623, February 1st, 2000 (Earth Time)

Taweret glared at them when Adora had Beta depolarise the force field that kept her locked up. She should have done this earlier, but between ensuring that her friends had everything that they needed to get Catra back and sorting out a few issues with the occupation of the planet, there hadn't been time for that. And Taweret had been safe and comfortable, sort of, in her cell anyway - not as comfortable as she was used to, of course, or if she would have been held in Bright Moon, but it wasn't as if she was in a Horde cell.

"Hello, Taweret," she said with a nod and a smile. "Hello, Zahra," she added for the host the Goa'uld was controlling. "I am She-Ra, Princess of Power." She gestured at the others. Taweret had already met them, but she might not remember them. "You already know General O'Neill and Sha're. These are Queen Glimmer of Bright Moon and Dr Jackson. And Jakar and his host Mats."

Taweret nodded curtly after standing up from her cot - she was still shorter than Adora but a bit taller than Glimmer, Adora noted. She didn't miss that the Goa'uld ignored the Tok'ra, either.

"I'm sorry it took a while to get around to you, but we were kind of busy taking over your bases and dealing with your ships," she said.

"I hope they accounted themselves well," Taweret said with a toothy smile.

"Not really," Jack drawled. "Paperwork was more challenging than your guards."

The Goa'uld sneered. "Apophis assured me that he sent his best warriors with me."

"Well, if they were his best, this would be a short war," Jack replied.

"You defeated one fleet of his. He has more. Many more," Taweret retorted. "More than enough to destroy the Tau'ri and your new allies."

"Ah." Daniel raised his finger. "That's a bold statement, but since you don't know how many forces our Alliance can field, it's just a boast."

The Goa'uld glared at him. "The Goa'uld Empire rules the galaxy, and Apophis is the most powerful of the System Lords. No force can stand against him. Certainly not the Tok'ra, who only survived by hiding in the shadows for millennia."

That sounded like empty bravado to Adora - the galaxy was far too large to be ruled by the Goa'uld. And Apophis wasn't the most powerful of the Goa'uld any more.

"And yet, you never dared to intrude into Horde Prime's territory - or challenge the Asgard," Sha're said.

Taweret tensed, glaring at her, then raised her chin and scoffed. "If either of those powers were allied with you, where are they? Do you expect me to believe that they would let their clients deal with me?"

"We might need to get a bigger cell for her ego," Jack muttered next to Adora.

She chuckled at that while she pushed the button on her communicator. "Hordak?"

A moment later, Hordak walked into the hallway facing Taweret's cell, and the Goa'uld queen recoiled, gaping.

She recovered quickly, though. “That’s not Horde Prime.”

“You are correct,” Hordak told her. “I am Hordak. The first of his clones to gain my freedom.”

“So, you’re a deserter.” Taweret laughed, though it sounded a bit forced. “What will you do once Horde Prime finds you?”

“Horde Prime is dead. I killed him,” Adora told her.

“An empty boast!” Taweret retorted with a sneer. “This is a farce! Will you claim to be a Gate Builder next?”

“It is the truth,” Adora said. “Horde Prime attacked our home and we defeated him - and freed his clones from his control. They joined our alliance.”

“You expect me to believe that?”

“Actually, no,” Jack said with a grin. “We don’t. But it makes telling you the truth more fun.”

Adora resisted the urge to roll her eyes at him. “We want you to understand your situation. And your options.”

Taweret narrowed her eyes. “You need my help. That’s why you are doing this… production! To impress and fool me!”

“We don’t actually need your help,” Adora said. “Beta already told us that you don’t know anything useful about the experiments here.”

“But you want my knowledge of Apophis’s court and his plans!” Taweret scoffed. “You expect me to betray him because of such a transparent lie!”

“We expect you to betray him to save your own skin,” Jack told her. “Or because you want to usurp him. Or just because. You’re a Goa’uld.”

“Cooperation is your only chance of survival,” Jakar spoke up using his Goa’uld voice, and Taweret flinched. “If you kill your host, you die. If you let yourself be removed from her without killing her, you’ll live.”

“Traitor!” Taweret hissed in return. “I know what you do to those you capture.”

“We would like to mete out the punishment you deserve, but our allies do not condone that,” Jakar replied with a glance at Adora.

She nodded. “Yes. We don’t kill prisoners. Cooperate, release your host, and we will guarantee your life.”

“You will meet Amaunet and the other Goa’uld prisoners who can confirm this,” Sha’re told her.

Adora tensed. If Taweret decided to kill her host… They could stun her, of course. If they were quick enough, they could keep her sedated until the Tok’ra could remove her. But it was dangerous. It was better to persuade her to cooperate.

“You made a lot of fantastic claims. Who are you?” Taweret was sneering again.

“I told you already - I am She-Ra, Princess of Power.”

“And I’m Glimmer, Queen of Bright Moon. We represent the Princess Alliance of Etheria.”

“That means nothing!”

“We defeated Horde Prime. We freed his clones. And we’re restoring magic to the galaxy,” Adora said.

Taweret gasped at the last part. Oh - of course! She was old enough to remember the time before the First Ones stole the magic from the sector for the Heart of Etheria.

Adora smiled at her. “We did that to Saqqara. You probably noticed that.” Well, they had been forced to, as a last resort, but she didn’t need to know that.

Taweret stared at her. “An empty boast!” she spat - but it sounded hollow.

*****

“Hordak! You're back! How was the talk with Taweret?”

Samantha Carter looked up at Entrapta's comment. Indeed, Hordak had returned.

“It went as expected. Without proof, Taweret did not believe our claims - or professed such doubt, at least. Although since she seemed unsettled at the end, I believe we had a conditional success,” he replied. “Whether it was worth my absence from our work, time will tell.”

Sam swallowed a comment about self-importance; Hordak had been absent for less than an hour, and while he was a great scientist, even double that time wouldn't make much of a difference, if any at all, in their search for a way to save Catra and the other missing people. They had to take longer breaks to eat and sleep, after all.

But provoking an argument would be wasting time and creating friction; Hordak was quite prickly. Not as bad as some of Sam's colleagues from Earth, but he wouldn't shrug off such a comment as easily as Entrapta or Bow.

So she focused back on her sensor analysis while Hordak returned to studying the remote projector's focusing crystals with Entrapta. Their last experiment had proven that their idea could work, but they needed to refine their approach to get the details needed to actually track non-natives in the other dimension by the changes they caused. And improving the sensors to that point not only required improved computing power, which they had acquired by

linking advanced machines from the lab and the fleet above, but also better algorithms.

And coding those, especially so they could run on a hodgepodge of different operating systems, was a challenge. Even for someone like Sam, who had a lot of experience linking First Ones, Horde and Earth technology thanks to her research with Entrapta.

A challenge she would beat, Sam reminded herself as she adjusted her code a bit more, then ran another test on the raw sensor data. If only she had a way to make the computers copy her own thoughts… She blinked. Maybe she needed a break if she was thinking about things like that.

The test would run a few minutes, anyway, producing thousands of individual analyses and compiling them into one data set so she wouldn't waste time either way. "I'll be right back," she announced before leaving the room.

When she entered the secondary control room serving as a break room, the huge holoscreen there was showing a comedy from Earth - Entrapta had linked it to the spy bot network so they could get a feed from Earth. The lag was bad, but that didn't matter when you were merely watching media instead of communicating.

Sam used the remote on the table - like the rest of the furniture, it was from the expeditionary force meant for a field headquarters and looked a little out of place in the room - to switch channels. No one else was present, and she preferred the news over some sappy Hollywood movie. Especially if it was a sappy Hollywood movie featuring a scientist in too-tight clothes flirting with a dashing military officer and a plot with holes large enough to fly a frigate through. At least there was no love triangle with an alien this time.

"...and despite the mounting pressure for transparency, Alliance Command insists that they cannot reveal the files from Stargate Command for military reasons. So, fact-checking claims remains a

challenge, which is why we have invited two experts to the studio to discuss this."

Sam closed her eyes and sighed. She was tempted to switch channels again, but it would be useful to keep up with Stargate Command's media reputation in the public. Getting blindsided once by rumours about a - completely fictional, thank you - near-catastrophe featuring black hole research had been bad enough.

So she sipped coffee and nibbled on a pastry while watching two 'experts' discussing her former team.

"...and while there was a civilian on the team, that doesn't change the fact that it was a military team, led by an officer, and part of a military operation. That will have coloured their interaction with the galaxy at large. A civilian team would have reacted quite differently to alien cultures."

"But that is understandable since we were already at war with the Goa'uld. You have to consider military necessity in such a situation."

"The war was started by a clandestine program of the United States Air Force, funded from black accounts, without more than perfunctory oversight, and focused on developing advanced alien superweapons."

"To defend Earth."

"If it had been about defending Earth, Stargate Command would have recruited the best and brightest scientists for their research, regardless of their nationality. But they stuck to the military instead."

"Samantha Carter is amongst the world's foremost physicians."

"And a Major in the Air Force. That has far more weight than…"

Sam sighed. In a way, it was ironic that after years of having to struggle against the perception that she owed her commission to

her scientific expertise and wasn't a 'real officer' despite having more combat experience than most of her peers, now people were using her military rank to disparage her scientific credentials. Although it was hardly surprising - some of her colleagues in the field had massive yet very vulnerable egos and would latch onto any excuse for their lack of success in research. At least the experts hadn't claimed that she had slept her way to the top here.

"...and rumours of her close relationship to Princess Entrapta remain in light of Etheria's known stance on such things and…"

Sam clenched her teeth. That should teach her to taunt Murphy. She shook her head and left the room. The test should be finished by now, and if the results matched projections, they should be ready for another experiment soon.

*****

Unknown Location, February 1st, 2000 (Earth Time)

Catra eyed the door and held her breath, ears twisting. She couldn't hear anything or anyone outside. Of course, the doors were thick - she knew that from her Bright Moon - and so that didn't mean the coast was actually clear.

She clenched her teeth. She couldn't wait any longer. This Bright Moon was too different, this Angella too messed up and dangerous, for Catra to risk waiting any longer in the hope that her friends would find and save her. At any moment, Angella could decide that Catra had to die. Either for her past crimes or to keep her from telling everyone that Angella was not this dimension's Angella. Or both.

Catra had to save herself.

She resisted the urge to look once more for hidden cameras observing her - she couldn't do anything about them, anyway - and lifted the carpet, revealing the lightly scratched stone floor below. "Here goes nothing…" she whispered as she unsheathed her claws, then slashed down.

It took a bit more swipes and slashes to cut through the stone than she had expected, but it was fast work, and she soon had the stone cut and broken into pieces she could easily lift out of the growing hole.

And then her claws cut through stone and found nothing - not a force field painfully stopping her swipe, but empty air. She grinned, dug the claws of one hand into the stone and cut around it with her other hand, then lifted with a grunt.

A hole. Not yet large enough to fit through, but she could see the floor below her in the soft light of the moons that shone through the windows. Perfect! Now she just had to…

Her ears twitched as she not only heard a waterfall but also breathing, and her eyes widened. That wasn't an empty room below - someone was sleeping there! Damn! In her Bright Moon, those rooms weren't occupied!

She dropped the stone on the floor of her cell, next to the other pieces - no sense in trying to hide them - and quickly enlarged the hole by cutting off another piece. She could squeeze through now, though it would be a tight fit. Better widen it some more.

Then she was done. Taking a deep breath, she laid down on the floor, frowning at the dust covering the carpet and getting into her fur, and pushed her head through the hole to take a peek.

There, at the wall, was the waterfall she had heard. There was also a big window facing East, a balcony to the south, vanity and armoires, a half-open door leading to a huge bathroom, and a massive canopy bed in the off-centre that looked vaguely familiar. This was a guest room, and a first-class one.

She held her breath and looked around for a sword. If this was Adora's room… No. No sword. But she saw a trident peeking out from under the bed and had to swallow a curse.

This was Mermista's room! She cocked her head and eyed the bed, whose occupant was hidden by the curtains. She didn't hear

two breaths and saw no clothing strewn around the room, so Mermista hadn't been busy with Sea Hawk and was now exhausted and sleeping deeply.

Well, that wouldn't stop Catra. She could sneak past an alert awake Mermista; a sleeping one was child's play. Baring her teeth, she pushed headfirst through the hole and dug her claws into the ceiling below before swinging through and letting go, landing on all fours on the thick carpet in the middle of the room with barely a sound.

Perfect!

She grinned as she moved past the bed towards the balcony. She could easily climb down from there to the yard below - she knew that from experience. It was a little hard on the wall there, but Catra didn't give a damn about this Bright Moon's appearance.

She brushed the curtain half-covering the door to the balcony aside and slipped out, peering down at the yard. Yeah, she recognised the location. From here, she could easily slip out of the palace, and then she had multiple routes to the fields surrounding the town. If she went all-out, she could reach the whispering forest before the sun rose and anyone would notice her absence. So, she just…

Something was moving down there! Hissing under her breath, she moved back and ducked, waiting for an alarm to be raised, ready to scramble down the wall and fight her way out.

But instead of yelling, she heard a grunt, followed by something flying over the balcony's railing and hitting the floor next to her with a thud.

A grappling hook? She stared at it, blinking, while it was pulled back, then got hooked over the railing. Who would…? She closed her eyes and stifled a groan when she realised who would scale the wall like this.

“Oh, my love, I'm coming!”

Yeah, the whisper confirmed it. Sea Hawk was visiting Mermista at night. Judging by the slightly slurred words, he probably carried a rose between his teeth.

Catra glanced back. She could hide - perhaps under the bed - and just let him and Mermista get it on, then sneak out and climb down. But if either Sea Hawk or Mermista spotted the hole in the ceiling…

And hiding under a bed while two people had sex on it wasn't exactly how Catra wanted to spend her time, either. Not with her sensitive ears and nose.

Screw it! She moved back, then dashed behind the curtain at the door, her back to the wall, and peered through the small gap facing the doorframe.

“Oh, my dear Mermista! Your love is coming!”

Catra saw a hand grip the railing and heard a grunt. Then Sea Hawk pulled himself up and swung his legs over it. And he really was holding a rose between his teeth! Catra resisted the urge to shake her head and held her breath while he straightened, then walked into the room.

Now!

As soon as he was past her, she slipped out behind his back, vanishing around the corner.

“My Love! I've climbed mountains to reach you!”

“Ugh… What the…? You're late!”

Catra shook her head and ignored the couple's greeting as she gripped the rope dangling from the grappling hook and started to climb down. At least they seemed distracted, so she would…

“Look at the ceiling! Sea Hawk!”

“My love!”

“Not that - the ceiling! Someone broke into the room! That's… the prisoner! She escaped!”

Damn! Catra clenched her teeth and dropped the rest of the way down, then started to run.

Catra's Mermista was loud enough ‘to be heard through a hurricane’, as Sea Hawk had once described it at an Alliance dinner, and this Mermista was no exception. Catra knew the palace guards would be on alert in moments. Her original escape plan would need to be adjusted - she couldn't count on sneaking out into the town. Not with the palace lighting up as guards - and soon princesses - started looking for her.

She changed course and headed to the corner of the yard, running straight at the wall to the outer part of the palace, dropping down to all fours to pick up speed. One, two… She launched herself into the air and hit the upper part of the wall with her claws extended, shredding the surface as she scrambled the last few yards up.

She slid over its top, trying to flatten herself to minimise her silhouette to anyone looking her way, and dropped down on the other side. She tore up the lawn as she landed, but that couldn't be helped. Though she could use that to lay a false track.

She tore off, claws ripping chunks of earth and grass, towards the gate to the side, but changed direction as soon as she hit the stone-plated path that led through this ornamental yard. Let the guards think she still wanted to escape to the town.

But her real destination was the back of the palace. She moved a bit slower, without her claws granting her traction at high speed, and vanished between two rows of bushes with fancy flowers, then ducked under a fence and dashed past an empty stable - had this Glimmer also had a pony in the palace once? It seemed like it.

And the original Angella hadn't skimped on pasture for the poor pony either - the fence reached all the way to the outer wall of the palace. It was high enough to shield the entire princess playground from view and would do the same for Catra now.

Until she went over it, of course. She could scale it easily using her claws, but if anyone spotted the traces that would leave before she could get away from the palace, she would likely be caught halfway down the cliff on the other side…

She should have taken Sea Hawk's grappling hook and rope with her. Hissing at her mistake, she eyed the wall, then the tree next to it. It had been carefully trimmed by the palace gardener into a decoration, but it was still tall enough to reach halfway to the wall's top. It would have to do.

And while climbing the tree, she would be covered from view by the foliage. She quickly went up, weaving around the many branches, until she reached the top, which was slightly swaying under her weight.

Glancing back, she could see the palace fully alert - all the lights were on, and she could hear more shouting and yelling and see movement behind windows. Yeah, operation 'Catch the Cat' was in full swing.

But Catra hadn't almost beaten the entire Alliance through dumb luck. Scoffing, she shifted her weight, causing the treetop to sway even more. Back and forth, back and forth, back and… She jumped, holding her breath, reaching out as she stretched her body. Her fingertips clamped down on the edge of the top of the wall, and she clenched her teeth as she resisted the urge to unsheathe her claws and get a better grip.

Instead, she pulled herself up, shifting grips to find better purchase on top, and swung her legs over the wall, followed by her body until she was hanging by her fingertips on the other side - straight above the cliff overlooking Bright Moon's lake.

Exactly where she wanted to be right now, she reminded herself. If not for long.

On this side, she had no choice and had to use her claws to descend; the wall ended where the cliff began, and there was no ledge to drop down on. If she fell, she would bounce off the cliff a few times until she hit the water at terminal velocity, as Entrapta would say.

She wouldn't fall. Digging her claws into the wall, she let go of the top and started her descent.

She clenched her teeth at the sound her claws made as they slowed her down until she hit the base of the wall. If anyone heard that… But she was committed now.

The cliff itself was steep but far from smooth, so she had to start climbing down instead of sliding. That slowed her down some. She still made a good pace - thanks to her claws, she could make her own hand- and footholds.

But when she was still halfway to the ground below, she heard a familiar and thoroughly unwelcome sound: Flapping wings. Large wings. A quick glance around confirmed her fear: Adora was riding Swift Wind - and headed to the cliff.

Catra looked down. She was still too far up to risk jumping into the water below her. Going up was out of the question. And she was too exposed on the cliff to hide.

Damn.

Maybe if she hid herself in a crook in the cliff, Adora might miss her in the dim moonlight. But where was such a spot? Pressed against the stone, Catra had trouble seeing a good hiding spot. And if she moved, she would draw more attention to herself.

She muttered another curse. Move and hope to find a hiding spot before Adora found her? Or stay still and hope Adora missed her

in the middle of the cliff? No, this Adora wasn't her Adora, but she was likely as stubborn - or more so.

Catra slowed down a little bit, though, and tried to keep an eye on Adora. If she moved smoothly and not too quickly, and timed her faster movement to the moments when Adora wasn't looking in her direction, she might escape notice.

Adora swept past her - and above her. She was starting her search from the top, then. Not the bottom, to cut off any escape. Did she know Catra hadn't had time to reach the bottom yet? Or was that because Adora wanted to be able to swoop down once she found Catra instead of having to climb up?

It didn't matter why, just that she did. Catra clenched her teeth and kept climbing down. There! That might be a hiding spot - a small gap between a protruding rock and another, just large enough for her to fit in.

Baring her fangs in a grim smile, Catra started making her way to the spot. A glance up confirmed that Adora, while closing in, was still about two passes away from her height. That should be enough time to slip around the rock in the way and hide.

She held her breath as she waited, in the barely-there shadow of the rock, for Adora to pass above her. Almost. Almost. Now! Swift Wind swept past, and Catra pushed off, claws digging into the hard rock as she traversed the rock as fast as she could. She only had a second or two… She panted for breath when she slid into the narrow gap, pressing herself against the stone. Now she had to wait until Adora passed this spot, then wait some more until they finished here and went away to search the stables or something. Then Catra could finish her descent and disappear into the forest below.

Her ears twitched - Swift Wind was approaching. Catra resisted the sudden urge to turn and face the rock, not looking until she heard the flying horse pull away. She had to see what was happening. She wouldn't cower like that.

So she watched Adora fly towards her. It wasn't her Adora, but it was a beautiful sight anyway - Adora's outfit shone in the moonlight. Almost ethereal. Even Swiftwind didn't distract from it - his white fur and wings caught the light as well.

Then the two were past, and Catra sighed with relief. That was… She froze. Adora was turning early - and coming back. Had she…?

She must have - she was coming straight at Catra! Damn. Catra looked around. Still too high to jump. Hell, she was so high, if she jumped, Adora could easily catch her before she hit the… Catra's eyes widened. It was a foolish idea. Stupid. But… even if this Adora wasn't her Adora, she couldn't be completely different from her Adora, could she? Not if things had happened more or less like in Catra's dimension.

It was the best shot she had. If she was recaptured, she would be put in a cell from which she couldn't escape. Or killed.

So she pushed herself out of the gap, only holding on to the rock with one foot and one hand, and turned to face Adora. Familiar eyes widened with surprise before they narrowed again.

Smiling, Catra closed her eyes and jumped.

"CATRA!"

She didn't open her eyes and let her body go limp as she fell, the wind tearing at her as she picked up speed. If she had misjudged this Adora…

"CATRA!"

Closer. And she sounded a bit concerned. Catra's smile widened a little, though she kept her eyes squeezed shut. Yes!

Then, an arm wrapped around her waist, fingers digging into her side, and she was pulled into Adora's side. A moment later, her stomach lurched as Swift Wind started to pull out of his dive.

“You idiot!” she heard Adora yell as they slowed down and levelled out. “Trying to kill herself?”

“Without wings, you cannot fly,” Swift Wind commented.

And now they were above the lake at the foot of the cliff. Far above it - but not so far that a fall would be fatal.

Catra twisted in Adora’s grip, turning her head to face her. “I’m sorry about this,” she said, smiling.

Adora’s expression darkened. “Oh, you will be…”

Catra wriggled - her arms were caught by Adora, but she was flexible, and Adora was so close… She twisted, then leaned forward and cut Adora off with a kiss.

And when Adora froze, gasping with shock and surprise, her grip loosening, Catra bent her knees, brought her feet up, and jumped out of her grip, diving for the lake below.

This time, Adora wasn’t quick enough to catch her before she hit the water.

Research Station Beta, PU-9623, February 2nd, 2000 (Earth Time)

“...and while the actions of SG-1 are undoubtedly heroic, one has to consider the situation during which they were taken: They were active during a war that only started because the United States government tampered with an alien relic in secret.”

“I'm not sure it’s ‘heroic’ to visit another planet with a group of soldiers and a nuclear bomb in tow and then blow up the government there when they take exception to that, Jim.”

“It was an expedition to another planet - of course, they had to be prepared for the worst. Matter of fact, the worst case

happened, and they dealt with it, Frank!"

"And they weren't all soldiers - Dr Jackson was with them."

"He was in uniform!"

"But he's a civilian!"

"That's a technicality. He looked the same as the soldiers. And during his time with SG-1, he was armed and fighting like any other member of SG-1."

"But he was still a civilian!"

"As much a civilian as any other private military contractor!"

Jack O'Neill turned to Daniel, who was staring at the screen with his mouth hanging open. "Did they just call you a mercenary?"

"They… they did! But that's preposterous! I am a consultant!" Daniel shook his head. "A scientist!"

Jack grinned. "Well, you have taken part in pretty much every battle we've been involved in. And you did get combat pay, didn't you?"

"I didn't get combat pay!" Daniel protested. "That's reserved for members of the Armed Forces. My recompensation was just adjusted for hazardous duties."

"Potato, potato," Jack retorted, still grinning. "The media thinks you were a mercenary."

"That's not the media! That's just the most extreme bunch of pundits they could throw together for a cheap rating boost!" Daniel shook his head. "Why are we watching this.. this sensationalist drivel?"

"Because Carter wanted to know what people back on Earth were saying about us," Jack replied as he grabbed another soda from

the cooler they had installed in Beta's new break room. Not that Daniel was wrong - this talk show was more 'Jerry Springer' than anything else.

"...and all that still doesn't make SG-1 any less heroic! They've saved Earth from alien invasions long before the princesses arrived, Robert!"

"As part of the United States Armed Forces! They aren't some… some superhero team operating outside the law!"

"Stargate Command was operating outside the law!"

"It was not! The operation was covered by regulations."

"Regulations that obviously need heavy revisions!"

"You want to hamstring our military in the middle of a war?"

"Accountability for the military is most needed in the middle of a war! That's when rules and laws are in danger of being ignored in the name of expediency!"

Jack nodded. The guy was a genuine frothing-at-the-mouth lunatic, but he was right about that. Pretty much only about that, though. At least, even here, the majority of the 'experts' seemed to have a pretty positive view of SG-1, so…

"Or in the name of love. We've all heard the rumours about what SG-1 did when operating on alien planets."

"Oh, yes."

"Are you serious? We are talking about Stargate Command, not a Hollywood romance!"

"Dr Jackson brought a war bride home from the very first mission!"

Scratch that thought! Jack pressed his lips together. He glanced at his friend. Daniel was glaring at the screen. Probably not a good time to ask whether Sha're got a green card yet through their marriage. Though Jack better checked up on that before some bureaucrat with delusions of importance tried to make a fuss. He'd have one of his staff look into that.

"So much for the rally behind the flag effect," Daniel muttered as the pundits descended into another loud argument about the legality of Stargate Command and its actions in the past.

"For most people, it hasn't really sunk in that we're at war. We don't have a lot of casualties, and all the battles are fought off-world, without press coverage. So…" Jack shrugged.

"So *that*," Daniel said, nodding at the screen again. "Let's change the channel. I don't want to watch this any longer."

"Alright." Jack reached for the remote when the door opened, and Glimmer stuck her head inside. "There you are! We're about to start the experiment!"

Right. Jack got up. He wasn't going to miss that. If only to make sure Adora didn't try again to volunteer herself as a test subject. They couldn't risk her with the first experiment. They couldn't risk her with the second or third experiment, either, but Jack had a feeling that Adora wouldn't let that stop her if the first experiment succeeded.

*****

The Lost Dimension Part 1

Research Station Beta, PU-9623, February 2nd, 2000 (Earth Time)

Finally! This had taken much too long! Adora bit her lower lip so she wouldn't say that out loud. She knew her friends were doing their best, and she also knew that dangerous experiments shouldn't be rushed. Even more so if it involved dimensional travel, which was extremely dangerous, and not just for the ones doing the experiments.

But knowing this didn't make waiting for her friends to find a way to save Catra any less stressful. Catra was lost in another dimension - a dimension they didn't know anything about except that it was shaped by people's thoughts and feelings, which didn't sound very safe at all. What if it reacted badly to Catra? Adora knew that her love still had some issues - despite Adora and her friends' help. What about all the other poor people who had been sent there by Beta on Taweret's orders?

The sooner they could go and get Catra and the rest back, the better!

Now, if only her friends would hurry up - *safely* hurry up, of course, without rushing things. Just… put a move on, or something.

"You didn't start without us, did you?"

Adora turned and refrained from glaring at Jack. Even though his joke was terrible.

"We're still running our last set of checks, sir," Sam told him. "Then we can use the projector to open a dimensional portal to the target dimension and send Atak through."

Adora felt a pang of guilt. She should be going through the portal, not Atak. Catra was her love - and this was her responsibility; she

was the Supreme Commander of the Alliance. And she was She-Ra, Princess of Power - out of everyone here, she was the hardest to kill.

But Entrapta, Sam and Bow had told her that She-Ra's power would add another variable to the experiment that might throw off their calculations. Even when she entered as Adora - she had asked. Well, they were the experts. They and Hordak, who hadn't said anything - he had scoffed, though, in his grumpy manner.

She looked at Atak, standing inside a yellow-painted round area in the centre of the room. He bowed his head as soon as he noticed her, and she struggled not to wince. He was risking his life for Catra; the least she could do was to show support and trust. At least he was well-prepared for this. He was wearing a space suit Entrapta had modified for him and was loaded down with all kinds of sensors - he looked like he had a spy bot strapped to his back. And a line was tethering him to a hook in the testing room. It would likely snap when the portal opened, but it might hold. Either way, they would get more data, Entrapta had said. Probably in case they had to lasso Catra and drag her back through the portal or something.

"Good, good." Jack nodded and walked over to Adora. "Don't worry, we've got this in hand." He smiled, but Adora couldn't help feeling that he might not be entirely honest. If this were easy, they would have done it already.

"The probability of success has been greatly increased compared to our last test," Beta said. It wasn't nearly as reassuring as she probably thought.

Adora nodded and smiled anyway. "I know."

"Alright!" Entrapta looked up from her tool. "Everything checks out! We're ready!"

And everyone turned to Adora.

She took a deep breath and nodded. "Let's start."

“Yes!”

Entrapta moved over to the main console, where Sam, Bow and Hordak were already seated.

“Charging up the primary and secondary power banks,” Sam said.

“Projector crystals aligned with the target solution,” Bow added.

“Shielding within expected parameters.” Beta, of course, wasn’t looking at any screen - they were inside her body, so to speak.

“Dimensional sensors tracking.” Hordak sounded almost bored. Wasn’t he nervous at all? The last time he had dabbled with dimensional travel, they had almost destroyed Etheria.

“Sensor lock achieved! Opening portal!” Entrapta yelled as her hair tendrils flew over two different consoles. “Stay away from the marked transport zone!”

Adora clenched her teeth as a humming noise filled the room. A moment later, Atak vanished, and the line that had been connected to his suit fell down - cut right above the edge of the affected area.

“Sensors working… searching,” Hordak announced. Still sounding bored.

“Secondary power banks active.”

Adora drew a short breath through her teeth. The longer this took, the bigger the risk of losing Atak was. And then they would…

“Target locked.”

Yes!

“Target solution generated. Crystals aligning.”

“Power banks ready.”

Come on! Adora silently urged her friends on.

“Opening Portal!”

Once again, the humming noise came - but it sounded slightly different. Or that was just Adora.

And Atak reappeared in the marked transport zone - and promptly fell down since he had appeared about two feet above the floor. But he had made it back! They could get people back from the other dimension!

Now they just had to find Catra!

*****

“What do you mean, you can’t find Catra?”

Samantha Carter winced a little - Adora was loud. “We can’t track Catra, so we can’t open a portal to her,” she repeated herself.

“But… You have her scans! All her data!” Adora protested.

Sam nodded. “But that’s not enough to track her in the other dimension.”

“We can track the effects non-natives - those transported there from here - have on the dimension,” Entrapta cut in. “But we can’t track individuals. Well, we can track individual signals, but we don’t know who they are. Our sensors aren’t able to track their biological data.”

“We managed to retrieve Atak because we knew exactly where he was since we sent him there,” Bow added.

Adora frowned at each of them. “But we have all the data from the experiments!”

Sam pressed her lips together. They had gone over that before. “Yes, we do - but we know that they moved after arriving there.”

Or had been moved.

"Then can't you reconstruct their, ah, routes?" Adora looked almost desperate.

"Well… we weren't tracking them afterwards, so we kinda lost their trace. So, we can't really tie the effects we can track to anyone specific," Entrapta said. "Sorry, but that data was never recorded - quite a mistake on Taweret's part."

And on Beta's, Sam added silently. Although with Beta's attitude toward the 'test subjects', one couldn't be sure that it had been a mistake or just indifference. Sam wasn't quite convinced that Beta had been 'just following orders' - the artificial intelligence had proven to be quite flexible in how she interpreted her orders.

As if she had read Sam's thoughts, Beta's holoprojection appeared next to them. "Unfortunately, Taweret was only interested in our research's potential as a weapon despite the obvious alternative uses dimensional travel offers."

Alternative but dubious uses. Indeed, contacting alternate universes to gather information - or resources - sounded tempting, and some Stargate Command analysts and scientists had proposed that after the incident with the Quantum Mirror, but they obviously hadn't considered the risk any such venture would carry. Even if they found a way to travel to alternate dimensions without destabilising their own, they would have to deal with the reactions of the natives of that dimension. The General had commented about Star Trek's mirror universe, but Sam knew that such extreme examples were not the only potentially hostile results of dimension travel. Not by far. The Alliance certainly would react a little concerned if other dimensions started to mine their worlds.

Not to mention that the only dimension they had been able to reach so far was a very unstable dimension instead of an alternate universe. Beta insisted that it was merely a transitory choice, a way to travel to actual parallel dimensions - or higher planes of

existence, though the Artificial Intelligence had been a bit quiet about the original aim of the research station since the Alliance had taken over.

“Then we can just open a portal to everyone we find!” Adora blurted out. “We need to find everyone anyway!”

Sam winced. This was possible, of course - a simple brute-force solution. But it wasn't advisable, in her opinion, at least. “We would have to do that blindly - we would target anyone fitting the target data and then forcefully transport them to our dimension without knowing their identity - or willingness to be transported - until after the fact.” That would be kidnapping people.

Adora bit her lower lip. “But…” She trailed off.

“Also, each such portal will affect the target dimension and make it harder to track the changes from others. The bleed-through from the portal is vastly stronger than the effects from individuals after the fact,” Entrapta added. “And the effects of She-Ra's power might amplify that.”

Sam nodded. “And we already cannot track everyone who's missing.” Of course, some of them could have died - that would explain the missing number.

“Worst case, we'll completely lose track of people,” Bow added. “It's already hard to track some of them.”

Sam was aware of that. “It might be related to how foreign they feel, which would depend on their respective environments. If they don't feel out of place, they might not cause a lot of changes.” Or any at all.

“Whatever! But you can track people we send over, right?” Adora asked.

“Yes.” Sam nodded. It wouldn’t be easy either, but they would be able to reliably track anyone they transported to the other

dimension. As long as nothing went wrong with their sensors or computers.

“So, we can send a search party to the other dimension!” Adora smiled. “One portal, that should be manageable. And when we find Catra and the others, we open the next portal.”

“Oh, yes! We can do that!” Entrapta nodded enthusiastically. “Though we'll have to find a way to communicate.”

“After a few more tests,” Sam quickly added. “We still don’t know how the entire process and the target dimension are affected by magic.”

“Yes,” Bow agreed. “We don’t want to mess this up and lose any more people, right?”

“Of course not.” Adora nodded, though it was obvious that she wanted nothing more than going to look for Catra right this moment. “How long will that take?”

Sam took a deep breath. “It will take a few more experiments. We need to test the process with magitech first and then scale it up.”

“Working up to She-Ra,” Bow said.

“We’re not going to test this with princesses or sorceresses,” Adora said, narrowing her eyes. “When we reach that point, I’ll be going through.”

“Of course.” Bow smiled weakly, though Sam understood - she knew Adora well; her friend wouldn’t budge on that.

“OK!” Entrapta beamed, of course. “We’ll run a series of tests - we should have most magitech devices for testing available.”

“And I will gladly carry them for you, Goddess,” Atak said.

“You don’t have to, Atak!” Adora said at once.

“It is my honour to help you, Goddess.” Atak bowed his head.

“And since you have no potential for magic, you won’t affect the readings!” Entrapta nodded.

“And we kind of need a sapient tester to retrieve them,” Bow added before Adora could object. “Otherwise, we can’t retrieve them.”

Adora grimaced and almost pouted but agreed - after a moment.

And Sam softly sighed with relief. They really couldn’t rush this. Though they couldn’t take too long, either, if what she suspected was true - the data potentially showed that the effect of non-natives on the target faded faster than expected. If the dimension or the intruders adapted to each other, then they would lose the ability to track the missing people - and the search team they apparently would be sending through. And they still had to find a way to communicate with anyone they sent over - a search party wouldn't be of much use when they couldn't tell the research station when to take them back.

Fortunately, Sam and the others had a few ideas about that.

*****

Unknown Location, February 3rd, 2000 (Earth Time)

Catra really didn't like the Whispering Woods. For years, the stupid forest had been a thorn in her side. It had shielded Bright Moon from the Horde’s advances. Scouting parties regularly vanished without a trace - and not just because of Alliance ambushes. Catra had checked after the war. Armoured thrusts ran into bogs and terrain so rough and dense, even hovertanks had trouble advancing any further - and any column stuck in the woods just became easy prey for flanking attacks by Alliance forces. Or for some of the nastier monsters hiding in the cursed forest.

But right now, she loved the Whispering Woods. If not for them, she would have been recaptured already. Just getting away from this dimension's Adora had been tricky. If she had decided to fetch Mermista at once, instead of searching for Catra herself at first, Catra wouldn't have managed to leave the lake she had fallen in before Salineas's princess turned it inside out.

Hell, the river Catra had been swimming inside had flown backwards for a few minutes. If she hadn't managed to grab a root at the riverbank and pull herself out, she would have been carried back to the lake.

But Catra had escaped. The lake, the river, and the manhunt in the fields that followed - Jack better certified her for passing SERE training after this - evading half the Princess Alliance's army was like the final test from hell, even if most of the princesses hadn't shown up in time to do anything.

Of course, if Bright Moon's farms had been a little bigger, with fewer hedges and small patches of woods separating them and little creeks leading from the woods to the river, Catra wouldn't have managed it. Not with Adora on Swift Wind flying overhead.

Whatever. She had made it into the woods. Now she just had to survive until Adora - her Adora - showed up with the rest of their friends. She froze for a moment, one hand on a huge tree trunk that had fallen over and barred her way. How could they find her? Catra didn't have her communicator any more. And she was currently in the middle - well, on her way to the middle - of the Whispering Woods precisely because not even the entire Alliance army would be able to find her here.

She muttered a curse under her breath as she climbed over the trunk - without using her claws; best not leave any tracks this dimension's Bow could find. How could her friends find her? She hadn't thought about that when she escaped. Not that she had had a choice. If she had stayed, she would have been at the dubious mercy of Angella.

Should she turn around and head to the edge of the woods? No. She would just make it easier for her pursuers. And without a communicator, she wouldn't be able to tell if her friends had arrived until she saw her Adora as She-Ra.

But if she just hid in the woods, no one would be able to find her. Not even her friends. Of course, if her friends found this dimension's princess Alliance first, Catra might not have to go to the edge of the Whispering Woods to hear the explosions.

Wait! Catra tensed. This Adora had found her very quickly - relatively quickly - after she had arrived in this dimension. So, there was a way to track people!

She looked over her shoulder. And if they used that, they could find her here. Only… it had been hours now since her escape. The sun was up. If they could track her like that, wouldn't they have done so already? Adora could travel the Whispering Woods without a care; nothing there could really hurt She-Ra. Hell, Light Hope's base had been in the Whispering Woods, and Adora had visited regularly.

Catra sighed. No, however they had managed to track her before - probably by tracking the dimensional transport - they couldn't use it on her now. She was safe!

Then she heard a clicking noise, followed by the sound of breaking wood and rustling leaves. Something big was pushing through the underwood. And it didn't sound like a Horde Hauler - those were legs she heard. Many legs.

She flashed her fangs. She could take any monster here in the woods. And she could use the stress relief. On the other hand, any pursuit might find the monster's carcass, and it wouldn't take a genius to figure out who had killed it once they saw the claw marks.

Damn! She clenched her teeth and started to move away from the approaching creature. A little detour sounded like the best choice.

Not that she knew where exactly she was going, anyway.

But as she climbed over a few more fallen tree trunks, the noise of the monster behind her didn't fade. The thing was tracking her! And probably leaving a trail even Kyle could follow.

No choice, then - the stupid thing, whatever it was, had to die. She just had to make sure she wouldn’t leave an easy track to follow afterwards.

Catra bared her teeth and looked around, checking the trees - there! She quickly dashed over to the tallest, sturdiest trunk she could see and launched herself up, reaching for the lowest branch. A quick grab, swing and a series of jumps later, she was crouching on a thick branch and staring in the direction of the approaching monster.

The trees shook in the thing's wake, birds lifting off in swarms and ripped foliage carried away by a breeze, but she didn't see many trees being toppled - just a few smaller ones. Then, she spotted part of an armoured shell through the gaps in the canopy. Ah - a giant bug.

That was annoying. Even with her claws, it was hard to get through their shells, and they took a lot of damage to finish off. On the other hand, that made for a very good stress relief - she could go all-out.

Although… why was the thing tracking her? The bugs generally didn't do that back home. They tried to eat you if they found you, and they chased you if you tried to run, but they didn’t follow you through half the woods for so long - not without having attacked you before, at least.

She shook her head and focused on the fight at hand when the bug broke through another large bush and stopped, antennas twitching as the head slowly turned and rose to look at Catra.

Catra hissed at it, and the bug clicked its mandibles in return - and charged at her.

The tree on which she was crouching was probably large enough to withstand the bug's attack, but Catra wasn't going to find out the hard way if she was correct. She raced forward on the branch, claws tearing up the bark, then pounced on the monster with a yell.

The thing dug its legs in and reared, leaving furrows in its wake, but it was too slow and too late - Catra hit its body, claws slicing into the shell as she slid down its side, before it finished raising its front legs.

And as it turned, trying to bite her, Catra slid underneath it and slashed at the thing's softer belly. The shell wasn't as thick and hard here as on top, and Catra's claws left behind cuts that bled ichor.

The thing roared and turned around itself, legs ripping up the earth as it tried to hit her. Catra hissed again as she dodged the closest leg, then lashed out at the joints, another weak point. A few frantic swipes later, the lower part of the leg crashed to the ground, and the monster cried out even louder.

But it had a dozen more limbs, all trying to crush Catra underneath it. She cut down another leg, a bit higher, but almost got clipped by its forelegs when that slowed her down a little. She also had to dodge more ichor from the wounds in its belly. And the stench…

Gagging, she rolled out from underneath the bug right when it tried to lean on one side and then squash her flat using its whole body. It couldn't stop itself in time, and the earth shook a little when its belly hit it.

Catra was already moving, dashing around the monster, avoiding the flailing limbs as it tried to stand up again. She dodged left, then right, as the barbed tips slashed down, impaling themselves in the ground near her, then jumped and sailed over the monster’s mandibles when it tried to bite her and landed on its head.

“Game over!” she hissed and raked her claws over its eyes, then through the base of its antennas.

The monster’s scream almost deafened her, and she was flung off its head when the bug started convulsing, but the bush behind her cushioned her fall. “No more tracking me!” she spat as she got up.

The bug tore up the earth around it, then crashed into a tree - and started to batter it with its remaining limbs, sending chunks of bark and wood flying through the air.

Catra was tempted to put the thing out of its misery, but she had spent too long already - and their fight might have already drawn the attention of anyone hunting her.

So she booked it on all fours, dashing through the underbrush to gain some distance. She jumped on low-hanging branches to change direction and throw off any pursuit, taking random turns until she was so far away that she didn't hear the monster's cries any more.

And had gotten thoroughly lost in the process. Though that could be easily fixed by climbing a tall tree and looking for landmarks. Or just for the sun’s position. A rough idea of her location would be enough, anyway - it wasn't as if she was going to call in artillery barrages or air strikes.

But just as she was about to climb the tallest tree in her vicinity, she stopped and sniffed the air. What the…? She blinked. That smelt like… fresh pie? In the middle of the Whispering Wood.

Oh. That could only be one person. Madame Razz.

For a moment, she hesitated. Madame Razz was… ‘weird’ was the most polite way Catra would describe her. She had only met the woman a few times, with Adora, but that had been a little disturbing. Maybe a bit more than a little. Madame Razz lived in a different world - maybe literally, if what Entrapta had once speculated. Something about experiencing multiple times at once.

Of course, the old woman could simply be senile and mix up the past and the present. That would explain how she kept calling Adora ‘Mara’. But if Madame Razz had actually met Mara, Adora's predecessor as She-Ra, then that would mean that she was as old - maybe older - than Angella.

And a woman who had lived that long, in the middle of the monster-infested Whispering Woods, going senile was a scary thought. Hell, a woman who had lived that long was scary enough without mixing up people in her brain or living in multiple times.

So, it might be better for Catra to head in the other direction, away from the smell of fresh pie, and not risk even more trouble. On the other hand, maybe this Madame Razz could help her? Did she know that Angella wasn't the original Angella of this dimension?

And hiding from an old woman who spent her days baking pies and carrying a broom with her wasn't really Catra's style, no matter in which dimension she might be.

Scoffing, she started to follow the smell of pie.

It didn't take her long, of course, to find the small hut in which the woman lived - Catra's nose was good but not good enough to smell pie from a mile away. She just had to move through a number of denser bushes - picked clean of berries, she noticed - and travel along a small creek. No traces of animals, much less monster tracks, as far as she could tell. That was a good sign, right?

Whatever.

Stopping at the edge of the small clearing in which the hut stood, she cocked her head to the side and listened. She could hear a faint mumbling from the hut. So, Madame Razz was home.

Catra stepped into the clearing and approached the hut. “Hello? Anybody home?”

The mumbling stopped, and Madame Razz's head appeared in the small window to the side, above the cooling pie. “Oh, Mara, dearie! No, you're not Mara.”

“I am Catra,” Catra said, smiling without showing her fangs. “But I’m not the Catra from this dimension. I accidentally was transported here when I helped Adora fight evil aliens.”

The woman stared at her. “You're Horde.”

Catra clenched her teeth. “Not any more.” She wasn't in the Horde any more. She wasn't that Catra any more. She wasn't.

“Horde.” Razz was scowling at her. “In my forest!”

“I am not Horde any more!” Catra snapped. She blinked. Right, the clothes. “I'm wearing these like Adora does - because they are practical and comfortable. But I am not Horde. I am not from this dimension at all!” And because you're used to them, a small voice in the back of her head whispered.

“Horde!”

“NO! I am not Horde!” Catra took a deep breath. Calm. Keep calm, she told herself. Stay polite and friendly. Explain things. “I am from another dimension - another world. Like… You know Mara took Etheria into another dimension?”

“Mara dearie! My Mara was so brave!”

“Yes, she was.” Catra pressed her lips together. “And I am from another dimension where we saved Etheria from the Heart of Etheria. And from the Horde.”

“Horde!” Another scowl and broom-waving followed.

Catra raised her arms. “No, I'm not Horde. I am not from here.” How often did she have to repeat that? “The Horde here was defeated anyway!” With extreme prejudice - Angella had said so.

“Horde!”

This was… Catra narrowed her eyes. “Mara came from the First Ones.”

“Mara, dearie! My Mara was so brave!” Razz was smiling.

“And she fought Horde Prime.”

“Horde!” And Razz was scowling.

This was… This Razz was not acting like the Madame Razz Catra knew. Not at all. Madame Razz was weird, yes. Maybe senile. But she did listen to people. She answered questions or ignored them; she didn't just spit out words like this.

Catra frowned. Something was wrong. Very wrong. And… “Where's Loo-Kee?” She hadn't seen the little cat pixie at all so far, she realised. And back home, he had been fascinated by her - apparently, Catra had been the biggest cat he had ever seen, so he had come out of hiding. He hadn't done that for Adora, Catra knew.

Razz didn't answer.

“Loo-Kee. Your friend,” Catra prompted her.

Razz still didn't answer. She didn't react at all.

“Did the Horde capture him?” Catra asked.

“Horde!” And there was the scowl and the broom-shaking. Like before. *Exactly* like before. If Loo-Kee had been captured or killed by the Horde, wouldn't she have reacted more strongly? Differently? “Mara was brave, wasn't she?”

“Oh, Mara, Dearie!”

Catra felt her stomach drop. Something was very, very wrong here. Sure, it was possible that this dimension's Loo-Kee simply

had never met Madame Razz. And that this Madame Razz was different from the one she knew. Different dimension, different people.

But somehow, Catra suspected this wasn't the case. Madame Razz felt just too… wrong. Off.

Flat.

Like a bot of sorts.

Catra clenched her teeth and moved away from the hut. She had to think about this. But not here. Not when she had no idea how this Razz would act. Or what she could do.

*****

Alliance Base 'Gateway', PU-9623, February 3rd, 2000 (Earth Time)

"I should have gotten veto powers for naming bases," Jack muttered as he skimmed over a report and saw the official name of the newly-christened base they had overtaken.

"Hm?" Daniel asked, looking up from his own work.

"Nothing." They had already discussed the name. Daniel saw nothing wrong with it.

"Ah." And Jack's friend went back to reading whatever files his tablet had received with the latest update, leaving Jack to return to his paperwork.

Which mostly consisted of reports and notices. Lots of long, detailed reports and notices. "I can't believe Hammond complained about me not writing lengthy reports," Jack said. "I was saving him so much time."

Daniel didn't react.

Jack sighed - loudly - and skimmed the next report. Oh. He groaned. Space Systems Command - Jack liked to call them Spazzies - wanted a detailed report of the current operation in PU-9623 in order to reevaluate troop transport capacities for the Constitution II-class of frigates. Carter wouldn't like that. Not at all.

"What's wrong?" Daniel asked.

"The Navy pukes want to know if their boondoggle of a frigate design can be turned into a landing ship," Jack explained. "Without sacrificing any other capabilities it's supposed to have."

Daniel blinked. "I thought they were already building the ships? Sam mentioned that a while ago."

"They are." Jack bared his teeth in a twisted smile.

"Oh."

"Yeah. They probably plan to adjust the next batch." At least, Jack hoped the Navy pukes weren't as crazy as to redesign the ships already close to launch.

"Ah. That sounds… sensible?" Daniel smiled a bit weakly when Jack frowned at him. "I mean, incorporating battle experience is supposed to be a good thing, right?"

"If done right," Jack said. "After what Carter told me about the design process so far, I doubt they are doing it right." he shook his head. "We are getting dedicated troop transports - we don't need our frigates to be able to double as landing ships. In a pinch, Horde frigates can use their shuttles to land troops."

Daniel nodded. "So, tell them that?"

"I will." Not that it would help. Jack expected them to ignore his opinion just as they ignored Carter's opinion. Worst case, they'd try to enlarge the next batch of ships and end up with even worse designs. He checked the names of the admirals involved. Just in

case they might end up involved with a combat mission of his command. "Some officers are only fit to command museum ships," he muttered.

"The Navy actually doesn't run museum ships," Daniel told him.

"What?" Jack stared at him.

His friend blushed. "Ah, I once asked when my class visited one."

Ah. Jack nodded. "Good. Some people - like Kearsy - would probably manage to sink a museum ship."

Daniel snorted.

And Jack adjusted the report's priority. Carter was already busy with the portal projectors; she didn't need any distractions, especially not something as dumb as this request.

No, he could take care of that. It might even be fun to find the best ways to call everyone behind this an idiot without violating the Alliance regulations…

*****

Outside Alliance Base 'Gateway', PU-9623, February 3rd, 2000 (Earth Time)

Adora crouched down at the base of the wall and checked the material. It was solid. And the former creek facing it was dry. As it should be - there was no need to run a stream through the base in the first place. It only made the base more vulnerable. And it wasn't hygienic at all. She had to suppress a shudder when she remembered how they had infiltrated the base through that creek.

But they had fixed that - the creek was rerouted around the base, and the base itself had a decent sewage system now - one that wasn't a security weakness waiting to happen. Tok'ra technology was very good for that stuff; their allies knew all about building secure bases.

“There you are!”

Adora turned and stood, facing her friend. “You told me to go outside.” And to stop bothering Entrapta, Sam, Bow and Hordak while they worked.

Glimmer nodded with a wide grin. “I wasn’t sure, though. That you’d actually do it, I mean. So, I first checked if you were not trying to hide in the lab.”

Adora glared at her. “I’m not that bad!”

“You’re worse!” Glimmer snorted, then grew serious. “We’ll find her,” she said.

“I know,” Adora lied. Her friends were geniuses. They had a lot of experience with this kind of project. And they had made a lot of progress. Adora knew all that, had seen them at work, and yet couldn’t help worrying.

Glimmer twitched for a moment - probably unconsciously tried to teleport - and then walked up to her and put her hand on Adora’s shoulder. “Hey, you know Catra. She’s tough. And smart. You know how much trouble she gave us.” With a laugh that sounded a little forced - Adora could tell - she added: “If whoever is living in the other dimension tries anything, she probably will conquer half of the world there before we arrive.”

Adora chuckled weakly. “Yeah. Like in the Crimson Waste.” Scorpia had told her about that trip.

“Well, let’s hope she doesn’t take over bandits this time,” Glimmer said. “Or starts a war.”

“Catra wouldn’t do that!” Adora protested. “Not without a good reason, at least,” she added.

Glimmer giggled. It sounded more honest this time.

And Adora felt a bit better.

But she still worried. Catra was alone in an unknown dimension where people disappeared - a dimension that reacted to your thoughts, according to Beta. Catra had changed, but… Some of her thoughts could be pretty dark.

*****

Refugee Camp, PU-9623, February 3rd, 2000 (Earth Time)

“Goddess!”

“Goddess!”

“She-Ra!”

“Your Divine Highness!”

Adora couldn't help grimacing as the slaves they had saved and freed from Taweret surrounded her. She wasn't a goddess. She was just doing what she could to save and protect people in need - as everyone should.

Still, she smiled. “Hello, everyone.” At least they had stopped kneeling. But Adora was pretty sure that had only happened because the clones had told them that she didn't like it, not because they had stopped worshipping her. But she'd take what she could get. And the slaves had been abused so much, literally left for dead and used in experiments by someone they worshipped as a god - even the workers had, apparently, been amongst the most loyal of Apophis - Adora couldn't bring herself to rebuke them again. It would be like breaking their trust as Taweret had done. Once they had recovered a bit more, she'd address the worshipping problem.

“Did you find our missing people, Goddess?” Kuta called out.

Adora smiled at him. Kuta was always respectful and he called her Goddess, but that was it - he didn't bow and scrape as much as many of the others or prayed to her. “We are working on it,” she

told him. “We'll soon launch the first attempt to save them from where Taweret sent them.”

Kuat scowled at hearing Taweret's name but nodded. Adora couldn't tell if he believed her, but that was kind of reassuring as well.

She didn't want blind obedience, much less blind faith.

*****

Research Station Beta, PU-9623, February 3rd, 2000 (Earth Time)

Samantha Carter frowned as she adjusted the Portal Projector’s power controls again. They had managed to change the settings to narrow down the projector's area of effect to what was effectively a micro-portal - so small, apart from air molecules, not much else would be transported, but it would be usable for communication, at least for electronic bursts as long as they were perfectly synchronised. Two-way communication would need not only a longer duration but an actual portal, not just a transport effect, though, and the power requirements for that were off the scale, even with a reduced area of effect. But maybe, if she managed to raise the efficiency a bit more…

“Check out the new readings!”

Sam looked up at Bow's exclamation. He sounded concerned - and he didn't get excited easily, unlike, say, Entrapta.

Sam’s friend was already moving over, carried by her hair, to look at Bow’s console. “Yes? Oh! That's unexpected!”

Sam joined them and took a look at the latest sensor readings from the target dimension. A moment later, she pressed her lips together so she wouldn't curse.

Usually, they detected foreign sapients in the target dimension by the small changes caused by the other dimension adapting to

them as their minds affected it. Effects akin to small ripples that quickly vanished the further they went.

Now, it was different. If the changes had been ripples before, then they were waves now. And they were spreading without vanishing - and amplifying each other, it seemed. “Bring up the earlier data!” she snapped.

“Already on it,” Bow replied, and the data on the screen expanded. “Putting it on the main screen.”

Sam turned as the holographic display in the centre of the room changed, the depiction of the local system vanishing and being replaced by sensor data. “Cascading changes…” she muttered.

“What is going on?” Entrapta asked. “It's like… like an entire area of the dimension is changing drastically!”

Sam didn't know what was happening, but she doubted it was a good thing. “Let's call the others!” she said. “They need to know this!”

*****

Unknown Location, February 3rd, 2000 (Earth Time)

What was wrong with this Razz? Even after a few hours pondering the question, Catra hadn't found an answer. She took a bite out of the fish she had caught and grilled and sighed.

Was the old woman actually a bot? Some sort of decoy? But if she had been a bot, who would have created her and why? Or was she just going senile? Was that going to happen to Madame Razz back home as well? But if that were the case, wouldn't this dimension's Adora have done something? You couldn't leave a senile old woman in a monster-infested forest by herself, no matter how much some of the creatures there might like her.

And what about Loo-Kee? The Razz back home considered him a friend, but this Razz didn't seem to know him at all. Was that just

a difference between their dimensions? And what effects would that have had? It wasn't as if the little pixie had been crucial for the Horde war, so things would have still worked out the same. Probably. On the other hand, Loo-Kee had been important for Razz. And Catra had kind of liked the little tyke herself - she still needed to introduce Luna to him. If he were here…

She blinked as she heard a familiar noise. Think of the devil? Turning, she spotted a small face staring at her from the underbrush. ”Loo-Kee?”

He smiled and jumped out of the bush, approaching her. “Hello!”

He sounded like Catra's Loo-Kee. And he was as friendly as she remembered him - once he had overcome his shyness. And she was meeting this dimension's Loo-Kee for the first time… This was too much of a coincidence. Something was very wrong here.

She narrowed her eyes when whatever this creature was eyed her fish like Loo-Kee would have. “I caught it,” she hissed before she could control herself.

In return, the pixie made the most pitiful expression at her, sniffling as his big eyes started to grow wet.

“Oh, for…” Catra rolled her eyes and ripped off a piece of her meal. “That's all you're gonna get, though, you hear?”

“Thanks!” Loo-Kee started munching on it, and Catra studied him some more. He looked like she remembered him. *Exactly* like she remembered him, down to small details.

And only those, she realised. She didn't spot anything she might have forgotten. Oh. Was that…?

The sound of an explosion interrupted her thoughts. That had been… either too close or too powerful. Either way, it sounded like bad news. Catra stuck the rest of the fish in her mouth and jumped up the closest tree trunk, quickly climbing up.

She had to jump to another, taller tree but quickly found herself above the canopy, overlooking the forest. A huge cloud of smoke was rising from the edge of the forest, where Plumeria was located. And floating in the smoke, slowly emerging…

Catra hissed. That was a Ha'tak! In this dimension?

Her ears twitched as she heard a voice from the ship. A familiar voice - a Goa'uld. Amplified enough so her ears could pick it up even at this distance.

“I AM YOUR GOD! BOW TO ME!”

Apophis.

*****

The Lost Dimension Part 2

Research Station Beta, PU-9623, February 3rd, 2000 (Earth Time)

"...and that's the situation."

Jack O'Neill nodded when Carter finished. "So… the dimension we're trying to reach is changing massively, and we don't know why."

"We have several theories, sir," Carter replied. She sounded a little annoyed. Probably both at his flippant summary and the fact that she didn't have an answer.

"And the changes have actually stopped - kinda," Entrapta added. "Well, they aren't accelerating any more. And it seems as if they are kinda fading again."

"Ah." Adora nodded. "So, things are going back to normal?" She looked relieved.

Jack could understand that. He felt better at hearing that as well.

"That depends on how you define normal," Entrapta said.

And Jack was back to worrying.

"It could be that the changes recede," Bow said, pointing at a wall of numbers and tables that Jack didn't bother studying. "But it could also be that the changes are settling in, sort of."

"One possible explanation for the fact that we cannot detect any more changes after a while is that the changes caused by sapient visitors become the norm in the target dimension after a while," Carter said.

"So… a huge part of the dimension just changed completely, and that's now normal for the dimension?" Adora asked.

Glimmer shook her head. “How can anyone live there?”

“The target dimension is greatly and easily affected by sapient minds. We already knew that,” Hordak cut in. “That malleable reality is the norm for the dimension. As far as native life is concerned, sapients would likely be able to form their own area of control and create a stable zone to inhabitate.” He paused for a moment and cocked his head. “That is if there are actually native sapient life forms. Given what we know about this dimension, we should have detected constant changes on a much larger scale. Although if all sapients of the dimension are brought in line with each other, so consensus about their reality is achieved, the dimension itself would be quite stable, I assume.”

That was… A world where reality only remained real while everyone agreed that this was the way it should be? Jack grimaced. “I don’t think that would work. There’s always someone who disagrees with how things should be.”

“Perhaps amongst humans. But not every civilisation follows your example,” Hordak retorted. “When Horde Prime ruled us, none of us would deviate from his wishes. Not for long, in any case.”

“Only until you got mindwiped or chipped,” Jack commented. He ignored the frown on Hordak’s face. The former warlord had spent decades trying to conquer Etheria for Horde Prime; he could take a reminder about how wrong that had been.

“In theory, such a society could be formed without mind control,” Carter said. “For example, a hive mind species would naturally form a consensus. And such a species would be adapted well to a dimension where reality itself can be changed by your mind.”

That sounded logical - as expected from Carter. Daniel nodded as well, in obvious agreement. And yet… Jack frowned. “And how would such a species deal with, ah, visitors from afar who aren’t connected to their hive mind?”

Judging by the grimaces on everyone's faces, the answer wasn't going to be 'nicely'.

*****

"They're going to mind control Catra?" Adora gasped. She wouldn't let that happen again! The first time had almost destroyed Catra - would have actually killed her, if not for She-Ra's power!

"It's a theory," Sam said. "We don't know if the dimension has native sapient life."

"But since it has, you know, kinda fixed structures as our sensors tell us, and is not constantly changing randomly, I think there are sapients there," Entrapta pointed out. "Someone has shaped the dimension so we can track changes to it. And someone clearly was fetching everyone who arrived away - at least, that's the most likely explanation for their rapid change of position after arrival."

Adora clenched her teeth. Someone was rounding up the people who entered the dimension. And for what? To control them? To keep them from changing the dimension? If they did anything to Catra, she would… Adora drew a deep breath. She had to control herself. Catra was tough and smart. She wouldn't let herself get caught easily. Adora had to trust her lover. Even if it was hard. "So, when we enter the dimension, we'll meet whoever is collecting visitors."

"That's what we think, yes," Bow said. "All the data points to that."

"Good. Then we can talk to them right away and get Catra and the others back." Adora nodded. And if they didn't want to listen, then she would *make* them give everyone back. Even if there was no magic in the dimension - they hadn't checked for that yet - she would still have She-Ra's power.

Nothing and no one would stand in her way. She'd save Catra. And the others.

“Ah.” Daniel cleared his throat. “I have a question.”

“Yes?” Entrapta turned to smile at him.

He nodded. “If we arrive there as a group, how will that affect the target dimension?” He smiled a little sheepishly. “I know we are on the same wavelength, so to speak, so would we affect the dimension more strongly than a single visitor?”

“Probably yes,” Sam said. She frowned. “We haven’t tested that for obvious reasons. But we would likely have a bigger impact on the dimension than if we arrived spread out. In fact…” She trailed off.

“Oh! If we create an amplifying effect, we could probably start a huge change as well!” Entrapta beamed.

“Or we should take precautions so we don’t start changing someone else’s dimension,” Bow said. “They might see that as an attempt to attack them.”

He was right. But should they split up?

“Never split the party,” Jack said as if he had read Adora’s mind. “We can’t let them pick us up one by one.”

Adora nodded. They could always apologise to whoever was concerned. And, she thought, feeling a bit guilty, it might help them get their people back.

*****

Samantha Carter took a short breath. “We don’t have a way to mitigate our impact on the target dimension yet, sir. We don’t know enough about the mechanics of the entire process.” Nothing beyond the fact that sapient minds affected the dimension, but she didn’t say that. “We don’t know what triggered this massive change. Was it a critical mass of aligned minds? Or is there a build-up that reaches a trigger step over time?” In which case

they might be able to enter the dimension and stay for some time before affecting it on such a scale.

"Although we're pretty sure that the changes originated from the people who were sent there from Beta," Entrapta added. "The changes grew from previous, weaker effects that we picked up on our sensors. Probably - we still need to confirm that with another test. It could also just be a correlation."

"And correlation does not imply causation," Daniel said, nodding. "Ah… it could just be a coincidence that the effect started where previous, ah, travellers were."

"Ah."

"In theory," Entrapta said. "Our sensors weren't calibrated precisely enough to discern that when it happened. But they will be next time!"

"We're not going to wait for a next time," Adora said. "We can't."

Sam knew that. But she also knew that they shouldn't be blindly charging in either. But it was obvious that Adora's patience was running out. And neither the General nor Glimmer was trying to step in.

They needed more data and more time to analyse this new development. But Sam didn't think they would get it. The best she could probably do was to ensure they were not rushing things too much - she could at least make the actual translocation as safe as possible. "We'll need to run a few tests so we can confirm that we'll be able to retrieve the rescue party," she said.

"Do it," Adora said.

*****

Unknown Location, February 3rd, 2000 (Earth Time)

Plumeria was burning. Even from this far away, it looked worse than when the Horde under Catra had taken it. Of course, Catra had been limited to Horde ground forces and air support, not a Ha'tak floating above the kingdom while Death Gliders and Al'keshs strafed and bombed what the ship's cannons had missed.

She shook her head, clenching her teeth when another pillar of smoke rose on the horizon. It didn't look as if Apophis was planning to conquer the kingdom - it looked as if he wanted to wipe it out. And was doing a good job of it. Probably trying to make an example out of it to impress the rest of this Etheria.

But Plumeria wasn't a good choice for that. From a military point of view, it was the weakest kingdom of the Princess Alliance. Not the least important - Perfuma alone was crucial for the logistics of the Alliance - but as far as defences and combat capability were concerned, it was a pushover, at least if you had operational surprise and the means to move enough forces in before the rest of the Alliance could react. Catra had proven this.

So, this wouldn't scare the princesses into surrender. Not that anything would - they had not surrendered to Horde Prime either. But it would enrage the princesses. Maybe even this dimension's Perfuma and Entrapta. But Glimmer, Frosta and Mermista would be furious and mobilising their forces.

At least Angella would prevent reckless attacks that would only play right into Apophis's hand. But even so… Catra looked at the floating spaceship again. The princesses here had no idea what they were facing. If they treated this like another Horde invasion, not knowing what the Goa'uld could do, things could end in a catastrophe. And if Apophis or one of his underlings managed to possess a princess…

Damn! She hissed. She knew better than anyone else here what the Goa'uld were like. She had to warn the Alliance here.

Turning, she took a look at Bright Moon, visible in the distance. That was too far to reach on foot in time. But Alliance soldiers

must have been sent to look for her. And they would be in contact with Adora and Angella.

She snorted as she jumped from branch to branch towards the ground. All that effort to get away, and now she had to double back and hope that her pursuers were close.

And that they didn't try to shoot her on sight. Not that they would succeed, but if she had to take their communicator by force, it would complicate things with the Alliance even further.

She reached the ground and looked around. "Loo-Kee?"

No answer. The little pixie was gone. Probably scared into hiding. And Catra had no time to waste on looking for him. He should be safe enough in the woods here, anyway.

*****

The explosions had stopped about fifteen minutes after Catra had started running and hadn't picked up for the next hour. So, Apophis was done with Plumeria. But the Death Gliders and Al'keshs would be spreading out already, doing recon if he was cautious. Or attacking targets of opportunity if he was reckless and thought all the kingdoms on Etheria were as easy to destroy as Plumeria.

She almost hoped it would be the latter. It wasn't a nice thought, but a few bombing runs on other kingdoms would make the Alliance focus on defence instead of launching an attack on the Ha'tak. And while they were protecting their people, they were not trying to charge an enemy they knew nothing about.

Which should make it easier for Catra to help them with defeating Apophis. And to stay out of Angella's dungeons. Or so she hoped. Angella might think that this was all a ploy of Catra - probably cite the timing of Catra's escape as suspicious or something.

Maybe Catra would have to shoot down a Death Glider or board an Al'kesh to prove her goodwill. Though either would be hard

without a plane of her own. Or at least a heavy weapon.

Her ears twitched. That sounded like a pair of Death Gliders passing overhead! Headed in the direction of Bright Moon! She didn't hear more craft, though. Recon then - even Apophis wouldn't expect two Death Gliders to defeat Bright Moon.

But after this, attack runs would follow. To probe Bright Moon's defences, possibly to degrade them before the main attack was launched.

She hissed under her breath as she jumped over a fallen tree that looked vaguely familiar. She had to reach Bright Moon before Apophis launched a full attack. Trying to talk to the princesses would be impossible in the middle of a siege - especially if she couldn't get through the shield.

So, where were the Bright Moon soldiers hunting her? It would be ironic if she had managed to lose her pursuers when she needed them to find her.

She kept running, though not all-out. She had to pace herself. Worst case, she had to run all the way to Bright Moon. And she'd probably arrive just in time to see the Ha'tak start bombarding the palace…

Another explosion interrupted her thoughts. Close or just massive? It had sounded close, but… She looked up but could only see the dense foliage above.

Wait! She blinked - that was the sound of a Death Glider pulling high-g turns! Over the Whispering Woods? She had to check what was happening!

Snarling, she changed course towards the thickest tree trunk she could see nearby. Bark flew as she scaled it as quickly as possible, her claws ripping into the wood and through foliage and branches.

As she raced upwards, she heard more explosions - and staff weapons firing. No doubt, someone was fighting the Jaffa!

She reached the top of the tree and peered up. Where…? There! A Death Glider was turning, trying to shoot… Swift Wind?

Catra stared. The flying horse was dogfighting the Death Glider? "If my Swift Wind ever tries that with Adora in the saddle, I'll kill him myself!" she spat as the Death Glider pilot overshot Swift Wind again. And what was Adora doing? Trying to hit the thing with her sword?

Catra blinked as Adora tried to do exactly that. "Oh, for…!" she exclaimed. "Why don't you shoot some magic beam at it?"

Adora didn't reply - hadn't heard her. But the Death Glider decided to stop trying to dogfight and broke off, easily leaving Swift Wind behind. Fleeing? A Jaffa?

No, not fleeing. The Death Glider turned and started an attack run. So, the pilot knew how to zoom and boom, as Jack called it.

And Adora met him head-on, sword flashing as she deflected the blasts aimed at her! Catra held her breath. It wasn't her Adora, the outfit was wrong, but… She couldn't help smiling at the sight. Still, deflecting staff weapon fire, while impressive, wouldn't defeat the Death Glider, so…

She gasped. Adora jumped off Swift Wind, directly into the path of the passing Death Glider, blade held in both hands. The Jaffa pilot tried to dodge but was too slow - and Adora's sword tore off its wing, sending the craft tumbling into the forest below.

Catra barely registered the explosion that followed - she was watching Adora fall. Of course, She-Ra was tough, but from that height, even her Adora would feel it. Although if the trees broke her fall…

But before Adora could hit the canopy, Swift Wind swept in, catching her on his back as he pulled up from a dive that should have carried him straight into the woods.

Catra took a deep breath. They had done it. But if the Jaffa pilot had been a bit better, or kept his distance more, if he had caught Swift Wind catching Adora… She clenched her teeth and yelled: “You idiot! What were you thinking?”

Swift Wind jerked to the side, then turned around.

Apparently, they had heard Catra.

Well, she had wanted to make contact with the Alliance anyway, hadn't she?

So she stayed and put on the best, most confident smile that she could as Adora approached on Swift Wind.

“Catra!” The scowl on Adora's face made Catra reconsider her decision, but the die was cast or whatever the saying was.

“Adora.” She nodded, shifting her weight slightly so she could jump off the branch if she needed to. “What were you thinking, trying to dogfight a Death Glider? If the pilot had been halfway competent, Swift Wind would have been dead.”

“I am She-Ra's loyal steed! We are bound together!” Swift Wind protested. “No enemy can match us when we are fighting together!”

“Someone needs to tell that to Apophis over there in his Ha'tak,” Catra commented with a snort.

“So, you're behind this!” Adora spat, pointing her sword at her.

Catra tried to ignore the blade, which was a bit too close to her - especially since it bopped up and down; Swift Wind's hovering was not exactly that stable. “You idiot! I've told you before, I'm not your Catra. I'm from a different dimension, where we - the Princess Alliance and others - are fighting the Goa'uld.” She pointed at the Ha'tak, which was still hovering over what remained of Plumeria. “That's Apophis, one of the Goa'uld System

Lords. He is an alien snake that burrows into you and takes over your body."

"I'm not falling for your tricks again!"

Oh, for…! "It's not a trick." Catra cocked her head. Time for a little gamble. "Didn't a bunch of people arrive like I did, sent here by Taweret? Apophis's Queen?"

Adora blinked. "They mentioned Apophis… But they said he was their god. They didn't say he'd attack us!"

OK, this Adora really was an idiot! "The Goa'uld pose as gods and use technology to fool their slaves and followers." Which were slaves in all but names, but best not to confuse this Adora further. "We've been fighting them to free their slaves. We've already defeated many such ships."

Adora narrowed her eyes at her. "I don't believe you! You're a liar! Always were!"

"You don't know me!" Catra spat. "I'm not your Catra, and you're not my Adora!" She glared at Swift Wind for good measure. "And you're not my dimension's Swift Wind. He's busy freeing horses."

"She-Ra and I share a sacred bond!"

That was… stupid even for Swift Wind. Like… She closed her eyes. Not again! "Whatever!" She turned back to Adora. "Take me to Angella so I can tell her about Apophis before he starts destroying the next kingdom." The Queen at least knew that Catra was from another dimension. Catra hoped that Angella was smart enough to realise that she needed Catra's help more than she needed to keep her quiet about Angella's own extradimensional origin.

"Are you surrendering?" Adora was still frowning, with that mulish expression she sometimes had when things were not going her way.

“I am telling you to take me to Angella so I can give her crucial information about this new enemy,” Catra retorted. “If you want to call that surrendering, be my guest.”

Adora scoffed. “Don't try anything!” Then she reached over - faster than Catra expected, but not fast enough that Catra wouldn't have been able to dodge if she had wanted to - grabbed her by the scruff of her neck and pulled her up. “I'm watching you!”

Catra froze for a moment. This was… not her Adora, she reminded herself as she was sat down in front of Adora on Swift Wind's back. Not my Adora, she silently repeated herself when she felt a muscular arm wrap around her stomach and hold her in place - with a familiar body pressing into her back.

“Let's fly back to Bright Moon!”

“Away we go!”

Not my Adora, Catra told herself once again as they flew off. Even if she feels and smells like her.

She couldn't let herself relax and enjoy this.

*****

Research Station Beta, PU-9623, February 3rd, 2000 (Earth Time)

Technically, this wasn't Jack O'Neill's decision. He might be a general now, in charge of Alliance Special Forces Command, but Adora was the Supreme Commander of the Alliance, and she had decided that they would enter the ‘target dimension’. They really needed a better name for it, actually. He couldn't just keep calling it that. Daniel said to wait until they knew what the natives of the dimension called it, something about not presuming to name another dimension, but even a string of letters and numbers would be OK as a temporary measure.

Anyway, this wasn't Jack's decision, but if it were up to him, he'd make the same decision. You didn't leave your people behind or give them up - you got them back. And that was what they would be doing. No matter the cost.

Though the cost might be high in this case. If their arrival caused one of those cascading change thingies, and the natives thought this was an attack, then this could mean war. War with an entire other dimension, even if it wasn't particularly large. And a dimension where your thoughts could shape reality. Whether you wanted it or not.

Heh, if it came to war, could they imagine a big honking spaceship to appear on their side? That would be a novel way to fight a war. People were always trying to outthink the enemy in war, but to out-imagine the enemy was new.

Unless you counted some of the research proposals he had seen submitted to the Alliance. Those were so outrageous, they were clearly the result of an overly active imagination. Or greed.

Whatever. Jack checked his gear again, then checked his tab for urgent reports. Nothing.

He had nothing to do but wait for Carter and the others to finish their setup.

Well, he could check up on the others to keep busy, at least.

*****

Adora knew she should be doing something helpful. Maybe talk to the freed slaves again, help them get adjusted. Inspect the base above. Make sure that everything was going well. Check the reports and files sent from Alliance HQ.

But she had already done most of the paperwork - well, the important parts. OK, the really important, urgent parts. And Glimmer had told her that she was just stressing the Alliance soldiers if she kept checking things. And heading to the freed

slaves again… Being worshipped and thanked was embarrassing on a good day, but being fawned over while she couldn't save her lover? No, thanks. She didn't need that.

“Here you are!”

She looked up from her tablet - not that she had actually been reading whatever file was on the screen - and frowned at Jack. “You know that this is serving as my office.” He also had an office in the research station, even if he spent more time in the break room.

“Yep. But I figured you were in the labs, ready to jump into another dimension as soon as Carter and the others finish the thingie.” He grinned.

She frowned some more. “I would just distract them.” Bow had told her so discreetly. Hordak had done so not so discreetly.

He shrugged and sat down on the chair in the corner of her office. “Someone has to keep an eye on them to make sure they don't push themselves too hard.”

But Catra was in danger! Adora pressed her lips together and swallowed her words. It wouldn't do anyone any good if her friends hurt themselves by working too hard. Or too much. “Glimmer's with them.” And she wouldn't let them do anything stupid.

“Yeah. She shooed me out.” He rubbed his neck as he moved his head. “They're doing what they can,” he added in a quieter, more serious tone.

“I know.” She narrowed her eyes. “You don't need to keep an eye on me.”

He smiled, not showing any embarrassment at being caught. “Doesn't hurt, though, does it?”

Of course, it didn't.

He leaned forward, hands on his thighs. “Want to talk about it?”

No need to mention what he meant. Or whom. “No.” She didn’t want to talk about it. She just wanted to go and save Catra. As soon as possible.

“OK.” He nodded and leaned back, pulling his own tablet out of his pocket. And ignored the frown she aimed at him.

She didn't need a watcher. But if she said so, she would sound childish. And having someone else here was… well, not bad. Kind of nice.

She went back to staring at the file before blinking and looking at Jack again. The way his hands were moving… “Are you playing a game?”

“Yep.”

“On your tablet?”

“Yep.”

Oh. She hadn't known they had games for their tablets - they were compatible with Earth computer files, but that shouldn’t include games. As Entrapta had explained once, adapting text files and other data was easy, but they had to basically copy the word processors and other programs Earth used to run on Etherian systems. So… She groaned. “That's what they call piracy on Earth.” Glimmer had complained about that. As had Sea Hawk, though he had been offended for the sake of ‘real pirates’.

“We aren't on Earth, are we?” His grin widened. “And rules are always less strict in the field.”

She snorted and shook her head, then went back to her paperwork.

“We'll get her back. Safe and sound.”

She smiled without looking up again.

*****

“Alright. The latest batch of tests looks good!” Entrapta announced. “We did manage to confirm that communication is possible through micro-portals as long as we rig the communicators to broadcast before the portal opens.” She beamed.

Samantha Carter nodded. “We’ll need to calibrate the systems to start broadcasting a bit before the set times, to compensate for any delays.”

“And if we improve the compression algorithms, we could have two-way verbal communication!” Entrapta nodded enthusiastically. “It'll be lagged, worse than talking over the spy bot network, but it would be possible. With enough power, we could project a microportal every ten seconds.”

“That would require more power than we currently have available here,” Sam pointed out. And the side effects from working the projector constantly would be nasty. Probably not strong enough to affect the seismic stability of the region - they were microportals, after all - but she would have to study the exact effects of the vibrations caused by the projector in more detail to exclude that danger.

“The strain on the systems operating them continuously during the mission would generate are unlikely to be worth it,” Hordak commented. “We might have equipment failures at the worst possible moment.”

Entrapta pouted. “And I guess we don't have the time to construct a secondary projector for communication.”

“I don’t think so,” Bow said. “But this is good enough. With the text-to-speech and speech-to-text routines, we can use verbal communication anyway.”

“It’s still going to suffer from a lot of lag,” Entrapta complained.

That couldn't be helped, in Sam's opinion. “We have a working system. That's good enough.”

“Does that mean we're ready to go?” Glimmer asked.

Sam drew a short breath. She would prefer to run a test with several travellers, sent to a remote location, to check the system before starting the mission. But Adora had made it clear that she wouldn't let anyone else take that risk, so they might as well not bother.

“The projector needs some maintenance,” Beta replied. “To ensure it will run perfectly after the latest tests. Then the mission can start.” Sam wondered if the bot would insist on such checks if it weren’t Adora going through.

“How long will that take?” Glimmer asked.

“About one and a half hours,” Sam told her. She had done that maintenance a lot over the last few days.

Glimmer nodded. “Alright. I'll tell the others.”

And they were committed.

*****

Unknown Location, February 3rd, 2000 (Earth Time)

Catra was glad that they didn’t have to tangle with another Death Glider on the way to Bright Moon. This Adora might try to dogfight it again, and unlike her, Catra was not staff weapon-proof. At least, she didn’t think Adora would drop her off without landing if they were attacked. Though she couldn’t help wondering about that until they reached Bright Moon.

The shield was up - Catra saw it catch the light of the Third Moon of Enchantment - but as Adora approached, an opening appeared,

and they could pass through. As they circled above the central yard before landing, she looked up at the moon. “I wonder if Alpha’s on that moon as well.”

“What?” Adora spat.

“First Ones research station in my world,” Catra explained. “Alpha’s the bot running it. Like Light Hope, but more Entrapta.”

“What?” Adora repeated herself.

Swift Wind touched down amongst the guards who had gathered, and Catra snorted. “If Entrapta and Bow can repair Darla, we might visit.” She blinked and turned her head to look at Adora. “Wait! You got her back before you destroyed the Horde, right?”

But Adora scowled and grabbed her arms. “I don’t even know who Darla is!” she spat, then lifted Catra up and slid off Swift Wind’s back.

“Mara’s ship,” Catra replied, staggering as she was pushed towards the waiting guards. She saw Adora freezing for a moment, mouth half-open. That wasn’t a good sign. “The Horde recovered it in my world. Did you check if it’s still in the Crimson Waste?”

“Why should I bother?” Adora said, scowling even more.

“Because that’s our best chance to fight Apophis!” Catra blurted out. The guards grabbed her arms, and she squirmed for a moment, suppressing the urge to break their grip.

Adora scoffed. “Yeah, right.”

Catra clenched her teeth together. Why was this Adora such an idiot? “Do you have another spaceship on Etheria? Or are you trying to fight the Ha’tak with Swift Wind?”

“Our sacred bond allows us to defeat any foe!”

Catra ignored the fool and stared at Adora.

But the other woman scoffed. “We defeated the Horde. We will defeat those invaders as well!”

Catra groaned. “Let me talk to Angella.” Hopefully, the queen was not as stupid.

“She’s got other things to do than listen to you! Take her to the new cell!”

“Wait! I have critical intelligence about the enemy!” Catra dug her claws into the ground, making the guards trying to drag her away stumble for a second. “Have you forgotten your training? Intel is everything!” The Horde instructors had been quite clear about that.

Adora frowned again, looking confused for a moment.

Catra hissed under her breath. Adora couldn’t have forgotten her cadet training! “Just ask her if she needs intel!”

Adora narrowed her eyes but nodded. “I will.”

Catra started to relax - to think this idiot would have dropped her in a cell in the middle of a Goa’uld attack! - but was startled again when the two guards dragged her after Adora.

She considered scratching the floor inside the palace just to make a point - she was going along with this when she could have shredded those two - but decided not to push her luck. It was clear that her fate was hanging by a thread.

It didn’t take them long to reach the Alliance meeting room.

“I’ve taken down one enemy flyer and captured Catra!” Adora announced as she entered.

“I walked up to her and told her to take me here.” Catra stared at Angella. “I know this enemy. We’ve been fighting him in our

world.”

“Her world? What?” Glimmer blurted out.

“She’s with them!” Frosta jumped off her chair - still a bit too big for her - and started to walk towards Catra, ice appearing around her fist.

The other princesses whispered amongst each other.

Catra ignored them all and focused on Angella. She was the only one who mattered. Well, the Snow princess about to hit her with fists made of ice was a problem as well, but Catra knew she could take a punch from the shrimp, and Angella was calling the shots.

The queen glared at her for several seconds, then raised her hand. “Stop, Frosta!”

“But she admitted to working with the enemy!” Frosta whined. Hadn’t she grown up at all since the Princess Prom?

“Mom?” Glimmer looked confused. As did Adora, but that was nothing new.

Angella rose from her seat and walked toward Catra. “You know our enemy.”

“Apophis. We - the Princess Alliance and others - are fighting him and his fellow Goa’uld in our universe.” Catra grinned. “We’ve kicked his ass on his throne world and destroyed entire fleets of Ha’taks.”

“Oe of those razed Plumeria, and you claim to have destroyed fleets of those things?” Glimmer shook her head, then winced when Perfuma sniffled at hearing that.

Angella seemed to ignore both. “I find that hard to believe myself.”

“Well, we’ve got ships of our own.” Catra tried to straighten to face Angella on a more equal footing, but the two guards were still gripping her arms. “Better ships than Apophis has. Unfortunately, the only spaceship currently on Etheria is Mara’s old ship. In my universe, the Horde tried to recover it, but you got it back. But it seems that you forgot about it here.”

Angella drew a sharp breath - Catra caught her flinching for a moment - but when she spoke, she was all calm and collected. “The ship was not recovered here.”

“Then it’s still in the Crimson Waste,” Catra said. “You need to get it and repair it as soon as possible. Apophis won’t limit himself to destroying one kingdom. He’ll keep doing that until you surrender or are destroyed.”

Angella inclined her head a tiny bit. “He has sent us his demands.”

Catra wanted to shrug, but she was still held by the guards. “Well, play for time. It’ll take a lot of work to get Darla in the air again.”

“You don’t give us orders!” Glimmer spat.

Others agreed with her, but Catra glanced at Entrapta. The princess was rather quiet, which was a surprise. Ah, she was busy with her tool! Probably already planning the recovery operation.

Catra turned her head and met Angella’s eyes again.

The queen glared at her again, then turned to face the others. “She’s our enemy, but she’s correct: We will need a spaceship of our own to battle this new enemy. We’ll stall Apophis and recover She-Ra’s ship.”

“Yes!” Entrapta cheered. “More First Ones technology!”

Catra snorted. At least this Entrapta and her own were the same.

“And what will the spaceship do?” Glimmer asked, still frowning. “I remember it - it wasn't nearly as big as the one that… is attacking

us," she added with a glance at Perfuma.

"It might be enough to get a boarding team inside the Ha'tak," Catra replied. "It's First Ones technology, and even a thousand years ago, they were better than the Goa'uld. If it's not enough, you can use it to get to Alpha on the Third Moon of Enchantment. It's a First Ones research base, and there should be shuttles in the hangar there." This Entrapta might not be able to turn them into stealth shuttles, but they would be very useful in dealing with the Death Gliders and Al'keshs and offer quick transportation. "You could…" She trailed off as she realised that Angella had frozen up again.

"Alpha…" The queen shook her head, then stared at Catra with an unreadable expression. "You know about that?"

"Mom?" Glimmer sounded concerned.

"Angella?" Adora as well.

"A First Ones *research base* on a *moon*?" Entrapta sounded enthusiastic.

But Catra had, apparently, stumbled into another minefield. And it was all her fault - of course, Angella would be aware of Alpha! She had been created in the lab! "We found it in our world," she said.

"What is it? Mom?" Glimmer asked.

Catra clenched her teeth so she wouldn't blurt out the answer. Revealing the origin of the princesses in the middle of a Goa'uld invasion? As a suspected enemy? Yeah, right! They had to focus on the war at hand.

"It's where I was… born," Angella said.

Catra suppressed a groan as the room fell silent for a moment.

“You were born on the Third Moon of Enchantment?” Glimmer didn't quite screech, but it came close enough to hurt Catra's ears.

“You're a First One?” Adora blurted out.

“That's why Bright Moon lays claim to the moons!” Mermista apparently needed to work on her priorities as well.

Angella turned to look at Glimmer. “Yes. In the First Ones research station.” She turned to Adora. “No, I am not a First One.” She pressed her lips together. “Alpha made that very clear,” she added with a glance at Catra.

Catra winced. “Yeah, that figures.”

“What are you talking about?” Glimmer pouted at both of them. “I don't get it! Who is Alpha?”

Adora shook her head. “But… does that mean that Catra told the truth?”

“Don't act so shocked!” Catra hissed. Really, she wasn't *that* bad.

Angella straightened. “It's not important right now. We're in the middle of an invasion and must focus on that. We need to recover that spaceship and then board Apophis's ship. Before he destroys another kingdom.” She turned to Glimmer. “You will lead the recovery operation. Take Bow and Entrapta with you. And Adora,” she added.

“Alright, Mom.”

“The rest of us will do our best to stall the enemy,” Angella went on.

“Let's hope our best will be enough,” Mermista muttered. “We don't have flying ships.”

“Apophis will only reach Salineas over my dead body, my love!”

“That's what I'm afraid of.”

“Angella? Maybe I should stay as well. I can engage their flyers with Swift Wind,” Adroa suggested.

Oh, for…! Catra opened her mouth to tell the idiot off - she should know better! - but Angella shook her head.

“You need to go. It's She-Ra's ship,” she said. “And you're a First One. You will be needed to take control of it.”

Yeah, she definitely knew Alpha, Catra thought. Probably far too well.

*****

Research Station Beta, PU-9623, February 4th, 2000 (Earth Time)

Jack O'Neill suppressed a yawn as he approached the transport area. He should have slept a bit while waiting. Maybe if he hadn't raided Danel's coffee supply… But what was done was done.

Adora was, unsurprisingly, already standing there, in full She-Ra uniform, sword out. And she looked eager and ready, not tired at all despite the early hour. Of course, she was cheating with magic.

Glimmer yawned as she joined them, almost dragging her staff along the floor. But Teal'c looked alert as ever - of course, Jack's friend cheated with his Jaffa meditation thingie.

And Daniel was still hopped up on coffee, it seemed. Then again, he was always eager when it came to meeting new people. At least Sha're seemed to be sufficiently wary to keep him out of trouble if Jack was too busy.

“Alright!” Entrapta walked over, followed by Bow and Carter. “Hordak will be using the projector as soon as we're ready!”

Jack would have preferred someone else, but since Bow, Entrapta and Carter were coming with them, Hordak was the only choice left. Someone had to keep an eye on Beta as well, even though they had moved Taweret off-planet already. Just in case the bot got ideas about subverting authority again, what with both Jack and Adora going off-dimension.

He looked at the group. “Everyone ready?” They looked ready, at least. “Remember: No thinking of Marshmallow Men!” Daniel chuckled, and Carter rolled her eyes with a wry smile, which was about the best he could have hoped for, but the others looked lost. “We'll have to watch Ghostbusters together,” he said.

“But Jack is correct - we'll be shaping the dimension around us with our thoughts, so we should, ah, control ourselves,” Daniel said.

“The effects should be fairly limited according to our projections,” Carter said. “At least at the start.”

That was reassuring. “Then let's keep it that way,” Jack said. “Let's go.”

“Alright! Science Buddy, go!”

A moment later, Jack heard a humming noise, and then everything went white.

And then he was standing on grass. Tall grass. Vaguely familiar, he had seen… He trailed off and then cursed. They were on a hill, looking at a Ha'tak attacking Bright Moon, cannon fire splashing against a magic shield covering the entire town. Jack recognised the markings on the ship. “How the hell did Apophis arrive here before us?” he spat. “And why are we on Etheria?”

“Oh, no!” Daniel shook his head. “Uh. I don't think he arrived here before us, Jack. And this is probably not Etheria.”

What? Jack turned to look at him. “What do you mean?”

“This dimension is shaped by our thoughts. And Taweret sent over a dozen of Apophis's slaves over. Slaves who considered him their god.” Daniel grimaced. “They might have *created* their god here.”

Jack blinked. That… made a lot of sense. But it also meant they were screwed.

“Fuck!” he spat.

*****

The Lost Dimension Part 3

Unknown Location, February 4th, 2000 (Earth Time)

Apophis was attacking Bright Moon! Adora took a step forward, brandishing her sword, before she registered Daniel's words. Turning to stare at him, she asked: "The slaves *created* Apophis here?"

"Ah, probably? We know that thoughts shape this dimension, and if over a dozen people believe Apophis is their god…" Daniel grimaced.

"But… could they create an entire Ha'tak?" Sha're asked.

"We don't know," Entrapta said. She was not looking at them or at the Ha'tak but staring at her tool. "In theory, anything is possible here - even the laws of nature might be changed through thought. But without testing, we don't know how much effort that takes." She finally looked at them. "Maybe if we try to change the world together?"

"Great. We'll defeat the enemy through the power of shared delusions," Jack muttered.

"Do you want to tackle a Ha'tak with your gun?" Glimmer shot back. "It doesn't look like this Bright Moon has any active defences that can take it, either."

She was right. Adora couldn't see any guns returning fire at the Ha'tak as it kept firing at the magic shield protecting the town. It looked like Bright Moon at the start of the Horde War.

"Other question!" Bow spoke up. "Why does this dimension look like Etheria?"

Adora blinked. That was a good question! The only person who knew Etheria in this dimension - before her friends and herself

had arrived - would be… “Catra!” Her lover was stubborn to a fault, wasn’t she? She might be able to create this.

“You think Catra imagined this?” Glimmer sounded sceptical.

“Who else could it be?” Adora asked.

“If it were Catra, why don’t we see Horde frigates pound Apophis’s ship to dust?” Jack asked.

Another good question.

“Look at the Whispering Woods!” Glimmer exclaimed. “That smoke…”

Entrapta lowered her visor and leaned forward. After a moment, she straightened. “That’s coming from Plumeria.”

Adora drew a sharp breath. So much smoke… the whole kingdom must be burning! Apophis! And now he was trying to destroy Bright Moon! “We have to stop him!”

“Unfortunately, I forgot to pack a frigate into my pocket,” Jack said.

“We could imagine one!” Bow said. “Just think about one appearing and blowing Apophis to bits!”

Adora immediately thought about a Horde frigate just doing that. One from… Second Fleet. Not Third Fleet. She didn’t need Priest here. Oh! “Make clear that it’s an allied Horde frigate!” she said. “Second Fleet!” Someone snickered, probably Jack, but she ignored it and just thought about a frigate from Second Fleet. One to defend this world against Apophis. To save everyone. Just a single frigate!

“I don’t think it’s working,” Jack said after a while. “Carter?”

“We don’t detect any substantial changes in the vicinity, sir. Or in orbit,” Sam replied. “If this Ha’tak was the result of a shared

conviction by Apophis's slaves that he was their god and would arrive, then it might take several weeks to show such a significant change - and we have fewer people here than were sent to this dimension by Taweret."

So, it wouldn't work! Adora gritted her teeth. "Then we have to get into the ship and just defeat him!"

"Oh!" Glimmer disappeared and reappeared a moment later in front of Adora. She smiled a little sheepishly. "I almost forgot to check - magic works here! I can teleport us inside!"

That was great news! Adora beamed at her friend.

"But can you teleport us all inside? And off again, should Apophis suddenly decide to blow up his own ship and escape?" Jack asked. "Or display whatever god-like powers his slaves think he should have?"

Right. "Just get me on the ship. I can take him," Adora said. She had defeated Horde Prime. She could take Apophis.

"Are you sure?" Bow asked. "We don't know how strong this Apophis is."

"Yes." She had to do it. She had to stop Apophis before he destroyed Bright Moon here.

"Ah. Shouldn't we try to contact the locals first and coordinate?" Daniel said. "And find out why this dimension looks like Etheria?"

Adora pressed her lips together. The longer they waited, the greater the risk that the shield failed. The Horde had almost broken it once through continuous bombardment. And they hadn't had the firepower of a Ha'tak.

"If there's another She-Ra here…" Bow trailed off, and Glimmer nodded. "Yes. Let's go to Bright Moon. I can teleport us there!"

"All of us?" Jack asked again.

“I can recharge at the Runestone,” Glimmer said.

“Shouldn’t the stone be linked to the local Queen?” Sam sounded surprised.

“I can recharge there even without being linked to it,” Glimmer said. “As I did before I became Queen of Bright Moon.” She held out her hands. “Let’s go!”

“Ah… we should make sure that they don’t mistake us for attackers,” Daniel said. “We are strangers - and you might be mistaken for, ah, doppelgangers.”

Oh. Adora clenched her teeth. Being mistaken for Double-Trouble would be bad indeed. “We’ll have to be careful.”

“I can demonstrate my power,” Glimmer said. “Double-Trouble can’t copy that. And if I have a double there, she’ll listen to us if she’s anything like me.”

Ah. Adora exchanged a glance with Bow. It seemed he didn’t share their friend’s confidence either.

But she didn’t think they had a choice - the shield wouldn’t last forever.

*****

Samantha Carter wouldn’t say she was easily impressed, not after everything she had seen, but this dimension was *incredible*. It looked like Etheria - or, rather, the region of Bright Moon, the Whispering Woods and Plumeria; she hadn’t seen the other regions yet - and yet, the resemblance was only superficial. Her instruments and sensors showed differences that made it very obvious that they were in a dimension where the laws of nature differed significantly from her home dimension. Not a parallel dimension or universe at all.

Sure, she had known that from the sensor readings she had seen back at Alpha, but the difference between seeing the data and

actually experiencing it in person was stark.

"Oh! I think we're starting to affect the dimension!" Entrapta said next to her as they waited for Glimmer to return. "Look!" Her hair turned her multitool towards Sam.

Sam glanced at it. "The tree changed density… far faster than would be possible."

"Yes! I imagined it being less dense, and it started to change!" Entrapta beamed. "We can change the world!"

They could. In very small ways, so far, but to think that reality - this dimension's reality - was theirs to change on a whim… It was a daunting prospect, but Sam couldn't help feeling excited. The possibilities were endless! They could create the perfect environment for an experiment. No - the nature of the dimension would preclude running experiments since their expectations would absolutely affect the outcome. But they could create environments that would offer the exact effects they wanted for any given task.

Well, they could once they had dealt with Apophis, Sam reminded herself, feeling a little foolish, when she heard another rolling barrage of blast cannon fire hit the magic shield in the distance. She should focus on that problem instead of getting distracted. On the other hand, to defeat Apophis, they needed all the data about this dimension that they could get.

"Alright! I'll take us inside the palace!" Glimmer announced. "Adora! Bow!"

Both reached out, and a moment later, all three disappeared in a cloud of sparks.

"I really hope that the shield keeps holding up," the General muttered. "Or this will be the shortest rescue mission in Alliance history."

“The readings we took show that while it is degrading, it’s a linear process and, barring any significant changes, it will take at least another hour to reach the point of collapse - though there’s a bit of guesswork involved when that point arrives - we never got the data we need to calculate it precisely,” Entrapta announced.

“That’s very reassuring,” the General replied.

“I know!” Entrapta beamed at him, completely missing his sarcasm.

Sam frowned at him, and he had the grace to look sheepish.

“Well, one hour should be…”

Glimmer’s arrival cut Daniel off. “Alright. I’ve dropped Adora and Bow off. Entrapta! Sam!”

Sam took her hand, Entrapta latched onto the other, and then Sam’s stomach twisted a little as Glimmer used her power.

A moment later, they were standing in one of the courtyards of the palace - and facing several guards.

“Princess! Wait!” the officer in charge yelled.

“No time!” Glimmer replied - and disappeared again.

Sam wasn’t as skilled as Daniel in such matters, but this wasn’t the best way to enter a foreign nation’s seat of government. Especially a seat that was currently under attack - she could see and hear the Ha’tak’s guns hit the shield above her, a constant, unnerving sequence of impacts and explosions. If the shield suddenly collapsed…

“Who are you?” the officer turned to frown at Sam.

“That’s my other science buddy, Sam!” Entrapta told him. “Hi!”

“Major Samantha Carter,” she informed him. “Alliance Military.”

“Alliance Military?” He looked confused.

“Not the Princess Alliance - not yours,” Adora told him. “Ours.”

“But…”

Once again, Glimmer appeared, dropping off the Daniel and Sha’re.

“Princess!”

And she was gone.

“Ah… Hello?” Daniel smiled at the guards.

“Let’s just wait until all of us are here,” Bow said. “Then we can explain. OK?”

To Sam’s surprise, the guards seemed to accept that. She would have thought they would be more suspicious - or on edge - during an attack on the palace.

But then Glimmer returned with the General and Teal’c and all but collapsed, panting. “That… took a bit more out of me than I thought,” she managed to say as she bent over.

“Princess!”

“Glimmer!”

“Glimmer? Adora? What are you doing here? Entrapta? Bow? Why did you return?”

Sam had never met the woman standing in the doorway behind the guards, but she recognised her immediately.

“Mom?”

“Angella?”

Queen Angella. Glimmer's mother. Sam pressed her lips together while Adora and Glimmer gasped and paled. They should have considered that this Bright Moon was still ruled by Queen Angella. How this would affect Glimmer, Sam didn't know, but it would surely complicate matters.

"Ah… we can explain," Bow said, grimacing.

"We're not from this dimension," Entrapta spoke up. "We're from another dimension. And we're here to help. And to save Catra. And to gather data!"

Sometimes, Entrapta's bluntness could be very helpful. Sam hoped that this would be one of those times.

Angella had gone pale as well. "Glimmer?" She sounded… hesitating, not doubtful, Sam noticed.

Glimmer grimaced. "I'm from another dimension. I'm not your Glimmer," she said.

"Your daughter and our, ah, counterparts are still… wherever they are, I guess, Your Majesty," Bow said. "And… ah, these are our friends. Allies. General O'Neill, Major Carter, Doctor Jackson, Sha're. Teal'c."

Angella barely glanced at him and ignored the others. She kept staring at Glimmer instead as if she were shocked to see her.

"So…" Adora started to say after an awkward moment but was interrupted by a particularly loud impact on the shield.

"I don't want to alarm anyone," the General said, "but how much longer is the shield going to last?"

"It will last long enough for Adora and the others to return with She-Ra's ship," Angella stated.

She sounded confident, but Sam checked the data from their sensors anyway. It showed some degradation of the shield,

although at a stable and very slow rate. Still, it wouldn't last forever - at this rate, it would collapse in a bit over six hours.

“Oh! You're recovering Darla?” Entrapta beamed. “Do you need help? I've restored Darla before - and we modified her once; we can do it again! Although we might not have the time to do that before the shield falls here,” she added, biting her lower lip.

And even with upgrades, Darla didn't have the firepower to shoot down a Ha'tak, Sam knew. She could outfly it, of course, and a hit-and-run strategy might prove effective in some circumstances, but Bright Moon couldn't run. And that was based on the known capabilities of a Ha'tak in their home dimension. They didn't know what this Ha'tak could do.

“I can teleport us inside the Ha'tak,” Glimmer said. She was still glancing at Angella even as she addressed the others. “Once we're inside, we can take out Apophis - and we can sabotage his ship.” She straightened. “But I'll need your permission to recharge from the runestone for that. Your Majesty,” she added after a moment with a weak smile. “I'm kind of exhausted right now.”

Angella tensed at the address. “It's too dangerous to enter the enemy ship like that.”

“It's our best chance!” Glimmer retorted. “We have done this before.”

“Not against an actual god,” Daniel pointed out.

“Apophis is a false god,” Teal'c objected.

“Not in this dimension,” Daniel retorted. “We don't know how powerful this Apophis is.”

“It doesn't hurt to try!” Glimmer said, then blinked. “I mean… It could hurt, of course, but we've done this before, without magic.”

“Glimmer!” Angella snapped. “The ship is protected!”

“Not against magic!” Glimmer retorted.

“Actually…” Daniel winced when both women turned to glare at him. “Our Apophis couldn't protect himself against magic, as far as we know. But this Apophis?”

“Let me try! What do we have to lose?” Glimmer said.

“Your life!” Angella spat. “And the shield does repel magic attacks. We tried that.”

“What kind of magic attacks did you try?” Entraptra asked.

“Everything we could,” Angella replied with a frown. “We couldn't stop it. We couldn't even slow down its approach.”

That didn't tell them much. In order to estimate this Ha'tak's capabilities - and weaknesses - they needed more information.

But before Sam or Entrapta could ask for details, Adora spoke up. “Ah. As Entrapta said, we're looking for a friend of ours - our Catra. Have you seen her?”

Angella tensed again and looked at Adora with a frown. This time, Sam was sure that it wasn't a good sign.

*****

The constant barrage was unnerving. Even in her cell, Catra could hear every impact against the magic shield protecting Bright Moon, and there were a lot of them. Probably more than during the Horde attack, which had almost brought it down in her dimension, and that had taken most of the artillery parks of an entire front and strained the logistics of the Fright Zone. Apophis obviously didn't have to worry about that.

Maybe I should escape, Catra thought, not for the first time. If the shield fell, then the force fields holding her captive in her new cell wouldn't last a second. Unfortunately, her odds of escaping a second time weren't good - unlike her first cell, this cell had force

fields covering the roof and floor as well. And they were claw-proof. Although Catra hadn't gone all out. Even though her claws might not be able to scratch the force fields, if she applied enough force…

Her ears twitched as she picked up voices. Familiar voices.

"...can't believe you locked her up!"

Adora? Catra blinked. But this Adora was supposed to recover Darla. Was she back already?

"She was the Horde leader."

And that was Angella. But why was she saying this? Adora had been the one to put Catra into this cell before leaving for Darla. Why would…

Her eyes widened as she heard more people. More familiar people. Jack, Sam, Daniel…

She gasped and jumped up, pressing herself against the force field facing the door. Her Adora was here! And her friends! They had come for her! They hadn't abandoned her!

She drew back and straightened just in time for the door to open, then flashed a grin.

"Hey, Adora."

"Catra!"

Adora's face lit up with so much relief - and love - that Catra swallowed her comment about how it had taken Adora long enough to find her and just smiled and nodded. And blinked so her eyes would clear up.

A moment later, Adora was pressed against the force field, and Catra could almost *feel* her lover's eyes go over her body, searching for any signs of wounds or bruises.

“I'm fine,” she told her.

“You're locked up!” Adora protested. “In a cell!”

“She was the leader of the Horde,” Catra heard Angella protest.

“Was. She joined the alliance,” Adora replied before turning to look at the queen. “Let her out now!”

Angella hesitated for a moment, and Catra saw her frown at her and glance at Glimmer before she pushed a button on the wall to deactivate the force field.

And then Adora's arms wrapped around Catra, and they embraced. And kissed.

And Catra relaxed with a shuddering breath. Adora was back with her. They were together again. For a moment, she didn't hear or feel the impacts from Apophis's barrage. Didn’t think about their situation, this dimension. Just held Adora.

Someone cleared their throat.

Catra ignored them.

Someone cleared their throat again.

Catra still ignored them.

“So, that’s the second time we had to save the cat, huh?”

With a scowl, Catra pulled back from Adora and released her - mostly. She kept an arm wrapped around Adora's side and her tail brushing over Adora's leg. “I could have escaped any time,” she told Glimmer. “I actually did, and only came back to save… them,” she finished with a glance at Angella. The queen was alone with them in the room, she noticed - no guards were present. No locals were here at all.

Interesting.

“Sure you could have teleported through the force fields here,” Glimmer retorted, shaking her head. She was smiling, which took the sting out of her comments, but Catra didn’t miss how she kept sneaking glances at Angella. Right. She should have expected this. After losing her mother, meeting another Angella would shake up Glimmer.

So, Catra let the matter drop and didn't mention her options to get out of the cell - mostly centred on luring the guards to lower the force field to get the drop on them. Besides, it was best to keep that a secret, just in case.

“Any news from the recovery mission?” she asked instead.

Angella narrowed her eyes at her. “They have found the ship and are in the process of repairing it.”

“Darla. She has a name,” Entrapta objected before blinking. “Well, our Darla was named Darla. You probably should ask her if she wants a different name.”

“Ships are female,” Jack added with a grin.

“Actually, that's not a universal custom,” Daniel cut in. “The Russians, for example, use a male gender while in German, a neutral gender is used.”

“I don't think the gender of the ship in question is important,” Jack said. Daniel opened his mouth, likely to point out that Jack started it, but Jack cut him off. “What's important is whether or not the ship can get us inside Apophis's floating palace.”

“It should,” Catra said. “It's only a Ha'tak.” Horde Prime's flagship would be different, but Darla's shields should be able to get them through a Ha'tak's protections. She wasn't a scientist, but she knew the capabilities of both ships by heart. She had to, to make proper tactical decisions and plans.

“Ah, we actually don't know that,” Daniel said with a weak smile. “That this is a normal Ha'tak, I mean.”

Catra narrowed her eyes. “It looks and shoots like a normal one,” she said.

“Yes, but it was created by the thoughts of the slaves of Apophis displaced to this dimension. They consider him a god,” Daniel explained. “So, depending on their imagination, we could be dealing with a literal divine vessel.”

Catra blinked. What was he saying? “The slaves created the ship?” she asked out loud. That was insane!

“Yes!” Entrapta nodded emphatically. “Well, that's our hypothesis, but the sensor readings we took looking for you and the data we have of this dimension support it. This dimension is affected by the minds of its inhabitants. Or shaped - it's very malleable; even the laws of nature here aren’t fixed. It's one of the most interesting places we've ever seen! Can you imagine living in a dimension where you can alter reality with your imagination?”

Catra couldn't help thinking that sometimes, Entrapta looked rather scary, in a deranged way. This was one of those times. If they were a dimension defined and altered by your imagination… She gasped and stared at Angella, then back at her friends. “Do you mean that not just the ship but Apophis himself might have been created by those people Taweret sent here?”

Entrapta nodded.

“That's our running hypothesis,” Sam confirmed. “We noticed a massive change in the dimension's structure, and it seems to correlate with the Ha'tak's appearance, although we have yet to confirm it.”

“So, we're fighting a god imagined by his brainwashed followers?” Catra shook her head. A dimension where people could create a god just by believing in them? Wait! Did that mean… “Can anyone do this? Imagine a god? Or other people?” she interrupted Sam’s explanation about how time might play a role, and the

accumulation of like-minded individuals or whatever affected the process.

“Ah… theoretically, yes,” Sam told her.

“The only theoretical limits are your imagination!” Entrapta added. “It's so fascinating!”

Catra felt her stomach drop. You could create people by thinking of them? And your only limits were your imagination? Or… your knowledge? It would explain a lot. She turned to glance at Angella. The queen was glaring at her, but also… nervous? Catra shook her head. This was a bad idea, but… she had to know. Had to ask.

“Did you create all of this?” She gestured at the room. “Bright Moon, Etheria? The people here?”

*****

What did she mean by that? Jack O'Neill tensed and glanced at Catra, then at Angella. The queen had frozen for a moment, and he felt his stomach drop.

“What?” Adora asked, sounding confused.

Angella was still not saying anything, just staring at Catra.

And Catra was staring straight back. “Angella isn't from this dimension.”

“What?” Half the room blurted out the same question.

Angella didn't deny it, Jack couldn't help noting. Though her stare turned into a glare.

And Entrapta was already running with it. “Well… that is a new theory. We thought that the dimension's native inhabitants - sapient inhabitants - had formed a meta-consensus that allowed them to stabilise a core part of the dimension thanks to a shared

view of how reality should work. And we thought that this would likely be a sort of hive-mind, though that was speculation based on human mental structures. But if this stabilised area was the result of one mind… it could work. We already know that there's a temporal component to the shaping effect, and if you had enough time, you could likely influence a significant part of the dimension, especially if there were no other minds attempting to shape it. And! It would explain why this dimension looks so much like Etheria! The odds that the natives of this dimension would form a world like ours despite the drastic differences in how the dimension works were pretty much zero, now that I think of it. I should have thought of that myself, but I was distracted by the new dimension's data. Sorry!”

Jack blinked. He wasn’t a scientist, but he was used to listening to them, and that sounded like Entrapta thought this was a valid theory.

He glanced at Carter, who slowly nodded. “It would explain several things we noticed,” she said.

“But…” Adora looked around, then settled on Catra. “How do you know that?”

“We talked,” Catra told her without looking away from Angella. “She told me. This is Etheria how you think it should have been, huh?”

Angella still didn't answer, but Jack could see she was starting to scowl at Catra. He clenched his teeth. The last thing they wanted was a blow-out between them and the queen - and possible creator - of this land right in the middle of a Goa'uld attack.

“But… if you're not from this dimension, where are you from?” Glimmer asked, almost hesitantly.

Jack swallowed a curse. It didn't take a genius to realise what she was thinking, hoping, right now.

Angella turned to look at Glimmer, and her expression softened somewhat. “I came from Etheria - my Etheria. I stepped through a portal, sacrificing myself to save it.” She narrowed her eyes, scowled at Catra and spat: “A portal she opened to conquer Etheria!”

Catra flinched at that and seemed to shrink in herself.

Ouch, Jack thought.

“She changed!” Adora spoke up, wrapping her arm around Catra's shoulders. “We all did. We made peace with the Horde - and we defeated Horde Prime together. And now we're fighting Apophis and the other Goa'ulds. Together.”

Right. Couldn't forget the snake trying to kill them all. The snake that was potentially a god-like snake thanks to a bunch of brainwashed slaves.

Angella didn't take that well. “She almost destroyed Etheria, and you forgive her?”

“I thought forgiving was the thing on Etheria,” Jack said before he could stop himself. He didn't flinch when Angella glared at him, though. She might be queen of a land she had created and have magic powers, but… well… in for a penny, in for a pound. He shrugged. “People can change. Teal'c was Apophis's First Prime before he defected, saving us all.”

“Indeed.” Teal'c, of course, just inclined his head in his usual way when Angella turned to glare at him.

“The Horde seems to have settled in well, the clones working hard to fight the snakes,” he went on. No need to go into details.

“And Hordak threw off Horde Crime's mind control!” Entrapta contributed.

“Hordak!” Angella hissed. “You are allied with *him*?”

Right. He had been the main enemy of hers, hadn't she?

“People can change!” Adora said, not letting go of Catra, and Jack resisted the sudden impulse to add ‘for better or worse’. This was a very delicate situation, but if they could defuse this and focus on defeating the freshly created Apophis II…

“Are… are you *our* Angella?” Glimmer asked in a very soft voice that still made everyone tense up again. She moved her mouth, adding something in a whisper that Jack didn't catch.

And Angella drew a sharp breath and closed her eyes before slowly turning to face Glimmer. “I… I don't know.” Shaking her head, she added: “I don't know any of you. I don't understand how you could… be like that.”

“Uh…” Bow grimaced when most people looked at him. “If you're not from our dimension, then something should show up on a scan… I think. But we probably need better instruments to tell.”

“Yes!” Entrapta nodded emphatically. “Since no universe is exactly the same, there should be discernible differences even between parallel universes with closely-matching history. If we get enough data, we should find them!” With a frown, she added: “Although proving that you're from the same universe would be a bit harder, since even if we don't find any differences, we could not really be sure that we just lacked the instruments to find them. We don't have a lot of data on multi-dimensional differences.”

“And we don't have a lot of time to deal with Apophis,” Jack cut in. This was all getting far too technical or philosophical for him. They were still under constant bombardment, for crying out loud! “So, let’s focus on that? We can sort out the rest afterwards.”

At least, he hoped so. In any case, you had to be alive to sort things out.

*****

Angella had created this world? This area of the dimension they were in, Adora corrected herself. It was incredible, but she trusted her friends. And Angella hadn't denied it. And she was not from this dimension, either. So, she could even be their Angella - the one who had sacrificed herself to seal the portal, saving Etheria from destruction. And Adora from sacrificing herself.

Glimmer's mom.

Adora desperately wanted to find out if this was true. She wasn't sure, though, if she wanted to find out what it meant for the people they had seen - guards she knew back home. And Catra… she had to talk to Catra. Her lover was shaken by this; she was putting up a good front, but Adora could tell.

But Jack was right - they had to stop Apophis first.

She nodded. "Glimmer needs to recharge at the runestone. And we need to know if we can get inside the ship with magic."

"It's protected against magic," Angella said.

"Did you try teleportation magic? Did this dimension's…" Glimmer trailed off, and Adora saw she was clenching her teeth.

"That would have been too dangerous to attempt," Angella retorted.

"So, you didn't let her." Glimmer scowled. "I'll try it!"

"No!" Angella blurted out.

"You can't stop me!" Glimmer spat.

"I won't let you recharge!"

"Well, they don't really act like family," Catra mumbled next to Adora.

Adora pressed her lips together. Catra had never seen it, but Glimmer and Angella were acting exactly as they had during the Horde war. "We need to know. If we can teleport inside, we won't have to risk a boarding action."

"And we won't have to wait for Darla to be recovered," Bow added.

"The shield will hold," Angella said. "I know it."

"Because you want it to hold?" Catra asked in a clipped tone. "You alone, against a god imagined by over a dozen people?"

Angella glared at her. "It will hold."

"Uh… Your Majesty, what exactly did you do with the people sent here before us and Catra?" Daniel said before Catra could push Angella some more.

"Adora collected them before they could get lost, and we put them in a small village in Bright Moon."

"Near the border to Plumeria?" Glimmer asked.

"Where the Ha'tak appeared?" Catra added

"Yes," Angella said, pointedly looking at Glimmer, not at Catra.

"Did Apophis pick them up?" Jack asked.

Angella frowned. "I don't know. We were focusing on evacuating the villages in the ship's path and trying ways to attack it."

"Would Apophis really have left his faithful?" Bow asked. "They're the source of his power."

"He might not be aware of that," Glimmer retorted.

"But they might imagine their god taking them with him, and so that is what a god created by them would do," Bow pointed out.

That made sense to Adora. But that didn't mean it was true - religion seldom made sense in her experience. However, she also had to admit that she was a little biased there.

"They also know that Apophis is a cruel god," Jack said. "They built his secret base, and as a reward, he got rid of them and let Taweret use them for experiments."

"That doesn't mean that they would have lost their faith in him." Daniel shook his head. "Many religious people are perfectly capable of finding explanations and excuses for their deity letting them suffer even though they should be able to help them. The former slaves could think this was a test of their faith. Or that they had failed Apophis or disobeyed him, and this was their punishment."

"What if he killed them with his bombardment? Wouldn't that, uh, unmake himself?" Jack asked.

"Eventually, probably," Sam replied after a moment. "But changes aren't instantaneous here, and we have not observed the constant changes you'd expect if the reality was reacting at once to any stray thought - or to the creator of the change falling asleep. So, there has to be a stabilising effect. Even if the people who thought up this Apophis were dead, I would think the Ha'tak would not be affected for several hours, or even longer."

"So, no killing the slaves to kill Apophis," Catra said. She was grinning, but Adora had a feeling that at least a few people here wouldn't have been joking about this.

"What would happen if we left, and Apophis would end up alone with his slaves here?" Sha're asked. "Would he or his faithful be able to find a way to reach our dimension?"

That was a very good question, in Adora's opinion.

"You mean if we all left?" Daniel looked at her.

Sha're nodded.

If Apophis were trapped here, could he escape? But could they leave everyone except for Angella? If the people here were just imaginary people… Adora shook her head. "We would have to rescue the former slaves as well."

Catra scoffed but didn't contradict her.

"Mission creep."

"Jack! We always planned to save everyone!" Daniel protested.

"Sometimes, that is impossible," Teal'c commented.

"We're not leaving anyone behind," Adora said. Never again. "We'll destroy the Ha'tak and Apophis." She looked at Angella again. "We need to test Glimmer's power against the Ha'tak's defences."

Angella jerked a little as if she had been struck, and Adora felt guilty for asking this.

But Glimmer nodded. "Yes."

And she and Angella were staring at each other again. At least they weren't shouting, though.

*****

Samantha Carter half-expected Glimmer to yell 'you're not my mom!' at Angella. Despite the seriousness of the situation - they were under constant bombardment, and the magic shield would not last forever - the confrontation between the two queens left an impression of a family spat on her.

Which hinted at implications Sam didn't want to go in right now. Not when they had an Apophis powered by faith to defeat. And speaking of that… "We need to test something else," she said, interrupting the confrontation. "We need to know if anything taken from this dimension will last in our dimension."

“Oh, yes!” Entrapta was quick to agree. “We cannot exclude the possibility that this Apophis could create a way to travel dimensions - it's actually quite likely since the people believing in him were transported across dimensions, so they know it's possible - but we don't know if anything created here - or anyone - could survive in another dimension where the laws of nature are different. It depends on the exact properties of the way things are created here. If you think something into existence, does that create something permanent that won't change again unless there's someone else influencing it, or is anything here just the base energy, sort of, of this dimension, and without thoughts stabilising it, it will return to its base form? The lingering effect we theorised would indicate it would last at least for some time, but we don’t have any exact data!” She beamed. “But! We can find out. We just need to call Hordak and then have him transport something from here back.”

“We need to be very careful, though,” Sam quickly cautioned. “If the matter taken from here returns to energy almost instantaneously, the consequences could be drastic. Explosive,” she added for those who didn't immediately catch the implications.

The General winced. “If Apophis here could send nukes over to our dimension by chucking rocks through a gate, that could be a bit of a problem,” he said with a twisted grin.

Adora nodded with a firm impression. “It doesn’t matter. We'll stop him here anyway and save everyone.” She looked at Entrapta, Bow and Sam. “Set up a safe way to test it while Glimmer recharges.”

Sam saw Angella stiffen, but to her surprise, the queen didn't object. And Glimmer didn't gloat but looked at Bow. “Bow?”

“Ah, I'll stay here - we need to know what happens if we take stuff from here back,” Bow said with an apologetic smile.

Glimmer nodded, and she left with Adora, Angella and Catra.

“Alright! I'll call Hordak and check where we can dump a potentially huge bomb without destroying anything important!” Entrapta announced.

“And we'll gather an appropriate sample,” Sam said. Small enough so the potential energy was manageable.

“I'll prepare a sensor suite for the transport.” Bow took out his tools. “So we don’t need to use fixed sensors.”

Which meant they could use a greater distance from the planet as the arrival point and still get all the data they needed. Sam nodded and looked around in the yard. Any rock would do, but something more complex might be more useful. Although anything complex would be big enough to pose a substantial risk should it explode.

Best start with a rock, then scale it up to more complex devices if the first experiment went well. And then try it with animals.

Sam didn't add ‘and then with people’, not even in the privacy of her head. Not even if those people might just be figments of Angella's imagination.

Five minutes later, everything was ready. A small rock rested in a box Bow had put together, surrounded by a sensor suite, and Entrapta had finished coordinating with Hordak.

“Alright! Hordak says the target area is clear. And that he has a lock on the beacon, though we should evacuate the area anyway so none of us gets caught up in the effect. That would be bad without a spacesuit,” she said.

Sam nodded, suppressing a wince, and they retreated out of the courtyard, leaving the box on a small support made from material from their own dimension.

“Go-time!” Entrapta announced.

A moment later, the area around the box warped - and it was gone, with the support.

Sam immediately turned to her laptop, set up in the room next to the yard. The communication lag meant it would take a few seconds for the data to arrive. They felt like hours.

Then the data came back. The rock was stable. Sam drew a breath through clenched teeth. That meant they didn't have to fear a barrage of transdimensional nukes from a victorious imaginary Apophis. And that the air in their lungs was safe as well - replacing that with air from home would have been a bother.

But it also meant that Apophis could form an army here and invade another dimension if his creations lasted at least a little while. And it opened ethical questions about this world's people. What would happen to them if Angella left? Would they stay or fade into energy? And what if by transporting them to another dimension, they could become stable? Could they leave them to fade away if they could save them?

More data came in.

“Oh! It looks like there's some small degradation of the rock's structural integrity,” Entrapta said. “It's losing mass.”

“It could fade?” Bow asked. He sounded happy about it.

Even though she felt guilty for it, Sam shared his feelings. That was one potential very messy problem avoided.

*****

The Lost Dimension Part 4

Unknown Location, February 4th, 2000 (Earth Time)

Standing near the huge recharging station below the runestone - Glimmer didn't like that name, but it *was* a recharger - Catra and the others were waiting until Glimmer finished recharging. Angella, too, was standing here - after dropping Glimmer off above.

Catra kept her distance from the queen. Whether this was the Angella from Catra's home dimension - or universe; the differences weren't quite clear to her - the woman had created the entire world here, and if that was her dream world, then it was obvious that she had issues. Wiping out the entire Horde… Catra suppressed a shudder. And this Angella had had Catra imprisoned even though Catra had returned to help save the world. Talk about carrying a grudge!

But that was moot now. Adora, the real Adora, was here. Had come to save her! Catra smiled as she leaned into her love. "Missed you," she whispered.

"Missed you too," Adora whispered back.

Catra didn't miss how Angella stiffened. She almost smirked. It must hurt to realise that the copy you had imagined wasn't even close to the original. The real Adora was so much more than She-Ra. And she loved Catra! "I hope that won't take long," she said.

"She needs to recharge fully," Angella said - without looking at them; Catra checked. "It's foolhardy to attempt this at all; it would be suicidal to do so without having fully restored her power."

"Glimmer can do it!" Adora said. "We've been through worse!"

Catra had her doubts - they were dealing with a Goa'uld turned into a real god, or what the slaves thought a real god was - but kept silent. This was not her world or dimension, and if thoughts

could change the world here, then she couldn't damage Adora's trust in Glimmer.

Though with Angella herself being so pessimistic… Catra clenched her teeth. "Yes, Glimmer can do it. This Apophis was created by people who grew up without magic and won't know what it can do." And what you didn't know, you couldn't counter or stop.

Angella winced, and Catra grimaced. "Don't tell me… You gave them lessons?"

The queen glared at her as if this was Catra's fault. "When we found and saved the first arrival, we welcomed them - and showed them Etheria."

"And magic." Catra sighed softly. And refrained from making a comment about the fact everyone here was a creation of Angella's imagination. There was no real 'we' here to speak of for the queen.

"And magic." Angella scowled. "And this is how they repaid our hospitality: By launching an attack on us with their imaginary god!"

An imaginary god attacking an imaginary world, Catra thought but - once again - didn't say. She couldn't help glancing back, though, at the guards lined up at the end of the bridge leading here. Imaginary people. The whole world was just… made up. Created according to the desire of Angella. Her perfect world.

Catra felt her fur bristle at the thought.

Glimmer appeared in a cloud of sparkles in front of them. "Done!" she announced. Her smile faded as she glanced from Adora and Catra at Angella.

The queen straightened. "I have to, once again, caution you against this. The risks are too high, and it is not necessary. Soon, Glimmer and the others will have restored She-Ra's ship and return to take down this false god."

Glimmer clenched her teeth, and for a moment, Catra's ears picked up a low whining noise from her. But then Glimmer raised her chin and spoke in a prim and proper tone. "We cannot trust that everything works out with Darla - or that she will be able to penetrate the Ha'tak's defences. Any good plan needs contingencies to withstand the test of the battlefield."

Angella deeply frowned at that, and Glimmer's lips moved into a hint of a smug smile. She probably had quoted her mother here.

If this Angella was actually their Angella - Glimmer's mother - things would become very awkward back home. And not just because Glimmer was now queen of Bright Moon. Had been queen for years, actually. But the family dynamics… "Poor Micah," she whispered.

"What?" Adora turned to look at her.

"Nothing," Catra said.

Glimmer and Angella continued to stare at each other for a second before Glimmer turned away. "Alright. I'll test if I can get into the Ha'tak. Assemble the others - if I can do it, I'll get back at once and take you up!"

"Alright. Let's go to the yard," Adora said.

Catra nodded. "Yes. Better not try anything so close to the recharger."

Glimmer frowned at her - as did Angella - but she didn't care. It was a recharging station.

Five minutes and an explanation about how stuff taken from here would fade back home from Entrapta later, they were ready.

Glimmer hugged Bow, glanced at Angella again, then nodded and turned to look at the Ha'tak. It was still firing all its guns - Catra hadn't noticed any of them slowing down or falling silent. Of course, imaginary ships never suffered malfunctions…

“I’ll be back!” Glimmer announced, then disappeared.

A moment later, Catra saw a flash above the Ha’tak that wasn’t a gun firing. She hissed and squinted - there was a speck falling towards the ship - no, towards the ground. Damn!

But then the speck disappeared, and Glimmer reappeared in front of them, falling to her knees. She was panting and looked roughed up. “I couldn’t get through the Ha’tak’s shields,” she said with a deep scowl as Bow embraced her.

“Guess we’re back to Plan Darla,” Catra said. Imaginary Darla.

Damn.

*****

Jack O’Neill had suspected that it wouldn’t work. The easy plans never worked. Something always came up that prevented you from just going in and shooting the bad guy. Well, mostly. Sometimes, stuff came up afterwards. But if teleporting didn’t work, there were other options. “So, we need a spaceship. Any chance that we can get one from home?”

Carter shook her head. “Unfortunately, sir, the dimensional portal projector can’t manage the mass of a space-capable craft. It would be destroyed by the attempt, as the data from Beta has shown.”

Jack had known that. But it never hurt to ask - sometimes, scientists forgot to mention things. Even Carter. “Would have been nice to call in a frigate.”

“We don’t know if a frigate is enough to deal with this Ha’tak,” Bow said. “It was created here and is resistant to magic. It might be more powerful than a Horde frigate.”

Jack frowned. “And yet we’ll place our hope on Darla II.”

“She won’t let us down!” Entrapta said. “Especially if we overhaul her!”

“We might not have time for that,” Bow pointed out. He glanced up at the shield above them.

Jack looked up as well. He might be mistaken, but the flashes from the impact of the Ha’tak’s cannons seemed to have grown stronger - or the shield had grown weaker.

“Even without an overhaul, Darla will get us through.” Entrapta showed no fear at all.

“Let’s hope so,” Jack said. If the shield started to fail, they would leave. That would leave Apophis in charge of this dimension, but they could and would return as soon as possible - and better prepared.

“Yes,” Daniel said. He didn’t look quite as worried as Jack expected. Something must have shown on his face since Daniel nodded. “It’s a different dimension, Jack. Belief matters here - probably more than anything else. Darla here is not merely an Ancient ship but also likely the embodiment of the hope of the world - she is She-Ra’s ship.”

Adora winced at that, Jack noticed. She didn’t say anything, though.

Catra, on the other hand, snorted. “The hope of a world created by a single person. Against a god created by a dozen faithful.”

“Well… Angella has been here for years,” Carter retorted. “If our theory is correct, if the impact of someone grows stronger with time, then she has left a lasting impact on the world, enough to outweigh the larger numbers of Apophis’s former slaves.”

If. Jack suppressed a wince.

“Angella didn’t imagine a god - or goddess - though,” Jack said.

“She imagined She-Ra, though,” Daniel said. “And from what we know, she saw She-Ra as the protector and saviour of the world. That adds a lot of power - probably.”

“I guess we’ll find out the hard way,” Catra said.

Jack nodded. The whole situation was weird - and making him uncomfortable. Sure, Napoleon had said that the moral was to the physical as three to one, but he didn’t mean people’s imagination. Wishes didn’t wars. Or shouldn’t. The universe shouldn’t work like that. It was unnatural. And he didn’t give a damn that it was natural in this dimension or whatever! Shrugging as casually as he managed, he said. “So, I guess we relax until the local She-Ra arrives with her ship.”

As if the snake had heard him, another volley hit a particularly close spot on the shield, and most in the courtyard glanced up worriedly.

“It’s not as if we can do anything else,” Catra said, scoffing slightly. “We can’t ‘direct the defence’.”

“It’s not our world,” Adora said - but with a glance towards the door leading into the palace, where the guards waited. And where Angella had gone to take command.

“It’s not much to direct, anyway,” Glimmer said. “Bright Moon has no way to strike back at the Ha’tak, so we can’t even prepare a sally.”

“You could prepare an evacuation,” Sha’re suggested.

“What for?” Catra snorted. “Angella is the only real person here, isn’t she?”

“Catra!” Adora hissed.

“What? She admitted that she created this world.”

“But that doesn’t mean that the people aren’t real. They act like… real people!” Adora objected.

“They don’t,” Catra disagreed. “You haven’t talked to them enough to tell, but they’re… more like bots. The way they talk. Dumb bots, not Emily,” she added.

“Ah.” Entrapta blinked, closed her mouth and nodded. “OK then.”

“But…” Adora trailed off. “We still can’t let them die!”

“Are they alive?” Catra shot back.

“That is an interesting question. Leaving biology aside - we can’t really use that given this dimension’s nature - and assuming they act like a bot, could they still be considered alive? Can they learn things? Evolve? If they are not people, could they become people?” Daniel shook his head. “Ethically, it’s a very difficult question.”

“You need to talk to this dimension’s Madam Razz,” Catra muttered. “She makes our Madam Razz sound like… Sam.”

“What do you mean?” Carter asked. She was a bit tense, Jack noted.

“Crisp, precise, smart,” Catra said. “This dimension’s Madam Razz sounds like a dumb bot with bad programming.”

Entrapta perked up. “Oh! Do you think we can fix that? Usually, we couldn’t, since they’re not really bots, but since we can change them with our thoughts, it should be possible, theoretically, to change them.”

“I think our presence is altering the world here,” Carter said.

Jack knew an evasion if he saw it. But he also knew that he didn’t want to make the entire mess even worse. And trying to change people or potential people was not going to help anyone, as far as he was concerned.

Before Carter could nip Entrapta’s plans in the bud, the door to the interior of the palace opened, and Angella stepped out. “Adora and the others called. They have recovered She-Ra’s ship and are returning.”

“Great!” Jack smiled. As dangerous as attacking a magical Ha’tak with a thousand-year-old small ship was, he much preferred that to discussing whether or not imaginary people were people.

*****

“There she is!”

Adora narrowed her eyes as she squinted after Catra's announcement. Yes, she could see Darla. Flying low - nap-of-the-earth flying, Jack called it - the ship rapidly approached. She craned her neck, trying to see if Death Gliders were closing in, but it seemed Apophis's troops had missed Darla. So far, at least. It wouldn't last forever.

She glanced around. Angella had chosen the ruins of Thaymor as the meeting spot since they couldn't have Darla land in Bright Moon while it was under attack. Angella had claimed Thaymor was the closest spot everyone knew, too far away for the Ha'tak's guns and an immediate strike from the Death Gliders but still close enough to be easily reached by Glimmer without exhausting herself again. Catra was sure it had been chosen because of her own actions in the Horde War, when she had destroyed the village and faced Adora as an enemy for the first time.

But this Thaymore had been rebuilt, like the one back home, but then destroyed by Apophis, so… Adora dropped the thought. This wasn't the time to worry about stuff like this. Not when they had an evil god to defeat.

And were about to meet their counterparts from this dimension. In the ruins of Thaymor. She winced. Maybe Angella had picked this meeting spot with that in mind? No - Angella knew how

important it was that everyone worked together. But she also had created the people they were about to meet.

She straightened as the ship touched down and the ramp opened. And tensed when she saw the people at the top of the ramp. Glimmer, Bow and Adora. They looked so young - like they hadn't aged since the early part of the war. This Adora was still wearing She-Ra's first uniform. And holding the original sword. The sword made by the First Ones to control the Heart of Etheria, Adora thought and clenched her teeth at the memories that brought up.

Glimmer - this dimension's Glimmer - started down the ramp. "Mom? Why did you call us here? Are you joining us in the…" she trailed off when she saw Adora and her friends. "What?"

"We have… allies from another universe," Angella told her.

"Allies? *Catra*?"

Adora winced at the loathing in her counterpart's tone. No, that wasn't her.

She felt Catra's tail wrap around her leg as her lover leaned into her side and flashed her fangs at this She-Ra. "Yes, as I told you before. Several times."

"That… that's a lie!" this She-Ra spat. "You're the enemy!" She glared at Catra - and then at Adora.

"Was the enemy. We're allies now," Catra retorted - and leaned into Adora's side.

"We don't have much time," Adora said before her counterpart could say anything else. "We need to stop Apophis before he breaks Bright Moon's shield. And we need to attack before he notices our ship."

"*My* ship!" the other She-Ra spat. "It's She-Ra's ship."

"Oh! You already enhanced the engines!" Entrapta exclaimed.

Adora turned to look at her friend and saw her held up by her hair tendrils, staring at the ship's engines through her visor.

Entrapta turned her head to look at the other trio. “Did you enhance the shields as well? We'll need them at full power to break through the Ha'tak's shields. At least according to my data.”

“Mom?” This dimension's Glimmer asked. “Are you sure about this?”

Angella nodded with a firm expression. It wasn't the kind of reassuring smile Adora had hoped to see. “Yes. Let us be off.”

“You're coming with us, Mom?”

“Yes.”

That was… Adora bit her lower lip. On the one hand, Angella being with them was good since the others would be listening to her. *She had created them, after all.* On the other hand, Angella coming with them would leave Bright Moon without its leader. And Angella had almost never been at the frontlines in the Horde War. Not while Adora had been in the Alliance. The only time Angella had fought directly had been… the day she had stepped into the portal to save Etheria.

“Yes, let's go. Not even his divine snakeness will miss a spaceship so close to his floating palace,” Jack spoke up.

“And who're you?” Glimmer said, frowning at him.

Enough! Adora took a step forward. “That's General Jack O'Neill. He's with our Alliance against the Goa'uld. And these are Major Samantha Carter…”

“My other science buddy!” Entrapta piped up.

“...Dr Daniel Jackson, Sha're and Teal'c,” Adora went on. “Teal'c defected from Apophis to our side,” she quickly added.

“Another ‘defector’?” the other She-Ra narrowed her eyes.

Teal'c didn't even flinch at her glare. “I oppose the false gods,” he said, tilting his head slightly.

“Sir! We've detected two Death Gliders headed towards us!” Sam announced.

“Time's up! Everyone on board!” Jack yelled.

“It's my ship!” The other She-Ra moved to block the ramp.

“Adora.” Angella smiled at her.

After a moment, the other She-Ra nodded and walked inside, followed by Angella.

“I can already tell that we'll be working well together,” Catra commented behind Adora as they quickly rushed up the ramp.

“Yeah, Apophis has already lost,” Jack agreed, his words dripping with as much sarcasm as Catra's.

“We'll pull through,” Adora said. But she wasn't quite sure. Catra had been right; their counterparts felt off. Weird.

Unnatural, Adora couldn't help thinking.

*****

“This is fascinating! It's like our Darla, and yet not! The interior is completely different!”

Because Angella only heard reports covering the ship’s appearance but never received any information about the interior of the vessel before she stepped through the portal, Samantha Carter thought as she and Entrapta followed the others to the bridge. Sam had to fight the urge to run and drag Entrapta with her, rushing after the rest of the group. This wasn't the Darla she

was familiar with; she wouldn't be able to do anything in the upcoming fight. She might make things worse, actually.

Potentially without doing anything, even. Would the ship adapt to their vision of Darla? They hadn't been in this dimension long enough to leave an imprint, at least as far as they knew. Certainly not long enough to effect major changes. Creating Apophis must have taken weeks to months. But smaller changes would be possible - if Catra had created Loo-Kee subconsciously, that would mean a few days were the threshold for sentient or sapient creatures.

Although there were many factors that they hadn't accounted for. Was it easier to create something new than to change something created by someone else? Did the creation's sapience or age matter? Or its power to affect the world?

"And those doors… they look more like the doors in Alpha than in Darla!" Entrapta ran a few hair tendrils over the door in the wall, prompting it to open as they stepped past, revealing a quite austere cabin.

Right. Angella had been born - or created - in the research base on the Third Moon of Enchantment, Sam reminded herself. She was familiar with Ancient architecture and technology - at least with its style.

The ship vibrated, then Sam heard the engine power up - they were taking off. "We should hurry," she said. "They will engage the Death Gliders soon." And Sam would rather be on the bridge for that. Even if she couldn't do anything, she wanted to see what was happening.

"Right! We'll be able to check how the weapons differ from ours!" Entrapta switched to walking using her hair, and the much longer steps quickly carried her ahead, forcing Sam to run.

The bridge didn't have enough seats for them - just the one for She-Ra, actually, Sam saw when they arrived a few seconds later.

Everyone else was standing. And they were already pulling high-g manoeuvres as the sight out the bridge windows showed; the inertial compensators were working better than she had expected.

“Oh, hello, Entrapta!”

“Oh? Hello!” And there was the second Entrapta, staring at them with a puzzled expression.

“Did you modify the engines?” Sam's Entrapta went on. “Or were they already different? How fast can they go?”

“We fixed them to the original specs - I didn't have enough time to modify them.”

“Oh! So the original specs differ as well!” Entrapta nodded. “Another difference between our worlds.”

“Death Gliders in range.” Bow interrupted them - this dimension's Bow, Sam reminded herself. He sounded tense.

“Shoot them down,” She-Ra ordered.

A moment later, Darla's guns fired, and both Death Gliders exploded.

The General whistled. “Good shooting!”

It was. Better than she had expected, Sam had to admit. This was the first time the locals were flying Darla in combat - their second time flying her at all - and scoring hits at that distance was not easy, even for an experienced crew. Though she couldn't tell if the guns were more or less powerful than the guns on Darla back home.

“Well done!” Angella nodded with a faint smile. “But those were just the first line. We need to board their flagship.”

“And we will!” She-Ra said with a grim expression.

“More Death Gliders incoming!”

“Shoot them down!”

The next engagement went as quickly as the first, the squadron of Death Gliders blown up in short order, and Darla flew on, towards the Ha'tak.

“Entering in range of the enemy's main guns!” Bow reported.

“Evasive manoeuvres!”

Once more, the inertial compensators worked perfectly. The ship was moving erratically, twisting and turning to evade the barrage from the Ha'tak, and yet Sam felt as if they were standing still. It was slightly disorienting.

Then a blast landed a glancing blow, and the shields flared up - and the ship lurched.

“That was close!”

“Shield holding!”

Sam glanced at the screens. How much had that taken out of their shield? She couldn't see the relevant data. How could you fight without that knowledge?

The enemy fire increased in volume as well, and more Death Gliders arrived. The Ha'tak in front of them was growing larger every second. Soon, they would hit the ship's shield…

“Open a hole!” She-Ra ordered.

Darla fired again, rapidly, all blasts converging on a single point ahead of them, causing the Ha'tak's shield to flare up - and ripple, forming a… hole?

“That's not how it works!” Sam blurted out moments before Darla punched through the hole, followed by a Death Glider - with two

more smashing against the shield to either side of the opening and blowing up.

“Someone tell Darla that. On second thought, better don't tell her!” Catra said, baring her teeth as Darla twisted, flying alongside the Ha'tak for a moment, evading a volley from the Death Glider behind them.

“Shoot it down!”

Sam's stomach rose as Darla flipped around, cannon fire from the Ha'tak missing her as the Death Glider rolled in an attempt to evade her volley.

But one shot clipped a wing of the craft, and it spun out of control, detonating against the Ha'tak's side.

“Now let's go in!” She-Ra snarled.

Darla turned again - and Sam gasped when the ship flew straight at the Ha'tak's hull, accelerating as much as possible.

*****

Catra hissed under her breath and held on to Adora when the ship suddenly turned from flying along the Ha'tak's hull to diving at it. This was wrong - Darla didn't feel, didn't fly like that. “Shit!” she cursed, a moment before they crashed into - through - the hull, bracing for a shock that never came.

Instead of being thrown off her feet and across the bridge, she barely felt the ship coming to a stop after having torn up two decks of the enemy vessel.

“Wow! Your inertial compensators are much better than ours! We have to check them out!” Entrapta's voice cut through the sudden silence.

“Later!” Adora snapped. “We have to take out Apophis!”

“I'll cut him down,” her copy yelled, rushing towards the door.

Catra heard Adora mutter a curse under her breath as her lover sped after the other. No choice now - she ran after them as well, dropping on all fours to keep up. The two idiots were racing each other, jumping down the ramp before it had reached the bottom and barrelling through the squad of Jaffa gathered there.

Adora rammed her shoulder into the first on the left, smashing him into the next one, both ending up crashing against the wall with enough force to bend and shatter their armour. The copy cut the other two apart with a single swing of her sword, cutting through armour and flesh. Neither the copy nor Adora slowed down.

Catra jumped over the spreading pools of blood and dug her claws into the floor to keep from losing her footing, cursing some more. “Don't just run off!” she yelled as she rounded the next corner and spotted Adora and the copy ahead of her.

“We can't let him get away!” Adora yelled back. “We need to keep the pressure on!”

“Do you even know where you're going?” Catra was slowly catching up to the two She-Ras, jumping over the remains of another squad of Jaffa splattered against the walls - it looked like neither She-Ra had bothered to use their blades here.

“Not the lift!” Catra spat as she finally reached them. “That's a trap!” Or would become one.

“The shaft will take us up to the bridge!” the copy spat, then jammed her sword through the gap and twisted, forcing the door open.

Catra blinked. “You want to climb up?” A lift shaft? That was a killing zone!

The other She-Ra didn't answer as she stepped inside and looked up, then down before grabbing the ladder set into the wall.

Obviously, this idiot was doing this.

And, Catra realised, her idiot was eyeing the shaft as well. “No!” she snapped. “Let's take the stairs!”

“But… I can climb as well as she can!”

“And I can climb better than either of you, and it would still be stupid! Let's go!” Catra didn't even try to pull Adora with her but whirled and ran towards the stairs, hoping they would be in the same place as in other Ha'taks. The former slaves thinking this up had been on Ha'taks before, hadn't they?

“Catra!” Adora ran after her. As planned.

Catra sliced the door into pieces with her claws, then had to jump to the side as two blasts tore through the opening. Ambush!

But Adora was already moving. She caught the next blast on her sword-turned-shield as she charged past Catra. Grunts and the sound of crushed metal followed.

When Catra rounded the corner and entered the staircase, two Jaffa were dead, one half-embedded in the wall, the other on the ground with his head smashed in, and Adora was already speeding up the stairs.

“Come on! We can't let the other beat us!”

“It's not a competition!” Catra yelled back, jumping up the first flight of stairs, then at the wall, and up the next.

“Tell that to her!”

Catra couldn't help but hope that if there had been another Catra here, she would have handled it better. But it would have been Angella's creation…

They ran past two floors, then a third, as Catra's ears picked up the sound of running Jaffa. “Stop!” she yelled. “Behind us!” She

whirled and jumped back to the last door, claws out, just as it opened.

As the first Jaffa charged through, she grabbed his staff weapon's shaft and pulled, jerking him forward. Her free hand slashed through his neck guard, and he fell down, blood pouring down his back. The next one swung his staff at her, but Catra ducked and sliced through his armoured lower legs, cutting muscles and bones.

The Jaffa screamed and went down as well - but still tried to grab her. Catra twisted out of the way and smashed her foot into his helmet, then dug her claws into it and swept him past her.

That left…

"Duck!"

She dropped down to the ground at once, and a piece of cut metal as large as her torso flew over her head and into the two Jaffa left with enough force to cave in their chest plates. And their chests.

"Come on!"

And Adora was already rushing up the stairs again. She really wanted to beat her counterpart.

Well, at least that would show Angella that you couldn't beat the originals, Catra consoled herself as she followed her idiot.

*****

"Didn't I say you never split the party?" Jack O'Neill complained as he rounded the corner, his M4 ready, but only saw another massacred squad of Jaffa and no sign of either Adora or Catra. The three had vanished in the Ha'tak's interior. Of course, he only had to follow the trail of dead Jaffa to find them…

"She-Ra can handle Apophis - or anyone else!" Glimmer said.

No, not Glimmer. Her copy. ‘Local counterpart’, Daniel would say, but Jack knew they were just a copy. And a bad one, at that. Not only was she panting and obviously not used to running after She-Ras, but she also was far too optimistic for an officer in a war.

“We don't know that - we don't know how powerful Apophis is,” the real Glimmer said. “He's supposed to be a god - and his ship was more powerful than a regular Ha'tak.”

“But so was ours,” Entrapta pointed out.

“Nothing and no one can stand up to She-Ra,” Angella stated. The queen didn't look out of breath. Or as if she had run at all. “She is Etheria's protector.”

“Well, not even She-Ra is unbeatable,” Glimmer retorted. “As we know.”

“Oh! It's like the unmovable object meeting the irresistible force!” Entrapta looked around. “We might find out if multiple minds working together for a short time are more effective in shaping this dimension than one mind with a lot of time to work!”

“What do you mean?” Glimmer's copy asked with a frown.

“Nothing,” Angella said with a glare aimed at Glimmer. “We need to focus on the task at hand - which is defeating Apophis.”

“I thought She-Ra would take care of that,” Glimmer spat back with a scowl. “Suddenly, she's not good enough?”

“Glimmer…” Angella’s scowl deepened.

Jack cleared his throat. Maybe they should have left all the copies back in Darla, not just Entrapta's and Bow's. They were already too bunched up here for his taste. At least Daniel and Sha're had stayed back as well, and… He cocked his head as he heard boots pounding the floor. “Incoming!”

Teal'c was already moving past him, staff weapon out, and fired a moment before the first Jaffa guard squad rushed around the corner. The blast took the leader in the chest and threw him back, toppling two more.

Jack shot the last one standing, placing a burst in his chest and throat, then double-tapped the two remaining before they could get up. “It looks like the first shock and confusion has worn off, and they are rallying - and moving to cut us off,” he said.

“We need to follow She-Ra,” Glimmer's copy said at once. “She's going to Apophis.”

“We need to stop the bombardment and secure the ship,” Jack retorted. “That means taking control of the reactor and engines.” And ensure that Apophis couldn't blow up the ship with them on board.

“This path leads to engineering,” Carter said with a nod. “If the layout at least roughly conforms to standard Ha-taks,” she added with a small frown.

“Well, the reactor and engines are where they should be! Our sensors show that.” Entrapta smiled. “Though they are much more powerful than the ones we know.”

More good news. Jack suppressed a sigh. “Then let's go. Apophis dying won't serve anyone on the ground if Bright Moon gets destroyed.”

Angella nodded after a moment, then turned to Glimmer's copy with a smile. “We have to trust She-Ra to deal with Apophis.”

“Yes, mom!”

Jack glanced at Glimmer and saw that she was clenching her teeth and balling her hands into fists.

He turned away, covering the hallway ahead, and repeated himself: “Let's go!”

Teal'c took point, and they followed the route Carter had chosen. Halfway to the stairs leading down, they had to deal with another squad of Jaffa charging at them. Bow covered all of them in glue with one arrow, and Teal’c Jack and Carter shot the Jaffa before they could wrench their weapons free of the sticky mass.

“That was too easy,” Jack muttered as they reached the stairs. “They just rushed us blindly. Apophis's guards should be better than that.”

“We've fought many of them who did that,” Glimmer objected, peering downstairs while Jack checked upstairs.

“But not quite that rashly. They didn't even try to use cover or ambush us.” And their aim sucked. For Apophis's best, they were rather bad.

“I would never have accepted this performance when I was Apophis’s Prime,” Teal'c agreed.

“The faithful might not have the knowledge to create guards who can use more sophisticated tactics, sir,” Carter suggested.

“Let’s hope that's true,” Jack said. It would be great if things were going their way for once.

They climbed down the stairs without further resistance, and the squad guarding the exit on the reactor level was dealt with with another glue arrow and a grenade. Jack didn't bat an eye at the mess that left, but he saw Bow and Glimmer wince. Not Angella or Glimmer's copy, though.

That said something about this world. Something Jack didn't want to think about right now.

They moved on towards the reactor room. Once they were in control of it, they could cut power to the guns. And to a number of other systems the snakes would rather see working.

*****

She wouldn't let that… that *other* She-Ra beat her. Not to Apophis, not in anything. Adora clenched her teeth as she raced up the stairs - towards the Ha'tak's bridge. Not because she had anything to prove. But she was more experienced than the other Adora, and this was too important. They had to defeat Apophis before he destroyed Bright Moon and took over this dimension. And Adora couldn't trust the other She-Ra with this - the woman was far too…

"Watch out!" Catra yelled from behind. "Incoming!"

Adora changed her sword into a shield and immediately moved it to cover the door ahead of her - Catra's ears were much better than hers. A moment later, the door blew open, pieces bouncing off her shield, and four Jaffa charged through the thin smoke.

Adora swung her shield and smashed all of them into the wall, not bothering to stop before she took the next flight of stairs. A scream cut short, ending in a coughing noise, told her that Catra had taken care of any survivors.

The Jaffa guards here never seemed to learn. They just charged at her, weapons firing, squad after squad. Without flinching, without faltering. Without any thought. Like… bots. Dumb bots.

She pressed her lips together as she reached the next floor. They - and Apophis - had been created by the former slaves of his stranded in this dimension. Was this how they saw the Jaffa? Real Jaffa would adapt, at least somewhat. Even Apophis's most loyal guards would change tactics instead of charging to their doom. And at least some of them would flinch at some point or even retreat. Or surrender and call her a goddess, an unwelcome voice sounding like Priest added in the back of her mind.

Not these Jaffa, though. They showed no emotion. No thoughts.

"This is the deck where the bridge should be," Catra announced.

Adora nodded and stopped in front of the doors, glancing back.

Her love caught up, panting slightly. Her ears twitched. “I don’t hear any guards on the other side.”

That didn't mean there were no guards - Jaffa could stay silent and wait to ambush them. But these guards?

Adora nodded and stabbed her sword through the door, then moved it in a half-circle, cutting an opening wide enough for both of them into it. A swift kick sent it inside, and Adora followed, blade first, with Catra a step behind her and to the side.

The hallway was empty. “Unguarded?” Adora asked.

Catra cocked her head, then dashed forward to the closest corner.

“Catra!” Adora ran after her - why did Catra have to be so impulsive? - but Catra had already stopped. “We're too late,” she said.

Adora reached the corner as well and saw what she meant - the hallway there was filled with dead Jaffa, cut to pieces. And the doors to the bridge had been torn open.

Catra leapt over the pools of blood on the floor, touching down on a clear spot, then jumped up and bounced off the walls twice before landing in the doorway to the bridge.

Adora clenched her teeth and ran, jumping over the last half of the hallway.

The bridge crew had been killed as well, half the screens and consoles smashed. But the other half showed that the Ha'tak was still firing at Bright Moon - and the shield was flickering even more under each impact.

Catra dashed to one of the intact consoles and started pushing buttons before shaking her head. “I can't stop the bombardment. Or redirect it.” She moved to the next console. “And I can't move the ship either.”

“The other She-Ra must have smashed the steering and controls,” Adora said.

“Or these things never really worked as they should,” Catra said, looking up at the ceiling.

Adora frowned. “A decoy?” Apophis was paranoid, as most Goa'uld, so she wouldn't put it past him to build a fake bridge as a decoy to fend off coups and boarding attempts.

“Or the ship directly answers to Apophis.” Catra shrugged. “It's not as if the ship is any more real than anything else in this dimension.”

It felt pretty real to Adora. But she knew what her lover meant: This was a figment of someone's imagination. “Now…”

Catra interrupted her, looking at the ceiling again. “The throne room!”

There was a throne room on this ship? Adora bit her lower lip. Stupid! Of course, there was a throne room on Apophis's ship! “The other She-Ra!” she gasped. She had beaten Adora to the bridge, but Adora wouldn't let her beat her to the throne room! “Let's go!”

They ran out of the room and then to the right as Catra informed the others over the communicator of the bridge status. Ahead of them was a hole through which Adora could see a scorched lift shaft. The other She-Ra must have come through here!

Catra peered inside and sniffed the air, wrinkling her nose. “Up!”

“So, *now* we climb?” Adora asked, already gripping the ladder.

“Obviously, the Jaffa here aren't as skilled as the ones back home if your copy made it through in one piece. Now climb!” Catra retorted in that slightly annoyed tone of hers she used when she was proven wrong.

She was always a little prickly. Adora smiled and kept climbing.

At the top of the shaft was another hole. They must be on the highest deck of the ship. Not the safest location for a throne room - but would the former slaves have known that?

Adora grabbed the ragged edge of the hole and pulled herself through, her sword appearing in her hand. She was in a huge entrance hall, facing a massive gate seemingly made of solid gold. It was closed, and there were no dead guards on the floor - had they beaten the other She-Ra here? But the hole…

Catra appeared next to her, and Adora turned to ask her: "Do you hear anything?"

Catra cocked her head, ears twitching. Then her eyes widened, and she turned to stare at the gate.

Adora grabbed her and jumped to the side.

Just as she landed with the protesting Catra in her arms, the gates were smashed open from the inside, and a white blur crashed into the wall, creating a crater.

A person-shaped crater, Adora realised, with the other She-Ra embedded in it. She slid to the floor, coughing up blood, and stared at the gates with bared teeth.

And from the throne room, a booming voice rang out.

"FOR DARING TO ATTACK YOUR GOD, YOU WILL SUFFER UNTIL YOU BEG FOR DEATH!"

"Looks like this Apophis is tougher than the original," Adora heard Catra mutter another curse under her breath.

She nodded in agreement.

*****

The Lost Dimension Part 5

Unknown Location, February 4th, 2000 (Earth Time)

“We're at the reactor room. Going in,” Samantha Carter heard the General's voice through her communicator as she studied the lock on said door.

“We're at the throne room. Engaged with Apophis.” Catra's voice sounded far tenser than Sam had expected.

She also heard some crushing and grunting noises, followed by some booming boasting and mocking laughter. Things apparently weren't going well for the other group.

“They'll be fine!” Entrapta said. She sounded honest, but Sam had her doubts. The real Apophis would not last long against one, much less two She-Ra's. That meant they had to adjust their estimates of this Apophis's power upwards. Far upwards.

“What's the holdup, Major?” the General asked.

“The lock is more difficult to crack than expected, sir,” she replied with a frown. None of the usual approaches were working - she hadn't even found the lock’s power supply yet. She would have assumed that it was entirely mechanical if not for the fact that she hadn't found any couplings or other ways to move a bar. It was like the lock was… “...a magic lock,” she whispered, her eyes widening.

“Oh! That would explain the data we got!” Entrapta beamed. “How interesting!”

“Magitech?” the General asked.

“No, sir. Magic. I doubt there is any technology in this lock,” Sam corrected him.

“Well, technically, magic is still technology,” Entrapta said. “Although magic in this dimension might not fit the scientific definition, seeing as the laws of nature are so flexible here. On the other hand, we simply might not yet have discovered the underlying physics of this dimension.”

“Magic or magictech - can you crack it?” The General sounded impatient. He would be tense with half their group fighting a battle that sounded more and more desperate the longer Sam heard it play out over the comm.

“Not unless you mean it literally,” Entrapta replied, saving Sam from having to admit her failure. “Glimmer? Can you use your magic?”

Glimmer took a look at the lock and shook her head. “I am not as good a sorceress as Dad. Or my Aunt. And this is a completely different dimension, with magic made up by people who have no idea how it should work. I can't control such an enchantment.”

“Then I guess we need the universal door opener mark IV,” the General said.

“Oh?” Entrapta blinked. Then she saw him pull out a pack of C4. “Oh! That's what you meant!”

Sam was already moving back - the General was an expert on demolitions, but she expected him to err on the side of more blasting power in this situation. “Take cover!” she said, then snagged a tendril of Entrapta's hair to gently pull her friend with her.

Glimmer and the others were already behind the closest corner. Sam had barely hunkered down - keeping a hand on Entrapta to prevent her friend from moving out of cover to take a look - when the General dashed around the corner and crouched down. “Cover your ears!” he said, raising a detonator.

Sam quickly slapped her hands over her ears and opened her mouth. A second passed. Then another.

“Entrapta!”

“Sorry!”

Then, a loud explosion made her ears ring for a moment, followed by a shockwave that, even blunted by the distance and the hallway’s corner, felt like a blow to her chest.

The General was already moving forward, straight into the cloud of dust and smoke that filled the area ahead of them, and Sam caught a glance of Teal'c's form even further ahead before the smoke hid both men from view.

She pulled her goggles down over her eyes and ran after them. The cloud was already thinning when she reached it, but she still almost ran into the remains of the door after half a dozen steps.

Stumbling and cursing herself for it, she made it past the bent and twisted metal into the reactor room - and stopped at once, blinking.

“That's… not a Goa'uld reactor,” she said. Nor was it an Ancient model. Or a Horde core.

“Looks very snakey to me. All that gold and hieroglyphs,” the General commented. with a wave. “Just their style. Too much bling even for the worst gangsta rapper.”

“Yes, sir. But that's purely aesthetics. The whole design doesn't conform to standard Goa’uld reactor technology,” Sam said, taking a few steps closer. And that was a mature technology. This was… something else. Impressive, certainly, and it fit the aesthetics perfectly, though…

Her eyes widened. “Where are the powerlines?” she muttered. The huge, vaguely cylindrical construction was a monstrosity of gold and inlays, and she could see sparks and lightning flash through small gaps in the ornaments, but she couldn't see any lines connected to the thing.

“Oh! The power generated is immense! That's better than our own designs!” Entrapta gushed. “But what's the source? It can't be an antimatter plant, there's no fluctuation - the power is far too steady for that, and yet where is it coming from? It has to be…”

Sam pressed her lips together. Outdone by the Goa'uld? Worse, by an imaginary Goa'uld, thought up by his faithful to… She gasped again.

“Magic!” she breathed together with Entrapta.

“Magic?” the General repeated.

“It's a magic reactor - it runs on magic,” she explained. Or divinity, maybe.

Well, what else should she have expected if a group of people deliberately kept ignorant of technology of any kind were imagining a spaceship for their god? They had no idea how things should work in their universe and assumed it was magic controlled by their god’s whim. The whole ship was just a facade. An illusion. Unburdened by knowledge, science and the limits and demands of known technology.

“The whole ship must be running on make-believe,” she said.

And in a dimension shaped by one’s belief…

She winced. This Apophis was an even greater threat than she had imagined.

As if someone had read her mind, another scream cut through the communicator.

“ADORA!”

*****

“ADORA!” Catra screamed and rushed towards her love.

“I’m OK!”

Adora was lying, Catra knew - her love was struggling to get up from the ground after she had left a hole in the throne room’s wall and a crater in the Ha'tak’s hull.

Catra dropped on all fours and dug her claws into the steel to stop before she rammed into Adora. “Don’t…”

“TREMBLE BEFORE YOUR GOD!” Apophis appeared in the hole in the wall, floating a foot above the ground, power crackling around his hands. “I WILL…”

“FOR THE GLORY OF GRAYSKULL!”

So, the other She-Ra wasn’t dead yet. Catra helped Adora up while her lover’s braindead copy charged at Apophis from the side.

Apophis snarled and turned to face her, hands raised, and a gleaming force field appeared in front of him a moment before the local idiot crashed into it.

“We need to attack together!” Adora blurted out, but before she could get moving, the other She-Ra was sent flying by a burst of power from Aphophis and crashed into the wall on the other side. Like the last half a dozen times she had attacked him.

“She isn’t listening,” Catra spat and tried to drag Adora to the side, out of Apophis’s field of view. “We need to find another way to beat him ourselves.” At least the idiot didn’t seem to stay down no matter how often she was hit by Apophis.

Unlike Adora, Catra added silently. Her love was battered and bruised from that single blow.

“But… Watch out!”

Before Catra could react, Adora pulled her to the side and raised her sword, turning it into a shield to catch a bolt of lightning

Apophis sent at them. The energy crackled as it hit the shield, and Catra felt her fur starting to rise, but Adora stood her ground, baring her teeth at the snake.

“YOU DARE TO DEFY ME?”

“Took you that long to notice?” Catra muttered, quickly glancing around. If the copy managed to distract Apophis again, and Adora could handle another few attacks, Catra might be able to use the wall and one of the holes to get at the snake’s back.

“You’ll never win!” Adora spat, taking a step toward Apophis, shield held high.

Another lightning bolt flew towards her, and the shield stopped it again. Adora wasn’t even pushed back, Catra noted. And yet the same attack had thrown her through a wall just a moment before…

“FOR THE GLORY OF GRAYSKULL!”

Apophis didn’t even bother to turn around - he simply flicked his wrist, and the copy was sent flying again.

“If we keep this up, we’ll wreck the Ha'tak,” Catra whispered. She moved a few steps to the side, closer to the wall. Almost there… She caught Apophis’s eyes turning towards her and dived to the side.

The floor where she had been standing exploded before she hit the ground, lightning sending shards of metal flying. Catra ducked her head and covered it with her arms as they hit her. Most were stopped by her uniform, but one left a cut on her arm, and she hissed with pain when another pierced her tail.

“Catra!” And Adora the idiot rushed towards her, changing her shield into a sword to send a bolt of magic at Apophis that fizzled on his shield.

Apophis didn’t waste the opportunity and hurled another lightning bolt at Adora. It caught her right before she reached Catra, sending her flying again - into the wall next to the lift shaft.

Catra gasped and scrambled up. Adora was… Apophis was… she jumped, dodging another attack, and twisted in the air so she landed on all fours on the rubble left behind by one of the lightning bolts. Her claws dug into the metal and propelled her forward moments before the next attack struck, and a quick dash avoided another, but she couldn’t keep this up forever.

“RAHHH!”

She didn’t have to - the idiot copy’s next attack was as ineffective as the ones before, but while Apophis was blasting her into the other wall, Adora had managed to get up and back into the fight.

“I’m your enemy!” she yelled, advancing toward the snake. “Fight me!”

“YOU ARE A BUG I SHALL CRUSH!” Apophis spat back, followed by two more lightning bolts.

Again, Adora wasn’t moved by the blows she caught on her shield. She wasn’t even slowed down - she kept advancing even though her legs must be hurting.

Catra was missing something. This made no sense. The copy was getting up from blows that should have shattered her, and Adora either shrugged off the attacks or was sent flying by them. The shield alone couldn’t be the reason…

“INSOLENT VERMIN! DIE!”

Apophis unleashed a veritable lightning storm - and Adora stood her ground even as electricity crackled around her body and made her hair stand up - and Catra’s nose smelled an overpowering ozone stench.

The shield couldn’t do this… Catra’s eyes widened. This was a different dimension. Different laws of physics. And magic. “Keep the shield up! He can’t hurt you as long as you have it!”

That was it! They couldn’t fight this as they would fight back home - they had to fight it according to this world! A world created by Angella and a bunch of former slaves.

Catra snorted. All they had to do was think like… Her eyes widened when she saw Apophis turn towards her with a deep scowl and lightning crackling around both hands. She had to dodge! Had to run! Had to get aw…

“DIE!”

She screamed when the lightning storm hit her, pain filling her, and she smelt burning hair before everything went dark.

*****

“CATRA!”

Jack O'Neill winced at Adora's scream coming through the radio - communicator. Things were not going well at all. “Adora? Adora?” he asked.

No answer.

“We've lost contact with them, sir,” Carter announced.

That was even worse news. “We need to get up there,” he said, turning to look at Carter. “Can you do anything with the reactor here?”

She pressed her lips together, a scowl appearing on her face for a moment - annoyed at herself, no doubt, even if it wasn't her fault at all that they were in some magic spaceship. “No, sir, I…”

The entire ship shook, sending everyone stumbling. “It seems their inertial compensators aren't as good as Darla's,” Entrapta,

caught by her own hair, commented in the sudden silence.

The ship hadn't stopped shaking. It felt like a weaker earthquake - but it wasn't stopping. Jack quickly checked that everyone present was OK - no one seemed hurt, even those who had fallen - and then looked at Carter again.

She had gone pale staring at her tool, and Jack felt his stomach drop. “What's going on?” Was someone else attacking the ship? Or was it sabotage? A malfunction?

“There's a massive discharge of energy at the top of the Ha'tak!” Carter blurted out. “A sustained one!”

“Oh…!” Entrapta cut in, her hair tentacle holding out her own tool to Carter. “Look at this! It's out of sync!”

The ship was still shaking. Jack wasn't a tech, but he knew enough about planes to know that this wasn't a good thing. Magical ship or not, that kind of stress tended to literally shake things apart.

“It's Adora,” Glimmer said in a struck tone, looking at the ceiling. “Apophis must have… hurt Catra. Like Horde Prime did.”

“Oh.” Entrapta sounded scared.

And that scared Jack.

Something cracked behind him - in the huge magical reactor.

That scared him even more.

“Change of plan!” he snapped. “We rig the reactor to blow and return to our ship!”

“But Adora needs our help!” Glimmer said.

“She-Ra will save us all!” the local Glimmer said. She didn't sound worried at all.

Angella, on the other hand, didn't seem nearly as confident. She looked like she wanted to say something but stayed silent, staring at the ceiling.

“Teleport the others back to the ship!” Jack said, looking at both Glimmers as he pulled out packs of C-4 from his pockets. “Hurry!”

Glimmer nodded, but her copy scowled and looked at Angella.

This time, the queen did react. “Do it, dear. There's nothing we can do here.”

And Jack turned to look at the reactor, wondering where to put the explosives. And whether or not the reactor would explode before he finished.

*****

“DIE!”

With her magic forming a blaze around her, Adora barely noticed the lightning bolt fizzling out against her shield. Catra was hurt! Again! Adora cradled her limp body with her free arm, staring at her love. She was breathing, but barely. And her fur was singed - burnt - in many spots. This was Adora's fault. If she had taken out Apophis right away, if she had been stronger, quicker, better…

She shook her head, sending tears flying, and pulled Catra close to her chest. “Not again!” she whispered and willed her power to heal her love.

“YOU CANNOT STAND AGAINST A GOD!”

A hail of lightning bolts hit her shield, but she didn't pay attention. She was watching while Catra healed in moments, fur regrowing, twitching muscles relaxing, chest rising smoothly - Adora could feel Catra's heart beat steadily.

“FOR THE GLORY OF GRAYSKULL!”

“STOP PESTERING ME!”

A white blur flew past her and hit the wall in the back. Adora didn't care. Catra was safe. Unconscious but safe. Alive and healthy.

And Adora would make sure that she stayed that way. She slowly raised her head and stared at Apophis over the edge of her shield.

“DIE! CRUMBLE BEFORE MY MIGHT!”

Another lightning bolt hit her shield. She didn't even feel the impact. Apophis couldn't hurt her as long as she had her shield.

Adora took a step forward.

“DIE!”

And yet another lightning bolt uselessly struck her shield.

Adora took another step forward. And one more. She saw Apophis scowl turn into a snarl, exposing his teeth.

He threw a lightning storm at her. She kept walking. Through it. The energy tore up the ground - and sent her counterpart flying again - but didn't touch her.

“I AM YOUR GOD! DIE!”

His eyes flicked to the side for a moment. Just a hint of fear before she sneered at her.

“You are no god,” she told him, narrowing her eyes.

“I AM YOUR GOD!”

More lightning lashed out.

“You are just a figment. A fantasy.” She shook her head. “You're not real.”

“I AM YOUR GOD! BOW TO MY MIGHT!”

“You're a false god!” She glared at him. Just a bit closer…

He started to float back, and she scoffed. “A real god wouldn't flee!”

He froze for a moment. “I AM NOT FLEEING!”

He flew at her, lightning crackling around both fists, eyes glowing with power, as he lashed out.

“DIE!”

She caught his attack on her shield. This time, she felt the impact, felt the pressure, felt his power trying to push her back, trying to overwhelm her.

But she was She-Ra, Princess of Power. Protector of Etheria. She wouldn't falter. Wouldn't fail. She would save her friends and everyone else.

Clenching her teeth, she pushed back. Her boots left dents on the metal floor.

“YOU WILL FAIL! NO ONE CAN STAND UP TO A GOD!”

“I. Will. Not. Fail!” she spat through clenched teeth. She met his eyes and *pushed*.

His force field broke, and she saw his eyes widen a fraction of a second before her shield smashed into his face and sent him flying back - and to the ground.

He slid over the floor, rolling twice before he was stopped by a piece of the torn gates embedded in the metal, and stared at her as if he couldn't believe what was happening.

“This is impossible! You cannot defeat me! I am a god!”

“You are a fake god!” she repeated herself as she advanced on him.

“NO! I AM…”

“FOR THE GLORY OF GRAYSKULL!”

What? Adora glanced to the side, just in time to see her counterpart charge in again, sword held in both hands. “Wait!”

“DIE!”

Another lightning storm erupted around Apophis, and the other She-Ra charged straight into it, screaming about Grayskull.

Adora hunkered down behind her shield, pressing Catra to her body to protect her as electricity raged around her. This was…

The storm vanished. After a moment, Adora peered over her shield.

The other She-Ra was on the ground, smoke rising from her twitching body. But Apophis was on his back, She-Ra's sword sticking out of his chest - piercing where the symbiont was located, or would have been located back in Adora’s dimension. A pool of blood was spreading beneath him. His mouth was moving, trying to form words, but only blood came out.

His eyes met hers, and before Adora could think of what to say, they glazed over, and he grew still.

*****

The reactor was damaged - malfunctioning. Or should be. The cracking sounds coming from it couldn't be indicating anything good. Or shouldn't. Samantha Carter couldn't tell.

She was really sick of dealing with make-believe technology. She should be able to assist the General in placing the charges so they were most effective, but all her knowledge was useless here - the

reactor didn't work according to any physics, any principle she knew. Not even magic, at least not as far as she could tell. Magic had rules.

Glimmer - the real Glimmer - appeared next to her and yelled: “Hold on!”

Sam barely managed to grab the woman's hand when everything disappeared in a cloud of sparkles, and she reappeared in the middle of Darla's bridge. No, in the middle of the bridge of a ship that looked like Darla but was also just a figment of imagination.

Glimmer, panting, disappeared again to fetch the General.

Sam turned to look at her friends. The only ones missing were the General. And, of course, Adora and Catra.

“The enemy ship is turning on its axis!” the other Bow announced.

Sam gasped and checked her tools. And cursed - the Ha'tak was listing to the side, the angle steadily growing. The engines must be struggling.

Through the bridge windows, she saw debris left from their violent entrance, as well as Jaffa corpses, starting to slide down the hallway in front of the ship. The artificial gravity of the Ha'tak was failing, then.

And yet, the artificial gravity and the inertial compensators in this Darla were working so well, Sam hadn't noticed any change inside.

Glimmer reappeared with the General and bent over, chest heaving from exhaustion.

Sam checked her readings. The listing had increased even more - but it was still manageable. At least in theory. This was a spaceship, not a naval vessel.

“Adora! Catra! Where are you?” Bow spoke into his communicator. “We need to leave!”

Sam didn’t hear any reply. The others must have lost their communicators. Or their lives… No! That was…

“The enemy is still firing on Bright Moon,” the other Bow reported.

“The shield is starting to fall,” the other Entrapta added. “It cannot resist much longer.”

“Trigger the charges!” Angella told the General.

“The others are still missing!” Glimmer protested.

“They're She-Ra,” Angella retorted. “They'll be fine.”

She sounded so confident, Sam couldn’t help worrying that she was delusional. Not that she hadn't doubted the woman's sanity before.

“Adora! Catra! Where are you?” Glimmer all but screamed into her communicator.

“They're still firing.”

“Detonate the charges!”

“We don't know if blowing the reactor will stop the guns!” Sam blurted out.

“But it will do something,” Entrapta said. “Probably.”

Sam looked at the General. He was clenching his teeth - she could tell from the twitching of his jaw muscles - but slowly nodded. Then he raised the detonator. “Get us out of here!”

The other Bow moved his hands over the console, and the ship took off - Sam could only tell from the way her viewing angle of the area outside changed.

“Full speed reverse!”

And they shot out backwards.

“Here we go!” the General snapped.

Sam heard a dim explosion. Then her tool beeped an alert - and a series of explosions went off.

“Secondary explosions! The reactor is going!” Entrapta announced.

“The Ha'tak's starting to fall!”

A screeching noise filled the ship - Bow hadn't been able to compensate for the movement from the Ha'tak and keep them steady, so they were now flying backwards through walls and decks, leaving a trail of debris in their wake that was clearly visible through the bridge windows.

Sam held her breath. It was insane! They should be dead, their ship crushed! Physics didn't work that way! Darla's shields shouldn't be able to hold out!

And yet, they did. Suddenly, they were outside the Ha'tak. Sam caught a glimpse of two Darla-sized holes close to each other in the hull before Bow turned the ship around.

And the Ha'tak was descending while venting smoke from several gaps in its hull and listing to the side.

“Adora! Where are you?” Glimmer sounded desperate.

“Adora! Come in!” Even the other Glimmer sounded concerned.

And Angella had grown tense, Sam noted - staring at the top of the Ha'tak, which was starting to fall now.

“Adora…” Glimmer whispered as the Ha'tak dropped below them.

“Look!” Bow - their Bow - suddenly yelled, pointing ahead.

Sam squinted - and saw a bright light appear a bit below the top of the enemy ship. Was that…?

The light turned into a beam, widening, then vanished, leaving a smoking hole in the hull. Was that movement?

The wind ripped the smoke away, revealing a glowing figure in the hole. Sam used her binocs.

“Adora!” Glimmer yelled.

It was her! And she was carrying Catra and the other She-Ra!

And she was standing on a crashing capital ship.

“Get them!” Angella snapped.

“Glimmer!” Bow blurted out - but both Glimmers had already disappeared, leaving two clouds of sparkles.

And reappeared below, next to Adora. Sam saw them move, reach out - and then the Ha'tak hit the ground and everyone disappeared in smoke and fire.

Sam held her breath. Were they…?

But then the bridge sparkled, and five people appeared. Adora, holding the unconscious forms of Catra, with Glimmer. And the other Glimmer with their She-Ra, also unconscious.

“I did…” Glimmer collapsed.

Adora caught her before she hit the ground.

“Glimmer!” Bow rushed to her side.

“Adora!” The other Glimmer was holding on to their She-Ra.

And in front of them, a mushroom cloud of smoke and fire rose from the Ha'tak's crash site.

*****

When Catra came to, the first thing she saw was Adora's face. Although from an angle - she was in Adora's arms. Bridal-style. And Adora wasn't looking at her but at someone else.

"...and we should… Catra's awake!"

That was Glimmer's voice.

"Catra!" Now, Adora was staring at her. Smiling. And trying to crush her ribcage.

"Hey, Adora… bit tight," Catra told her in a whisper.

"Oh!"

The arms holding her relaxed - slightly. They still held her tightly. She smiled at Adora, then noticed that her love had tears in her eyes and reached up to brush them away.

Someone made gagging noises next to them, and Catra scowled. Who was… Ah. Glimmer's copy. Catra should have known. They were on Darla's bridge, she realised a little belatedly, with the others.

Acting as if she hadn't noticed Glimmer's copy, she moved her hand from Adora's cheek to her neck and pulled her love in for a kiss.

"I can't believe it!" Glimmer's copy complained.

"That's… how can you do that?" That was Adora's copy. She sounded shocked. "That's Catra!"

Catra sensed Adora tensing up - probably about to tell the others off - and squeezed her neck slightly, preventing her from breaking off the kiss.

"Gah!"

She smirked when she finally drew back and saw the outraged expressions on the copies' faces - and the mix of embarrassment and amusement on her friends' before she looked at Adora again. "So, you got the snake?"

"Yes."

"I killed Apophis!" Adora's copy cut in.

"After I already defeated him," Adora retorted. She narrowed her eyes at the other. "He always beat you away before I struck him."

Adora's copy scowled at her. "You didn't even use your sword!"

"Exactly!"

"Ah… the main thing is that Apophis is dead, right?" Bow asked with a weak smile. "And his ship is destroyed."

"Yep." Jack nodded.

"And Bright Moon is safe." That was Bow's copy.

So, the smoke in front of the ship was not the kingdom burning but the Ha'tak. That was good news - not that Catra had doubted that Adora would defeat Apophis. But it also meant that Angella didn't have to worry about the snake any more. And that probably wasn't good news.

Catra sighed and wriggled out of Adora's arms. "So, what happened to the former slaves who created Apophis?"

"We don't know their status," Jack said. "If they were on the ship…" He shrugged.

Catra took a closer look at the screens showing the crashed Ha'tak in more detail. The ship had been ripped apart, either from the crash or internal explosions. Several larger parts remained somewhat intact, but between the impact and the fire, anyone who had been inside them was probably dead anyway.

“I've sent troops to their former camp. And we'll search the wreck as soon as it's safe. We have to be sure that they are dead,” Angella said.

“What?” Adora turned to gape at the queen. “They're victims brainwashed by Apophis! If they're alive, they need our help!”

“They created this!” Angella snapped, gesturing at the burning wreck before them. “They are responsible for the destruction of Plumeria, and it's only thanks to She-Ra that Bright Moon still stands! They are too dangerous to be left alive!”

Thanks to She-Ra indeed, Catra thought as she saw the copy nod. My Adora.

“We can't let them summon their god again!” Glimmer's copy said with a scowl that matched Angella's.

‘Summon their god again’? That was an odd way to word it. Did she think that this Aophis had been the real one, summoned and now returned to his home dimension? Was she aware that they were in a dimension where you created everything, even gods, with your imagination? Was she aware that she was such a creation?

Catra narrowed her eyes as she looked at the copies.

“You can't kill them! This wasn't their fault - they were sent here against their will! Once we take them home, they won't be able to create their god any more!” Adora said.

“They are a danger! And traitors - we took them in, helped them, gave them a home, and they tried to destroy us all!” Glimmer's copy protested.

“It's not their fault - they were raised from birth to worship Apophis!” Glimmer cut in. “You can't expect them to change without telling them the truth about the Goa’uld!”

“The first thing their god did when he appeared was to attack us and destroy Plumeria. Since he was their creation, they would have known that would happen,” Angella said - with a frown aimed at Glimmer.

The copies nodded again. Did they know they were created as Apophis was? Or did they think they were real? Could they influence this world as the former slaves and Angella - and Catra's friends - could? If so, did they know that? Or were they just ignoring everything that would make them question themselves?

Catra couldn't tell. But she was sure they had to find out. This was the key to sorting out this whole mess. If the copies were just figments, the only people who mattered - the only real people - in this dimension were Angella and the former slaves, if they were still alive. But if the copies were people…

That would be an even bigger mess. Especially if they depended on Angella’s imagination to exist.

*****

Jack O’Neill really wanted to leave this dimension. Ideally before someone else summoned another crazy god. Or something worse. Or the weirdness started to affect himself.

And he very much wanted to leave before they started a fight with the locals. That was never a good idea, no matter whether you were on a black ops mission in another country or on a rescue mission in another dimension.

Doubly so if the fight was about saving a bunch of people who had tried to kill you and your friends pretty damn hard for quite some time. Jack couldn’t really fault the queen for her attitude - if those former slaves had summoned Aphopis and his magical Ha’tak to Earth and might try again, he would want to put a few rounds into each of them himself - brainwashed former slaves or not.

Of course, other opinions differed.

“They were raised to obey their god blindly!” Glimmer protested. “Of course, they would pray to him. That this dimension reacted to their prayers and created Apophis wasn’t their fault!”

“This dimension gave them exactly what they asked for. They are responsible for the destruction caused by their god!” The queen glared at Glimmer.

In fact, the two queens were facing each other rather closely. Not very queenly at all. It looked more like a family spat than a diplomatic disagreement.

“They were raised like this from birth! Indoctrinated! Under pain of death! Did you expect them to abandon their religion?” Glimmer spat. “Just like that? That’s not how it works!”

“It is true that many of the False Gods’ slaves, both human and Jaffa, blindly follow what they were taught from birth,” Teal’c spoke up. “However, their minds are not held in thrall. Only their own choices prevent them from questioning their false gods dogma.”

Jack nodded. Like Teal’c had done. And Bra’tac.

“That’s not entirely fair,” Daniel spoke up. “It takes a lot of strength to abandon the society you were a part of since birth. Even more so if it involves cutting ties with your family and friends. And, of course, risking death by doing so - or, if you are religious, your very soul.”

“They were not at risk here!” Angella retorted. “They were safe from their god. They chose to bring their evil god here!”

“That’s because that was all they knew!” Glimmer put her hands on her hips. “Did you even talk with them? Explain that their god was fake and evil? Try to help them change?”

“Why would I? I had no idea that their god was like this!” Angella scoffed. “They told us that the goddess Taweret sent them here to die but that their god would save them.”

“Well, it doesn’t look like that worked out for them,” Jack commented, glancing at the smoking remains of the crashed Ha’tak.

“We don’t know that they were on board! They could have stayed at their camp!” Glimmer snapped.

“Then they are likely dead - killed by the guns of their own god.” Angella sniffed. “In either case, they must face the consequences of their actions.”

“They need help! We need to deprogram them! Show them that their god was a lie!” Adora shook her head. “Like the Horde - either Horde - they didn’t know any better!”

Catra coughed. “Most of us in the Horde knew that what we were doing was wrong,” she said in a low voice. “You were kind of the exception.”

That earned her a glare from Adora. “We were taken in as babies and raised as soldiers!”

“And you defected as soon as you had the opportunity,” Catra told her.

“Because I met Glimmer and Bow and found the Sword of Protection.” Adora shook her head.

“And because, well, you’re Adora,” Glimmer added. “We can’t expect everyone to be like you.”

“When we had the opportunity, after meeting you, we rebelled against Ra,” Sha’re said, looking at Daniel.

“Well, yes, but those were special circumstances. Would you have rebelled without our arrival?” Daniel smiled. “Those people never had that chance.”

“We welcomed them,” Angella said. “We cared for them. We provided them with food, shelter and any help they needed to

start a new life. And yet, they chose to summon their evil god and attack us."

"Can't argue that," Jack said.

"That doesn't mean they cannot change!" Adora retorted. "We need to talk to them, explain things, and give them a chance!"

"We need to find out if they are still alive first," Catra said. "If they are all dead…" She shrugged. "No point arguing in that case."

"Yes!" Adora nodded firmly. "Let's check the crash site. And their former camp. And no killing them!" she added with a frown at Angella.

"We cannot risk them repeating their deed," Angella protested. "I cannot put Etheria at risk."

She had a point there as well. But Jack knew Adora. She wouldn't agree. "Then let's hurry," he said. "We shouldn't waste time." They had already wasted enough time.

Jack wanted to leave this dimension yesterday.

*****

This was all wrong! You shouldn't kill people just for being a threat - and without even talking to them! Adora couldn't believe this Angella wanted this - it went against everything the Alliance stood for. Either Alliance. Adora shook her head as Darla closed in on the burning wreckage of the Ha'tak.

At least the queen had agreed to order her soldiers to check for surviving former slaves and capture them instead of having them killed. That was something. For a moment, it had looked as if they would come to blows - or worse - over that. Glimmer had been spitting mad - Adora's friend was still fuming, actually, and keeping her distance from this Angella as much as possible without leaving the bridge.

And this Angella was ignoring her. And everyone else, it seemed - even her Glimmer and Adora. Angella was just staring at the wreck or at the soldiers surrounding it.

"Oh! Mermista is here - look at the fire she just put out!" Entrapta piped up. "She must have transported the water all the way from the lake!"

"Or created it on the spot," Catra muttered next to Adora.

Adora frowned at the reminder that this wasn't an alternate Etheria. They weren't in a parallel universe but a different dimension with, as Sam had put it, 'completely different laws of nature'. Reality wasn't real here - or only as real as you wanted. And that included the people.

She glanced at the other Adora, who was standing next to Angella. She looked like Adora had, years ago. But she didn't act like Adora would have, now or back then. She was far too… brutal. And… stubborn wasn't the right word. Single-minded? Even at her worst, Adora hadn't been like that. Not at all.

Maybe that was because the other Adora didn't have Catra. This dimension's Catra was dead. Killed by the Alliance. Maybe even by this Adora. Personally.

Adora shuddered at the thought. If she had killed Catra… She didn't want to imagine what that would have done to her. To kill your love… Could there be anything worse you could do?

She wrapped an arm around Catra and pulled her close. Catra made a surprised noise, squirmed a moment, but then settled. Good. Adora wouldn't let go of her. Not ever.

The bridge was silent on the final approach to the wreck. Even Entrapta didn't say anything as she and Sam were fiddling with the sensor they were setting up. That was actually a bit weird, wasn't it? Adora considered checking up on them, but that would have meant releasing Catra.

Then the ship touched down - far smoother than their own Darla would - right in front of the largest piece left of the Ha'tak - the remains of the top. Where they had fought Apophis.

“We'll need to stop the fires before we can search the wreckage,” Angella said. “Mermista is working hard, but that will take some time. I'm not going to risk my soldiers’ lives.”

“You won't have to,” Adora told her. “We can check ourselves - with our scanners.” This Darla might fly much more smoothly than hers, but her friends had the better sensors. As far as they could tell, at least, with how easily things could change here.

She looked at Entrapta and Sam. “Can you detect any survivors?”

“Ah…” Entrapta trailed off and looked at Sam, biting her lips. That was a bad sign.

And Sam looked like she had just been told she would have to eat Horde rations for a week. The brown ones. But she nodded anyway. “We had to recalibrate our scanner. The way we detected dimensionally displaced people before, looking for the changes they cause in the environment, was not a viable way to find them since the entire wreck is such a change.”

“Yes.” Entrapta nodded. “So, we had to find another way to find them. Something that set them apart from this dimension's native people.” Adora felt Catra tense up and hugged her more tightly as Entrapta went on. “We picked constants that differ between parallel universes - we had data about that from Beta’s earlier experiments, before the war with the Horde Prime. So… we found a constant that seems unique to our dimension by cross-checking with the readings from us and what data we had from the Quantum Mirror.”

And she trailed off again.

“Carter?” Jack sounded concerned. He must have picked up as well that something was wrong.

“We only detected one such constant outside our own team in the vicinity, sir,” Sam replied.

“One survivor?” Jack frowned.

Adora frowned as well. If all the others had died, they must have been very lucky to survive.

“In a manner of speaking, sir.” Sam sounded tense. And she was… glancing at Angella?

“Shit!” Catra whispered next to her.

Oh.

Adora blinked. Then she got it. And stared at Angella. She was…?

“NO!” Glimmer yelled. “She can't be my mom! Mom would never do what she has done!”

Oh, no!

*****

The Lost Dimension Part 6

Unknown Location, February 4th, 2000 (Earth Time)

“Mom would never do what she has done!”

Samantha Carter pressed her lips together as she listened to Glimmer’s outburst. That was exactly what Entrapta and she had feared would happen when they revealed the results of their scans. But trying to hide this would have made things even worse - you didn't try to ‘manage’ your friends like that.

Although, in hindsight, perhaps they should have attempted to inform their friends, especially Glimmer, in a more discreet manner, Sam added when she saw Angella turn to glare at her apparent daughter.

“You claim to be my daughter?”

“No!”

“Um.” Entrapta raised a hand. Both Queen Angella and Glimmer turned to glare at her, and Sam saw her friend flinch. But Entrapta slowly nodded and went on: “It’s not a claim - data doesn't lie. Your dimensional constants match, so you're from the same dimension. Theoretically, one of you could be a clone or impostor, but we check regularly for that in case Double Trouble tries to infiltrate the Alliance, and so we can be sure that this is our Glimmer. And who would have made a clone of Angella and left her in this dimension, way before we even knew about it?”

“Loki,” the General said in a flat voice. “That's the kind of thing he would do.”

Sam couldn't really argue that. Loki wasn't quite as bad as the other Asgard and the General and several others who had met him claimed, but Sam would be lying to herself if she tried to pretend that Loki wouldn't be able to conduct this kind of irresponsible, unethical and semi-random experiment.

But she also knew that the odds that Loki actually had done this, and then kept it secret, were about zero. If he had had the kind of access to Etheria that he would have needed to clone Angella and know enough about her to imprint on the clone, their encounter with him and especially their deal would have gone far differently.

So she nodded in agreement with the General. “In theory, yes. But in my opinion, Loki didn't have the opportunity or motivation to do this.”

The General pouted at her for a moment but didn't contradict her.

“Anyway!” Entrapta said. “If we can safely dismiss Loki as the one responsible - and we absolutely can - who else could have done this?”

“I am not a clone!” Angella snapped.

Entrapta looked at her. “That's what I am saying? Kinda?”

Angella didn't stop frowning, not that Sam had expected her to. But She also hadn't expected the local Glimmer to stay silent - or the local She-Ra. She would have thought they would react to the claim that this Angella wasn't their Angella but a visitor - or impostor - from another dimension.

Unless, of course, they were created by Angella not to question Angella. Consciously or subconsciously. And that was a tangent that Sam wasn't sure she wanted to explore.

“I am not a clone. And you are not my daughter,” Angella said. “Glimmer would never work with the Horde - the same criminals who almost destroyed our entire world if not for my sacrifice!”

Glimmer actually flinched at that. And Sam saw that Catra’s ears were lying flat against her head.

Adora shook her head. “How can you say that? Years have passed since… that day. People changed. We changed.”

“I grew up,” Glimmer said, straightening. “I am Queen of Bright Moon now. Have been for years.” She took a step closer to Angella. “*My* Mom would know that. And *my* Mom would never kill people without giving them the chance to change.”

“Nor would *my* daughter leave threats to our world be!” Angella retorted.

“But this isn't your daughter, is it?” the General cut in, pointing at the local Glimmer, Adora and Bow.

“How dare you say that!” the local Glimmer spat at once. “I won't let you insult us like that!”

“Yes!” the local She-Ra moved forward, sword in hand. “We won't!”

The General took a step back. “Didn't you listen to what Angella just admitted? And implied? That she isn't from this dimension?”

“Liar!” the local Glimmer spat.

“Liar!” the local Adora chimed in.

The local Bow didn't say anything but did draw his weapon.

“Stop!” Adora stepped in front of the three… people? Sam was really starting to doubt that they were sapient individuals. “There's no reason to fight.” She turned to Angella. “Calm them down.”

Angella frowned, her eyes scanning the room, then slowly nodded - although with her lips twisted into a scowl. “Do not start fighting them,” she told them.

The local Glimmer nodded at once and took a step back, lowering the staff she had been holding at the ready. The other two followed her example, and Sam sighed silently with relief.

They had to avoid that at almost any cost. A fight against Angella, in a dimension she had been shaping for years, would be a catastrophe. Sam cleared her throat. “We need to check the camp where the former slaves had been as well. We have to be sure that they aren't hiding somewhere.”

Angella stared at her before slowly nodding, and Sam felt relieved again. Almost as relieved as if she had disarmed a bomb. Which was a rather fitting comparison, she had to admit.

*****

So, this Angella was their Angella. Catra had… not suspected. Feared it? That would fit better. The one who had created this weird, mad version of their home world and had become its queen, the one who had the local Horde wiped to a man - with the exception of Shadow Weaver, for some reason - was the former leader of the Princess Alliance and Glimmer’s mother.

“Figures,” she muttered under her breath as she watched Angella on Darla’s bridge.

“Hm?” Adora turned around and looked at her. “What did you say?”

“Nothing,” Catra replied reflexively. “Just… thinking how weird this is,” she added after a moment.

Adora nodded with a sigh, then glanced at Glimmer, who was standing next to them and glaring at Angella. Though the way her eyes shifted, she was probably glaring at the other Glimmer as well.

Damn, Glimmer must be going through hell right now. She found her mother thought lost forever, only to realise that Angella had gone crazy and had replaced Glimmer with a copy she made up in her mind. A copy with a pretty simple mindset. Or a pretty simple mind - the copies here certainly didn’t act very independently.

In a way, it was a blessing that Angella had killed off the entire Horde here. Created, then killed off, actually, which was messed up in a lot of ways, but that was another topic. But Catra was quite relieved she didn't have to look at a copy of herself made by Angella. It would probably be a blood-thirsty, cruel, and stupid madwoman bent on hurting everyone else - a crazy killer.

She clenched her teeth at the thought. Adora and Glimmer might be disturbed by the caricatures Angella had created in their image, but neither had been like those versions standing next to Angella.

Unlike Catra.

She pushed the thought away. She had changed. She was changing, still. And this wasn't the time to dwell on that, anyway. Not with the current problem they had to deal with. "So…" she trailed off, nodding in Angella's direction, then looked at Adora and Glimmer.

"That's not Mom," Glimmer hissed.

Adora winced. "But Entrapta and Sam checked."

Glimmer scowled.

Ador went on: "And Bow went over their data." At Glimmer's request. And he had confirmed it. Twice.

"I know," Glimmer spat, and Catra put her hand on Adora's shoulder and squeezed gently.

"Ah." Adora winced again.

Catra didn't say anything.

"It's… Mom never acted like that, like… some bloodthirsty bitch!" Glimmer spat.

"Yes," Adora said. "Angella was kind."

“People can change,” Catra said. She didn’t have to add ‘for the worse’ - her friends understood what she meant.

“But not like this!” Glimmer shook her head. “And even if she changed, why would she make everyone in the world like her?” She shook her head. “Is that how she saw me?”

Was she about to cry? Catra pressed her lips together and tried to ignore it.

“I don’t think so,” Adora said. “She didn’t want you to risk your life, but…” she trailed off.

“Really?” Glimmer scoffed through clenched teeth. “Then why is she happy with a daughter who’s all ‘rah, rah, fight’?”

Adora didn’t answer that, so Catra sighed and said. “She must have changed.”

“A lot,” Adora agreed. “She was alone for years. No friends. No one. That’s… not healthy.”

Catra nodded. She knew what having no friends any more felt like.

“Then why didn’t she create a world where everyone is happy? Instead of bloodthirsty?” Glimmer asked. And those were tears on her cheeks.

“They probably were happy before, ah, this happened,” Adora said.

And after they had killed the Horde, Catra added silently. But it was a good point - Catra showing up would have made them fear another Horde attack. And then Apophis actually invaded.

“So, she was happy with *that* Glimmer?” Glimmer spat. “Her obedient daughter?”

Oh. Catra winced. She wasn't touching that. Not even if she could do it in a hovertank.

Adora grimaced as well but bravely tried to console her anyway. "Uh… She was happy with a daughter willing to fight, like you were?"

Glimmer scoffed again. "Then why wasn't she happy with me while she was still with us?"

Catra wasn't touching that either. At least, Glimmer seemed to have accepted that this was her mom. Even if that didn't seem to help their situation.

Or answer the big question in the room: What do we do with Angella?

*****

Jack O'Neill wasn't a coward. He had faced death without flinching before. He had told off Goa'uld who held him prisoner and risked his life many times over doing missions for Stargate Command (and before that, for the US government, but those missions were still classified).

He hadn't volunteered to escort Carter and Entrapta to the former slaves' former settlement because he was afraid of becoming collateral damage to a blow-up between Glimmer and Angella escalating into the use of magical weapons of mass destruction, or whatever this messed-up dimension would create for them. The odds of that happening weren't as low as he would like, but he still wouldn't bet on them. And if anything like it happened, he'd bet on Adora settling matters, She-Ra style.

That he was glad that he hadn't stayed on the ship, where the tension was thick enough to cut with a knife - probably thick enough you needed a really sharp one - was because he didn't like family drama and all the awkwardness it brought up. If anyone doubted it, they could ask his family. There was a reason he hadn't attended any family holiday for the last decade. And

hadn’t bothered to return any calls after Stargate Command had gone public and his position with it.

Also, Jack could claim without lying or bragging that he was a good officer and knew how to lead soldiers, and he might be a bit more skilled at the whole staff rank politics than he would like to be, but family counselling wasn’t one of his strengths. Again, people who doubted him could ask his family. As long as they didn’t pass on any messages from them.

“Alright! We’ve set up the scanner!” Entrapta announced, and Jack focused on the mission.

“Good,” he said, walking past the still-smoking ruins of a nice little cottage-style building to join her and Carter in what used to be the centre of a small village before someone had wrecked it - using rather personal means; there weren’t any craters left by heavy weapons, much less a Ha’Tak’s main guns. No, the buildings had been wrecked with small arms or just set on fire. “The perimeter’s clear.” Neither Jack nor Teal’c had found any enemy - or survivor - hiding nearby. And Daniel hadn’t stumbled on any hidden survivor while looking for clues about the local culture or whatever, and he was usually a decent tripwire for such things. Teal’c had found tracks leaving the village, but he hadn’t been able to tell if they had been laid before the attack or during it.

“Let’s see what the scanner will show, then!” Entrapta sounded as enthusiastic as ever, at least to Jack - her mood had improved significantly since they had left the ship.

“Initiating preliminary scan,” Carter said, pushing a button.

Jack saw a few lights flash on the scanner, followed by a distinct humming noise. Either would make using the scanner while hiding from the enemy a risky proposition, he noted. Then again, this wasn’t a finished model but just what the two - and Bow, who had stayed with Glimmer to keep her company and keep her from

starting a pseudo-civil war in alternate Bright Moon - had thrown together on the fly.

“Multiple traces of extra-dimensional influence detected,” Carter reported.

Well, they already knew that the former slaves and test subjects of Apophis had been settled here.

“Initiating primary scan,” Carter went on.

“That will take a while,” Entrapta said. “We have to check for minor variations and continuing effects before we can check for the different constants. Sorry, but with the processing power available to us, we can’t speed up the code to recognise patterns.”

“That’s OK,” Jack said.

“I’ve tried to create better matrices and crystals by thinking about them, but it didn’t work - we haven’t been here long enough yet to sufficiently influence the dimension,” Entratpa went on.

That… wasn’t OK. Jack forced himself to smile and nodded, then glanced at Carter and raised his eyebrows. She should know better than to attempt to use their imagination to create anything in this crazy dimension. A bunch of former slaves had created their evil god, and Jack was sure that their imagination paled when compared to what Entrapta could think of.

Carter straightened, but her expression was a bit too controlled and bland to be genuine. “We have detected no sign that we’re in danger of accidentally influencing the local dimension in a dangerous manner, sir.”

What Entrapta had mentioned hadn’t been accidental, but before Jack could make a properly sarcastic comment about that, Entrapta piped up again. “Oh! We’ve got a contact! And it’s an active one!”

“A dimensional traveller still actively influencing the environment,” Carter explained.

“I understood that,” Jack commented.

“Sorry, sir.”

“Oh! The secondary scan revealed that it’s not one, but several contacts!” Entrapta cheered.

“Checking for dimensional constants,” Carter said.

Right, best cover all bases. Sure, those ‘travellers’ were almost certainly the missing former slaves, but this was such a weird dimension, Jack would rather check before making assumptions that might end up biting him in the ass.

“Constants confirmed to be identical to ours, sir,” Carter said after about half a minute.

“So, our missing snake-worshippers did survive. At least some of them.” Jack nodded. “Let’s go gather them up before they summon another god-snake.” And before some locals found them and decided to ‘disobey’ Angella’s orders.

“Yes, sir. I’ve sent the coordinates to your tablet.”

“Right. My tablet.” Jack pulled the tablet out of his pocket and opened it in map mode. He would prefer an actual printed map - despite the destructive testing done on them, those gadgets just felt too flimsy, no matter if they were magitech or not - but he couldn’t argue that they were useful when they worked.

A map of the surrounding terrain appeared, with coordinates and symbols blinking, indicating their position and their targets’. The map wasn’t perfect, nor as detailed as Jack would like, just based on their scans, but it was better than nothing.

“Let’s go. We’ll gather Teal’c, Daniel and Sha’re on the way. Provided we can pry Daniel away from the ‘cultural artefacts’ left

behind in the rubble here."

*****

Jack and the others had discovered the missing former slaves and were on the way to recover them. And Adora was standing on the bridge of this Darla and doing… nothing.

She pressed her lips together. She felt so useless! Glimmer was so angry - and hurt - and Adora couldn't do anything to help her. They had found Angella, who had sacrificed herself to save Etheria - and had prevented Adora from sacrificing herself - but she had changed so much, Adora wouldn't have recognised her.

No wonder the world Angella had created was so different. No, so messed up - the Angella Adora had known wouldn't have wanted to kill helpless people who didn't know any better and just followed what they had been taught since they had been children! And she wouldn't have treated her daughter so coldly! Certainly not after having been missing for years!

And the Angella Adora had known wouldn't have replaced Glimmer - and Adora, and everyone else - with some copies who acted so strangely. She had been kind, not cruel. And she had loved her daughter! What had happened to Angella? How could she have changed so much?

"I think it's because she was lost for years in an empty dimension that changes according to your whim," Catra said in a flat tone.

Oh. Adora must have said the last line out loud - or whispered it; Catra was so close, her ears would pick it up anyway. She glanced at her love, about to agree, then noticed Catra's expression and the way her ears laid flat against her head. Oh. "That wasn't your fault."

That earned her a glare. "The hell it wasn't! I opened the gate that she closed."

"But…" Adora pressed her lips together again. Catra isn't wrong, there. But Catra had changed. For the better. And Angella had changed for the worse.

And Adora didn't know why. If Angella could change like this, could anyone else? Could Adora end up like this dimension's Adora?

If someone killed Catra…

She drew a sharp breath through her clenched teeth. If anyone killed Catra, Adora would kill them. Was that why Angella had become like this? Why she had created and then wiped out the Horde in this dimension? Because she had lost her family? Though she had known that Glimmer, Adora and her friends were alive - Angella had sacrificed herself to save them.

Or was Catra right, and Angella had gone mad in her isolation here? Mad enough to recreate a warped version of Etheria? A world changing according to her whims?

Adora's eyes widened. Did she know she had created the world? Wait - Angella obviously knew that; she had said as much when they had been talking about the former slaves. But had she known that when she had created the world?

"I have to ask her," she muttered, glancing at Angella again.

"Ask her what?" Catra cocked her head at her with a frown.

"Why she changed."

"You think she'll tell you?" Catra scoffed.

Adora wanted to say that asking wouldn't hurt, but… It would probably hurt. On the other hand, Glimmer was hurting. She was still standing with Bow in the corner, all tense and ready to bite off anyone's head.

“We need to know why,” Adora said. She wouldn’t be able to help anyone if she didn’t know why things had gone so wrong here. She nodded firmly at her own words.

“Well, I’m sure we can…” Catra started to say, then added: “Wait! You mean right *now*?”

But Adora was already halfway to Glimmer. “Glimmer!”

“What?” Glimmer spun around, glowering at her for a second.

Adora nodded at her. “Come! We’ll find out what happened to your mom!”

“What?” “What?” Glimmer and Bow said together. “Right now?” Glimmer asked, glancing at Angella.

“Shouldn’t we wait until we have recovered the surviving former slaves?” Bow asked.

“Apparently not,” Catra said. Adora didn’t need to look at her to know her expression.

She shook her head. “No more waiting. We’ll find out what happened to your mom.” What changed her.

“Here?” Bow looked pointedly at the other people on the bridge.

Catra shrugged. “It’s not as if they are real people. You saw that. They ignore whatever Angella said if it doesn’t fit them.”

“They don’t ignore us the same way, though,” Bow said.

He wasn’t wrong, but Adora was done with waiting. And they could take their copies, anyway - the other Adora had been useless against Apophis until Adora had broken the fake god’s shield.

“Besides, they’ll probably get upset anyway once we take Angella home,” Catra said.

Adora gasped. That was… She hadn't considered that. But it was obvious, wasn't it? Whatever was the reason for Angella's change, staying here wouldn't help her. And Adora would help here. She owed Angella far too much to abandon her.

"But what if she doesn't want to come home?" Bow asked. "We can't exactly force her to come with us, can we?"

"Of course, we can," Catra replied.

Adora nodded. Catra was right. They would take Angella home no matter what.

Glimmer nodded as well.

Angella turned to face them before they reached her and narrowed her eyes at them. Adora pressed her lips together and kept walking. "We need to talk."

"Leave her alone!" The other Adora moved between her and Angella, followed by the other Glimmer and Bow.

Had she really looked like that, years ago? Adora pushed the stray thought away and focused on Angella. The others don't matter, she told herself. "What happened to you?"

Angella pressed her lips together for a moment, and Adora managed not to flinch. Then the other woman straightened, and her expression smoothed out before it turned into a faint smile. For a moment, she looked exactly like the woman Adora remembered - but her smile was polite, not warm. "You know what happened to me. You were there."

Adora had been there. At the portal. The memories were painful, but she wouldn't ever forget how Angella's last words before she stepped into the portal. "Not that. What happened afterwards?"
What did change you?

"What did change you?" Glimmer asked, echoing Adora's thoughts as she moved to stand next to her - and a little in front.

Angella glared at her. “Change me?”

“Yes!” Glimmer blurted out. “You weren’t like this!”

“Oh, great!” Adora heard Catra mutter on her other side.

“Like what?” Once again, Angella looked like the Angella Adora remembered - when she was arguing with her daughter.

“Like some bloodthirsty maniac!” Glimmer snapped. “The mother who raised me wouldn’t have killed the entire Horde!”

Angella bared her teeth for a moment. “Really? I remember a daughter who always wanted to go and kill the Horde scum!”

Adora winced and glanced at Catra. Her love’s smile had worn very thin, and while she was showing a bland expression, her tail was swishing back and forth, showing how agitated she was.

“I wanted to fight the Horde, yes! But killing them all? We took them prisoner when we could!”

“In a war, you kill your enemies before they kill you!” Angella spat. “I would have thought you’d understand that.”

“No! You *defeat* your enemies!” Glimmer retorted. “And once you’ve won, you make peace!”

“Peace that will be broken as soon as the enemy recovers enough to fight again.” Angella scoffed. “You can’t be safe until your enemy is dead. If you leave them alive, you put your friends and families at risk.”

“That is wrong! You can make peace with your enemies! Turn them into allies and friends!” Adora spoke up. *And more than friends and allies.*

Angella narrowed her eyes at her. “How naive. If you trust your enemies, they will exploit this.”

“I was a Horde soldier myself!” Adora told her. Angella couldn’t have forgotten that, could she?

“*You* never fought us.” Angella scoffed again. “You switched sides as soon as you had the opportunity. You didn’t wait until you were defeated to abandon the Horde.”

Adora glared at her. “Catra risked her life to save Glimmer from Horde Prime! And he was about to defeat us all!”

Angella drew back, eyes widening, but quickly recovered. “A likely story!”

“I was there!” Glimmer cut in. “And you don’t have a leg to stand on - you trusted Shadow Weaver!”

“I did not trust that… woman,” Angella retorted. “I used her knowledge against the Horde. But trust her? Never! Did you think I was such a fool?”

Adora winced when Glimmer drew back. That was a sore point for her friend.

But before she could say anything, Glimmer blurted out: “You trusted her to lead us to the Portal!”

“I did. But if you had killed your enemies when you had the opportunity, the portal wouldn’t have been built in the first place,” Angella replied with a sneer at Catra.

What? Did Angella expect Adora to kill Catra? She stared at the woman. She couldn’t mean that, could she?

“We don’t kill prisoners!” Glimmer spat. “You taught me that!”

Prisoners? Oh. She must be talking about the time Glimmer and Bow had captured Catra!

“So you took that to heart, even though you complained about everything else I did in the war?” Angella snorted but without any

humour. “If you had killed your enemies at the first opportunity - if I had killed them - we would have been safe. Etheria would have been safe. I learned that lesson, but it’s obvious that you never did.”

“Because it’s the wrong lesson!” Glimmer yelled.

“It’s the truth! You cannot trust your enemies! The only way to be safe, to keep your family safe, is to kill them all! If we had done that, I wouldn’t have lost you or Micah!”

“I told you, Micah’s alive,” Catra spat.

“You lie!”

“No! Dad’s alive! We saved him!” Glimmer shook her head. “And he’ll be so disappointed in what you have become!”

Angella froze for a moment, gasping.

As did Glimmer.

And Adora heard Catra hiss a curse.

Angella stared at Glimmer, lips moving for a moment, forming words without sound.

Glimmer grimaced but straightened her shoulders and met her eyes defiantly.

Both stared at each other, and Adora drew a slow breath. She had to say something, anything, to… fix this. Somehow. But before she could think of what to say that wouldn’t make things worse, Angella turned and walked away.

“This isn’t over! You can’t just walk away!” Glimmer yelled. She tried to rush after Angella, but the other Glimmer appeared in front of her.

“Leave Mom alone!”

“She’s not *your* mom!” Glimmer snapped.

“She is my mother!”

“Well… in a sense, Angella created her…?” Bow trailed off with a wince at the glare he received from Glimmer.

“That would make her everyone’s mom!” Glimmer scoffed.

“Congratulations. You just got fifty million siblings,” Catra said.

“Don’t joke about this!” Glimmer snarled, turning to face Catra.

“Why not?”

“It’s not funny!”

The other Glimmer didn’t react to their bickering. Nor did the other Bow. Or anyone else Adora could see. Like everyone else had ignored the entire conversation with Angella. No, Adora corrected herself. They weren’t ignoring them - the others showed absolutely no reaction. It was as if they didn’t hear anything. Or couldn’t hear anything.

This wasn’t the first time Adora had seen this. Had Angella created them like that? Unable to even notice anything that would question her or the world she had made? She looked at her counterpart - or copy - and couldn’t help wondering if the reason this She-Ra was so… so weird was because she couldn’t question Angella.

Like a dumb bot unable to disobey its programming. Like Light Hope, Adora thought, remembering her and how she had been forced to act by her creators. But despite her programming, Light Hope had been a person, hadn’t she?

Were those people here like Light Hope in that way? Were they people?

*****

Even with the map created by the scanner, it took them an hour to reach the area where the surviving former slaves of Apophis were. By the time they crested the last hill on the way, Samantha Carter was feeling a little nostalgic - it had been a while since she had hiked like this on an alien planet with the rest of SG-1.

"They should be straight ahead - well, straight down, in the valley below!" Entrapta announced. Her visor hid her face, but her voice clearly showed her enthusiasm.

"Great!" Daniel sounded happy as well, though part of that was likely because he was relieved that they had reached their goal; he had stuffed his rucksack with all the artefacts he had found in the ruins of the village, and while he hadn't exactly gone out of shape, as the General had joked, Sam had no doubt that he wasn't as used to marching on foot as he had been back in Stargate Command.

Sha're, on the other hand, showed no sign of being winded. Amaunet had kept her host in perfect shape. And she had been possessed for years, so some of the effects of that would linger.

"So, anyone spot our missing god-creators?" the General asked, looking down into the valley. "Smoke from a campfire?"

"I do not think they would risk detection by making a fire," Teal'c commented.

"Let me scan for them again!" Entrapta said. She wasn't exhausted at all since she had used her hair for walking.

Sam nodded and pulled up her tool. This shouldn't take too long.

"Ah, there they are!" the General announced before she could finish her scan.

He was pointing ahead at… a small clearing? Sam raised her own binocs and saw movement there - someone was walking through the underbrush.

“Let’s go and get them before they move again!” The General started down the hillside at a quick pace.

It took them about ten minutes to reach the forested area, at which point Teal’c and the General pulled ahead, vanishing in the bushes. Sam and the others followed them, but a bit more slowly.

Still, they were close enough to hear when the two made contact.

“The God’s guards are here!”

“Mercy, my lord!”

“Mercy!”

“I am not a follower of the false god Apophis. You have nothing to fear from us,” Teal’c announced in the kind of voice that carried over a battlefield.

“Oh, no! It’s the Betrayer!”

“Mercy!”

“Stay faithful, brothers! Our Lord will protect us!”

The General’s voice cut through the desperate cries: “Kind of famous, are you, Teal’c? Or should that be infamous?”

“Oh, no! The God-Killer is here!”

“SG-1!”

“We are doomed!”

“Merciful God, save us!”

Sam couldn’t help grimacing when she rounded a particularly large tree and saw the clearing - where four men were on their knees, begging, in front of the General and Teal’c.

“Well, that brings back memories,” Daniel commented behind her. “You really need to stop making such bad first impressions, Jack.”

“Hey!” the General protested. “It’s not my fault Apophis made us the bogeymen!”

Daniel nodded and walked past Teal’c and the General to address the terrified former slaves. “Don’t be afraid! We won’t hurt you - we’re here to help you.”

One of the men looked up, a hesitant smile half-forming on his lips. Then his eyes widened, and he gasped, staring past Sam.

She glanced over her shoulder. Oh. Of course, the most loyal slaves of Apophis would be familiar with his former queen’s host.

“I am no longer Amaunet’s host,” Sha’re said as she stepped past Sam. “Taweret has been taken prisoner and the slaves she had been keeping prisoners have been rescued.”

Another of the cowering men looked up. “They are alive?”

“Yes.” Sha’re nodded. “Apophis intended to silence them - and you.”

“We… we knew too much. Secrets that could threaten our god, should his rivals get their hands on us,” the man said.

“You knew that, yet you still summoned him?” The General shook his head.

“We prayed to him.” A third man was raising his head. “And he answered our prayers.”

“By shooting at your camp. Did you flee?” Daniel asked in a soft voice.

The three men lowered their heads again, and the fourth whimpered. “We were… weak. The others stayed and faced our god’s judgement. We ran,” the first man whispered.

“As soon as we saw the divine ship,” the second added.

Ah. That explained why they had survived.

“You did nothing wrong,” Daniel told them as he crouched down next to the first man. “Apophis didn’t have the right to kill you.”

“He is our god! Our lives are his to use as he deems fit!” the man protested.

Daniel shook his head. “No. Your lives are yours to live. No god has the right to take your lives.”

“He is our god! We belong to him!”

“If he cannot protect his faithful from being taken by others, he is a weak god,” Sha’re said with a sneer. “He has been beaten by SG-1, he has lost his heir and both his queens, and he was defeated in this world as well and his flagship lost.” She pointed in the direction of Bright Moon. The crash site wasn’t visible from here, but with good binoculars, you could make out the smoke still rising from he wreck. “He has lost any claim he had on you.”

That seemed to rattle the men. Sam saw them exchange glances while they still had their heads lowered. Of course, Sha’re would be familiar with Apophis’s most loyal slaves.

“Did… you defeat him in this world?” the third man asked.

Sam pressed her lips together, and Daniel and Sha’re seemed to hesitate as well.

“The false god was defeated by She-Ra. She challenged him in his palace and killed him to save this world,” Teal’c told them.

“She-Ra…” the first man whispered as he glanced at the others. “We’ve heard of her.”

“The goddess who stormed his palace on Saqqara…” the second man breathed, and the other two slowly nodded.

“She healed everyone, friend and foe alike.”

“Yes, She-Ra did,” Sha’re said. “She protects everyone.”

“And she wants to take you home to your friends and families,” Daniel added. His smile looked a bit embarrassed.

Sam could understand that - Daniel knew as well as she did that Adora wouldn’t like this.

“If the goddess who defeated Apophis commands it…” The first man took a deep breath. “...then we obey.”

The others nodded.

Sam winced. Yes, Adora definitely wouldn’t like this. But trying to tell the former slaves, all of them indoctrinated from birth, that She-Ra wasn’t a goddess could wait until they had taken them back to their home dimension.

*****

Catra eyed the tower in front of her, especially the balcony three-quarters to the top. She could easily climb up there - her claws would leave some cuts and gouges on the surface, but Angella could probably wish the damage repaired, so that was no big deal.

The question was: Should she be doing this? She had never really met Angella before the… Portal. Angella was Glimmer’s mom, and Adora’s… foster mom? Or something. In any case, Catra should just call Adora and let her and Glimmer know that she found the queen who didn’t want to talk to them.

On the other hand, what would Adora do? Stand at the bottom of the tower and yell up? Bring all guards running and her copy? Just demanding to meet Angella hadn’t worked when they had arrived at the palace gates, and Catra didn’t think it would work now either.

Glimmer could teleport up there, of course. But Catra doubted that she would - Once she had stopped bickering with her copy, she had gone off to, well, the closest to her cabin on this Darla. To cry, unless Catra's ears were lying to her, which they weren't. Which meant Bow would be useless as well.

Which left Catra. The former Horde commander who had almost taken Bright Moon once and waged war for years on the Alliance. The one responsible for Angella being here in the first place.

But also the first who had met her and the first who had talked to her since the Portal. And someone who had screwed up far worse than Angella had.

So, Catra had an obligation to help fix this. Even though there was a decent chance that showing up in Angella's second office or whatever was up there would end with the queen having her imprisoned again - well, trying to, at least - and a hundred per cent chance that Adora would be mad at her for doing this.

Sighing, Catra walked up to the wall and unsheathed her claws.

Less than thirty seconds later, she pulled herself up and over the railing of the balcony and peered through the open door. Ah - it was an office. She saw Angella standing at the desk, one hand moving over its surface. Though… Catra narrowed her eyes. That didn't look like an office in use. There were no papers on the desk. And the style of the furniture looked a bit off compared to what Catra was familiar with at the palace. Wait! Those books and memory crystals on the shelf looked familiar. She had seen them before somewhere…

Oh. Her eyes widened. This was *Micah's* office. That made sense.

Catra nodded and stepped through the door. "Angella? We need to talk."

*****

The Lost Dimension Part 7

Unknown Location, February 4th, 2000 (Earth Time)

Catra cleared her throat. “Angella? We need to talk.”

The queen spun around. “You!”

Catra managed not to flinch at the glare aimed at her. Instead, she nodded with a twisted smile. “Yes, me.”

“What are you doing here?”

She hadn’t called the guards. That was a good sign. Or so Catra hoped. She shrugged and said before she could help herself: “Talking to you.”

Angella’s scowl deepened. “You?” she scoffed.

“Yes, me.” Catra shrugged again and wandered over to the desk - keeping it between her and Angella. “I kind of know what you’re going through.” At least, she thought so. If she was wrong… well, Adora would be mad either way.

Angella scoffed again. “You dare? You’re Horde scum!”

But she still hadn’t called for her guards, Catra noted. And she sounded a lot like her daughter right then. Well, except for the slight accent. “I know what it’s like to feel guilty.” And shame. And embarrassment. And self-loathing. And being crazy.

“Guilty? I didn’t conquer a kingdom and then tried to take over the world!” Angella spat. “I defended my world against you!”

Technically, Catra hadn’t conquered a kingdom - well, not while Angella had been around. Salinas and Plumeria had fallen afterwards.

But Angella wasn’t finished. “I didn’t try to destroy the world!”

This time, Catra flinched. She had done that. But she pushed the guilt she felt away and nodded. “Technically, I was trying to change the world - to create a perfect world for me.” With Adora at her side, of course.

And Angella flinched. But her glare grew more intense. “You endangered our world! I had to sacrifice myself to save it!”

“And then you created your own perfect world,” Catra said. “Only, it’s not as perfect as you thought it would be, right?”

Angella pressed her lips together.

“Because no matter how we’d like to fool ourselves, it’s a fake world. Not real.” Catra nodded once more.

“This world is real!” Angella blurted out. “And I didn’t destroy another world for this - this was an empty dimension when I arrived!”

Catra clenched her teeth for a moment. I was crazy, she told herself. “It’s not real. It’s reacting to our thoughts.” She put her hands on the desk - freshly polished, she noted - and leaned forward. “And it won’t ever be real. It will always remain a dream.” A foolish dream.

“No! This is no dream!” Angella yelled.

“That’s why the ‘people’ here act like bots?” Catra scoffed. “Your fake ‘daughter’ is only doing what you want her to do. She is barely more than a puppet, isn’t she?”

“No!” Angella shook her head. “No!”

Catra drew a sharp breath. Time to get serious. “You knew that, though, didn’t you? You always knew she was a fake.” If Angella had actually fooled herself…

“No!”

“And now the real Glimmer is here,” Catra went on, trying not to show how tense she was. “And she is disgusted by this perfect world of yours.”

Angella flung her arm out and swept a stack of books from the desk, scattering them over the floor. “Shut up!”

“And you fear that Micah will be disgusted as well.”

“Shut up!” Angella rounded the table and rushed towards her.

And Catra hissed through clenched teeth. Damn! That had been too much!

She jerked back, hands raising to defend herself, but stopped. Fighting Angella would be… Catra managed to turn with the blow but was still sent stumbling. “Did that…” Another blow to the stomach - she had barely time to tense her muscles - interrupted her, pushing her back a few more steps.

Once more, she almost lashed out in reflex but managed to control herself. She did take a few more steps back, though - Angella was stronger than she had thought. Stronger than Glimmer, in any case. Catra had been hit far worse, though. And she deserved it back then, too.

“Shut up!” And there Angella came again, baring her teeth as she wound up another strike.

Catra twitched but stood her ground, catching another blow to the face. She exaggerated her staggering until her back hit the wall.

“Shut up!” Angella snarled.

OK, enough was enough. Catra literally had her back to the wall. This time, she jerked her head to the side, and Angella’s fist hit the wall instead of her face - and they ended up facing each other up close. “Lashing out won’t solve this,” Catra whispered into Angella’s face. “Trust me, I know.” She bared her teeth in a grin and tried not to wince from the pain of her swollen lips.

“This is all your fault!” Angella drew back her other fist.

Catra deflected the blow. “Not everything. Creating this world is on you,” she spat.

“I wouldn’t be here if not for you!” Angella’s fist was bleeding, but Catra didn’t think the tears in her eyes were because of that.

This time, she caught the blow. She couldn’t have done that with Adora, but Angella was no She-Ra. “Yeah. And I didn’t choose to be raised as a Horde soldier. But I still could have defected.” Like Adora did.

Angella was panting - Catra could feel the woman’s breath on her face. “You were in charge!”

“Yes.” Catra stared at her. “I was.” That was her fault. Her guilt. “And you made this world.”

“I had lost everyone!” And the tears started to fall.

“And I had lost Adora.” Catra clenched her teeth. “It’s not an excuse.” She snorted. “Trust me, I know.”

Angella stared at her. “I’m not like you!”

“No.” Catra chuckled. Once. “But you will be if you don’t stop… this.” She shook her head. “Stop pushing your loved ones away. Trust me, that’s the worst mistake you can make.” Catra knew that very, very well.

Angella blinked through her tears and took a step back before looking away. “You heard Glimmer. They hate me!”

Oh, for…! Catra scoffed. “They love you, you idiot!”

Angella glared at her. Was that progress? “What would you know about *that*?”

That was… "They accepted *me*!" Catra snarled. "At least *you* didn't kill any real people!"

"And why did they accept you after all you did to us?"

"Because Adora's a much better person than I'll ever be," Catra said.

Angella blinked. "This is not - not just - about Adora. You heard what Glimmer said. I made a copy of her! She thinks I replaced her!"

"You did." Catra snorted as Angella glared at her again. If she could admit her guilt, Angella could own up to her own mistakes. "But that doesn't matter. She's your daughter. Micah's your husband. Consort. Whatever. They love you."

Angella looked away again. "They don't know me. Not any more."

"Glimmer's done things she regrets as well. So did Micah." At least Catra assumed so - she wasn't really that close to him. But he had been controlled by Horde Prime's chips during the war and attacked his friends, and Catra knew how that felt.

Angella didn't say anything. Catra waited. She had said what she had wanted to say. Repeating it wouldn't really help. Maybe…

"I created the Horde just to wipe it out," Angella said without looking at her. "Including a copy of you."

Ah. Catra drew a short breath through clenched teeth. "They weren't real people," she said as nonchalantly as she could. "More like… training bots?"

Angella turned her head to stare at her again. "Training bots don't bleed and beg."

"I wouldn't have begged either," Catra told her. She flashed her fangs. "And I'm not that easy to kill. I let you hit me."

Angella scoffed softly in response, and, for a moment, they looked at each other with matching wry, pained grins.

“So…” Catra trailed off. “Do you really think you are worse than me? Or Hordak?”

“Hordak.” Angella pressed her lips together before shaking her head. “No, I don't suppose so.” She straightened. “Very well. I shall have a talk with Glimmer. And with Micah.”

That didn’t sound very enthusiastic to Catra. But it was good enough. The rest was up to Glimmer and the others. Catra had done her good deed for the week or something. Now they just…

She turned her head when a cloud of sparkles appeared on the balcony.

“Mom! We need to talk!” Glimmer exclaimed as she, Adora and Bow were revealed. “I’m… Catra? What are you doing here?”

“Catra?” Adora gasped.

“Hey, Adora!” Catra grinned at her, wincing a little at the pain from her lips.

“You’re hurt!” Adora started towards her.

“Mom! You’re hurt!” Glimmer must have noticed Angella’s bleeding hand. “What… Wait! Did you two fight?”

“No!” Catra said.

“Yes,” Angella said.

Catra glared at her. That was the absolute wrong thing to say!

“Catra!”

“Mom!”

“Why did you fight?”

“Let me heal you - both of you!”

“It wasn’t a fight!” Catra protested. She had let Angella hit her!

But no one was listening to her.

*****

Jack O’Neill shook his head as he watched the former slaves board one of the skiffs that had arrived at their position. Four survivors of over a dozen. The rest of them had been killed by the very god they had created in their minds. There was probably a lesson here.

He turned and saw that Daniel was on his knees and checking the remains of the campsite, if you could call it that - it lacked even a firepit. “Daniel?”

“Just a few more minutes. I’m checking for any tools that they might have created,” his friend replied without looking up from the patch of sandy ground he was searching.

“I think they took everything with them. Not that they had much to begin with,” Jack said.

“We’re in a special dimension, Jack. They might have created tools and other artefacts without being aware of it.” Daniel perked up and raised his hand, holding up what looked like a piece of rock. “Ah!”

“A pet rock?” Jack raised his eyebrows.

Sha’re shook her head with a frown aimed at him but didn’t comment.

“It’s flint!” Daniel replied.

“Yes?” Jack wondered what he was about.

“This couldn’t have formed here naturally - the geology is wrong for flint to form,” Daniel said. “And it has traces of being worked on. So, either someone dropped it here, or it was created by someone thinking that it should be found here. But according to the local Etherians, this area was never settled - that’s why they placed the refugee camp here.”

There is probably a lesson here as well, Jack thought. Of course, the camp they had seen - well, its remains - had been very nice, a small village, not some enclosed tents in the desert, but it certainly had been out of the way from the major kingdoms. On the other hand, the Etherians hadn’t had the best experiences with visitors. First the First Ones, and then Hordak. And this was a world created by an Angella gone rather… extremist, not the real Etheria. A world where the Horde had been exterminated to the last soldier instead of welcomed with open arms after the war had ended.

He pushed the thought away. “So…?” He cocked his head.

“The only one able to do this would have been the former slaves. So, they expected to find flint if they dug around here - which means they are familiar with such campsites.” Daniel beamed at him. “Campsites by fleeing slaves trying to hide from the Goa’uld!”

“Ah.” Jack nodded. “You think they have tales of or even experience with slaves fleeting on their home worlds.” Daniel looked surprised, and Jack snorted. He wasn’t some dumb jock. And he had spent years working with Daniel; you couldn’t help picking up some things.

“Ah, yes, exactly!” Daniel recovered quickly. “And they were thought to be the most loyal slaves of Apophis. So, there might be a bigger culture of dissidents amongst his followers than we expected.”

“That would be nice.” Jack grinned. “I’ll pass it on to the intel weenies. They’ll want to hear all about it from you.”

Daniel smiled, then blinked. “Oh.”

Jack smirked a little. Giving a lecture was one thing, being grilled by spooks looking for clues about the enemy was another. Daniel was familiar with the difference from experience. He patted his friend on the shoulder and went to check on Carter and Entrapta.

The two were focused on their gimmicks, occasionally waving around some sort of antenna. Or a magic wand; Jack couldn’t tell the difference. “So!” he called out. “How much longer do you need before we can leave?”

“We’re almost done, sir,” Carter replied, looking up at him. “We’ve completed the primary scans and are now double-checking some results.”

“Then we can compare them to the data from the destroyed village and find out how much the number of minds affects the shaping effect on this dimension!” Entrapta said, nodding enthusiastically. “Well, we should be able to form a hypothesis, at least, but that’s still progress!”

“Good.” Knowing how dangerous the four rescued former slaves were was important. The last thing Jack wanted was to be caught by another Apophis on the way back to Bright Moon. Or some other monstrosity conjured by someone’s imagination. “Don’t think about Marshmallow Men, by the way.”

Carter chuckled at that, then pressed her lips together and frowned at him. “We won’t, sir.”

He grinned. He still had it.

“We won’t?” Entrapta looked confused. “I’m now thinking about… whatever that is.”

Uh-oh. Jack grimaced. “Ah… Carter can explain. Once you have finished your work here.”

“Right!”

While Entrapta turned back to their scanner, Carter shot him a look through narrowed eyes. Jack shrugged with an apologetic smile. Yeah, that hadn't been smart of him, but, if necessary, Carter could handle distracting Entrapta until they were back in their home dimension. If Entrapta hadn't seen the movie, there shouldn't be any danger, anyway.

No more than from anyone else having stray thoughts. You apparently needed a very focused mind to create anything like a god here.

Though smaller stuff was a different thing, wasn't it? Jack blinked, then grinned and looked at the campsite again. If this were on Earth, in a National Park, there would be…

"Jack!" Daniel exclaimed. "Someone has planted a park ranger sign here! How could… Jack! You just ruined the site!"

Perfect.

*****

By the time they left the palace, Adora was still angry at Catra. Her love had gone off to talk with Angella! Alone! With the person who had had the entire Horde - including Catra - in this dimension executed! And she saw nothing wrong with it!

"I don't know why you are so mad," Catra said.

Adora turned to face her with a scowl. "You know exactly why I am mad!"

"Everything worked out fine." Catra crossed her arms over her chest and raised her head a little. She did that when she felt guilty and didn't want to show it, Adora knew.

"You didn't know that when you sneaked off and climbed the tower! Like… like an assassin! If anyone had seen you…"

Catra scoffed. "As if the guards could have spotted me!"

Adora glanced at the two guards standing at attention at the gate. They were glaring at Catra.

Catra followed her gaze and snorted. “They’re just copies.”

The guards didn’t react to that at all, and Adora pressed her lips together. That was creepy. And Catra was still wrong. “Angella isn’t,” she said.

“Angella didn’t think I was an assassin either.” Cara shrugged.

“She attacked you!” And hurt her!

“It was just a few slaps,” Catra retorted. “I’ve been hit harder in training.”

“That was in the Horde!” Adora spat. And they hadn’t known how wrong that was.

“Or by a little girl,” Catra continued.

“That was Frosta!”

Now, Catra frowned at her. “You healed me.”

“That’s not an excuse for getting hurt!” Adora clenched her teeth. Catra could be so stubborn!

“Hey! Angella attacked me! I didn’t attack her.”

“You said you let her hit you!” Adora almost grabbed Catra but stopped before she touched her.

“Well… yes, I did.” Catra flashed her fangs. “But I knew I could take it.”

“Did you?” Adora narrowed her eyes. They had talked about that in cadet training! “What if she had used her powers? What if she had used a weapon?” Angella could have created anything in this dimension.

“I wouldn’t have let her hit me then!” Catra shook her head.

“You couldn’t have known that!” Adora clenched her teeth again. Why was her love so stubborn?

“It was a calculated risk.”

That was also from cadet training. And the Horde standards for what was an acceptable risk were far below the Alliance ones. “You didn’t have to take the risk at all! Or alone!” Catra looked away, and Adora bit her lower lip. “Why did you do it?” she asked in a softer voice.

“She was here because of me,” Catra whispered.

Oh… Adora sighed and reached out to hug Catra. And resisted the brief urge to shake some sense into her. She took a deep breath and calmed down. “That doesn’t mean you have to get hurt.” That was wrong! And two wrongs didn’t make a right!

“I didn’t plan to get hurt.”

“You let her hit you.”

“Well… no plan survives contact with the enemy?”

Adora didn’t need to see Catra’s face to know she was weakly grinning. She hugged her a bit more tightly, though. Just to make her point. “Idiot.”

“That’s my line.”

“Not when you’re being the idiot.”

“Someone had to talk sense into Angella. And, well…” Catra sighed - Adora felt her taking a deep breath. “...I’ve been there. I’ve made mistakes like she did. And worse.”

“Oh.” Adora blinked. She hadn’t considered that. “But we all made mistakes,” she whispered. “I did, Glimmer did…”

“Not like mine,” Catra cut her off. “And Glimmer? You think she could have talked things out with Angella?”

Adora bit her lip again and felt her face heat up. “She’s not a teenager anymore.”

“Could have fooled me.” Catra snorted again. “And you were feeling too guilty to handle this.”

“Me?” Adora drew back and stared at her.

Catra nodded. “You feel guilty for letting her sacrifice herself in your place.”

Adora opened her mouth, then closed it again, and glared at Catra’s smirk. “You feel guilty as well.” Or more.

“Yes. But I don’t know Angella. Not like you and Glimmer do. And she doesn’t know me. We’re kind of… more professional.”

Adora snorted. “So professional, you had a fight.”

“It wasn’t a fight - I let her hit me,” Catra retorted at once. “And it worked, didn’t it? She’s coming back home.”

Adora reluctantly nodded.

“Everything worked out fine.” Catra’s smirk grew.

Adora rolled her eyes. “That doesn’t mean you were right to do it.”

“Sure it does!”

“It just means you were lucky.” And luck ran out sooner or later.

Catra shrugged, still grinning.

Adora again wanted to shake her. She could tell that this was a facade - she knew Catra better than anyone else. “We’ll talk about

this again, later," she said. When she could prepare better. Catra couldn't go on like this.

Catra grimaced, and Adora couldn't help grinning. A little.

*****

"...so, the Queen's coming back with us?" The General sounded a little doubtful, in Samantha Carter's opinion. Quite justified, of course - when they had set out to recover the missing former slaves of Apophis, Queen Angella had been quite forceful in her refusal to talk, much less come with the group. Things had apparently changed drastically in their absence.

"What made her change her opinion?" Daniel asked.

"We had a talk," Catra said.

"They had a fight," Adora added.

"It wasn't a fight!" Catra protested. "Whatever - the point is, Angella is coming back with us. Probably as soon as she and Glimmer finish their own talk." She shrugged. "Then we can finally leave this dimension behind."

"But it's such an interesting dimension! Anything is possible here! You can alter the very fabric of reality with a thought!" Entrapta piped up.

"Like Jack demonstrated when he created a signpost as a joke," Daniel said with a wry smile.

"Ah." Adora nodded.

"But that's just scratching the surface," Entrapta said. "You could do that with magic in our dimension. Castaspella could probably teach you a spell for that." Sam noted that the General stopped grinning at hearing that. "Or a magitech device that created materials out of the available molecules in the air or something," Entrapta went on. "But here, we can change the laws of physics -

the fundamental rules that define the universe - with our minds! Imagine what we could do if we change the gravitational constant into a variable!”

Sam did - and struggled not to wince at the potential consequences. “I fear that we lack the necessary data to conduct such an experiment in a safe manner.”

Everyone else except for Entrapta grimaced.

Entrapta, though, nodded. “Yes! Which is why we will have to run many experiments here to gather data - we can build up safely to the major experiments. Well, mostly safely - some risks remain, of course, because we’re breaking new ground. And, I guess, because the entire dimension is so malleable. Even small distractions could ruin our data.”

Or our lives, Sam thought, smiling weakly. “That would take a long time, though,” she pointed out. “And we have many other, urgent projects we have to finish.”

Entrapta blinked. “Right. Hordak and Loki wouldn’t be happy if we just dropped the research into their projects. And neither would be the Alliance, I guess, if we stopped research and development. Although! If we could use this dimension to research things…”

“That would have to be done safely,” Sam reminded her. “Which would take a long time.”

Entrapta sighed. “I guess so.”

The General clapped his hands together. “So, no unravelling the universe for now! Neither this one nor our own!”

Sam nodded in agreement. Although Entrapta was correct about the potential this dimension offered to research. Maybe once the war against the Go’auld was over, they could pursue this. Although… “We will have to keep this dimension under surveillance, though. We have to assume that Apophis is aware of what kind of research was done here.” Even if Taweret might have

tried to hide it, he would have had spies amongst the Jaffa to inform him. "And while we have taken control of Beta and captured Taweret, we cannot exclude the possibility that Apophis will attempt to continue those experiments."

"Great." The General sighed. "We'll have to find a way to observe a dimension where our mere presence will change it."

"That's not actually that uncommon," Daniel commented. "Especially when interacting with another culture."

"Or in physics," Sam added. Although the observer effect usually wasn't as massive - and dangerous - as it was here.

"Right. So, let's think about that. Once we are back home," the General said.

"Well, we can keep scanning for foreign visitors to this dimension," Entrapta said. "That wouldn't be very exciting, though - and it would be unfair to Beta if she were limited to observing and couldn't do any experimenting."

"Oh, yeah. We don't want the mad scientist bot to grow bored, do we?" The General nodded.

He was using sarcasm, but Sam nodded in agreement. "I fear Beta might show some, ah, initiative if she were bored."

"Right. Carter, find a way to keep the bot busy without breaking our universe, OK?"

"Yes, sir."

"Oh, there's lots Beta can help us with!" Entrapta cheered. "We've got so many projects, she is bound to find something she likes!"

"Yeah…" The General gave Sam a look, and she nodded again.

Message received.

“Though…” Entrapta frowned. “If Angella’s coming with us, what about her people here?”

“They’re not real people. They’re like dumb bots,” Catra said with a shrug.

Entrapta frowned at her. “That doesn’t mean we shouldn’t care about them! We can’t just abandon them!”

The General looked like he disagreed with that opinion. As did Catra. But Sam wasn’t sure. “We don’t know how sentient or sapient they are,” she said.

“Exactly!” Entrapta beamed at her. “We need to know more before we just… leave them to fade.” She frowned again. “No one should be left alone to slowly disappear like that.”

It might be a case of anthropomorphism, influenced by her contact with Alpha, Beta and Emily, but Sam had to agree with that. And Adora seemed to have some doubts as well.

“They wouldn’t be alone,” Catra objected. “They would be all together.”

“But without Angella,” Entrapta retorted, shaking her head. “Their queen. Their mom, in a way.”

“If they might be sapient - or even just sentient - then we can’t just abandon them,” Daniel said. “That would be cruel.”

“That’s something the Goa’uld would do,” Sha’re added.

Teal’c nodded curtly.

The General sighed again.

*****

Catra rolled her eyes and leaned against the parked skiff. “Would you want Angella to stay here for the rest of her life then? Huh?”

“Well…” Entrapta frowned. “That wouldn’t be fair. But she’s responsible for them since she created them. You can’t just make a bot and then abandon them.”

“She also created the Horde here - and then had all of them executed,” Catra pointed out.

Daniel winced at that, as did Sam, but Entrapta nodded. “She did. And that wasn’t right. You shouldn’t create something just to destroy it. Except when it’s a target dummy, of course. But you don’t make target dummies that could feel - that would be really wrong. Anyway! Just because it was wrong to create the Horde and then destroy it doesn’t mean that abandoning this Etheria is OK.”

Adora nodded. “Two wrongs don’t make a right.”

Catra clenched her teeth. “We don’t even know if those people can feel anything.” Or if they were actually people. “They didn’t react like real people would have - you know that; we fought them.”

“People with cognitive limitations are still people,” Daniel objected. He pushed his glasses up his nose. “And they did feel pain.”

Briefly, Catra thought. She didn’t say that out loud, of course. This was already a tense discussion. And Adora was getting worked up - Catra could tell. Well, more worked up; her love was already worked up about Catra’s talk with Angella. She pushed the guilt she felt for worrying Adora away. “Or they just acted like they were expected to. Like simulations. For training.” Like the enemies they had been facing during cadet training.

“Well…” Daniel smiled in that ‘apologetic way of his that told Catra she wouldn’t like what he was saying. “If the simulation is good enough to look real, how can we tell it apart from real feelings?”

“That’s a good question!” Entrapta nodded. “If they were bots, we could analyse their decision matrices and check if they feel something or just follow their programming. But that’s a bit tricky

here - we might be influencing the results by changing them as we examine them. Without realising it." She blinked. "Oh, and it would also be difficult since they aren't bots with a decision matrix but people with a brain."

"It would be very unethical," Sam agreed.

"And if we cannot determine if they are sentient, we have to assume they are. Anything else wouldn't be ethical," Daniel said.

"Why is the ethical answer always the one that creates more problems?" Jack complained.

"Do we actually know if they will fade without Angella?" Adora asked, biting her lower lip.

"No, we don't," Entrapta said. "Not for sure. But our data does indicate that without an external, meaning a foreign sapient influence shaping it, over time, this dimension returns to its basic undetermined state. At least, we haven't noticed anyone created here affecting the dimension as we do. Although we cannot exclude the possibility that our scanners aren't calibrated to detect such a hypothetical influence."

"Without proof of that, we still have to assume that they don't have such a stabilising influence on their surroundings." Sam sounded as if she didn't like that any more than Catra did.

And while she was right, the conclusion was still wrong. "Angella is the only one to stabilise this world," Catra said. "Should she be trapped here just because we can't be sure that the people here are people?"

Adora opened her mouth, only to close it after a second without saying anything. Idiot.

None of the others said anything either. Typical.

"We cannot demand this of her," Daniel said after a moment.

"Why not?" Catra shrugged. "If she's responsible for them, and we can't assume that they are just bots, and she's the only one to save them from fading away…?" She trailed off and raised her eyebrows at him. "Or are we just expecting her to sacrifice herself for this world instead of demanding it?" Sacrifice herself *again*.

Once more, everyone was silent for a moment.

"And what if the people here are just… programmed figments or something?" Jack added. "She'd sacrifice herself for nothing."

"That's a good point," Daniel said hesitantly. "Staying here, alone, surrounded by her own creations, isn't healthy. Would it be ethical to expect Angella to sacrifice her own mental health based on the mere assumption that her creations are sentient?"

No, Catra thought. That would render her efforts to talk sense into Angella pointless.

"But what if they are?" Entrapta asked. "They act like they are."

"We need to find out," Adora said.

"But how?" Sam asked. "This dimension's unique circumstances render a Turing Test useless since the test subjects are directly or indirectly linked to a sapient mind."

"And even if they aren't sapient, they could still be sentient," Daniel pointed out.

"So are animals, but we eat them," Jack retorted.

Catra bit her lower lip. This was… There was something… she almost had it. Ah! "They're not like animals," she said.

"Of course not," Adora said.

Catra frowned at her. "No, I mean… they weren't just created by Angella - they're still linked to her. When we started talking to her, the guards, the copies, they didn't react. Do you think Angella

created them like that? With such a… a blind spot? Or did she change them as soon as we started talking?"

"Oh!" Entrapta tilted her head. "She wouldn't have programmed them like that when she created them since she wouldn't have expected such a situation. Or would she?"

"It's not impossible, but… unlikely, I think," Sam said.

Yes. Catra nodded. "So, if their minds, their personality, can be changed on a whim, especially their memories, are they truly people? Or just, like, extensions of Angella's thoughts?"

"Manipulating someone's memories doesn't rob them of their personhood," Daniel objected.

"But what if they don't have a personality without someone imagining it?" Catra retorted. "If they fade without Angella, and they were created by Angella, and constantly adapted by her imagination…" She gestured at their surroundings. "That sounds like a dream that fades when you wake up."

"How poetic," Jack commented. She narrowed her eyes at him, and he shrugged. "But a good point. It's like we're in someone's dream, and talk about not letting them wake up so the dream never fades."

"That's stretching things quite a bit," Daniel said. "A dream we can interact with, and affect without imagination."

"That's still a dream." Jack grinned. "And you can't keep dreaming forever."

"It's still a hypothesis," Daniel pointed out. "Based on our assumptions."

He was right, technically, but the more Catra thought about this, the surer she was that this was sort of a dream. A dimension formed by your imagination, lasting only as long as you thought

about it - as long as you were present. As long as your mind was occupied with it.

Yes, that was like a dream. And no matter what you were dreaming, sooner or later, you had to wake up.

“But…” Entrapta looked distraught. “Even if they aren’t real people, they still act and think as if they have real feelings, even if they need Angella for that. And they will react to Angella leaving. Especially if it takes time for them to fade.”

“Angella can change them so they don’t react,” Catra said.

“That wouldn’t be right either!” Entrapta protested. “They would be left like that for… days, maybe weeks depending on how long it takes established structures and forms to fade here - we still haven’t worked out if the age of the changes affects this.”

“Angella leaving with us isn’t something that they wouldn’t expect,” Adora said. “Princesses leave their kingdom to visit others. That’s normal.”

“But they wouldn’t be cut off from any contact,” Entrapta said. “Not since we invented communicators. Here, Angella would effectively vanish. And they couldn’t contact her if they start fading.”

“Well, then it would be Glimmer’s - the copy’s - problem,” Catra muttered. “She’s her successor.”

“That’s not how…” Adora trailed off. “What if we copy Angella?”

Catra blinked. Now, that would solve this stupid problem, wouldn’t it?

*****

“You want to make a copy of me?”

Queen Angella didn't sound very enthusiastic in Jack O'Neill's opinion. He wouldn't have been, either, if someone wanted to make a copy of himself. Especially if it was a snake or Loki.

Entrapta, though, nodded with a beaming smile. “Yes! So this world still has an Angella when you're gone - I mean, when you're gone with us.”

“Just in case your, ah, world depends on you,” Adora added. Her smile was obviously forced. “So your copy either keeps it stable, or…” She trailed off and bit her lower lip.

Catra rolled her eyes. “Or keeps them company while they disappear with the entire world.”

Jack almost snorted. At least Catra didn't hide what she thought about the entire affair.

Angella glared at her, then at the rest of the group. “And what do you expect will happen?”

“We don't know,” Carter replied. “There are multiple potential outcomes and we cannot say which is the most likely.”

“So you are hedging your bets?” Angella raised her eyebrows. “Do you think I might not leave if I fear that the entire world will fade without my presence? Or do you assume I will not return if there's already a replacement present here?”

“What?” Entrapta looked genuinely surprised. “No! We just thought about the people here.”

Yeah, Jack was sure that this had never crossed her mind. The others, though… Adora, of course, only now realised how this looked, but Catra definitely had thought about this part. Daniel looked guilty and embarrassed for getting caught, not shocked, and Sha're looked as if she expected that.

Glimmer, though, scowled. “What do you mean, returning here?”

Angella turned to stare at her. “Do not take my decision for granted, Glimmer.”

“You can't leave us again!” Glimmer blurted out. “You can't!”

Angella flinched. “I am not planning to,” she said, sounding more than a little guilty. “I was just commenting on this… plan of yours.”

“I didn’t know about that plan either!” Glimmer protested.

“We came up with that to ensure that we don't abandon the people here,” Entrapta told her. “It was the best we could think of, based on the data we have.”

“Making a copy of me was the best you could think of?” Angella frowned at her.

“You made a copy of everyone else,” Catra cut in. “So, it's not as if it's something special.” Angella glared at her but Catra shrugged. “Goose, gander, you know.”

“Do what you want. I will not take part in it.” Angella walked past them, to the edge of the small area that served as their camp at Bright Moon.

Glimmer shot them a look and turned to follow her, but Catra reached out. “Stay! You know her best.”

“What?”

“We need you to help with this,” Catra explained. “Or we'll get a weird copy.”

“Making a copy of my mom is weird already!”

“She made a copy of you.”

“That doesn't make it any better!” Glimmer snapped.

“Just imagine Angella as you remember her,” Entrapta spoke up. “We all do that. Then we should be able to create her.”

“Or we end up with a mad goddess,” Jack commented.

“That would only be the result if we imagine her as such, Jack,” Daniel told him.

Well, from, his brief acquaintance with her, she seemed mad enough for two queens to Jack. He didn't say that, though. This was already taking too long. “Let's do this, then,” he said instead.

Most of the others closed their eyes. Jack didn't. He just tried to think of Angella, but nicer. Like Adora. Not as powerful, though. Just in case.

Minutes passed without anything happening. Jack was about to make a comment about plans failing when suddenly, a sparkling cloud appeared in the middle of the group, bright enough to make him curse and shield his eyes.

By the time he managed to see more than colourful spots, Angella stood there. Smiling kindly.

“Glimmer. It's been so long!” And she hugged her. “So, you’ve finally found your missing mother! And you’ll take her home with you! I am so happy for you!”

“Ah, yes…” Glimmer's smile looked more like a grimace. As did Adora's. Entrapta was looking at her scanner. Bow was looking like he wanted to be anywhere but here.

Well, Jack shared the sentiment. This Angella was creepy. Like some Stepford Wife Queen. He turned and walked over to stand near Angella.

The real queen didn't even glance back at her copy, though he was sure she had noticed her appearance - she couldn't have missed the blinding light.

But she didn't say anything, and neither did Jack. They just stood there, waiting, until he heard steps behind him and turned to see Adora approaching them.

“Uh… we're ready to return. The, ah, copy has gone to the palace,” she said.

“Very well.” Angella nodded with a cool expression.

“Do you, ah, want to say goodbye to…”

“No.” Angella cut her off. “Let us finally be off.”

“Yeah.” Jack had had his fill of this creepy copycat dimension. “Let's go home.”

He was already reaching for the communicator to call the base when they started to walk over to the rest of the group.

A minute later, the world around them faded, and they found themselves back in Beta’s main chamber. Hordak was peering at them through some sort of scanner, with Beta hovering behind him.

And Jack had never been as happy as to enter an Ancient research base as right now. The base was run by a crazy and creepy AI, their experiments were morally and ethically questionable, but at least the crew were real people, not figments, and reality wasn't reacting to stray thoughts as if you were god.

Jack had had his fill of gods as well.

*****

The Lost Dimension Part 8

Research Station Beta, PU-9623, February 4th, 2000 (Earth Time)

They were back in their home dimension! Finally! Adora almost sighed with relief as she looked around, but she noticed Angella was looking like she was frozen except for her eyes darting back and forth as she took in the room. Oh - Angella had said that…

"According to the scanners, there is no residual extra-dimensional energy," Hordak announced.

"Hordak!" Angella spat, tensing up.

Adora winced. They had told Angella about Hordak, but maybe they should have prepared her a bit better for meeting her old enemy. On the other hand, what if she had refused to come?

"Queen Angella." Hordak nodded at her, then looked at his display. "The data explains several of the readings we got from the dimension. And the timeline checks out. It seems that time isn't amongst the constants affected by the dimension's nature, then."

"Oh?" Entrapta quickly moved to his side. "You managed to get data about the dimension's past?"

"I extrapolated a ripple effect from the divergences in the base readings," Hordak started to explain.

"Oh!"

Both seemed to be ignoring Angella, who was glaring at them. Adora saw that Sam looked like she really wanted to join them but didn't dare to. What a mess! At least the former slaves were taken away by the guards.

"Welcome back, Adora, Jack O'Neill." Beta appeared in front of them and bowed.

“Alpha!” Angella tensed up even more, almost snarling at the projection.

Right - she knew Alpha. Both the base and the bot. And she probably didn't have good memories of either. Adora winced.

But before she could say something, Beta spoke up. “I am not Alpha. I am Beta. Alpha is in charge of biological research. I focus on extradimensional research.” She cocked her head sideways. “Are you one of the original test subjects of Alpha? The data I was given seems to indicate that.”

Angella’s glare intensified, and Adora saw she was clenching her bared teeth.

“What data?” Glimmer asked. “We didn’t have any idea… Hordak?”

Hordak looked up. “When I was informed about Queen Angella’s presence in the other dimension, I requested all the data we had on her. If it became necessary to extract her in an emergency, the data might have been helpful for calibrating the system.”

Extract her… “You planned to kidnap her?” Adora blurted out. Like he had - with Light Hope’s help - kidnapped her?

Hodark frowned at her. “Only on your orders as the Supreme Commander of the Alliance.”

Ah. Adora nodded, then winced again. That still sounded bad! And now it made her look like she would have kidnapped Angella!

“Not on mine?” Glimmer asked, glaring at Hordak.

He faced her. “Your rank relative to Angella’s is a little doubtful at the moment.”

“What do you…?” Glimmer blinked. “Oh.”

And next to Adora, Catra sighed. “Did you really only realise now that with Angella back, there are two Queens of Bright Moon?”

“I did!” Glimmer protested.

“But you did not consider all the implications,” Angella said, in a tone that took Adora back to one of Angella’s lessons at the start of her time in the Alliance.

“I was more concerned with getting you back home than politics!” Glimmer spat, and, for a moment, she, too, reminded Adora of that time.

“I see.”

And now Glimmer was clenching her teeth. This was all going wrong! They had found Angella, saved her - from Apophis’s attack - and were taking her home; they should celebrate instead of fighting!

“Royal family drama!” Jack muttered. “It’s a good thing we didn’t take any journalists with us!”

“Journalists?” Angella was quick to turn to him, Adora noted.

“People who report the news to the public,” Jack explained with a too-innocent smile.

Angella frowned at him for a moment. “You talk as if you would take such people with you on a combat mission.”

“Well…” Jack’s smile widened. “On Earth, we’re used to journalists reporting from war zones. Unlike the Princess Alliance. So, there’s a bit of a dispute about the whole thing.”

“I thought you liked not having to deal with the press, Jack,” Daniel commented. “Did you change your opinion?”

Jack frowned at him. This was just him being contrarian, then, Adora realised.

“I see.” Angella didn’t scoff, but her expression showed what she thought of that. She turned to Glimmer. “Nevertheless, we should discuss this in private.”

Adora suppressed another relieved sigh.

Then Angella continued: “And with Adora, of course.”

Oh, no!

*****

“...and the readings here indicate that the other dimension - we really need to find a good name for it, I think, but we probably should ask Angella what she wants it called since she basically created its most distinct area. It would be rude to name it ourselves, wouldn’t it?”

“Yes.” Samantha Carter nodded at Entrapta’s question, even though she doubted that Angella really cared about the dimension she had been trapped in. Although she could be mistaken - she hadn’t met Angella before this, and any second-hand information had obviously been voided by the changes being stranded in another dimension had inflicted on the woman. In any case, it wouldn’t hurt to be polite. And it could hurt to be rude, a small voice added in the back of her mind. Angella had wiped out the Horde in the other dimension, after all. To a man.

“OK! Anyway, the data indicates that the other dimension is free from foreign influences now - we haven’t picked up any changes induced by travellers. Unfortunately, we can’t tell yet if the area that forms Etheria is stable or if it’s started to fade but at such a slow rate that we cannot detect it at this point. And unless the fading rate is growing exponentially, it will be a while until we can detect it. It’s not helping that we lack a solid base rate since it was in constant but minimal flux before this. Actually, this might be the first time the dimension hasn’t been influenced by a sapient mind from another dimension since Angella appeared there, so this might possibly be totally unprecedented! And given

how malleable the entire dimension is, it's theoretically possible that by creating a second Angella, and the desire to stabilise the dimension, we might have changed the constants of the dimension so that's actually possible - a sort of self-sustaining change lasting past out departure. We might not have created a new dimension, but we might have irrevocably altered one!" Entrapta beamed.

Sam blinked, sorting out the relevant points from her friend's slightly rambling talk. "In theory, it might be possible." Mainly because anything was possible in the other dimension.

"We lack the data to tell for certain. And barring positive proof that the affected area is reverting to its basic, undefined state, we will not be able to exclude the possibility that the decay rate is too low to be detected by our scanners," Hordak pointed out.

"If the rate of decay is so low that we can't detect it, then for all practical purposes, the dimension would be stable," Sam retorted. Civilisations could rise and fall - alien civilisations - in such a timespan.

"Unless there are trigger points after which the rate sharply rises. Or cascading effects," Hordak said. "Just because a system looks stable for a long time does not mean that it actually is stable."

"Yes!" Entrapta nodded. "But we can probably improve our scanners if it takes so long!"

"Even that still would not provide us with proof but merely increase the probability that the dimension's changes are stable," Hordak said.

They were mincing words and technicalities now. Sam was familiar with that kind of argument - and she didn't like it. "We should focus on the practical side."

Entrapta nodded. "Yes! Who knows, maybe we'll detect changes soon - although that would be bad, of course."

"If that turns out to be the case, would Angella be available to return to the dimension to restore it?" Beta asked. "That would result in far more useable data, I believe."

"Oh… We can ask her, I think," Entrapta said. "But Glimmer was kind of mad at the idea." She bit her lower lip. "So… I'm not sure?"

"She might mistake such a request for an attempt to banish her again, especially in light of the current crisis of succession," Hordak said. "It would remove her as a claimant to Bright Moon's throne."

Entrapta frowned. "I don't think Glimmer wants her mom gone so she can be queen."

Sam shook her head. "I don't think so either." Sam was sure Glimmer wouldn't want that. A number of kings and queens, historical royalty on Earth, at least, would have jumped at such a ploy, but not Glimmer. Sam might not know Angella, but she knew Glimmer.

Hordak nodded, but Sam couldn't tell if he agreed or merely acknowledged the statement. "It would be better if they could come to an agreement supported by both," he said. "Disputes over the succession often have a disruptive effect on a kingdom, and since Bright Moon is the leading kingdom in the Princess Alliance, with proportionate influence in the Alliance against the Goa'uld, any such disruption would negatively affect the war effort."

Sam tried really hard not to answer that statement with a comment the General would have made about 'realpolitik'. Hordak might not be a warlord anymore, but while he might have lost the ambition, he hadn't lost the cold calculating views fitting the position. He wasn't wrong, though - if Angella replaced Glimmer as Queen of Bright Moon, who knew how that would influence the Alliance? Her actions in the other dimension might lead to a push for a much harsher way to wage war - something many people on

Earth and in the Alliance would agree with, Sam knew. Maybe even the General.

But she had no doubt that Adora would disagree, quite strongly, with such a push. And that would cause more issues.

If Bright Moon were a democracy… She shook her head. They had to deal with the world as it was, not as they would like it to be. She could only hope that Bright Moon had procedures in place to settle such a situation. If not, things were bound to get messy; history provided countless examples of how monarchies fared in such situations.

*****

Alliance Base 'Gateway', PU-9623, February 4th, 2000 (Earth Time)

"Why did we have to leave the research base?"

"Because I am not holding a private talk where Beta can overhear everything we say, Glimmer."

Catra nodded in approval. Angella might be… traumatised, but she wasn't stupid.

Glimmer clenched her teeth and turned to frown at Catra. "And why are you here?"

"Because I'm not letting Adora deal with this by herself," Catra told her with a toothy grin.

Glimmer frowned some more and then looked at her mother.

"She might have some insight to offer about some of the matters we are to discuss." Angella didn't shrug, but she sounded as if she had.

Catra had to give her props for managing to dismiss both Glimmer's unspoken appeal and Catra's presence.

“I'm not sure we should discuss politics here, or now,” Adora said. “That seems something we should discuss back home - in Bright Moon.” Her expression was bland, but Catra could tell that she was not comfortable here. Well, she shouldn't be.

“Yes!” Glimmer agreed at once, smiling at her. “We need to discuss things with Dad. And we need to look for precedents in the archives.”

“There are no precedents,” Angella told her. “I founded the kingdom when I became its first queen.” ‘And you should have considered that before you spoke’ was left unsaid, but Catra heard it perfectly anyway - in Shadow Weaver's voice.

She clenched her teeth. Shadow Weaver was dead. And they weren't discussing her and Adora's upbringing here.

Bow nodded. “Yes. A unique situation on Etheria.”

“But the coronation we attended after you were gone… that was a tradition,” Adora said. “Wasn't it?”

“I set the tradition,” Angella told her. “Back when I ascended to the throne. I didn't expect to rule as long as I did. Things were… more dangerous back then. And I wasn't aware of everything Alpha had done to me.”

“Oh.” Adora closed her mouth before saying anything else.

Glimmer pressed her lips together. “Dad should get a voice anyway.”

“We're not deciding anything without him,” Angella told her with a sigh so soft, Catra's ears almost missed it. “But we need to discuss the salient points of the matter so that I can consider it properly. I shall not be rushed into such decisions while missing crucial knowledge.”

Catra nodded in agreement again. That made sense. A few of her more… questionable decisions would have been different if she'd

had better intel.

“What do you want to know?” Glimmer crossed her arms with a slight huff.

“Do you wish to remain queen?”

Glimmer blinked, apparently surprised. “I am willing to do my duty,” she replied after a second. “For our kingdom. I have done so ever since you… disappeared.”

“That doesn't answer the question,” Angella told her. “I've never doubted that you'd do your duty; I have raised you, after all. But do you *want* to be queen?” Glimmer hesitated, and Angella went on: “Back during the war against the Horde, you preferred commanding and fighting in the field to ruling.”

“I can do both - I did both!” Glimmer protested. “That's how things are done. A princess defends their people with her power - you taught me that!”

“It is not about what you can do, or what you should do, but what you want to do,” Angella corrected her.

Catra glanced at Adora. Her love was frowning, but probably not because she had realised that this was a lesson she needed to learn as well.

And Glimmer wasn't happy. “Oh, now what I want is suddenly important? Before, it was always duty this, responsibility that, and suddenly, you want to know what I want?” She glared at Angella with bared teeth.

Adora grimaced at that. Bow did as well, and Catra managed not to wince. Maybe she shouldn't have insisted on tagging along. Bow seemed like he wanted to be elsewhere as well - but he stood behind Glimmer, one hand on her shoulder.

Angella pressed her lips together, probably reining in her temper - the similarity between her and Glimmer was quite obvious right

then. After a deep breath, she replied: “Based on what I heard so far, you did well as queen, handling both Bright Moon’s internal affairs and foreign diplomacy.”

“The kingdom's still standing,” Catra added. Both of them glared at her, and Adora frowned, but it was worth it.

“We beat the Horde and we'll beat the Goa'uld,” Glimmer said.

And figure out how to deal with Earth afterwards, Catra silently added.

“I'm still waiting for an answer, Glimmer. What do you *want*?”

Glimmer ground her teeth. “I don't know! I want you back, with me, with Dad! Like it was before!”

For the first time since they had arrived in this room, Angella looked taken aback. “Glimmer…” she whispered, then straightened and nodded.

“And I don't want you to go back to that stupid fake world with the stupid fake copy of me!” Glimmer spat.

Angella frowned in return. Once again, she seemed to struggle with her temper. “I see.”

“Do you?” Glimmer scoffed. “You said you might return to this dimension!”

“I said that the possibility shouldn't be excluded,” Angella retorted. It sounded like an excuse.

“Always keep an escape route open,” Catra said. Angella glared at her again, but Catra met her eyes with a smile. She understood wanting to be able to retreat, to go back to a safe place, where things made sense. And where you didn't have to face your past mistake - or the threat of making new ones.

But she also understood that whether Angella was doing it deliberately or not, she was also threatening to leave Glimmer again. And she knew what that kind of threat did to you.

So she bared her teeth. “But you can't escape this. We won't let you.”

Angella kept glaring at her for a moment longer, then looked away.

“So, how are things in Bright Moon? I assume even though the Alliance was victorious, there were significant changes as a result of the war against the Horde.”

Catra grinned as Angella changed the subject. She couldn't escape this discussion, but they could continue it later.

*****

Refugee Camp, PU-9623, February 4th, 2000 (Earth Time)

“Alright!” Jack O'Neill nodded at the guards stationed at the entrance while the gates swung up before turning to the four former slaves standing behind him. “Sorry for the delay, but checking you for any transdimensional sickness took a while.” He smiled. “But your families are in the camp here.” With guards placed nearby, both for their security and the Alliance's - these were, after all, former slaves Apophis had picked for being loyal. Not even Adora had argued much against keeping an eye on them in case they were still loyal to their false god.

The men slowly nodded to him - none of them tried to bow, which was good, though a few dipped a bit low - but clearly were already watching for familiar faces amongst the gathering civilians.

And so were the people inside the camp. “Mata!” one cried out. “Mata!”

“Ahak!”

One woman ran toward the group - toward one of the men - Jack had brought, and there came the hugging, crying and babbling. Jack smiled at the display. It was similar to seeing released P.O.W.s reunite with their families.

“Kuni!”

“Sirtak!”

And others found their loved ones thought dead. More tearful reunions with the people they had managed to bring back from the Bizarro Dimension. Which was a fitting name, even if the others disagreed.

But Jack also saw others look around, hopeful smiles fading, turning to grief and tears, when they didn't see their missing loved ones, and his smile turned a little grim. That would hurt the most - realising that your family was dead as you had believed, right after you got your hopes up that you had been wrong. That must feel as if you had lost them twice.

“We should have handled this better,” he muttered as he watched dozens - mostly women with children - turn away from the laughing lucky ones. Not that there was a good way to tell people their family member had died. But there were ways that weren't as bad.

“Yes, we should have,” Daniel agreed next to him. “I should have predicted this.”

“It's not your fault,” Jack reassured him. Jack might not be Daniel's official team leader any more, but he was still responsible for him and the others. Especially with Adora and Glimmer distracted by the mess with Angella. This was Jack's fault.

Daniel looked like he disagreed but slowly nodded. “We need more people with the experience and training to handle traumatised victims of the Goa'uld,” he said. “And we need to take them with us on such missions.”

More people to lift, feed and protect, in other words. But Daniel was right - they needed specialists for that. Combat troops weren't trained for this. On the other hand, Jack wasn't sure if he wanted more civilians on combat missions. That tended to create friction no one needed. The Peace Corps had no place in the Marine Corps. Although… "We'll have to check with the Princess Alliance."

"Oh, yes!" Daniel nodded. "They probably have people with the experience in their forces. And the princesses are expected to handle both combat and such matters. Well, the ruling princesses, at least."

Using heads of state for handling rescued civilians in a combat zone… As much as it made sense, it still felt weird to Jack. Not that he'd mind having another magical powerhouse along on a combat mission.

He shrugged. "Well, we're done here." The crowd was dispersing, splitting up into the different families clustered around the survivors. "We should…" He trailed off as he saw a group walking towards him, Kuta, one of the unofficial leaders - or were they official by now? - amongst them.

"General O'Neill." Kuta addressed him. "As the goddess promised, you brought our missing people back." He bowed deeply. "Thank you."

"Ah, yeah…" Jack grimaced as the others with Kuta bowed as well. "I'm sorry we could not save everyone."

"It is a miracle anyone survived the anger of Apophis," Kuta said. "The goddess brought him low, though."

"She-Ra cut him down," Jack agreed. "Though that wasn't the Apophis you knew - the Apophis here is different." Much weaker, for one.

"Taweret sent your people to another dimension, one filled with people very similar to us yet different," Daniel added. "Their

Apophis was defeated, but ours still remains."

Jack didn't think the people surrounding them understood what alternate dimensions were, but they nodded anyway.

"They entered the realms of the gods," Kuta said. "They told us so. And they saw the gods wage war against each other as their carriages clashed."

That was… not quite what had happened. But not entirely wrong, either. "Something like that," Jack said. "It was complicated."

"Divine matters are always such," Kuta said. "Incomprehensible to mortal minds."

"I wouldn't say that," Daniel objected. "Apophis wanted to conquer the dimension - the realm - and he was defeated and slain by its defenders who wanted to protect everyone from him."

"Pretty straightforward," Jack agreed.

"And the ruler of the realm returned to this realm," Kuta went on. "To reunite with her family. As the goddess has reunited our families, she reunited hers. Praise to the divine She-Ra!"

"Praise to the divine She-Ra!"

Jack winced. They needed better opsec on such missions. Just because those people had been raised as slaves of the Goa'uld didn't make them stupid, he reminded himself. Obviously, the freed former slaves had picked up more about the mission's background than Jack and the others had realised. Or wanted them to. This complicated matters.

And that more people were treating Adora as a goddess wasn't helping, either, but Jack was kind of used to that by now. It was Adora's problem, anyway.

*****

PU-9623 Orbit, February 4th, 2000 (Earth Time)

“This planet doesn't have a Stargate - Apophis didn't want to risk someone else finding it by accident - so we have to take a spaceship to the closest system with a Stargate,” Adora said as their shuttle closed with the Horde frigate in front of them.

“You've explained that already,” Angella replied.

Adora pressed her lips together. Yes, she had done that. But the way Angella stared at the frigate, ignoring everything else around her, and the way she had tensed up when she had seen the shuttle itself, it had seemed as a good way to distract her. At least to Adora. They hadn't thought that Angella didn't have good memories of First Ones shuttles. Or First Ones bases. Or First Ones anything.

No, that was unfair - Adora was a First One, and Angella didn’t have a problem with that. Or hadn't had a problem with it. Maybe that had changed after her ordeal. Or after she had realised that the portal that had almost destroyed Etheria had been based on Beta's research. Angella hadn't said anything, and she had been more distant than before to everyone, even Glimmer, but Adora couldn't help wondering.

In any case, staying here wasn't helping. Angella wouldn't feel comfortable, much less happy, here, not with Micah on Etheria and Beta's presence bringing up so many bad memories.

“Shuttle D-One requesting permission to land,” Bow spoke up from the pilot's seat.

“Permission granted,” a Clone's voice answered through the comm, and the frigate's hangar opened up. “We are at Her Divine Highness's command!”

Adora winced.

“So it is true,” Angella commented. “Hordak's people revere you as a goddess.”

“Not all of them! Only a part,” Adora defended herself.

“Technically, Hordak's people don't,” Catra cut in with a smirk. “Most of his followers are in First Fleet. It's Third Fleet that's full of her worshippers. Though they proselytise.”

Angella frowned but otherwise didn't acknowledge the comment.

“They don't listen to me when I tell them that I am not a goddess,” Adora said.

“How can they claim to follow you if they do not heed your command?” Angella asked.

“Earth people do that all the time,” Catra said, stretching in her seat as the shuttle entered the frigate. “They claim to follow a religion but only follow the rules that they want to follow anyway. However, to be fair, their gods don't talk to their worshippers. Or do anything. Or appear anywhere. So, it's easy for Earth people to claim anything they want about their gods.”

“Priest and his people do obey me,” Adora said, pouting a bit. “They're just… stubborn about their belief in me. And it's not as if I can forbid them from believing in me.”

“Why not?” Angella asked. “They lay claim to you and you don't want it.”

“That would violate their freedom of religion,” Adora explained. “It's an Earth concept,” she added. “We cannot force people to believe or not believe in a religion.”

“What about your freedom not to be worshipped?”

“Ah…” Adora grimaced. “It's complicated.”

“Besides, it's better if they worship Adora than any other god,” Catra said. “If they decided to worship Horde Prime again, or picked someone else who would abuse the power such worship granted them…” She shook her head.

“Like a Goa'uld?” Angella asked.

“That would be very bad,” Adora said, shuddering a little.

“Or any religion on Earth,” Catra added. “Earth's history is full of atrocities committed in the name of their religions - long after they had expelled the Goa'uld who had either founded or taken over most of them.”

The shuttle set down, and Bow started to turn the systems off.

“If you consider them atrocities, I assume they were worse than anything that happened on Etheria,” Angella said as they rose from their seats.

Adora saw Catra flinch at that, and she clenched her teeth.

“Mom!” Glimmer, who had been quiet so far, hissed.

Angella cocked her head and looked at her without saying anything.

Catra shrugged as she didn't care, but Adora knew she was putting on an act. “As far as I know, yes. Though I don't know what you princesses did when you established your kingdoms, back in the day.”

“The history records are a bit spotty,” Bow said with a slightly forced smile as they walked to the back of the shuttle. “And Dad always says that the documents we do have were written by people with a hefty interest in legitimising their actions to strengthen their rule.”

Angella snorted at that. “Indeed. Our history was not quite as noble as many of your peers proclaim. Though given our creators, that shouldn't come as a surprise, even if many of us tried to be better than them.”

Adora pressed her lips together. The First Ones had been planning to sacrifice Etheria to destroy Horde Prime. She wasn't responsible

for that - she had stopped it - but they were her people. Had been her people.

But they had reached the aft of the ship, and Adora saw that the clones were waiting for them, lined up on each side in neat rows. Someone had even laid down a red carpet, perfectly aligned with the ramp.

Angella didn't comment, but Adora couldn't help blushing when the other woman glanced at her.

“I didn't ask for this,” she muttered as they descended the ramp.

But she still smiled when the ship’s captain bowed to her. She might not like being worshipped, but she wouldn't be rude to the clones. They had been raised, created, to be unquestionably loyal by Horde Prime and were still learning how to be free. So, she wouldn't hurt their feelings.

“Your Divine Highness, my ship is at your command! It's an honour to serve you and your companions! Whatever your orders, we will lay down our lives to obey!”

Even if it was hard at times.

*****

Research Station Beta, PU-9623, February 4th, 2000 (Earth Time)

“So… Here is the latest data from our transdimensional sensors!”

Samantha Carter nodded at Entrapta as she skimmed over the readings.

“Still no conclusive results concerning the dimension’s stability,” Entrapta went on.

“It’s only been a few hours,” Sam replied. “We can’t expect to detect significant changes so soon.”

“It was theoretically possible,” Hordak disagreed. “If we detected solid signs of the dimension destabilising at this point, it would have facilitated matters, of course.”

Sam frowned at him. That was a very cold view.

“But that would have meant that the entire world Angella had created would be fading - including the people!” Entrapta protested.

“Yes.” Hordak nodded. “But if it turns out to be stable, the Alliance will have to deal with it and all the ethical questions that will cause. Given the nature of the world Queen Angella created, that could be a distraction we might not be able to afford in the middle of the war.”

Those were a bit too many ‘might’ and ‘could’ for Sam’s taste, even if Hordak was likely correct. It was one thing to be able to reach a parallel universe, it was another to be able to reach a copy of your world and yourself created by one of your own in another dimension. Sam wasn’t an expert on Etheria’s politics, but she knew enough to know that the princesses wouldn’t just shrug off such a development - certainly not the ones in the Alliance. And if Princess Sweet Bee and her allies heard about Angella having copied them - Sam was pretty sure Angella had done that - then things were bound to turn very complicated.

Entrapta was frowning at Hordak. “Just because something is difficult to handle doesn’t mean we should wish for it to disappear!”

“I am not wishing that the second Etheria disappears; I am merely stating that if it did, it would remove potential problems.” Hordak sounded more than a little defensive. “In fact, the dimension provides us with a host of interesting data. Losing that would be a blow to several avenues of research.”

“Right!” Entrapta smiled again, and Sam suppressed a sigh.

At least, her dealing with the other dimension - she wasn't calling it the funhouse mirror dimension, which was the General's latest proposal - would be limited to the scientific and technical aspects; others would deal with the politics and ethics of it.

And that suited her just fine. Sam was a scientist, not a philosopher or politician.

*****

Gate Area, Near Bright Moon, Etheria, February 5th, 2000 (Earth Time)

Angella had weathered her first trip through the Stargate better than most, Catra noted when they walked down the ramp. She wouldn't have expected that, especially after Angella's experience with the portal that had sent her into her exile. Then again, Angella had kept Bright Moon going during the war against the Horde even after all the first Princess Alliance had fallen apart, so the queen - or former queen; they still hadn't settled that - was tougher than most assumed when they compared her to Glimmer.

Angella looked around, frowning as she took the sight in. "It looks like a Horde base."

"We used their expertise to build the base," Glimmer told her.

"And their style." Angella pressed her lips together.

Catra almost quipped about picking the best people for the job but managed to hold her tongue. This wasn't the time to needle Angella.

"Well… it works well?" Adora smiled weakly. "The Horde prefab elements allow for quick construction and can be customised to many tasks. If was the fastest way to secure the Stargate location."

"It also means that the first thing visitors see of Etheria is a Horde base," Angella retorted.

Catra smirked at that, but Glimmer nodded. “That was actually a point in its favour - no single kingdom can claim precedence this way.”

She was leaving out that the Scorpion Kingdom still heavily used Horde structures, Catra knew, but it seemed to mollify Angella - she was frowning slightly less.

“I guess hosting the Stargate in a base built by Bright Moon might have led to grumblings from other kingdoms,” Angella said as they passed through the scanners.

“Oh, yes!” Glimmer sighed. “Some of them would have never shut up!”

Angella snorted and started to say something in return, but the door opened, and she trailed off, gasping softly at the man standing there. “Micah.”

“Angella.”

Angella started to walk towards him, first slowly, hesitatingly. But suddenly, she rushed forward, faster than Catra had ever seen her moving, all but jumping into Micah’s arms.

Yeah, that explained where Glimmer got it from.

*****

Royal Palace, Bright Moon, Etheria, February 5th, 2000 (Earth Time)

“So. Now that things have settled down, let's talk about politics.”

That’s a nice, bland way to talk about Micah's and Angella's emotional reunion, Catra thought as she leaned back in her seat in the private meeting room. Although she couldn't help contrasting it with Angella's reunion with Glimmer. Granted, that had been under very stressful circumstances, and Angella had thought for years that Micah had been killed by the Horde, but

seeing this - the two were still sitting together very closely, and glancing at each other far more than at anyone else - had to sting Glimmer more than a bit. If someone had done this to Catra… Well, Shadow Weaver would have done this in a heartbeat.

She clenched her teeth. Yeah, she wouldn't want to be in Glimmer's place. But she would ask Angella after this - sometime after this - why Shadow Weaver had been still alive in the other dimension.

“Yes,” Micah said after a moment, nodding and smiling widely at Glimmer.

Angella nodded. “There are several questions to be discussed. And the most important one still needs an answer.” She inclined her head at Glimmer.

Glimmer pressed her lips together in response, and from her angle, Catra saw Bow place his hand on hers under the table. Yeah, the tension between the two queens hadn't improved at all since their return.

But Glimmer controlled her temper - mostly. “You want to know whether I want to stay queen,” she said in a slightly clipped tone.

“Yes.” Angella nodded. “We cannot discuss how to handle this without knowing what you want, Glimmer.”

“No pressure,” Catra muttered under her breath. Only Adora heard her, though - she glanced at Catra with a slight frown.

Glimmer frowned as well. “Shouldn't we focus on what's best for Bright Moon and the Alliance?” she asked, raising her chin.

“You're the current Queen of Bright Moon,” Angella replied. “Forcing you to serve against your will would be as detrimental to either cause as trying to oust you against your will.”

Putting Angella back in charge would definitely be worse, in Catra's opinion. Even if the woman was stable - Catra wasn't sure

about that - how she handled the Horde in the world she had made showed that she shouldn't be ruling Bright Moon or anyone else right now. The inevitable conflict with Adora, the meddling by Earth and Etherian rulers trying to exploit that… No, that wouldn't be a good thing. But Catra saying so, at this point, would likely not be productive.

"I wouldn't be so petty as to sabotage our efforts just because I didn't get my way!" Glimmer protested. "I didn't do so during the Horde War, either!"

"You did not," Angella agreed - although after hesitating a moment. "And yet, there was a lot of friction caused by our differences, friction which hampered the Alliance's efforts."

"Is that why you created my copy to be so obedient?" Glimmer blurted out. She drew back right afterwards, looking almost as if she were surprised at herself, but Angella flinched as if she had been struck.

"I believe every parent wishes at some point that their children would follow their advice," Angella said with a very bland expression.

"I don't think they want mindless bots that follow orders to the letters," Glimmer spat.

Catra pressed her lips together and glanced at Adora. Her love was biting her lower lip and looking from Glimmer to Angella and back. And Bow was useless as well.

Damn. It looked like Catra had to step in between the two queens. She'd rather charge through a minefield. But needs must, and…

Micah spoke up before she could think of the best way to intervene. "When I was on Beast Island, I was… all alone." He wasn't looking at anyone in the room, Catra noted. "There were no other prisoners on the island I could have talked to. Only monsters that wanted to kill me. And the island itself." He took a

deep breath. “I had to struggle to survive. Other prisoners arrived after me, but not many, and none of them lived long enough for me to meet them - I only found their remains. After a while, I don't know how long it took, I stopped looking for them. Or for anyone.” He sighed. “I only had my memories - and I could really trust them either. I don’t know what I would have done if I had had the opportunity to change things.” Now he looked at Glimmer and then Angella. “I wasn't myself.”

Angella slowly nodded, reaching out to hold his hand.

And Glimmer was still pressing her lips together, but she looked less angry.

Then Angella started talking. “I expected to die when I stepped through the portal. I hoped to die since the alternative was… being doomed to be lost forever. And I thought of you.” She glanced at Glimmer, then turned away. “And then I found myself in a void. Floating in nothing. The fate I had feared the most. I don't remember how long it took for things to change - but I know the first things changed, appeared, without me realising I was doing it. Flowers and grass, a patch to sit down. For some time, I thought I was seeing things - that I had gone mad. And I… didn't mind so much. It was better than just floating in the void.” She snorted but without any humour. It sounded more like a sob. “I was a coward. I chose to live in a dream rather than face reality. And in a dream, there are no consequences. Why not indulge yourself? So I did.” She was staring at the desk in front of her. “I could have everything I wanted. My kingdom. My friends. My daughter. My revenge. As long as I was fooling myself.” Another almost-sob. “I knew - thought - that Micah was dead, but in a few years, maybe I would have fooled myself that I had only dreamt his death.”

That was far too personal for Catra. This should have been between Glimmer, Angella and Micah. Catra wasn't part of their family. And she didn't want to be reminded of her own attempt to fool herself into having a perfect world. Her failures. Her crimes. Her…

Adora’s hand squeezing her thigh made her look up. Her love shook her head.

With a wry grin, Catra slowly nodded.

“Mom…” Glimmer's voice cut through the sudden silence. A sob followed. “I didn't… I didn't think.” She sobbed once. “Sorry!”

“I should be sorry,” Angella replied. “I made so many mistakes, even after I realised you had found me.”

“I should have known that. After the war, after Dad had returned…” Glimmer shook her head. “I'm sorry.”

Catra clenched her teeth and grabbed Adora's hand. She really wanted to be anywhere else. Especially when Glimmer and Angella got up and hugged each other, and Adora, Bow and Micah beamed at them.

*****

The Double Cross Part 1

Alliance Base 'Gateway', PU-9623, February 5th, 2000 (Earth Time)

"We can't keep the refugees here," Lieutenant Colonel Barnet said as he pointed at the map projected behind him. "This planet is bound to become a battleground as soon as Apophis realises that we have taken it."

Jack O'Neill nodded in agreement, leaning back in his seat. Technically, he was merely an observer at the staff meeting. As of 08:00 today, Barnet was the base commander. His troops, a battalion from the British Army with a fancy name Jack didn't care about very much, had formally relieved Jack's own forces and taken over the base.

But Jack was a general and, with Adora and Glimmer both gone back home to Etheria, he was both the highest-ranking Alliance officer on the planet and the one left in charge of the over-all mission. Which meant dealing with the aftermath of their invasion was his task.

Not that Jack did care too much about formalities. Well, less than the stuffy Brits did.

"General orders prohibit removing native people from their homes unless there's a clear military necessity," Major Smith-Barnesby, Barnet's second-in-command, cut in.

"I don't think the former slaves fall under the definition of 'natives'. They were forcefully moved here to build the base by Apophis," another officer, Captain Thorne, piped up. The guy was a bit young for his rank, in Jack's opinion. Then again, a lot of the officers in the British Army were; they had been expanding their forces by quite a bit gearing up for the war. That kind of build-up put a strain on the officer corps. Last Jack had heard, they were asking retired officers to return.

“I would concur, but that’s not something we can decide,” Smith-Barnesby replied. “However, when it comes to judging the situation here from a military aspect…”

Jack realised that everyone was looking at him. He refrained from sighing too loudly. “Those people were picked for their loyalty to Apophis.” At least, they had been faithful enough to recreate their god even after his queen had used them as test subjects for her experiments. That took a lot of loyalty. Or fear. “So, we can’t exactly trust them, and they represent a potential threat to our forces should Apophis attack this planet.” A very theoretical threat - a bunch of former slaves in a refugee camp didn’t have a prayer of actually threatening, much less damaging the base. “So, we’ll move them off-planet to a safe location.” One someone else could pick.

“That will require another frigate as transport,” Smith-Barnesby pointed out. “That would reduce our naval forces.”

“Not for long,” Jack retorted. And they had handled the entire guard fleet here easily. Missing out on two or three frigates for a day or two wouldn’t make much of a difference.

Everyone nodded at that.

“So, check with our friends in the Navy and get the refugees off this planet. We don’t know when Apophis will counter-attack,” Jack went on. It was too bad that the planet didn’t have a Stargate; with that, it would have made a great staging area or forward base.

“Yes, sir.”

Jack nodded and leaned back again. Not too much - couldn’t rile up the limeys too much.

“Now, the next item to discuss is the supply situation,” Barnet went on. “We have enough food and ammunition for an extended period of combat, but we don’t have spare parts for the more exotic machinery in use here.”

"You mean the research base," Jack said.

"Yes, sir."

"They've got that covered." Between Carter, Entrapta and Hordak, they could probably rebuild the entire research base from scrap.

"Yes, sir." Barnet nodded and made a check on his list. He was probably just covering his ass anyway, in case someone wanted to blame him for any trouble in the research base. That kind of stuff wouldn't fly under Jack or any of his people, but it was common enough in the army.

"Next item. The mess hall. There have been complaints about the menu selection."

Jack sighed under his breath and refrained from commenting about offering the complainers to eat MREs instead. As soon as the fighting was over, the tedious paperwork began.

*****

Royal Palace, Bright Moon, Etheria, February 5th, 2000 (Earth Time)

"Whew! Glad that's over!"

Adora frowned at Catra's outburst and checked that the door behind them was closed. If Glimmer, Angella and Micah had heard that… "It's great to see them doing so well," she said.

"They still have to sort out politics," Catra said, stretching her arms over her head and craning her neck. "Glimmer's got to man up and tell Angella that she'll stay queen."

"You think she should stay queen?" Bow asked.

"You don't?" Catra shot back, raising her eyebrows.

"It's her decision," Bow replied. "And she hasn't made up her mind yet. So much happened since we found Angella…"

"What's there to make up her mind about?" Catra snorted. "You have met Angella. Do you think she could be the queen Bright Moon needs right now?"

"Well… we haven't really talked to her that much about that," Bow said.

Catra rolled her eyes and then looked at Adora.

Adora coughed. She didn't like to be put on the spot like this. Glimmer was her best friend, and Angella was… Angella had welcomed her into the Alliance despite her origin. And Angella had sacrificed herself so Adora hadn't done it. "We met Angella under very special circumstances. We can't judge her for that."

"What circumstances? An attack by Apophis?" Catra scoffed. "We're at war with the Goa'uld. Angella doesn't know anything about them. And she doesn't know anything about Earth. Even if she hadn't been isolated for years, she would have trouble adjusting to the current situation."

That wasn't wrong. And yet… "It's Glimmer's choice," Adora said. She wouldn't stab her friend in the back.

Catra narrowed her eyes, then snorted again. "Then let's hope that she makes the right decision."

*****

"So… Mom and Dad have 'retired for the evening'. They've got a lot to talk about. And stuff."

Adora nodded at Glimmer's comment. They had a lot to talk about, indeed. They hadn't seen each other for so long - almost twenty years. Well, closer to twenty than to ten, at least. They must be very… She felt her cheeks grow warm.

"Yes, *that*." Glimmer rolled her eyes before she sighed and sat down on the couch in Adora's room, next to Bow.

Adora glanced at Catra, expecting a comment, but her lover just nodded and curled up a bit more on the armrest of Adora's seat. Turning back to Glimmer, Adora nodded again. What should she say about that? It was natural, after all. Perfectly fine. She'd do the same if she had been separated from Catra for so long. She had done the same after they had returned to Bright Moon today.

She felt her cheeks heat up again, and Catra snorted.

"Anyway," Glimmer continued. "That's not a problem."

"Of course not," Catra muttered under her breath.

"The problem is the succession question." Glimmer shook her head. "Mom said it's my choice. Well, she said what I want is the most important thing about it. But not everyone thinks so."

"Oh?" Adora frowned. "It's an internal matter of Bright Moon, isn't it?" Other kingdoms didn't meddle with each other's internal matters. Especially not with each other's royal family matters. That was a fundamental principle since the Princess Prom had started.

"Yes!" Glimmer blurted out with a frown.

"But?" Adora leaned a bit forward, and Catra slipped an arm around her shoulders from behind and the side.

Bow cleared his throat. "Well… it's a basic principle of Etherian politics and diplomacy not to interfere with questions of succession. But every rule has exceptions."

"And the first rule is: Don't get caught," Catra added with another snort.

"Did any other Alliance member else actually… try to interfere?" Adora couldn't imagine any of their friends trying to meddle in this

matter.

"They only sent their well-wishes," Bow said after a glance at Glimmer. "But they also stated their intention to come by as soon as Angella was up to receiving visitors."

Well, that was only natural - all of the other princesses knew Angella well. Some of them had known her much longer than Adora.

"And once they arrive, they'll want to know if they're visiting the former or current Queen of Bright Moon," Glimmer added with a scowl.

"And if you wait too long, they'll suspect that there's trouble," Catra said. "And Sweet Bee will spread rumours that you've got Angella locked up in a dungeon because she disagrees with your policies."

Adora gasped. Her lover couldn't be serious, could she?

"Something like that," Glimmer grumbled. "And even if we can handle the other kingdoms, there's still Bright Moon itself. The servants already call Mom 'Queen'."

Adora blinked. "Ah… That's kind of… they don't want to presume?" she guessed.

"Some slipped and called me *Princess*." Glimmer was scowling now.

"That's a presumption, yes," Catra said. With her lover pressed into her side now, Adora felt her nod. "Though… what do you call *former* Queens?"

"Generally, former rulers are called by their last title," Bow said. "Though since for everyone else that's generally 'Princess', it's not really helpful." He smiled weakly. "Bright Moon is unique in that the title of our ruling princess is 'Queen' and not 'Princess'."

"Something Mom set up," Glimmer said. "And since she founded the kingdom, there hasn't been another queen so far, so there's no precedent. And everyone's used to her being queen, anyway."

Adora could see the problem. But she could also see the solution. "So, it's up to Angella to set a precedent, then."

Glimmer frowned at her as if she had said something wrong.

"Both Glimmer and Angella have to set the precedent," Bow said.

Ah! Adora grimaced at her faux-pas.

"Yes. And Mom says it depends on what I want." Glimmer pouted again.

"So, what do you want?" Catra asked. That earned her a glare from Glimmer, which she shrugged off. "It is your decision," she added, echoing Adora's earlier words.

"Yes." Glimmer sighed and leaned back on the couch, looking at the ceiling. "I want to stay Queen."

Adora started to nod. That was settled…

"But I don't know if I want to stay queen with Mom looking over my shoulder," Glimmer went on. "Watching me make mistakes, criticising me…"

"I don't think she'll do that," Bow said.

"If she didn't say anything, it would be even worse!" Glimmer spat. "Imagine her silently judging me!"

"Ah…" Bow grimaced. "But you've been a good queen! You've ruled Bright Moon fairly and well."

"I was the only queen," Glimmer said. "It's not as if there was anyone else to take over. Dad's the king, but only because he

married Mom. He’s not in the royal line. So, it’s not as if there was any alternative.”

Oh. Adora could see her point, but this was far too pessimistic. Or paranoid, Catra would say. “But you are a good queen,” she said. “You handled the Alliance - both Alliances - and the Stargate well. And you’ve been running the Princess Alliance in the war.”

“And without making any blunders,” Catra added.

Glimmer looked surprised, then sighed again. “But who’s to say I couldn’t have done better? Mom’s got much more experience!”

“But not with the war against the Goa’uld - or with other planets,” Catra said.

Adora nodded with an encouraging smile. “And Angella knows that. Or will know it once Micah tells her.”

Bow nodded as well. “Yes. If Angella didn’t trust you, she wouldn’t have said that what you want matters most.”

Glimmer slowly nodded, but she didn’t seem convinced. Adora could tell.

*****

Research Station Beta, PU-9623, February 6th, 2000 (Earth Time)

“Due to its special nature, conducting experiments in the target dimension requires sapient test subjects or researchers. Therefore, until such are available - volunteers, of course - I suggest switching the research focus of this base to another dimension.”

Samantha Carter narrowed her eyes at Beta. The bot’s 'volunteers, of course’ sounded like an afterthought at best - more like a formality. Sam had no doubt that Beta only said it because she was aware that the Alliance wasn't like the Goa'uld and

wouldn't tolerate using humans as test subjects. On the other hand, Beta was correct that all transdimensional research currently planned was limited to observing the target dimension.

Behind her, she heard Entrapta gasp. “Oh, no! We forgot about how Angella returning would affect you and your research! We're so sorry!”

Sam wasn't sorry. While she could understand very well how it felt when your research project fell victim to a change of policy or budgeting, Beta had, and eagerly, Sam was sure, been sending people as test subjects to another dimension - one dangerous and unstable - against their will. That was unacceptable, and as Alpha's example showed, this blatant lack of ethics couldn't be blamed on the Goa'uld. She didn't say so, though - at least, Beta had abandoned Taweret when Adora and the General had arrived. As long as Beta didn't attempt to sway Entrapta to her way of thinking, Sam could keep her thoughts private.

“What dimension do you suggest?” Hordak asked. He sounded interested. Of course, he had pursued interdimensional travel for decades, but that had been back when he had desperately tried to return to Horde Prime's side. But maybe he still held some passion for the subject? More than he held for the research into stabilising and reversing the genetic degradation of the Asgard, which Loki was pushing back at Alpha?

Beta nodded at him. “The target dimension was always meant to be a transitional target, a step between our dimension and the actual goal of the research done here - *Ascension*.” Sam could hear the capital letters. “So, it would only be logical to switch the focus from exploring the target dimension to directly looking for the dimension inhabitated by those who have ascended.”

Sam pressed her lips together. She hadn't explored that specific area very thoroughly, but she had studied the material available and what she had found… “As far as I know, travelling to that dimension is irreversible. And that includes scans” At least, all the Ancients’ data agreed on that - they had only indirect data about

the dimension, extrapolated from examining adjacent or related dimensions, models, and what scans could be taken when an Ancient had ascended. And claims from Ancients before their ascensions, which were obviously of dubious veracity.

“Oh!” Entrapata beamed. “That sounds fascinating! Almost like trying to visit gods!”

“Gods?” Beta cocked her head to the side in an almost human gesture. “Like Adora?”

“Oh, not like her!” Entrapta shook her head. “I mean the kind of gods worshipped on Earth that are intangible, invisible and cannot be perceived or contacted by any means that would result in factual data.”

Beta nodded. “That would describe an ascended being somewhat adequately if one lacked actual data.”

“It would also fit a fictional being,” Hordak commented in a dry voice. “Though most proponents of the Earth religions based on these kinds of gods insist that their deity of choice is able to both physically and mentally affect them despite a profound lack of evidence for such.”

“That doesn't sound very scientific,” Beta commented. “Although this might be based on past tales of Ascension and, therefore, might be of historical if not scientific interest.”

Sam shook her head. “I think we should focus on more practical research.” Instead of poking that particular can of worms. The last thing the Alliance or anyone needed was Beta trying to examine religion. Not that trying to reach a dimension populated by the kind of ascended beings Beta described was much better. Sam couldn't help thinking of ancient myths about mortals visiting Olympos. That kind of venture rarely ended well for the mortals.

“Of course,” Beta agreed. “We cannot squander our means.”

“If we're talking about practical aspects of research into transdimensional travel, I would suggest renewed research into using other dimensions as a way to travel faster than our current methods,” Hordak said. “If we succeed, our fleet would benefit from unparalleled strategic mobility.”

“Oh, yes! We could use other dimensions as shortcuts!” Entrapta nodded enthusiastically.

Sam nodded as well. If they could move fleets around much faster than with their current methods, the greater numbers of ships fielded by the Goa’uld Empire would become all but irrelevant since the Alliance could concentrate the bulk of their forces and strike faster than the Goa'uld could react.

“I see the potential applications.” Beta didn't seem very enthusiastic about it, Sam noted. “Although…” She suddenly trailed off. “We've received a message from the former commander's ally, Apophis. It is addressed at Taweret.”

Sam drew a sharp breath through clenched teeth. “What does it say?”

“As far as I understand it, it's a request for a meeting over faster-than-light communicators.” Beta played the message.

A demand, actually, Sam thought. Just more politely worded since Taweret was - had been - Apophis's queen. And while they could stall a bit, Apophis would likely know that a dimensional experiment would render communication impossible for its duration, they would be expected to answer before long.

Beta cocked her head to the side again. “Commander O’Neill has called for an immediate meeting.”

As expected.

*****

Royal Palace, Bright Moon, Etheria, February 6th, 2000 (Earth Time)

"We really need to collect a few Stargates to mount on frigates," Catra commented as she sat down in her usual seat in the meeting room. "This would be so much easier if we had a mobile gate in the PU-whatever-system. And we need a better name for the system as well. Who exactly is in charge of that?"

"The Stargates, or the naming?" Adora asked as she joined her, almost sitting down before standing again. "Bow, do you need any help?"

"No, thanks, Adora," he replied. "Just running a last check on the projector and communicator array here before the meeting starts."

"We don't want a technical problem to delay this." Glimmer must have caught the last part when she entered the room.

Catra cocked her head. Her ears twitched, but she didn't hear any more steps from the hallway.

Glimmer rolled her eyes. "Mom and Dad aren't coming."

"Oh?" Adora blinked.

"This is an Alliance matter," Glimmer said. "And they aren't up to date about our military situation."

"Ah."

Catra wasn't so sure about Micah being out of the loop - that didn't sound like him - but he was probably focused on Angella. And Angella *definitely* was out of the loop. The last time she had been on Etheria, the world had still been stuck in Despondos, and the most advanced military technology on it had been Horde Bots and Hovertanks. Another reason why Glimmer should stay queen.

"We're ready!" Bow announced as he got up and walked over to his seat.

“And just in time!” Adora smiled.

“Connecting,” Bow announced, pushing a few buttons on his tablet.

Catra’s ears twitched again as the projector started to hum, and several screens appeared around the table, lighting up one after the other and showing the rest of the participants. Jack, Sam, Entrapta, Hordak, Daniel, Sha're, Teal'c. And Beta appeared inside the room as a holoprojection.

On the screen in the centre, Jack's eyes darted around for a moment, then settled on what must be the camera facing him in his meeting room. *“So… you've heard the news? Apophis is making a booty call.”*

“Jack!” Daniel protested.

“He wants to talk to Taweret. You know what the king and queen get up to,” Jack replied.

Catra chuckled at that - and even more when she saw Glimmer’s grimace.

“Jack!” Daniel looked aghast.

“General!” And Sam looked annoyed.

“Sorry.” Jack didn’t seem to be sorry. *“Anyway, Apophis called half an hour ago, demanding to talk to Taweret. We've got about an hour to decide how to handle that - that's how long an experiment usually blocks communications according to Beta.”*

The bot's projection nodded. *“Past records show that this is roughly the time passing before Apophis will resend his message.”*

“And we can't get Taweret to answer it - the snake's already with the Tok'ra to get separated from her host,” Jack went on.

“Can we fake such a call?” Glimmer asked.

"Technically, yes," Entrapta replied. *"At least for the appearance on a screen. We have to tweak the records we made, but that's just data."*

"However, faking her speech patterns for a call…" Sam winced. *"That's a bigger challenge. We don't have enough records of her talking, and most of them are from when she was already a prisoner. Apophis likely will see through such a ruse."*

"Even Double Trouble would have problems impersonating Taweret convincingly under such conditions," Bow added, nodding. "Not that we would consider that," he hastily added.

Double Trouble would be as likely to join the Goa'uld as to stick to the script if only to cause more chaos, Catra thought with a scowl. And the question would not be whether but when they'd betray the Alliance.

"Of course not," Glimmer agreed with a scoff.

"So, fooling Apophis into thinking all's going according to plan is out," Jack said.

"It would only have been a temporary solution anyway," Sha're added. *"He would check with his commander and his spies in the guard fleet afterwards even if he were fooled."*

"So… do we call him out and taunt him about having taken another queen of his prisoner?" Jack was joking, but Catra had no doubt that he would love to do it.

"That would reveal our Alliance," Adora said with a frown. "And an attempt to pose as a rival System Lord would require more Ha'taks than we have access to. We have to either stall for time and evacuate the entire planet or pose as a Horde task force."

"We have to assume that Apophis knows about Horde Prime's demise," Hordak pointed out. *"So, it would have to be a rogue Horde task force."*

Even a rogue Horde task force would probably be impressive enough to keep Apophis at bay, Catra thought. "Going after their old enemy?" She shrugged. "Could work."

"Why not inform him that the research station has been returned under the control of its original owners?" Beta asked.

Pose as First Ones? Catra blinked, then glanced at Adora. That would mean her love would have to play the part of the First Ones - the kinds who were experimenting with people and willing to sacrifice Etheria to win their war. Catra didn't think that would be good for her. Or that she'd be good at it. But she knew Adora would still try it if she thought it would be the best solution for their problem. Though it wasn't, and not just because Adora was really bad at lying. "We don't have First Ones ships," she pointed out. "And claiming we took over the Horde would probably not sound too convincing. Even if it's actually true," she added with a grin.

"We only have Darla. And a few shuttles," Entrapta added. *"That's not enough for a fleet."*

"So, Plan Horde it is," Jack said.

No one disagreed.

*****

PU-9623 Orbit, February 6th, 2000 (Earth Time)

"Open a channel to Apophis using the relay in the base. I will inform him that this system is no longer under his control - or of his concern."

Hordak was better already getting into his act, Jack O'Neill thought as the Horde clones on the bridge complied. Because the tone of the order reminded Jack a bit too much of the snakes. Uncomfortably so, especially in light of what Hordak had done in the past. Sure, he was reformed now, and apparently loyal, but…

Jack had heard that before. Usually from intel weenies about local ‘allies’ on missions that never showed up in any official files. Well, he was keeping his eyes on the guy. Which was why he was here, on the frigate serving as flagship, instead of in the base on the ground. Just in case.

“Communication established.”

Hordak straightened, and Jack checked again that the ‘flag room’ in which he was observing wasn’t visible on the camera feed covering the bridge. Just in case.

Then, the big screen on the bridge changed from showing the planet below them to Apophis. *“Finally! I was…”* He trailed off, mouth half-open for a moment as he stared at Hordak, and Jack had to snort. Carter would have to make him a copy of that picture. He checked the feed from Bright Moon - yeah, the princesses were snickering.

“Apophis, I presume,” Hordak said, seated on the captain's chair on the bridge in full armour.

“You are not Horde Prime,” Apophis spat. He had recovered quickly from his surprise, Jack had to admit.

“I am Hordak. Leader of the Horde. Conqueror of Etheria.”

Apophis wasn't in his throne room, Jack noted, but in his private quarters. Same amount of gold and other bling, but no guards and flunkies lining the walls. *“You're using the communicator in my base.”* And there was a familiar scowl. Snake boy didn't like this at all.

“Your base was protecting an installation of our enemies,” Hordak said. “I took it.”

Apophis tilted his head slightly and his eyes narrowed. Props for self-control. Jack saw him glance to the side, at a screen next to his seat. Probably checking the status of his guard fleet. *“You*

attacked my fleet," he said a moment later, confirming Jack's guess.

"None shall stay in our way to obey Horde Prime's orders," Hordak went on. "Our holy duty shall be done."

And now he was channelling Priest. Jack grimaced,

Apophis frowned for a moment. *"Horde Prime was fighting the descendants of the Gate Builders."*

"We call them the First Ones. Horde Prime vanquished them, but some of them yet remain scattered in their former realm. Hiding amongst the lesser species." Hordak scoffed. "None of them shall escape our wrath, as the one on this planet found out."

Apophis jerked, and on the screen in the flag room, Jack saw his jaw muscles tense as he clenched his teeth. So, he had known that Taweret's host was a descendant of the Ancients. That had been assumed, but confirmation was always good.

Yet the snake didn't rant or threaten after hearing that his queen had been supposedly killed. He merely nodded. *"I was informed that Horde Prime had met his end."*

"Horde Prime is eternal," Hordak replied at once, straightening. "He sees all, knows all, and controls all."

Apophis nodded again, and Jack thought he saw his eyes narrow just a bit more. *"And he tasked you with hunting down his enemies in my realm?"*

"Wherever they are hiding," Hordak said. "None shall escape their fate. Such Horde Prime decreed, such shall happen."

"Such Horde Prime decreed, such shall happen," the clones in the background repeated his words.

Definitely too many Priest vibes for Jack's taste. He glanced to his side and saw that Adora was grimacing on the screen showing

Bright Moon's meeting room. But they were counting on Apophis being more cautious when he thought he wasn't facing a warlord, but a zealot.

"I see." The snake nodded. Then his lips twisted into a faint, nasty smile. *"Are you aware that there is a planet full of descendants of those First Ones?"*

What? Jack drew a short breath. Was Apophis…?

"What is this planet?" Hordak asked.

"It's populated by billions of the lesser species you are already familiar with, with the First Ones hiding amongst them - ruling from the shadows. Building up their forces and technology to use them in war. And I think we both know who they will wage war against."

Oh, that bastard!

Apophis's smile grew wider. *"It's called Earth. I can give you all our data on it."*

*****

Hyperspace, On the Way to PU-9623, February 6th, 2000 (Earth Time)

"He didn't even ask what happened to Taweret." Adora shook her head as she paced in their cabin - the captain had tried to get her to use his cabin, but she had put a stop to that.

"He's a Goa'uld. They don't care about others," Catra said, looking at her upside down - she was sprawled on her back on the bed, head hanging over the edge.

"I know that," Adora replied. "But she was his queen. Without her, he can't supply his Jaffa with symbionts. That will cripple his recruitment if he can't replace her."

“True. But he replaced Amaunet with Taweret,” Catra pointed out.

“I don’t think there are too many Goa’uld queens left who aren’t already attached to a System Lord,” Adora said. At least, the Tok’ra didn’t know of any.

“We thought that back then as well.” Catra snorted. “I’m not holding my breath. He probably has some contingency plans already lined up. Never underestimate your enemy. You saw how quickly he adapted to Hordak’s claims.”

“Yes.” Adora sighed. They had hoped that losing his queen, his base and his forces in the system would unbalance him.

“For what intel he had, it was quite a smart plan he came up with in the middle of the call,” Catra went on. “Set the new enemy on your old enemy and let them fight.”

“No matter who comes out on top, he wins,” Adora agreed.

“And he’ll be waiting and checking if he can mop up the survivors with his forces.” Catra shifted around a bit. “Or ask for a favour if Hordak wins. Like getting Taweret back.”

Adora nodded. “It was weird, though, that he didn’t ask about her,” she repeated herself. “Her host was a First One, not her.” Apophis had to know that the Horde was aware of the Goa’uld and how they took over people.

“He probably didn’t want to mention his close association with an enemy of a religious fanatic in charge of a fleet,” Catra said. “I wouldn’t want to do it either. And he might fear that Taweret threatened Hordak with his retaliation.”

“Maybe.” Adora shrugged and sat down at the desk. “It was a spur-of-the-moment decision. He’ll likely adapt his reaction - or has done so already. He might even ask for a meeting.”

“Would be an ideal opportunity to ambush him,” Catra said.

What? Adora drew a sharp breath. Catra had done exactly this at the Princess Prom! She knew better than that! "We won't break diplomatic conventions and abuse a meeting under truce!"

"It wouldn't be a meeting between the Alliance and Apophis, but one we duped him into," Catra retorted. "We would crash a meeting between Goa'uld System Lords to take them out - even if we had to infiltrate the meeting under a false flag," Catra said. "Didn't you wear Horde uniforms once to infiltrate a base?"

"That's not the same!" Adora shook her head. "We have to draw the line at posing as someone else to lure someone into a diplomatic meeting so we can ambush them. If we do that, no one will trust us - or the clones - any more."

"I'd say it depends on if there are witnesses left afterwards, but I guess some idiot would leak it to the press." Catra shifted and lay on her side, one hand propping up her head. "But I bet you that Jack will propose such an ambush if Apophis wants a meeting."

Adora pressed her lips together. Jack would indeed propose such a plan. Quite passionately. But the Alliance didn't work like that. Morals aside, the diplomatic and political costs would be too high. How could your friends trust you if you used such means? She changed the subject. "Anyway, Apophis will have to be ready to invade Earth. He can't leave either Hordak with Earth's resources or Earth with Hordak's knowledge."

"He'll first have to confirm whether Horde Prime is dead or not," Catra said. "In his current delicate situation, with his rivals ready to pounce him, he can't risk angering Horde Prime by attacking his task forces."

Adora nodded. They had some time. "And we can use this to make it look as if Hordak has taken over Earth." As long as they hid Earth's new ships-

"Yes." Catra nodded, then blinked - and cursed. "I just had a thought. What if he plans a false-flag operation to hit Earth and

hopes that the Horde goes after a rival of his? He probably wouldn't risk it if Horde Prime were still alive, but if he thinks this is just a splinter group…"

"That sounds like something he'd do," Adora agreed. "Or he tries to manipulate a rival to strike."

"If he could do that, I think he'd have done it already to his rivals," Catra said.

"Never underestimate your enemy," Adora quoted her - and grinned at her scowl.

Her mirth didn't last, though. They had to deal with Apophis before things took a turn for the worse. The last thing they wanted was for the Goa'uld to find out the truth about the Alliance and unite in response. And using a fictive Horde remnant to guard Earth in the guise of having conquered it came quite close to revealing that truth.

*****

Alliance Base 'Gateway', PU-9623, February 7th, 2000 (Earth Time)

"We really need to get a Stargate here. Apophis wanted to hide the location from his rivals and probably wanted to isolate Taweret so she couldn't easily go and meet others, but neither is a concern for us. And the research station is too important to abandon," Catra said as she took her seat in the meeting room. "And having to spend a day travelling here every time something happens is a waste of time."

Samantha Carter agreed with the proposal. "Yes. We could relocate the base, but it would take a significant effort and spacelift capacity to move and reinstall all the dimensional portal projectors."

"Protecting the system here also requires significant, potentially crucial forces," Captain Thorne pointed out. "And aren't we getting

dedicated Fleet Transports?”

Sam gave the man props for speaking up as the most junior officer at this gathering, but he was wrong. “Due to the nature of the transdimensional experiments, we can't run them on either Earth or Etheria - the effects on advanced technology would be nigh-catastrophic. Not even Etheria's magic or Earth's native technology could mitigate the effects of regular suppression of key pieces of advanced technology.”

Thorne blinked in obvious surprise, but his expression quickly changed to a frown as he defended his idea. “Couldn't you install the lab on some moon?”

“The moon would be too close to Earth,” Entrapta spoke up. “Like any of the moons of Etheria. We could pick another planet, I guess, but Mars has a base already, and we'd interfere with them. Maybe some of the moons of Saturn or Jupiter?”

“Those would require dedicated defences as well,” Sam pointed out. Sure, the task force protecting the Solar System would cover that as well, and could focus on an attack on such a moon, but they couldn't leave Earth unprotected and so were not able to respond with the full force to an attack on the base.

“And we might not want a portal to alternate dimensions or universes that close to a populated planet,” the General pointed out. “Or add more strain to Earth's Stargate. The schedule is crowded already - Hammond is giving me the evil eye whenever I want to take a trip,” he added with a grin.

He was making light of it, but he was correct - between the Alliance’s ever-increasing needs and the United Nations missions, Stargate Command already had to draw up schedules that showed similarities to those used to handle traffic at major train stations or airports.

“But if it’s in another system we'd still have to travel from Earth to it, so wouldn't that actually be a wash for additional gate trips?”

Thorne wasn't giving up. At least he didn't seem to be the type who just couldn't accept a woman's opinion no matter how well-founded since he was arguing against the General as well.

“I think we should discuss this at a later meeting,” Lieutenant Colonel Barnet stepped in, giving Thorpe a look that made the young man wince.

“Yep.” The General nodded. “We're here to discuss Apophis’s attempt to set the Horde against Earth. Did you finish analysing the data he sent to Hordak, Carter?”

Sam straightened. “Yes, sir.” She used her remote to activate the holoprojector in the room. “While the navigational data is correct, as expected, there are significant discrepancies in the data covering Earth's defences compared to Apophis's confirmed knowledge and most of his data covering the supposed influence of Ancients on Earth seems made up.”

“What a surprise!” The General snorted. “Apophis is not being honest? Who would have thought?”

“What kind of discrepancies?” Hordak asked.

“His data claims a scouting force of his fleet was ambushed and destroyed by unknown means,” Sam explained. “He didn't give any details at all about his intrusion.”

“A vague warning?” The General frowned. “Does he want the clones to be paranoid so they shoot first and ask no questions later?”

“Horde doctrine would be to send a small scouting flotilla into a new system,” Hordak said. “Horde Prime generally preferred to use overwhelming force after he was sure about a target's defences.”

“Apophis might not be aware of that,” Adora said.

“Or he just didn't want to tell people about his defeat,” Catra added.

“Well, as far as Apophis knows, we were working on anti-ship missiles, and we've had a few years to develop them further. So he probably hopes we’ll take out a few ships at least,” the General said.

“Prompting retaliation,” Catra added. “And then he sweeps in and destroys the survivors if they seem weakened enough. But can he spare a fleet large enough for that?”

“Intel from the Tok'ra and our own analysis would indicate he can't,” Sam said. “Although as the situation changes, so do priorities.”

“And Apophis suffered another loss. He might be in a tight enough bind to take a riskier gamble,” the General said.

“Indeed.” Teal'c nodded slowly. “The experiments Taweret ran here were an attempt to find a superweapon to win against his enemies. With that spoiled, he must find another way to triumph or risk defeat at the hands of his numerous enemies. Acquiring Horde technology might appear tempting to him.”

“And if he can snatch it from a drifting hull wrecked by us while fighting is still going on…” The General nodded. “And he can probably spare a few cloaked ships much easier than he can spare a fleet able to take out a Horde force.” He frowned. “But it's still a massive gamble. He doesn't know if we successfully upgraded our missiles so they can deal with shields, and he doesn't know what the Horde would do. Desperate or not, that seems a bit too risky for Apophis.”

“He would prefer to operate with more information,” Teal'c said. “But that's not always possible.”

“That's why data is so important!” Entrapta nodded emphatically.

Sam was about to agree when her computer lit up with a priority message. She opened it and gasped. “Adora? Sir?”

“Yes?”

“Carter?”

“Alliance Headquarters just informed me that Stargate Command was contacted by rebel Jaffa through the Stargate. They sent a warning about an impending attack by ‘the Horde’ against Earth.”

*****

The Double Cross Part 2

Alliance Base 'Gateway', PU-9623, February 7th, 2000 (Earth Time)

"Do we know if those 'rebel Jaffa' are actual rebels?" Catra asked after checking the message on her pad. "If Apophis is trying to make the Horde run into a prepared ambush by Earth, this would be an easy way to alert us."

"Well, it's kinda hard. They don't carry badges to prove their identity," Jack replied with a shrug. "And we haven't had contact with many rebel Jaffa."

"Rebels are often isolated. At best, they are organised in cells, but they are slow to trust anyone due to the danger of encountering a spy for the false gods. Bra'tac knew a number of rebels and sympathisers within Apophis's ranks, and even he, a known dissenter, was not trusted by many," Teal'c added. "Unfortunately, a lot of his knowledge died with him."

"He couldn't risk that knowledge falling into the wrong hands should any member of SG-1 become captured and taken over by a Goa'uld," Sha're said. "Apophis discussed your possible capture several times with Amaunet, and finding out if there were other traitors like Teal'c was one of his priorities. He assumed that your successes were at least partly due to such traitors."

"Well, looks like you left a lasting impression on him, Teal'c," Jack said with a grin. "Even though I'm a bit annoyed that he thinks we only kicked his ass thanks to inside help."

"Several of our most important successes were only achieved thanks to Teal'c and Bra'tac's help," Daniel pointed out.

"Yes, yes. But this makes us sound as if we're just spooks," Jack retorted.

“Having the enemy underestimate you is a great boon in war,” Teal’c said. His expression didn’t change from his usual stoic one, but he did sound a little smug to Catra’s ears.

“So, we don’t know if we can trust them,” Adora summed up.

“If we can have Melog meet them, we should be able to find out if they wish us ill,” Catra said. Melog should be able to sense their feelings somewhat, at least. “But even if they’re genuine, they could still be duped by Apophis.”

“While Apophis is fond of executing rebels, it is not beyond him to have spies infiltrate a rebel cell and then use that to root out more potential dissent,” Teal’c said.

“Yeah, standard spook practice. Use the known spies to find their contacts,” Jack said.

Catra nodded. “And you can feed them the information you want the enemy to have. Such as a warning about a coming attack by another enemy of yours.”

“Ensuring that they run into a prepared enemy.” Jack shook his head. “We’ll have to put on a good show back home if we want to fool Apophis.”

“Do the Tok’ra have any information?” Adora asked.

Jack glanced at Sam, who shook her head. “We haven’t received any information from them about this.”

“We’ll ask them to look into this,” Adora said.

Catra narrowed her eyes. “The talk between Apophis and Hordak was a private channel. If rebel Jaffa know about it, they either have tapped his private communications or Apophis shared the news with at least one of them.”

“I do not think any rebel Jaffa have penetrated his communications to that degree,” Teal’c said. “I was his Prime and

did not have such access, and Apophis will have increased security after my defection."

Catra agreed with that. Not even the Tok'ra had managed that, and they had thousands of years of experience infiltrating the Goa'uld. Then again… "They could be lucky," she said. "But I think it's more likely that Apophis deliberately let that information leak."

"If he does, he risks his rival System Lords hearing about it as well," Sha're pointed out. "Although that, too, might be intended if he has plans to set them up as well."

"Send them after the Horde?" Jack snorted. "That would allow us to fight them with our forces while hiding the involvement of the other members of the Alliance."

It would also alert the Goa'uld that the Horde was attacking at least one of them, but they knew that when they started Plan Horde, as Jack called it. "We'll have to make efforts to show that this 'rogue Horde task force' is not going to indiscriminately all Goa'uld, or they might unite."

"Yes!" Adora nodded. "If they think this is between us and Apophis, they might stay out - or stab him in the back."

"Apophis knows that," Sha're said. "He might plan to use the threat of the Horde as a way to force the other System Lords into a truce and alliance against them. It would give him breathing room to consolidate and restore his forces while his rivals suffer losses."

"Every one of the false gods will attempt to use such a war to weaken their rivals," Teal'c said. "However, they are all aware of this and will plan accordingly. Overall, it will diminish the effectiveness of their forces, but we cannot count on them fracturing in a suicidal manner in the face of a common enemy."

"The System Lords aren't stupid," Daniel said. "They are used to each other." He took a deep breath, then bit his lower lip for a

moment. “We might consider diplomatic approaches to prevent them from seeing us as a threat to all of them.”

“Sounds good,” Jack said with a grin. “If we can divide them, we can mop up the rest more easily.”

Catra agreed but winced slightly. It was a good plan, but…

“We can’t do that!” Adora blurted out.

…Adora wouldn’t like it.

*****

“Why can’t we do that? It’s a legitimate ruse of war.” Jack O’Neill frowned. Fooling your enemy any way you could was a basic principle of warfare.

“You don’t abuse diplomatic customs like that,” Adora retorted. “Who could trust our word if we break it like that?”

“There’s a difference between breaking your word or treaty and posing as someone else to fool your enemy,” Jack pointed out. “That’s like spying on your enemy or feeding them bad intel.”

Catra nodded in agreement, Jack saw, but her expression looked a bit too resigned for his taste.

“It would not be dishonourable. Technically,” Teal’c added, though his expression didn’t make it clear if he approved or not.

“That’s not the same. If we make a treaty under false pretences to entrap our enemies, it might be technically different, but it still casts doubt on all our treaties,” Adora said. “Other people will always wonder if we’re about to betray them as well.”

Jack snorted. “We’re talking about the Goa’uld. Anyone who’s ever met them knows they aren’t trustworthy and will betray you as soon as they think they can get away with it.”

“Yes.” Adora nodded. “But we’re not the Goa’uld. What will the Asgard think? Or the Tok’ra?”

“The Asgard have made a treaty with the Goa’uld as well, Jack,” Daniel butted in.

“And they know the Goa’uld would break it if they could or knew they could. They didn’t build a snake maze on Cimmeria because they trusted them,” Jack said. “And the Tok’ra are all about underhanded spy stuff.”

“I’m not saying we should trust the Goa’uld. But we have to maintain a higher standard,” Adora insisted with a frown. “We don’t want a reputation for such treachery when we deal with other species. We want others to trust us.”

“We also don’t want to lose the war,” Jack said.

“We won’t lose the war if we respect the customs and the spirit of diplomacy,” Adora said.

“But it could prolong the war and cause more casualties,” Jack countered.

He saw Adora flinch at that. But a moment later, she shook her head and raised her chin. “In the long term, we lose even more if people don’t trust us. If they expect us to stab them in the back, they’ll react accordingly if there’s a conflict - or a misunderstanding.”

And that made Catra flinch.

“I have to agree,” Daniel said, stabbing Jack in the back. “It’s not just an undercover operation scaled up if you actually make a treaty under false pretences. That would be seen as dishonourable by many cultures.” Jack frowned at him, but he shrugged. “It might be a double standard, and only gets applied if someone gets caught, but you can’t ignore that such, ah, ploys tend to undermine your reputation as well as weaken the general trust in diplomacy.”

Jack scowled. That made some sense, but it still felt like voluntarily hobbling yourself. It wasn't a war crime like murdering prisoners of war or civilians - which made things worse, anyway - but it would make it easier to defeat the snakes with the least number of losses.

He glanced at the others in the room. Daniel clearly thought Adora was correct. Catra seemed to disagree, or at least have some doubts, but she clearly wouldn't go against Adora's wishes either. Teal'c's expression was unreadable, and Sha're hadn't said anything yet so her scowling could be aimed at anyone. Both wanted the snakes to be crushed, of course, but Teal'c prized honour, and while Sha're wouldn't blindly follow Daniel, she might weigh the political cost of such a deception as more important than the military advantages it might provide. And Carter would claim that she was a scientist and not a spook. Jack didn't count on Entrapta to take a side in this anyway.

Not that the Alliance was a democracy, of course. Adora was the Supreme Commander, and you'd need a lot of political support in the Alliance to force her to adopt such a plan. If the princesses agreed with Adora - and Jack was pretty sure most would - then that wouldn't happen.

He sighed. "Let's discuss this when we know more about the situation. We have a few rebel Jaffa to contact."

"They are currently on PZ-9132, an uninhabited planet according to our files," Carter said. It had a breathable atmosphere, at least.

"We don't have spy bots there, but if the Jaffa dial in, we can route the comm to us here," Entrapta added, "and talk to them with some lag."

"Giving away that we're not near the Stargate," Jack said.

"We don't want to give that kind of intel to people who might be working, knowingly or not, for Apophis," Catra said.

“Then we travel back. We need to know more about this,” Adora said.

“And we need to decide how we play the Horde attack on Earth,” Jack reminded her. “Before Apophis’s stealth ships arrive there.”

She frowned but nodded. “We can do that on the way. Let’s go.”

*****

Alliance Forward Base, PU-9841, February 8th, 2000 (Earth Time)

The forward base securing the Stargate hadn't changed since they had passed through two days ago. Prefabricated walls surrounded a bunker containing the Stargate and several auxiliary bunkers housing the garrison, supplies and command and control structures. There were no heavy weapon emplacements - the ground forces’ task was to keep intruders away and handle assaults through the gate, not defend against a planetary invasion from orbit. That was what the flotilla in the system was for.

Still, Adora knew that while it wasn’t a huge commitment, it was still a sizable force just to secure a quick way to reach PU-9623. Relatively quick - it still took a ship a day to make the trip. And while the flotilla wasn't expected to defeat an all-out attack by a major Goa'uld fleet, it still had to be large enough to be able to stall such an invasion long enough for the garrison to evacuate through the Stargate - provided said Stargate wasn't blocked by another gate dialling in, of course.

All in all, it tied up a significant number of forces and logistical efforts just to cut down on travel time for key personnel such as Adora and her friends to PU-9623 and the bases on it. That hadn't been too much of a concern when the Alliance had expected the operation to be a temporary incursion, perhaps a large-scale raid to destroy whatever Apophis was preparing there, but now that they had to protect Beta, things had changed.

“We need to move this Stargate,” Adora said as the shuttle carrying them touched down on the landing pad inside the base.

“I've been saying that for some time,” Catra commented as she got up from her seat. “As have others.”

Jack made an agreeing noise, and Adora rolled her eyes. He had been less chatty than usual during the trip. He was probably still annoyed about her stance on diplomacy.

“But we’ll have to thoroughly check if there really are no natives on the planet,” Adora went on.

“Scans didn't show any settlements or other signs of a population,” Sam said.

“They could be hiding - they're close to the Goa'uld Empire and might even be refugees,” Daniel added. “If they don't use Naquadah or other advanced technology and are a small community, they would be hard to detect, right?”

“Yes,” Sha're agreed. “The Goa'uld would usually not care much about a few slaves fleeing, at least not to the point of expending a significant effort to track them down. If they hide underground or under cover like in forests or jungles, they would be safe from anything but a dedicated hunt.”

Adora pressed her lips together as the ramp was lowered. To live like that, in permanent fear that ships descended on you from the skies, that soldiers would come to hunt you down, should you be detected… That would be worse than growing up in the Horde.

“Even with our best sensors, it will take a long time to check the planet,” Sam said.

That didn't matter. They had to do it. They couldn't take the Stargate if there were people it belonged to. Adora returned the salute of the officer in charge of the base - Major Hawthorn, an American - and started formulating the orders for the flotilla and garrison to search for natives.

*****

Samantha Carter was secretly quite glad it wasn't up to her to scan the planet for natives. It wasn't that difficult, but it was very, very tiresome to run scans covering an entire planet. Scans detailed enough to find not only humans but potentially other sapient life forms took time. Sure, you could do something else while you waited for the scanners to finish their work, but only within limits. There were always checks and adjustments to make. Potential hits to examine further before they could be dismissed - the software was good but not perfect, and Sam knew you couldn't fully trust any automated system for such tasks. Not all the checks were strictly necessary, of course, but Sam would feel as if she was neglecting her duties if she didn't focus on the task.

No, it would be up to the clones in the ship to handle this, with support from the ground garrison. However, if they found something out of the norm, Sam knew she would be called in if she was still on the planet. If it was something dangerous or exotic, she'd be called in even if she wasn't on the planet.

And that suited her just fine.

In the meantime, she focused on the Stargate ahead of her. It was, as usual, blocked to prevent unauthorised access. Not with something as sophisticated as the iris back on Earth, but by being mounted on a frame that lowered it to ground, face down, when not in use. Simple and efficient, perfect for such field bases.

But if they wanted to talk to those Rebel Jaffa - well, if they wanted to let them call in, at least - they needed a barrier that allowed the wormhole to form but prevented physical travel through it. And lacking an iris, Sam would have to install the next best thing - a force field strong enough to handle that.

Fortunately, Entrapta and Sam had already solved that problem - a bot of Emily's size could handle that with a modified force shield projector. At least long enough for all practical purposes. All Sam had to do was to check if the field was properly placed and stable.

And it was. She switched it off, then turned to the General and Adora. “Force field ready to deploy.”

“Alright!” The general nodded. “Dial in.”

Sam pushed a button and the Stargate rose into a vertical position, the force field already securing it.

Daniel started entering the address on the D.H.D., and soon, the wormhole formed, then stabilised - and Sam deactivated the forcefield. With the wormhole active, travel to the gate here was impossible so the field was not needed right now. “The Stargate is open.”

“Let's call our rebel Jaffa,” the General said.

“Opening a channel,” Sam replied. The communicator quickly established a connection with another on the other side. “Frequencies and codes match,” she reported.

The General nodded and turned towards the screen linked to the communicator. “Put them through.”

Sam did a last check to ensure Adora, Catra and Melog weren't visible on the camera feed - they were known to Apophis after the raid on his palace, but they didn't want to show their hand at the start of the meeting - then accepted the video connection.

A Jaffa with a scar across his forehead - a wound from a blade or claw, Sam noted, not from removing a brand - appeared, in front of a landscape without any signs of inhabitation and only a few scraggly trees. He inclined his head. *“Greetings, Tau'ri. Teal'c.”*

“Hello,” the General replied.

Teal'c nodded as well but didn't address the Jaffa by his name. So, he didn't recognise him. That meant the Jaffa hadn't been a high-ranking member of Apophis's forces when Teal'c had been his First Prime.

“Hello.” Daniel smiled.

Sha're, however, had narrowed her eyes and took a step forward. “Kul'et.”

The Jaffa - apparently Kul'et - tilted his head to the side. *“I know who you are, but I do not know your name.”*

“Sha're.”

Daniel reached out and caught her hand, Sam noted.

“So…” The General looked at Sha're, then at Kul'et. “You know each other.”

“He was a guard at Apophis's palace. A low-ranking guard,” Sha're said. “He often punished slaves.”

“On my superiors' orders,” Kul'et replied, looking at her steadily.

“Just following orders,” the General said, baring his teeth.

“Like others.” Kul'et nodded towards Teal'c.

Teal'c returned the nod. “Indeed.” He didn't flinch.

Sam saw that Catra tensed up, though, and Adora patted her shoulders while Melog pressed against her leg.

“But now you've rebelled against Apophis,” the General went on.

“Yes.” Kul'et straightened. *“I had the opportunity to desert when I was sent to serve on another world. I and a few others took it.”*

Sam frowned. A demotion? If he had served at Apophis's palace, he might have been amongst those Jaffa punished after the raid that freed Sha're. It wouldn't be an unusual reason for someone to switch sides, though it didn't make for the most loyal allies.

“And you've heard about a threat to our world as well,” the General went on with a polite smile. “Quite fortunate.” He didn't

bother to hide the scepticism.

"It was fortunate indeed," Kul'et replied. *"A friend of mine overheard Apophis's orders to his Prime and told me. News of a new enemy spread quickly."*

Sam glanced at Teal'c, who inclined his head slightly again in apparent agreement.

"Apophis needs to work on his opsec," the General commented with a grin. "I won't complain though when it makes our life easier."

"Then you are prepared for this attack?" Kul'et tilted his head to the side.

Is he fishing for intel, Sam wondered, or is this mere curiosity - or even genuine concern?

The General snorted. "We've been expecting an attack ever since we sent Apophis running last time."

"According to what I heard, this enemy destroyed a far more powerful force than two Ha'taks," Kul'et said.

"Thank you for the warning. We appreciate it." The General's confident smile didn't change. "But enough about us. What about you?"

Instead of responding, Kul'et raised his eyebrow remarkably like Teal'c liked to do.

"What are your plans now?" the General elaborated. "You've deserted from Apophis and warned us. We owe you for that. What do you want?"

Kul'et stood ramrod straight. *"We wish to know where we can find the Goddess She-Ra so we can enter her service. She has proven to be far more deserving of our worship than Apophis."*

Sam glanced at Adora and saw that she was sighing. Catra was smirking, though - and Melog had changed colour, indicating amusement as well.

The General glanced at Adora as well, and, after a moment, she nodded, expression firm again.

He grinned in return. “Well, you're in luck, Kul'et.”

Adora stepped into the field of view of the camera. “Hello.”

And Kul'et dropped out of view of his camera. *“Goddess.”*

“Did he just kneel down?” the General asked.

“That would be an expected reaction to meeting a goddess, Jack,” Daniel said.

Adora sighed again.

*****

Catra snickered at the sight of an empty screen, but it wasn't that funny. Well, it was pretty funny to see Adora's reaction - her love was muttering about not being a goddess as if that would impress anyone - but Kul'et dropping to his knees didn't actually prove he was honest. Apophis knew about people worshipping Adora as a goddess after his palace had been raided and she had healed half his capital when she had restored magic to the planet. It didn't take a mastermind to connect Adora to Earth when she had been with SG-1. So, ‘pretend to worship She-Ra’ would be a no-brainer for any spy of his trying to infiltrate the rebel Jaffa - or Earth. But that didn't take into account that there were ways to check if the faith was genuine.

She glanced at Melog, who remained at her side.

Funny.

That made her snort again. “We'll have to meet them.” If only so Melog could take a closer look at them - he couldn't sense their emotions through a Stargate.

“If this is a trap…” Jack whispered.

Adora meanwhile took a step forward. “Please rise, Kul'et.”

“As you command, Goddess.”

Catra resisted the brief urge to tell him that ‘Your Divine Highness’ was the official address in the Church of She-Ra. She'd let Priest do that if the guy turned out to be an honest deserter. Heh, what if there was a schism in the Church over how to call Adora? It wasn't as if they listened to Adora's wishes in the matter, so she wouldn't be able to settle it…

On the other hand, church schisms tended to become very violent according to Earth history, so maybe that wouldn't be funny at all.

“I am She-Ra, Princess of Power. I am no goddess,” Adora said.

Kul'et didn't even flinch. He bowed his head instead. *“There is no need to test my faith, Goddess. Your deeds prove your nature.”*

Catra narrowed her eyes. Priest and his missionaries went on about how you couldn't have faith without doubt, so Adora denying her divinity was necessary to have faith in her, but how would Kul'et come up with this by himself? If Apophis knew about the Church of She-Ra, he'd also know that the clones were allied with Earth. And if Priest had somehow sent undercover missionaries to Apophis's realm, the Alliance would know about it. Probably.

She made a mental note to look into this.

Adora sighed, and Catra reached over to squeeze her hand while the tip of her tail ran over the back of Adora's thigh.

“How many are in your group?” Adora asked.

"We are but three, Goddess, but we know that there are others still within Apophis's ranks who worship you as well, and their numbers are growing. We decided to desert to warn Earth about this new threat while they stayed. If all of us had attempted to desert, it would have been too great a risk."

A likely story, and yet… Catra couldn't help thinking it was a bit too smooth.

Explains too much.

Melog agreed, then. Of course, Kul'et had grown up in Apophis's service. He probably had to quickly learn to come up with excuses for any potential failure when facing his god - or goddess. Still…

"Let's send in the spy bot and check for an ambush," Catra whispered.

Jack nodded and turned to Sam. "Send in the scout."

Outside the camera's field of view, the spy bot waiting next to Sam started to hover, then flickered and vanished as the stealth generator went active.

Catra watched and caught a slight ripple when the invisible bot passed through the gate.

"Who else is with you?" Adora asked.

"Man'ot and Bre'kul, Goddess," Kul'et replied.

Catra glanced at the screen in front of Sam. The bot was transmitting, and she could see two more Jaffa waiting, one on each side of the gate.

They stepped into view, bowing their heads. They looked a little younger than Kul'et. And a bit more nervous. *"Goddess."*

"I'm not detecting any other life forms nearby nor any hidden energy signatures in the vicinity," Sam reported. "The bot doesn't

detect any ships in orbit either.”

That didn't have to mean anything, of course - the bot's sensors were good, but it wasn't a deep space spy bot meant to spot enemy vessels.

But it was, as Catra had known, good enough for Adora. “I'm coming to meet you personally,” she told Kul'et, already walking towards the ramp.

“Goddess!” Kul’et fell down on his knees again - Catra watched it on the feed from the bot - as did the others.

Then Melog and she went after Adora. She might not be She-Ra, able to tank whatever the three Jaffa were carrying, and probably whatever might be hiding in orbit, but she wouldn't let Adora alone on another planet.

The air on the other side was dry and smelt slightly stale, somehow. Which was strange since they were on an open plain surrounded by desert. Well, they weren't here for that. All three Jaffa were still kneeling, not even looking at Adora.

“It is an honour to meet you, Goddess. We have dreamt of this but dared not hope…” Kul'et said.

Hate and fear.

Melog softly growled at Kul'et, then turned to the other two.

Happy. Relieved.

So, one spy and two dupes.

Catra bared her teeth in a smile and stepped closer to Adora.

*****

Gate Area, PZ-9132, February 8th, 2000 (Earth Time)

Jack O'Neill couldn't help feeling a little apprehensive when he stepped through the Stargate. Sure, Carter had scouted the other side with her spy bot and found nothing, and Adora had already stepped through the Stargate and nothing had happened, but you could never be completely sure there was no trap. Especially when it came to the snakes. And this Kul'et just was a bit too smooth for Jack. So, he was prepared for an ambush when he walked down the ramp.

Not that he would show anything but confidence, of course, the better to unnerve his enemies and bolster the morale of his troops. "So… nice place here. Love what you did with the porch."

The three Jaffa blinked, confused, Adora frowned at him, and Catra snorted. She was tense, though. And so was Melog - the alien's illusionary fur was bristling, and they were glaring at Kul'et as if they wanted to pounce on the Jaffa and savage him.

Which meant that Catra was feeling the same. So, Kul'et was a bad guy - Melog had come through. Fortunately, Kul'et wasn't aware of Melog's powers or he'd probably realise that the jig was up.

"Just a joke," Jack said.

"A bad joke," Adora added.

Jack made a point of pouting but used the distraction to make eye contact with Catra and raise his eyebrows.

She nodded at Kul'et and signed 'one enemy' behind her back, then signed 'two' and 'friendly'.

Jack kept smiling. So, Kul'et was a spy. And didn't know they had seen through his act. Any spook back home would claim that spies you knew about must be left in place so you could feed them misinformation. They loved playing such games.

But this was a bit bigger than the Cold War. The stakes were a lot higher, and the most crucial information - the Alliance with Etheria

- couldn't easily be hidden from someone you supposedly trusted. They would have to keep Kul'et away from any important base much less Earth. And they would have to keep such tight control over what and whom Kul'et could see that, as a trained spy, he would very quickly realise that he had been made.

So, time to do the fun thing. Jack bared his teeth in a wide grin. "Say, Kul'et, did you get a cool secret decoder ring when you were trained as a spy by Apophis? I've always wanted one, but I never got one as a kid."

The two other Jaffa blinked, mouths hanging open. Kul'et did the same but blurted out: "What? I'm not a spy. I was a guard."

Adora frowned at him, and Catra said: "We *know* you're a spy. You can't hide your true allegiance from us."

Kul'et face twisted into a snarl and a zat appeared in his hand, but before he could raise the weapon, he was buried under about two hundred pounds of alien cat. Three hundred if you included Catra breaking said arm a moment later.

The other two Jaffa were frozen, then dropped to their knees again. "We didn't know, goddess! He fooled us!"

"Please believe us!"

And Adora, as expected, turned to beam at them. "Don't worry - I know you two are honest."

Relief - and awe - appeared on their faces for a brief moment before they bent down again, pressing their foreheads into the ground.

"Yes, Goddess!"

Jack shook his head as he moved to search and cuff Kul'et. Adora really needed to learn how to talk to impressionable Jaffa and other people without making them think she was a goddess who could see into their souls or something.

“And she wonders why people worship her,” Catra muttered as they went through Kul’et’s clothes together, removing several hidden gadgets.

Jack snorted again, then took a look at a miniature communicator that actually looked a little bit like a secret decoder ring if you squinted. “Looks like Apophis did hand out the good stuff to his spies.”

He tapped his radio button. “Anything we didn’t find, Carter?”

“No, sir. You should have everything according to our scanner.”

Jack grinned. It was good to know he could still search an enemy without a high-tech scanner to help. “Let’s get him back through the gate so we can interrogate him properly.”

Kul’et gasped. “Praised be Apo…urk!”

Jack drew back - Catra had just broken the Jaffa’s jaw and was pulling it open, revealing blood and… foam? Kul’et was jerking, and his eyes were rolling back - and then he went slack…

Jack cursed under his breath. Secret communicator rings and hollow teeth filled with poison - Apophis was hitting all the cliches.

“No!” Adora yelled, raising her sword - but not to point it at the spy. Instead, she raised it to the sky.

“No!” Jack spat, tensing. “Not again!”

But he could already feel her releasing the magic of this world.

And there it came. Jack clenched his teeth when Adora pointed her sword at Kul'et, bathing the spy in golden light that left him staring open-mouthed at her. The foam was gone as well, vapourized, Jack noted.

And then Adora turned, and Jack felt and saw the magic rush out of her, like a flood washing over the ground - and shooting into

the air. And for a moment, he felt as if he could lift the Stargate and carry it around.

Then the desert around them changed, plants shooting out of the ground. Grass, bushes, flowers. Trees. Instead of in the middle of a desert, they were now standing in the middle of a clearing, surrounded by a thick, lush forest, and the stale, dry air was now a gentle breeze with a flowery scent.

“All it lacks is Bambi and Disney would sue,” Jack muttered as he took a few deep breaths.

Catra's ears twitched. “What about birds?”

“Birds?” Jack blinked, then frowned. Now that she mentioned it, he could hear birds chirping. So, maybe there was an alien Bambi in the woods as well.

The two other Jaffa stared at the sudden change of scenery, then went back to pressing their foreheads against the ground.

“Goddess!”

“Praised be She-Ra!”

But Jack looked at Kul'et. The spy was trembling, his lips moving without making a sound, and his eyes darted around until they locked on Adora, who was lowering her sword with a sigh before turning to frown at Kul'et.

“We don't torture prisoners. We don't kill spies, either. You will be treated humanely. There is no need to kill yourself.”

Kul'et was staring at her with wide, frightened eyes.

“And we won’t let you kill yourself,” Catra added.

“G…. goddess,” Kul'et whispered.

Melog changed colours and looked at Catra, and Jack heard her chuckle for a moment. “Looks like you converted him, Adora.”

Adora blinked at her, then looked at the trembling Kul'et, who was trying to bow but was still held in Catra's grip, then at the two other Jaffa on the ground, and finally at the forest surrounding them.

“Oh.”

“Yeah, ‘Oh’,” Jack commented.

*****

Alliance Forward Base, PU-9841, February 8th, 2000 (Earth Time)

“You partially terraformed the planet.” Sam sounded fascinated, in Adora's opinion. “The forest covers a similar area as the original Fright Zone on Etheria, as far as we can tell - the spy bot’s sensor range is a bit limited at the moment, I've requested more bots to explore the planet but they will take some time to arrive. More importantly, it seems that you changed the atmosphere. It's now much more humid as before, at least in the gate area. We need more readings, though, and samples to check if it's a lasting change and what exactly happened. If the oceans are affected as well, for example.”

Adora winced at Sam’s words. She hadn't meant to do that. “I only wanted to save Kul’et's life,” she whispered. She hadn’t been sure her normal healing magic would’ve been enough, but the Jaffa shouldn't have to die because he was ordered by Apophis to avoid being captured.

“Well, you did. But I think you went a bit overboard,” Jack said in a dry tone. “Changing the entire world to save a spy is a bit much.”

“It is an uninhabited world,” Adora defended herself. “I didn't alter someone's home without asking them.”

Catra snorted, leaning against the console next to the Stargate. “You wouldn't have let him die anyway.”

Adora pouted at her. “Well, no, I wouldn't have.” That would have been wrong. Besides, they had to restore magic to all the worlds from where the First Ones had taken it away anyway. And there had been something wrong with the planet's atmosphere. Adora didn't know what exactly, but most of the magic had gone into healing that.

“But all that magic…” Jack trailed off with a frown, and Adora saw him rub his arms.

“Are you OK?” she asked. Had the magic she had done hurt him?

“Peachy,” he quickly said. “Just a bit tingly still from all the magic thrown around.”

“Oh?” Sam looked up from her screens and turned to Jack. “‘Tingly’?”

“Just… a figure of speech,” Jack said, looking warily at her.

“You might have been more seriously affected by Adora's magic, sir,” Sam said, taking a step towards Jack. “We need to examine you.”

“I’m fine, Carter.” Jack crossed his arms.

She narrowed her eyes at him. “I think that remains to be determined, sir. Healing magic - shouldn't have any adverse effects on your health, but there could be some changes.”

“Changes?” Jack looked very wary, and Adora bit her lower lip. She hadn't meant to hurt anyone!

“Changes. Adora seems to have created an entire ecosystem on the planet, including animals,” Sam explained. “We need to get genetic samples for analysis so we can determine if they're copies of existing species or new species - maybe evolved from present

species, though we don't know what those are either. I assume that biologists will be busy for years on the planet."

Catra snorted again, and Adora blushed. She hadn't meant to do that. She had just wanted to save Kul'et.

"Maybe we should name the planet 'Adora's World'," Jack suggested. "If it's going to be so important."

"I think we should leave that to whoever eventually settles there," Adora said. A world named after her? That was… too much.

"Jack's just trying to distract Sam from scanning him," Catra said.

Adora frowned at him. As did Sam. He grinned, though it looked a bit weak.

"Sir…" Sam shook her head. "We need to know if you were affected."

Jack sighed. "Alright. Do your thing, Carter. At least you don't use needles."

"I'll need to take blood samples as well, sir."

"Gah."

*****

The Double Cross Part 3

Alliance Forward Base, PU-9841, February 8th, 2000 (Earth Time)

“So, what's the verdict, Carter?”

The General sounded flippant, but Samantha Carter could tell that he was at least a little nervous behind his wide, cocky grin - his eyes gave it away. She knew him too well to be fooled.

“Well, sir…” she started to say, then wanted to wince when she saw his expression grow serious at once. He knew her too well not to catch on that she didn't bring good news.

And then he was grinning again. “If I am mutating into a dog, I'll need to know so I can make arrangements to get my uniforms altered.”

She snorted at that. “You're not turning into a dog, sir.”

“I sense a ‘but’ coming.”

“Your vitals are all good.” Great, even, for his age. Or for any age.

“Still not feeling reassured. Come on, tell me the bad news.”

She winced and sighed through clenched teeth. “I’ve detected some changes in your body on a cellular scale.” She took a deep breath. “Your DNA is… changing.”

“That sounds like a mutation.” He was dead serious now. “Unless X-Men lied to me.”

She didn't bother laughing at his joke. “It's not a mutation - it's more an… optimisation. I need to run it past an expert to confirm, but my preliminary estimate is that minor faults and defects in your DNA are being…” Don't say ‘fixed’, she reminded herself. “Corrected.”

“By magic.” He was pressing his lips together with such effort, they formed a thin line.

She nodded. “That needs to be confirmed as well, but it is the most likely explanation.”

He scoffed in return. “So, someone's cleaning up my genes. I guess I won't have to worry about all the radiation I might have picked up in places I never visited in the first place.”

Sam shook her head. “Any such lingering or potential health issues were already taken care of when Adora healed you the first time, sir:”

“Ah.” He narrowed his eyes. “So, what exactly is happening now?”

“I have yet to confirm it,” she said. “But my best estimate after using the most detailed magictech scanner I have access to here is that your, ah, Ancient heritage has been rendered more prominent.”

“I'm turning into an alien?” He stared at her.

“Not quite. It's more that your, ah, Ancient genes are becoming more dominant,” she explained.

“That sounds like I am turning into an alien, Carter.”

“The Ancients were, as far as we know, and as far as DNA tests have confirmed, our ancestors, sir. They were and are, in Adora's case, close enough to humans to have viable, non-sterile offspring, according to Alpha's data. That means we're the same species.”

“That sounds like semantics.”

“Scientific definitions aren't semantics, sir,” she reminded him, frowning slightly.

“That's what a semantic would say.”

“You're not turning into an alien,” she repeated herself. “And you won't suddenly sprout, ah, tentacles. As far as we can tell, you're simply becoming a bit more… like your ancestors. DNA-wise.”

He snorted. “Still sounds like turning into an alien. Will I get a magical sword or tiara?”

She hesitated a fraction of a second, but it was enough for him to pick up. “Don’t tell me I'm turning into a princess!”

“There's no sign of that as far as I can tell with my current equipment, sir,” she retorted.

“That's not a ‘no’, Carter.”

“It's as much as I can do here. We have to travel to Etheria and have you examined there.”

“By the crazy Frankenstein AI on the moon, you mean.” He scoffed and looked at the screen on the wall showing muted news from Earth on a lagging loop.

“And by the experts from Mystacor,” she added.

He turned to stare at her. “Right. Forgot about them. So, I'm turning into a witch?”

She winced again. That this would strengthen what, according to Castaspella, was already a high potential for magic was her best hypothesis. “I think the correct term would be ‘sorcerer’, sir. Though unless you start training in sorcery, you won't be able to actually work magic.”

“And that's how I like it!” he snapped. “Not a word to anyone with magic about that, Carter!”

“Sir! It's just a hypothesis so far. It could be something else. We need to have you examined by experts to be able to exclude the possibility that this might be a threat to your health.” She met his

eyes with a firm expression. “I cannot condone that risk.” And he should know better.

He stared at her for a moment, then sighed. “Alright. Let's get the Frankenbot to peek at my genome to check that I'm not turning into an alien.”

Sam didn't smile but merely nodded. But she was relieved. If she had to decide whether she would follow the General’s orders or her conscience, with his health potentially on the line… whatever the choice, she wouldn't have been happy.

*****

“So?” Catra turned away from the one-way window into the interrogation room where Kul’et was sitting - secured - at a table and looked at Melog.

Awe. Guilt.

That didn’t tell her what the Jaffa was feeling guilty about. Spying for Apophis on Adora? Or that he failed Apophis? He had been grateful, earlier, Melog had said - but that had been right after Adora had saved him from the poison he had taken.

She shook her head. “Looks like you’ll have to talk to him, Adora.”

Her love sighed but nodded. “I don’t know what would be worse - that he’s still faithful to Apophis or that he worships me.”

Catra rolled her eyes at her. “Stop whining. Every Jaffa that converts to the Church of She-Ra is one less Jaffa we have to fight.”

“I’m no goddess!” Adora clenched her teeth. “No one should worship me!”

Catra shrugged. “They do it anyway. Freedom of religion.”

“No one should be worshipped like that!” Adora retorted. “That kind of blind faith is what the Goa’uld want - and what makes them so evil.”

It was just a small part of why the snakes were evil, in Catra’s opinion. You didn’t need blind faith to get blind obedience. The Horde had shown that. And Earth had plenty of other examples. But it usually made it easier, of course. “It’s not exactly blind faith,” she said, grinning. “Priest certainly isn’t always listening to you. Well, he’s listening, but he doesn’t just do what you want.” Like when Adora wanted him to stop worshipping her.

Adora groaned. “That’s not a good thing either! I’m still responsible for him and his people!”

Catra scoffed. “You’d be responsible for them as Supreme Commander of the Alliance anyway.”

“It’s not the same!” Adora insisted. “This goes far beyond the military chain of command.”

Catra shrugged again. Sure, the clones would likely ignore any rules if Adora really wanted them to do something, but… “As long as they listen to you when it’s important, it’s a good thing,” she said. “Would you rather have them converting to an Earth religion? I’m sure many of their religious leaders would love having fanatical converts at their disposal.”

“Of course not!” Adora shuddered. “But… It’s just not right. And I don’t like to burden the next She-Ra with this responsibility.”

Catra pressed her lips together. The next She-Ra would only be chosen if Adora died. And Catra would do anything to prevent that from happening. But there was no need to go into that. She slowly shook her head. “She-Ra will do fine. Mara and you both had to deal with worse responsibilities.”

“And Mara died,” Adora spat.

Alright, Catra had been wrong. There was a need to get into this. "I'm not going to let you die. And if you're trying to get killed, I'll kill you!"

Funny.

Adora blinked. "What?"

"You know what I mean!" Catra said with a deep frown aimed at both her love and Melog.

Adora smiled even as she shook her head. "I'll go in now." She turned to the door leading to the hallway and left the room. A moment later, Catra saw her entering the interrogation room.

"Goddess!" Kul'et tried to jump up, but the chain fastened to his cuff stopped him. A moment later, he tried to bow but only managed to press his head against the top of the table.

Catra snorted - the Americans had installed the interrogation room, as a 'provisional measure', as they had called it, since they didn't want to move Kul'et to a standard P.O.W. camp until they knew whether he had ditched Apophis's faith or not, but they had done good work anyway.

She glanced at Melog for a moment.

Awe. Gratitude. Love. Guilt.

That sounded promising. Still, they had to be sure.

"Sit," Adora said.

"Yes, Goddess."

Catra saw Adora frown for a moment before smiling again. "How are you doing? Are you being treated right?"

He better be, Catra thought. If They couldn't ensure P.O.W.s being treated correctly in a tiny forward base under their very noses…

Well, technically, Kul'et was a spy, but since the Alliance had pulled off the same plots already, no one would make a fuss about that. No one who mattered, anyway.

Kul'et took a deep breath and bowed his head again. "I am being treated better than I deserve. I have done the bidding of a false god and attempted to deceive, to betray you, a true goddess. My life is forfeit!"

Guilt. Shame.

"He has been too long near Apophis," Catra muttered. "That's where he picked up all the drama."

Melog sent her a spike of amusement.

"No!" Adora shook her head, and Kul'et actually flinched at her tone. "No one is going to die for Apophis - or any other Go'auld - if we can help it. That includes you!"

"Your mercy is as vast as your power, Goddess."

Honesty. Relief.

Adora winced. "That's just doing the right thing. You were raised to believe in an evil cause. So was I. And others." She leaned forward, putting both hands on the table. "We understand. And we don't judge you for it."

Kul'et blinked. "I don't understand…"

Confusion, Melog confirmed.

Catra sighed. In theory, Kul'et could still be feeling all this and be loyal to Apophis. Relieved that they were treating him well, guilty for failing - or for having torn loyalties, maybe.

This could take a while. Maybe they should have called for professional interrogators. No - they wouldn't hold the same respect as Adora did.

*****

"...and so Melog came to the conclusion that Kul'et has honestly changed sides."

Jack O'Neill nodded at Adora's summary. "You mean he converted, right?"

Adora frowned at him, but Catra nodded. "Yes."

"That was likely the key reason he switched," Daniel cut in. "Adora saving his life in extremis, and changing a significant part of the planet at the same time, would have shaken anyone, of course, but Kul'et was especially receptive due to his background."

"The Goa'uld depend on power, both real and fictive, over their followers to keep them faithful," Sha're added. "But that means that should they be defeated by a rival, their followers might switch allegiance and faith to the victor because they might seem ascendant."

"And dear old Apophis has suffered a few humiliating defeats." Jack grinned. Some of them, like the losses of two fleets, he would have been able to keep secret from the general population, but Kul'et would have been aware of them since he was supposed to become a double agent. And Apophis hadn't been able to hide the raid on his palace. Now the Alliance just had to keep the pressure on, and Apophis's entire empire might crumble…

Of course, having the snake's faithful convert to worshipping Adora had some drawbacks as well, but they could deal with those once the snakes were done. "We've got Apophis fooled into thinking the Horde is about to attack Earth, and we turned his spy. How do we exploit this?" That was a question for the brass and spooks at Headquarters, but it never hurt to come back from the field with a few ideas and proposals. Especially if you were discussing it with the Supreme Commander of the Alliance.

"Kul'et had orders to gather what information he could, pass it back once he had the opportunity, and then wait for further

orders," Catra said. "So, we don't have to decide right now what misinformation he can pass back. But Apophis will have stealth ships on the way to Earth to watch the expected Horde attack. He might even move a fleet there in case there's an opportunity after the Horde and Earth destroy each other. We need to decide how to handle that."

Sha're nodded. "If Apophis thinks the battle was very costly for all involved, he won't be able to resist attacking the exhausted victor. Not only will he hope to recover Horde technology no matter who supposedly won, but taking Earth will enhance his prestige amongst his peers - and add a massive population to his realm."

"A population who will resist his occupation," Jack pointed out. "And we're rather good at making any occupiers' lives hell." Especially if they wanted to impose their religion on Earth. Hell, this would make Afghanistan look like a pleasure cruise!

"I doubt that Apophis would consider this," Daniel said. "That's not how it works in the Goa'uld Empire."

"He would expect the humans to bow to him once he has dealt with their leaders and armies," Sha're added.

"Then he'll be disappointed," Jack said. "We don't submit easily."

"His response will be brutal," Sha're replied. "He'll do anything to crush resistance. And Earth has so many people, he could kill a billion or more and still consider it a great addition to his power."

"Indeed," Teal'c said gravely.

"The loss of so many people would wreck Earth's industry," Carter objected. "The supply chains would already be in tatters after the Horde invasion, murdering more people…" She shook her head. "Earth might not recover in decades from such a blow."

"Fortunately, that won't happen," Catra cut in with a snort. "So, we have to fool Apophis into believing that either the Horde won easily or Earth easily defeated the Horde."

“If Apophis thinks Earth is strong enough to easily defeat an enemy who wrecked his own fleet, then he'll see us as much more dangerous than he thought - maybe a danger to the Goa'uld Empire,” Daniel said. “At the very least, he could portray us as such to his fellow System Lords.”

“He would try to set them on Earth in order to weaken both, just as he did with the Horde,” Sha're agreed.

“Guy's got no imagination,” Jack muttered. And the snake probably thought he was being clever instead of obvious.

“So, if Earth suddenly appears to be a great power in the galaxy, or at least tough enough to defeat the Horde remnants, that might cause the Goa’uld to address us with a united front,” Adora summed up.

“We don't want that,” Catra said.

“But a seemingly easy defeat of Earth at the hands of the Horde could have the same effect on the System Lords,” Daniel retorted.

“That would only mean a return to the status quo,” Sha're disagreed. “When Horde Prime was still alive.”

“But he was occupied with the First Ones back then,” Adora pointed out. “At least for the longest time. That wouldn't be the case now - if the Horde struck at Earth, the Goa'uld might expect them to strike at their own holdings next.”

Jack nodded. “And Apophis will try to use that as well to save his own neck.”

“It's still better than the alternative,” Catra argued. “The snakes won't know what the Horde might do, and how many are left, so they will be cautious until they find out more. So, we gain more time to prepare.”

“But the Goa'uld will prepare for a Horde attack. That means we'll lose the element of surprise anyway,” Carter said.

Catra shrugged. “That would happen sooner or later anyway. This way, especially with Kul'et on our side, we can control what Apophis will know, and through him, the other System Lords.”

It wasn't perfect by any means, and the brass and politicians back home wouldn't be happy, but that was war for you. Jack nodded. “So, let's think about how we can fake a Horde victory and occupation of Earth. Preferably one that makes Earth look like it's not worth another attack.”

“I don't think that's going to be possible,” Daniel said. “Earth has such a great symbolic value as Ra's ancestral seat, holding it, even if it lays in ruins, would benefit any System Lord.”

Jack frowned a little. “It's still better if Earth only has symbolic value rather than symbolic and economic and military value. So, any ideas?”

Carter suddenly stiffened. That was a bad sign - Jack was asking for ideas, not more problems. “Sir, I just realised there’s a problem with those plans.”

*****

Alliance Headquarters, Brussels, Belgium, Earth, February 9th, 2000

“...and so we can fake an occupation of the Solar System by the Horde.” Adora smiled at the assembled Alliance leaders. “Since the majority of the ships protecting Earth are Horde frigates, we won't have to change our troop deployments. We'll have to be more careful with how we deploy Earth-made ships, but since the Goa'uld haven't encountered them yet, even if they are observed, they won't be associated with Earth.” And all of them were descended at least partially from Horde designs, so anyone analysing them without access to a captured ship would likely focus on the similarities.

The British Secretary of State for Defence nodded. “We might have to cover the ship's name and pennant numbers, though. And

the flags, of course.”

“Yes.” Adora nodded. But that was standard procedure for any deployment anyway - at least until Earth's part in the Alliance was revealed. “We thought about using some of them to fake a naval engagement in the system to fool the stealth ships from Apophis which will be observing the Solar System.” Kul'et had confirmed that part. “ But that would hamper later deployment of the ships, and we don't want Apophis to think that Earth has naval yards - and that the Horde has taken them.”

Everyone nodded in agreement.

“Not that Earth has too many working naval yards to begin with,” Catra muttered next to Adora.

That was a bit unfair. Earth had many working naval yards. It was just that, with the exception of the British Flower II-class, they hadn't actually finished and commissioned any spaceships yet. The Americans were close with their Constitution II-class of frigates, though Sam had mentioned that their design still had some issues to be ironed out, and any fixes had to be applied to the other ships on the slips, delaying their completion. And the ships wouldn't be ready for deployment until they had enough space fighters to fill the hangars. The French were a bit more behind, but they were working closely with the British and last Adora had heard, they didn't expect too many troubles with their first design. The Germans were not quite as advanced, but they were both working on a stealth corvette and adapting the British transport design, so they had split their efforts. And, unlike the United States, the Europeans were all working with at least another, usually smaller country, which complicated matters a bit.

But that wasn't a topic for today's meeting. Adora forced herself to keep smiling as she went on: “But that won't help with the real problem: The radio waves Earth has been transmitting.”

She could see the assembled ministers react as they realised, some more quickly than others, what she meant.

“We've been broadcasting for years - including coverage of your arrival and the forming of the Alliance…” the American Secretary said, grimacing.

Adora nodded. “We've plotted how far the transmissions have spread, and while they haven't reached any systems occupied by the Goa'uld, and won't for decades to come, at which point they won’t be discernible any more, any ship sent to observe Earth from close by will be able to receive and understand them.”

“Like a radio telescope,” another minister said. “They'll be able to look into our past.”

“Yes.” Adora nodded again. “And we can't expand our sensor network fast enough to cover all that space. Not if we want it dense enough to spot their stealth ships.” Entrapta and Sam had been clear about that. Deep space was just too vast even for their magitech sensors.

“So what can we do?” the French minister asked. “If we couldn't do anything, you'd have started with that.”

“We can't count on spotting Apophis's stealth ships in space, and we can't stop the transmissions that were sent already. But his ships will need time to reach the Solar System. So, we need to ensure that when they arrive close enough to pick up the radio transmissions covering our arrival on Earth, Apophis cannot use whatever they receive any more.” She smiled as confidently as she could. “We’re planning to create a distraction so tempting, he won't be able to resist, and then we strike.”

“You want to take him out?” the German Minister asked. “A decapitation strike?”

“Yes.” Adora nodded firmly. “He's already suffered several defeats and is increasingly desperate. If we offer him a possible solution to his troubles, he's unlikely to resist.”

“And what are you planning to use?” The American Secretary was leaning forward.

“A Horde superweapon,” Adora replied. “One about to be used against Earth.” She saw their reaction, and clarified: “A fictive Horde superweapon constructed by us.” Leaking intel about it to Apophis would be tricky but not impossible with Kul'et's help.

“Ah.”

*****

Spacelab, Earth Orbit, February 9th, 2000 (Earth Time)

Samantha Carter brought up the latest schematics of Project Fortitude - she wasn't calling it ‘Project Death Star’ no matter what the General said - on the holoprojector inside the Spacelab. “This is what we currently have. If we use the Horde fleet trains manufacturing pipeline, we can build the hull from parts intended for the Velvet Glove mounted on a standard frigate. It would take a few days if we use an existing frigate, a bit longer if we purpose-build a frigate, though in that case, we could also adapt the structure and power generators for the project, which should enhance its effectiveness.”

Entrapta scrunched her nose while she studied the schematics. “Hm…”

Hordak tilted his head, then nodded. “It seems feasible. However, someone not familiar with the Horde would realise that it's not an original Horde design - Horde Prime would have never allowed such an aesthetically imperfect vessel to be produced.”

Samantha Carter pressed her lips together. She didn't think the design was that bad or ugly. “It's meant to be a prototype,” she defended her project.

“Horde Prime fixated on perfection. He wouldn't have shown, much less deployed, an imperfect design such as a prototype,” Hordak retorted. “Although I assume that Apophis is not as familiar with Horde Prime's character to know this, so this might work.”

“But it wouldn't work!” Entrapta blurted out.

Sam turned to look at her. “What's wrong with it?” she asked. Had she overlooked something? Missed a critical point?

“It wouldn't work! The ‘Core Cracker Cannon’ doesn't have enough power to actually crack a planet's core!” Entrapta shook her head. “It's just an upscaled regular beam cannon. But it's not upscaled enough. And the beam isn't focused enough to penetrate a planet's crust to the depth needed - in fact, the focussing crystal lenses are widening the beam. All this would do is create a hole in the ground, and not a very deep hole, either - the beam would lose cohesion way before it reached sufficient depth. You could continuously fire it for days and it wouldn't do much more!”

Sam cleared her throat. “It's supposed to be a decoy, not a working superweapon,” she reminded Entrapta. And a rush job. And it’s still more functional than the Navy's frigate design, she added in a fit of pique. At least this design would be ready to use sometime this year.

Entrapta frowned at her. “But if it obviously won't work, it won't fool anyone either!”

“I doubt Apophis would be able to tell that from the information he'll get,” Sam explained.

“We shouldn't underestimate our enemies!” Entrapta nodded at her own words. “Everyone says that.”

“We should not overestimate them either,” Hordak said. “I suffered a few setbacks early in my campaign when I misjudged the Alliance's response and had positioned my forces for a counter-attack that never came because they withdrew, and I had no forces ready to exploit that.”

Sam nodded, though she did feel a little torn about Hordak supporting her using his past as a warlord. “We can't exactly build a working superweapon for this,” she said - not for the first time.

“Well, we could, if we used an unstable dimensional portal, but deploying that from space is a bit of a challenge. It would be more like building a flying portal and landing it on the surface before activating it. And finding a way to replicate the dimensional interaction that allowed the portal on Etheria to almost destroy the planet would be tricky even with Beta’s support,” Entrapta said. “And that technology is banned, of course, because it's so dangerous,” she added.

The last line sounded a bit like Entrapta had learned it by rote to Sam, but that might just be her imagination. Still, better safe than sorry. “It was banned for a very good reason.” If research into something could destroy a planet - or more - if it suffered a mishap, you'd be insane or desperate to do it.

Or an Ancient, though their sanity obviously was in doubt.

“I concur. However, you said we could build a working superweapon?” Hordak sounded interested.

“Well, it depends on what kind of superweapon you want. If we combine the dimensional portal projector with the spy bot network for targeting, we should be able to compensate for the firing delay, but we would need to develop safe ways to quickly recharge the projector - it wouldn’t be very impressive if you couldn't fire it fast enough to destroy a fleet. It would need a larger housing and a lot more power than we can fit into the hull there, though.” Entrapta nodded. “And it wouldn't be able to destroy a planet unless you could keep at it until all parts were transported into another dimension, which would take a loooong time. It would be faster to just have a fleet bombard a planet, I guess, even if that wouldn't crack the core either. Anyway, it would probably not qualify as a superweapon. But! What if we combined a Naquadah-enhanced superbomb with a mass driver? Detonate it in the liquid part of the core of a planet, and the shockwaves should wreck the tectonic plates from below!”

Sam felt her stomach drop at the proposal. That was… theoretically possible. Building a bomb powerful enough to

achieve that wouldn't be too hard, but finding a way to deploy it to a planet's liquid core would be nigh impossible. “The bomb would never reach the core without being destroyed by the force needed to reach that deep,” she said. “And that kind of force would wreck the planet anyway.”

“Yes, that's the problem,” Entrapta agreed. “But if we manage to adjust the dimensional projector so the bomb is phased out of our dimension just long enough to pass through matter at the speed of a mass driver, it should phase back in just in time to detonate. The timing is tricky, and the speed needed is a bit above our current projections for such cannons, but if we focus on it, I think we could do it!”

“That would take a lot more time than we have,” Sam reminded her - and herself. “And we only need something that looks like a superweapon to bait Apophis.” Even though he already had a fleet to wreck planets with sustained fire. But a superweapon would appeal to his ego, according to the General. ‘They always go for the Death Stars,’ as he had put it.

“But it should look convincing!” Entrapta insisted. “So it needs to at least work in theory!”

Hordak nodded.

Sam sighed. “Let's see what we can do.”

This reminded her a bit too much of the US Space Navy design process.

*****

Royal Palace, Bright Moon, Etheria, February 10th, 2000 (Earth Time)

“So, Entrapta and Hordak wanted to build an actual superweapon?” Catra snorted as she closed the message and looked at Adora. “To better fool Apophis?”

"Yes," her love sighed.

"A *Core Cracker Cannon*?" Glimmer had found the message as well.

"Sam's supervising," Bow said - a bit hastily, in Catra's opinion.

Justified, of course - Glimmer looked quite disturbed. Which also was justified - she knew, as did Catra, of course, how close Etheria had come to destruction because of 'superweapons'.

Catra pushed the memory away. "It's being handled. Besides, not even those three can build a superweapon as quickly as we need it. Just building the decoy will take a week if we screw up the logistics of our fleet."

"You sound remarkably unconcerned about that." Glimmer narrowed her eyes at her. "Especially after telling everyone how crucial those supply chains are."

"It'll be good training for when we launch the first offensive," Catra replied with a shrug. "Teach the Alliance to deal with the chaos of a campaign." Most of the Alliance members had never fought an interstellar war, much less on that scale. The clones had, of course, but it had been a while for them as well, and they would have to adjust to fighting in an Alliance. And without Horde Prime jumping into bodies to handle things in person. She flashed her teeth. "But, speaking of crucial things for the war…"

Glimmer scowled at her. "We haven't decided yet."

Catra rolled her eyes for a moment. "You mean you haven't decided yet if you want to stay queen."

"It's not that simple!" Glimmer defended herself. "Mom and Dad are still working things out."

Meaning, Angella was still trying to learn how to fit in after her return to Bright Moon, Catra mentally translated. She didn't say

that out loud, of course. Instead, she smirked. “So, that’s what you’re calling it in Bright Moon. ‘Working out’.”

“Catra!” Adora was blushing.

Glimmer, though, snorted. “They haven’t seen each other for over a decade and thought the other was dead.”

Bow looked a little embarrassed, but Catra nodded. “More seriously, though: We need to sort out our chain of command before we pull off a major operation.”

“I know,” Glimmer spat.

“And if Angella is too ‘busy’ with Micah to rule…” Catra trailed off.

“Nothing’s going to change for now,” Glimmer stated the obvious.

Catra shrugged and let the matter drop - for today. She’d return to it tomorrow, and keep at it until things were settled.

Adora cleared her throat. “Anyway, we’ve done preliminary planning with Priest for the space battle - a skirmish, actually. We’ll make a light show and have Kul’et leak that Earth has driven off an attack, but the Horde is bringing in a superweapon.”

“Why would we know that?” Bow asked.

“Because Hordak bragged about it to scare Earth into surrendering,” Catra explained. “But they won’t surrender, of course. Horde Prime probably wouldn’t have bragged like that, only after the deployment, but it would fit an underling trying to fill his shoes.”

“Priest wanted to write the dialogue, but Hordak declined,” Adora added with a wry smile.

“Is Priest working on the fake space battle?” Glimmer asked.

"Yes. Faking the weapons is easy - we'll just power down the beams some. But ideally, we'll need empty frigate hulls to blow up," Catra said. Or actual frigates, but blowing up a working frigate while Earth was struggling to build smaller warships and the Tok'ra had to make do with what small ships they had managed to scavenge and steal probably wouldn't go over well with the rest of the Alliance.

"Fake ships and a fake superweapon? That's a lot of effort and resources to fool Apophis," Glimmer said.

"We're not just fooling him - if all works out, we'll capture him," Adora said.

Or kill him, Catra added. Apophis wouldn't escape.

"You think he will visit the fake superweapon himself?" Glimmer frowned.

"He won't be able to resist," Catra said. "And then we'll get him."

"Ah." Glimmer nodded, then looked at her tablet again. "I think that's all the important stuff we had to cover."

"There are several important memos and reports left!" Adora protested.

"That can be handled by the staff," Glimmer said. "I'm not dealing with altercations between clones and Earth nutcases over religion. Not unless they turn into riots or someone gets seriously hurt. Or they become more frequent than once every two weeks. We're not going to run the war according to what Earth media are screaming about on any given day."

Adora pouted, but Catra nodded. Glimmer was right.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, February 11th, 2000

"...and protestors have been gathering outside the local military base. They demand that the, and I quote, 'heathen aliens' are banned from visiting the county. So far, the commander of the base has not responded to our requests for a statement."

Jack O'Neill rolled his eyes. "That's because the whole incident has nothing to do with him or the base, you moron!" The clone whose proselytising had started all hadn't even visited the base. Nor had the 'Alliance military police unit' that had responded to save the clone bothered to check in with the base before breaking up the mob. No wonder the base commander was doing his best to keep out of the line of fire of this mess - no matter what he said, someone would take offence.

And it wasn't a big deal, anyway. The clones hadn't killed or seriously hurt anyone, even though they hadn't been gentle in dispersing the lynch mob. Not even the preacher who had riled everyone up. Jack wasn't sure if one of his commands had been able to do that, especially one that had only recently - as in five minutes before deployment, and Jack wasn't checking too closely if that had been backdated - been converted into a military police reserve unit. For once, Priest's skill at politics had come in handy.

Though Jack also couldn't shake the feeling that the clone missionary hadn't visited that particular town by chance. The clones usually stuck to big cities, at least in the USA. Or to the towns and cities outside the major Alliance bases - Brussels was about to build the first church for the Church of She-Ra, last he had heard, and the only reason Hamburg wouldn't beat it was that the German bureaucracy took longer to issue building permits.

Either way, it wasn't his problem. Or much of a problem at all. Despite the best efforts of certain members of Congress and parts of the media, those things never lasted long—something else Jack didn't really want to examine too closely.

He switched the channel and leaned back in his chair.

"...The United Nations General Assembly debated another resolution that would demand that control over the Stargate passes to a 'multi-national committee', as of yet not defined. It is not expected to pass but has the support of most African and Middle Eastern member states as well as Russia and China, and…"

In other words, no news from the United Nations. Some people just couldn't accept that they lost. As long as the sore losers stuck to trying to pass resolutions in the United Nations, nothing would come of it. And if they didn't and escalated… well, you'd have to be a suicidal moron to start anything with the Alliance if you didn't have a fleet of spaceships with big honking guns of your own. So far, even the Iranians had behaved rationally in the face of that.

"...the announcements of extensive naval exercises near Earth have raised concerns about the state of the war. The Alliance has not been very forthcoming about their operations, and rumours about a failed invasion continue to spread despite several statements of the Alliance Headquarters refuting them."

"...people demand the truth! What is happening out there? Where are our boys fighting? And whom?"

"...with the Alliance refusing to reveal where our tax dollars are going, fears of widespread corruption are common. Several experts have cited historical and current examples of how vulnerable autocratic governments such as absolute monarchies are to systematic corruption and voiced concerns about the Etherian members of the Alliance, especially in light that the vast majority of funding for the Alliance comes from Earth, and…"

Yeah, Earth funded the lion's share of the Alliance's costs - provided you didn't count all the spaceships. Or the frankly priceless support by their magical princesses.

Jack clenched his teeth. Damn! He didn't want to think about magic. He sat straight and gripped the closest memo on his desk. Already handled. As were the next two. He was actually up to date with his paperwork! And it wasn't a good thing.

He switched the channels again, but the report about local and global businesses profiting from the war was just rehashing things he already knew and did so in a particularly boring, buzzword-filled manner.

Not enough to keep him from thinking about magic. And Ancient genes. And subordinate scientists taking time out of their very busy schedules doing important research for the war to bother Jack about it. How often did he have to tell Carter that he was fine? No mutations, no weird magical effects happening - magic didn't start 'leaking' if you didn't use it. He had asked Castaspella that long ago. Besides, it wasn't as if Jack had magic. He had the talent to use magic if he wanted to. But he didn't want to.

Learning how to cast spells would take too long, anyway, even if he wanted. Jack would have to quit his post and move to Etheria. And that would mean leaving his people in the middle of the war, and good officers didn't do that.

Someone else, someone not Jack, someone who wanted to, could learn to do magic instead. It wasn't as if Mystacor had unlimited teachers, anyway. So, it was better to let others with the talent, younger people who weren't generals, learn magic.

Even if they didn't have the same potential as Jack.

He nodded at his reasoning. Not learning magic was the right decision.

A beep from his computer alerted him of another message arriving. Work!

Smiling, he opened the mail. Another proposal from R&D for special equipment for Special Forces? Those always were fun. "Let's see what they cooked up this time…" He blinked, then frowned. 'Special magitech equipment' sounded good, but 'dependent on a user's magical potential' sounded…

…like Jack had to ask a few people in the know a few questions about confidentiality. Pointed questions.

*****

The Double Cross Part 4

Solar System, near Earth, February 14th, 2000 (Earth Time)

Adora watched carefully as the shuttle flew alongside the hull to their side. Up close, the decoy superweapon did look impressive. At least if you had never seen Horde Prime's flagship before it had been turned into a plant. Adora hoped that Apophis wasn't familiar with the Velvet Glove. Even so, the superweapon was three to four times the size of a Horde frigate, which was impressive for a Horde ship. But compared to the superweapons Jack had shown them, it wasn't that big. Of course, those were fictive superweapons, not real ones. Then again, this was a decoy, so it wasn't a real superweapon either. Just real enough to fool Apophis. Hopefully.

And it was a pretty functional decoy. The hangar doors opened smoothly as their shuttle approached, and the forcefield keeping the atmosphere from venting into the vacuum barely flickered when the shuttle entered the hangar. Of course, none of the people involved in its construction would accept shady construction. The only part that didn't work was the Core Cracker Cannon.

They touched down, and Adora saw a formation of clones line up on both sides of the ramp as it descended.

“Supreme Commander!” the officer in charge of them saluted. “Welcome on board the Piledriver.”

Adora smiled at him and returned the salute.

“Hello, Adora! Hi, Catra!” Entrapta waved at them while Hordak and Sam, standing at her side, nodded. “How do you like the not-fully operational battle station?”

“Isn’t it a little small for a Death Star?” Catra commented with a grin.

Sam frowned at that, Hordak didn't react, and Entrapta pouted. “Jack made the same joke already,” she complained. “It’s not our fault! If we had had more time, we could have made it fully operational.”

Sam cleared her throat. “It's a fully functional *decoy*. It's not meant to wreck planets.”

“But Jack said…”

“The General was joking.” Sam pressed her lips together.

“Is he still carrying a grudge over the magitech weapon proposal?” Catra asked.

Adora frowned. “I thought that had been cleared up. The timing was just a coincidence; his medical data wasn’t leaked.” The research proposal had been written up before the… magic incident Adora was responsible for. And technically, it was Jack’s complaint that had revealed what had happened to him. Though it would be unfair to mention that to him.

“It's a sore subject,” Sam said in a tight voice.

“Ah.” Adora nodded, suppressing a wince.

“He'll come around once he can blast stuff with magic weapons,” Catra said.

Sam nodded with a faint smile. “I guess so.”

Entrapta, however, beamed. “Oh, yes! We've gone over the proposals - those will be great!”

Adora agreed, but they weren't here to discuss magictech gear. They were here to inspect the decoy superweapon. “So, show us

around?” They had seen the plans, but this was the first time Catra and Adora were on board the decoy.

“Of course!” Entrapta nodded several times. “Let's start with engineering! We've used a standard propulsion array, standard for a Horde frigate, so it's kinda slow, but we've improved the shields in exchange. And since the main weapon is a decoy, we could install a more powerful reactor, and so the shield is far stronger than a frigate's!” Entrapta led them down the hallway. “So, it can take a beating. But it's not actually that much better protected compared to a frigate - since it's so slow, it's also an easier target. Even with all the electronic countermeasures we installed. Though those are mostly to keep Apophis from detecting the hidden troop compartments. Which we built into the reactor room. The interference from the reactor and the shielding from it should help counter any sensors.”

Adora frowned. “Isn't the shielding supposed to protect us from the reactor's radiation?”

“Yes!” Entrapta nodded. “But it will also block scans. And we left enough around the reactor, so it's still within Horde safety regulations.”

“Horde Prime's or Hordak's?” Catra asked.

“Mine,” Hordak told her.

“Good.” Catra grinned. “I wouldn't trust the safety regulations from Horde Prime.”

Adora nodded. That man had seen all his clones as expendable, after all. “And I can heal everyone afterwards, just to be safe.”

Catra snickered. “Jack will love that.”

Adora frowned at her - making fun about Jack's fear of being magically changed wasn't nice - but Sam nodded. Firmly. Maybe she carried a grudge as well about the misunderstanding?

Maybe Adora should talk to them. They shouldn't start a dangerous mission with such tensions in the team.

*****

Solar System, near Earth, February 15th, 2000 (Earth Time)

"...So, the decoy battle station is fully operational?"

"Yes, sir." Samantha Carter kept her face impassive and didn't smile at all at the General's joke. "All systems are operational - including the shielded troop compartments." She pointed at the holographic projection behind her in the cabin currently serving as her office on the decoy.

"Which not even semi-portable scanners the size of a crate would find, right?"

"None of the known scanners the Goa'uld use can penetrate the shielding, sir," Sam replied. "All they will detect are the decoy readings we prepared - meaning, they'll see additional power supplies for the main gun," she added before the General could ask. "Although if you desire additional proof, you can attend the testing with the Tok'ra we've scheduled for later today."

"Ah, that won't be necessary. I trust you, Carter."

She pressed her lips together. As he had trusted her not to reveal his condition to others? She'd never break his confidence like that! It was petty, she knew, but he should have known better than even to ask.

Something of her thoughts must have shown on her face since she saw him wince for a moment. "So… everything's ready for the mission. All we need is Apophis to bite."

"Yes, sir."

"Good."

A moment passed without either of them saying anything. She didn't like how awkward it felt.

"So… if we needed, could you and Entrapta rig the main gun to actually fire?"

"The main gun is functional, sir," she replied. "It just doesn't have the power its size would indicate since most of its volume is taken up by the troop compartments and other secret systems. Otherwise, it's a standard main gun used on Horde frigates." He knew that.

"Yeah, I know. But could you, you know, have it shoot at that kinda power if we needed it? By overloading it, or something?"

"No, sir. That would merely melt most of the gun - including the troop compartments."

"Ah." He nodded, then grinned. "Good job on keeping Entrapta from making an actual superweapon. Wouldn't want to blow up a world by mistake."

She frowned at him. That was an unfair comment - Entrapta knew better than that. "The only way such a weapon would have been actually used would have been if Alliance Command decided to use it. Entrapta would never use it on her own." And Adora would never condone such a course of action. She would never sacrifice a world to win a war.

"Not even to test it?"

She frowned again. "None of us would test it on a planet, sir." It would bring up too many memories. Of Etheria's near-destruction. And of planets left destroyed at Horde Prime's command.

"Good." He sighed. "Several people who know about this operation are quite interested if such a weapon could actually be built."

“My report shows that it’s theoretically possible - provided quite extensive research proves the viability of several assumptions critical to the concept,” she said. “The cost of this research, both in resources and time, cannot be estimated with any degree of certainty at this point, but even the most optimistic estimate is substantial.”

“Yeah, I’ve seen the numbers. Though that won’t stop people who really want their second Project Manhattan. Especially if it results in an actual Death Star.” He shrugged. “Though some of them probably just want a big cut of the money which would poured into such a project and don’t care if it ends up working.”

Sam nodded. She was aware of this kind of… it wasn’t technically corruption, but you could make a case for it being embezzlement. Though given past practices in the USA with regard to procurement for the Armed Forces, it would just be seen as business as usual - few such projects did not end up costing far more than promised.

He shrugged. “Well, not this one. Our Etherian friends have a kind of chip on their shoulders about blowing up planets. The Alliance won’t be funding research into planet busters.”

Or other weapons of mass destruction, though the definitions of what was a weapon of mass destruction tended to be a bit fluid when it concerned space combat. Any weapon system that could destroy a large spaceship mounting force shields would easily lay waste to an unshielded city - or landscape. And if you had a fleet of ships designed for such battles, an orbital bombardment could destroy a planet’s biosphere.

“They wouldn’t take kindly to independent research into such weapon systems, either, sir,” she said.

“I know. And so does the President. But do you think this will stop Kinsey’s cronies?”

She pressed her lips together. "He has been quite vocal about not alienating our allies, sir."

"Yeah, which means he thinks he can distance himself from whoever is doing this if it gets out," the General replied.

"Such research requires highly specialised and experienced scientists, apart from access to advanced technology, sir. And actually testing even rudimentary power systems advanced enough to power such a weapon would show up on our sensors the moment they are switched on for the first time."

"I hope you're right, Carter." He shrugged. "But it won't stop people trying it. Ours, the Russians, the Chinese… Like every damn dictator who wanted nukes, they won't feel safe until they have something to make the Alliance back off from meddling in their 'domestic matters'."

Sam knew that. But she didn't think they would succeed. Not without a lot more advanced technology available and a lot more research. But she also knew that sooner or later, both would be available.

"Anyway, I've picked my teams for this mission. I'll send them up so they can get settled in." He nodded at her. "Good work, Carter."

"Thank you, sir. I'll pass it on to Entrapta and Hordak."

Another nod. He turned, then stopped. "Also… sorry about, you know. I overreacted."

She hesitated a moment, then nodded, smiling a little, and he left the cabin.

*****

Royal Palace, Bright Moon, February 15th, 2000 (Earth Time)

Catra felt surprised. And wary. She had been all set to insist on coming with Adora to the meeting about Bright Moon's crown, argue that they needed some outside opinion, from someone who wasn't a princess, who had different experiences and perspectives, and whatever other argument she could pull off without coming across as a blatant liar (such as claiming she wasn't biassed in favour of either Glimmer or Angella), but no one had said anything about her walking in at Adora's side.

In a way, it was almost disappointing. But she was in, and with Adora, and that was what mattered. Someone had to keep the bigger picture in mind. And keep Adora from being manipulated - Catra wouldn't put it past Angella to try to act like… like Shadow Weaver, all understanding and caring, and praising, when she wanted something. She still had to find out why, of all the Horde people, Shadow Weaver had been alive in the other dimension - and not exiled, but at court.

But that could wait until this was settled. Maybe a bit longer - with the decoy operation coming up as soon as Kul'et could credibly pass the information Earth supposedly had managed to find about the Horde Superweapon on to Apophis, Catra would rather not create a potential mess.

She sat down next to Adora, scooting her chair a bit closer so her tail could wrap around Adora's calf under the table. On Adora's right were Angella and Micah, on Catra's left Glimmer and Bow, both sides facing each other.

“This feels like a trial,” Catra whispered so only Adora could hear.

Her lover didn't say anything, but Catra felt her tense up. Damn. She had meant it as a joke.

“So!” Adora cleared her throat, smiling forcedly, and nodded at everyone and no one at the same time. “We're here to discuss the succession of Bright Moon's throne.”

“Also known as Bright Moon family therapy,” Catra quipped under her breath.

This time, Adora coughed and glanced at her with a small frown.

Catra knew she was right, though - this wasn't about precedent or law since Bow hadn't found anything about it. The only known case where a princess had returned after a successor had been enthroned had happened seven hundred years ago in a remote kingdom that wasn't around any more - the civil war that had settled the succession there had wrecked it, and the following conflict with Plumeria had resulted in the kingdom becoming part of the ruins found in the Whispering Woods.

No, this was about what Angella and Glimmer wanted.

As if she had been reading Catra's thoughts, Angella nodded and spoke up: “Yes. And as I have said before, this is Glimmer’s decision.”

Catra pressed her lips together. Angella kept insisting that only Glimmer's wishes mattered, but Catra couldn’t help wondering what would happen if Glimmer decided something Angella thought foolish. Well, at least she couldn't easily go back on her word after she had said this, so Glimmer had this in the bag.

“It's not just my decision,” Glimmer retorted.

Catra clenched her teeth and hissed under her breath. Of course, Glimmer just couldn’t run with it!

“It is. You are the crowned queen of Bright Moon. You passed the test - both on coronation day and by ruling the kingdom,” Angella said.

“That's a formality!” Glimmer spat. “I'm talking about family! You're my mom!”

Hah! Catra gave Adora a look that her lover pointedly ignored, though Catra could see her cheeks heat up a bit.

Angella looked taken aback a bit, her eyes widening for a moment before she nodded with a soft smile. “That doesn’t change anything. You're no longer a child, Glimmer. You have proven you are a queen. The kingdom prospered under your rule. Or do you disagree?”

Glimmer visibly clenched her teeth.

Catra stared at her. This was what they needed - full approval by the potential contender. Just accept it! she silently urged her friend.

“Look, it’s…” Glimmer trailed off, frowning. Probably at herself. “I only got crowned because you sacrificed yourself! Not because you thought I was ready for it!”

Once again, Angella looked surprised - maybe even a little confused. Well, so felt Catra. “And then you proved you were ready when you ruled,” Angella said while Micah nodded.

“I almost got Etheria destroyed when I listened to Shadow Weaver!” Glimmer blurted out. “I was just lucky things worked out as well as they did!”

Catra blinked, then snorted. “Join the club!”

“Catra!” Adora frowned at her.,

But Micah chuckled, ruefully. “Shadow Weaver was a master at manipulation. I think of all of us here, only Bow never fell for her lies.”

“Ah…” Bow blushed a little. “I did think she was genuine when she claimed to join the Alliance.”

“But she never manipulated you into making a really stupid decision,” Glimmer told him.

“She never tried.”

Adora was looking down at the table, Catra realised. Probably thinking about their childhood. And blaming herself for what Shadow Weaver had done. “Don’t be an idiot,” Catra whispered, reaching over to squeeze Adora's thigh. “It wasn't your fault. You were a kid.” Catra, on the other hand, had fallen for Shadow Weaver's lies even as an adult - she should have known better.

“I also trusted her,” Angella said. “Even when I stepped through the portal, I thought she had turned over a new leaf. To find out later that she had not changed, still pursued her own goals no matter the cost to everyone else…” Her lips formed a thin line. “If I had known that, I would have treated her very differently in the other dimension.”

Catra slowly nodded. That explained things. Not everything, of course.

“So we all fell for her lies. That still doesn't settle things!” Glimmer insisted. “What do *you* want, Mom?”

“I want you to be happy, Glimmer.”

“How can I be happy if I steal your throne?”

“You earned the throne, Glimmer. It's not stealing if I hand it to you voluntarily.”

“But…”

“Oh, hell!” Catra blurted out. “She told you you did fine! Now stop waffling and say you'll keep ruling Bright Moon so Angella and Micah can keep catching up on all the sex they missed!”

“What?” Glimmer gaped at her.

“Catra!” Bow gasped.

“CATRA!” Adora snapped.

And Angella stared, blinking.

But Micah laughed, wrapped an arm around Angella's waist and pulled her into his side. “She's right about that, Glimmer.”

“Dad!”

“Micah!”

Now both Glimmer and Angella were blushing like mad. Adora as well.

But Glimmer had shut up about trying to talk herself into not being queen.

Catra considered this meeting a success.

*****

Alliance Headquarters, Brussels, Belgium, Earth, February 16th, 2000

“I'm missing the healing potions,” Jack O'Neill joked as he put the file down on his desk.

Dr Leary, the scientist sitting across from him coughed. “We actually did consider such a project - there was some preliminary research into it since magical potions are relatively prominent in myths on Earth and also feature in various emerging magical traditions here.”

“I was thinking of the things in computer games.” Jack smiled as blandly as he could.

Leary grimaced, so he probably hadn't noticed that Jack was joking. That was par for the course - the man was overly serious. Why he had been sent to a meeting with Jack was anyone's guess. Maybe office politics. Or just politics - the man was working for DARPA, after all, which was one of the holy grails of any Defence lobbyist. “The obvious advantages of such an item are, well, obvious. But if we look at the existing magitech healing items, the risks of such are also apparent.”

“Yeah, we don't want people turning into zombies after curing a paper cut.” Jack nodded with a snort.

“Quite.” Leary smiled forcedly. “In any case, we did some preliminary research, but most of the healing potions, I mean the potions most similar to those which are worked on by practitioners of magic on Earth, are meant to, ah, cure sicknesses or alleviate some debilitating or painful conditions, instead of mending wounds.”

“Medicine, in other words. And we have lots of that already,” Jack said.

Leary nodded. “Indeed. Alternative ways to treat influenza or the common cold might appeal to a certain demographic, but unless such remedies are far more effective than current medical solutions, spending money on them would be a waste.”

Jack nodded. That wouldn't keep rich fools from spending a lot of money on such potions, of course. Magic was the new fad, at least outside religious circles, and anything magical sold like hotcakes.

“So, for now, it has been decided - mutually, Mystacor's delegation agrees - that the Alliance wouldn't finance research into, ah, healing potions or other magical potions. Recruiting sorceresses trained in healing magic should already be a priority for the Medical Corps, anyway.”

That didn't mean they had too much success at it, though - Jack had seen the numbers. Not even his command had received nearly as many such recruits as he had requested. And his people would be operating behind enemy lines and in other places where medical evacuation wasn't expected and really needed healers.

But that wasn't the point of this meeting. “Well, the magic items on the list seem interesting,” he commented.

Leary winced. “They're magitech tools.”

Jack shrugged. “They do magic when you activate them - or are supposed to. That makes them magic items.” His soldiers certainly would call them that. “And all the magitech items I know don't need special genes to be used.” He narrowed his eyes slightly.

“Ah, yes!” Leary perked up. “That's actually a result of the main difference between, say, the magitech scanner the Alliance uses and the proposed tools. With the scanner, you push the button, and it tells you what it scanned. Like a computer. With our proposed tools, activating the item creates a magical power of sorts, but it's up to the user to actually aim and use that power so it achieves the desired effect. And that requires a certain genetic disposition.”

“A talent for magic, you mean,” Jack said in a flat tone.

Leary nodded with a smile. “Exactly! People who could, with the right training, learn to cast spells.”

People like me. Jack drew a deep breath through clenched teeth. It had been a coincidence, he reminded himself, that the proposal had first crossed his desk so close after he had found out that his genes were changing. He had already overreacted and made Carter mad; he wouldn't make the same mistake again. “We generally want them to learn how to cast spells,” he said.

“Oh, yes.” Leary nodded. “That would be ideal, of course. But as you know, the opportunities for magical education are currently rather scarce, even with help from Mystacor. We can only send a handful of people to Etheria, and Earth's own magical institutions are still in the process of being built and not up to taking more than a few students for rather experimental lessons.”

“So, you'd rather use them for experiments with magitech?” Jack’s tone was, maybe, a bit sharper than it should have been, but he kind of had a personal stake in this.

“Yes!” Leary nodded again, smiling broadly. “If we can create such items, we can drastically shorten the time needed to field magical

support for our troops. All it would take is a recruit with the talent, magic gear and time to train with the gear - nothing too different from existing specialist training."

Any fool could see the advantages, and Jack wasn't a fool. And, of course, it would also mean that when the war was over, and the soldiers were getting demobilised, unlike trained sorceresses, those kinds of magic-using soldiers wouldn't be released into civilian life with the power to throw fireballs at their fingertips. Not until they trained as actual sorceresses, at least.

Yeah, Jack could see this proposal's advantages. Even if he didn't like it. "And how likely is this to work out? In time to be used in the war?"

Leary's smile twisted a little. "Well, it's a new field of research and development, so we can't make exact predictions, but we're quite optimistic that we'll see tangible results in time to be fielded. Mystacor's researchers are very interested in this as well, so we have experienced people working on this."

In other words, this could be pie in the sky. But the potential was so obvious, and with Etheria backing the idea, Jack knew trying to block this would be pointless. Better to get on board so he could keep an eye on this - he had mixed feelings about those 'tools', but he would rather not end up fighting zombified test subjects because no one ran herd on a bunch of mad scientists. If his people were to use those things, Jack would make sure they were safe. Even if he had to use his stupid alien genes for it.

So he nodded and gave Leary his best fake smile. "Well, you have my support, Doctor."

"Thank you, general!"

*****

Asteroid Belt, Arealis-System, February 18th, 2000 (Earth Time)

Adora looked at the crates being lowered to the deck of the ‘Steel Fist’ - Hordak's idea; he claimed the name would fit Horde Prime's naming scheme best - and managed not to wince. The bodies inside the containers had never been alive, so they weren't really corpses, and they hadn't been cloned in the Horde pods but had been grown in Alpha, but they looked the part.

That was a good thing, of course - in order to really fool Apophis, they couldn't just pretend the entire crew had evacuated; some corpses had to be left - but they really looked the part. Some were torn up, some showed the typical signs of ‘explosive decompression’, as Sam had called it, some were riddled with bullets… the ones that were supposed to have died from suffocation were the least bad to look at.

“They were really thorough in preparing this,” Catra commented, peering at the closest container's glass lid. She acted cool, but Adora could tell that she didn't like the sight either. “I'd be worried if I didn't know this was mostly Alpha’s work.”

Adora blinked. “You're not worried that Alpha did this?”

Her love shrugged. “We already know Alpha would do whatever she thought was needed for her projects no matter how wrong if she were allowed to.”

“Ah.” Adora nodded. Catra was correct - Alpha had been following their orders, well, Adora's, to the letter, but it was obvious that all she cared about was her research and that she had no moral or ethical restrictions. Not that that was her fault, of course - the First Ones had built her like this - but it was still a potential problem. And yet… “It's better than the alternative.” Some clones had volunteered to stay behind! Adora and Priest had set them straight, but that had been a shock. The last thing Adora wanted was for people to sacrifice themselves for her!

Catra checked her tablet. “Well, everything's proceeding according to schedule. Kul'et's report should be reaching Apophis today, unless his people are not quite as competent as we assumed.”

Adora nodded. And then, Apophis would think Stargate Command was about to launch a desperate mission to take out the superweapon before it could be deployed against Earth - using information that would allow him to swoop in and take the superweapon for himself. Everyone agreed that he wouldn't be able to resist the temptation to show up both the Horde and Stargate Command. And the timing was tight enough that Apophis couldn't hesitate too long, or he'd lose the opportunity - this system was just close enough for his forces to be diverted here instead of closing in on Earth.

But Adora couldn't help worrying that the timing might be too tight. Sure, the plan allowed for delays, and the scripted attack had several points where the supposed boarding action by Stargate teams would be stalled to give Apophis's forces more time to move in, but the plan was a bit more complicated than Adora would have liked.

"The Imperial Japanese Navy would have loved it," Jack had commented.

Daniel had disagreed with that, but his explanations had made it clear that Jack hadn't been that far off.

"So, the crew casualties are ready to be placed," Catra said. "And the bots should soon be done with the supply station on the ground. We're ready to move into the troop smuggling compartments as soon as we get word that Apophis is starting his operation."

Adora nodded and turned to look through the force field separating the cargo bay from space. She could see the hull that served as the Steel Fist's escort in the distance. It would be blown up as soon as the mission started. At least they didn't need any fake corpses for that part.

Everything was ready or almost ready. And yet… "I wish we could just go straight for Apophis," she said.

Catra shrugged again. “He's prepared for that. We won't be able to sneak into his palace again, and a frontal assault would cause too many civilian casualties - and allow him enough time to escape. But if he thinks he's fooling us, he'll be vulnerable.”

Adora knew that. The Alliance command council had argued about this almost as much as they had argued about Adora and her friends leading the mission. As if she'd let anyone else risk their lives without her when she was needed!

She just preferred a less complicated plan. Even cadets learned that you could never anticipate everything. You could just do your best and improvise when needed.

*****

Asteroid Belt, Arealis-System, February 20th, 2000 (Earth Time)

Samantha Carter stared at the holoprojection above her laptop, which showed the Arealis-System and the projected course of Apophis’s fleet, confirmed by the spy bot network. Five minutes out according to their best estimate.

She zoomed in on the asteroid belt with a few keystrokes. Tiny projections of the “Steel Fist” and its escort appeared, followed by even smaller projections depicting the two Tel’taks that had docked to both ships.

“Are they there yet?” the General asked. He was sitting back in his seat, hands on the back of his head as if he was bored, but Sam knew it was an act. Same as Catra’s ‘snoring’.

“Not yet,” she replied. “Approximately four more minutes.”

“You said that last time I asked!”

She snorted, once, and switched her attention to the screens showing the interior of the ‘Steel Fist’. The cloned corpses had been placed, and the boarding team was doing a good job of

shooting up the hallways around the bodies. They didn't stray too far from the airlock where the Tel'tak was docked, of course - they would have to retreat quickly once Apophis's ships arrived.

The team on the hulk serving as a decoy escort was doing the same, but since that hull would be blown up, they weren't quite as crucial for fooling Apophis's troops as the team here. If Apophis realised that this was staged…

She pressed her lips together. The stealth compartments built into the fake superweapon were shielded, but against sensors and small arms fire, and the shields of the "Steel Fist" wouldn't last long at all against a bombardment from multiple Ha'taks. If the "Steel Fist" came under fire, they would have to scuttle it using the charges built into the structure and hope that the debris would fool Apophis and allow the compartments housing Sam and the others to be picked up later. Entrapta and Sam had added stealth generators as a last resort, but even if they worked perfectly, they wouldn't stop a stray shot from hitting them.

Sam wasn't really fond of the odds she had calculated to survive this. At least if things went very wrong, not all her friends would die with her - Entrapta had been left behind to work on their projects with Hordak and the rest. It was just the SG-1, with Sha're, and the "Best Friends Squad" here, with two fire teams from the General's command added.

A beep drew her attention - and made the General and Catra sit up at once. "Enemy fleet exiting hyperspace in ten seconds," she reported.

"Showtime. Literally," the General commented with a toothy grin.

Then the holoprojection changed, fourteen Ha'taks appearing with two dozen Al'keshs surrounding them. She checked the distances - a few minutes, at most, until they would reach them. Two minutes for the Death Gliders already shooting out of their hangars.

The General wanted five seconds, then pushed a button on the radio in front of him. "O'Neill speaking! A Goa'uld fleet has just appeared. All teams, withdraw at once - the mission is scrapped!"

Another voice protested. *"Sir! We only need a few more minutes!"*

"We don't have them, O'Malley! Withdraw - this is an order!"

"Yes, sir!"

The General deactivated the radio and chuckled. "O'Malley must have been channelling his annoyance that he couldn't join us."

"Do you think Apophis is tapping into our radios, Jack?" Daniel asked.

According to Kul'et, the Goa'uld were monitoring the radio waves but didn't have the capability to break their encryption in real-time.

"It never hurts to go the extra mile," Jack said. "Though if he were, I think he would be taunting us right now. Or demanding our surrender."

"He might have decided that the risk of facing SG-1 again is higher than the danger of an underling betraying him and taking the superweapon for themselves," Teal'c commented.

"As long as he comes to check out his new toy as soon as he has secured it, that's fine," the General said.

Sam agreed. If they only had to fool his most fanatical Jaffa and not Apophis himself, that would improve the odds of their success.

The Death Gliders were racing towards them. Their speed was actually higher than expected, if not by much. Sam still frowned as she logged the data. Still not fast enough to reach the ships before the Tel'taks could undock and cloak.

Which the one docked to the Steel Fist just did, followed ten seconds later by the one docked to the escort. As both cloaked - their holoprojections changed colours - the fake escort blew up.

The Goa'uld fleet was still coming at them at full speed. The Death Gliders were firing blindly at the last position of the Tel'taks and the space around them. Fortunately, the cloaked ships had already gained enough distance that the shots went far too wide.

Sam turned to look at Adora. "Escape pods ready to be launched."

Adora nodded. "Do it."

Sam gave the order with a push of a button. The ship was too big to feel any reaction from the escape pods being launched, but she could see the pods, all of them carrying at least one cloned body, on one screen and track their courses on the holoprojection.

They didn't make it far - half the Death Gliders turned and started shooting them. A few blew up, but others began leaking atmosphere or trailing debris. "They're trying to disable them," Sam reported. "Initiating self-destruction routines."

The disabled pods began to blow up as their communicators broadcasted pre-recorded defiant messages.

"You will never take us alive!"

"Glory to Horde Prime!"

Sam muted them. "Decoy scuttling charges ready."

"Trigger them," Adora ordered.

Sam did. This time, the ship shook as the bombs they had placed in the outer hull went off, simulating a failed scuttling.

She straightened. "Charges detonated as planned."

"Thank you, Sam."

Now, they only had to wait until the Jaffa boarded them. And hope that Apophis's commander didn't decide to just destroy the decoy.

*****

It was working. The plan was working. Catra clenched her jaws and tried to ignore how her tail was swishing back and forth as she watched the holoprojection showing Apophis's forces close in on the "Steel Fist". The icons for the escape pods were fading out one after another.

She glanced at Melog. Her friend reflected her own mood. Damn. She had to calm down. Even if just waiting for others to act was a pain. No, not the waiting - the hiding in a defenceless decoy.

She had to focus on the situation instead of worrying. "The Death Gliders keep trying to disable the pods even though that only makes them self-destruct when they don't accidentally blow them up," she commented. "Someone's being stubborn."

"If Apophis demanded prisoners - presumably to interrogate about the operation of the weapon - then his chosen commander would rather die than not obey," Teal'c said. "Even if he did all he could and gained the decoy superweapon as ordered, it would still only be a partial success."

But one could argue it was a complete success given the circumstances. Catra was familiar with that situation, though she doubted Apophis would be any more receptive than Shadow Weaver had been.

"Well, without a trained crew to interrogate, Apophis would have some trouble getting it operational," Daniel said. "If it worked at all."

Sha're nodded in agreement. "And if Apophis punishes the commander for this failure, it might cost him one of his most loyal Jaffa."

“First the Palace, then the research station, and now this? Dear old Apophis must be starting to run out of his most loyal commanders,” Jack said with a snort.

“Well, technically, he'll always have a most loyal commander as long as he has commanders, though they might be less competent and even less loyal than their predecessors,” Daniel commented. “But if he selected for loyalty rather than competence, he might end up with more competent commanders if he gets rid of the current ones.”

“I hope we won't end up improving the quality of his officers,” Glimmer said.

“I doubt that.” Sha're shook her head. “Anyone exceptionally competent but of questionable loyalty would have been eliminated by Apophis as soon as he realised it. And any rival commanders would have pointed it out to him at once.”

Catra nodded. She knew exactly how that worked. That was how the Horde had done things. And that was one of the reasons the Goa'uld would lose this war.

On the projection, the Tel'taks and Al'keshs were now surrounding the “Steel Fist” and the debris field that had been the decoy escort. Catra glanced at the camera feeds to check if she could spot them. The scanner feeding the holoprojection would detect far more detail, but she liked using her own eyes. She didn't spot any of them, though - the distance was still too great.

“Alright, folks, prepare to be boarded,” Jack said.

“And hope they don't have better scanners than we thought they have,” Catra added.

“Catra!” Adora hissed.

“You don't have to whisper,” Catra retorted with a grin. “The soundproofing is so good, even I didn’t hear the shooting outside.

We can scream to our heart's content here without anyone hearing us.”

“Catra!” Adora rolled her eyes, but their friends and the two fire teams with them chuckled.

A beep and a red blinking string of letters made Catra snap back to the holoprojection - and curse.

“Additional ships detected!” Sam reported. “Counting… thirty Ha'taks. Fifty Al-Keshs. And forty-two Tel'taks.”

That was a fleet, not just a task force! The holoprojection showed them, coloured yellow, surrounding Apophis's fleet in a pincer movement. The Al'kesh and Tel'taks were already speeding up to engage their counterparts.

Apophis's forces were reacting as well, the faster ships racing to engage the new enemy. But their Al'Keshs and Tel'taks were outnumbered, and the Death Gliders, which might have been able to overwhelm the enemy defences if they had been ready, were not concentrated, many of them just turning away from hunting down escape pods. Catra didn't think they would be able to form up into effective formations before the new fleet had already deployed enough Death Gliders to stop them.

“It looks like Apophis's operational security is even worse than we thought,” Jack commented.

Catra nodded. This must be a rival of Apophis who had found out about this. They had overestimated their enemy. And underestimated another enemy. She cursed. “If his commander thinks that he cannot win this, he might decide to deny them their prize.” In which case he'd order the fleet to shoot at the “Steel Fist”.

She stared at the holoprojection. So far, Apophis's ships were still moving to engage the new arrivals, the screening units launching themselves at the enemy ahead of the Ha'taks. But they were outnumbered two to one. And their formation was split.

“His best chance is to delay the enemy in the hope of taking the “Steel Fist” and escaping with it into hyperspace before the enemy can reach it,” Catra said. That was what she would do. But they had to know that if the “Steel Fist” could flee, she would have already done so - they had disabled the engines, after all, to explain why they hadn't fled before Apophis's forces had arrived. So…

Adora nodded. “It's their best course of action, but they have to know the chances they'll pull it off are low.”

A Tel'tak - cloaked - was headed towards them. But so were two from the new enemy, whoever it was.

“Well, no matter who wins, we'll get to bag a System Lord,” Jack said with fake cheer.

“Unless the other side manages to destroy the decoy to prevent their escape,” Catra retorted with a grim expression. That was the obvious response if you lost the boarding action.

They had to hope that Apophis's forces were either competent enough to get the ship moving before the enemy capital ships were in range, or too incompetent to blow up the ship themselves before the others took it.

Catra didn't like either odds.

*****

The Double Cross Part 5

Asteroid Belt, Arealis-System, February 20th, 2000 (Earth Time)

"Apophis's Tel'tak just docked, sir."

Jack O'Neill nodded at Carter's report. He could see it himself on the screen - a camera was covering the hallway outside the airlock. They didn't have any trouble opening it, of course - the 'boarding team' that had retreated earlier had not bothered to block or seal the airlock; no one would have done that while fleeing. But… "What damage did the 'failing scuttling charges' do to the engines?" he asked.

"They knocked the crystals out of alignment, sir. Exactly as planned." Carter was slightly annoyed; Jack recognised the tone. Probably not really at the implied questioning of her work but their general situation.

The Tel'kats from the unknown System Lord who had decided to crash their party before they could trap Apophis were only a few more minutes away - despite being cloaked from any sensors but the Alliance scanners, they were still avoiding Apophis's ships and Death Gliders, which delayed them.

"Any chance that Apophis's goons will manage to repair the engine in time to escape?" Jack looked at Carter.

"If they have a skilled hyperdrive engine technician with them who immediately starts working…" Carter shook her head. "No chance, sir. We wanted damage that would take long enough to repair to make the boarding team's retreat believable."

"I know," Jack said. "And it was a good decision. No one could have predicted this."

On the screen, the airlock opened, and he could see the Jaffa pouring through the opening. Blowing it open would have been

faster, but that would have led to the ship's air being vented into space if they undocked - or if their ship got shot off the airlock.

The boarders split in two, one heading for the bow part of the ship and one headed towards aft. Or whatever Navy pukes called it. Bridge and engine room. We should build a ship with the important rooms switched, or hidden, he thought. Would confuse the snakes. At least once.

On the holoprojection, the two other Tel'taks were closing in as well, just circling around a damaged Death Glider. Trying to be sneaky snakes.

"They didn't bring bombs," Jack noted aloud. "They can't blow the ship up from the bridge or the engine room, either."

"We know that, but the Jaffa and their masters don't," Daniel said.

Jack understood what he meant - they could trigger the real scuttling charges and hide their smuggling compartments amongst the debris. The snakes would blame each other, with no one the wiser, and keep killing each other.

The victor might stay and collect the wreckage to study, though, if only to have something to show to their master. Still, with the stealth modules, they had good odds of avoiding being noticed until it was safe to recover them. And they had enough supplies and air scrubbers to last a long time. Certainly long enough for a 'Horde task force' to show up and check what had happened to their missing 'superweapon'.

It was the smart decision to take - the mission was fubar. Apophis's goons couldn't get the decoy to their Lord before they were boarded in turn. And odds were, they tried to shoot it up at that point anyway. But…

"So… which System Lord do you think we'll trap instead of Apophis?" Catra asked, flashing her teeth in a cocky grin. Her tail was swishing back and forth quite rapidly, though. And Melog looked not quite as cocky as she did, Jack noted.

“Probably Sokar or Heru’ur,” Glimmer said, nodding calmly. “They are fighting him and would likely have focused their spies on him and have the forces ready to react.”

“I concur,” Sha’re said. “But we cannot exclude the possibility that other System Lords have been closely observing the conflict, waiting for an opportunity to take out one of their rivals - or all three.”

“Yes.” Adora nodded. “We planned for Apophis, but we can adapt and capture someone else.”

Sure, they could. But they had prepared for Apophis and his defences, not anyone else. All their contingencies to extract them would be useless. Odds were, the relief forces assigned to get them out if they had to hunker down and hold out until relieved would be out of position now.

Carter and Daniel were looking at Jack, too. They knew that as well as he did that he really should push to abort the mission right here and now - the other Tel’taks were closing in now. About one more minute, tops. And Apophis’s Jaffa were flailing around on the bridge and the engine room, trying to get weapons working that were carefully disabled beforehand. If they didn’t seal off the hallways, they’d be trying to breathe vacuum as soon as their Tel’tak was in range of the enemy’s guns.

And yet… Jack had mostly joked about bagging another System Lord, but they had put a lot of work into this mission. Work he wouldn’t want to go to waste. Not when they had decent chances to pull off a victory from the jaws of defeat. After all, whoever was attacking Apophis wasn’t expecting this to be a trap either and would be unprepared for them.

And unprepared for She-Ra.

Jack nodded and smiled - about as forcedly as the others, he’d bet. “I think it’s gonna be Sokar. That’s the kind of sneaky move he loves, according to what we know.”

Daniel blinked, and Carter rolled her eyes, but they would follow him.

And the Etherians were already sold on it anyway.

*****

Adora nodded. No matter who won this battle, odds were the decoy would attract a System Lord, and then they could spring their trap. Capture the Goa'uld, take over the ship and escape with it.

"The second boarding force is in range," Sam announced. "They've started their attack run."

"Standard formations," Catra commented as the holoprojection showed the two Tel'taks flying towards the docked one.

"If it works, it works," Jack said.

Moments later, the ship shook, and Adora saw Apophis's Tel'tak shaking as multiple blasts hit it, piercing its hull. She didn't hear anything, though, which was eerie.

Catra pressed her lips together - she must find this disorienting as well, then.

The Tel'tak shook from more hits but remained docked, and Adora couldn't see any secondary explosions. For a moment, she wondered if the Tel'tak would survive this, forcing the attackers to make another run. But then, the ship was ripped apart as something blew up in the aft section, spewing debris into the path of the two attackers, whose shields flared as they flew through the expanding cloud.

And the decoy ship shuddered again when the struck Tel'tak's remains were blown away from the airlock. On the screen, Adora saw a squad of Jaffa taking up positions across the hallway from the airlock.

“They’re trying to use it as a choke point,” Jack said. “That should buy them a bit more time to get the engine working. What do you think, Carter?”

“They’ll need at least a few more minutes,” Sam replied. “They have yet to align any of the crystals.”

Adora glanced at the screen showing the engine room. The Jaffa - fewer than before; some must have gone to defend the airlock - were wrestling a massive crystal into place. Adora wasn’t an expert, but she doubted that would be enough for precision machinery.

“Watch the hull cameras!” Catra suddenly snapped.

Adora turned to look at the other screen, where Sam was quickly enlarging a particular feed. She could see that the Tel’tak had not docked to the airlock, but the hull next to it - and people were leaving the ship.

“That’s not standard armour,” Sam said.

“It is an armoured vacuum suit,” Teal’c said. “Although a rather old-fashioned one.”

“Can you see any symbols to identify who is behind this?” Jack asked.

“The places where such markings are usually placed are clear,” Teal’c replied.

“So… someone’s trying to be extra-sneaky,” Jack commented. “Sounds like Sokar.”

“I agree. Heru’ur is not known for such subterfuge,” Teal’c said.

“Or he has never been caught,” Catra pointed out as the Jaffa in suits opened the airlock.

Was the airlock damaged by the destruction of Apophis's Tel'tak? Or didn't the new attackers want to risk suffering the same fate if they docked? Or…

"It's not closing," Catra said.

Oh. Adora grimaced when the inner door of the airlock opened, and the air inside the hallway shot out into the vacuum, dragging the waiting Jaffa with them. They were still flailing, still alive, when they were sucked into space. One managed to grab the doorframe and stop himself from being thrown clear of the ship, but Adora saw a flash illuminating the airlock's insides, and then the hapless Jaffa, a hole blown through his chest, was floating in space as well. That was a very nasty way to die…

"Yeah, that's a bit too clever for a System Lord who likes fighting in the trenches," Jack commented.

"Hey!" Glimmer protested.

Adora scowled as well. Princesses fought at the front; that was how it was done. Your power didn't serve anyone if you stayed behind the lines.

Catra, of course, chuckled. "What about Generals fighting in the trenches?"

"It's not the same!" Jack retorted. "We're talking snakes here - they generally don't like to risk their lives."

"Any System Lord fighting at the frontline risks getting stabbed in the back as much as he risks death at the hands of his opponents," Sha're added.

"Heru'ur is famous for defying those dangers," Teal'c nodded.

Adora watched the cameras again. The hallway had lost all its air, but the internal doors had held - both the Jaffa on the bridge and in engineering were unaffected. Well, physically - the engineers

were looking frantic as they continued to struggle with the repairs, and the ones on the bridge looked struck.

"They must not have expected that." Catra shook her head. "If they vent the rest of the ship, they'll win this. Apophis boarders didn't bring any spacesuits."

"Must be embarrassing to miss that," Jack said with a scoff and a glance at his own custom spacesuit.

Adora nodded. Boarding actions were dangerous enough; not to prepare for a hull breach was suicide.

Suddenly, the repair crew in the engineering section froze for a moment before stopping their work on the crystals. Instead, they rushed to the reactor controls.

"They're trying to overload the reactor," Sam confirmed Adora's suspicion. "I've countered their orders."

"Good. Can you make it look like a computer glitch or safety protocol?" Jack asked.

"I already did that, sir," Sam replied.

"Ah, of course." Jack looked a bit embarrassed himself.

On the screen, the Jaffa in spacesuits advanced, splitting up as had Apophis's team before - only this one had double their numbers.

Adora didn't think Apophis's forces would win this. But that meant…

"Two Al'keshs have broken off from the fighting and are headed towards us," Sam reported.

"Apophis's commander must have realised he can't win this," Catra said. "Let's hope Sokar's forces are good enough to stop his last attack."

Adora nodded in agreement.

*****

Samantha Carter watched intently as her scanner tracked the two Al'Keshs flying towards the "Steel Fist". Unlike the Death Gliders starting their attack runs, the bombers had enough firepower to destroy the decoy. Usually, bombs were as useless in space combat as they were in a dogfight, but with the ship immobilised, that wasn't an issue. And it didn't take much to compensate for the lack of gravity - a bomb would continue the trajectory of the ship launching it at the moment of separation. Sam had no doubt that Apophis's crews were trained enough to manage that. And if they weren't, they were likely fanatical enough to ram the decoy.

She ran a few calculations in her head. Rough, but sufficient to estimate the effect. If one Al'Kesh rammed the "Steel Fist", the shielded compartments could hold - provided the shields went up in time. Two Al'Keshs made that rather less probable. "We might have to enact the evacuation plan, sir," she said, "if the bombers are on a suicide course." Which they wouldn't know until it would be almost too late to react.

The General leaned forward, tense and focused, and stared at the holoprojection. "The new snakes are moving to stop them."

Sam nodded. The attackers' Death Gliders, which had been fighting their counterparts, were disengaging and swinging around to attack the two Al'Keshs. But she could already tell that the majority wouldn't reach the bombers in time to stop them, and the firepower of those who would was unlikely to be enough.

"The Tel'taks are undocking," Catra reported.

Adding two stealth ships would even up things, but they had to accelerate first to intercept the bombers.

The first Death Gliders, some of Apophis's own in pursuit, were in range now and started firing. The blasts were deflected by the Al'Keshs' shields, though, and by focusing on the bombers, they

left themselves open to the fighters behind them. Sam saw two, then another, explode in short order. No, that wouldn't…

She drew a sharp breath when she realised the surviving Death Gliders weren't pulling up for another attack run but kept accelerating straight at the Al'Keshs. Even though she had considered suicide attacks, to see it happen…

“They're ramming them!” Adora gasped.

A moment later, the first Death Glider hit the shields of the leading bomber and blew up, followed by another. The shields shattered with the third, and the Al'Kesh suddenly changed course in an obvious attempt to evade the next.

They were too late, though - two Death Gliders crashed into the ship at near-full speed, still firing, and sent it reeling. No secondary explosions, but the ship was blown off-course, trailing debris.

“Fanatics,” the General muttered as more Death Gliders went in, all firing until they crashed into the bomber.

Sam quickly zoomed in on the struck ship. The hull had buckled under the impacts, she could see multiple breaches, and… there was the first secondary explosion. Not a magazine, but… The ship vanished in a ball of fire before she could finish her thought.

“They were ordered to stop the bombers at all costs,” Teal'c commented. “And they did.”

The second bomber, trailing the first, had managed to change course in time and had only been hit by two suicide attacks. But that manoeuvre had brought it right into the path of the two Tel'taks. Still cloaked, both flew straight at it.

Sam winced at the explosion that followed.

She felt the deck under her feet shake slightly - the surviving Death Gliders of Apophis's force were throwing themselves at the

decoy, but even with their counterparts' numbers reduced by those who had intercepted the Al'Keshs, there were enough Death Gliders around to make that tactic much less effective. And the "Steel Fist" was much tougher than an Al'Kesh. Only two more Death Gliders managed to ram the ship before they were all destroyed, and the damage done was minimal, according to Sam's scanner.

Sam checked the state of the main battle. Apophis's forces were collapsing. Half of his Ha'taks had been destroyed, and the remaining ones were under withering fire as they tried to disengage and retreat - not they were trying to reach the decoy, she realised.

"Won't make it," Catra commented. "Too slow, and the attackers can concentrate their fire."

Sam agreed with the assessment.

"Look, they've reached the engine room," Sha're called out. "They are…"

"...about to blow the doors," the General finished for her with a grim expression.

Without having sealed off the hole in the hull. Sam winced - Apophis's Jaffa were helpless. They couldn't even launch an attack of their own; opening the doors would only speed up their deaths, and… Her eyes widened - the defenders were moving to the doors. Some were tying themselves to the consoles closest to the doors. Why would…? "They're about to open the doors themselves!" she blurted out.

The General cursed. Catra also cursed.

The doors slid open, and the surprised attackers still placing charges were cut down by the defenders' staff weapons and zat'nik'tels. One of them cut himself off, Sam saw, trying to grab a charge as he was sucked out of the room, but his hands missed. Two staff blasts killed him moments later.

The defenders switched their fire to the remaining attackers. Sam saw one of them get hit, his suit rupturing, as they shot back. But the outcome was never in doubt - not when the defenders were already suffocating.

But they kept shooting until they fell unconscious. By the time the last one died, one of the attackers shooting him with a zat'nik'tel when he collapsed, the bridge was under attack as well.

Sam already knew how that would end.

*****

The waiting was the worst, but they didn't have a choice any more. Catra scoffed under her breath as she watched the holoprojection. After finishing off Apophis's forces, which had died to a man trying to destroy the “Steel Fist”, the new fleet had formed up in a defensive formation around the decoy ship while throwing over a hundred workers at the task of restoring the ship's hyperdrive before either the Horde or Apophis came back with more ships to retake the decoy ship.

And most of those workers were humans - slaves. Catra had already seen Jaffa literally using whips to drive them to work harder. That meant that if Catra and her friends tried to escape by triggering the scuttling charges, blowing the decoy ship up and escaping while cloaked (and disguised as debris as a backup), they would be killing over a hundred helpless people in addition to a bunch of fanatical Jaffa. They couldn't do that.

Not that Catra would give them good odds of escaping even if they did that, not between all the Death Gliders flitting around the “Steel Fist”, probably hunting for more suicidal cloaked Tel'taks. No, they were now committed to the plan; the window to call it off and withdraw had closed.

But it meant she had nothing to do but wait for the workers to finish fixing the hyperdrive and hope nothing else would go wrong. Like a third System Lord sending forces to take the

superweapon. Or Apophis returning with more ships. Or the Asgard arriving to ‘stop the Horde’ or whatever.

She snorted. Any of those scenarios were unlikely. If Apophis had more ships, he would have sent them in the first place. The Asgard didn’t have the ships to spare and didn't really care about the Horde or Earth - not enough to get involved. And the odds of them knowing about this were slim to none. And if a third System Lord not only had gotten the fake intel about this operation but had the forces ready to move in time to stop Apophis, then Apophis's security was so bad, he should have been defeated by his rivals already.

Catra knew all that, but a little bit of worry remained. Apophis's security had been been broken by one rival already, after all. Which reminded her… “Hey, Teal'c - seen anything to identify the new guys yet?”

Teal'c replied without looking away from the screen he used to watch the engine room, where most workers were slaving away. “Not so far. Not even the slaves are carrying symbols of worship of their fake god. That in itself is telling - whoever is behind this is quite skilled at hiding their involvement. They must have experience with hiding their operations.”

Ah! Catra's eyes widened for a moment. That sounded like…

“Like, say, having fooled everyone into thinking they were dead for a thousand years, like Sokar?” Jack beat Catra to the punch.

“I believe he would be the most likely suspect, as the saying goes,” Teal'c said. “We know he was already fighting Apophis, so he would have had forces in the area ready to be deployed, and even after the purges following Apophis's setbacks, it is not unreasonable to assume that Sokar has some spies left at his rival's court.”

Catra nodded. That sounded plausible.

“Sokar…” Sha're trailed off, and Catra saw her take a deep breath. “His reputation for cruelty is only rivalled by Ba’al's.”

“Well, taking him out will be a good thing, then,” Jack commented. “Not that taking out a snake is ever a bad thing, of course.”

Catra agreed with that as well, though the Alliance didn't know as much about Sokar's realm as they knew about Apophis's, so exploiting the loss of its ruler would be more difficult.

“We might even discover at least one of Sokar's hidden worlds,” Sam added.

“Indeed,” Teal'c agreed. “It is unlikely that he will have the decoy moved to his capital, if only to keep it secret from his own court, but with what little is known about his territory, any new information will be a boon.”

“That will make it harder to escape, though,” Bow pointed out. “We won't know the area, and we won't have any allies nearby. Not close enough, at least, or the spy bot network would have found the system already.”

“If we manage to capture Sokar, this will decapitate his forces and throw his court into chaos,” Sha're retorted. “His underlings will start struggling for power at once. Sokar’s rule relies on fear above all else.”

“And no one fears the chump who gets captured in his own realm by a few good men and women. And cats,” Jack said, nodding at Catra and Melog with a grin.

She snorted at that. It made sense, but it was also more than a little optimistic. “Let's not get overconfident. We have to capture him first.” And then escape before Sokar's underlings realised that this was the best opportunity to get rid of their boss. “And for that, those idiots need to finish repairing the hyperdrive.”

“The crystals we knocked out of alignment were further disrupted by the fighting between Apophis's forces and the new attackers,” Sam said. She sounded a bit defensive, as if it was her fault that the Goa'uld were incompetent. “The attacks by the Death Gliders also damaged one of the projectors, which will require further repairs.”

“Any estimate for how long that will take them?” Jack asked.

Sam grimaced. “Based on their performance so far, at least several hours.”

Catra shook her head. Motivation by whipping didn't work. Especially not when it came to difficult tasks such as repairing high-tech machinery. People made mistakes under such stress. And speaking of mistakes… “Can you check their work?” she asked.

“We are plugged into the ship’s systems and can run a diagnosis,” Sam replied.

“Good. I'd hate for this mission to get derailed further by a faulty hyperdrive sending us god knows where,” Jack said. “I'm already behind on the latest season of the Simpsons.”

Catra snorted, but Bow perked up. “Oh, you are?” he asked. “I’ve got all episodes that were aired so far on my tablet.”

“Really?” Jack looked surprised.

Probably hasn't expected his joke to be taken seriously, Catra thought with a snicker.

“Yes.” Bow smiled, then looked embarrassed. “My brothers like them, and, well…” he shrugged. “Everyone's still doing it.”

“Well, can I borrow your tablet then?” Jack asked.

“Jack! Are you seriously going to watch a cartoon series in the middle of the mission?” Daniel blurted out.

“Do we have anything else to do?”

Daniel blinked but didn’t seem to have an answer to that.

Neither did Sam, though she was frowning, Catra noticed.

So, it seemed as if they would indeed watch cartoons in the middle of a mission. Well, Jack would, at least. But there weren't many alternatives. Of course, Catra could think of a number of things to do with Adora that beat watching cartoons, but they lacked the privacy for that.

Quite the dilemma. Catra blamed the Goa'uld for that.

*****

The Simpsons had been funnier in the past, in Jack O'Neill's opinion. And he blamed the Etherians for it - the ‘Princess of Springfield’ character, an exiled Etherian, had started with the ‘magic goes wrong’ episodes, which now seemed to take up half the season. If it wasn’t Bart getting cursed, Lisa trying out witchcraft, or Homer annoying ancient ghosts by mistake, you could bet on some Etherian guest character appearing and making a mess with magic.

Far too much magic in the Simpsons, for Jack's taste. He shook his head as the current episode ended with half the town turned into the Simpson's version of the Whispering Woods - for the second time this season.

“Whoever is writing those episodes has no idea about Etherian magic,” Glimmer commented. “Even for a cartoon show, I'd expect more research.”

“But they hit the nail on the head with the exiled princess Sour Wasp,” Catra retorted with a grin. “I wonder if Sweet Bee will sue.”

Jack chuckled at the thought. He'd still prefer it if the character were removed.

“Ah, Bow,” Daniel spoke up, “do your brothers prefer the new seasons or the old ones? I mean, the seasons released before Etheria made contact with Earth or the ones after that point?”

“Both,” Bow replied. “Though they don't get all the jokes in the older ones. And half the jokes about Etheria are funny because they are so wrong.”

“Ah. I was wondering about their grasp of the cultural context.” Daniel nodded.

“I don't get many of the nuances of the jokes in Earth media either,” Sha're added.

“You're making a lot of progress,” Daniel told her. “It's not as if it's different for the audience on Earth outside the USA.”

“That's because you have as many people on your world as the rest of the galaxy put together,” Glimmer grumbled.

“It's not quite as extreme,” Daniel corrected her. “Though we do have a lot of distinct cultures.”

“Well, on Etheria, most are only getting to know Western media,” Bow said.

“And some Japanese,” Catra added with a sigh.

“If your impression of Earth culture is based on our media, it might have interesting effects on cross-cultural relationships,” Daniel said. “I’ve mentioned that in a paper for the tourism commission.”

Glimmer groaned. “Don't remind me about them. They don't get that the Stargate is not a tourist transport.”

“Or that our cruisers aren’t cruise ships,” Jack added with a snort.

“We don't have any cruisers, sir,” Carter cut in.

Jack rolled his eyes at her. He knew that, but his quip wouldn't have worked as well with frigates. “The point is that we don’t have the spare transportation capacity to dedicate to tourists. Or the resources to waste on protecting interstellar Spring Breakers and Snow Birds.”

“Well, I don’t think that the commission expects mass tourism to take off anytime soon. But they are hoping for luxury trips, as far as I understand,” Daniel said.

Jack snorted again. Of course, it was about luxury trips for the rich - they had the contacts and influence amongst politicians to prop up the commission in the first place. Same for the pressure to sell shuttles to civilians. Some people really didn’t get that a shuttle wasn’t a Humvee.

“If anyone wants to travel to other planets, they can join up,” Campbell commented. Isa and the rest of the two fire teams in the compartment voiced their agreement. “They'll get all the exciting travel they can stomach.”

Jack doubted that if the kind of people who wanted to go on luxury trips joined the Alliance forces, they would end up on the frontlines. They tended to go for cushy jobs in the rear. Preferably in some exotic travel destination. At least he hadn't had to deal with them at Stargate Command, thanks to the secrecy, and he didn't have to deal with them in the Alliance thanks to his position. Some perks that came with a general's rank were nicer than others.

“So, what about the next episode?” Bow asked, holding up his tablet.

Jack looked around. No one seemed terribly enthusiastic. Bow was probably just politely asking, Catra was curled up in Adora's lap in a way that would have half the brass Jack knew scream about inappropriate PDAs, Glimmer was looking bored, Carter hadn't watched the cartoons anyway but had been busy with her computer and Teal'c was… Teal'c. Daniel and Sha're looked

interested, at least, and Jack's people in the back were a toss-up between watching and sleeping.

“Maybe we should…” he began.

“Sir! They brought the hyperdrive online,” Carter interrupted him. “The “Steel Fist” is now operational.”

Jack jumped up and walked over to her. “That was fast, wasn’t it?”

“It's within expected parameters,” Carter replied. Which probably meant she could have done it faster by herself.

Jack checked the feeds from the hidden cameras. The workers were exhausted - some had collapsed in the engine room - but the bridge crew was busy. Very busy. And on the holoprojection, the patrolling Death Gliders were racing back towards the Ha'taks.

“Get ready, folks,” he called out. “Looks like we'll be on the way to wherever soon.”

*****

Hyperspace, February 20th, 2000 (Earth Time)

“According to the navigational data from the ship’s computers, we’re on the way to PT-1853. The Jaffa have plotted the course in several legs.”

Adora nodded at Sam’s report. “Do we have any data on that system?”

“Except for the fact that it has a Stargate, no. Exploration has been cut short due to the war effort, and the Tok’ra’s data - at least the data they shared - has nothing on it either,” Sam replied.

That meant none of the Goa’uld knew about the system. None but the System Lord behind the attack on Apophis’s forces. That didn’t mean it had to be Sokar - not many Goa’uld would send a

captured superweapon to one of their main systems - but it made it a bit more likely; no one knew much about his territory.

"Good work, Carter. Let's hope that the Jaffa don't find our taps."

"Unless they physically dismantle the entire computer system and manage to spot the data ports we've hidden inside, that is unlikely, sir." Sam sounded a bit annoyed. "We're using the ship's own systems, after all, which they control, and our access is purely passive."

Sam was right, of course - they had done everything to prevent their deception from being discovered. Their plan wasn't perfect, of course - the fact that they were not on the way to Apophis proved that better than anything else.

"We're dealing with a paranoid snake expecting traitors everywhere - who has just pulled off an intel coup against Apophis," Jack pointed out.

"We built the system with this in mind and implemented the Tok'ra's advice."

Jack grumbled something Adora didn't catch but which made Catra snort. "I don't think the snake in charge of this will have the ship's systems dismantled for inspection," she said. They would want to keep the 'superweapon' ready to be used as soon as possible - before Apophis might decide to spread the news of this to alert all other System Lords of the danger and unite them against this."

"And they probably don't expect such treachery from the Horde," Bow added.

"Unless they know about his mind control chips," Glimmer retorted.

"Horde Prime probably kept those secret so his enemies wouldn't be warned," Catra pointed out. "Makes it easier to appear all-powerful and all-knowing, too, if people don't know your tricks."

Adora reached out and pulled Catra closer; her love must be remembering her time under Horde Prime's control. Cata grumbled a bit but didn't wriggle out of her embrace.

"At the very least, they won't try to pull the systems apart while they are travelling," Sam said.

"Never underestimate their fanaticism," Jack objected.

"They will not risk destroying the prize they were sent out to secure for their false god," Teal'c said. "Nor will they start to dismantle it without explicit orders. And such orders will likely be given in person - no System Lord will trust an underling with the power to destroy them."

Adora nodded. That was what they were counting on. "How long will we travel?" she asked.

Sam hit a few keys. "If they follow the plotted course, we'll be in hyperspace, with a few interruptions for navigation, for a week."

Adora frowned. They had laid the trap near Apophis's territory. "So, they took a task force standing by to attack Apophis and sent them to intercept us, and now they're withdrawing to a more distant base."

"Probably a forward base for attacks against Apophis," Jack added. "Let's hope our snake will want to check the goods before sending us deeper into their territory."

Adora nodded in agreement. She didn't want to spend weeks or months in hyperspace. That hadn't been a concern when they were planning to trick Apophis.

"So… since we'll be a while here…" Jack grinned. "What's next on the menu as entertainment?"

*****

PT-1853 System, February 27th, 2000 (Earth Time)

“We're about to exit hyperspace.”

Adora suppressed a sigh of relief at the announcement. After a week in hyperspace, she'd even prefer dropping into an ambush to spending another night in the stealth compartment. Sure, they had everything to survive for months if needed, but for one thing: Privacy.

All she wanted was to capture the Goa'uld responsible for extending their trip, head to the closest Stargate and return home to lock herself and Catra in their room for the next twenty-four hours or so. And if she had to personally beat the Goa'uld's entire guard for that, she'd do it happily - another week of this, and she'd agree with Catra about using the shower here! Though Melog, who was mirroring Catra's emotions, would probably claw a hole through the walls before that, if Catra didn't do it herself.

“Great! I am sick of Earth TV marathons!” Glimmer sounded as frustrated as Adora felt.

“We also have literally millions of books with us.” Daniel obviously didn’t quite get what Glimmer was really frustrated about.

Adora saw Sha're lean over to whisper in his ear, followed by Daniel blushing. Well, he understood now.

“Exiting hyperspace in five, four…”

Adora raised her chin and braced for the familiar feeling.

“..three, two, one…”

And they left hyperspace. Adora watched the holoprojection change as their magitech scanner switched on.

They were inside a system with two planets. And a couple of asteroids - no ring, though.

A moment later, several dozen Ha'taks and even more smaller ships appeared in the projection.

“That's either a major fleet base, or whoever is in command doesn't even trust their chosen task force to stay loyal,” Jack commented.

“No System Lord trusts anyone,” Sha're said.

“They've opened communications,” Sam announced.

On the screen that had been showing shows and movies for a week straight, a Jaffa appeared. Adora recognised him - it was the Jaffa in charge of the task force. Gun'il, as they had found out from overhearing chatter amongst the crew.

The picture of him shrank to show another Jaffa, and Adora winced at the sight of the burn scars that covered the man's face. *“Gun’il. You have achieved what you were ordered to do?”*

“Yes, Kal'toc. We have secured the weapon Apophis craved and slaughtered his warriors. Our God's will was done.”

“That remains for Him to judge,” Kal'toc retorted. *“Prepare for His arrival.”*

Gun'il bowed his head, and even on the screen, you could see that he was tense before the connection was cut.

“They don't mention their System Lord's name,” Daniel commented. “I thought this might merely be an excessive interpretation of an order not to reveal their origin, but they do it even here, in a supposedly secure system. This is quite peculiar.”

“That's not normal,” Sha're agreed.

“Yeah. Usually, you can’t stop them from praising their god,” Jack said.

“Indeed.”

“And the only System Lord we know who we don't know much about is Sokar.” Catra shrugged. “Another clue that it's him, but

we already pretty much knew that.”

“Such religious practices can give us valuable insight into a System Lord's domain,” Daniel objected. “If saying their god's name is taboo, then that could tell us something about their faith. Such a practice is not very common on Earth.”

“Or all of them are just afraid of attracting his attention by saying his name,” Jack said. “We'll know soon enough,” he added, pointing at a Ha'tak that was leaving the planet's orbit and headed, together with most of the fleet, to their position. “I bet he just arrived by Stargate and ring transporter.”

*****

“They've docked,” Sam announced, even though everyone could see the airlock on the screen.

Adora clenched and unclenched her fingers, almost summoning her sword. Finally! Their target had arrived.

Gun'il and his guards were lined up facing the airlock, more nervous than Adora had ever seen them, even though they clearly had achieved their mission. Then the doors slid back, revealing a Goa'uld, and the Jaffa dropped to their knees.

“Sokar,” both Sha're and Teal’c said together when they saw him.

“Told you,” Catra added. She was sheathing and unsheathing her claws, Adora saw. And her tail and ears were twitching.

“Do you recognise him?” Daniel asked.

“We recognise his symbol,” Sha're replied. “Not his host. It's been a thousand years since he was seen by other System Lords.”

The Jaffa were calling him their lord, praising him frantically, until he allowed them to stand up.

“Someone's really full of it,” Jack commented as the Goa'uld started his inspection of the ship, led by the still-tense Gun'il.

Adora clenched her teeth. The Jaffa had won a victory for their god - or so they thought, at least. How cruel was this Goa'uld to make his most loyal followers fear him so?

She summoned her sword and went to the concealed doors that led into the control room of the ‘Core Cracking Cannon’. Soon, he wouldn't be able to terrify people any more.

“There he comes!” Jack whispered from behind. “He just entered the room.”

Adora glanced at the screen behind her, checked again where the Jaffa stood, then used the door controls.

She burst through the opening a moment later, sword turned shield, but the Jaffa guards were just reacting to the ambush, and Adora reached Sokar before they could even try to stop her. She smashed him into the warriors behind him, a personal shield flaring up, then breaking around him as all went down in a tangle of limbs and armour. A moment later, Catra jumped past her to rake her claws over the closest warrior.

“How dare you!” Sokar bellowed, raising his arm - with a Goa'uld torture device! “You will…!”

While shots rang out behind her and bullets and staff weapon fire cut down the guards on the side, Adora smashed the Goa'uld over the head with the flat side of her sword, knocking him out. Catra took care of the closest guards with a bit more vehemence than usual.

“Room secure!” Isa bellowed as the last guard went down.

Jack nodded. “Alright. Move to the bridge! We need to…”

The ship shuddered, almost sending them stumbling, and Adora heard the sounds of explosions. “We're under fire!” she snapped.

"The escorts have disabled our engines," Adora heard Sam report over the communicator.

Jack cursed. "They're very quick to stab their god in the back. Too quick."

Adora nodded. This didn't look like a coup.

"More Tel'taks are on the way," Sam told them.

Boarders.

Catra looked at their prisoner. "Let's hope we did get the right snake."

If this wasn't Sokar… Well, no matter what, they had to secure the ship and repel the boarders.

And then find a way to get away.

*****

The Double Cross Part 6

PT-1853 System, February 27th, 2000 (Earth Time)

They were surrounded by dozens of Ha'taks and their escorts, commanded by one of the worst Goa'uld they knew of, and the enemy had just disabled their engines.

Samantha Carter had been in worse situations, but not many.

She checked the readings from the Steel Fist's systems on her computer. The Goa'uld had destroyed the sublight engines, but the hyperdrive was still functional. Although it relied on power from the main reactor, and the readings she got from the engine room weren't good.

Sam switched through a few windows and frowned. The reactor output was fluctuating - the engines' destruction must have damaged it, likely through a power surge. She clenched her teeth. That wouldn't have happened if they had used the latest Horde technology, but the Alliance had been worried about that falling into the hands of the Goa'uld even if the ship was scuttled, and so they had used designs that the Goa'uld already knew. Inferior designs. But the damage seemed repairable - though it would take some time. And even if they could open a subspace window, they still needed some form of propulsion to push the ship through it before the Goa'uld destroyed them. Although…

"Bridge secured. What are the snakes doing?" The General's voice came over the comms.

Sam checked the holoprojection. "Holding their positions, sir."

"Can we get away?" Adora asked.

"We need the reactor repaired and a way to accelerate the ship for a short period," Sam replied. "Then we can escape into hyperspace."

"How long will that take?"

"It depends on how fast we can repair the reactor and rig up a directed explosive to propel the ship," Sam replied.

"I like that plan," the General said. She had known it would appeal to him.

"Bow, Sam - get started on it," Adora ordered. *"Have the Goa'uld tried to contact us yet?"*

Sam didn't know if that question was aimed at her, but she checked her data anyway as she got up. "No contact yet," she said. "I'm moving to the reactor room."

"I'm headed there as well," Bow added.

Why haven't they contacted us yet? Sam wondered as she ran past a dozen dead Jaffa. They had disabled the ship's engines as soon as Adora had taken the Goa'uld captive, so what were the Jaffa waiting for? Or were they waiting for someone? What if they hadn't captured Sokar, but another Goa'uld serving him? Maybe as a decoy?

She clenched her teeth. She couldn't worry about that - she had to focus on repairing the reactor and setting an explosive charge powerful enough to accelerate the ship forward without destroying it.

She would have to trust that the others could handle the rest.

*****

Catra had been in worse situations than being stuck in a crippled ship surrounded by enemies, but that wasn't a high bar to clear given her experiences.

"Should we call them and tell them we have a hostage?" Daniel asked.

Before Cara could tell him how bad that was, Sha're spoke up: "No. If this is a coup attempt, or a plot by a rival, that might push them to destroy the ship to ensure Sokar is dead. And if this isn't a coup, we would give them information without gaining anything in return."

"Yep." Jack nodded. "If they realise that this was a trap all along, they might just blow us up. As long as they think this is a superweapon, they might still be wary."

"If they think this is a working superweapon, why haven't they boarded us?" Glimmer retorted. "Aren't they afraid that we'll blow them away?"

"They have us surrounded, and our shields are down." Catra pointed at the radar display. "If we powered up a weapon, they'd notice and blow us up." And even if the superweapon were real, they wouldn't be able to kill the entire fleet in one volley - the Goa'uld had had a week to study the fake schematics and documentation, and they knew how it supposedly worked. They might fear a self-destruct that wrecked the entire area, but those were fanatically loyal Jaffa, so who knew how they would react to such a threat?

"Even if it were a coup, they would want to make sure Sokar is dead, so they should have been calling us," Jack said. "Maybe pretending to be loyal to him or something." He shook his head. "I don't think our guy is Sokar."

"You think they're waiting for the real Sokar to arrive and handle this?" Catra cocked her head.

Daniel frowned. "Wouldn't he have ordered them to secure the ship before that?"

"If he thinks it could be a trap, he might expect that to trigger it again," Catra replied.

"He has a reputation for twisted plots," Sha're said. "But this could still be a coup - or a plot by a rival, like Ba'al. If they had to

improvise, they might still be trying to take control of the fleet surrounding us."

"I'd expect them to have started shooting each other in that case," Jack commented.

"Not if the rest of the fleet doesn't know about it," Sha're retorted. "But you're right - we should see some signs of internal fighting soon in that case. It's unlikely that a coup or a rival's sabotage would work perfectly."

"As we just proved," Jack said. "Carter? Any update?"

"We're working on the reactor, but it will take a while yet - we're still assessing the damage and need to recalibrate the controls, sir."

That wasn't good. Maybe they should have taken Entrapta and Hordak with them… But if everything went wrong here, those two would be needed more than ever.

"If this doesn't work, what are our chances if we retreat into the stealth compartment and scuttle the ship as we originally planned?" Daniel asked with a glance to Sha're.

"I think whoever is in charge of the enemy here will collect every single last speck of dust left behind," Catra told her. That was what she would do in their place. "We might escape with the stealth field active, but if we're unlucky, someone could spot stuff hitting us or disappearing in the stealth field, and then they'll have us. And even if it worked, we'd still be drifting in space - and no one's coming to our rescue here since no one knows we're here." They were out of range of the Spy bot network, so they couldn't even call for help.

"Well, I guess it's do or die then," Jack said. "Let's hope the snakes wait a bit longer to sort out what they want to do."

A moment later, the console behind him lit up with an incoming communication.

Catra glared at him.

*****

There were times when Jack O'Neill was sure that the universe was out to get him. Like, this time right now. He turned to glare at the communication console. Teach him to dare Murphy. He cleared his throat. "Well, let's not make our dear caller wait."

"But you said…" Daniel started to say something, probably about Jack's earlier comment, but trailed off when Jack accepted the call.

A man - a Goa'uld, his eyes were glowing - appeared on the screen in the centre of the bridge. He was sneering, his skin was unnaturally pale, almost as pale as a clone, and Jack could see some veins crisscrossing his bald skull. Compared to the other snakes Jack had seen, this one looked downright alien.

"Colonel O'Neill." And there was the snake voice as well. *"Of course, it would be you. Your reputation precedes you."*

"Actually, it's 'General O'Neill now," Jack replied. Sokar - if that was Sokar - must have used old intel. How that kind of information spread might be useful to find out.

The snake scoffed. *"You have been an annoyance for Apophis."*

Jack smiled. Genuinely - he was proud of that, and if the snake wanted to make some small talk about other System Lords, that meant more time for Carter and Bow to fix the reactor. "Well, he didn't really make it hard."

The Goa'uld's laugh sounded like he was coughing, and his lips twisted into a sneer. *"That made you complacent."* The snake flashed his teeth again. *"Your last mission failed."*

Jack shrugged as nonchalantly as he could. He had to keep the Goa'uld talking so they could get away. "Really? Looks to me as if

both Apophis and the Horde failed. Neither of them is in control of this superweapon. Mission accomplished."

He tensed up. If the snake had seen through their deception, then this was the point where he would gloat. Probably.

"Your 'superweapon' is crippled and surrounded by my fleet, O'Neill."

"So you say." Jack bared his teeth. "But we still control it. And we can destroy it."

"Only at the cost of your own lives."

Had the snake's smile slipped for a moment? Was that the reason why he hadn't sent his Jaffa to board them already? That would mean he didn't know this was a decoy and thought the superweapon was real… Jack shrugged again. "A small price to pay for saving Earth from it. And, well… you've got a kinda reputation. Dying seems preferable to getting captured by you."

The Goa'uld laughed again, slightly longer. And creepier. Jack felt himself shudder when the snake suddenly stopped and stared at him. *"Commendable. But you have not done so yet. I wonder why…"*

Jack resisted the urge to wet his lips. He just had to keep the snake talking. Long enough for Carter and Bow to fix the damn reactor. "You haven't sent in your warriors yet."

"You still have hope of escaping your fate?"

"We're hard to kill. If I had a nickel for every time Apophis thought he had us dead by rights…" Jack grinned.

The Goa'uld frowned for a moment, then matched his grin. *"I am not Apophis. I will not make his mistakes."*

"You're Sokar." Jack nodded.

"Did you hope to take me hostage?" Sokar - if that was really Sokar - snorted. *"I am not as foolish as Apophis."*

"The thought has crossed my mind," Jack told him. He wanted to check back with Carter and get an update, but that would give the game away.

"Another failure of yours, General O'Neill." Sokar slowly shook his head. *"You would have had better chances to escape if you had taken over the ship before arriving here. In fact, given how quickly you took control of the ship, I wonder why you didn't do so - you had ample time for it during the trip."*

Jack clenched his teeth. Sokar was getting close to unravelling everything. Or had he guessed the truth already and was playing with them? He licked his dry lips. "As much as we make it look easy, we still have to prepare for taking over a superweapon."

"And for ambushing a god."

Jack spread his hands. "Can't fault us for trying."

"Oh, I can - and will. Daring to strike at a god deserves a punishment equal to the crime." Sokar chuckled again. *"Did you get greedy? Did you decide that in addition to capturing a superweapon, you would capture a System Lord as well?"*

Jack grimaced. That would have been stupid. But it would explain why they hadn't bailed before.

"And how did you manage to hide from my warriors for so long? I did not send fools on this mission. They knew that their lives would be forfeit if they were fooled by you."

"Wouldn't you like to know?" Jack smiled broadly at the snake. Let him worry about what they had done here to hide. If Sokar was as paranoid as the rest of his peers, he'd make up threats even Jack wouldn't think of.

"I would - and I will. And do you know why, O'Neill?"

"I guess you're dying to tell me why," Jack said.

"Your situation is hopeless. Even if a fleet arrived to save you, my ships would destroy you before they could rescue you. A fate worse than death awaits you - eternal agony for your defiance. And you know all that. And yet, you hope. You don't want to die. You don't want to kill yourself and your men. And that is your fatal weakness."

Jack narrowed his eyes. That sounded very confident. Had he overlooked something? Were they missing a crucial threat? "You want this superweapon. You don't want us to destroy it."

"Correct. But I would rather destroy it than let someone else control it - and use it against me."

Ah. Jack nodded. "You wouldn't be content with our solemn promise not to use it against you, I guess."

Sokar laughed again. *"I have studied you, General. You are no fool. You would not keep such a promise."*

That sounded like a compliment. But coming from a snake, that was an insult. "Worth a try." What was Sokar planning? Was this just a sick way to keep them hoping right until the end? Or did Sokar have a way to get the ship before they could blow it up? If there were any cloaked Tel'taks on the way, their scanner would have detected it.

What was he planning? Jack blinked. And why was the snake's picture getting blurry? He shook his head and almost swayed. Wait…

He glanced to the side. Daniel had taken off his glasses and was blinking rapidly. And Glimmer looked like she was about to fall asleep. Even Teal'c seemed a bit off…

Jack gasped.

"Poison!" he hissed.

*****

Poison? Adora looked around and gasped - her friends were reeling, and she had been so focused on Sokar that she had missed it! “Catra!”

Her love was blinking and frowning, her ears twitching. “I'm…”

Adora summoned her sword and healed her.

“...OK.” Catra finished. “But the others…”

“The poison is already working! If you want to survive, you have to…” Sokar was cut off when the screen blacked out.

“Bastard must have poisoned the fall guy!” Jack muttered.

Adora quickly healed him, then the others - Daniel and Sha're had already collapsed, and some of the soldiers with them weren't looking any better.

“Thank you,” Campbell said.

“Thank you,” Isa added, even though the Socrpionwoman hadn't really seemed affected that much.

“Thanks… Carter!” Jack snapped.

“We're about to finish repairs, sir.” Sam sounded fine.

“Bow?” Glimmer asked.

“Since we were working near the engines and at the reactor, we never removed the space suits,” Bow replied.

Adora sighed with relief. She had managed to heal everyone, and they would soon leave this place.

“Sokar's sending in cloaked Tel'taks!” Catra hissed. “And he's trying to contact us again.”

“Probably to gloat.” Jack scoffed. “And to offer us the antidote in exchange for the weapon.”

“After he told us we'd suffer for eternity?” Adora shook her head.

“Technically, he told Jack that,” Daniel said. He took a deep breath, closing his eyes for a moment.

“Still a bad plan,” Catra said without taking her eyes off the screen showing Sokar's ships approaching them.

“Sokar probably had the underling who visited carrying poison to spoil any assassination attempt.” Sha're, too, took a few deep breaths. “I think that might be standard practice for him, and he just exploited the opportunity here.”

“Sounds like it'd fit Sokar, yeah. And he'll claim it was all planned.” Jack nodded. “How much longer, Carter? We're about to have visitors!”

“We're placing the charges - one more minute, sir!”

“We don't want to start the reactor until the last moment,” Bow added.

That made sense, of course.

“Might not have a minute,” Catra said. “They're about to dock at the lower airlocks - closest to the engine rooms.”

“Prepare to repel boarders!” Jack ordered the soldiers and started to move towards the door leading off the bridge. “Damn, I sound like a Navy puke! And suit up!”

Adora was already running, easily passing him and the others. “I’m covering the starboard airlock!” she snapped.

“They're docking now. I’ve sealed the airlocks, but that won't stop them for long,” Catra replied on the channel. *“I'll join you!”*

Adora knew better than to tell her love to stay back. She reached the starboard lower airlock and took up a position opposite it.

A moment later, Catra, suited up, took the corner behind her, running on all fours - and along the wall for a second. Behind her, the blast doors snapped shut, isolating the compartment.

"Smith! Suit up, damn it - they'll blow the doors again! Isa, Campbell - cover that door. Everyone else, fallback positions one blast door back!" Jack bellowed over the communicator.

"Propulsion charges have been set," Sam reported. *"We're moving to start up the reactor and hyperdrive."*

"Let's hope Sokar won't have the ship blown up once he detects the reactor powering up," Catra whispered.

Adora bit her lower lip and nodded.

Then the airlocks were blown open, and Adora changed her sword to a shield as she let the air drag her forward. As soon as she reached the remains of the door, she grabbed the edge and swung around, entering the Tel'tak with her shield up. She caught two shots on it, another bounced off on her back, and then she started tearing into and through the Jaffa assembled inside the small craft, Catra at her side.

Half a minute later, it was over. The last Jaffa, his suit slashed open by Catra after Adora had torn his weapon away, was still trying to reach her with his arms, but a kick from Catra sent him outside the ship.

"Watch out for grenades! Isa, keep it up!"

The other battle wasn't going as well, but they didn't seem to be losing.

"Reactor starting up!" Sam announced.

"Hyperdrive on standby!" Bow added.

Adora grabbed Catra and hurried back into the ship. The Tel'tak was docked, but better safe than sorry.

They had barely made it inside the wrecked airlock when the ship shook again.

"We've entered hyperspace."

Adora sighed with relief. They were safe - for the moment, at least. But safe enough. Now, all they had to do was to find the closest Stargate and get home. If one of the Two Tel'taks had survived the transition into hyperspace, they could just take it and be gone long before anyone might find the wreckage of the decoy, and…

"Daniel collapsed!" Sha're yelled through the communicator. *"The poison's still active!"*

What? But Adora had healed him - she had healed everyone!

"Man down!" Jack reported.

"I don't feel so well either, sir," Campbell said.

What was going on?

*****

Hyperspace, February 27th, 2000 (Earth Time)

They only had a few minutes - the way they had set things up, the Steel Fist couldn't travel too far through hyperspace. Just enough to get away, to travel far enough so Sokar's fleet would have to search an area too large to find them quickly or easily. Samantha Carter should be preparing the next trip through hyperspace - calculating the course, checking the drive and reactor, setting up another propulsion charge, in case the Tel'taks docked to the ship hadn't survived the transition to hyperspace…

But the General and the others were suffering from poison - even after Adora had healed them. Twice, now.

So, Bow was checking the hyperdrive and reactor and preparing another charge from their remaining supplies while Sam ran her scanner over the General, trying to find out how a poison had resisted She-Ra's magic. The results she got confirmed what she had suspected.

“So, what did the magic scanner reveal?” he asked with forced levity - she could tell he was tense.

She pressed her lips together. “She-Ra's magic purged the poison from your bodies, but the poison itself wasn't destroyed - enough was left outside your bodies to affect you again. And it still lingers inside the ship.” Another quick scan, now that she knew what to scan for and had the time, showed it had spread quite far through the ship.

He cursed under his breath. “I should've known Sokar wouldn't use a poison that breaks down quickly! He probably considers area denial a bonus.”

They had been under attack by Sokar's forces and trying to escape with a crippled ship when the poison had struck, but Sam knew the General wouldn't allow that to excuse his oversight. Nor would Sam allow it to excuse her own, of course.

“We couldn't expect him to poison a ship he wanted to use,” Sha're disagreed. “Nor that he obviously never considered that he might be affected by lingering poison himself in certain circumstances.”

“Unless he has rendered his host immune to the poison,” Teal'c pointed out. “Such is known to have happened.”

And Sokar's host certainly looked alien enough to have undergone several questionable treatments, in Sam's opinion.

Sha're conceded the point with a nod.

“And he would have a way to decontaminate the ship,” Sam said.

“At the risk of revealing his tactic and poison of choice,” Daniel retorted.

Sha're shook her head. “He would simply leave no witnesses alive.”

“Charming fellow,” the General commented. “But we've got his poison to deal with. How do we decontaminate us so Adora doesn't need to keep healing us?”

“Her magic purged the poison from your body and its immediate vicinity,” Sam said. “If you wear your spacesuit and she healed you, you should be fine.”

“Should?”

“I will have to scan each individual to check, but your suit is clean inside, sir,” she told him.

“Couldn't you have opened with that?” he complained, though he was grinning. “So, do it. We need…” A beeping noise interrupted him.

Sam checked the alert on her laptop. “We're exiting hyperspace in twenty-five seconds.”

“Alright - focus on getting us to the next Stargate, then check everyone. And keep your suits on, everyone!” the General ordered.

They dropped out of hyperspace, and Sam checked the coordinates. Slightly off but within expected tolerances.

“Where are we?” Adora asked.

“In the middle of nowhere,” Catra replied, pointing at the display on the bridge.

Sam nodded as she got up. Deep Space, away from any system nearby that Sokar's forces might control or search. “Bow and I are going to check the Tel'taks, sir,” she reported. If one or both had survived the trip intact, they could leave with them and scuttle the decoy ship.

But Sam wasn't very optimistic - even under optimal conditions, taking another ship with you through hyperspace wasn't easy. Doing it with a crippled ship pushed through a subspace window by an explosive charge… Sam didn't like those odds.

“The starboard Tel'tak has been completely ripped off,” Bow reported before Sam reached the airlock on the port side. He'd had a headstart.

“Copy,” she confirmed as she opened the blast doors, revealing the wrecked airlock in front of her. “I'm checking the second Tel'tak.”

It was still docked to the ship, which was more than she had expected. But it had been exposed to vacuum - still was - as part of the boarding tactics Sokar's Jaffa had used, and that hadn't done it any good during the transition through the subspace window and subsequent travel through hyperspace. And that didn't even take the damage from the fight inside it into account.

“What's the verdict, Carter?”

She suppressed a sigh as she checked her readings - such as they were; most of the ship's systems were dead, and the rest…

“The ship's systems suffered severe damage,” she reported. “Reactor, sublight drives and hyperdrive are nonfunctional. Control crystals are damaged, and the navigational console is a total loss.” From a stray staff weapon blast, or so it looked.

“So… can you repair it?”

She hesitated. It wasn’t a total loss, but repairing it would be what an old instructor at the academy would have called ‘quite a

challenge'. Still, it was possible. They'd have to cannibalise the decoy ship for it, though - this time, the decision to use Goa'uld technology for critical parts had turned out to be helpful since the parts were somewhat compatible.

The question was, would it be better to repair the Tel'tak or to rig the Steel Fist for another trip through hyperspace to a world with a Stargate? They could only do either; the Tel'tak wouldn't survive another trip through hyperspace, and to repair it, they had to sacrifice the Steel Fist.

"We can," Sam started to explain. "But it would take longer than rigging the decoy ship for another trip, though such a trip would almost certainly wreck the Tel'tak beyond repair, meaning…"

*****

Deep Space, February 27th, 2000 (Earth Time)

Repair the Tel'tak or another jump with the decoy? Catra frowned. The decoy ship was already damaged, and while she wasn't a tech, she was pretty sure that improvised propulsion by explosions wasn't helping that. "How many more times can we enter hyperspace with the Steel Fist before it falls apart?" she asked.

The slight hesitation was answer enough for her.

Then Bow clinched it. *"Uh… One more time for sure. Two, maybe?"*

Her old Horde instructor, bloody bastard, would have called out: 'Are you asking or telling, cadet?' Catra looked at Adora. Her love looked grim.

"We cannot guarantee more than one additional subspace transition," Sam replied over the communicator.

"Betting everything on the next planet? With our luck so far?" Catra shook her head.

“What if they find us here before we can repair the Tel'tak?” Daniel was looking kind of pale, still. “We'd be stuck.”

“We'd be stuck at the next planet, too,” Catra retorted. “And how likely is it that they'll find us? We didn't exactly make a smooth transition.” And they were jamming whatever homing devices the Jaffa might have snuck past them.

“While we deviated from our set course, the distance was within the expected range,” Sam spoke up.

Adora shook her head. “A working Tel'tak can get us home by itself if everything else fails.”

In theory, Catra silently added. They would have to stop for supplies and avoid cabin fever quite often.

“Yeah,” Jack agreed. “Start repairing the thing, Carter.”

“Yes, sir.”

And that was it. Now, it was up to Sam and Bow. Catra leaned back in her seat. Travelling in the Tel'tak would be even more cramped than in the stealth compartment, but it beat being stuck in space because the system you picked had had its Stargate removed or whatever.

*****

Deep Space, February 28th, 2000 (Earth Time)

“We've finished repairs!”

Catra, curled up next to Adora in what remained of the Stealth compartment after it had been stripped for parts, looked up.

Bow looked tired, but he was smiling. Hell, he looked as if he were about to topple over.

“Yes! Finally!”

And now he did topple over thanks to Glimmer hugging him too enthusiastically. Even in their spacesuits, that had to hurt a little.

“Oof! Bow!”

“I'm OK!”

He looked OK, at least. Not that Catra cared too much as long as he wasn't bleeding or unconscious right now. Not after they had spent almost a full day in their suits. Granted, mostly because of the poison still lingering in the air, especially with the filters being dismantled to replace the Tel'tak's, but still! They could finally get off this wreck and return home.

Eventually, she amended as she followed Adora to the jury-rigged airlock leading to the Tel'tak. They still had to find and reach a Stargate. But with a working ship - and one with a stealth generator at that, even if it was not as good as the one built into the decoy's stealth compartment - that shouldn't be too hard.

Their luck had to get better at some point, at least.

As expected, the ship was cramped with the whole gang and two fire teams inside. Not to the point that it was standing room only, but it made a Horde Transport look roomy. And the bathroom facilities would be strained with so many people, too, even if they weren't hastily repaired like everything else.

She shuddered at the thought of the smell after a day or two. It made spending more time in the suit look like the lesser evil. At least the suit was rigged to take care of that.

Melog, next to her, turned green. Sickly green.

She patted their flank, then slipped past Isa to the cockpit - it was too small to be called a bridge. “Everyone on board,” she reported.

Adora nodded at her. “Good.”

“Airlock's sealed,” Bow said from the pilot's seat.

“Let's go!” Adora ordered.

Catra heard the ship's magnetic docking locks disengage with a slightly screeching noise, but neither Sam nor Bow looked worried, so that was probably OK. Through the cockpit's windows, she saw the decoy ship’s battered, holed hull fall out of sight as the Tel'tak turned away.

“Thrusters performing at the expected level.”

“All systems nominal.”

A small cheer went up from the fire teams. Most of them who hadn't worked a lot with Sam, Bow and Entrapta probably had been worried about the ship blowing up. Catra snorted softly at the thought as the ship continued in silence.

“We're at a safe distance,” Sam announced as the ship swung around until it pointed at the small form of the Steel Fist again.

“Alright. Trigger the scuttling charges,” Jack said.

“Yes, sir.”

A moment later, the ship vanished in a silent, expanding fireball.

Sam's hands flew over the keyboard, and the scanner strapped into the nook next to her seat vibrated a moment. “Destruction complete.”

“Good.”

Catra shrugged. They had already removed all the pieces of technology the Goa'uld didn't already know, like the scanners and improved stealth generator. But that way, the snakes might not realise it had been a decoy if they ever found it. No loose ends, even though the thought of Sokar and the other System Lords realising they had been fooled completely made Catra grin.

“Alright. Take us out of here!” Jack spoke up. “Let's go home!”

“Yes, sir. Course set.”

The ship sped up again, away from the still expanding cloud of dust left from the Steel Fist, and entered hyperspace.

Smoothly, this time.

*****

In Orbit above PT-9714, March 2nd, 2000 (Earth Time)

“We've arrived in orbit above the target world. Scanning for the Stargate.”

Jack O'Neill nodded at Carter's report. “Doesn't look like a good vacation spot,” he commented.

“We're not here for a vacation,” Catra retorted. “We just need to get to the Stargate and get off.”

Jack swallowed the comment he could make about the - likely intended - double-entendre; things were already tense enough after two days in hyperspace in a ship so cramped, Jack could finally top whatever stories submarine crew members could come up. Even trekking through a jungle for a week wouldn't have people on edge like that; at least on a patrol or march, you had something to do, and the exertion helped as well. Here, though? Best not to tease people. “It looks like a dustbowl.”

“Correct, sir.” Carter nodded. “The atmosphere is filled with dust particles.”

Jack frowned. “Does that match our data?”

“We don't have much data about this planet, sir. Only that it has an Earth-like atmosphere and a Stargate.” Carter sounded defensive even though it hadn't been her decision to pick this

world; it simply had been one of the worlds they knew had Stargates in range and had been picked at random.

“Is that natural?” Adora asked with a frown.

“We don't know enough to tell,” Carter replied. “But the preliminary data doesn't match what would result from volcanic eruptions. There's no radiation, though.”

So, not the result of someone going crazy with nukes.

“Is it dangerous?” Glimmer asked.

“Our suits can handle vacuum and a moon's surface,” Bow replied. “Dust won’t be a problem.”

She glared at him. “We’ve spent too long in suits already! Can we breathe the air down there?”

“Ah!” Bow’s smile turned sheepish, and Jack chuckled under his breath. “It shouldn't be that bad on the ground.”

“Then let's get down!” Glimmer blurted out. “Before I lose my sense of smell!”

“Oh, please! It's not as if you had much of one before!” Catra scoffed. “Now, me, on the other hand…”

“You grew up in the Fright Zone! I've been there; as bad as the smell is here, it's still an improvement over the stench there!”

“Sam, did you find the Stargate?” Adora spoke up, a little more loudly than usual in a blatant attempt to curb the brewing argument.

“The scan just finished,” Carter replied, staring at her screen. “We've found a mass of Naquadah that matches the mass of a Stargate…”

“That means ‘yes’,” Jack cut in with a grin.

"...but we also found significant other concentrations of Naquadah," she went on with a slight frown aimed at him. "Refined Naquadah."

Oh. Refined Naquadah meant technology - Ancient technology, most likely. Jack sighed. It looked like they couldn't just land next to the Stargate and go home. "Let's take a look before we open a gate back to our lines. I assume it's close to the Stargate?" Hopefully, it wouldn't take too long to verify there wasn't anything dangerous waiting to follow them back home, and they could leave exploring this planet to someone else.

"Yes, sir. But there's something else."

Or not. Jack looked at the screen in front of Carter and muttered a curse.

*****

Gate Area, PT-9714, March 2nd, 2000 (Earth Time)

"Yeah, someone really didn't like whatever was here," Jack O'Neill commented as he stared at the cratered area in front of him. "At least they didn't blow up the gate." The destruction stopped a few hundred yards short of the Stargate proper.

Catra knelt down and stared at a piece of twisted metal that had buried itself into the earth nearby. "Doesn't look like Horde steel. But I can't make out any markings."

"Let's check out the rest of the wreckage!" Glimmer, who had finished coughing and resealed her helmet, said.

"Is it safe?" Jack turned to look at Carter and Bow, who were huddled over the magic scanner.

"No dangerous radiation as far as we can tell," Carter replied. "But there's residual exotic radiation."

"Exotic radiation?" That didn't sound good.

“It matches the effects of Horde beam weapons,” Bow added.

Jack narrowed his eyes and looked at the craters again. Orbital bombardment by a Horde task force? They weren't even close to the borders of Horde Prime's former empire. “How long ago did this happen?” The craters weren't grown over much, but that didn't mean anything with the dust blocking sunlight and, well, this being an alien planet.

“We have to run more precise tests, sir. But judging by the rate of particles in the air… If our models from Earth fit this world, then I would guess a couple of years at most.

So… either in the last days of Horde Prime's rule… or after he had been defeated.

Jack's curse was matched by Catra's.

*****

“The explosives in the Telt'ak's are set.”

Adora nodded at Campbell's report. It was a shame that they had to destroy the ship, but they couldn't take it through the gate with them. In theory, they could leave it and then send a recovery crew through the Stargate to fly it back, but the closest Alliance-controlled worlds were months away, and neither Sam nor Bow were sure the ship would manage to make such a trip without a major overhaul first, not after everything it had gone through. It simply wasn't worth the effort. Not even for spare parts since most of the parts were cobbled together from other parts. Of course, some people - mainly outside the Alliance, but some inside the Alliance as well - would disagree and consider the risks worth it anyway. Blowing up the ship would prevent that kind of mess.

“Dibs on pulling the trigger!” Catra flashed her teeth in a wide grin.

“No fair! You can't call dibs on that!”

“I just did!”

“That doesn't count! Besides, you said it wasn’t that bad, Catra! You've got no claim to this!”

“No, I said I’ve smelt worse! I’ve got the best nose; I deserve to destroy this thing!”

Also, some people, like Glimmer and Catra, really loathed the conditions under which they had been escaping from Sokar, and destroying the ship would serve as a way to vent that frustration.

Adora shook her head at her lover and her friend bickering and walked over to Sam and Bow, both looking through the data from their scanner. “Did you find anything else?” she asked.

“Well… based on the samples of several destroyed ship parts, all of the same type, and the lack of any other ship parts near them, we think this was a major factory complex. Goa'uld technology, though we haven't found any signs of which System Lord was the owner,” Bow said.

“Ground scans confirm this. A shipyard or at least a sort of maintenance facility for smaller craft would be our current estimate,” Sam added.

Adora nodded. “And the attackers?”

“The residue left from the beam weapons matches Horde beam weapons,” Sam said. “In theory, they could be Asgard beam weapons, although we lack samples of their current arms. However, the odds of both species using weapons with so closely-matching characteristics despite a thousand years of divergences are minimal.”

Adora nodded again. “And how long ago did this happen? Was it during Horde Prime's reign?”

“No. We’ve measured the lingering exotic radiation and managed to determine the decay rate precisely enough to exclude that

possibility. This happened roughly one year ago," Sam said.

Adora suppressed a curse. That meant they had a rogue Horde task force flying around and attacking planets with orbital bombardment. And looted the remains, according to the traces Daniel, Sha're and Teal'c had examined.

Adora and her friends had suspected that there were Horde remnants unaccounted for - only Horde Prime had known how big the Horde had been; his clones only knew the fleets they had been serving in and those who had worked with theirs. And, of course, Horde Prime wouldn't have gathered his entire force to attack Etheria - he wouldn't have exposed his empire like that for a planet with only one spaceship for defence. But to have it confirmed was still a blow she could have done without. Especially after a failed mission.

"We need to find them," she said. Find them and find out what they were doing and why. If they started a war with the Goa'uld, then they were potential allies. But if they were still loyal to Horde Prime, or had started to carve out a territory for themselves, they represented a danger to the Alliance - and to the Galaxy.

"We can send a swarm of spy bots through the Stargate once we're back home," Sam said. "And some supporting facilities so they can start scouting this sector of the galaxy."

"Yes." Adora looked at the still-visible signs of battle before her and pondered the problem.

She knew this wouldn't be enough if the Horde force in this part of the galaxy were hostile. Any Alliance task force dealing with them would be operating months from the closest Alliance bases. They would need a huge fleet train, preferably with mobile yards, Horde-style - or new bases and an extended supply line back to Earth. Or a combination of both. Either option would strain current logistics, and there were also political issues with both. First Fleet hadn't fully rebuilt their fleet train yet because without it, they were tied to Etheria and the former Horde factories supplying

them. That also gave Hordak additional influence over the fleet thanks to his close relationship with Entrapta, who kept the factories running. Second and Third Fleet, though, were able to operate independently for any length of time. Some princesses and several Earth politicians didn't like that. They preferred more control over the fleets.

But the longer the supply lines got, the more inefficient they became. At a certain point, the effort needed to support fleet operations through bases and transport ships ferrying supplies from Earth and Etheria would dwarf the admittedly considerable resources needed to create and maintain a mobile fleet train. And the Goa'uld Empire was so vast, some System Lords' domains were way past that point.

But Adora and her friends had hoped to be able to delay addressing that problem until the Alliance had dealt with the closest System Lords, like Apophis. That should have built up enough trust and confidence to make it easier to build up fleets that had the resources to maintain themselves and could operate far from their home worlds.

Or without home worlds, which was another can of worms.

Adora sighed. She really didn't like to address that, but it had to be done.

"Let's wrap this up and go home. We've got a lot to do."

*****

The Clones Question Part 1

Alliance Headquarters, Brussels, Belgium, March 3rd, 2000

"...and then we withdrew through the Stargate, using the planned destinations to return to Alliance-controlled territory," Samantha Carter finished her verbal report. Which was the same as her written report, already filed this morning, but that had never kept the brass from holding personal debriefings.

"Thank you, Major Carter." Admiral Kearsy sounded anything but grateful. Of course, he wouldn't be happy in general - the General had been pushing hard to remove him from the Alliance Command Council, and as far as Sam understood things - she didn't like to delve too much into such things, but she couldn't avoid the gossip and office politics in her position - was that Kearsy had called in every favour and used every piece of blackmail he had on influential people in Washington. Even Kinsey had put in 'a good word' for the 'hard-working Admiral'.

Even so, Sam had heard from several people that one more misstep would see the man retired - or sent to a naval station in Alaska or Antarctica, should he choose to be difficult about it. In her opinion, that couldn't happen too soon; the man wasn't just unable to keep his bigoted religious beliefs to himself; he was also not fit to design a rowboat, much less oversee the US spaceship construction effort. If she had to deal with yet another attempt to redesign the Constitution II-class while the first ships were being built, she might abuse her friendship with the Etherians and demand that he be dealt with.

The admiral cleared his throat before he continued. "We have a few questions about your decision to destroy a functional spaceship - a stealth spaceship - before using the Stargate to withdraw."

Sam had expected that. “As my report stated, the ship wasn’t safe to enter hyperspace, and an attempt to salvage it would have risked exposure and capture by hostile forces.”

The man’s smile twisted slightly. “Your entire team took worse risks when going on this mission, I believe.”

“For a much more valuable objective, sir. Capturing a System Lord would have benefited the Alliance far more than salvaging a barely spaceworthy small craft that has been rendered temporarily functional with field repairs.” She tilted her head as she met the man’s eyes.

“That is not your call to make, Major.”

“The Supreme Commander of the Alliance made that call, sir.” Sam smiled a little more sweetly than was completely professional.

“We all agreed that the mission was worth the risk,” General Naird threw in. Kearsy glared at him, and he added: “Well, the majority did.”

“Compared to the capabilities offered by our stealth shuttles, a Tel’tak wouldn’t have added anything to our fleet,” Admiral Brown-Emerson commented in his British accent.

“Do I have to remind you that we are still building up our naval forces?” Kearsy spat. “Any spaceship is needed. And unlike a shuttle, a Tel’tak is hyperspace capable!”

“Not this Tel’tak,” Sam corrected him. “The hyperdrive would have needed a complete replacement.” Well, that was not entirely correct. Sam was pretty sure she would have been able to repair it, but it would have taken completely rebuilding the drive, and that would have only been the start. All the other components… Sam had better things to do than repair a Goa’uld craft that was already nearing obsolescence thanks to the Alliance’s magitech sensor technology.

"Even so, an enemy ship taken as a prize offers unique opportunities - especially for the kind of missions General O'Neill loves to undertake, doesn't it, Major?" Kearsy looked like he barely managed to avoid sneering when he mentioned the General's name.

"While I wouldn't presume to speak for Special Operations Command, we have allies with access to such ships if we need one, sir," Sam retorted.

Kearsy scoffed. "Allies with their own agenda! It's difficult enough to get cooperation from another branch of the service for vital tasks; relying on alien allies for critical capabilities would be foolish."

Was that a dig at her because she had insisted on realistic limitations to the US's spaceship program? Sam couldn't tell, but she wouldn't put it past Kearsy to blame her for not magically altering poorly designed frigates so they somehow made the Navy's impossible demands work.

"We haven't had any issues on that front so far," Brown-Emerson said, stressing the 'we' very slightly, before Sam could think of a good answer.

Kearsy glared at him for that, but the British officer kept his bland expression.

"Well, most Alliance operations were cooperations with the Princess Alliance, and they worked out," Naird said. "Better than our past cooperations with the Navy," he added with a brief and slightly forced chuckle. "I mean the Air Force."

Kearsy scoffed again. "The fact remains that we could have recovered a functional spaceship with a bit of an effort - and with minimal risk compared to the mission you returned from. A mission, I have to point out, that ended in dismal failure and almost led to the loss of key personnel of the Alliance! We have neither a System Lord nor a spaceship in our hands now - in fact,

we built and sacrificed two functional spaceships and have nothing to show for it!”

He wasn’t wrong about that - the mission had been a failure. But it had failed because of circumstances outside their control; the plan had been sound. But arguing that wasn’t Sam’s job. That would be up to the General, Adora and the others.

She could argue the loss of the decoy ships, though. “Those ships were built as expendable decoys for this specific mission, sir. They were never meant to be functional warships, and only one had a working hyperdrive to begin with.”

“Instead of building those… decoys… the yards could have built actual spaceships!” Kearsy stood and slammed his hands on the table.

“That is correct, sir.” Sam nodded, which seemed to surprise him - he blinked. Before he could say anything, she continued: “Although they were built by the fleet train of Third Fleet so this didn’t cut into the yard capacity assigned to the build program on Earth.” She didn’t have to add that Kearsy had been one of the most vocal backers of the decision to build up a native space industry on Earth able to fabricate warships instead of relying on Horde facilities and design - Kearsy’s scowl showed he understood perfectly what she meant.

Once again, Sam’s smile was just a shade too sweet to be professional. Maybe the influence she had thanks to her friendship with Entrapta and the others was corrupting her.

But when she had to deal with ignorant people like Kearsy, it was worth it.

*****

Earth Orbit, March 3rd, 2000

“I see. An unknown Horde Fleet has attacked an equally unknown Goa’uld shipyard.”

Glancing away from Earth's surface visible through the fake window in the room on Priest's flagship, Catra watched him rub his chin, obviously digesting the news. Or supposed news - she was pretty sure the information about their mission would have reached him before this meeting; Priest and his followers were fixated on Adora, after all, and Catra didn't doubt that the members of the Church of She-Ra were doing their best to follow their goddess's every move.

"Yes." Adora nodded. "We haven't found any clue to either's identity, though we've contacted the Tok'ra so they can look into the Goa'uld side of the thing."

"We will search our archives again for any scrap of information about the Horde's fleets we might have missed, Your Divine Highness!" Priest announced.

Adora winced, and Catra rolled her eyes. At Adora for feeling guilty about turning Horde Prime's flagship into a plant, and at Priest for going over the same data they had gone over with a comb twice before. If there had been any information about any missing fleet, or about the system that had been attacked, they'd have found it. But if Adora's faithful wanted to waste their time on that, Catra wouldn't stop them. That way, they were less likely to get into trouble.

"We've also started extending the spy bot network in the area. If the Horde fleet is still operating in the area, we'll soon know," Adora went on.

Catra wouldn't bet on that. The bots hadn't found anything so far except some debris - from Goa'uld ships, nothing from a Horde craft - in the system. She had no proof, but the attack felt like a raid - smash the enemy, grab what resources you could loot and get the hell out of the system. Though, the fact that the Horde forces had looted the planet raised questions. The average Horde Fleet didn't need to loot their enemies; they had a fleet train to supply them with anything they needed. And Goa'uld technology wasn't as advanced as Horde technology, so… "Why would they

loot the place instead of destroying everything?" she asked. "Could they be suffering from supply issues?"

Priest frowned. "They might simply have wished to analyse the technology to better understand their enemy."

That was a possibility as well. But Catra didn't think so - the Horde had been too thorough with looting. No, for some reason, they had wanted whatever Goa'uld supplies they could get.

"In any case, knowing that there is another Horde fleet fighting the Goa'uld is a great boon, Your Divine Highness. Whereas we only suspected and assumed, now we know that more of us are out there." Priest beamed at Adora.

Catra rolled her eyes again. Priest's attempt to suck up to Adora was far too blatant. They hadn't been able to take out either Apophis or Sokar and that meant the mission was a failure. That they had found some intel, and that Kul'et's fake intel must seem to have been validated by Sokar's attack and Apophis would start another purge in his court to find Sokar's spies wouldn't help much - Apophis and Sokar had already been fighting each other, and the hunt for spies endangered the Tok'ra's operatives.

"We need to contact them as soon as possible." Adora pressed her lips together. "We need to find out why they are fighting the Goa'uld."

"And we need to tell them about you, Your Divine Highness." Priest smiled widely. "Your deeds and Your wisdom will guide them to join the Alliance!"

Adora winced again, but Catra nodded. Her lover hated it, but the more clones followed her, the better for the Alliance.

"And we need to look at increasing our numbers," Priest said, bowing his head toward Adora. "We are working diligently on converting others to the Faith, of course, but we should consider building more clone pods and expanding the construction capacity of the fleets. The current cloning facilities have the capacity to

sustain our numbers, especially if we leave ground combat to the Earth forces and bots, but should we suffer heavy casualties in space, they might not be sufficient. And without using the mind-imprinting devices Horde Prime used, we'll need more time to raise and train new clones so they are able to serve when needed."

Adora frowned. "We're not making Soldiers as if they were bots!"

Catra nodded. They weren't the Horde! Either Horde.

"Joining the war would be their choice, of course," Priest said.

Adora narrowed her eyes. "We won't raise people with the expectation that they will fight in the war."

"Perish the thought!" Priest bowed his head. "That would go against all the teachings of Your Divine Highness! We would never do that! All we ask is to raise our brothers to be good people. People who will follow the example you are setting, Your Divine Highness."

Adora opened her mouth, then closed it. Catra snorted. Her lover couldn't exactly argue against people following her example. Well, she could, but that would make her a hypocrite.

But all of them here knew that anyone raised to follow She-Ra would happily join the war against the Goa'uld. And Catra was also aware that a number of their allies wouldn't be happy about Priest's plan to expand both the number of the clones and their fleets. Both on Earth and Etheria. She felt a little torn about the idea herself.

And yet, with an unknown Horde fleet out and about, they might not have a choice.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, March 4th, 2000

Jack O'Neill watched from the edge of the training field as a platoon of his soldiers struggled to clear the obstacle course they usually ran in record time. Well, they were still doing better than some regular units, but for Special Operations Command, it was not up to par.

"And this after they all had passed the zero-g assault course," Sergeant Meadows commented next to him with a deep frown.

"It's one thing to train boarding ships, it's another to spend days in the suit and fight a war in the field." And the platoon had spent more than a day in the suits already at this point, without a break. "It's still better than the old NBC drills," he added. The spacesuits were far more comfortable than those, and they didn't slow you down that much - Jack knew that from experience. But they still reduced your effectiveness in combat. Significantly in some areas, as the exercise showed, but that should be compensated for with more training and experience.

And they needed the training. The failed mission had driven that point home. Jack should have ordered everyone to keep their suits on no matter how uncomfortable it was. And he shouldn't have blindly trusted that She-Ra's magic would fix the poison. Jack should have known better than trusting a magic solution.

"I don't envy the poor bastards in the regular units," Meadows said.

Jack shrugged. They didn't have nearly enough spacesuits for every soldier - they had barely enough for his command and he had to fight with the Marines to get them and call in a favour with Entrapta - but everyone needed to be prepared for an attack with chemical weapons. Sokar's stunt had driven that lesson home. That the Jaffa would be killed as well wouldn't stop the snakes; they had no qualms about sacrificing their own troops to hurt their enemies. Especially if they were losing a battle anyway. "They're not as much at risk as our troops."

“That's true.” Meadows seemed about to add something but yelled: “Jenkins! Get up and get running, or we'll do a medical evac drill!” instead.

Jack snorted and turned away. He had seen enough and had been seen enough - an officer had to keep in touch with the troops under his command. He should run the course himself, but he had already done that yesterday, and he had a mountain of paperwork to deal with; during his absence, the stuff had multiplied, and that wasn't even counting the forms and reports he had to deal with from the mission itself.

And, he added silently with a frown as he made his way back to his office, the idiots he had to deal with. He had heard about Carter's debriefing. Not from her, of course - she would never complain about such things, at least not to him. But others paid attention.

Kearsy should have been reassigned weeks ago, but the whole thing had been delayed because the idiot knew too many influential people, and the usual posts to which you could send officers like him so they couldn't do any damage to the war effort but couldn't complain either since it was nominally a promotion were already filled.

Which said something about the Armed Forces, of course. Even in the Air Force, Jack wouldn't have expected so many staff officers to be so… Well, Daniel, always diplomatic, had called them ‘slow to change their convictions’ when they had discussed it. Carter had used ‘traditional’ with that little twist to her lips that showed that it was an insult. Jack wasn’t about to be polite inside his head and just called them stupid. And a few worse words.

Having faith was fine and dandy - a soldier needed to believe in something to risk their life in war, and whether you believed in your country or your god didn't really matter. Until one went against the other, of course. You didn't put your god over your country. And you didn't use your god as an excuse to attack your allies.

“Things would be so much simpler if Kearsy were a member of the Church of She-Ra - she could just tell him directly to behave,” Jack muttered as he entered his office, then snorted at the thought. If Kearsy converted, his career would be over anyway. His allies and supporters would turn on him in an instant, and the enemies he had made wouldn't lift a finger for him. Well, Priest might, actually.

“Sir?” Brown asked from his desk.

“Nothing. Just a silly thought,” Jack replied. “Is there anything urgent I need to deal with?”

Brown tilted his head, glancing at the sheet next to his phone, and Jack frowned. His aide knew what Jack considered urgent. Phone calls from generals and politicians generally weren't. But Brown had a habit of politely and subtly disagreeing about that. “Who called?”

“Senator Kinsey, sir. He didn't say what it was about.”

Jack sighed. “I'll call him back.” Once he had his next coffee.

*****

Alliance Headquarters, Brussels, Belgium, March 6th, 2000

“...and lastly, there's been concern about the proposal to clone more, ah, clones and build more Horde frigates.”

Adora nodded at the Secretary of Defense's words. “Yes. Priest is concerned about suffering casualties above their capacity to replace, especially with news about another Horde Fleet operating in the sector.” As soon as she finished, she pressed her lips together for a moment. She should have worded that a little better - ‘capacity to replace’ sounded too mechanical.

The Secretary of Defense smiled a bit weakly. “Ah, that wasn't the concern I was talking about. Our government is concerned about

using cloning technology to produce soldiers."

Adora nodded again. "I share this concern."

The man blinked, apparently surprised by her words, but recovered quickly. "Indeed. The implications on how the war is seen by the civilian population, and the effects on recruiting, are potentially problematic."

"Not to mention that this will put the question of whether we should use this technology on humans on the table," the German Verteidigungsminister added.

Adora nodded once more. They had gone over that with Priest. Some wouldn't see cloned humans as people - some already didn't consider Horde clones people. And not just those who called them 'soulless abominations'.

"We're aware of that," Glimmer cut in before anyone else could speak up. "It's a difficult decision with many far-reaching consequences. I doubt any of our countries, whether on Earth or on Etheria, are ready to handle the changes such a decision would cause in society. There are many questions that need to be answered."

"Not the least the question of what you should do once your mass-produced clone soldiers have no more war to fight in," the British minister commented. "Her Majesty's Government opposes the use of cloning technology for military recruitment."

"As does France," his French colleague added.

"The United States' position is that at this point, there is no need for such drastic, unprecedented and potentially destabilising technology. The risks are far too great when compared to its moral implications and questionable military benefits."

"Brecht's saying about the Government dissolving its people and electing a new one comes to mind," the German minister commented.

Adora didn’t quite get that, but the rest matched what she had heard in the leadup to this meeting after Priest's proposal had been passed on to the rest of the Alliance. And she agreed with the stance. You couldn't just let anyone, well, anyone with the technology and facilities to build and run so many cloning pods, mass-produce people as if they were bots. That went against everything the Alliance stood for. It was just wrong.

“While my government doesn't disagree,” the minister from Norway spoke up, “we also cannot overlook that the Alliance is already producing bots, and some of them are sapient. The implications are the same.”

“They're not the same!” the American protested.

“Morally, they are the same.”

“Sapient is sapient,” Entrapta commented, nodding emphatically. “No matter how you’re built. Whether metal, ceramic, crystal or biological, it's all just matter, in the end, nothing more.”

The Secretary of Defense looked as if he wanted to disagree but held his tongue.

“The scale is vastly different, though. As I recall, the sapient bots are only produced in tiny numbers,” the British minister said.

“So far,” the minister from Norway retorted. “What if we end up needing more smart combatants and turn to bots?”

That was a good question.

“We'll produce more dumb bots and put human veterans in command of their units,” Catra replied. “That's more effective than producing more sapient bots who have no experience.”

Entrapta nodded several times. “Yes. We found that out in the Horde War. The data is very conclusive.”

Adora wasn’t the only one who winced, though in her case, it was because she had torn through Horde bots without a thought.

“I think we can cross this bridge once we reach it,” the French minister said.

That went against the basic principle of planning ahead, in Adora's opinion. Then again, it also wasn’t smart to start trouble when you didn't need to - and they didn’t need to make the problem with clones worse. Not when the real problem - one of the real problems, she corrected herself - hadn't been addressed yet. “So, we're in agreement that there won’t be any cloning of humans for military reasons,” she said.

“Yes.”

“Yes.”

“Not for any reason!”

“We didn’t agree to that!”

“It's implied!”

“It's not.”

“What do you need clones for?”

“There are several possible reasons for cloning people.”

“None of them are valid!”

“You can't dismiss them without even hearing them!”

“We just went over the reason they are not valid!”

“It’s unnatural!”

Adora cleared her throat, stopping the growing argument in its tracks. She made a mental note to ask around what this was about. “So, that's about cloning humans. But the Horde clones

aren't humans. Their society is based on cloning - they do not reproduce sexually. And they are a sovereign species. If they decide to increase their numbers, that's their decision. It would be like us telling people they aren't allowed to have children." That had been an excellent argument from Priest, Adora had to admit.

"That's not the same!" the Secretary of Defense blurted out. "You can't compare individual decisions to found a family to mass cloning!"

"You can't force your family norms on aliens," his colleague from Norway retorted.

"You have to consider the impact of each decision," the American shot back. "As with the bots, numbers matter!"

"It's not our decision in the first place."

As the other ministers started to debate again, Catra, who had been uncharacteristically quiet so far, Adora realised, leaned over and whispered: "Wanna bet that this is actually about not wanting the clones to outnumber their forces if they chose to?"

Priest had mentioned that as well, Adora knew. And he might have been correct. Even though his proposal wouldn't even come close to doing that - not even if he wanted; the Horde didn't have the cloning pods for it and wouldn't have them for a long time.

Then again, it wasn't a baseless concern. There were other clones out there, after all. Clones they didn't know anything about.

*****

Colorado Springs, Colorado, United States of America, Earth, March 7th, 2000

"Carter! Entrapta! Come in! Don't mind the neighbours - they still haven't adjusted to my new commute!"

“General.” Samantha Carter nodded a greeting as she stepped into his home.

“What did the neighbours do? I didn't notice anything,” Entrapta asked behind her, turning around to peer at the neighbouring houses, semi-hidden by the three shuttles parked outside.

“Nothing. The General is joking,” Sam told her.

“I’m not!” he protested with a grin. “And they're watching us attentively, you can be sure of that!”

“Isn't that rude?”

“It’s their job.” He smiled a little wryly. “When I got promoted to General, the Air Force bought up all the lots bordering mine for security purposes. If they hadn't, the Homeowner Association would have tried to burn down my home for parking my shuttle in the driveway. The others are in the living room - make yourself at home!”

“Alright!” Entrapta nodded, and Sam caught her pulling up her multitool as they entered the General's living room. Probably to check what a Homeowner Association was.

“Sam! Entrapta!”

“Hello!”

“Greetings.”

Daniel, Sha're and Teal'c were already there, occupying the couch and one seat. She had expected that - Teal'c would have flown with the General in his personal stealth shuttle while Daniel and Sha're usually took a normal shuttle from the Alliance pool when they needed to travel. For now piloted by a soldier, but Sha're was training to take over.

“Who wants a beer?” The General appeared carrying a tray filled with snacks and his favourite beer as well as some sodas.

Sam noted that the couch table was already covered with more beer bottles and bowls of food. As expected. German beer, mostly.

“It's been a while since we had a get-together here,” he said as he took a seat and Sam grabbed a soda for herself.

“Your Homeowner Association sounds more dangerous than the norm,” Entrapta commented while her hair grabbed two sodas and a bowl of tiny marshmallows. “I haven't found anything about other such groups using arson.”

“That was a joke,” Daniel said, frowning at Jack.

“Yes. Though I am sure they wished they could run me out of town when Uncle Sam took over.”

“Ah.” Entrapta nodded, then started munching from the bowl and occasionally taking sips from the can.

“Adora and the others were held up at headquarters but should arrive soon,” the General went on after downing half his beer. “The thing about the clones really raised some hackles.”

“I don’t understand the problem,” Entrapta said. “The clones are not subjects of any country on Earth. So, why should they listen to anyone on Earth about how they should reproduce? Also, the Alliance needs more ships, and ships need crews, and the clones have the means to provide us with both.”

She wasn't technically wrong, Sam knew, but it was a very blunt way to look at it.

Daniel cleared his throat. “It's a complex issue. Leaving aside the, err, ethical and religious concerns, some people feel that the Horde is already the most powerful member of the Alliance since they control the vast majority of the Alliance's spaceships. Hearing that they plan to expand while Earth is still so far behind in building up their own ships might make them concerned about the future. And there's still lingering resentment about the changes to Earth society the Alliance caused. Some feel that if Etheria could

make them adapt their way of life, they should be able to reciprocate."

"But neither Etheria nor the Horde prohibit people from having relationships and families with anyone or discriminate against it." Entrapta frowned in the slightly pouty way she usually did when struggling with an unfamiliar concept. "So, what is there to reciprocate?"

Daniel hesitated, and the General said: "For some people, not being able to tell others how to live their lives makes them feel discriminated against. You can find a lot of them in Homeowner Associations."

Entrapta blinked. "That makes no sense."

"It doesn't." The General shrugged.

"I have also heard that there is concern amongst some leaders on Earth that their population advantage might be negated by mass-cloning by the time Earth's production capacity for advanced technology would reach parity with the Horde's," Teal'c spoke up.

"But that's baseless!" Entrapta shook her head, her hair tendrils almost spilling a bowl of tiny crackers. "The resources needed for mass cloning on such a scale… Just the need to educate every clone would be beyond the means of the current population, and that's without taking all the physical resources into account! Not to mention they don't have much experience with rearing new clones. Sure, you could use Horde Prime's memory implant technology, but at that point, you might as well just build bots! And that will cripple your science research, which means you couldn't develop better technology, which means your ships - which would require tons of resources as well - would become obsolete, meaning you'd need even higher numbers to compensate… It just doesn't work that way! Not in the time projected for Earth to adapt to advanced technology, at least."

Sam nodded - she had run the numbers as well. Though longer-term, a dedicated focus on cloning and expansion could theoretically enter exponential growth.

“It's completely irrational,” Entrapta huffed and sat back down, stuffing her mouth with two tendrils full of snacks.

“That's politics for you,” the General commented. He leaned back. “Anyway, it's not as if anyone can stop the clones from doing what they want, so it's going to blow over.”

“That's what Hordak said as well. The not being able to stop them, I mean,” Entrapta said. “Earth can't dictate how the clones should live.”

While correct, Sam was sure the former warlord hadn't meant the moral aspects of the question but had been talking realpolitik. Earth simply lacked the power to enforce their views, even if they wanted to stoop that low.

“Unfortunately, that doesn't mean some people won't try,” Daniel said.

“And if your press gets involved, they might try to draw parallels to how the Goa'uld reproduce in large numbers,” Sha're added.

Sam winced. It was likely only a question of time until the cloning plans were leaked to the public. And once the various extremists heard about it, their reactions wouldn't be pretty.

She finished her soda and grabbed a beer, but her mood had already been soured. So much for a nice evening with her friends!

*****

“Hello, everyone!”

“Hello!”

“Hello!”

Following behind Adora, Glimmer and Bow, Catra stuck to nodding in greeting at the others already occupying the living room. At least they weren't too late - the group didn't look as if they had been having too much fun yet.

“Sorry for being late, but we had a meeting run long.” Adora smiled at the others with that expression of hers that showed she felt responsible for something that wasn't her fault.

“As usual,” Catra commented as she snagged a beer - one of the German ones, not the American stuff and waited for Adora to pick a seat for them.

“Not every meeting runs longer than expected,” Adora retorted.

“But every meeting is expected to run long,” Catra shot back. Oh, salmon rolls! She grabbed the bowl and ignored Jack's snicker.

“If every meeting is expected to run long then you need to adjust the allotted time for the meeting so it matches expectations,” Entrapta said. “Data doesn't lie.”

“Then they would run even longer. It's a rule,” Jack said.

“But that doesn't make sense!”

Adora grabbed a beer herself and some hot chips, then sat down, and Catra first perched on the armrest before she slid onto Adora's lap, startling her lover with a grin.

“Hey!”

“That's my line,” Catra said before pushing a roll into her mouth. Oh! Mh! “Good rolls,” she told Jack after swallowing. “Where did you get them?”

“Brown got them for me,” he admitted. “I planned to get them myself, but there was a problem with the training schedule. And he probably wanted to avoid complaints from the German police if

I parked the shuttle in front of the local supermarket again," he added with a grin.

"You used a shuttle for a grocery run?" Daniel stared at him.

"I put it in stealth mode and had it hover above the ground," Jack replied. "So, I didn't break any traffic laws."

"Except for air traffic regulations, sir." Sam sounded exasperated, but Catra could spot a smile on her lips.

"I was flying too low for that to apply. And I had a flight plan filed per regulations. Not my fault that the German official thought I was joking." Jack shrugged. "Anyway, Brown had it handled like a good aide should."

"Or a lawyer," Daniel commented.

"He's too honest for a lawyer."

Catra snorted at that. The aide sounded quite sneaky to her - sneaky enough, at least, to handle Jack's antics. Of course, Jack was sneaky enough to let him do it, so… Whatever. She finished her beer, then called out: "Hand me another one, Daniel?"

"Why don't you get up and grab one yourself?" Glimmer asked.

"I'm needed here to make sure Adora relaxes," Catra told her with a grin while she took the can from Daniel. "She needs another one as well, by the way."

"I haven't finished my first yet," Adora protested.

"You can still use another," Catra retorted. The meetings had been tedious. So much posturing and horse-trading just to get things done! Almost as bad as Horde meetings, but you didn't have to fear literal backstabbers. Well, you probably didn't; there could always be some fanatic. Or someone going crazy; the stress of waging war could break people.

“So… what movie are we watching?” Adora asked.

“Well, we have watched Star Wars twice, so I was thinking something new,” Jack said. “Sorry, Teal'c.”

Teal'c nodded in response but didn't comment.

“And I was told by someone,” Jack pointedly looked at Daniel, “that you need more exposure to movie culture to truly appreciate ‘so bad they're good’ movies.”

“All I said was that to enjoy those sorts of movies, more context might be needed,” Daniel told him with a frown. “And all the movies you suggested were just bad.”

“Enough beer and every movie starts looking good,” Jack shot back. “Anyway, with the classics out, I thought I'd take a page out of Etheria's book and get the latest movie.” He flashed his teeth in a wide grin, reached behind his seat and pulled out a small case. “Behold the latest Hollywood blockbuster: ‘Space Pirates’.”

“Isn't that still in the cinemas?” Daniel asked.

“I got an Etherian bootleg,” Jack said.

Glimmer groaned. “Disney will complain again if that gets out, and the negotiations about a copyright deal will stall again.”

Catra shrugged. That wasn't her problem. Besides, Glimmer could always give in and bribe them with magic healing or something if things were going wrong. “Come on, put it on.”

“Alright.” Jack stood up and walked over to the TV.

Catra leaned back into Adora and got comfortable.

*****

“We absolutely need to show this to Mermista!” Catra blurted out when the end credits started rolling.

“We absolutely can't show this to Mermista!” Glimmer protested.

“But they so ripped off her and Sea Hawk! Princess Siren even looks like her, and they got her attitude down to the way she rolls her eyes!” Catra giggled. “And the hero is a space smuggler named ‘Falcon’ with a laser cutlass whose ship gets wrecked in the very first scene and he just walks it off!”

“Exactly!” Glimmer shook her head. “She'll go ballistic.”

“There are bootlegs around already. Mermista will hear about it sooner or later anyway,” Catra pointed out.

“That doesn’t mean we need to tell her!” Glimmer insisted.

“Of course we do! That way, we can see her reaction firsthand!” Oh, Mermista would go ballistic! Sea Hawk would probably love it - the actor playing his expy was great. “And we need to get the cast to visit Etheria!”

“You want to reward them for ripping off our history?” Glimmer sounded shocked.

“More like ripping off our stories.” Catra shrugged again. She didn't care - it was a great movie. And speaking of that… “Bow! I'll need a copy for us!”

“OK.”

“Bow!”

As Bow tried to placate Glimmer, Catra smiled. That had been a great movie night. Just the thing to relax and have fun.

*****

Alliance Headquarters, Brussels, Belgium, March 9th, 2000

"...and behind me, in front of the White House, a crowd has turned out to protest the production of clone soldiers. While the protesters are, so far, peaceful, the mood is quite riled up, and the police in riot gear are standing by to intervene."

Behind the reporter who was almost breathlessly narrating, Jack O'Neill could see the crowd waving various signs around. He wasn't quite sure - the cameras didn't really linger on them - but he thought he saw something about 'soulless hordes' next to the dozens of identical "Say NO! to unnatural procreation!' and 'No Kid Factories!" signs. Someone must have mass-produced them for the protest, he thought with a snort.

Then the frame froze, and Major What'shisname, Greaves, stepped up and addressed the room. "As you can see with this news clip - just a sample from various others - we're already seeing protests from the public against cloning people."

Not for the first time since he had received his personal stealth shuttle, Jack had to admit that while it was great to be able to commute to any location on Earth or the moon from his home - or any planet with a Stargate if he took a trip to Stargate Command - it came with a few drawbacks. Such as not having an excuse not to attend a stupid meeting halfway across the continent from your base because travelling there wouldn't take him much time at all.

And so he had to listen to a staff officer who must have risen through the ranks in Public Affairs without ever seeing the field, much less combat. Major Greaves certainly seemed way too concerned about this whole thing. Then again, that was his thing. Jack on the other hand.. If he ever found out who got him on this committee, someone would regret it. He was special forces, not public relations!

"Protests by fringe elements driven by religious nutcases," General Barbier said in his distinct French accent. "If we listened to them, we might as well drop any advanced technology and go back to horse and carriage."

“They're not Amish!” Greaves protested. “They have significant influence amongst the more conservative, err, conservatives.”

“In the United States, maybe. I can assure you that such fringe elements do not influence French policies.”

“Her Majesty's Government also isn't in the habit of listening to demands rooted in irrational beliefs or based on sensational movies,” Admiral Brown-Emerson added. He wasn't a PR specialist, either. Must have annoyed someone back in Merry Old England.

“Unless they donate to your election campaigns,” General Naird commented. Of course, he would jump at the chance of getting on a committee for the networking and influence. At least his background - Signals - was something slightly related to this bullshit. “Didn't one of your Lords start a petition to clone a dragon?”

“That's not a rejection of cloning technologies - quite the opposite, in fact,” the British admiral retorted with a straight face.

“You can't claim that's rational, though.” Naird snorted. “And I bet the guy has come up with this after watching Jurassic Park.”

Brown-Emerson chuckled, conceding the point.

“Sirs?” Greaves cleared his throat. “While fascinating, this meeting is being held to discuss the potential issues the adaption of cloning technology for procreation could have for the image of the Alliance.”

“It's just the Horde clones who are doing it, and they, well, are clones,” Naird said. “No other country has passed legislation to allow the cloning of people.” He gestured at the screen. “Those people are protesting an imaginary threat!”

“That is correct, sir. However, what people believe, regardless of its veracity, still matters,” Greaves retorted. “If the population - or

a part of the population - thinks the Alliance is building factories to churn out cloned soldiers, that will have repercussions."

Jack wasn't really concerned about a bunch of idiots falling for rumours. But the people using those idiots? The people politely voicing 'concerns' about the 'unprecedented expansion of what is arguably already the most powerful member of the Alliance', as one of them had put it? Those could be trouble. Even though Jack had mixed feelings himself about the Horde expanding. Still…

He scoffed, drawing the room's attention. "And even for the Horde, who have been cloning each other for centuries, it's not going to be easy to expand. This isn't a game where soldiers spawn fully trained and equipped at the push of a button."

"No one is expecting that!" Greaves protested.

Jack had a mind of showing the Major the clips from the more conservative TV channels Daniel had collected. Some idiots certainly seemed to think they were living in Starcraft. "Anyway, we're not going to get buried in clones." Carter and Entrapta, and they would know best, had run the numbers, and Jack had checked them himself.

"We can't tell people that, though," Naird pointed out. "That's a military secret!"

"We don't have to tell them that. We can simply not comment but let experts explain the truth," Barbier countered.

"That would be the same! We can't let the enemy know about our production capacity!" Naird shook his head.

"If the Goa'uld have spies on Earth, then speculation about cloning and training capacity is the least of our worries," Jack said. "We just did a dangerous mission to convince the snakes that we're at war with the Horde, remember?"

Naird glared at him. "Of course I do! But we still cannot reveal such details about our military capacity!"

“I think we should consider it if only to counter the narrative that we're on the verge of people cloning armies,” Greaves cut in. “If fear of this scenario continues to spread, it's bound to do a lot more damage to the Alliance's capability to conduct this war. Not to mention the consequences if people start to suspect that friends and family could be replaced by clones.”

“Surely that is not a realistic scenario!” Barbier exclaimed.

“Never underestimate the stupidity of the average man,” Jack muttered.

“I suggest we create a task force for combatting disinformation and rumours,” Naird said.

“Good idea,” Jack said. Naird looked surprised at his support, but as long as Jack wasn't on that force, he was all for it. Maybe they could have the Department of Education do it. It certainly seemed as if the world - Jack didn't believe that America was unique in that area - was in need of better education, so people didn't believe every nonsense.

The Clones Question Part 2

Earth Orbit, Solar System, April 10th, 2000

"...and as our first batch of new brothers is ready to take their first steps into the universe today, Her Divine Highness Herself is attending this joyous occasion to welcome them with her blessings!"

Adora didn't wince when the assembled clones broke out cheering at Priest's prompting, but she felt her cheeks grow warm. She shouldn't have agreed to this, all the public relations concerns be damned! It was dubious, anyway, that her presence would help make the clones more acceptable. As Mr Brown and Julie had explained, there was considerable overlap between those on Earth who were afraid of an army of 'soulless clones' taking over Earth and those who considered her a 'false heathen demon tempting the faithful', someone even worse than the Goa'uld, just because the Church of She-Ra was still growing on Earth.

It wasn't as if she wanted to convert people to worship her - or have anyone worship her at all!

On the other hand, those newborn clones didn't deserve to feel snubbed and abandoned just because Adora felt embarrassed. It was bad enough that some bigots hated them already before they were even born - or decanted, as Catra called it.

Priest was correct that they were newborns, and newborn children deserved love and care, not hatred and ignorance. It was the duty of She-Ra to protect people, and she wouldn't shirk it.

So she smiled at Priest, tried to ignore how he and everyone else bowed their heads and stepped forward to the small podium placed in front of the cloning pods in the main cargo bay of the frigate they had converted into a support ship, and smiled.

“Thank you, everyone,” she started the short speech she had prepared last night - after a final check that Catra hadn't sneaked in the suggestions she had mentioned last night. “I am happy to be here to see new people entering our world, our universe. They are the first of a new generation, the first after Horde Prime was finally defeated.”

Experience made her pause in time to let the clones curse Horde Prime. She managed not to wince when she noted that they had picked up a few more creative insults from Catra. That bit certainly would be cut before it was aired by any American broadcasting company.

“They are the first generation to be raised differently - to be raised as people in their own right. The first to benefit from what you all have fought and struggled for - and earned - the right to pursue your own path in life, to find happiness according to your own desires, not according to one being's whims and dictates. You called them your brothers, and they are, but they are also your first children. Treat them as such - raise them with love, care and understanding. Do not force your own expectations on them, but let them decide how they want to live their life.”

She felt more than a little like a hypocrite. Here she was preaching about childcare when she had been raised as a child soldier by Shadow Weaver. But that didn't mean she was lying, or wrong.

“Above all, accept and love them no matter their choices, but guide them as well so they can make their own decisions and live with the consequences.”

Adora took a deep breath and blinked - her eyes were feeling a little wet.

“In short, be their loving family.”

She slowly nodded, and the clones cheered again.

“Her Divine Highness has spoken, and Her Wise Words shall be heeded!” Priest declared. He bowed deeply to Adora and then

turned to face the assembled clones. “Now, let's not dally any longer and welcome our newest children to our family!”

Adora turned to watch the rows of cloning pods behind her. The first one, the one at the right end of the front row, briefly glowed, illuminating its interior. The liquid inside it was quickly drained, revealing a new clone. Several cables and tubes connecting him to the pod were withdrawn, and Adora suppressed a slight shudder at the memory of Horde Prime using a similar mechanism for himself.

But then she heard a hissing sound, and the lid of the pod slowly rose as warm air dried the clone inside.

He wasn't moving, though. Adora could see him breathing, but he wasn’t moving. But if something were wrong, the machines and sensors would have caught it. And Priest didn't seem worried, so this was normal.

Then the clone opened his eyes, blinking confusedly - at her, Adora realised. “Who…?” he whispered. “Where am I? Who am I?”

“You are a clone, same as we are,” Priest told him. “The youngest member of our family.”

The clone looked from Adora to Priest, then at Adora, and finally down at himself.

“And this is Her Divine Highness, She-Ra, Princess of Power! We owe her our freedom and our lives!”

Adora blinked as the clone’s eyes widened and darted back to stare at her. “She-Ra…”

Before she could tell him to call her Adora, Priest cried out: “Praise her Divine Highness!”, and the other clones took up the call.

Including the new clone whispering it as two clones helped him out of the pod and led him to the side, where clothes and other necessities were waiting.

Adora turned to frown at Priest - she hadn't been told about that part! - but he was already stepping up to the next pod.

*****

Portsmouth Naval Shipyard, Maine, United States of America, Earth, April 15th, 2000

"...and it's with great pleasure and pride that we have gathered to watch the launch of the Constitution II, the mightiest warship ever to be constructed on Earth. May she serve as admirably as her famous predecessor, the oldest warship still in service!"

Samantha Carter clapped her hands politely as everyone else present applauded. She managed not to roll her eyes as Admiral Baker continued his speech.

The man was technically correct - the Constitution II was the largest warship built so far on Earth and outgunned the Flower II-class built by the United Kingdom even without taking her fighter complement into account. Which was a good thing since the Corsair IIIs that were supposed to be carried by her were still in the testing phase. Although the fighters were about to enter mass production as soon as testing showed that Sam's fixes for the last issues worked. Which it would - Sam and Entrapta had done the fixes personally. Compared to the work on the Constitution II, the project had run almost smoothly for its scope.

Of course, the fact that the Corsair III was a joint project of the United States, the United Kingdom, France and Germany, and one where the US Navy hadn't been able to take the lead, had helped there. If they had incorporated every damn 'suggestion' by the Navy, they would still be in the planning phase for the next prototype. If they had simply copied the Horde fighter design, maybe adapted it a bit, they would have had squadrons of them

entering service already, but if there was one thing the Earth part of the Alliance agreed on, it was that they didn't want to rely on copying designs but create their own despite the cost.

By her estimation, the Constitution II could have been launched about a year earlier, and at a much, much lower cost, if they had stuck to the original design for a frigate instead of trying to construct a ship that would do the job of both a frigate and an escort carrier.

And, in her opinion, clearly if diplomatically stated in her reports, the design was a failure as a carrier. It had less firepower than a Horde frigate despite being bigger. And a single squadron of fighters simply wasn't worth the additional crew, space and supplies requirements. More shuttles would have been better and would have significantly helped with the capacity to conduct rescue, scouting and even special operations. But the Navy had argued that the new ships' 'dual focus' would let them gain critical experience with both gunship and carrier operations in space at the same time and that the exploding costs were worth it since that way, they would be able to save money when designing the fleet carriers and battleships they wanted.

Sam would believe that when it happened - and after double- and triple-checking the budgets.

"And now, let's watch as the newest ship in the service of the United States takes to the sky!" Baker finished, gesturing with his arm at the ship in its berth behind him.

For a moment, nothing happened. Sam heard some of the audience starting to whisper - mostly, but not exclusively the civilians present, politicians and other notables, laypeople who expected an outdated rocket launch.

But modern spaceships with inertial compensators didn't launch on a pillar of fire. The ship silently started to rise, slowly clearing the berth's walls. Once she was clear, she accelerated, although

still far more slowly than she could, to avoid blasting the audience with a sonic boom.

Even so, it didn't take long for the ship to become a speck in the sky.

While the audience started chatting excitedly about the - in Sam's opinion rather mundane - event, she checked her laptop. According to the scanner in the Spacelab, the Constitution II's systems were performing according to their specifications, and the ship was following the pre-planned route for her maiden flight.

Good. Sam felt a bit relieved even though she knew the odds of anything going wrong were very slim. Not slim enough that she would have been allowed on the ship for this, though. In any case, this was now officially no longer her problem - at least until something did go seriously wrong.

"Major Carter, you must be feeling very proud to see your project coming to such an impressive conclusion!"

She turned to smile, politely, at Admiral Baker. "It is good to see the ship fly," she said, "but my part in the project was limited to troubleshooting when necessary." Which had been far too often the case, in her opinion. "You should congratulate the design team responsible for this." And, of course, the ship still needed significant time to work up until she was ready for active service.

"Already did!" He beamed at her. "And you know what they said?"

Sam managed not to channel the General and comment that she was sure he would tell her. "No, sir?" she said instead.

"That you were essential for the project's success! Now, as we both know, they wouldn't say this if this weren't true. So, again, congratulations! The Navy is in your debt."

Sam smiled, but inwardly, she felt quite differently. Those bastards were only praising her in order to blame her for any problems that

would appear during the ship's maiden flight or the shakedown cruise.

Well, Sam wasn't going to let them do this to her. Her reports were already filed and would set things straight if anyone tried to scapegoat her.

So she smiled and nodded - and hoped the admiral would turn to someone else soon so she could slip away and get back to more important work.

*****

Royal Palace, Bright Moon, Etheria, April 17th, 2000 (Earth Time)

Catra put down the report from Priest and shook her head. The clone knew how to mince words, even when writing military reports. But even flavoured quite optimistically, the results remained: Training the newborn clones to be competent crewmen for Horde ships would take six months at the very least, and only if you defined competent as "won't endanger the ship trying to do their duties" and focused on specialising as much as possible.

Which wasn't a good way to run a navy, as Catra knew from her time in the Horde. You wanted as much redundancy as possible in your crews to compensate for losses. And you wanted experienced sailors, both ratings and officers. During the Horde war, the Salinean fleet had had inferior ships but much better crews, and that had told in most engagements where they hadn't been outnumbered to a significant degree. And even outnumbered, they had inflicted disproportionate losses on the Horde forces.

So, in order to actually be effective, they would need to staff the Fourth Fleet with a solid core of experienced clones from the other fleets. That would reduce the crew quality in the existing fleet since those clones would have to be replaced. And cause some friction if you mixed crews from different fleets on the same ship -

or even in the same task force. Third Fleet had developed a very different culture than Second Fleet or First Fleet, not that the two latter fleets were identical either; Hordak and WrongHordak ran their forces quite differently.

They could avoid some of the friction by simply taking the cadre for the new fleet from a single fleet. Third Fleet would be the obvious choice, but that would mean that fleet would suffer the lion's share of the drain of experienced crews. And having new fleets so closely associated with existing fleets could, in the long run, damage the entire fleet's cohesion.

Although Catra wasn't sure that just forming new fleets with new cultures would help much with cohesion either. Maybe having more crews move around between ships and fleets would help, but with the way Third Fleet was basically just the Church of She-Ra's naval branch, as Jack had put it once, it might cause more problems than it would solve.

Problems Horde Prime hadn't had to deal with since he had just programmed the minds of his clones to get them as skilled and loyal as he wanted them to be. Loyal little drones. She shivered at the memory of being under his control, ready to lay down her life for him, ready to fight Adora for him… No one should have that kind of power!

Fortunately, all the data about that kind of 'programming' had been wiped on the orders of Hordak, WrongHordak and Priest - not even Entrapta had protested against losing data forever. So, no idiot could have the bright idea of using this technology to speed up training, and Catra wouldn't have to claw off their face for suggesting it, either.

Still, between the need to train all those new clones and crews and draining the existing crews of cadre, it meant that for the next twelve months or so, the Alliance's naval strength would be diminished.

She quickly ran the numbers on her pad. If everything worked out reasonably well, they'd reach the point where they would see the first actual increase in numbers and total effectiveness in about a year, but the individual ships would still be less effective than they currently were since a percentage of their crews would be new clones getting training. That could be improved with a dedicated training command, though setting that up would cost resources as well. However, once running, it should streamline and speed up the training of new clones and improve crew effectiveness.

And having a centralised Horde training command should also help with force cohesion.

Nodding, she started jotting down a proposal she could run past Hordak, Wrong Hordak and Priest. She could put it to the Command Council, but this was Horde business; the idea of a centralised Alliance Naval Training Command had been shot down from the start since none of the Earth navies wanted to adapt to a different naval culture, much less the Horde traditions, and technical training wouldn't help much with everyone using different classes of ships.

Just having a standardised Naval Tactics Course based on the Horde experience for all naval officers to take had been an achievement, and even that had required letting NATO take the lead in Alliance Special Operations training.

Sometimes, Catra really missed having the power to just order people to do things the right way or get shot. On the other hand, having such power also came with a lot more paperwork and everyone and their mother coming to her with problems they should have been able to solve themselves, cutting into her time to actually tackle the important issues.

She took a look at her proposal. It wasn't very detailed, but it didn't have to be; that stuff was best left to those with more experience in the specifics. But it outlined the pros and cons quite nicely. Now, all that was left was to send it to the Fleet leaders.

She was just getting around to that when an alert came in. Not an emergency, but urgent?

Oh. The spy bot network had discovered the missing Horde fleet.

She quickly sent her proposal and got up to head to the meeting room. The Alliance would have to deal with this new development.

*****

Royal Palace, Bright Moon, Etheria, April 18th, 2000 (Earth Time)

"So, what's the situation?" Jack O'Neill asked as he entered the meeting room and found the Etherians already present. Of course, he had had to take the Stargate from Earth while they were living down the hall.

"Hello, everyone!" Daniel said and Jack knew without looking behind him that he was frowning at Jack.

Jack ignored it. The Etherians had called for an urgent meeting, so time was of the essence. At least, that was his excuse. Besides, a meeting was a meeting; the sooner you got it started, the less time ended up being wasted. Though this was a peculiar meeting - besides the princesses, both Hordak and WrongHordak were present, but not Priest.

"Hi there!"

"Hello."

"Thank you for coming so quickly."

"Of course, we came."

"Indeed."

His friends apparently didn't want to go with the program. Foiled again. Jack sighed as he took his usual seat next to Carter, who

apparently had stayed the night on Etheria, probably burning the midnight oil with Entrapta again.

“We've discovered the missing Horde force,” Adora said once everyone was seated.

“One of the potentially missing Horde forces - there could be others,” WrongHordak cut in.

“A Horde force with which we haven't been in contact before,” Adora corrected herself. “Though it seems they are the ones that attacked the Goa'uld shipyard we found. They’re operating in the same area, at least, and they're attacking Goa'uld forces.”

“Oh?” Jack raised his eyebrows.

“Yes, sir.” Carter nodded. “We've been able to observe a battle between a task force of standard Horde frigates and what has been identified as a fleet under the command of Sokar.” She pushed a button on her laptop, and a holoprojection appeared in the middle of the room. Must have made an upgrade, Jack noted. Or just tapped into the existing hardware of the room. “The Goa'uld force was completely destroyed in short order, the expected outcome given the numerical and technological superiority of the Horde force. Interestingly, we observed salvage efforts afterwards - the clones are working on recovering two Ha'taks that were disabled instead of destroyed in the fighting.”

“They’re trying to recover the ships themselves? Not just stripping them for parts?” Jack asked.

“Yes, sir.” The projection zoomed in on those two ships, showing a few Horde craft near them and docked to them.

“That's a major effort for an inferior ship,” Jack commented. Before meeting the Ethetrians and the Horde, Stargate Command had been hoping to recover a Ha'tak by any means necessary, and Jack had familiarised himself with the plans made. Salvaging a ship disabled through damage took a lot of work unless it was

precise sabotage you could easily fix. Which getting your engines blasted off by focused naval fire wasn't.

“Indeed,” Teal'c agreed. “They are either not worried about being caught in the middle of the recovery operation by reinforcements or feel confident to repel any such force.”

“It's easy to feel confident in their position,” Jack said. “Though that makes it even weirder that they are bothering about Ha'taks.”

“Yes.” Entrapta nodded several times. “Are they trying to gather more data on their enemies? But between all the Ha'taks they destroyed and the shipyard they looted, they already should know all that is to know about Ha'taks. Unless they were very unlucky or sloppy with their sensors.”

“That is unlikely. Clones are trained better than that,” Hordak said with a frown.

“Yes.” WrongHordak agreed. “Most of us have had those skills ingrained by Horde Prime's conditioning and then practised them continuously. They are almost reflexes at this point.”

“But Horde Prime's death was a heavy blow to his clones,” Bow commented. “That’s like losing a princess without a successor ready to be crowned, and in such cases, a kingdom usually suffered an upheaval on Etheria. These clones would have suddenly lost their connection to Horde Prime without anyone ready to step in and lead them like First, Second and Third Fleet had. We can't really count on them to just keep going as usual.”

Daniel nodded in obvious agreement.

“That wouldn't have been enough for them to forget their training,” Hordak retorted. “And as our new intel shows, they fought effectively and at a level we would expect, so it's unlikely that they would have suffered a loss of effectiveness in just one area of expertise.”

Weirder things had happened, but Jack had to agree with the former warlord. “We need more information to tell.”

“Yes,” Glimmer said. “Before we contact them, we need to know what they're doing and why.”

“We can ask them when we contact them.” Perfuma smiled. “I'm sure they'll be curious about us as well - especially about their brothers in the Alliance. We can exchange information.”

Jack winced a little.

“We should be more cautious,” Sha're spoke up. “We don't know anything about them. They could be a danger to us.”

Frosta frowned at her. “They're fighting the Goa'uld - our enemies.”

“That doesn't mean that they're our allies,” Sha're retorted. “Or that they aren't willing to stab us in the back.”

“Indeed.” Teal'c nodded.

“It would be prudent to take the possibility into account that they have chosen a similar course as, ah, Hordak did when he was cut off from Horde Prime,” Daniel added with an apologetic smile.

“Yes.” Catra nodded sharply. “We need to know why they are fighting the Goa'uld before we make contact. If they want to conquer the galaxy in Horde Prime's name, we can't trust them.”

“They would consider us traitors,” WrongHordak said.

“But if we spy on them before contacting them, they might think we're not honest with them,” Perfuma objected. “We can't expect them to trust us if we aren't willing to extend our trust to them.”

Jack had to suppress another wince.

“We don't trust them,” Mermista said. “That's the point of this meeting. We need to decide what to do about them because they're acting weird and are a potential threat to us all.”

Perfuma frowned. “But is that our decision to make in the first place? Shouldn't we leave that either to the Alliance as a whole, or to the Horde, since they are their brothers, and not to the Princess Alliance?”

Good questions, Jack had to admit. This seemed to be a matter for the Alliance Command Council.

“Technically, this is both an internal matter for the Horde and a matter for the entire Alliance due to the threat a hostile Horde force represents,” Hordak said. “But since the majority of the clones follow She-Ra, she would have to be involved anyway, and since everyone knows Adora relies on her friends for advice, it seemed most efficient to have this meeting here to decide our course of action before informing the rest of the Alliance.”

Jack didn't like the implied dismissal of the Alliance as a whole, but the clone was correct. Whether Earth liked it or not, this would be decided by the clones and She-Ra. And, if he was honest, it was probably more productive as well. And, of course, he trusted Adora more than he trusted most of the governments back on Earth.

He leaned forward and focused on Adora. “So… What do you think?”

*****

What do I think? Adora briefly bit her lower lip. She had pondered this ever since she had heard about the news. Well, she could start with the easy part.

“I think this is a decision for the clones. Those were their brothers, their people. We don't know if the clones in that fleet still feel like they are part of the Horde or if they feel that they - or the fleets here - are a different people now that Horde Prime is

gone, like the others we've found before. But until we know, this is a Horde matter first, an Alliance matter second." Just as deciding to grow the clone population had been a Horde decision, not an Alliance decision.

"Should be good enough for the Alliance to accept so they can save face," Jack commented.

Catra snorted but didn't make any comment about letting an enemy save as much face as possible but nothing else. She'd done that last night already, of course.

"It's not an excuse," Daniel said. "It's the truth. And I doubt that the Earth countries want to set a precedent that would allow the Alliance to intervene in internal disputes."

"We absolutely would if it were necessary to save people," Glimmer muttered.

That was true, of course, but Adora was aware that it was best if they never had to do that.

"Internal disputes in a NATO country don't exactly present a threat to the Alliance as a whole," Jack said. "A Horde Fleet, though, does - they're what, a third of the current fleet strength?"

"That depends on whether or not they have maintained their ship numbers," Hordak replied. "They could have lost ships to battles and desertions. Or internal fighting. Or they could have increased their numbers, as we're doing."

"Do we even know if all Horde Fleets had the same number of ships?" Mermista asked. "We still don't know how many fleets existed thanks to Horde Prime keeping information from everyone, even the clones."

"All three Fleets with Horde Prime had the same number of ships," WrongHordak told her. "While not definite proof, it's pretty indicative of the norm."

“As obsessed as he was with what he saw as ‘perfect order’, the odds that he would have allowed divergences in the Horde's roster are minimal,” Hordak said with a sneer.

Adora agreed with that assessment. She couldn't see Horde Prime tolerating varying numbers of ships in his fleet.

“We should hope that they have the same number,” Catra said.

“Why?” Daniel looked puzzled.

“If they have lost significant numbers of ships to battle, it means there's an enemy out there who can match them - and us, in that case,” Catra explained. “If they destroyed each other over internal disputes, they might try to do the same to us.”

“That they do loot the false gods' resources and make determined attempts to salvage their ships might indicate that they have lost part or all of their fleet train and depend on such means to maintain and replenish their strength,” Teal'c speculated.

Adora nodded again. That was a possible explanation. The Horde didn't have bases to support their fleets. Each fleet carried their own logistical base with them, and if they lost it, they would be left to wither on the vine, so to speak. But…

“If they have access to even part of their fleet train, they should, over time, be able to restore it completely,” Hordak said. “Like First Fleet.”

“They would still have a problem with crewing new ships, though,” WrongHordak said. “Unless a lot of the crews of the lost ships survived their destruction - or were deployed on a planet at the time.”

First Fleet had drawn most of their replacement crews from the ground forces of Horde Prime that had been trapped on Etheria when Adora had turned his flagship - and with it the cloning pods - into a plant. But those had mostly come from the Velvet Glove; a

Fleet wouldn't have as many ground forces to deploy in the first place. “Could they build cloning pods?”

“Well, they should,” Entrapta said. “The basic design isn't that difficult to replicate, even without the blueprints in the databanks. Horde Prime really should have backed up his data.”

“In theory, they could,” Hordak added. “We all knew the basics. But whether or not any of the clones developed the aptitude to build such technology?” He shrugged. “I could have done it, but I was an aberration.”

“You're not an aberration. You're Hordak!” Entrapta told him with a frown.

He smiled at her, and Entrapta’s frown melted away.

Next to Adora, Catra snorted, but softly, so none but Adora heard it.

“In any case, I didn't have access to the mental patterns Horde Prime imprinted on every clone he grew,” Hordak went on. “And without them, the best I could have done would have been to copy my own. Which I did not want to. For various reasons.”

Adora nodded. She didn't want to pry. “So, the new fleet might be unable to replace lost clones.”

“Or they copied each other and formed some hive mind,” Catra joked. At least, Adora hoped she was joking. Judging by Entrapta and Sam’s expression, and Bow's grimace, Catra's idea might not be as absurd as it sounded.

“Let's hope not. Taking out hive minds is a pain,” Jack said. “But we still don't know how we deal with this new Horde force. Spy on them? Talk to them? Send them a late Valentine’s card?”

That was the tricky question. Adora looked at Hordak and WrongHordak. Maybe she should have invited Priest to this meeting as well, but… she already knew he would want them to

convert the other clones to worshipping Adora. Like he wanted to convert everyone else.

“We should be cautious and gather more information,” Hordak said. “Then, when we know more about them, decide how to handle them.”

WrongHordak shook his head. “We should approach them openly and arrange a meeting so we can honestly take their measure.”

Everyone was looking at her, Adora realised. Waiting for her decision. Well, this was easy. “We want friends we can trust, and that requires extending trust to them first.” She firmly nodded. “Honesty is the best policy.”

Of course, Catra had to snort and say something about “trust, but verify.”

*****

Orbit Above Etheria, April 19th, 2000 (Earth Time)

Samantha Carter had expected Adora's decision - anyone who knew her had. Or should have; she was sure some people back on Earth still didn't understand Adora. Probably because they were so cynical - or corrupt - they couldn't contemplate, much less accept that true idealists not only were real but also successful. It would wreck their worldview.

And it wasn't as if Adora's decision was wrong. Spying on the Horde fleet in question before contacting them might appear to be the cautious choice, but only if they weren't caught. If exposed, it would run the risk of antagonising the Horde force and spoiling any attempt at diplomacy. As much as some people might agree with the idea that a country had no friends, only interests, the fact was that countries were ruled by people, and people held grudges.

Still, being open and honest didn't mean you had to be careless about it. Adora was an idealist, but no fool. However, there was a

bit of a disagreement about what kind of preparations were adequate for the contact mission.

“We should take the entire First Fleet,” Hordak grumbled from where he was studying a screen on the bridge of the flagship First Fleet. “A show of force that will discourage aggression on the part of this Horde fleet. Unlike the other Horde remnants we met before, they are not only fighting battles, but they are not even just defending themselves or their territory; they’re actively attacking Goa'uld fleets and bases. If we appear weak, they might attack us as well.”

“We don't know that - we don't know why they're attacking the Goa'uld,” Entrapta pointed out. “If we appear threatening, they might attack us out of fear. It's a common response amongst many species. Including sapient ones, according to my data. We cannot expect them to act rationally.”

The General would say that sometimes, attacking when threatened was the rational response. Sam didn't disagree. But whether or not this applied to a specific situation was often only obvious in hindsight. She checked the data analysis her computer was running against the records from the spy bot network. So far, there were no irregularities.

“If they are so far gone as to let fear dictate their actions, they are already a threat that we would have to deal with sooner or later,” Hordak retorted. He shook his head. “And worse, if we show up with a fleet train, even parts of it, in tow, and they lack one, as we considered, then they might be tempted to attack us to take it from us.”

“We are not taking a fleet train with us on the contact mission,” Sam said. “Just a single yardship.” Enough to maintain the task force being sent for a short mission but nothing more. And none of the mining and refining and other supply ships that were necessary to provide sufficient logistics for a Horde fleet. “If we took the entire First Fleet, we would have to take the entire fleet train as well.”

“But we would have the strength to defend it,” Hordak argued. After a pause, he scowled. “I don't like this. All the other remnants we met, at least those who refused to join us, were isolationists. They refuse to accept that Horde Prime is gone and wait for orders that will never come, merely defending themselves when attacked. This fleet, though, shows initiative. They are conducting what seems to be an offensive - or at least a raiding campaign. Why are they doing this when all the others are passive?”

“Maybe they have a leader like you?” Entrapta smiled.

Hordak didn't. He grimaced. “That would be the worst case.”

Entrapta gasped. “Don't say that!”

Sam pressed her lips together for a moment. It wouldn't be fair to agree with Hordak. “You're not bent on conquest anymore,” she said instead.

“It took me many years and many experiences to change. And it was only possible because I was isolated from Horde Prime. I was formed by the unique circumstances I experienced on Etheria. The other clones were under his rule until a few years ago. They never had any freedom to develop their own opinions. They never had the opportunity to experience a different life, hear different opinions or act on their own initiative - that would have made Horde Prime cull them.” He shook his head. “No, if they have a leader like me, he'll be like me when I arrived on Etheria: Bent on conquest in Horde Prime's name.”

“We can’t know that!” Entrapta protested.

They couldn't. But It was very likely, in Sam's opinion. After Horde Prime had controlled every part of their life including their very thoughts, individuality came slowly to many clones.

“We need to be prepared for the worst,” Hordak said. “At the very least, we need to move the rest of First Fleet forward to a position where they can support and relieve us when necessary. Besides,

moving them out of the system will make the Princess Alliance stop complaining about the mining ships cracking asteroids. As if we're significantly reducing the number of asteroids! We could crack dozens without making even a hint of a dent!" he grumbled.

Sam knew that there was also a dispute about asteroid mining on Earth. The Horde fleet trains used to crack entire - smaller - asteroids for refining. It was quite effective but required large mining and refining ships and destroyed the asteroids being mined. The latter was a point of contention on Earth, especially amongst astronomers. Last she heard, there was talk about founding a society for the protection of celestial bodies.

Well, that was none of her concern. She was busy with research and the war effort. Which meant helping Entrapta and Hordak with planning the route to the new Horde fleet's area of operations.

She'd leave diplomacy and protecting asteroids to others.

*****

Gate Area, PZ-9771, April 30th, 2000 (Earth Time)

"Alright! Drop it down here! Well, not drop - put it down, I meant."

"Sorry!"

"Don't worry. That will buff out."

Catra snorted and shook her head as Adora took a step back from the Stargate on the floor inside the shuttle, and Entrapta and Sam stared at their scanners.

"I just followed orders." Adora pouted at her.

"You should have known better. Fortunately, a Stargate is hard to break, even for you."

"Yes."

Just when Adora perked up, Catra added: “Much easier to break a shuttle.”

“It's not broken!”

Catra shrugged. “Not for lack of trying.”

Before Adora could reply to that, Entrapat stood up and nodded. “Alright! Everything's in order - we can fly off and return to the others! And install the Stargate on Hordak's flagship!”

“Finally!” In Catra's opinion, they should have installed Stargates on every fleet's flagship long ago, probably on a few more. It would make moving around between theatres of operation much faster for everyone. But that meant removing them from planets, and between planets with a population and planets with the potential for being settled, finding Stargates no one would miss had been a bit of a challenge. You had to thoroughly check whether a planet really didn't have a native population, and that usually required more than a quick trip through the Stargate and a look at the gate area.

But this planet's population had been wiped out in the war between Horde Prime and the First Ones, at least according to the records they had recovered in the remains. Probably as collateral damage, Catra thought - neither side had really cared about anyone else. So, no one would miss this Stargate. And they really needed a mobile one in this sector, what with this weird Horde force being active in the area.

The ramp closed behind her, and she took a seat next to Adora's just before the shuttle lifted off. Shortly afterwards, escorted by a squadron of Horde fighters, they entered orbit and approached the frigate serving as flagship of this task force.

Hordak was already waiting in the hangar, and Catra and Adora stepped out of the way as he, Entrapta and Sam got busy moving and installing the Stargate. Catra followed Adora to the bridge. There was nothing they could do to help with that except for

doing the heavy lifting, but they could adjust the gravity for that here, and there would be reports waiting for the Supreme Commander of the Alliance on the bridge.

There always were reports and other paperwork waiting for Adora.

*****

Outside PT-9621 System, May 1st, 2000 (Earth Time)

"We've sent the communication request, Commander," the clone crewman reported to Hordak. "No response yet."

Catra hadn't expected an immediate response. Being contacted out of the blue, by First Fleet - the escort force for Horde Prime's flagship? That would have surprised, maybe shocked the clones in the system.

On the other hand, all the scattered Horde forces they had contacted before had quickly, sometimes desperately asked them if they had news about Horde Prime. She checked the time. Almost a minute, and this force had yet to open a channel.

"The ships inside the system are moving into a defensive formation."

Catra could see that on the holoprojection.

"Well, they didn't miss our call," Jack commented.

"They're not wary but not aggressive," Adora said.

"They don't know our forces," Hordak retorted. "This is a standard reaction. Once they know our numbers, they might alter their formation depending on their intentions."

"Incoming call."

Adora straightened. "Put it on the screen."

A clone appeared on the screen. He didn't look any different compared to any other clones. Same appearance, standard uniform. Just like Horde Prime had wanted. And yet… Catra narrowed her eyes. Something was off.

"Hello!" Adora beamed at the clone. "I am She-Ra, Princess of Power. This is Hordak, the commander of First Fleet."

Catra and the others present stayed outside the field of view of the communicator. Honesty might be the best policy, but that didn't mean you had to tell an unknown force everything right away. Explaining the Alliance would take some time, anyway. Especially the difference between the Goa'uld and the Tok'Ra. And the difference between Earth and the First Ones.

The Horde clone frowned a little at Hordak, Catra noted. Was he offended by his appearance? Some clones considered any change to their bodies an aberration, a violation of Horde Prime's will.

"I am the Commander of the Horde."

That was quite the claim if he meant the entire Horde. And it seemed he knew that Horde Prime was gone. Otherwise, he'd have asked the supposed leader of First Fleet about it. But had he no name, or was he hiding his name? Catra couldn't tell. And yet, something was definitely off about the clone. Something… She stepped over to Entrapta. "Can you zoom in on him on your screen?" she whispered.

"Yes!"

"What do you want?" the clone asked.

Catra focused on his appearance. The uniform was the same, but… "His shoulders!" she whispered.

"What about it?" Jack asked in a low voice.

Catra leaned over and zoomed in further. "Look at the shoulders! Beneath the cape! Something left a mark on it there. Something

heavy.” Those marks looked like the dents in a Horde uniform's shoulder pads after wearing a heavy backpack for hours - something Catra was familiar with as a punishment. “He must have been wearing something else on his shoulders and has replaced it with the standard clone cape to talk to us.”

“Yes?” Entrapta looked confused.

But Jack nodded. “He's hiding something.”

It was just a feeling, but Catra was pretty sure it was something important.

*****

The Clones Question Part 3

Outside PT-9621 System, May 1st, 2000 (Earth Time)

"We have made contact with you so we can find out what your intentions are, Commander."

While Adora spoke to the 'Commander of the Horde', Jack O'Neill studied his image on the screen to the side, out of the field of view of the camera. It wouldn't do to let those clones know that Etheria and Hordak were working with Earth. Honesty was all good and well, but you didn't have to be stupid about it.

And Catra had been correct - the clothes of this 'Commander' showed signs of something heavy he had been wearing on his shoulders. Though it wasn't a backpack. The position wasn't right for that. Unless it was some weird alien-style backpack - but the bodies of clones were so close to humans, that would have had to be a rather inconvenient setup for them. And while Jack had never met Horde Prime himself, his impression was that the megalomaniac wouldn't have settled for anything short of perfect for his clones.

On the other hand, the outfits weren't exactly practical.

"You wish to know our intentions?" The Clone Commander - Jack made a note to sneak in a G.I. Joe reference sometime - sounded suspicious.

Adora, though, merely smiled widely. "Yes. You're fighting the Goa'uld, after all."

"You know about them?"

Definitely suspicious. Although… should he have expected that, since they were meeting in a system that was, if not a frontline system, as far as you could have a frontline in space, so very close to it?

“We’re First Fleet,” Hordak spoke up. “We are aware of many things Horde Prime did keep from other fleets.”

“You claim to be First Fleet. I do not see the Velvet Glove with you. And I do not recognise you.”

“He must know that Horde Prime is dead,” Daniel commented on the obvious in a low voice. “He didn’t ask about him.”

“The Velvet Glove was lost when Horde Prime died,” Hordak said. “As were many ships. But we have rebuilt, and now we are stronger than before.”

The Commander stared at him, and Jack caught the hint of a sneer on his face. *“How did Horde Prime die?”*

“He attacked me and my friends,” Adora cut in. “He tried to conquer us, and we defeated him.”

“Who are you?”

“I am She-Ra, Princess of Power. Protector of Etheria,” Adora replied.

Glimmer scoffed. "He's rude to make her repeat herself."

The Commander’s eyes flicked to the side, staring at Hordak. *“And you follow her?”*

Hordak slowly inclined his head. “Horde Prime tried to erase me. He failed.”

The Commander nodded. *“He was not fit to lead us.”*

Jack wasn’t the only one to be surprised - he heard a couple of gasps so loud, the microphones on the bridge would have picked them up if not for the filtering software Carter had installed.

“None of the other fleets we found rejected Horde Prime like that,” Daniel whispered.

“If they rejected Horde Prime and are fighting the Goa’uld…” Glimmer trailed off, but her hopeful tone clearly showed what she was thinking.

“The enemy of my enemy is the enemy of my enemy,” Jack muttered. Those were the same guys who had wiped out entire worlds and species for their leader. And unlike the clones in the Alliance, they hadn’t seen Horde Prime fall and then were welcomed by the princesses and turned into allies.

“Yes. He was cruel, arrogant and treated you like tools,” Adora said, nodding firmly. “You deserve better than that. Everyone does.”

“So, what are your goals here?” Hordak asked. “Why are you fighting the Goa’uld?”

"You ask about our goals, yet hide your own.”

“We have been rebuilding our numbers, and now we’re working to restore what was lost in the war,” Hordak said.

Like magic, Jack thought, clenching his teeth for a moment.

“We’re looking for allies,” Adora added. “And for threats to us.”

“And do you think we are such a threat?”

“That depends on your intentions - and on your reason to fight the Goa’uld,” Adora replied.

Well, that was obvious to anyone, in Jack’s opinion.

"We are fighting the Goa’uld System Lords because they are unworthy leaders like Horde Prime.”

“And who is your leader?” Adora asked.

“I lead the Horde.”

Jack frowned. That was…

“He’s evasive,” Daniel said.

“Does that mean you claim power over all Horde remnants?” Hordak asked.

“That depends on your intentions.” The Commander’s lips twisted into a brief smile.

Smug bastard, Jack thought.

“You know our intentions,” Hordak retorted. He made a point to look at Adora. “We follow She-Ra. She has proven to be a leader worthy of respect. Someone who cares and protects her people. And she has defeated Horde Prime in single combat.”

Jack winced. That was throwing down the gauntlet - all that was missing was a direct challenge.

“I see.” The Commander stared at her. “Are you a First One?”

*****

Adora suppressed a wince. That was a difficult question. She didn’t want to lie - omitting the truth was bad enough already - but the Alliance had gone to great lengths to make Apophis think that Hordak was fighting the First Ones and their descendants. And since this fleet was fighting the Goa’uld, what were the odds that they were aware of that bit of intel? Or that they would become aware of it?

So she smiled and said: “I was born a First One but was taken as a baby from them and raised in the Horde under Hordak.”

For the first time, the Commander seemed obviously surprised. *“What? You were raised in the Horde? By Hordak? Who follows you now? A First One?”*

Ah… Adora saw Catra shake her head outside the camera’s field of view.

“There were no First Ones left except me,” Adora said. “They tried to destroy our world, Etheria.”

“I was stranded on Etheria decades ago,” Hordak said. “I gathered what forces and resources I could to conquer the world - for Horde Prime. And yet, when I was returned to the fold, I was judged a mistake to be fixed.”

“And we took him in,” Adora said. “We protect our world from any threat, whether it might be the Horde or the First Ones.” She stared at the Commander.

He inclined his head in return. *“And you wish to know if we are such a threat.”*

“As we told you already.” Adora resisted the temptation to roll her eyes. And ignored that Catra did roll hers.

“You defeated Horde Prime - or so you claim - and then took over First Fleet. Are you here to attempt to take us over as well?”

“We are not here to take over anyone,” Adora explained, clenching her teeth for a moment. Why did people always assume the worst of her and her friends? “We did not take over the Horde either. We welcomed them as new allies whom Horde Prime had hurt as much as he had hurt us, even if many had not realised it before he was finally defeated.” The clones might not have had the same chips Catra and the others had suffered from, but they had been as tightly controlled, bound to Horde Prime’s whims.

“So, you claim you are a worthy leader,” the Commander said after a moment.

“Yes.” Adora nodded firmly. She wasn’t perfect, but she tried her best. And that had to count for something. There were certainly many worse leaders.

“Yes, she has proven her mettle,” Hordak agreed.

Adora managed not to glance at him in response. He could just be playing his role, but… Later. "People follow us out of their own free will." In some cases even against her wishes. "We're here to check up on you, nothing more. We are not here to recruit you."

"So you claim."

"What can we do to prove that to you?" Adora asked. That was the heart of the matter.

"A demonstration of the power with which you defeated Horde Prime to prove that claim," he replied at once.

That would be… difficult. She couldn't exactly replicate the circumstances of Horde Prime's defeat. She could restore a planet's magic and use the power for an impressive display of magic, though.

She noticed that Catra was glaring at her and mouthing 'no'. But this was an opportunity to convince the Commander that they were speaking the truth about Horde Prime. "Pick a planet nearby, and I can show you my power." She blinked and quickly added: "I will not destroy it or render it uninhabitable."

The Commander looked at her for a moment - was he surprised by her accepting his offer - or challenge? Then he nodded. *"As you wish. I shall contact you with a suitable location soon."*

The connection cut, and the screen turned black.

Adora sighed, smiling. "That went well." Better than she had feared.

"So, we're showing off magic to them?" Jack asked.

"Apophis and anyone with spies in his court already know about magic after the battle in front of his palace," Hordak retorted.

"Not the point. But what if this is a trap? We're giving them time to mass more ships," Catra said.

“We also have time to prepare,” Glimmer retorted. “And Adora can turn their ships into plants if she has to.”

“Ah…” Adora wasn’t sure she could do that with the magic of a single planet. And she hadn’t really planned to do it, back then.

“Guys!” Daniel spoke up before she could explain that. “About the clone’s clothes…”

As everyone turned to look at him, Sha’re took a step forward. “Those marks fit what an Usekh leaves if you wear it constantly over the same clothes.”

Adora frowned. Usekh?

“That’s the ornamental collar many Goa’uld and Jaffa wear,” Daniel said.

“Indeed.”

Oh…

*****

Marks from an ornamental collar? Samantha Carter was not an expert on Goa'uld fashion. She was a physicist, not an anthropologist. But Sha're had years of experience living as a host, and Teal'c had spent decades in Apophis's service. She trusted them.

“If this fleet is under a System Lord’s command, and if Apophis has a spy at their court, then She-Ra being allied with First Fleet will have revealed our ruse about the Horde fighting Earth,” Hordak said.

“If Apophis had spies who knew about the Horde fleet here, I think we would have heard about it already - it’s a threat he wouldn’t ignore, and he would inform the other System Lords about it,” Catra retorted.

“Of course, the clones here following a Goa’uld is merely a hypothesis. There are other possible explanations for those marks,” Daniel said. “And many cultures had similar ornamental collars.”

Sam could tell that he did believe Sha're's guess - and Teal'c's - was correct, though. She did as well.

As did the General. He nodded. “If those clones are working for the snakes, then having our ruse revealed is the least of our problems…”

Sam nodded. Goa’uld with access to Horde technology were a much more dangerous enemy. Combined with the resources of their Empire…

“We don't know that,” Daniel repeated himself. “Even if the Commander has been wearing an Usekh, it doesn't mean he's following a Goa'uld - he could have looted such a collar and worn it as a trophy.”

“He was trying to hide it from us, though,” the General pointed out.

“He had no information about us. If First Fleet had stayed true to Horde Prime's ideal, wearing such clothes could be seen as corruption by them,” Daniel said.

“Horde Prime definitely wouldn't have tolerated that amongst his clones,” Hordak said. “He had clones disposed of for much smaller divergences from his chosen template.”

He knew from personal experience, Sam reminded herself.

“At least we know he's not a host. We do know that, right?” The General looked at her.

“Clones, like the Asgard from which they are descended, reject the symbionts,” Sam confirmed. “Trying to possess one would be fatal over time.”

“And he has no mark on his forehead,” the General went on. “So, he's not a First Prime.”

“He might not have yet served loyally long enough to have earned that reward,” Teal'c said.

Sam knew that that didn't mean the Commander wasn't as fanatically loyal, though. Priest and his followers were the best example. And new converts were, usually, more fanatical than older members of a religion.

“If the fleet's serving a System Lord, it would explain why they're looting and salvaging Goa'uld resources and ships,” Catra said. “They would have Jaffa serving him who can use the loot.”

“Yes.” Sha're nodded. “And turning a Horde Fleet on their rival System Lords would allow them to hide their actions and avoid retribution. They might even plan to use this ‘threat’ to form an alliance with their rivals only to betray them at the most opportune moment.”

“But who could be doing this?” Glimmer asked. “It can't be Apophis or he would have sent the Horde against his rivals - and against us.”

“Every System Lord would do this if they could,” Sha're said. “And any of their underlings would defect in a heartbeat and try to take over themselves if they managed to take over a Horde Fleet.”

“They would have become one of the most powerful Goa'uld at once,” Teal'c said. “Though they would also drive the others to unite against them, should they be exposed.”

Adora shook her head. “If they're following a Goa'uld System in the first place - we don't know that for sure.”

“I think we can safely dismiss the claim that they’re fighting the snakes because they hate such leaders,” the General said. “The Commander was far too shifty to be an idealist.”

“The other clones might be, though. It wouldn't be the first time that a leader is manipulating their followers by using their beliefs and claiming to share them,” Daniel retorted.

“The False Gods have been using that ploy for thousands of years,” Teal'c said. “Although they would not tolerate such cynicism from their warriors.”

“They do expect it from the Goa'uld serving them,” Sha're retorted.

“And some of the snakes might buy into their own lies,” the General commented. “They're certainly arrogant enough to think they're gods.”

“Can we convert them?” Bow asked. “Like Priest converted?”

Adora looked torn, Sam noted. But others nodded.

“Seeing She-Ra's power would impress anyone,” Glimmer said. “We know some of the most loyal Jaffa have converted after seeing her.”

“And after fighting her,” Catra added.

“It is worth a try,” Hordak agreed. “Unlike the Goa'uld, Adora does not need to fake her powers with technology. Nor does she rely on blind faith without any supporting evidence like Earth religions.”

That wasn't entirely correct, as far as Sam understood things - she hadn't done any actual research into the matter, but the reports of spirits manifesting on Earth following the return of magic had an influence on religions that worshipped such spirits. Like Shinto. Though Daniel expected at least some established religions, even monotheistic ones, to adapt their dogma as well, or so he had said a bit ago.

But this wasn't the time to discuss religion. Not that she wanted to discuss religion at any time if she could help it.

Glimmer nodded. “Should we call in Priest then? He can use the Stargate to join us.”

“We need reinforcements as well. First Fleet is the closest, but we probably can't stall long enough for them to reach us before the demonstration,” Catra said, frowning at Adora. “So, we also need to plan how to handle the Commander betraying us.”

She seemed quite sure that such an attempt would be made, Sam noted. And she wasn't the only one. The General and Hordak agreed as well.

And Sam couldn't disagree. Not with the information they had.

*****

Outside PT-9497 System, May 2nd, 2000 (Earth Time)

Catra had to hand it to the Commander (whom she really had to give a nickname or something; “Commander” sounded far too pretentious to her): He had picked this system well. It was close enough to reach it in a few hours in a Horde ship, but further away from former Horde space than the system in which they made contact. That meant the rest of First Fleet couldn't reach them in time for the ‘demonstration’.

Not only that, but, as their scanners and spreading spy bots showed, the other fleet had had additional forces close enough to reach the system, which meant the task force was now even more outnumbered. Worse, those reinforcements were trying to hide, staying out of range of the standard sensors of the Horde frigates.

“This is a trap,” she said, pointing at the holoprojection on the bridge that showed the system and the surrounding space, including the two Horde flotillas in question.

“We don't know that,” Adora retorted. “The Commander could have called them as reinforcements in case we ambushed them.” Catra cocked her head and raised her eyebrows at her idiot of a lover, and Adora flushed before raising her chin a little in that

endearing stubborn way of hers. “It's a possibility. We would do the same and we don't plan to betray them.”

Catra snorted. “I've been planning various preemptive strikes ever since we've set out for this system.” She hadn't managed to come up with any that she liked, though - and those reinforcements had rendered all plans with halfway decent chances of success obsolete.

“I know,” Adora replied. “But you weren't planning to betray them from the start. This is just a contingency if they betray us.”

“Well, it sure looks like they want to ambush us,” Jack commented.

“They're staying back, though - they're not moving to encircle us, for example,” Daniel objected.

“Those two forces could reach us in minutes through hyperspace,” Catra pointed out. “If they want to encircle us, they can exit hyperspace behind us.” Of course, they would have to plot their course when they were still minutes away, which meant they could only drop from hyperspace in close range if their targets were stationary or at least in predictable orbits. Or fixed in place by the force meeting them openly.

And the latter tactic was quite difficult to pull off in a battle, especially if your enemy just wanted to get away and was ready to sacrifice a rear guard to hold your forces while the rest escaped. Which meant that Catra was pretty confident that the Commander was planning an ambush without warning. They could spoil that by keeping their task force moving around the system in random order, but that would tip him off that they knew or at least suspected his treachery.

She shrugged. “So, do we want to bait him into attacking us by staying stationary, or do we tell him we know what he's planning by staying on the move while we’re in the system?”

Jack snorted. “If we had the entire First Fleet here, I'd say bait him into dropping the facade and attacking us, then turn the tables on him and counter-ambush them.”

“That would put everyone in the task force at risk,” Adora protested.

“They'd still be safer than we will be on the planet's surface,” Catra pointed out. “Even with a stealth shuttle.” If the other fleet could move enough frigates to start a saturation bombardment, things would get tricky. Even stealth shuttles could be hit by firing blindly.

Her lover frowned at her, and Catra flashed her fangs in return. Did Adora think she would let her go down on the planet by herself?

“I doubt they will attack, if they're planning to turn on us in the first place, before Adora has demonstrated her powers,” Daniel said. “They want to know what they are facing.”

“They could also just want to decapitate our forces,” Catra retorted, clenching her teeth. She'd rather not bet Adora's life on the Commander wanting more intel.

Sha're shook her head. “If they are serving a System Lord, they will want to know more about Adora's power - as much as possible, actually, since they will want to know if they can take it for themselves. They won't risk losing out on such a prize by striking too soon and killing her.”

That did sound exactly how the snakes thought. Catra could see whoever took over a Horde fleet trying to gain more power from their enemies. Of course, that just made it less likely that the Commander would play it first and try to kill them right away, not impossible. And once the demonstration was finished…

“But once they know it's magic, they will know they cannot take it for themselves,” Glimmer pointed out.

Catra nodded. “And they will try to kill us to deny this to anyone else.”

“And to stop us from using it against them,” Hordak added.

“Only those of them who reject the evidence of their own eyes - and sensors - and deny Her Divine Might,” Priest spoke up. “As in the past, Her Holy Deeds will enlighten even Her enemies and show them a better way.”

Judging by the way Adora flinched, she regretted calling Priest to join them through the Stargate on the flagship. But it was good to have Priest here - he brought a different perspective.

“As nice as it would be to have the entire enemy fleet convert to worshipping She-Ra, I don't think we can count on that,” Jack said. “It never worked so far.”

“Many converted to Her faith after seeing the truth of Her Divine power, wisdom and mercy themselves,” Priest retorted. “That others remain blind and determined to fight the truth does not change that.”

“Despite a number of deserters, and likely more who keep their change of allegiance secret, the bulk of Apophis's warriors remain loyal to the false god,” Teal'c said. “It would be reckless to expect otherwise here.”

Catra nodded. Adora changing a planet with her magic might impress the clones, but enough to change allegiance? She doubted that. Most Jaffa they knew to have converted had experienced a much more personal encounter with Adora's power, having fought her and then were healed by her.

No, she was quite sure they couldn't count on that to win the day here. They would have to win using their wits and guts, as Jack would put it.

And time was running short - the Commander expected them to enter the system now.

Fortunately, Catra had some ideas ready.

*****

Orbit above PT-9497, May 2nd, 2000 (Earth Time)

Having his own stealth shuttle had a number of perks. One of them being the most experienced stealth shuttle pilot in the task force, which meant Jack O'Neill was a shoo-in for the ‘contingency mission’ everyone but the most optimist worshipper of Her Divine Highness She-Ra knew would be necessary to counter the Commander's imminent betrayal.

Well, even if he weren't the best choice as pilot, he would have been on the shuttle anyway - since SG-1 was kind of famous, or infamous, amongst the snakes, they couldn't go down to the surface with Adora and the others, and staying back on the bridge of the task force's flagship wasn't Jack's thing - he was Special Ops, not Navy. And any advice he might be able to give to Hordak he could as well do over the communicator.

An argument that had the drawback of also applying to Daniel and Sha're, who were on the shuttle as well, together with Carter and Teal'c, but you couldn't win them all. Besides, it wouldn't feel right to go on dangerous missions to foil the plans of evil aliens without his best friends at his back.

And speaking of friends… He pushed the button of the intercom. “Hello everyone! This is your pilot speaking. After sneaking into this system, we've arrived at our destination and entered a holding pattern. So far, we haven't been cleared to land, so please be patient and ready to disembark on short notice.”

“Jack…” Daniel complained from behind him, but he heard Sha're giggle, once, and Carter would likely be hiding a smile as well.

Time to double down! “Please check the entertainment system for the local news!”

“The delegation hasn't landed yet, sir,” Carter reported.

He could see that on his screen - the shuttle, a regular model, carrying Adora, Glimmer and Bow down to the surface was still approaching the planet, and the First Fleet's task force had taken a formation in high orbit that should discourage a surprise attack by enemies dropping in from hyperspace - the odds of hitting the planet when coming out of hyperspace were a bit too high. Not that it would be a surprise, anyway; they had eyes on the enemy flotillas outside the system and would be alerted at once should they start to move.

“I should be on the shuttle,” Catra complained from the rear.

“Sorry, catwomen are a bit too distinctive,” Jack told her, turning to grin over his shoulder.

“So's She-Ra. Everyone saw her on Saqqara,” Catra retorted.

“But she’s already known.” Jack shrugged. In hindsight, they shouldn’t have revealed Adora like that. Jaffa were worshipping She-Ra, which meant news of her was spreading alongside her faith among Apophis's warriors and slaves. Any spy could hear about her. But Adora hadn't wanted to use a fake name. Honesty and all.

Still, that didn’t mean they had to reveal Catra as well. She had been a bit more noticeable during the covert part of the mission on Saqqara, when they had been passing themselves off as a delegation bringing tribute - including her. An unknown alien species? That had been noticed, and the guards and servants at Apophis's Stargate and palace hadn't been distracted by a fight for their survival at the time either. “Athletic blonde women are not that uncommon.” Athletic blonde women who could do magic, on the other hand… well, that ship had sailed already.

“Yes! Athletic blonde women are very common on Earth, as our data indicates! Even more common than their genes’ spread amongst your population would indicate, actually!” Entrapta chimed in. “And Glimmer can only teleport two people with her.”

“I should have taken Bow's place,” Catra hissed.

She could have, but Bow was the more experienced pilot. And he was a Techmaster, which Jack knew from long experience could come in very handy when things went sideways in unexpected ways, which they tended to do, in Jack's experience.

Not that he would say that out loud and trigger another argument - Catra was already too worried about Adora and the others. A sentiment Jack shared. The clone was going to stab them in the back; Jack's gut told him so, and every piece of intel they got confirmed it. The question was just when. Smart money was on ‘after Adora's demonstration’, but it was by no means certain. The Commander might also be waiting until she was in the middle of her demonstration, to attack while she was distracted.

Then again, attacking She-Ra in the middle of releasing a planet's worth of magic? There were far easier ways to commit suicide in Jack's experience. Hell, he was almost hoping the Commander would do that - he was curious if the clone frigates would end up as space plants in orbit.

“A shuttle has just left the other fleet's formation and is headed down to the planet's surface,” Carter reported. “Scans do not show any explosives on board.”

“Any bets that the Commander isn’t on it?” Jack asked.

“That's a sucker's bet,” Catra replied. “He'll send some expendable clones.”

“The other fleet isn't in a position to conduct an orbital bombardment of the meeting place,” Carter said.

“They're just a short flight away, though,” Entrapta commented.

On the screen, Jack could see that their own shuttle had touched down. A few more minutes, now.

He checked the enemy fleet. They were holding their positions opposite the task force. And the enemy shuttle was still on course. If the clones planned to crash it into Adora's shuttle, they would have to act now to hit it with enough force…

But the shuttle continued to brake, touching down about a hundred metres away from Adora's.

Jack nodded. "Showtime."

*****

PT-9497, May 2nd, 2000 (Earth Time)

Adora watched the Horde shuttle's ramp come down and straightened. Time to impress them and avoid a fight.

"Here they come," Glimmer commented from the shuttle where she was watching with Bow, as two clones disembarked, followed by four bots. All of them started walking toward Adora, throwing up dust with every step - the planet was mostly barren, with only primitive plants growing in spots.

"Based on the mass of the shuttle our scanners show, that only leaves the two crew inside," Bow added over the communicator. *"Unless they've altered the shuttle to reduce its mass to hide more people inside it. But that's a standard model, designed by Horde Prime himself, made for his clones and bots with minimal accommodations. To reduce its mass significantly would have taken a lot of effort."*

And Adora didn't think the clones would go that far just to hide a few more of their number. Not that it mattered.

"Thanks, Bow," Glimmer said. She sounded tense and impatient. *"More importantly, is the Commander amongst them?"*

"No," Adora replied.

"No," Bow confirmed a moment later.

"How can you tell without a scan? They all look alike," Glimmer asked. *"They haven't customised their appearance like our clones."*

"The way they move," Adora told her. And a gut feeling - she had been raised in the Horde, after all, which had been very big on having their soldiers look alike as much as possible, down to uniforms that hid as much of them as they could. And she had spent a lot of time with the clones after Horde Prime's death. Probably a bit too much, in hindsight.

"Hello," she called out, smiling, as the clones reached them. "Welcome."

The clones nodded at her in return, then stared at the shuttle behind her. The cockpit windows were polarised, so they wouldn't be able to see Adora's friends inside. Of course, if whoever was behind this fleet had access to Apophis's intel from Saqqara, that wouldn't help too much, but at least it couldn't harm. And Apophis had gone to great lengths to suppress knowledge of his humiliation there.

"So, who are you?" she asked.

The clones turned to stare at her. "We represent the Commander of the Horde," one of them said.

Adora was feeling a little annoyed at the implied claim, but she couldn't blame them for it; they didn't seem to have grown past their conditioning yet, unlike the clones in the Alliance. It seemed only the Commander had. "So, you're here to watch me demonstrate my power," she went on.

The clones nodded in unison, and Adora couldn't help remembering her first encounter with Horde Prime. All the clones, moving like parts of a machine, tools to be manipulated… Not if I can help it, she thought. And she would.

"So, watch. And don't worry - no matter how it looks, you're safe."

She took a step to the side and raised her sword. Taking a deep breath, she closed her eyes and focused on her power. She-Ra's magic. She felt the familiar pattern around her, barely restraining the planet's magic. She connected her own power to it, opened herself to the magic, and clenched her teeth as the magic rushed into her. As often as she had done this, it was still a struggle to hold it together, contain the magic, keep it from lashing out even as it felt as if she was about to burst herself, caught between the magic of this world and the pattern holding it back, trying to funnel it towards herself.

She slashed her blade down, cutting the pattern, and the magic was released in a blaze.

She opened her eyes and turned, looking at the clones, at the shuttles, at her friends, at the world, and channelled the magic into the world. Into the tiny plants and animals struggling to survive, into the water full of metals and other pollution, into the air dusty from smoke.

And she felt the world change as magic cleaned it and filled it with new life. New plants sprouting all over, growing rapidly, animals changing, spreading, evolving. Life changing from what was into what could have been. What would be, now.

The magic kept coming, wave after wave, changing the world. Finally, she felt the pressure vanish, stabilise, and shuddered as she lowered her sword.

The landscape around them had changed. No longer a practically barren, dusty plains, it was now a lush mix of forests and fields. She could hear birds sing and insects buzz around.

And she saw the clones gape at her, shocked and shivering.

“This is my power,” she told them.

“This is… this” one of them stammered, rubbing his arms.

“Not even Horde Prime could have done this!” the other exclaimed. “The whole world changed! You made it come alive!”

She nodded. “I told you the world wouldn't suffer. Quite the contrary.”

“This… this changes things,” the first said. “We have to tell the others.”

“Yes.” Adora smiled. It was working. They could avoid…

Before she could finish the thought, the bots jerked and raised their weapons. Adora changed her sword into a shield out of reflex, ready to block the blasts - but the bots shot the clones.

*****

Orbit above PT-9497, May 2nd, 2000 (Earth Time)

“Shots fired!” Samantha Carter announced.

“The enemy fleet is moving!” the General snapped.

Her eyes darted from the screen showing the magitech scanner's focus on the area on the planet's surface where Adora and the others were to the holographic display showing the planet's orbits and back. The General had the con. She trusted him and focused on the scene on the ground. This was the betrayal they had expected, So… Oh!

“The enemy bots shot the enemy clones,” she told the others. “She-Ra has destroyed them in return.”

“Bugout is a go, I repeat, Bugout is a go!” the General announced. “The enemy ships are moving into bombardment range. Get the hell out of there!”

Sam clenched her teeth and watched Adora check the clones before sprinting back to the shuttle. Even if the clones were still alive, they couldn't save them!

“Shuttle's taking off,” she reported, then glanced up to check the enemy fleet.

“Horde flotillas outside the system have entered hyperspace,” Entrapta said.

As expected, Sam thought.

“Noted.” Hordak sounded calm and collected on the comm. *“Moving to support Bugout.”*

Sam barely noticed the view through the windows changing as the General changed course and dove down into the atmosphere. Instead, she was focused on the shuttle's course below them. The first frigates were now coming within range of the task force as they tried to intercept the shuttle carrying Adora, Glimmer and Bow.

“Adora!” Catra snapped. “Get out now!”

The enemy frigates opened up, their fire split between the task force’s vanguard and the shuttle climbing up.

A moment later, she heard a faint pop and sparkles briefly lit up the shuttle's interior behind her. Glimmer had teleported in.

“Adora! You idiot!” Catra exclaimed.

“Hey! We were fine!”

And on Sam's screen, the shuttle blew up as several beams struck it.

“Bugout complete,” the General snapped. “Leaving atmosphere again.”

“Understood,” Hordak confirmed. *“Withdrawing.”*

Sam looked at the holoprojection and saw the task force's formation split up as the ships changed course and accelerated,

no longer flying directly at the enemy, but enveloping them as they sped past - a very dangerous manoeuvre as the enemy dense formation plunged directly into the former centre of the task force's. And at that close range, the fire would be murderous - already, Sam saw several ships on both sides getting hit, their shields flaring and failing.

But the Commander's fleet wasn't reacting quickly enough - the ships which had fired at the shuttle had fallen back and overcompensated, messing up the enemy formation. And they seemed to have trouble focusing their fire, Sam realised - unlike First Fleet's ships. By the time the enemy had restored their rough wedge formation, First Fleet's ships had savaged their outer flanks and were past them, reforming into a defensive formation while staying their course. Sam hadn't recorded any total loss on their side while one enemy frigate had blown up and another had lost all power.

More importantly, the enemy now had to either turn around while maintaining formation, which would slow them down considerably, or execute a much more complex manoeuvre where every ship turned individually and took a different place in a reformed formation.

They tried the latter despite multiple ships having suffered damage, and the slightly ragged formation was torn up completely. Two ships even collided, and more had near-misses that led to frantic course changes, which disrupted the formation even more.

"Reverse course and attack."

Hordak took advantage of it at once. The task force's ships all cut their engines, turned a hundred and eight degrees without changing their course, and then redlined their engines to quickly reverse their course - driving at the disrupted enemy fleet at an angle that cut straight through their right wing.

They were in close range before the enemy could reform, and their focused fire claimed half a dozen already damaged ships without suffering any total losses themselves before the fleet separated again.

“According to the spy bots’ data, the reinforcements for the Horde will arrive in a minute, Hordak,” Entrapta reported. “If our estimates are correct, which I think they are.”

“Noted.”

Thirty seconds later, while the enemy fleet was still rearranging their tattered formation, the task force entered hyperspace.

“Are you picking up any beacons from escape pods on our side?” the General asked.

The task force had not suffered any total loss, but Sam checked the sensor's results again before answering: “No, sir.”

“Check for enemy survivors!” the General ordered.

“Enemy flotillas dropping out of hyperspace! Aw, we didn't get their positions right!” Entrapta sounded disappointed.

While the scanner searched for survivors amongst the enemy wrecks, Sam quickly verified the positions of the reinforcements herself. They were further out than expected. And quite a bit off from the ideal positions they had calculated. Either they had overestimated the enemy - or the Commander had been a bit too confident and anticipated their response.

Either way, the new arrivals were no concern. “Tracking life signs in the closest wreck, sir,” Sam said. That was the enemy ship that had lost all power in the first exchange. And it was the furthest from any enemy formation.

“Good. Let's see if we can get a prisoner before we leave.” The General grinned. “Might as well save something from this, right?”

The safe course of action would be to leave the system as quickly as possible and then arrange a pickup outside with the task force, but Sam nodded. They needed more information about this fleet.

So, while the General moved the shuttle towards the enemy hulk, Sam and the others suited up and prepared to board the drifting frigate.

*****

PT-9497 System, May 2nd, 2000 (Earth Time)

"We don't have much time - two frigates are headed this way already. So, get in, grab someone and get out again!"

Catra snorted at Jack's comment. As if they wanted to stay any longer than needed in the enemy wreck. Adora had already risked her life doing that stupid stunt - and then doubled down and tried to save the lives of two enemies at the risk of her own! - there was no way Catra would let her risk her life pointlessly again!

"Docking."

She flexed her claws as she heard the sound of metal touching metal and felt the floor rock a little as the shuttle locked onto the frigate's hull.

"Opening!" Entrapta announced, and the door slid past, revealing the slightly scorched airlock of a Horde frigate.

Entrapta and Sam started working on the door controls at once, and half a minute later - far too long, in Catra's opinion! - the airlock opened.

She was the first through, followed by Adora, Glimmer and Bow. The airlock closed behind them, then air filled - the frigate had lost main power, but emergency systems were still working.

As soon as the inner door opened, she dashed through, glancing left and right. The engine room would be to the left, and any

damage control parties would be there, restoring the ship's power was the priority. Maybe…

Her ears twitched, and she grinned. “Someone's in the compartment next to us!”

A few swipes of her claws cut a hole in the wall in front of her, revealing a startled clone. Before he could react, Adora hat hit him over the head with the flat of her sword and knocked him out.

“Done. Returning!” Catra reported over the communicator.

Half a minute later, they were back in the shuttle.

“And we're leaving! Company's coming!” Jack announced as the shuttle undocked.

Catra was about to say something about an easy job when she heard a gasp. Turning, she saw that Sha're was kneeling next to the prisoner, holding up a small golden amulet that the clone must have been wearing under his uniform. It looked kind of familiar - definitely snake style - but she couldn’t place it just…

“Ba'al,” Sha're spat.

Oh. *That* one. Catra grimaced.

*****

The Clones Question Part 4

PT-9497 System, May 2nd, 2000 (Earth Time)

"Ba'al?" Jack O'Neill asked as he steered the stealth shuttle away from the drifting clone frigate. And away from the two frigates headed there to salvage it. The stealth generator was great, and the clones shouldn't be able to detect them even if they were almost touching their hull, but… the clones also shouldn't be following a snake.

"He's a Goa'uld who rose to prominence during the Second Goa'uld Dynasty on Earth, according to our records," Daniel replied. "He is associated with agriculture and was widely worshipped across the entire Mediterranean and beyond before the Goa'uld were overthrown. His worship continued, amongst other cultures by the Phoenicians, especially Carthage, and associated with human sacrifices, although the sources for that are mostly Roman, and so there's a certain bias to be considered when using them."

Jack checked the radar. No ships were pursuing them, so they should have evaded detection. Good. "I wasn't asking about the myth, but the snake. Isn't he one of the really bad System Lords?" And that took some doing for a snake.

"Although more subtle than Apophis, he's one of the most ruthless Goa'uld," Sha're said. "He kept his followers' loyalty through fear - like Sokar, with whom he was allied during the fight against Ra."

"Must have been the usual alliance amongst snakes," Jack commented, setting course for the outer system. Backstabbing from day one. Almost as bad as Pentagon politics.

"Apophis thought Sokar had dealt with him after Ra fell so he could make a move to succeed Ra as the ruler of the Goa'uld," Sha're said. "Neither Ba'al nor his forces had been seen in a while, and it seemed as if Sokar had absorbed many of his Jaffa."

“Apparently, that was not true,” Catra commented. “Looks like he was busy taking control of this Horde fleet.”

“Great. Just the thing we needed - a snake with superior technology,” Jack muttered. And right when it looked as if Earth had finally caught a break!

“Ba’al has a reputation for ruthlessness,” Teal’c spoke up. “It is said that he once sacrificed an entire world with millions of slaves to destroy an enemy fleet.”

“Sounds familiar,” Glimmer muttered.

“Ah… we always need to consider the source when judging people and, ah, Goa’uld. His rivals and enemies would have had a great interest in discrediting him to undermine his support and galvanise their own followers to fight him,” Daniel said.

“Apophis’s opinion matches the Tok’ra’s,” Sha’re said.

“Who are also his enemies,” Daniel retorted.

“You will be hard-pressed to find someone who doesn’t consider him an enemy, much less a friend of his,” Sha’re shot back.

“I admit that the evidence seems solid, multiple sources, but he has been hiding in obscurity for some time, hasn’t he?” Daniel said.

“As I said, he has a reputation for being subtle. And System Lords rarely change much if at all.”

“Indeed.”

Jack couldn’t help wondering if that was also how Daniel and Sha’re argued over small stuff in their marriage. And if Carter would do the same… Not that that was any of his business.

He cleared his throat. “So… he’s the type who would take over a Horde fleet and then use it covertly instead of demanding

everyone bow to him?" he asked as he altered their course - a patrol of Horde fighters was coming a bit too close for his taste.

"Yes."

"Indeed."

"The information we have would indicate that, but we need to check with the Tok'ra, I believe."

Great. "So, the fact that he hasn't done it doesn't mean he can't do it? He could have more than this fleet at his disposal?"

"We don't know how large this fleet is," Adora pointed out. "The ships we saw could have been the majority of his Horde forces."

"I don't think a Goa'uld would leave an underling with the majority of his forces," Catra said. "That leads to coups. He would try to keep the majority directly under his command and split the rest up between various officers. So, if this was, say, a third of his available forces, we're talking about half a fleet at the very least. And that's only his Horde ships. He'll have Goa'uld ships as well - and he'll likely upgrade them."

"That must be why he looted the shipyard we found," Adora agreed.

"We'll be fighting Super-Ha'taks," Jack muttered. "Isn't that great?"

"Oh, yes! I'm so curious to find out they adapted Horde technology to Goa'uld designs!" Entrapta cheered. "There are so many possible ways to upgrade them!"

Jack glanced over his shoulder, but everyone was frowning at him as if he had done something wrong. Even Carter.

It wasn't his fault that Entrapta was… a bit too focused on science instead of strategy or politics. Not that that was always a bad thing, mind you!

He sighed. “Well, the guys back in the Command Council won’t be happy about that.”

“I’m not happy about this either,” Glimmer said. “We need to focus on this Ba’al as soon as possible and take him out before he gets even more powerful.”

Jack nodded in agreement as he continued to fly them towards the meeting spot where the task force would pick them up.

*****

Alliance Headquarters, Brussels, Belgium, May 2nd, 2000

“...and then we took the flagship’s Stargate to return to Earth,” Adora finished with a nod at the assembled members of the Command Council.

“And the prisoner is still being interrogated?” Admiral Brown-Emerson asked.

“Yes. We’ve been able to confirm that he worships the Goa’uld Ba’al,” she replied. Not that had been hard - the clone had been praying to Ba’al as soon as he had woken up. “We have not been able to gather more intel, though - he is quite stubborn. But our analysts agree that it is very likely that the entire fleet is under the control of Ba’al.” If the clone had been an exception, if he had been a spy, he probably wouldn’t have carried Ba’al’s symbol at all - the Commander had had the two clones who had seen her demonstration killed just for their reaction; he’d do the same or worse to someone worshipping a Goa’uld, Adora was sure.

“I’m sure our specialists will be able to get him to talk,” General Naird said.

Adora slightly narrowed her eyes at him. Was he hinting at torture? The Alliance didn’t do that!

He blinked when he noticed her glare. “I mean, according to our files, clones have several psychological weaknesses that can be

exploited by skilled interrogators," he quickly added.

Ah. She nodded.

"Psychological weaknesses Ba'al must have exploited," General Steiner, a new addition to the Command Council from the Bundeswehr, said. "They were raised to obey Horde Prime without hesitation or question - he was literally the centre of their entire existence. It stands to reason that losing him would have left them terribly vulnerable to a skilled manipulator." He didn't have the German accent his retired predecessor had, Adora noted.

"And the snakes have been manipulating their faithful for thousands of years." Jack snorted. "They're very good at that."

Admiral Biggs, the replacement for the finally reassigned Admiral Kearsy, shook his head. "A weakness inherent to people who were raised without faith. That leaves a hole in their souls that the false gods can easily fill to control them."

Adora frowned again. That wasn't entirely correct, as she understood it. The Jaffa and slaves of the Goa'uld were raised from birth to worship the Goa'uld, at least the System Lords, as gods. And the clones might not have called Horde Prime their god, but they had effectively worshipped him as one.

But he was correct that losing Horde Prime had left many clones adrift, literally in the case of at least one force they had encountered, without direction or purpose. Many had become isolationist, refusing to accept that Horde Prime was dead, and were refusing any contact, driving away everyone, while waiting for Horde Prime to return. Others had become depressed. In some extreme cases, clones had just stopped doing anything, even eating, until they had died. Compared to that reaction, latching on to She-Ra instead to guide them was much better.

Anyway, this wasn't the time to discuss what was essentially semantics, she reminded herself.

“Actually, that’s wrong.” Of course, Daniel just had to disagree about that. “You can’t really claim that they lack faith. The Goa’uld’s power is based on faith.”

“It’s based on trickery and deceit - they are posing as gods, manipulating their followers. But they are false gods,” Biggs replied. He was clenching his teeth, Adora saw.

Teal’c nodded. “Indeed.”

“I think no one here disputes that they are false gods,” Daniel said. “But that doesn’t mean their followers lack faith. We have to take that into account when making plans about how to deal with this fleet. Recent converts tend to be fanatical, so we cannot count on them abandoning their new lord easily or quickly.”

“And we need to deal with them as soon as possible,” Jack added. “The longer Ba’al is allowed to build up his forces even more and upgrade his other ships and armies with Horde technology, the harder it will be to defeat him.”

“We have three Horde fleets to his one. If we keep one in reserve, we’ll still outnumber them two to one. Those are good odds,” Naird said.

“Moving First Fleet into his territory is a challenge already; moving another fleet as well?” Catra shook her head. “Even with the fleet trains reducing our need for bases and supply lines, the sheer distance we have to cover makes this a challenge. It would be much better if we could get them to desert him.”

Adora nodded. That would also save a lot of lives, which was an important point.

“Or at least start a civil war in the other fleet,” Catra went on.

That would cost a lot of lives.

Steiner looked up from his tablet. “That’s an excellent suggestion. We already know that a demonstration by She-Ra was enough to

sow doubts among the clones who witnessed it. Another such incident might cause a split in the fleet. At the very least, it should undermine Ba'al's claim to their loyalty."

Adora pressed her teeth together. "We can't rely on people converting because of me," she protested. That was… wrong.

Biggs nodded in apparent agreement.

"It's a possible strategy," Steiner defended the plan. "And it's much more likely to succeed than sending missionaries, isn't it? I doubt the clones would receive them well."

"They've also shot at us," Jack pointed out.

"Though if they're at least a bit like our clones, at least Third Fleet, they might try to convert more clones. That could offer opportunities for covert operations," Glimmer suggested.

"A decapitation strike against Ba'al?" Jack grinned.

"The last such operation was a failure," Naird said with a frown.

"We've learned from that," Jack retorted. "And taking out Ba'al would solve a lot of problems."

"We don't even know where he is and what resources he has - or what kind of bait we could use to lure him into a trap," Naird protested.

"Well, best we start working on that, then?" Catra grinned.

"And how do you suggest we do that?" Biggs asked with a slight snort.

"With our friends the Tok'ra." Catra flashed her fangs.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, May 3rd, 2000

Samantha Carter knew the Tok'ra were sworn enemies of the System Lords. They had been fighting them for thousands of years, never relenting despite facing what seemed to be a hopeless battle. They went as far as to consider themselves another species despite being biologically identical.

And they had a unique culture. According to all accounts, they formed a true symbiosis with their hosts. Daniel even was of the opinion that a Tok'ra was the combination of a symbiont and host, not the symbiont themselves, though that view was contested among both the biologists and anthropologists specialised in aliens.

Sam still couldn't help but remember how she had been possessed by Jolinar when she greeted the Tok'ra delegation. Especially since amongst the three members was Martouf - Lantash/Martouf, she corrected herself - Jolinar's old lover. Or lovers. He said he had accepted that Sam was not Jolinar, even if she had seen some of their memories, and that she didn't share any of the feelings of the symbiont, but the way his polite smile changed just a tiny bit when he saw her still filled Sam with a brief mixture of revulsion and absolutely groundless guilt. She wasn't responsible for Jolinar's death.

"Anise. Freya. Jakar. Mats. Lantash. Martouf," she greeted them.

"Sam!" Anise - her voice gave her away - smiled warmly at her, though Sam didn't miss how her eyes wandered around the gate room.

"General O'Neill couldn't make it," she told her, hiding the small, petty satisfaction she felt at telling Anise that the object of her fascination wasn't here. "His duties at Alliance Special Forces Command keep him busy." Really, the woman should just accept that he wasn't interested in whatever she was offering.

"Duty comes first, of course." Anise nodded.

"Always," Jakar agreed.

“But he will join us at Headquarters, right?” Freya asked as Sam led them through the scanners.

“As the most experienced officer in the sort of missions we obviously are going to discuss, his absence from the meeting would be a surprise,” Jakar commented.

Sam hid her annoyance at the presumption as she nodded. “Yes, he'll be at Headquarters. As will Entrapta,” she added with a glance at Anise.

“Oh, good!” The Tok'ra nodded with what seemed genuine happiness. “I'm looking forward to discussing a few things with you after the meeting.”

“Oh?” Sam tilted her head as they left the gate room. That sounded promising. Anise was a great scientist with thousands of years of experience, and her designs were almost always unique and interesting.

“Yes. I've been working on a way to physically enhance humans, and I've hit a bit of a snag.”

That definitely sounded intriguing. But also worrying.

But first things first. Dealing with Ba'al's clone fleet took priority.

*****

Alliance Headquarters, Brussels, Belgium, May 3rd, 2000

The more the briefing continued, the more concerned the Tok'ra looked, Catra noticed. It was, of course, understandable - the situation was bad. Not the worst case they could have imagined; that would have been Horde Prime somehow having returned or invading from a different universe, or a Goa'uld taking over Adora, but it was a serious crisis.

Anise shook her head after the briefing on the contact with Ba'al's fleet had concluded. “A Goa'uld with that kind of power - the

resources he has access to, the technology at his disposal. He must be stopped at all costs!”

“He and all his followers have to be dealt with,” Jakar added. “Before they can adapt and spread Horde technology to other Goa'uld - or leverage this to take over the entire Goa'uld Empire.”

“Such an attempt would plunge the Goa’uld Empire into civil war though, wouldn't it?” Admiral Biggs said. “That would weaken them.”

Catra rolled her eyes. “Ba'al knows about us. If we try to exploit such an opportunity, he will use us as a threat to unite the Empire under him.” Nothing united people faster than a common enemy they couldn't defeat alone.

“We cannot wait and hope our enemies defeat themselves,” Adora added. “We must strike as soon as possible. And for that, we need to find Ba'al.”

“Or find the right bait to lure him into the open where we can strike at him,” Jack said.

Biggs scoffed. “That plan failed against Apophis and Sokar, and you want to try it again?

“Third time’s the charm.” Jack’s smile was very toothy, Catra noted - and she was sure it wasn't just because he didn't like the US Navy on principle.

Biggs scoffed again, “Superstition won't help us. Quite the contrary.”

“Actually, as the latest research studies show, this saying might be true as far as magic is concerned - at least in certain emerging magical traditions on Earth,” Daniel commented. When both Jack and Biggs glared at him, he winced and smiled weakly. “But this is probably not the time to discuss this.”

“Yes.” Glimmer nodded emphatically. “We need to focus on how to take out Ba'al.”

“A multi-pronged strategy seems most appropriate,” Admiral Brown-Emerson suggested. “A decapitation strike aimed at Ba'al, efforts to convert his followers and undermine his rule, but also a fleet operation as a last resort, to break his power before he can consolidate and expand it.”

“That would require the majority of the Alliance military,” Naird protested.

“It's not as if we're currently fighting major campaigns,” Jack told him.

“If Apophis launches another attack, we would be hard-pressed to counter him. Especially if he realises that we fooled him into thinking the Horde fleet is an enemy of Earth,” Naird retorted.

“If he realises the extent of our military capabilities, he'll know that he needs allies, and he'll attempt to unify the Goa'uld against us - and under his rule,” Sha're said. “That won't happen without us knowing about it,” she added with a glance at the Tok'ra.

Anise nodded. “Indeed. We do not have any assets at Ba’al's cort - yet - but a diplomatic move like that from Apophis would be noticed by our operatives. And I have stress again: A Goa'uld with Horde technology - or Ancients technology - is a lethal threat to us all. We have to focus on this menace above all.”

Catra nodded and leaned forward. “So, what can you do to help with that?”

Anise hesitated a moment, glancing at the others, and Catra narrowed her eyes. That wasn't a good sign.

*****

As he sat down on the edge of his desk in his office in Alliance Headquarters, Jack O'Neill felt a bit of nostalgia. The room was

bigger than his old office in Cheyenne Mountain, even bigger than Hammond's had been, but with over a dozen people inside, it felt as crowded as his old office had with just SG-1 inside. And, of course, back then, whatever they came up with still had to be approved by their superiors.

“So… What are we going to do?” he asked as soon as Teal'c had closed the door.

Anise, who had been unabashedly looking around in his office, no doubt looking for any insight about him that would help her get her hooks into him, or at least a sample of his genes or something, turned toward him. “I was of the impression that we just finished discussing this in the Command Council and had the matter delegated to various planning groups.”

“Yep, we did.” Jack grinned. “Which is why we now can start actually planning what we’ll do.”

Adora nodded. “We're not an official planning group, but nothing prevents us from making plans.”

“No one can stop us, anyway,” Catra added, stretching as she was perched on the edge of the meeting table.

Daniel, who had made a beeline for Jack's imported coffee-maker straight from the door, picked his cup up, took a sniff of the hot air wafting up, and nodded with a smile before turning to face the rest of the room. “I thought that the rest of the Command Council was pretty unhappy with us after the last two missions.”

He was right, but Jack still snorted with a careless shrug. “They're looking for someone to take the blame for the current crisis.”

Daniel frowned. “To be fair, our missions did have, ah, mixed results.”

Catra scoffed. “We were working on the intel we had, which turned out to be missing some crucial facts.”

“Such as Sokar's plans, and Ba'al's everything,” Jack agreed.

“Both System Lords have been hard to gather information on,” Jakar said. “Mostly because they spent so long in obscurity and eschewed regular contact with the rest of the Goa'uld.”

“It's annoying when the bad guys show good tradecraft,” Jack commented with a toothy grin.

Jakar matched it and nodded. “Indeed, it is.”

“But enough of that. We do have a crisis to solve,” Jack said. “How do we solve it?”

Adora took a step forward. “We've agreed to use a multi-pronged strategy. We'll reach out to the clones working for Ba'al to… persuade them to reconsider their allegiance.”

“To convert them,” Catra commented with a grin.

Adora frowned at her for a moment, then went on: “We'll mass our available ships for a campaign against Ba'al’s fleet, to overwhelm them before they can build up their strength even more, and we'll launch a decapitation strike mission directly against Ba'al as soon as we can.”

“Which means, as soon as we find him,” Catra piped up again with a pointed glance at Anise and the other Tok'ra.

Anise frowned a little at that. “As I said in the meeting, we'll send operatives out to infiltrate Ba'al's forces and instruct our spies currently working against Sokar to investigate their supposed ties.”

Catra waved her hand rather dismissively. “Yeah, yeah, that's standard procedure. But that won't get us the results we need in time to be useful - you've just started on Sokar, haven’t you?”

Anise pouted, but Jakar nodded. “Given the dangers and risks involved, we have to move cautiously when inserting spies, often

relying on chance and random opportunities, and that takes time."

Not for the first time, Jack thought that their snake allies had grown a bit too used to taking the very, very long view in their fight against the Goa'uld.

"Yeah, but that means we can't hope for a lucky break - we need to be proactive," Catra said. She slid off the table. "We need to launch aggressive recon missions."

Jack nodded. "Exactly."

"We're expanding the spy bot network into the suspected area under Ba'al's control," Carter said. "Though to accelerate this, we will have to rely on spaceships carrying more bots deeper into the target area. That will increase the risk of being detected and the network being exposed."

"That's a risk we have to take," Jack said. He doubted the spy bot network would last forever, anyway. "We need to find Ba'al's bases as soon as possible so we can infiltrate them and prepare strikes."

"That's good for their Jaffa and the Goa'uld ships, but the clone fleet won't need bases," Bow remarked. "And they can move around."

Which made them hard to find, Jack knew. Saturating the area with spy bots wasn't really practical, given how much time it would take.

"But if they rely on the fleet train to provide their other forces with advanced weapons, they will have to stay in close contact with it," Carter said. "We can use that to track them."

"And if Ba'al is the typical snake, he'll keep a close eye on all his forces, so we should be able to find him as well," Catra added.

"Yep," Jack said.

“I see.” Martouk nodded. “But in order to gather this mission without deep cover operatives will be very dangerous.”

“Indeed.” Teal'c nodded with a hint of a smile.

“Yep,” Jack agreed. “We'll have to sneak up on and into enemy bases and look around for any piece of intel we can get without being detected.”

“Oh, that sounds familiar.” Daniel sighed, but he was smiling a little as well.

As were the others in the room, except for the Anise and Martouf.

Jack grinned - he was feeling nostalgic again.

*****

Orbit Above Etheria, May 6th, 2000 (Earth Time)

“Your Divine Highness! Welcome to the Herald of Salvation! The newest ship in your fleet!”

“Hello, Priest.” Adora smiled politely as she stepped down the ramp of the shuttle. “Did you choose the name?”

“It was chosen in light of her first mission, Your Divine Highness,” Priest replied as he straightened from his bow. “I found a more martial designation, such as chosen for our older ships, would not fit as well given that her mission is to save as many of our enemies as possible by showing them the light of Your Wisdom and Mercy.”

“And the fire of her improved beam cannons if they reject you,” Catra commented from behind her. “Can't let the hard work of Entrapta and the others go to waste, can we?”

“As the last resort,” Priest acknowledged, nodding his head at her. “We fervently hope that reason will prevail, and that our lost brothers will see the light. But we are aware of the challenges this

mission presents us with, and we will do our duty in Your service, Your Divine Highness."

Adora had already heard all the 'Divine Highness' she could stomach, but she knew from experience that telling Priest to call her anything else would only encourage him to come up with an even more ostentatious title, as Daniel had described it. So she nodded and tried to ignore it by focusing on the task at hand. "Yes. A fitting name for the flagship of the future Fourth Fleet."

"Indeed, Your Divine Highness! She will be a shining example for the rest of the fleet, and for the galaxy at large, of Your Grace and Courage!"

"Once she and the rest of the task force are crewed and worked up," Catra said.

"I have chosen the best and brightest from Third Fleet for this task, Your Divine Highness!" Priest replied. "They are well aware of the responsibility they have in shaping the core of Fourth Fleet's cadre so that our new brothers will serve you as faithfully as the other fleets."

"We will serve you with our lives, Your Divine Highness!" Padre, the clone chosen to lead this force, and the future Fourth Fleet, if he worked out, said, bowing deeply.

"I know you will," Adora told him, smiling gently. "All of you," she added, looking at the rest of the clones lined up to greet her. "You have my trust and my confidence."

"You honour us, Your Divine Highness!" Priest beamed at her, as did everyone else in the hangar except for Catra, who smirked.

Adora couldn't help feeling a little guilty and embarrassed at the display. She didn't deserve their worship. But they did deserve her trust. The Command Council had questioned this mission, voicing concerns that the ships of the recently founded Fourth Fleet should work up their crews, new clones mixed with veterans, safely inside Alliance space, in a training command, but Priest had

argued that the people forming the core of the crews for Fourth Fleet's first flotilla were all taken from Third Fleet's best and so they would be ready for deployment. Catra had agreed that getting actual field and combat experience as soon as possible would be better in the long run for the fleet's morale and esprit de corps. The sooner they were accepted as equal to the other Fleets, the better.

Adora had agreed. First Fleet and Second Fleet would provide most of the ships for this mission, anyway, so Fourth Fleet's small contribution wouldn't see action too soon - they still had yet to find the enemy's bases and deployments. So, the new fleet's new crews would get to train hard for the time being.

Still, she couldn't help worrying a little. Not only about the new clones serving on the new ships, fresh faces with new gear always meant problems in the field, she had seen that in both the horde and the Princess Alliance, but about the mission itself. Reaching out to the clones in Ba'al's service wouldn't be easy. Turning Horde soldiers had been hard enough in the Horde War on Etheria, and in space, the opportunities to make contact with potential deserters were far less.

And the danger for everyone involved was even higher, she reminded herself, remembering the two clones shot by their own bots after Adora's demonstration had shaken them.

No, Priest might be as confident as ever, but converting the clones following Ba'al wouldn't be easy at all.

But they would still try it, and give it their best shot. The clones manipulated by Ba'al deserved the chance to gain their freedom. And the Alliance would do their best to make it happen. Adora would ensure that.

*****

Orbit Above Etheria, May 8th, 2000 (Earth Time)

Inside the office they had appropriated on a yardship of First Fleet that had stayed in the system to keep building ships for Fourth Fleet, Samantha Carter was looking through Entrapta's latest proposal for a “science ship”. It was a far more practical design than her first one. Instead of a copy - at least in appearance - of a Miranda-class ship from Star Trek, it was a modified Horde frigate with the main beam cannon battery replaced by a greatly expanded version of the Spacelab Entrapta had built with Sam. Quite workable, in Sam's opinion - it shouldn't take long to alter the base schematics used by the Fleet Trains’ yardships; they had done that for a few improvements so far, the latest the beam cannons and shield projectors.

But the Spacelab part - it wasn't a module since it would be a permanent addition - would require more work. It would be quicker to custom-build it in a workshop instead of creating a prototype followed by the schematics for a yard… No. Once the war against the Goa'uld was over, there would be a need for such ships, so it was better to design them properly so they could be mass-produced easily and cheaply.

Which reminded her that she needed to go over the latest Fleet Transport schematics they had received; the British were planning to add some changes to the next block after the first block had started actual field deployment. The changes looked good, but Sam wasn’t quite sure if the relatively small increase in capability would be worth the added logistical and maintenance demands two versions of the same ship would cause. She would have to calculate that.

“So, what do you think?” Entrapta asked.

Sam felt a little guilty for having had her mind wander. That they both had a lot of tasks to do was no excuse in her opinion. She focused on the design again. “You've removed two-thirds of the beam cannons but left the power generators in place. That will allow more options during an emergency.” Such as the ability to shunt power to the engine or shields. Or to overload the beam cannons. With the main battery gone, the ship couldn't focus her

firepower; the remaining cannons were more a deterrent to attacks by swarms of fighters - a more potent point defence battery, actually. But overloaded, even those could, for a very short time, provide the ship with significant firepower at the cost of burning out the main focus crystals of the cannons involved.

Entrapta nodded. “Yes! And it will provide ample power to the lab for experiments!”

Right. Sam flushed a little - this was a science vessel, after all, not a military design. “And the shields will be able to withstand extreme conditions for longer.” That was a capability the latest Horde frigates had as well, but as with the enhanced beam cannons, trying to upgrade all existing ships would take too much time and yard capacity. They would have to stick to those ships undergoing regular maintenance or battle repairs, and the odd refit slipped in.

“Yes! Not enough to fly into a star’s corona - not yet - but we could dive quite a way into the atmosphere of a gas giant!” Entrapta beamed. “And if we overload the engines, we can get closer to a black hole!”

“I think disposable drones would be better for that,” Sam told her, smiling a little wryly. “Replacing drones is cheaper than overhauling the engines.” Or replacing them - or the ship, should the engines fail before the ship was in the clear.

“Right!” Entrapta's head bopped up and down as her hair tendrils flew over two keyboards at the same time. “Anyway, we can start building the prototype as soon as the fabber in section two finishes with the latest batch of cannons. I've checked it with Hordak; we've got five hours!”

That would be enough for a lot of the parts - the ones not requiring more advanced manufacturing, such as sensors. Though those they could get from the spy bot factories in the system; most of them had been retooled for ship sensors anyway since the spy bot network had spread so far, it was often more efficient for

expanding the networks to build automated factories further away than shipping bots from Etheria or Earth; those were mainly used for scouting and communication by task forces sent into areas not yet covered by the network. Such as Ba'al's suspected territory.

"Then let's get started," Sam said. "I didn't find anything I'd change." Though they would find a lot of things that would need changes once they actually used the prototype. No matter how good the design software and simulations were, some things you only noticed in actual use. A lesson the Navy sometimes seemed to forget.

"Yes! Now let's…"

Entrapta was interrupted by a beeping noise - a priority alert. Had something gone wrong? A new attack? Sam quickly changed the feed on her screen, and Entrapta swung over, carried by her hair, to look over her shoulder.

It was from the spy bot network. The bots had found a base in suspected Ba'al territory.

"That was fast," Entrapta commented, cocking her head to the side. "Faster than we expected. We're lucky!"

Sam wasn't sure about that. It could also mean that Ba'al had more bases than expected - or at least, more bases closer to Alliance territory than they had expected. Either wasn't good news.

*****

Orbit Above PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

Jack O'Neill couldn't help clenching his teeth when the stealth shuttle approached the planet. A dozen frigates were covering it, arrayed in three groups covering both poles and one in a geostationary orbit above the planet's main settlement - and his and his group's target.

If these were Alliance Horde frigates, they would have been detected already - this close, the stealth generator wouldn't be able to hide from upgraded sensors. But Ba'al's Horde lacked magitech. At least as far as we know, he thought, tensing up a little more.

Neither the frigates nor the patrols of Horde fighters flitting around between the three forces reacted to their presence, though. Hidden by their stealth generator, they were invisible. Unless one of the fighter patrols, which were coming a bit too close for comfort, literally flew into them, Jack could probably fly circles around them for shit and giggles.

“Passive sensor sweep concluded!” Entrapta announced cheerfully from the back of the shuttle. “Oh… You were right! Those are shipyards down there, but no ships are being built right now.”

They had known that from the spy bots that had discovered the system. Though they hadn't approached that closely; unlike their smaller infiltration versions, the space-capable bots weren’t built for that. And Jack wouldn't have trusted a bot to do this, either. Too much could go wrong on close recon missions. And too many opportunities could be wasted for lack of initiative - hacking computers, sabotaging enemy plans, taking out critical targets, freeing or taking prisoners… No, this mission needed people on the ground. The best people available.

“No ships? Are the yards finished?” Glimmer asked.

“The buildings are,” Carter replied. “Though passive scans are limited - we can't tell if the machinery and fabrication lines are set up and if the storage houses are full of the materials necessary for production.”

“If they aren't building anything they aren't ready,” Catra stated. “We wouldn't let them sit idle, and neither would Ba'al.”

Jack agreed and would have said so if they weren't about to enter the atmosphere and he had to focus on piloting the craft. This

was the most dangerous part of the mission. No matter how well you could fool enemy sensors, a ship entering a planet's atmosphere turned the air around it into superheated plasma, and that tended to be quite noticeable from afar.

The stealth generators tried to compensate for that, and did to some extent thanks to Carter and Entrapta's work, but even with magitech, you just couldn't hide all the light and heat.

So, Jack had to carefully follow a course that avoided the bulk of the enemy fleet and stayed as far as possible from patrolling fighters, and even so, there was still a risk that someone caught a glimpse of them and didn't mistake it for a meteor burning up in the atmosphere.

He kept a careful eye on the enemy while he took the shuttle down, but the Horde fighters stuck to their routes like glue - one of the disadvantages of using bots as crew, Jack guessed. Their own faced the same issues, but they simply didn't have enough trained pilots to crew all their fighters.

A few tense minutes later, they were low and slow enough so they were safe from passive detection, and Jack changed course toward their target. Still no pursuit or any sign that they had been detected.

He grinned. If he wanted to, he could land the shuttle right next to the base on the planet. Not that he would do it, of course. He was no fool. The risk of being spotted by ground patrols was too high. They wouldn't see them, and as long as the shuttle kept hovering, the ground wouldn't be flattened either, but if a patrol found tracks ending in nowhere, or dead birds that had flown into the invisible shuttle, or any other possible clue, it wouldn't take a genius to put two and two together and realise that the Alliance had much better stealth capabilities than the Goa'uld or Horde had. And that would be a major hindrance to future missions in addition to threatening one of their biggest advantages, the spy bot network.

Halfway across the planet's biggest ocean - he was flying low enough to avoid most sensors, just high enough not to leave a wake in the water - he keyed the intercom. “Hello, everyone! We're about to land at our destination. The weather is cloudy with a chance of Jaffa and bot patrols, both on foot and in the air, so dress accordingly, and thank you for flying with O'Neill Air!”

A round of chuckles from everyone and a sigh from Carter answered his joke, and he grinned. Nothing like a joke to lighten the mood before things got serious.

*****

The Clones Question Part 5

Outside Ba'al's Base, PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

"They need better perimeter checks."

Adora agreed with Catra's comment as she crawled up a bit more up the ridge to get a better view of the closer walls surrounding the base in front of them. She'd have to use binoculars, but it was still better than relying on aerial pictures or adapted sensor data. There was just something to taking a look in person at the enemy. Especially as a commander.

"I've seen worse from the Horde," Glimmer said behind her.

"Must have been a rear-echelon unit, not frontline troops." Catra joined Adora next to her.

"We sneaked past frontline Horde guards as well." And there was Bow.

"You did. But it took you more of an effort," Catra said. "We slipped through their patrols without trying."

"If the enemy is screwing up, you won't see me complaining," Jack commented.

"It's a matter of professional pride," Catra said. "This is basic stuff."

"Indeed."

Adora focused on the base below. It was huge - it included a spaceport large enough to handle four Ha'taks at once and shipyards with three 'slips' for capital ships, open to the sky - she could see the beginnings of what looked like Ha'taks there. And next to those were factories for the various weapons and other parts that would go into the ships. At least according to their

sensor scans. And there were more factories adjacent to the shipyard complex. And a high wall surrounded it. Constructing it would have taken a long time.

"That's not a forward base or even a supply hub," Catra commented. "That's an industrial centre. And we're barely past the border here."

"Very vulnerable," Glimmer said.

"That makes the guards' failure even worse. They should be better this close to the front," Catra insisted.

"They might not have considered this a potential front when they built it," Bow said. "It's close to Alliance space around Etheria, but we're further away from the known Goa'uld territories Ba'al is attacking."

"They should have reinforced it with better troops after they tried to kill us," Catra said. "Ba'al isn't a fool. And this is an important base. Can't he spare some elite troops?"

"Maybe he has even more such hubs in his core territory?" Daniel suggested.

Adora clenched her teeth. That would be even worse. But… "If he had such a broad industrial base, wouldn't he have a lot of guards as well?"

"The false god might rely on the ships in orbit to guard this facility," Teal'c suggested. "And he might be saving his veteran warriors for more important tasks than guarding his bases."

Catra scoffed. "Let's hope he's that stupid. Guarding your supply lines is crucial against a mobile enemy."

"If he's underestimating us, I'm not complaining," Jack said.

"Really? I think I remember…"

“Focus, Daniel! We’re on a mission in Indian country, not on a trip down memory lane.”

“But…”

“Speaking of troops…” Adora zoomed in on the barracks visible on the base. “If those are standard troop barracks, then there should be more soldiers around than we see.”

“They might be housing workers there as well,” Bow said.

“No. The false gods do not allow their slaves to stay in the quarters for their warriors,” Teal’c said. “The slave quarters are distinctively poorer. And the warriors would not relax next to the slaves’ quarters like those we see below.”

Several Jaffa were hanging out, or so it seemed, in front of the buildings. At least they were not standing at attention but sitting, and a few were sparring, but it didn’t look like the kind of organised training Adora would have expected. So, Teal’c was probably correct - it was too far for Melog to check with their senses. Then that meant that the workers lived… There, in the plain buildings next to the shipyard complex, she noted.

“Are those quarters full? Can you scan for capacity and check if the number of people matches it?” Adora asked.

“Yes!” Entrapta, who had stayed below the ridge, replied. “Let me just program the scanner for this… Done!”

A few seconds passed. Adora watched a Death Glider take off from a pad near the factory complex. Was that a test flight? Or a courier or shuttle mission? It didn’t look like a patrol.

“OK… looks like the people present easily fit into the quarters we have scanned. They could actually fit twice the number in there!” Entrapta reported.

“So, they’re planning to expand. Or that’s for the crews for the ships they’re building here,” Jack commented. “Can you tell if the

stuff down there is the stuff they looted from the planet they attacked?"

"One moment, sir - running a scan detailed enough to compare the details necessary for such a distinction will take some time," Sam replied.

Adora studied the defences visible from their spot. Towers with crew-served weapons, but no heavier weapons. Without the ships above them, the base would be helpless against orbital strikes.

"All that production capacity and no integrated defences worth a damn?" Catra echoed her thoughts. "Is this a trap, or can't he spare the resources?"

"Well," Jack said next to them, "that's what we're here to find out. Among other things. Let's see how we can sneak inside!"

*****

"So? Any convenient openings? Like, an unguarded sewer?"

"No, sir." Sitting in front of her laptop below the ridge hiding them from view, Samantha Carter shook her head at the General's question. "The wall surrounding the base has been constructed quite competently. There are no openings for wastewater - according to our scanners, it's filtered on-site in underground treatment plants." She double-checked her scans, just in case she had missed something. She hadn't.

"Yes. That's quite environmentally friendly," Entrapta added. "The other Goa'uld bases we saw were much less careful about their ecological footprint."

"Figures that the one time the snakes care about the environment, it's to our detriment," the General muttered.

"I am quite certain that Ba'al does not care about the environment," Teal'c spoke up. "If he ordered this, then he did it because of security concerns."

“Yes,” Sha’re agreed.

“Or he figured that having his freshwater sources polluted would harm the base’s productivity long-term,” Sam pointed out.

“That would mean this base isn’t meant to be a temporary installation,” Catra said.

“Unless that’s his standard procedure,” Daniel suggested. “He might be more focused on long-term planning than most Goa’uld - although given their lifespan, most of them should be taking long-term consequences into account.”

“They should, and some System Lords do, but Ba’al has not such a reputation,” Sha’re disagreed.

“His reputation might not conform to his actual actions,” Daniel replied. “We only have second-hand information to judge him.”

“Well, we’re here to get some first-hand information,” the General cut in. “So, let’s focus on how to get into the base instead of analysing data we don’t have, shall we?”

Sam nodded, feeling a bit stung by the reminder - she had not stopped analysing the data the scanner was providing, even though it hadn’t given any actionable results yet. “Half a dozen gates offer access, but they are heavily guarded,” she reported. A full squad of Jaffa outside the gates, backed by more inside, weapon instalments on the wall, and more sensors than the Goa’uld usually employed.

“Yeah, we saw that,” the General agreed.

“And it doesn’t look like the gates are used much except for patrols leaving and returning,” Catra added.

“In a pinch, we could ambush a patrol, take their armour and clothes and sneak in like that - some of us,” Bow said. “Though they would find out afterwards.”

“And we’d be limited to four people, and all of them would have to be able to pass as Jaffa,” the General said.

And unless they wanted to rely on Melog constantly keeping up illusions, all of them would have to be men. Teal’c, obviously, the General, Bow and Daniel were the only ones, though they might be able to dress up Adora, if changed into She-Ra, as a Jaffa guard with some work - she certainly had the height.

However, neither Sam nor Entrapta would be able to sneak in like that, and while Sam trusted Bow’s technical skills, she really wanted to personally hack the enemy systems.

“And we’ve done that on Saqqara,” Catra pointed out. “Ba’al might expect that trick.”

That was also a good argument - fooling the sensors installed at the gates wouldn’t be easy. Not impossible, but it would be a challenge, especially if they had to do it from afar.

“What are the alternatives?” Adora asked.

“Return the planet’s magic, and I teleport us inside?” Glimmer suggested.

“They might notice Adora changing the surface of the entire planet,” the General replied. “These kinds of side-effects tend to draw attention.”

“I could do something else with the magic,” Adora said.

“Something the ships in orbit won’t detect?” The General raised his eyebrows.

“Maybe?” Adora frowned. “If I channel the magic into the ground… I could make a tunnel into the base!”

That sounded… possible, but Sam didn’t like to trust the plan - and their lives - to Adora improvising a magic feat. That kind of gamble should be left for desperate situations, in her opinion.

But she couldn't see any alternative that was significantly better. The base was surrounded by cleared land that didn't offer any cover, so even if they hacked the sensors, they couldn't sneak up to the base. Melog's illusions couldn't turn all of them invisible out in the open like that, either. Although… "The raw materials!" She was already checking the sensor data - expanding it to cover more of the world.

"The raw materials?" the General asked.

"They need raw materials to build all those ships and other gear," Sam explained while she sorted through the data.

"They mine asteroids," Entrapta said. "That's standard Horde fleet train procedure."

"Yes. But there are some raw materials you can't get from asteroids. Like food." And a few others, of course, especially for chemicals.

"The Horde clones are used to eating food grown in tanks," Catra said. "The Horde never really cared about the quality of their rations."

"The grey ones were good, though," Adora objected.

"They were not as bad as the brown ones, but they weren't good."

Sam ignored the bickering and sifted through the older data.

"But the Jaffa aren't the Horde. At least the Jaffa warriors serving the System Lords we knew about generally don't live on a diet of vat-grown food," Daniel said.

"Indeed," Teal'c agreed. "While it is not impossible that loyal warriors would bear such conditions, most warriors I know would consider it beneath them to live on such fare."

"We haven't seen farms around the place, though," Sha're pointed out. "And they could ship in food from other worlds."

"But that would be requiring more spacelift," the General said. "And you never have enough transport capacity. So…"

"...they will be mining and producing what resources they can on the planet," Sam finished his thought. "I've identified two mines and one aquafarm on the sensor data we gathered on approach, sir."

"Good work, Carter!"

She tried not to smile too much at the praise.

"Alright, folks - we have a transport to hitch a ride on!"

*****

Outside Ba'al's Mine, PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

"For someone paranoid about security, this transport seems suspiciously easy to board," Catra commented as she looked at the vehicle below her.

"It's guarded by a squad of Jaffa and has integrated sensors," Adora commented from behind her. "And it's in the middle of the mine compound."

Catra snort. "As I said - suspiciously easy to board." Entrapta, Sam and Bow were already hacking the sensors, and the four Jaffa kept a close eye on their surroundings, but she didn't see them looking up very often.

"We're not going to sneak inside the compound, anyway," Jack added. "Let's get into position."

Catra nodded and crawled backwards until she couldn't be seen from below, then circled around the big rocks lining the ridge to

join the rest waiting at the ambush point. Well, the boarding point - it wasn't as if they were going to attack the transport.

"I'm feeling nostalgic," Bow said as he arrived as well. "We used to catch Horde transports like that all the time back in the war."

"Only until I beefed up security," Catra told him. "You didn't nab many of the convoys."

"There were enough solitary transports to pick off." Glimmer said.

Catra shrugged. "Can't really send a convoy to an outpost when they only need a single transport. But it's no big loss, either." The Horde planning had always anticipated some losses when calculating supplies. Hordak and hers, at least - Horde Prime had been a perfectionist. Then again, when your supply lines were part of your space fleets, you didn't have to make the same compromises both sides had been forced to on Etheria.

Glimmer snorted. "When we got a convoy, though, half your front collapsed."

Catra forced herself to shrug again. "That was back when the soldiers were deserting en masse anyway." She might have been able to stabilise the horde forces, but… She didn't like to remember that time of her life.

And she didn't need to glance over at Melog to know they had changed colours.

Adora cleared her throat. "Anyway, get ready to board the transport. They won't take much longer."

"We'll know when they're starting to move," Bow said, holding up his tablet. "We can see everything their sensors see, and they're still loading up."

Catra snorted. Adora hasn't been very subtle in her attempt to change the subject, but Bow still had missed it. Whatever. She crawled ahead a bit, up the ridge and past a sensor they had

hacked on the way in - Ba'al apparently hadn't the troops to spare to complement his sensor grid, which meant it was easy to bypass them with the right technology - and looked at the area below.

Hidden behind a scraggly bush, she could clearly see the dirt road the transports' wheels had dug into the ground in the last few months. The Horde might as well have paved the entire road; that would have been as obvious and would have allowed for higher speeds.

As things were, the transport would be going quite slow in the curve here - she could see dusty tracks and some traces of paint on the rock wall on the other side, showing that at least one transport had taken the turn with too much speed. So, it was the perfect spot to board it without anyone noticing.

They just had to drop down about five yards onto a moving vehicle to pull it off.

But that wasn't really a problem.

"They stopped loading the transport," Bow announced from below.

"Get up then!" Catra hissed.

The rest of the group started scrambling up the slope and spread out along the ridge.

"They've left the compound," Bow reported.

Catra's ears twitched - she could already hear the transport's engine. It wasn't Horde technology but more advanced than the usual Goa'uld setup. Then again, any kind of engine was more advanced than some of the transports used on planets ruled by the snakes.

"Get ready!" Jack sounded tense, but they had this in the bag.

And there came the transport, slowly taking the corner ahead of them.

“Sensors fooled, sir,” Sam reported.

“Go!”

Catra waited a moment - she could have jumped already, but the driver might have spotted her from that angle - then launched herself off the ridge and through the air, landing lightly on the back of the transport in a crouch. She resisted the instinct to dig her claws into the vehicle’s roof and quickly glued the lines she had carried with her to the top using Bow’s gadgets.

Glimmer, Sam and Jack were sliding down from the ridge on lines before Catra could give the signal. Teal’c brought up the rear - the transport had already passed his position when he jumped off and slid down as well. Entrapta, propelled by her hair, didn’t bother with the lines in the first place.

The hair tendrils cushioned her impact like a big spring, then unfolded - just in time to catch Adora, who was carrying Daniel and Sha’re with her when she jumped. Next to her, Melog landed as gracefully and softly as any cat would in their place.

Catra sliced through the lines with her claws as soon as Teal’c was clear, then watched the things disappear thanks to Melog’s illusions.

Good. Now, they just needed to get inside the transport and hide behind another illusion, and they would be set.

*****

On the Way to Ba’al’s Base, PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

Leaning back against the wall inside the transport, Jack O’Neill couldn’t help feeling that this was a bit too easy. Of course, sneaking onto a poorly-secured ore transport - and rare earth, not Naquadah or anything else that was worth its weight in gold or something - wasn’t exactly the same as sneaking into a System Lord’s palace, but Ba’al was supposed to be a crafty bugger, and

supply transports were an obvious weakness for the base he had otherwise locked up pretty well. With Horde technology, too, not just Goa'uld gear - although that could include Ancients tech as well, those snakes were worse than magpies, or submarine crews, when it came to getting gear.

On the other hand, Jack and his friends had magic, and the snakes didn't. And while Jack didn't like magic for several completely valid reasons, the least of them being that he wasn't a magical princess or witch and didn't want to be one, he liked having an edge on his enemies. And Melog's magic was very effective - anyone looking into the transport would just see ore containers and nothing else. Jack had checked it himself after they had sneaked inside. Coupled with Carter and Entrapta fooling the security systems, they should pass the inspection at the gates - the ones they had observed relied on scanners and the good old mark I eyeball.

Still, that was no reason to grow complacent. Overconfidence killed you. You underestimated your enemy at your own peril. And Ba'al, according to everything they knew, was a crafty little…

"We're approaching the base, sir," Carter's whisper interrupted his thoughts.

Jack sat up straighter, as did the others.

"Scanner-jammer's ready!" Entrapta announced.

"Checking with the shuttle… Bow's connection to the hacked security sensors is stable," Carter reported. "No unusual activity detected in the security system."

Good. Jack nodded. "Showtime, folks!" He gripped his carbine and ran a quick before-operations check out of reflex. The M4 was, as it should be, in perfect condition, loaded with the new armour-piercing-incendiary ammo the eggheads had come up with. It wasn't a magic bullet despite the hype and rumours, and it didn't use magitech but advanced technology to ensure that any Jaffa

hit would be sporting a burning hole front to back. Probably the wall behind them as well.

Jack had reserved the entire first production run for his command, of course.

Carter wasn't checking her own weapon - she was too busy typing on her computer to deal with whatever technological thingie Ba'al's Jaffa were trying to detect them - but he trusted her not to neglect her weapon as he trusted Teal'c to maintain his staff weapon.

"We've arrived," Carter reported, though Jack had already felt the transport slowing down - and becoming smoother; they weren't shaken as hard every time the wheels hit a hole or rock or whatever any more.

Then they came to a stop, the engine's droning noise ending, and Jack took a deep breath. If they were spotted, they would be exposed to fire from at least two weapon emplacements from the wall and a squad of Jaffa up close. Adora could take care of the heavy weapons, but in a crossfire, she wouldn't be able to block every shot. And Bow would take some time to get them with the shuttle.

He glanced at Carter, who signalled with her hand. So, the scans had started. No shouting or shooting outside. One of the Jaffa would check the undercarriage, another would climb on a tyre to check the roof. Fortunately, they hadn't left any traces up top.

Did the transport just rock a bit? Jack didn't think even a Jaffa in full armour would be able to affect the ore transport, but…

The loading doors in the back opened, and Jack held his breath as he raised his weapon to aim it at the Jaffa climbing inside. If the man physically checked the containers…

But the Jaffa pulled out a familiar scanner - standard Horde gear - and slowly turned around, attention focused on the thing's screen as he pointed it at the interior of the transport. Seconds passed,

then the Jaffa nodded and climbed out - jumped out - again, calling out as soon as he hit the ground.

A moment later, the loading doors closed, and Jack slowly released his breath. He glanced at Catra, whose ears were twitching, and she signed the all-clear.

Then the transport's engine started up again with a shirt whine, and then they were moving inside the base - headed straight to one of the warehouses, where the raw materials for the shipyards were stored. Being inside that huge structure would make it easier to slip out of the transport and hide somewhere.

About a minute later, the transport slowed down to a stop again - they must have arrived at the entrance. Catra winced a moment later, and Jack heard a faint screeching noise. Someone must have failed to lubricate the doors, he thought. That didn't matter, though - he doubted they would use the cargo doors when leaving.

Once more, the transport stopped. Now came the tricky part. They would have to slip out while the real containers were being unloaded. However, that shouldn't be too hard with the way the thing was set up. And Melog had assured them through Catra that they could keep them hidden for that.

The loading doors in the back didn't open, though.

And Catra whispered: "Something's hissing outside. And it smells awful."

Jack looked at Carter and caught her gasping. That was never a good sign.

"We're in the decontamination area," she said, eyes glued to her computer. "Where they wash the transports. But… they're not using cleaning solvents. It's poison!"

*****

Ba'al's Base, PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

"Masks on!"

Poison? Adora froze for a moment as she put on her mask. That wouldn't stop nerve gas, though. She could heal poisonings. But… for how long? And if she released the magic of this world, they would be noticed. But…

"It's a trap!" Daniel gasped.

"I can't teleport without magic."

"I don't hear any alerts!" Catra snapped. "Might be standard procedure."

"Standard procedure or not, poison is poison!" Jack spat. "Can you identify and stop it?"

"Working on it, sir," Sam replied. Her fingers were flying over the keyboard of her laptop.

"Seal the compartment!" Catra blurted out.

"Working on it!" Entrapta's hair was whipping around, carrying several tools.

Adora heard a hissing noise and tensed, but it was coming from one of Entrapta's tools.

"I'm sealing the seams, but that won't stop a nerve agent," Entrapta said. "And we just got confirmation - it is a nerve agent! But it will slow it down. We don't have the gear we need to seal the compartment against chemical weapons. An unfortunate oversight."

"I've stopped the poison dispenser," Sam reported. "And I've blocked the sensors from reporting it. But we need to neutralise it before we can leave the transport."

“They have to decontaminate the transport before unloading the cargo,” Sha’re said. “We can just wait.”

“By then, the agent will have contaminated this compartment,” Sam said.

“Can you trigger the decontamination procedure? I can heal us until then,” Adora said.

Catra narrowed her eyes at the ceiling. “I think I can hear it entering.”

Oh, no! Adora drew her sword.

“I risk alerting the base guards if I do that. I’ll have to fake a glitch,” Sam replied. “And I think they open the cargo compartment for that.”

“Do it anyway!” Jack said.

Adora started healing people. If only she could deal with the gas like that… But this wasn’t the time to experiment with her power.

Catra cocked her head. “Hoses are working.”

Adora didn’t relax. Nerve agents lingered - they had learned that in cadet training.

“It’s already seeping through,” Glimmer pointed out - indeed, drops were running down the sides of the transport.”

“That won’t be enough to decontaminate the inside,” Sam said. “We’ll have to wait until they open the door and repeat it.”

Adora winced.

And Catra cursed. “Do you know how much it takes to clean your fur?”

Adora knew. As did Melog, who looked green again - and Adora didn’t think that was just reflecting Catra’s mood. They really

needed uniforms that protected against such agents. Masks wouldn't cut it. They could use the space suits, but as light as they were, they were still too heavy to be worn if there were better alternatives. She made a mental note to make it a priority - they had started a project for such uniforms after the encounter with the Eurondans, but as she dimly recalled, it was still held up in a committee where people argued over who got to make them for the Alliance.

The liquid started to run down the walls. At least, this was the decontamination agent, not the nerve agent. Adora still doubted that it was good for your skin.

"Quiet! I hear someone coming!" Catra hissed.

"Finally!" Jack muttered under his breath as Melog hid them again.

Then the doors were opened - by a worker, Adora noted, who wasn't wearing any protective gear - and as soon as the man had withdrawn, the hoses started up again - and two were spraying the stuff in the compartment. Adora closed her eyes and clenched her teeth when the liquid hit her.

It went on and on, and there was nothing she could do - she just had to endure this. Others had it worse, even. Catra was the worst off, Adora knew, with her fur and her big ears.

But after about a minute, the hoses were turned off again. Adora's skin itched and she had to struggle not to scratch herself - she would have to heal everyone again once they were out of this compartment.

But before they could leave, two Jaffa in armour climbed inside, and Adora tensed again. Had they been made? Was this a reaction to the 'glitch'?

They looked around for a few seconds, talking briefly in Goa'uld. Both snorted and left again.

“The first one said that if any escaped slave had been in here, they’d have died trying to open the doors, so there was no need to get wet climbing over the containers,” Daniel whispered.

Adora gasped. So, that was why they poisoned the transports!

Daniel coughed. “The second said…”

“...that they would find any dead ones anyway,” Jack finished for him. “No, I didn’t understand him - that was just a guess. Guards will be guards.”

Catra snorted, then cursed even more and rubbed her ears. “Let’s get out now before the workers arrive.”

“Yes.” Adora looked at Melog. “Can you hide us until we’re clear?”

They nodded, and everyone started moving to the loading doors. Adora peeked outside - the coast was clear. And they were hidden by magic, anyway.

“Sensors fooled,” Entrapta said.

“Let’s go!” Adora slid down to the ground - jumping would make noise - and started towards the centre of the warehouse. They could hide between the tons of raw materials stored there and plan their next move.

And she could heal them. She hoped they’d find a way to get clean as well.

*****

They’d made it out of the transport just before the workers arrived to unload it. As Samantha Carter had expected, the slaves weren’t wearing protective gear. In the rush to get away and into a hiding spot, she hadn’t been able to see if the men and women showed any symptoms of health problems from long-term exposure to the decontamination agent, but she wouldn’t be surprised at all if that was the case - agents used to neutralise

neurotoxins were often toxic themselves. Certainly, Sam's skin was already irritated by the agent. And if Ba'al followed the usual Goa'uld policy of not offering any health care to his slaves, then he would have to replace those workers quite often to keep the output here up.

"Here, let me…"

Warmth filled her, and the irritating - and concerning, Sam was all too aware of the damage such agents could do - itching feeling vanished as Adora healed her.

"We need to get this damn stuff off us," the General muttered after peeking around the corner of the container behind which they were hiding. "We can't do the mission if you have to keep healing us every few minutes."

"We could tough it out," Glimmer suggested.

"Says the woman who has been scratching herself for minutes before Adora healed you." Catra sounded very irritated herself. Then again, as she had told everyone, her fur was sticky, and her ears drove her crazy. Her tail was whipping back and forth, either from tension or in an attempt to shake out more of the decontamination fluid. Maybe both, Sam guessed.

"We'll need to find a shower," she said - after briefly checking if the agent would react badly with water. It shouldn't, or the slaves' condition would be far worse, but you always checked such things because the cost of finding out after you already screwed up was usually horrible.

"Well, if we ask nicely, maybe the garrison will let us use theirs…" If she hadn't known already how frustrated the General was, his sarcasm would have told her. He usually was a little more constructive in those situations.

"We could build a shower. We just need a source of water," Entrapta suggested.

Sam blinked. Building a shower? That would… It sounded absurd at first thought - and she didn't want to think about the comments it would cause during their debriefing or the rumours it might create - but it should be a suitable solution for their problem.

"I'm looking for a source of water," she said, starting a search with her scanner. "We'll need a location where we can drain the water as well." Although Goa'uld tended not to care much about such details, someone might notice a slightly toxic puddle of water left where no such thing should be.

"And which offers us some privacy. Don't want to start any rumours," the General said, nodding emphatically.

Sam agreed wholeheartedly.

"Rumours?" Entrapta cocked her head and frowned. "About showering?"

Sam clenched her teeth and pretended to be focused entirely on her scanner.

"Ah, right - you guys still aren't used to mixed units," Glimmer said.

"We're used to mixed units," the General retorted. "Just not to shared showers."

"Must be rough in the field," Catra commented - and Sam could *hear* her smirk.

"We manage," The General replied blandly.

"But that seems inefficient," Entrapta said. "You'd have to either have a schedule or separate facilities, and either will add friction to your organisation."

"Not as much friction as shared showers would, trust me," the General said, and Sam knew without looking at him that he was grinning in that slightly lopsided way.

“That seems like a problem we need to address, then,” Adora said.

She isn’t wrong, Sam thought. Sexism was alive and well in the armed forces. She had met her fair share of soldiers and officers she wouldn’t trust in such a situation. But they were in the middle of a mission, and this wasn’t the time to discuss Alliance policies. Her skin was already itching again! “I think I found a spot, sir,” she spoke up, pointing at the location on her screen. “It’s not too far from here, quite isolated, and the sound from the processor next door should mask any from the water. Or from building the shower.”

“Right, let’s go! I’m itching for a shower,” the General announced.

“Jack! That was bad even for you!”

“Less complaining, more moving.”

*****

Catra’s fur was still wet. So was her uniform. Sam and Entrapta should have built a dryer as well as a shower - or ‘improvised decontamination facility’, as Sam insisted on calling it, at least officially. It was a shower, though. Not that anyone would care, anyway - they hadn’t even taken off their uniforms to shower. They were wet, and it was uncomfortable.

She ran her hands down her bare arms, then gripped her tail and tried to squeeze more water out of her fur. Sneaking around would be harder if they left a trail of puddles. Then she shook her head, trying to clear her ears again.

“Hey!” Glimmer hissed. “Watch it. I don’t need another shower!”

Catra snorted. “It’s just a few drops.”

“Then you shouldn’t make a fuss over it!”

Catra glared at Glimmer. She was the one who had to deal with wet fur! Then she blinked and smirked. At least her wet uniform wouldn't rub against raw skin until it finally dried. If it ever did.

Glimmer narrowed her eyes in return. "What?"

"Nothing." Catra smiled sweetly.

"You just thought of something!"

"Yeah, that we need to dry off some more before we sneak around. Don't want to leave a trail of water for anyone to follow," Catra said.

"The squelching noise is also not going to help with that," Jack added. "We need to take that into account when making better uniforms."

"Already noted, sir," Sam chimed in.

"Should just switch to standard Horde uniforms," Catra said. "They're rated against environmental attacks."

"They're not rated for all chemical and biological weapons we know now, though," Entrapta chimed in. "We'd have to adjust the design. And we would have to either build new factories or re-repurpose the ones we repurposed to make other stuff after the war."

"We can't have the Alliance dressing up as Horde troops!" Glimmer gasped. "There would be an uproar back home!"

"Yeah. They didn't like my uniform either when I first joined them," Adora said.

"I was kidding," Catra flashed a grin that earned her another scowl from Glimmer. "But we do need better uniforms." She bent down and rubbed the fur on her feet.

“You’ve never worn a standard Horde uniform,” Glimmer pointed out.

Of course not! Catra snorted and flexed her claws. “Even the Horde realised that they had to make adjustments for me.”

“I remember!” Entrapta beamed. “I did warn you that such modifications would compromise the uniform’s integrity, didn’t I?”

Catra nodded. “You did.” But the Alliance hadn’t used chemical or biological weapons - well, not the poison kind - so it hadn’t mattered much.

“Are we really discussing fashion in the middle of a mission?” Jack complained.

“No. We’re talking shit while drying off until we can continue the mission without leaving wet footprints all over the site,” Catra shot back.

“We could still build a dryer. We just need a few more parts and we need to hack the systems so the excess heat and additional power drain won’t trigger the internal sensors,” Entrapta suggested.

Catra knew from experience what her friend considered ‘a few more parts’ and shook her head. “No time for that.”

“Yes. Besides, the people back home would never stop with the vacation jokes,” Jack agreed. “We just have to tough it out.”

“Just like trekking through a swamp in boot camp, right?” Daniel asked in a rather sarcastic tone.

Jack beamed at him. “Exactly like that, just without the mud sucking your boots off!”

Catra snorted at Daniel’s pouty expression - he shouldn’t try to outsnark Jack.

“Alright. Let’s go,” Adora spoke up. “I think we’re dry enough.”

Catra swallowed the first remark that came to mind and nodded. They could leave the warehouse through the side entrance they had scoped out from outside the base. From there they could quickly reach what Sha’re and Teal’c had agreed was the main administration building of the base. They just need to ensure that the ‘decontamination facility’ was dismantled before leaving their hideout here.

“Wait!” Sam’s voice made everyone stop and turn to her. “I’ve been going over the warehouse’s manifest. There’s a suspicious item we should check.”

“Suspicious how?” Jack asked.

“It’s listed as ‘special supplies’, but I can’t match it to anything factory or repair installation in the base.”

That did sound suspicious. “Special project?” Catra wondered.

“Let’s hope it’s not some ‘special weapon’,” Jack said.

“Let’s go check it out,” Adora said.

Catra took point as they left their hideout and led them through the maze of containers and stacked other materials to the site Sam had identified. It was a sealed container. Horde-style, far more advanced than the cargo containers in the rest of the facility.

Hacking the lock didn’t take long, though - Ba’al might have access to Horde tech, but the Alliance had been hacking their security for years at this point. After half a minute, the doors of the container opened with a slight hissing noise, and Catra moved ahead of everyone else to take a peak.

It was dark inside, but her eyes adjusted easily - and she gasped.

The container was filled with pods. Pods containing people - humans. *Identical humans*.

*****

The Clones Question Part 6

Ba'al's Base, PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

"So… We're either looking at the galaxy's only case of… fifty-plets or Ba'al has been playing around with cloning technology," Jack O'Neill said, staring at the double rows of pods containing people.

"I think the word you wanted to use is 'quinquagintuplets', Jack," Daniel said. "Not 'fifty-plets'."

Jack cocked his head to the side and rolled his eyes at his friend. Daniel was the geeky language guy, not Jack. "The meaning was clear."

"Yes, but…"

"And," Jack went on, "let's focus on the issue at hand, not how we call it. We can save that for the report."

"It's obvious that Ba'al's cloning people," Catra said. She leaned forward and peered at the bare belly of the man in the pod before her. "And humans, not Jaffa. There's no symbiont pouch."

"These seem to be humans," Carter agreed. "But we can't assume he's not cloning Jaffa as well - we don't know."

"Or Horde clones," Adora added. "If he can clone humans, he can probably also clone Clones… err, you know what I mean."

"Yes." Jack nodded. "But does he have the tech to copy and implant memories?" That was the key question. Without that kind of tech, Ba'al would have to get his clones taught whatever skills they needed the hard way. If he could just copy the skills and experience as well as the bodies, though…

"They would have had to create the technology from scratch," Carter replied. "Horde Prime restricted it to his flagship. They

wouldn’t even have had examples to reverse-engineer. But we don’t know what kind of technology Ba’al has access to.”

“If all he needs are warm bodies, he can just use mature symbionts to take over the cloned bodies,” Glimmer said. “They would have that genetic memory. But they would also have the original’s ambition.”

“They would try to topple Ba’al and tear each other apart,” Sha’re said.

“So, we don’t have to fear an army of mini-Ba’als in cloned hosts, good.” Jack nodded. “But we might still be dealing with an army of clones.”

“Even without a way to implant skills into a clone’s mind, they could still be useful,” Glimmer said. “There are a number of tasks you don’t need too much training for.”

“But those aren’t really crucial skills for the war,” Catra objected. “If he has to teach new clones everything, he needs a lot of teachers and trainers and a lot of infrastructure. Unless he just wants warm bodies to launch suicide attacks…” She blinked.

Jack glanced at the pods again and cursed. If Ba’al was cloning slaves…

“He would have no qualms sacrificing cloned slaves for even a meagre advantage,” Sha’re said. “The simpler the task, the fewer resources it would take to get a clone trained. And the fewer the cost of sacrificing them.”

They’d have to prepare for suicide attacks. Watch out for fake surrenders. Suicide bombers hiding amongst other slaves. Jack cursed again.

“He wouldn’t have to care about the health of his slaves,” Carter said. “If training a new clone is cheaper than the cost of protective gear…” She glanced out of the container, at the warehouse’s front.

“But that makes no sense!” Entrapta protested. “Even if Ba’al would only teach clones the most basic skills, it would still take years for them just to learn a language! And the other skills they need to survive! Between growing the clones and housing and teaching them, they represent a significant investment! Throwing that away for basic menial labour or… something else… doesn’t make any sense!”

“The snakes might not care much if it is economical,” Jack pointed out. “They’re not the most rational ones.”

“No, you’re right,” Sha’re said. “If he’s cloning slaves - and those bodies don’t look like they are meant to fight - then he either needs more slaves and doesn’t mind waiting years for them to be useful for his goals… or he has a way to teach them.”

“Great.” Jack looked at Carter and cocked his head at the pod. “Can you find out what’s what?”

“According to our scans, it’s a cryogenic pod keeping a single person in stasis,” Carter replied. “The body itself… looks like a normal human body. No sign of a symbiont or any implants. Or any other alteration to the brain.”

“Well, the elasticity of the brain matter is a bit higher than usual for its age,” Entrapta added. “But if we want to find out what Ba’al is doing to the clones, we need to get more and better data.”

“Well, let’s look around for more intel, then,” Jack said. That was what they were here for, after all.

*****

Adora nodded. They could analyse what this meant later - once they had more intel. And once they were back with the fleet. But first… “Can we get samples from the people where without waking them up?”

“We would have to open the pods for that,” Sam said. “And that would start the process to revive them.”

And that would let the guards know that someone had sneaked into the base.

"According to our scanner, they are identical in all categories we can check without taking samples," Entrapta added. "Though that excludes an actual genetic analysis."

"Did you get all the data from the pods?" Adora asked.

"Yes! We downloaded the entire log of the pod," her friend replied.

"And we have the cargo manifest. It doesn't list the origin, but we might find that once we correlate the information with more data points," Sam said.

Adora nodded curtly. "Let's go then. We need more information about the production here. And the people working here." They had to know if Ba'al was killing off his slaves and replacing them with clones. Among other things, of course.

"And if a slave would be missed if they vanish," Catra said. Adora looked at her, and she shrugged. "They might know things we won't find in the databanks if we interrogate them thoroughly."

"You mean if we debrief them," Glimmer said.

"Thoroughly." Catra flashed her fangs.

Adora didn't quite roll her eyes. "Let's be cautious."

They checked outside, then left the container again - after a last thorough scan of it and its contents as well as taking material samples of both the container and the pods, in case that would give them clues about its origin.

The side entrance they had planned to take wasn't guarded, and the camera covering it was easily dealt with. But they still had to cross about fifty yards of roads and empty spaces to the main administration building. Melog's illusions wouldn't be able to

completely cover them over such a distance. They would have to make sure no one was watching the area too closely. “We need a distraction,” she said, then used her communicator to call Bow. “Is there a shuttle or ship coming in soon?”

“Nothing on our sensors,” Bow replied.

“Then we need to make a distraction,” Catra said. “Can you sabotage something? Without it being obvious?”

Adora saw Sam and Entrapta exchanging glances. “We can manipulate the security system, but that might draw attention,” Sam said. “It’s not very likely, but we cannot exclude the possibility that they will suspect something.”

“Wouldn’t the first time the snakes were paranoid,” Jack added. “But we’ll have to take the risk.”

“Yes,” Adora agreed. “Simulate a glitch or something that raises an alert.”

“Alright!” Entrapta nodded enthusiastically, and she huddled with Sam over the laptop.

After a few minutes, both got up. “We’re ready,” Sam reported.

“Melog’s ready too,” Catra said.

“Do it!” Adora told them.

A few seconds later, a siren went off in the area on the other side of the route, and everyone started running out of the door and toward the next building. Adora took the lead but made sure she didn’t leave the others behind - that would strain Melog’s illusions even more.

They reached the administrative building just as the alarm ended and huddled close to the wall next to the door. There, it was easy for Melog to make them look like part of the building, and

Entrapta hacked the door and the building's security system while Sam kept an eye on the sabotaged system.

"The corridor behind the door is clear," Entrapta said after a few minutes. "And there's an empty room nearby we can hide inside."

"Good. Melog's getting a bit strained covering so much," Catra said. "And I don't hear anyone inside either."

Adora nodded. "Let's go."

Another quick dash later, everyone was inside a small storage room with empty shelves lining bare stone walls.

"It's designated as an archive according to the building's system," Entrapta explained. "But there's nothing to be archived yet I think."

"No marble, no gold decor, not even some fancy drapes… Ba'al must be strapped for cash. Or just miserly," Jack commented.

"We could only hope so," Daniel said. "But…"

"It's an administrative, not a representative building," Sha're finished for him. "There's no need to spend money on the offices of the workers running this base. Though the commander's office and quarters will be far more elaborately furnished."

"Quiet!" Catra hissed. "I hear someone walking toward us."

Everyone moved to the wall, and Melog once more covered them in an illusion. Half a minute later, Catra spoke up again. "They went through the door."

Adora sighed, relieved. "Now - can you hack the databanks from here?"

"No. They aren't connected to the security system," Entrapta explained. "We need to get to a console, the computer core or the

location of the databanks. Though those should be next to the computer core for best performance."

"So… is there an unused console somewhere?" Jack asked.

"Yes," Entratpa replied after a moment, eyes on her tool. "But it's in a room with active consoles."

"Great. The computer core it is, then," Jack said. "Where is it?"

"In the basement."

"Figures. Ba'al is a fan of the classics, isn't he?"

That must be a reference to something from Earth culture, Adora thought.

Before she could ask, though, Sam suddenly snapped: "The base commander ordered a complete sweep of the base, sir. The garrison has been put on alert."

Both Jack and Catra cursed loudly.

*****

Had she made a mistake when she engineered the sensor glitch? Samantha Carter couldn't say. Given Ba'al's reputation, it wasn't out of the question that the base commander might react with a full alert to every malfunctioning sensor. Or he might just assume the worst since the base was new, but not that new; faults from construction should have been fixed, and equipment failing from constant use shouldn't be happening.

But whatever the reason, the base was on full alert, and squads of Jaffa were gathering to search for intruders. The group had to find a way to evade them before they were found. And it was up to Sam and Entrapta to do it - they were the ones responsible for hacking the system.

“Can we reach the core thingie before the Jaffa fill the building?” the General asked.

Sam quickly checked the different feeds from the hacked security systems covering the base. “They are converging on the shipyards - and on this building, sir.”

“Do we hide here and let them finish their search?” Glimmer asked, looking at the door.

“Will they finish their search?” Catra snorted.

“Depending on the commander of the base, they might order their warriors to search until they find an intruder - or until an alternate explanation for whatever triggered this has been found,” Teal’c said.

“Now that they have launched a search, they need to provide results, or they will look foolish,” Sha’re added.

“Well, we should get moving then so we have something to show for if we have to fight our way out,” the General suggested. “Besides Adora turning the base into a flower field or something.”

“I only did that once!” Adora protested. “The other times, it was Perfuma!”

“Sir!” Sam spoke up. “We’re running out of time!”

“Then let’s start running. Keep an eye on their positions, Carter.”

“Yes, sir.” Keeping track of so many squads by flipping through feeds would be hard, but she had no choice. If only they had finished the surveillance bot project which would have automated that, but the failure rate had been too high for Sam’s standards.

“They’re searching the computer system as well,” Entrapta reported as they rushed to the door - she could carry herself with her hair and focus on her computer. “So far, they haven’t detected

us, but we can't exactly leave backdoors open if they're actively looking."

That would give away that there were intruders on the base. "Keep from being noticed," Sam said as they rushed down the corridor. "The guards in the entrance haven't moved yet."

"You block the exits, then go in and search." The General opened the door ahead of them, revealing the staircase. "Let's use that time."

"The computer core is in the second basement floor," Sam reported. And the first squad had taken position at the side entrance. That left a backdoor… no, also covered. Well, if they had to, they could just cut their way through the walls. Or blow a hole into them. But being found would mean they failed their mission.

"First basement floor clear," Sam reported after a second of flipping through feeds."

"They're checking the sensor routines," Entrapta reported. "We can still look through the feeds, but we can't alter them now without them noticing."

That made things harder.

They reached the second basement floor. Sam checked the feeds again. "There's a patrol in the main core room."

The General cursed. They could take the squad out, but, again, that would expose their presence.

"Can we access the data lines somewhere?" Catra asked.

That was a possibility. Sam quickly checked the floor maps and contrasted them with the system's architecture. "We can go through the ventilation ducts. They double as cable tunnels in some areas."

"Oh!" Entrapta perked up. "Yes, that's a very nice way to travel!"

Before anyone could say anything, she moved ahead, past the closed door, and her hair reached up to remove a grill from an opening, then pulled herself inside.

Catra cursed and jumped up, quickly sliding into it as well in one smooth motion. “Don’t rush off!” Sam heard her hiss before Melog followed her.

Adora looked at the others. “Well… Entrapta is the expert here. She spent days in the Horde ventilation ducts once.”

Sam had heard the story, as had the others.

“Let’s go!” Adora continued, hoisting up Glimmer without showing any effort before turning to the others.

Sam was the sixth in, after the General, before Daniel and Sha’re, with Teal’c and Adora, their largest members, bringing up the rear. She had some trouble moving with her computer out in front, but she managed - and she couldn’t take her eyes off the camera feeds. If they were caught in the ducts…

A few minutes later, they were deep in the maze of ducts, still following Entrapta. They had passed several cable bundles before Sam, her attention on tracking the sweep of the base, realised that they were headed to the computer core room.

The computer core room with the guards inside.

Not that it mattered - dozens of Jaffa were now searching the building. The entire base must have been mobilised.

A message flashed on her screen.

I’m at the core room! The guards aren’t looking this way!

Sam clenched her teeth and hoped Melog had Entrapta covered since she knew what her friend would do.

*****

“I can reach the console from here… I think. Just need to stretch a bit…”

“Get back!” Catra hissed, clenching her teeth while she tried to keep Entrapta from doing something stupid.

“But it's right there!” came the whispered complaint.

“Let Melog take a look first, so they can cover your hair,” Catra said.

“Oh. Right.”

Sorry.

Sorry? What were they sorry… Oh, that! Catra winced when Melog pushed past her, almost flattening her in the process. The ventilation ducts weren't that big. “You're heavier than you were before,” she whispered when her friend had gotten in front of her. “Too many treats.”

Denial.

She snorted, softly, then whispered: “Watch out, Entrapta, Melog's coming through.”

“What? Oh!”

In front of Catra, Melog squirmed their way past Entrapta. It was a bit more difficult - Entrapta was shorter than Catra, but not quite as slender. And her hair didn't help. Fortunately, Melog didn't get tangled up in it.

Done.

In front of Catra, the duct suddenly looked empty.

“Oh! Nice! If only a stealth field would work like that!”

Focus, Entrapta, Catra thought. They needed information, not inspiration right now. She resisted the urge to crawl forward,

through the seemingly empty vent, until she could peer into the room ahead. Melog and Entrapta were invisible, not gone. She would only disturb either, and at this point, that could be critical.

But she really wanted to. To do something, anything, other than waiting and feeling useless, trapped in a ventilation duct while others acted. She'd be almost glad if they were detected, and she'd have to claw some… No, she wouldn't be glad. This mission was too important. No matter how frustrating it felt.

Finally, after what felt like ages, she heard Entrapta whisper: "Almost done! There is more data than expected, but I should be able to…"

"Enemy reinforcements arriving," Sam reported through the communicator."

Catra gasped and focused on her ears. Yes, she could hear footsteps in lockstep. Then she heard the door open.

"Search the room!"

"We've been guarding the door all day. No one got past us."

"We've got our orders."

"You can see that it's empty!"

Catra heard a smack, metal against flesh. Someone didn't like backtalk.

"Search the room!"

And the footsteps fell out of step. Three, four people walking around the room. Where Entrapta was trying to download the computer's data.

Close.

Well, no shit, Catra thought.

Entrapta didn't say anything. Good - from the sounds of it, at least one Jaffa guard was close enough to hear them whispering in the ducts. So, they just had to wait until…

Catra heard a curse, followed by the sound of metal striking metal.

“What did you do?”

“Something tripped me!”

Oh, for…!

“I don't see anything.”

“I didn't trip over my own feet - it was a rope! I felt it!”

Catra's ears twitched - metal scraping over concrete. They must be running their staff weapons’ shafts over the floor.

Up in air now.

Good.

“Nothing.”

“I know what I felt.”

“There is nothing, clumsy fool!”

“But…”

“Do you think the air from the vent tripped you?” A scoff followed.

Catra tensed. If they checked the ducts… they were hidden behind Melog's illusions, but the grill covering the vent was missing…

“The room is clear. Move on to the next objective!”

She heard the steps move further away, followed by the door opening and closing again.

“So much time spent to check what everyone could see with a glance!”

“What do you expect from fools who trip over their own feet?”

Laughter from the remaining guards followed. They acted like Catra would have expected from Horde soldiers in the same situation. And if Jaffa had this attitude toward each other, what did they think of the clones following Ba'al? It was something to keep in mind, a potential weakness that could be exploited.

Though not now. Now they had to get the intel they were here for.

“Got it!”

Back.

Back? Catra cocked her head, then grimaced when she felt Melog’s hindpaw touching her face. Ah, that.

Once again, Melog squeezed their way past Catra.

“Just fixing the grill and I'll join you!” she heard Entrapta whisper, followed by soft metallic noises. “Done!”

“We’re done. We need a safe room to regroup,” Catra reported over the communicator.

“Follow me,” Adora replied.

She must have picked a room in advance, probably with Sam's help, Catra guessed. One which the Jaffa had already searched.

The stench reached her nose quite a bit before she reached the room. “The garbage storage room? Seriously?” she hissed as she lowered herself down from the ventilation duct.

“It's only used by the workers, and they're barred from the building until the search is over,” Adora defended herself.

“It’s not that bad,” Glimmer chimed in.

“Not that bad for people whose noses are only there so their glasses don't fall off their faces,” Catra shot back. It stank!

“As long as the walls don't suddenly start to try to crush us, I’m fine,” Jack said.

“I don't think they will do that - I don't detect any presses that would be able to move those walls,” Entrapta replied.

“Ah… thanks. That's reassuring.”

“So, what data did you get?” Adora asked.

“Oh, lots!” Entrapta beamed. “The production schedule, full guard and worker roster, transport schedule, maintenance… Basically, everything the administration here needs. No blueprints, though - for those, we need to get into a shipyard.”

Catra nodded. So, that would be their next objective.

*****

Jack O’Neill knew that the administrative data would allow the spooks back home to ferret out a lot about the ships being built here through thorough analysis but to get the actual blueprints… that would give the Alliance a huge advantage in any future confrontation. And, maybe, even a few designs to copy. So, he nodded. “Alright. Let’s go and steal the blueprints. Might be useful if we need to stop a Death Star.

“Indeed.” Teal’c nodded with such a serious expression, Jack couldn’t tell if his friend had gotten the joke or not. It would be just like Teal’c to pull Jack’s leg by acting as if he hadn’t gotten it.

"I don't think they're building a Death Star here. The slips could be used to build components, but you'd have to assemble them in space, and we've seen no sign of any orbital construction going on. And it wouldn't make much sense not to build such yards in the same system you're building the Death Star, to save you the transportation effort. And we haven't seen the transport ships necessary to lift such huge parts from ground to orbit, either, so it would probably be more efficient to build everything in space from the start, although that depends on how many space-rated workers you have, I guess. Of course, the Clones would know how to build things in space and qualified for such work since their fleet trains do the same, so…"

"... there's no Death Star being constructed here," Catra cut off Entrapta.

"It's very unlikely, yes."

Of course, that didn't mean Ba'al wasn't constructing some superweapon somewhere else. Though would he build such shipyards instead of focusing everything on the superweapon? Megalomaniacs loved their superweapons. On the other hand, he probably needed escorts for it, and such yards would also serve as a way to hide his actual project by making spies and saboteurs focus on them… Maybe that was why the yards were so close to Alliance space? Jack would have to bring that up with the analysts back home. But now, they had a shipyard to plunder.

"Alright. Let's see how we can reach the shipyards from here without starting another search," Catra said.

"We could wait until the search is over," Sha're suggested. "At that point, the guards will be tired and convinced there aren't any intruders around and so won't be paying as much attention as during the search."

That was a good point, but waiting for hours - or even longer; who knew how paranoid the base commander was? - would tire them out as well. "Waiting will be a pain," he said.

“We can’t hack the systems to create a distraction,” Carter said. “Another such incident would confirm our presence to the base commander.”

“But can you hack the system to hide us from the sensors?” Jack asked. That alone would be a big help in getting to the shipyards - and, not to forget, out of the base afterwards.

“That should be possible,” Carter replied after sharing a glance with Entrapta. “But we’d still have to avoid being detected by the patrols.”

“We could have Melog make us look like a patrol,” Catra suggested. “As long as you can make sure that there are no records for them to analyse later and realise that there were too many guards around at the same time.”

“We can do that!” Entrapta said. “No sweat!”

Jack glanced at Carter. Entrapta was sometimes a bit too optimistic, but his former second-in-command nodded, so that was a valid plan.

“Let’s do that,” Adora said. “Check the cameras so you can tell when we have a window of opportunity.”

“Alright!” Entrapta bopped her head and went over to Carter to peer at her laptop.

With Melog and Catra on lookout duty, that left the rest of them to wait.

Jack wasn’t a stranger to waiting. Every soldier was familiar with it - hurry up and wait, and all. It still grated on his nerves. Not that he’d show it, of course - he made a point of yawning and taking a nap. Maybe he should mention that he forgot his Game Boy… No. That might be overdoing it. And if his troops heard about it, they might think that was acceptable for them as well.

“I think we got a window here, sir,” Carter said after fifteen minutes. “If the patrols follow the same pattern.”

“Which they have for the last two cycles,” Entrapta added.

“But we need to get into position now, sir,” Carter went on.

“Then let’s go!” Adora stopped pacing and headed to the door, where Melog and Catra were also up.

They quickly made their way to the side entrance - no guards in the vicinity, not after the building had been ‘cleared’ - and gathered there, waiting for Carter, who had her eyes glued to her laptop, to give the signal.

She held up a hand, using her fingers to count down.

5… 4… 3…

Suddenly, she looked like a Jaffa warrior in full armour. Jack managed not to wince at the sight.

2… 1… Go!

Adora took point, opening the door, and they filed out, marching in step. Or tried their best - Jack really hoped no Jaffa decided to stop them to berate them for not moving sharply enough.

But they managed to reach the closest shipyard without anyone calling them out - or shooting at them - and then entered the office building next to the open slip. They had to wait a nerve-wracking minute before Carter and Entrapta had found another hiding spot, but no one bothered or even saw them, at least Jack hadn’t noticed anyone.

He still didn’t relax even after they entered what apparently was an unused lounge overlooking the slip.

A very luxurious lounge.

“Someone really likes their comfort when inspecting the shipyard,” Jack commented. “Probably Ba’al himself.” He blinked, then grinned. “Let’s check the bar - I’m sure that would give us great insight into his character!”

“Jack! Are you trying to steal his booze?”

“Of course not!” Though if he thought he could get away with it without compromising the mission, Jack would do it in a heartbeat. Just the bragging rights alone would make it worth it.

*****

“Don’t steal the drinks,” Adora said. “That would give us away.”

“They also might be poisoned,” Catra added. “Either as an assassination attempt on Ba’al or by himself as a trap for his enemies. He might even use a poison he was immune to so he could poison someone while sharing a drink.”

Adora didn’t know if her lover was serious, but she wouldn’t put it beyond a System Lord like Ba’al to do such a thing.

Jack pouted at that, narrowing his eyes at the bar. “That sounds like him. In that case, we should take a few bottles as a gift for some acquaintances.”

Adora frowned at him for that. He shouldn’t joke about that. Catra laughed, and she frowned at her as well. She shouldn’t encourage him.

They weren’t here for that, anyway. “Can you access the yard’s computer from here?” she asked Sam and Entrapta.

“We’ll check!” Entrapta nodded.

“We have to be careful, though, in case this is a trap as well,” Sam added.

I would say that sounds a bit far-fetched, but since Ba'al has his deliveries cleared with nerve gas…" Daniel shrugged.

"We'll be careful!" Entrapta's hair flew out and started probing the console near a seat with enough gold plated to its surface to outshine some thrones Adora had seen.

She turned to eye the windows. They were polarised, so those working on the slip below couldn't see inside, but Adora couldn't help feeling exposed. After the poison incident and then the alert, she was on edge.

As was Catra. Adora's lover was putting on a good front, sprawling in a leather seat to the side as if she had no care in the world, but Adora could tell from the way her tail and ears moved. And from Melog's colour, of course. But that was kind of cheating.

"OK! We're in! And no trap - no alert, at least!" Entrapta's announcement interrupted Adora's thoughts. "Let's get the data we want!"

Hair tendrils whipped around, making Adora take a step back out of reflex. Sam, though, didn't even twitch, eyes glued to her laptop.

"Oh… those are the blueprints… Ha'tak, looks like a standard model… and there's the improved one! Look at those engines!"

Adora cocked her head but she couldn't see the screen from her spot.

"Ah. That's three per cent more acceleration," Sam said.

"Not bad! But we're still faster. Oh, look at that blueprint!"

"A Ha'tak with full Horde technology?" Sam sounded impressed. And worried.

With good reason - a ship the size of a Ha'tak, with Horde technology, would be a flying fortress. A *very fast* flying fortress.

“It’s all standard Horde technology, though - nothing improved. And they didn’t even adapt the engines; they adapted everything else,” Entrapta complained.

“They might not have the scientists and engineers to adapt the new technology,” Sam speculated.

“Not *yet*,” Jack said.

“Training people to that level takes a lot of time, sir. But they should be able to recruit clones from their fleet,” Sam replied. “They should be familiar with their own technology.”

“Familiar enough to improve on it?” Jack sounded sceptical. “I used a lot of gadgets in the force and never rebuilt one. Did some unofficial modifications to my gun, but that’s not the same.”

He was correct, but they couldn’t count on having such an advantage. “We can’t underestimate the enemy,” Adora said. “They only need one smart scientist to develop better weapons for their fleet, then they can build it.”

“It’s not that simple in practice, but essentially yes,” Sam agreed. Mostly.

“Can you sabotage their blueprints? Without being obvious?” Jack asked.

“If they compare them to the original, wherever it is, they’ll notice any changes,” Sam explained.

“Can you change them so it looks as if those who created the original blueprints did it?” Catra asked.

That was a rather… ruthless way to sabotage Baal’s research and development.

“Not with any degree of certainty,” Sam said.

"Not worth the risk then. Though what about adding something? Like a trigger? Something that wouldn't show up until we use it, so they have no reason to check their blueprints?" Jack wasn't giving up on his idea. "Maybe a locator?"

"Hm. Leaving it changed would be a risk, but we might be able to change it and then remove any traces. That would mean we had to limit it to the ships here, though," Entrapta said.

"Three super-Ha'taks sabotaged seems good enough for me," Jack said. "By the time they can start on more of them, we probably are at a point where that won't really matter any more."

That could be taken in a few ways. Adora chose to take it in an optimistic way. "Do it," she told Entrapta and Sam. "Just being able to track their movements will be a great advantage for us."

That done… Adora turned to the others. "Now we need to find a way to sneak out," she said.

*****

"We can call in Bow. He can hover the stealth shuttle above this building, and we board it under cover."

Samantha Carter nodded in agreement with Catra's suggestion. It was a simple plan with a high probability of success. But she had to focus on sabotaging the ships being built here before they could leave. Adding a locator beacon would need her to have it installed on the slip without anyone realising it. That meant it had to arrive inside a finished component to minimise the risk of anyone realising what was going on. There wasn't a big chance that the slaves working here would notice something amiss by installing an additional component, but it was best to minimise the risk as much as possible.

She quickly searched the copied data. She needed a component close to the hull and with an internal power source so the locator beacon could operate. Independently and send out a signal. The beacon itself would need to have an FTL communicator built in so

it had the necessary reach. And a navigation system to track the ship's course… no, better just have it tap into the navigation system of the ship. However, that limited the potential modules even more. A direct line to the ship's computer, close to the hull… "We have to alter the ship's sensor packs," she said.

"Yes! Well, we could add an entire new module, but that would be more difficult and more easily found," Entrapta agreed.

Sam checked the data until she found the factory complex where the sensor modules were assembled. They needed to use an automated process - anything involving an actual worker was too prone to catch the attention of the staff. "Alright. We need to alter this step."

Entrapta nodded. "Add a few more steps for the beacon… but that will slow down production. They might notice that."

Right. At the very least, they might investigate such a 'glitch'. Especially after today's alert. So… "Can we optimise the procedure to compensate?" Sam asked.

"We can, I think - the whole setup looks a bit inefficient. But we'd have to restore the original routines afterwards."

"Yes?" Sam looked at her.

Entrapta pouted. "That feels wrong!"

"They're our enemy," Sam said. "Think of it as sabotage."

"Well… Oh! We could prepare some sabotage here as well!" Entrapta perked up. "If we're already manufacturing beacons and altering the core programs, we can make it so we can remotely sabotage the entire complex! We could repurpose the munition factory to blow itself up! Although that would endanger the workers, I fear."

"Watch out for mission creep," the General suddenly cut in. "Just stick with the locator beacons. We can always send another group

to sabotage or bomb the factory."

That was true, especially with superior stealth technology. Although once they used stealth shuttles for that, the Goa'uld would know about that and react accordingly, so that was best used as a mass attack to exploit the element of surprise.

"We'll limit our mission to placing the locator beacons, sir," she said.

"Good."

Sam went back to hacking the computer core of the factory while Entrapta took care of the routines they needed altered - she had more experience with setting up factories, anyway. She had to be careful, though - whoever had been checking the security system's computers might be watching the other systems as well. But they already had a backdoor here, so…

After about ten minutes, she was done. And so was Entrapta. Actually setting up the swap, and the timer to undo the changes, took longer than that, though, but finally, they were done.

And so was the exfiltration plan. They would board the shuttle from the roof of the shipyard, hidden by Melog's illusion and a couple of large vents. There was still a chance that someone might spot them - Melog's illusions were not perfect when out in the open like that, and the stealth field couldn't cover the open ramp, but…

"Did you trip another alert?" Catra hissed.

"What? No!" Sam replied, then checked. "No, the system load is normal."

"They're calling up all Jaffa again," Catra said.

And, indeed, the camera feeds showed it - all the Jaffa currently resting were rushing out of the barracks, and the Jaffa on the walls were moving to the heavy weapons.

“That is not an intruder alert,” Teal’c said in a calm voice. “You can see the squad leaders checking the appearance of their warriors’ armour. They are forming an honour guard.”

Oh. That meant…

“Ba’als coming here?” The General grinned in a familiar way.

“What was that about watching out for mission creep?” Catra asked.

“Oh, come on - that’s not mission creep. That’s a target of opportunity!” he protested. “We can leave any time, but we can’t waste this opportunity!”

Sam couldn’t argue that.

*****

The Clones Question Part 7

Ba'al's Base, PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

Catra looked at the screen, which showed the base's guards lining up to form an honour guard. They made a good job of it, as far as she could tell through the cameras. Better than most Horde units would have been able to do on short notice. Only cadets were generally ready for an inspection at a moment's notice.

"Do you think it's Ba'al?" Adora asked. "Would he do a surprise inspection in person?"

Catra shrugged. Ba'al might not announce his travel schedules in advance just to avoid ambushes and assassinations, but she knew from experience that surprise inspections kept your troops sharp, though only if you kept the focus on things that mattered, such as readiness and supplies, not how good they were at standing at attention.

"He most certainly would," Sha're said. "He wouldn't completely trust even his closest subordinates. This base here contains a shipyard and factories - a plotting underling could use this to build up their own force."

"And try to turn the clone fleet in the system," Catra added.

"Turning anyone against their god, especially new converts, is quite difficult, as we found out," Daniel pointed out.

"The base commander is a Jaffa, so the odds of him betraying his god are very low," Teal'c added.

"But Ba'al can't depend on that," Glimmer said. "Or won't."

"Indeed."

"The sensors caught a Tel'tak approaching, sir," Sam reported.

“That would be our surprise guest,” Jack said. “Can you track the ship’s course back to its origin, Carter?”

“It did not come from any of the frigates in the system, sir. It dropped out of hyperspace a distance away.”

“I don’t think Ba’al flew the whole distance in that ship. He probably has at least one Ha’tak with a Stargate nearby, so he can quickly come - and go,” Catra said. A Tel’tak had a stealth generator, which made it a good ship to escape an attack - at least if your enemy didn’t have the sensors to see through that - but it was a rather small ship, neither impressive nor luxurious. She didn’t think Ba’al would spend days or even weeks in one.

“That would be a good compromise - no direct access to the planet through a Stargate, but it can still be reached relatively quickly,” Sam said.

“It’s easier to hide the entire system that way, too,” Sha’re added.

“He probably took this planet's Stargate for that,” Entrapta said. “Since the planet doesn't have magic, it must have had a Stargate when the First Ones started charging the Heart of Etheria.”

“Probably.” Jack nodded. “But now, let’s see who is arriving.”

Everyone crowded around the screen to watch the ship come in to land on the designated space. It threw up some dust as it set down, but the assembled guards didn’t even flinch as far as Catra could tell. Well, they weren’t that good at keeping spies and saboteurs out, so they had some use, at least.

The ship’s ramp was lowered, and four Jaffa stepped out, staff weapons ready, and looked at the assembled guards.

“Now, those look tougher than the rest,” Jack commented.

“Those would be Ba’al’s personal guard,” Teal’c confirmed. “Though I do not see his Prime.”

Those guards were tall - not as tall as Adora when she was She-Ra, but almost as tall and buff as Teal'c. And they looked experienced as well. Still, Catra was sure she could take them if she had to. Pretty sure, at least.

"And here's the main act."

A human - a Goa'uld; the eyes gave it away - walked down the ramp, and the base commander dropped to his knees, followed by the honour guard.

"If that's Ba'al, then he doesn't go for as much bling as the other System Lords," Jack commented.

"We don't know how his host looks," Sha're said. "But the reception… I doubt that any of his underlings would be allowed as much respect."

"Our lipreading routine says they're calling him Ba'al. And a number of other titles," Entrapta piped up.

Catra flashed her fangs in a grin and looked at Jack.

He matched her expression. "Time to bag us a System Lord."

*****

This time, the damn snake wouldn't escape! Jack O'Neill was dead tired of missing their target!

"But what if that's a trap?" Glimmer asked.

"They're calling him Ba'al," Jack replied. "I don't think Ba'al would use himself as bait for a trap." Snakes were cowards. But then again, would he be using such a small ship and so few guards?

"He could be using a double." Glimmer was digging her heels in, it seemed.

“A double used as a host by another snake?” Jack shook his head. “That’s a recipe for a coup.”

“But it’s a bit too convenient,” Adora objected. “We just happen to stumble on Ba’al on a recon mission?”

“We’re bound to get lucky sometimes,” Jack said. It wouldn’t be the first time. And they were due a lucky break after the recent streak of bad luck.

Catra frowned. “In any case, we need to find out more before we blow our cover over a potential decoy.”

“And how do we do that?” Adora asked.

That was a good question. It wasn’t as if they could take a blood sample and run tests - and even if they could, they didn’t have Ba’al’s DNA to check. But… Jack wasn’t the only one who looked at Melog.

“Melog says they will do their best, but they cannot make any promises,” Catra said. “They can’t read minds like you read computers.”

“It should still help. If that’s a body double, they should be nervous and resenting their role, shouldn’t they?” Glimmer sounded less sure than her words, at least to Jack.

“Yes. So, we need to get close - closer - to Ba’al to check. And we need an escape plan,” Jack said. “If we do nab Ba’al, we can’t count on sneaking away.” The snake wouldn’t enter this lounge for some privacy and send all their guards and servants away, and they couldn’t count on being able to take them all by surprise before they could raise the alarm. And, speaking of… “We also should move to another room before Ba’al arrives here.”

“Yes. Good thing we didn’t steal his booze,” Catra added.

Jack snorted. “Where’s the next best hiding spot? Preferably close to this lounge.”

“We could hide in the closest storage room, but it will be cramped, sir,” Carter replied.

A red dot marked its position on the map she displayed on the screen, and Jack memorised the route to it. “We can manage being a bit cramped.” He had suffered worse on missions. “And we need to move,” he added with a glance at the screen - Ba’al or body double, the snake hadn’t spent much time letting everyone kneel to him and was already marching toward the shipyard.

“And we should bug the place!” Entrapta piped up. Her hair fanned out, and Jack could see the tendrils reaching underneath the decorations lining the bar’s front.

“Better place it on the back, he said. “Less chance it’s going to be found there.”

“Even with a chameleon-coating?”

“Yes.”

“Alright!” The tendrils reached over the bartop.

Jack frowned, but before he could say anything, Catra was already moving to the other side of the bar.

“Looks good to me,” she reported a moment later.

“Great!” Entrapta beamed.

“Now, let’s move,” Jack said. “We don’t want to be here when Ba’al arrives.”

They moved to the door. “The hallway’s clear, but a group of servants is waiting around the corner, sir. We wouldn’t cross their line of sight, but well have to be quiet,” Carter reported.

Jack could be quiet. “Let’s go,” he whispered.

They sneaked out, hidden from sight by Melog, and reached the storage room. Jack winced slightly when he saw it - Carter had slightly understated just how cramped it would be. Which was really cramped. Especially if they wanted to leave space at the door for anyone to step inside and visually check the room. Well, they would manage.

And they would be crowded around Carter's laptop, anyway, to watch Ba'al walk through the base.

Which the snake did. It really looked like a surprise inspection. He wasn't headed to the administrative building or the shipyard, no. He went straight to the warehouse - the one inside which they had found the container with the clones, Jack remembered. And the snake did head directly to said container, too.

Interesting.

"Looks like that's a special project," Catra said. "Important enough to take priority over the shipyard."

"Maybe he does have a manpower shortage," Adora speculated.

"If he did, he would take better care of the workers he already has," Sha're disagreed. "But the workers here weren't even wearing protective gear. This has to be something else."

"Wasn't Ba'al the guy with the human sacrifices in Carthage?" Jack asked. He had read about the Punic Wars, of course, but he had focused on the military aspects. Not the religious ones.

"The reports we have are mainly Roman ones, so it's not quite clear how much of them were propaganda," Daniel said.

"Ba'al did have human sacrifices in his temples," Sha're said. "But why would he clone sacrifices when he could use the slaves too sick or old to work?"

"Well," Jack said, watching how Ba'al inspected the container without looking hurried in the least, "we might find out if they

waited for him to thaw them out."

"There's another shuttle coming on," Carter spoke up. "From the Horde force in the system."

Oh! That was even more interesting.

*****

Adora focused on the camera feed. The man on the screen acted like she'd expect Ba'al to act. Confident, arrogant maybe - though that was hard to judge from this angle, and with everyone literally bowing to him, even a humble person would have looked arrogant. Well, a truly humble person would have told the people to stop bowing, but then again, Adora knew from personal experience that even people worshipping you as a goddess might not listen to such an order. In any case, the man held himself in a not-very humble manner. She wouldn't call it strutting, it wasn't quite that, but he moved… Like Horde Prime did, she realised. A leader who thought they were a god.

But did that mean he was Ba'al? All the Goa'uld they had met so far had been arrogant like that. Granted, most of them had been System Lords or their queens, or their offspring… She blinked. Goa'uld had genetic memory. "Could that be a child of Ba'al posing as them?" They would have all of Ba'al's memories - they would be Ba'al, at least effectively.

For a moment, no one said anything. In the smaller picture on the screen, the Horde shuttle came in for a landing.

Then Sha're spoke up: "It's possible, yes. But few System Lords would risk giving their children such a role. It would tempt them to topple their parent and take over. Even Apophis, who granted his son a position of power few other System Lords would dare to bequeath on their offspring, would not have gone so far."

"Someone's always the first to cross a line," Jack muttered.

“We don't know much about Ba'al,” Daniel somewhat agreed. “And if he has a child with all his genetic memory, they would be able to pose as him without anyone else being able to tell.”

“Mainly because for all that counts, they would be him,” Sam pointed out.

Daniel nodded. “That is true, yes. I doubt a System Lord would go as far.”

“Sharing power with themselves?” Jack snorted.

Adora couldn't see that either. Horde Prime had made sure that all his clones were beneath him, far beneath him. He hadn't wanted equals; he had wanted slaves.

“That’s the Horde Commander,” Catra hissed.

Adroa looked at the screen. Her lover was right - that was the Horde Commander, wearing an ornate collar over his uniform, walking out of the shuttle, followed by four other clones.

“Is he imitating Ba'al?” Daniel said in a low voice. “The same number of guards, after arriving at the same place…”

“It would not be the first time an underling imitated their superior, but they have to walk a fine line between flattery and presumption,” Sha're said.

“It could be a power play,” Jack said. “The Horde clones are Ba'al’s most powerful force. The Commander might be subtly reminding Ba'al of that by acting like this.”

Adora shook her head. It sounded plausible, and yet… “Would he act towards his god like that?” Priest would never do that. Had never done that.

“Well, we'll see how they react - both of them are now on the way here,” Catra said.

“Great. We might get a two-for-one,” Jack commented.

“We still don't know if that's the real Ba'al,” Adora cautioned him.

“Even if it isn't, the guy probably knows a lot about Ba'al's plans,” Jack pointed out. “And the same goes for the Commander. If we can capture both, the intel would be worth scrapping the mission.”

“Especially if we can sabotage the shipyards here,” Catra added.

They were correct, Adora had to admit. If that were a double, then Ba'al would be warned and change his plans - but that would still cause setbacks and delays. And shifting gears on all levels and fronts would open opportunities for more missions and expose more of his plans. “Let's listen to their meeting and then decide if we take them out,” she said. “But we need to prepare our escape. If Bow is coming to fetch us, we need to crash the entire security system so we board the shuttle without getting shot at.” Well, they couldn't stop them from firing blindly, but that was random chance. And they needed to escape the frigates in orbit as well.

“We can do that!” Entrapta sounded eager.

“The servants are moving in. And more guards are coming,” Catra spoke up. “Some will pass by this room, so stay silent!”

Adora pressed her lips together and glanced at the door. Melog was hiding them, but… If the guards suspected illusions, they would physically check the entire room. They could only hope they didn't suspect invisible infiltrators.

On the screen, a squad of Jaffa stopped in front of their door. A moment later, their leader opened, and Adora tensed.

But the Jaffa only glanced around at the seemingly empty room, nodded and stepped out again.

Adora released her breath. It had worked. But once the Goa'uld were aware of what the Alliance could do, it wouldn't work any

more. Was capturing Ba'al or his child and the Commander worth this? No, she couldn't think like that. An advantage that could never be exploited for fear of losing it wasn't an advantage at all.

She focused on the screen again. Ba'al had arrived at the building and was headed to the lounge they had bugged. The Commander was on the way as well, though would appear later. And the servants were just finishing putting up food and drink inside the lounge.

"Cutting it a bit close, are they?" Catra muttered.

"That way, the food and drinks won't have turned stale when their god arrives," Sha're said. "The Goa'uld have punished their slaves harshly for lesser 'mistakes'."

"I'd have expected him to bring his own staff to cook his meals," Catra said.

"Some System Lords do. Others might consider that a weakness rivals might exploit and consider random chance a better protection against assassination attempts," Sha're replied.

Then everyone fell silent so they could listen when Ba'al entered the lounge.

*****

Samantha Carter knew she should have picked another spot to hide - things were a little too cramped in this room. Although she was aware that everyone would be crowding her anyway, as long as she had her laptop in front of her displaying the camera feeds. Still, so many people so close made it harder for her to do her job, which was to keep an eye on the computer systems they had compromised.

"I would have expected Ba'al to receive the Commander in a throne room, not a lounge," the General commented, leaning a bit too much forward. "Run with the whole 'divine rule' thing."

“It might be an informal meeting. Or a calculated way to honour his newest follower,” Daniel speculated as they watched Ba'al take a sip from a drink a servant handed to him right before the Commander entered.

“His four guards didn't enter,” Catra remarked. “Could be they aren't trusted by Ba'al - or the Commander doesn't want any witnesses from his fleet.”

“He bows as low as Priest does,” Adora muttered as the clone did exactly that.

Sam checked that the four clones outside the lounge were covered by a camera, then looked at the main part of the screen again. Maybe she should ask for Glimmer’s tablet to set up a secondary screen to make it easier to keep ahead of all the movement inside the base… Although Entrapta was managing that on the heads-up display built into her visor. Sam might reconsider her friend's offer to build one for herself. It did seem quite useful to keep yourself from being distracted. Like by people leaning in too close for comfort.

“Welcome, Commander.”

“Your Divine Highness.”

Sam glanced at Adora and saw that she was twitching. And Catra was snickering.

“It is my honour to report that the system remains secure, Your Divine Highness.”

“I expect nothing less. So, there were no incursions from the heretics?”

“We've been on the lookout, but we have not found any trace of the ships that managed to escape us. We also have not received any further attempts to contact us. After their fake goddess was destroyed, they must have been left leaderless - aimless, Your Divine Highness.”

"Like you were when I found you."

"Yes, Your Divine Highness."

"And yet, one would expect a Horde bereft of their goddess, fake as she was, to avenge her."

"That is not our way, Your Divine Highness. We obey and follow. We serve, but we do not lead. As soon as the Pretender was dead, they withdrew."

"Do you not lead your brethren?"

"I am merely the channel for your orders, Your Divine Highness."

"Yeah, right," Sam heard the General mutter. The snort from Ba'al that the device they had planted picked up showed that the Goa'uld didn't seem convinced, either.

"That's a schemer, alright," Glimmer added. "And Ba'al knows it."

"If that's Ba'al," Catra cautioned.

"If it looks like Ba'al, walks like Ba'al, talks like Ba'al…" the General replied.

"...it could be a good double," Catra pointed out. "Double Trouble would be able to…" She fell silent as Ba'al spoke up again on the screen.

"And my orders were to bring more of your people left drifting by the loss of your former god into my caring embrace."

"You also ordered us to secure your bases and raid your enemies, Your Divine Highness. As much as we revere you, we are but mortal and our means are limited."

It was hard to tell with the speakers of her laptop, but Sam thought there was a hint of smugness in the Commander's tone

as he diplomatically reminded Ba'al of the limits of his fleet's power.

"Bound by your decree to keep our allegiance secret, we cannot easily spread word of your grace to our brethren still drifting aimlessly following their loss. We have to find their ships using our own craft, and every ship sent out to search for them is one less ship guarding your worlds and striking your enemies, Your Divine Highness."

"We need to restore contact with the other Clone fleets we know of," Adora said. "We can't let Ba'al convert them."

"Broadcasting my offer would alert my rivals and prompt them to try and seduce your brethren with false promises of salvation."

"They cannot match you, Your Divine Highness. They can only offer empty promises. Only you can offer my people a future."

Again, the tone didn't quite match the words, in Sam's impression. But why?

On the screen, Ba'al took another sip from his drink, the massive golden cup hiding his expression.

"And I am delivering. The first test subjects have arrived on this world so you can witness that I am keeping my promises."

Test subjects? Did he mean the cloned humans? And what kind of tests was Ba'al talking about? Given his reputation, Sam wasn't certain that she wanted to know.

"I have never doubted Your Divine Highness."

"And I have a great beach property to sell to you in Colorado Springs," the General commented.

"And your trust will be rewarded. Soon, Commander, your faithful people will no longer face extinction but have their future secured - under my benevolent rule, they shall multiply once more."

Sam frowned. That sounded like… “They can't clone more Clones without Ba'al's help?” That didn't make sense, did it? Horde Prime had kept control of the main cloning factories for his Horde on his flagship, but every fleet had the medical facilities to treat their wounded, including cloning new limbs and organs, and the process was not that difficult to upscale to full clones… “He must be talking about imprinting their minds!” she blurted out.

The General cursed. “And if he can implant memories like Horde Prime used to, three guesses just what a snake will do with it.”

“Hordes of brainwashed clones - humans, Jaffa, Horde Clones - loyal to their god unto death,” Catra said with a hiss.

*****

While Ba'al went on to promise basically everything, Catra's thoughts were racing. An army of cloned soldiers, with skills and loyalty built into them. Like bots, but better. Smarter, more versatile. Willing to fight to the death, to sacrifice themselves for their leader upon command - or when they thought it was necessary. She shivered at the memory of how she had done so, on Horde Prime's command, just to hurt Adora…

She pushed the memory away, focusing on the problem at hand. Clones. And the technology to imprint skills and loyalty into them. She knew what she could've done with that kind of resources. If she had been able to use troops like that. Soldiers who didn't need to be trained for years before they could be deployed in combat. Whose numbers could be adjusted practically on the fly.

And soldiers who were faithful, loyal unto death, so fanatical that she wouldn't have had to worry about backstabbing attempts, sabotage, corruption or cowardice… Alright, that was going a bit too far. Priest proved that even fanatics were willing and ready to creatively interpret orders from their goddess. Still… “We need to stop him. Before he gets this off the ground,” she said.

“We still don't know if this is Ba'al or a double. If he can clone humans, he can clone hosts as well,” Daniel objected.

Proud. Confident. Arrogant. Satisfied.

“Well, Melog says that Ba'al feels like a System Lord should,” Catra said. “Arrogant and satisfied.” That was good enough for her.

“With their genetic memory, any symbiont would probably feel the same,” Daniel retorted.

“That would only work if Ba'al has access to a queen,” Sha're added. “We don't know if that's the case.”

“What if he can clone Goa'uld?” Adora asked.

“Then he wouldn't need a queen,” Sha're replied with a grim expression.

Catra didn't think that would be a big deal. Snakes already could spawn so many larvae, being able to clone them only mattered for those System Lords who didn't have a deal with a queen. And even if Ba'al didn't have access to a queen, having a Horde fleet fighting for him would probably tempt every ambitious queen to join him. So… Her ears twitched, and she held up a hand. “Shhh!”

“...and now we will test the first heralds of a new age for your people.”

“Yes, Your Divine Highness.”

The Commander sounded like some of the Force Captains Catra had known. The ones who had been plotting behind her back. But if she could see it, a System Lord who was thousands of years old would have seen it as well, wouldn’t he? Of course, it was also obvious that as soon as Ba'al could clone more Horde clones, the Commander would be the first to end up replaced by a better version…

“They're going to leave the lounge,” Adora stated the obvious.

It would be a good opportunity to ambush them inside the building, hidden from view from the rest of the base. On the other hand, if they waited, they could find out just what exactly had been done to the clones in the warehouse. But that meant they would have to sneak out of this building and back to the warehouse without being noticed.

Catra glanced at Adora, then at Jack. “Hit them now?”

Adora nodded. “Sam, Entrapta - prepare to shut down the entire system, everything.”

“OK!”

“Melog, hide us - we need to get to them before they leave the building.”

Agreement.

“Alright,” Catra replied for both Melog and herself.

“And how do we get out once we have them?” Glimmer asked. “Even with the bases's systems down, people could still see us board.”

“You can teleport us out,” Adora told her.

“But… Ah!” Glimmer nodded.

Adora smiled. “We need to start showing the clones that there are alternatives to Ba'al.”

And what better way to do that than to unleash the planet's magic? Catra smirked. With a bit of luck, that would shock the Clones in the ships above them as well.

“Let’s hurry - Ba'al just finished his drink,” Jack urged them.

They moved to the door, and Catra cocked her head, listening. She couldn't hear any steps nearby, but the door wasn't that thin.

Clear.

Catra opened the door and stepped into the hallway outside, moving to cut off Ba'al and the Commander. They had eight guards with them, and a few servants.

No problem. They just had to be quick enough to finish them before reinforcements could arrive.

She quickly dashed around two corners - she wasn't going as fast as she could; she couldn’t outrun the others, or Melog wouldn't be able to cover them all, but she was quick enough. Another corner and she came upon the rear of their target.

The guards were good, at least Ba’al's, Catra had to hand them that. Two were already turning, raising weapons, shouting “Ambush!”, when she pounced on them.

But Catra was quicker, her claws tearing through the two Jaffa's throats as she dragged them to the ground with her before they could fire.

The two Clones forming the rearguard with them fired, but their shots passed over her head - and were stopped by Adora's shield.

Adora smashed into them, trampling them underfoot before slamming the Commander into the wall with a sweep of her shield.

Catra jumped, pushing off the wall, hitting the other wall, bouncing off, launching herself at Ba'al… and hit a force field. She slashed at it as she slid down, then rolled to the side, another shot missing her as the guards in the front started firing.

Between Ba'al blocking their line of fire and Adora rushing ahead, they couldn't do much to Catra, though.

And then Adora hit them, followed by Jack and Teal'c shooting them, and they couldn't do much at all any more.

With the Commander down, that left Ba'al.

*****

Jack O'Neill double-tapped a guard who had caught a staff blast but was still moving - or twitching - and then spun around, carbine rising, to aim at the snake still standing. Ba'al was firing his pain thingie at Adora, who was shielding Catra behind her. She took the full charge to the face but looked none the worse for wear.

Jack held his fire - his gun wouldn't get through the force field, and ricochets were bad news for everyone, especially inside a hallway. Alerts were sounding - people had heard the shots.

Adora swung her shield forward, pushing Ba'al, forcefield and all, back against the wall with enough force to startle him and make him stop using his torture beam. Before he could recover, the shield changed into a sword, and Adora cut his forcefield apart.

“What…”

Catra dashed forward and cut short both Ba'al’s question and his arm. The snake stared for a moment, seemingly uncomprehending, as his lower arm clattered down on the floor in a spray of blood.

Before Ba'al could start screaming, Jack drew his zat one-handed and stunned him.

“Catra!” Adora snapped. She looked angry. Then again, as close as she had been, Ba'al's blood had splattered over her chest.

“You've got magic cleaning,” Catra shot back as she bent down and started tying off the limb.

“Not that!”

“We can fix him later.”

“And we need to move!” Jack cut in.

“Several squads are moving toward our position, sir,” Carter reported. “We’ve crashed the system, but the whole base has gone on alert anyway.”

Well, shots fired next to your boss had that effect, computer or no computer.

“Get to the roof here!” Adora ordered as she picked up both Ba'al and the Commander.

“OK!” Entrapta replied.

“Bow! Come fetch us!”

“On my way!”

“Move!” Jack snapped, covering the entrance ahead of them. “This will get crowded any moment.”

Shots and staff weapon blasts rang out behind him - the first guards had reached them and ran into Teal'c.

The door in front of Jack was kicked open, and he fired a short burst at and through it at once, catching an armoured figure right behind it. The new ammo tore through the Jaffa as advertised, and the man staggered, then started to drop.

But more were coming behind him. “Incoming!” Jack yelled, firing two more bursts before ducking below a staff blast that blew a hole in the wall next to him and grabbing a grenade. “Fire in the hole!”

He threw the grenade high, lobbing it through the door, while he fell back, firing a few more rounds to keep the Jaffa from rushing them.

Then the explosion went off, Jack felt the shockwave in his chest, and dust and smoke briefly hid the doorway.

“Come on!” he heard Adora yell, followed by metal smashing into metal. “Move!”

He spun around, running after the others. Teal'c was at the corner ahead, staff weapon aimed at the hallway behind Jack, covering him. Jack ran past him, jumped over a few crumpled bodies that had been smashed and slashed, and knelt down at the next corner. “Teal'c!”

His friend fired his weapon one more time, then sprinted towards and past Jack, who laid down covering fire.

“Stairs!” he heard over the communicator.

He glanced over his shoulder for a moment while swapping magazines. Teal'c was at the stairs, with Daniel and Sha're, who was firing a zat in the other direction. The rest must have gone up the stairs already.

Time to run.

“Fire in the hole!” He threw another grenade down the hallway and then ran all-out to the stairs, throwing himself around the corner into cover a moment before the grenade blew up behind him.

“Jack!” Daniel blurted out.

“Run!”

They ran, Teal'c and Jack bringing up the rear. Another squad of Jaffa had tried to cut them off one floor above them, but Catra and the others had gone through them. Mostly Catra - they looked like someone had put them through a blender. Jack almost slipped in the blood.

Below them, more Jaffa poured into the staircase, and Jack dropped a grenade down on them before booking it.

The doors on the next floor had been welded shut, it seemed - Jack could hear someone pounding on them on the other side as he dashed past, followed by Teal'c.

Two more floors. One more squad of guards dead on the ground - two shot by staff weapons, even though only Teal'c carried one in their group, Jack noted before realising that Melog must have fooled them into shooting each other - and they reached the roof.

A roof that was being shot at from below, with heavy weapons, forcing the team to huddle down in the middle of it to avoid catching a stray blast.

“They don't seem to care much about the health of their god,” Jack commented as he joined the others.

“They must have standing orders,” Teal'c said next to him, aiming down the stairs. “With the computer system down, they could not have coordinated so quickly.”

“I can't approach with all the guns firing there!” Bow reported over the communicator.

That was bad. But they could…

“Enemy frigate moving into position above the base!” Carter interrupted his thought.

That was worse. But they couldn't just blast the base with their Commander and their god inside, so…

“They’re firing!”

What the hell?

*****

Adora gasped, staring up at the sky. The Clones were firing at their own base? Their own Commander? Their own god? How could that be possible?

“Ba'al must be a double!” Catra hissed. “Or that's treason!”

“We need to leave!” Glimmer yelled.

It didn't matter why they fired. They were on a base. A stationary target. They couldn't leave quickly enough.

As the first beams struck the base's outer walls - the first barrage was off, a distant part of Adora's brain noticed, must not have calculated the atmospheric interference correctly - time seemed to freeze as she raised her sword and reached out, feeling for that familiar pattern to cut…

She screamed as she channelled this world's magic, all of, throwing it against the beams striking down from the sky. As the magic obeyed, the beams splashed against a dome covering the entire base, some stopped outright, others, at the edges, deflected to strike the ground, throwing up shards of stone, clumps of earth and clouds of smoke as they blew craters into the area.

Adora clenched her teeth, straining under the pressure. But she would not yield. They wouldn't touch her friends. They wouldn't touch any of the helpless victims here. SHe would stand her ground.

No, she corrected herself, trembling as she stood, sword raised to the sky, that wasn't enough. She had to *stop* them from attacking.

Her eyes blazed with power as she reached out once more, magic expanding her senses, reaching out, up, into the sky, into space…

There! Directly above them, she found the enemy. A Horde frigate, beam cannons firing ceaselessly, two more frigates about to join them, more on the way…

No! The dome rose, shooting up, deflecting the beams to the side as the magic obeyed her and flew directly at the ships in orbit. She saw the first frigate starting to move, the two others slowing

down, trying to escape, but she wouldn't let them. They'd return to attack her friends and the others again.

Before the ships could flee, she struck, sending magic into the hulls, into the engines and reactors, into everything.

And they stopped. Changed. *Bloomed*.

Adora smiled as three new flowers spread their glittering petals in the sky above them, forming a triangle of life in space, leaves twisting and weaving to orient themselves towards the sun, thick stems connecting everything, reaching out to each other…

She heard Sam's voice in the background. “Three frigates are gone, sir! Replaced by… giant flowers! The other frigates have stopped their approach and are withdrawing!”

“Bow! Get us out of here before they recover!” Jack sounded worried.

“I can teleport us!”

Catra's beautiful voice joined the chorus. “Bow! Open a line to the enemy fleet and tell them to surrender or they'll suffer Adora's Divine Wrath as well!”

What? Wait! That wasn't…

Adora blinked, lowering her sword and turning toward her lover, breathing heavily as the strain from channelling so much magic finally caught up with her. “Catra! What…?”

Bow's voice rang out from her communicator - and from the speakers inside the base.

“Warriors of Ba'al! Surrender or suffer the Divine Wrath of She-Ra, Princess of Power! You only live by her grace!”

The fire from the weapon emplacements had stopped, Adora realised, though she couldn't remember when that had happened

- during her channelling the world's magic, or when the orbital bombardment had started?

She walked to the edge of the roof, to the railings holed by staff blasts, and looked down. She was glowing, she noted - surrounded by a shining halo. It would fade, she knew, but…

“Glory to Ba'al!” someone shouted, and a staff weapon hit her in the face.

“Adora!”

She didn’t even feel the explosion. Nor the dozen other shots hitting her. She simply stood there, staring, until the shots tapered out. She caught one with her blade and sent it to the side, into a part of the outer wall, and the firing stopped altogether.

Then, one by one, people started to kneel.

*****

The Clones Question Part 8

Ba'al's Base, PT-9511, PT-9511 System, May 17th, 2000 (Earth Time)

"The remaining Horde forces in the system have signalled their surrender."

Samantha Carter mentally filed Bow's report as she focused on restoring the same security system she had just crashed minutes before. Most of the warriors might have surrendered, but there were holdouts, and it would be a while until Alliance forces arrived to secure the base. They needed the ability to check the entire base as soon as possible to prevent sabotage attempts by the Ba'al loyalists.

"Copy, Bow. Did any ships escape?"

"Except for the frigate that jumped to hyperspace before we even called for their surrender, no."

There. Sam successfully rerouted the sensor data to an alternate core. The main sensor data processing core was still caught in a loop of cascading self-diagnosis routines that Entrapta and Sam had started in it and which proved to be harder to stop than expected. So much for improvised viruses. But now they could at least access the sensors… those that were still working, she amended her thoughts. There were blind spots in several locations where the sensors must have been burnt out after the safety limiters on the power supplies had been taken offline by another virus.

"Sensors are back online, though we lack complete coverage," she reported.

"Good work, Carter. Keep making sure that the base won't blow up around us!"

The General thought he was joking, but if Sam hadn't shut down the shipyard's automated production lines, that could have happened. A lot of machinery would have had to malfunction at the exact right time, but it would have been possible, at least theoretically. A not-unusual weakness of many Goa'uld designs.

"Ah! Look at those sneaky snakes trying to sneak by us! Teal'c, care to cut them off?"

"Yes, O'Neill."

She spent the next few minutes writing a new routine to control the power fed to the most sensitive sensors. It would reduce the sensors' effectiveness but prevent them from burning out.

"We've mopped up the holdouts in warehouse two. The clone container is secure."

"Copy, Catra. Stand by."

"We've finished the squad trying to get into our rear."

More good news. She ran another diagnosis on the sensor network… no sign of any tampering. Not from anyone else, at least. And there were no reports of any contacts.

It looked like they had managed to pull off the takeover of an entire shipyard - as long as they could hold it for a little longer, until the task force secured the system and started to land the ground forces assigned to it.

She checked the feeds.

The guards and workers who had surrendered were staying in the yard next to the barrack, watched over by Adora. She didn't like staying there, of course, while everyone else rooted out the ones who hadn't surrendered and gone to ground, but no one else could have replaced her. She was the only one who could guard so many potential enemies by herself. Sam doubted that many Jaffa or workers would want to defy Adora after she had

demonstrated her power. Of course, even if they did, Adora could handle them.

Just as Daniel and Sha’re could handle the Commander and Ba’al, should either of the two wake up from being stunned and attempt to get out of the improvised cell they had been put in.

“Alright! I’ve checked the defences twice - they are offline! And I haven’t found any self-destruct devices!” Entrapta announced. *“I’m coming back to help with the computers!”*

More good news. Now, if only the task force would hurry up and finally secure the system… She checked the long-range sensors. They weren’t as good as the Alliance’s, but they could still find Horde frigates. And if Sam had calculated the flight times and the communication lag correctly, then…

Here they came. Frigate after frigate, the task force dropped out of hyperspace and started to fan out to secure the surrendered enemy ships. Sam could see shuttles shooting away as well - those were the landing forces they were waiting for, with two frigates separating from the rest of the force to cover them.

“The task force has arrived in-system, sir,” she informed the others. Just a little bit longer.

“Great! Don’t get sloppy now, folks - we’re almost home-free. Another successful mission!”

“Technically, Jack, we failed the mission when we broke our cover.”

“Daniel!”

Sam couldn’t help snorting at the exchange - for a moment. Then, she went back to restoring the base’s computer cores.

Her work wouldn’t be done even after the base was secure, after all.

*****

“Alright. Let’s wake him up,” Catra said and leaned forward to stare at the unconscious, one-armed form of Ba’al - of his host, she corrected herself with a touch of guilt. She had cut off his arm, though he had been busy trying to hit her with that torture device mounted on it at the time, so it was really self-defence.

“I’m healing him now,” Adora said.

Catra quickly checked the restraints - all set - and glanced at the door - secured.

When she turned her attention back to the prisoner, Adora had just finished healing him, although only enough to wake him; she hadn’t regrown his arm. That probably required more magic. But he didn’t need the bandages any more.

The man didn’t try to move, and his slow breathing didn’t change.

Catra snorted. “Playing dead?”

“Neural activity detected in both the host’s brain and the Goa’uld’s brain,” Sam reported over the communicator.

After a moment, the man opened his eyes. “It was worth a try.” He raised his head and looked around - first at his restraints, then at Adora. “For someone with your power, you seem remarkably concerned about me. Do you expect me to escape my bindings and attack you with my stump?”

Catra grinned. At least, the snake had a sense of humour. She could almost respect that.

“Hello, Ba’al - or whoever you are,” Adora told him. “I’m She-Ra, Princess of Power.”

“Yes, yes, you’ve already introduced yourself to my loyal underling,” Ba’al replied. “Unlike some of my rivals, I am not in the

habit of dismissing the reports of my commanders even when they sound rather far-fetched." He looked around. "Although I do think we're missing Colonel O'Neill. I remember he was shooting at me."

Catra shrugged. It had always been a long shot to hope he hadn't noticed or recognised their friends. "It's General O'Neill now," she said, then turned to the camera covering the room. "Jack?"

A moment later, the door opened, and Jack entered the room. "How the mighty have fallen," he said with a grin once the door closed behind him.

"Don't be too hard on yourself, O'Neill," Ba'al shot back.

"I'm not the one strapped to a table in a cell."

"No, you're the general still fighting on the frontlines because your planet can't find better soldiers."

"I like leading from the front - an alien concept for you, I know." Jack shrugged. "But enough about me. Let's talk about you, Ba'al."

"Yes!" Adora nodded. "You're our prisoner. We won't kill you, but we will free your host whether you cooperate or not."

"I fear that's not something you can promise." Ba'al grinned. "But let's say I cooperate. What would be my reward? Purely hypothetically, of course."

Catra narrowed her eyes. The Goa'uld was far too cocky for someone missing an arm and any plausible chance of escape. Something wasn't right.

"You'd have access to more entertainment in your cell," Adora said.

"Oh? I have very discerning taste when it comes to entertainment." Ba'al smirked.

“We’re talking movies and books,” Jack told him.

“Sanitised, so I cannot glean any useful information from either, I suppose?” Ba’al sounded almost amused.

“You know the drill,” Jack said with a shrug.

“That doesn’t sound very appealing, to be honest. It sounds rather boring, actually.”

“Sounds like a good deal for a snake like you, actually.” Jack grinned toothily.

“Really?” Ba’al looked at Adora. “Is that your opinion as well, Princess?” he asked in a mocking tone that made Catra want to slice off his other arm.

But that would only hurt his host, she reminded herself.

Adora frowned at him. “You heard our offer.”

“I have a counter-offer. Release me, or my hostage will pay the price.” Ba’al was still smiling.

“You really think we’d let you go?”

“No, I suppose not. Well, it has been a pleasure to meet you, but I think I’ll take my leave now. Do not worry, though - we shall meet again.” Ba’al bared his teeth, nodded - or tried to, strapped to the table, it looked really awkward - then closed his eyes.

“What the…?”

“The scanners detect poison flooding the host’s body - and the symbiont’s! Their vital signs are…”

Adora was already raising her sword, sending magic at the bound man.

“...stabilising,” Sam went on in a more controlled voice.

Ba’al opened his eyes again and glanced around. “I must confess that this is a surprise. This is the first time this hasn’t worked.”

“There’s always a first time,” Jack said.

“As you can see,” Adora went on, “we won’t let you die.”

Catra flashed her fangs at him. “Feel free to try it again - she likes the exercise.” The snake had a limited amount of poison available; the more he used now, the more harmless he became.

“I think I’ll give it a pass, but thank you anyway.”

He still sounded smug, but Catra thought he was not quite as confident anymore. Unless that was an act, of course.

“So, about that cooperation…?” Jack smiled at him again.

Ba’al snorted in return. “For what undoubtedly amounts to another form of torture? I know what you Tau’ri consider entertainment.”

Catra snorted against her will, even though it wasn’t really funny. Did that mean Ba’al had prisoners from Earth? Or access to information gained from such?

Or was he bluffing? Just trying to rile up Jack? That would be quite understandable, of course.

Catra was determined to find out.

*****

Jack O'Neill really wanted to bash the man's teeth in. He knew that that would only hurt the host, another victim of the snake, and that he shouldn't abuse a prisoner, but damn was that one smug snake! Missing one arm, strapped to a table in a secure cell, surrounded by a woman who had turned his ships into space flowers, and he acted as if he was in charge - even after he had found out he couldn't kill himself and his host.

Then again, the snake was crazy; you had to be to act like suicide was a way to conduct a prison escape. Jack blinked. Or… what if the snake wasn't crazy? "Oh, I wouldn't say that. We have plenty of great movies, shows and books. Some of them would teach you a few valuable lessons."

Ba'al snorted. "I am not much for indoctrination either, General."

"Unless you're the one doing it to others," Jack shot back.

The snake jerked a little - trying to shrug while in restraints. "I prefer to think of it as educating people and showing them a better way."

Jack snorted, but he heard Catra hiss under her breath.

Ba'al had heard it as well since he turned his head to look at her. "And who are you? You are not one of Bastet's chosen. A sekhmet's claws can't cut through metal."

"I'm Catra." Jack saw her bare her teeth at the snake.

"How original." Ba'al sneered, and Catra scoffed. "You were on Saqqara."

It didn't sound like a question, but the snake could just be bluffing and fishing for information, and they wouldn't give him any. "So, about that entertainment…" Jack said. "You sure about it? It's going to be very boring in your cell without some perks."

"Oh, I do not think I will be your prisoner for very long." Ba'al smirked.

"We already showed you that you can't kill yourself. And we will free your host," Adora told him.

"It is not as if I would wish to keep him, anyway. I do not have any use for damaged goods."

Jack clenched his teeth at the reminder of what the Goa'uld did with crippled slaves. “Well, you're about to experience a similar thing. We're not going to give you a new host. But don't fret - we've prepared a nice habitat for you.”

For a moment, the snake's eyes flashed with what Jack hoped was rage. But he quickly recovered. “I do not think I will suffer such an indignity for long, though.”

“Pretty confident, are you?” Jack shot back with a scoff. “Do you really think you'll be able to escape?”

“Oh, unless your goddess here is going to spend all her time being ready to pull me back from the brink of death, I don't think you will be able to hold me for long.” He turned his head to look at Adora. “And if you do, you'll be missed by your faithful worshippers - and on the frontlines our dear General so loves.”

So, that was how the snake wanted to play things. He expected to kill himself sooner or later. Jack had met such fanatics before, in his old line of work, but they had always been followers, never the leaders. And Ba'al didn't strike him as someone who'd follow anyone. And Jack didn't think he was crazy or suicidal either. So, why was he acting like this? Was it a bluff?

“We won't let you kill yourself,” Catra said. “We can put you into stasis until we’re ready to extract you - and to remove your poison glands.”

The man's eyes widened for a moment, then glanced at Jack before settling on Adora. “You are more ruthless than I was told to expect.” His face settled in a sneering smile. “But then, there’s always a distinct difference between what we tell the faithful and what we actually do. I do have to admit, however, that your facade is better than most.”

Adora glared at him. “It is not a facade! It wouldn't be right to treat those who were fooled into following you the same as you!”

Ba'al scoffed in return. “You are not fooling anyone here, my dear. No need to pretend.”

“Is this going to be one of those ‘we are not so different’ speeches?” Jack cut in. “Because I can tell you it won't work. She-Ra's the genuine article.”

“Really?” Ba'al raised his eyebrows and smirked again. “You have caught me, and now you will make an example out of me. You will take my host, my dignity and my higher faculties from me. The details may vary, but that is exactly how any Goa'uld would treat a captured rival.”

Oh, for…! That was a low blow. Jack glanced at Adora and cursed internally. She wouldn't take this well.

And Ba'al wasn’t finished. He raised his head as much as he could with the restraints holding him down and grinned at her. “Though I have to give you points for creativity - most of my peers would leave the act of restoring their dead victims to a sarcophagus. You like to do that yourself, though, don't you? Going for that personal touch?”

Adora jerked in response, and Catra hissed again.

Damn.

*****

Adora wasn't like the Goa'uld! She wasn't a sadistic tyrant torturing her enemies and robbing them of their dignity! She was protecting and helping people! “I’m not healing you to torture you - I'm healing you to save your host!”

Ba'al laughed in her face. “So, you would let me die as long as you could save my host? How naive do you think I am?”

Adora clenched her teeth. She wouldn't hit the Goa'uld - she'd hit the innocent host, anyway. “We're not like you!”

“That's exactly what someone like me would say!”

Oh, this…!

“You don't have to take our word for it. Once we have you out of your host, you will find out for yourself,” Catra told him.

“Is that when you will present me with the choice of either letting my mental faculties degrade as I am bereft of a host until I cannot think clearly any more, or ‘cooperate’ to avoid that fate? Or will you skip the posturing and go straight to torture?” He scoffed.

“We're not going to do that!” Adora blurted out. They didn't torture their prisoners! “We won't get you a new host, that's true, but we wouldn't give you a new host anyway - we wouldn't let anyone suffer like that!”

He looked surprised for a moment before laughing again. “I cannot believe you would admit this. How did you think you could convince me to cooperate if you tell me to my face that you won't grant me even the smallest concessions I need to preserve my mind? I would rather die than suffer such indignity!”

Adora pressed her lips together. It was unfortunate that Goa'uld depended on sapient hosts to reach their own mental potential, but that didn't justify subjecting anyone to giving up their freedom and becoming a prisoner in their own body!

“Oh, stop it!” Catra rolled her eyes. “We know it's not that bad - you're not the first Goa'uld we captured.”

“And who knows, it might be good for you. Make you chill out some. Like fixing a dog.”

Adora winced at Jack's remark. That was… well, almost as bad as Ba'al's comments.

“You have done this to others?” He didn't seem to be as smug any more as he stared at Jack.

“We've got the routine down pat. There's already a nice little snake habitat with your name waiting for you,” Jack replied.

Adora shook her head. “We know what losing your host does to you. But it's not as bad as you claim.”

He scoffed, clearly angry. “That is easy to say for you - it's not your mental faculties that degrade, reducing you to an imbecile.”

“They aren't yours either!” Adora retorted. “You use your host's mind for yourself!”

Catra suddenly snorted, and Adora glanced at her lover. “You're like a thief who stole a fortune and then demands that he can keep it when he's arrested because he got used to luxury.”

That’s a really good point, Adora thought.

Ba'al must have thought the same since he didn't seem to have a comeback ready. But after a few seconds of glaring, he snorted again. “You know nothing. I am looking forward to your reaction when you find out just how ignorant you are.”

Adora frowned. It did sound like empty boasting, a defeated enemy trying to posture, and yet… she couldn't help wondering what if it wasn't?

“I'll take that as you refusing our generous offer,” Jack commented, which resulted in another snort from Ba'al.

“You can take it however you wish, General O’Neill.” He closed his eyes and let his head rest against the table.

It seemed as if he was done with them.

“I guess this interrogation has finished,” Jack said.

“Yes,” Catra agreed. She drew a zat'nik'tel and stunned Ba'al. “Let's keep him in stasis until we can get him to the Tok'ra. He's less annoying that way.”

That was a good idea. But… "We would need one of the stasis pods from the clone container for that," Adora pointed out.

"Well, we're not going to keep the clones frozen for much longer, do we?" Catra shrugged. "Entrapta should have figured out if that's safe by now."

That was true. However, they might want to move the container to a safer location for that. One with a Stargate in it. Maybe even Earth or Etheria. They hadn't decided yet if they were holding this base or moving everything useful to Alliance space. Without more information about the forces Ba'al had at his disposal, they couldn't tell if they could hold this base against an attack - they couldn't even speculate who might be in charge, what with both Ba'al and the Commander taken prisoners. If that was actually Ba'al - they still weren't a hundred per cent sure about that. He certainly had the arrogance of a System Lord, but the way he tried to kill himself…

So… "Let's go and interrogate the Commander," she said.

She hoped they had more luck with him.

*****

Samantha Carter frowned as she looked one last time at the results from the analysis of the biopsy they had taken. The preliminary analysis, she corrected herself - they would do another analysis, a much more detailed one than this one, once they got the samples to Alpha with its far more advanced instruments. But even so…

"The Goa'uld is at least several hundred years old," she said to the others in the repurposed briefing room inside Ba'al's former base.

"Isn't Ba'al supposed to be a few thousand years old at the minimum?" the General asked.

"Actually, he would have to be five thousand years old at the minimum since he was present at the Rebellion against the

Goa'uld on Earth, but one would have to take into account that he was considerably older at that point to have established himself as a leading figure," Daniel elaborated.

"So, that's not Ba'al?" Glimmer asked.

"We cannot determine that yet. The Goa'uld use of the Sarcophagus technology to rejuvenate themselves throws off our analysis," Sam explained. "We hope that the more advanced instruments and computers at Alpha can tell us more."

"And we got Loki to help there!" Entrapta smiled. "He probably would like to do something different for a change."

Sam doubted that - he had been almost single-mindedly focused on his mission to save his people as long as she had known him - but then, she wasn't that familiar with Loki. The Asgard was not the most personable scientist she knew, to say the least, and she didn't seek out his company. And since genetics wasn't her main field, he tended to be a little - or a lot, depending on the day - condescending.

But he was the best in his field, Sam had to admit that, and he would likely be able to find out if the Goa'uld they had caught was the original Ba'al. Although that might not matter much. "Even if this symbiont is too young to have been alive back then, he could still have the complete memories of Ba'al, which would render the age differences effectively irrelevant," she pointed out.

"Yes!" Entrapta nodded with a smile. "Since Goa'uld have genetic memory that they can pass off to their children, they can sort of make a younger copy of themselves - and without any technology at all! It's fascinating. According to Anise, they can choose how much memory they pass on as well, if they don't want to make complete copies - I guess it would get a bit confusing if their children are actually copies, right?"

"And bloody," the General agreed. "The snakes aren't very likely to share power even with themselves. Especially not with

themselves."

"There can only be one."

Sam turned to stare at Teal'c, and she wasn't the only one. Her friend raised his eyebrow at them as if he hadn't just made a movie joke and were confused about the attention.

She shook her head with a slight smile while the General chuckled and Daniel explained the quote to Sha're and the others who were not familiar with the movie.

"...and there was a sequel, but it was not as well-received, and…"

She cleared her throat to interrupt him. "We have also analysed the identical people kept in stasis whom we have taken into our care. They are indeed clones, all the markers are there, and while we cannot be a hundred per cent certain yet, we need a more thorough examination for that, the circumstantial evidence we found indicates that they were grown using Horde technology."

"Great," Jack commented. "So, Ba'al can make copies of people."

"We haven't found any sign that they were subjected to Horder Prime's mind-imprinting technology, though," Sam went on.

"So… They are like newborn babies? When they are released from the cloning pods, I mean," Adora asked.

Bow grimaced. "Do you think they need diapers?"

"Ew!" Glimmer made a retching noise.

"I guess we know what the punishment duty for Ba'al's Jaffa is," Catra said with a chuckle.

"Well, I doubt he'd ship clones who still need to be potty-trained to this base," the General commented. "It lacks a daycare centre."

Sam shook her head. "Unfortunately, there's more."

“I knew it!” The General shook his head. “There's always more.”

Sam smiled thinly at his weak joke. “We’ve found traces of Goa'uld possession with our scans in every clone. Naquadah levels in their blood are very slightly elevated, there's microtrauma around their spinal cords that matches those from other victims… We still need to confirm it with more extensive examinations once they are released from stasis, but it seems all of them at least briefly served as a host for a symbiont.” She shuddered at her own memories of being possessed by Jolinar. How much more traumatising would it be if those were your earliest memories?

The General's expression had turned flat. Everyone else had grown serious at once as well.

“Why would they do that?” Glimmer asked.

Sam took a deep breath. This was a necessary briefing. “Hosts share the experiences of the symbiont's actions and can retain some of the symbiont's memories as well.” She knew that from personal experience. “It could, theoretically, be used as a way to implement basic skills into a host’s mind.” Likely quite effectively if the host was, for all that counted, a newborn clone with a brain devoid of actual memories.

“Oh, Hell! Ba'al doesn't need the mind-imprinting technology at all, does he? He can just use symbionts.”

“That would be our conclusion, sir, but we still need to release the clones from stasis to confirm it.”

*****

The Commander didn't look that arrogant any more, Catra found as she looked at him seated in the improvised interrogation cell. Oh, he tried to look tough and defiant, but she was familiar enough with Horde Clones to spot the signs. Oh, if they were doing this in the actual torture chamber, he'd probably be cracking already, but they were better than that. Even if she was tempted

to at least scare him with the idea for his attempt to murder Adora.

Well, time to get this show on the road - they were on a timetable. She opened the door and walked inside, ahead of Adora.

The Commander ignored her and focused on Adora. “Ah, the false goddess arrives!”

“I am no goddess!” Adora replied.

“Your followers claim otherwise.”

“I can't tell them who to worship.” Adora shrugged, though Catra knew she wasn't quite as unconcerned. Well, everyone who knew her was aware of how much of a sore point this was.

The Commander scoffed. “A transparent claim.” But he was fidgeting, Catra saw. No comparison to Ba'al's attitude. Or Hordak's. You could say a lot about Hordak, as you could about Catra, but he wasn't a coward or a fake.

And Catra was pretty sure the Commander was both. She leaned forward, both hands on the table, and unsheathed her claws so they sank into the metal. When she caught his eyes focusing on that, she smirked. “Your ships have surrendered. Your ‘god' is in our hands. The base is ours.”

He scoffed again, but his cheek twitched. “The force here might have surrendered, but not my fleet. And losing the base is meaningless for us - we don't need it!”

Nothing about his supposed god, Catra noted.

Adora hadn't missed that, either. “And what about Ba'al?”

“He will return!”

“More powerful than before?” Catra snorted. “He's no Horde Prime - and She-Ra destroyed Horde Prime.”

He stared at Adora. “You lie!”

“I don't lie,” Adora told him. “I destroyed him. I am not proud of it, but there was no other way to save everyone else. You can ask the others.”

“Your brainwashed followers, you mean!” he spat, tugging on the cuffs securing him to the table.

“No!” Adora retorted. “We would never do that to anyone - or tolerate it. We know how terrible it is.”

Catra nodded, clenching her teeth. They knew it too well. She focused on the task at hand instead of on the memories of Horde Prime. “And you know it too. You know Horde Prime did it - and that Ba'al was doing it. You don't believe that he's a god.”

He gasped, staring at her, then at Adora. “He's a god!”

Catra snorted. “We've dealt with people who honestly believe the snakes are gods. You're not like them.”

He glared at her. His “You are wrong!” was a second or two too late to convince anyone.

Adora shook her head. “Why were you following him? What did he promise you?”

The Commander pressed his lips together and avoided looking at either of them.

Time to push their advantage. “He offered to make more clones for you,” Catra said.

He jerked at that, then glared at her. And the way he ducked his head a little… Yeah, they already knew that, but this confirmed it further.

“You couldn't get the cloning pods to work properly, could you?” Adora asked softly. “Horde Prime had kept the knowledge to himself.”

The Commander bared his teeth, but his eyes moved from her to Catra to the door, then to the table and back. “We could clone people!”

“But you couldn't clone them with the knowledge they needed,” Adora said.

“And you didn't want to raise them.”

“We couldn't! They don't learn anything!” he blurted out. “They were braindead.”

Catra suppressed a wince as she drew a slow breath. So, they had tried. But without any experience in raising kids, they hadn't known what to do. And had assumed the newborn were… Shit.

“Oh, no!” Adora looked horrified.

Catra pressed her lips together. That was worse than she had thought, and she had grown up in the Horde. Much worse.

“What did you do?”

“They were braindead,” he repeated himself without looking at them.

“No!” Adora gasped, shaking her head. “You didn't…”

Catra shook her head. They did. Time to cut this off. She reached out to squeeze Adora's hand, then focused on the Clone. “And then you met Ba'al, who promised to deliver you Clones like you were used to.”

He nodded.

“As long as you fought for him.”

Another nod.

She shook her head. “He was stringing you along.”

“No! It would take time to solve all problems, but there was progress!”

That sounded more desperate than convinced.

“Even so, once he got it working, he'd replace you with Clones loyal to him.” Like Horde Prime had done.

“I was… prepared for that.”

“Prepared to out-plot a Goa’uld who has been around, plotting against his rivals, for thousands of years?” Catra snorted. “Do you even know how he ‘trained’ the human clones he brought here? The ‘test subjects’?”

“If we knew we could have done it ourselves!”

“He had them possessed by Goa'uld.” Adora had recovered from the revelation. “They were hosts.”

“But…” he shook his head. “We can't be possessed by Goa'uld. That wouldn't work.”

Adora slowly nodded. “He was either lying to you and hoping to use you until he could replace you with Jaffa and replicate your technology - or he was planning to create Clones he could possess.”

“Either way, you lose,” Catra added.

“No!” He shook his head. “No! That's… No!” He looked like he was about to cry.

Catra felt bad for a moment. Then she reminded herself that the Clone had tried to murder Adora.

*****

Former Ba’al’s Base, PT-9511, PT-9511 System, May 18th, 2000 (Earth Time)

“General, we've secured the perimeter of the base and have taken control of the mining sites on the planet. Thanks to the assistance of Queen Glimmer, we managed to prevent the Jaffa guards stationed there from holing up inside the mines.”

“Thank you, Colonel.” Jack O'Neill nodded in response. He was already aware of the facts, but a proper report was still needed.

“We've suffered light casualties, though before we could medevac the wounded to the hospital ship, Queen Glimmer had already taken them to the Supreme Commander for treatment.”

Meaning, Adora had healed them all. Well, Jack couldn't fault her for it, as long as she didn't strain herself too much. Which, despite the efforts of her friends, was still a potential danger. Adora needed to delegate more.

They had a hospital ship - well, a frigate with extended medical facilities, to be exact - with them for a reason. Sure, magic healing was great, but doctors could treat many wounds perfectly well.

“We've also started installing temporary barracks,” Colonel Maryland went on, “Until the temporary prisoner holding area is ready and we can move into the base's barracks.”

“Temporarily,” Jack added with a grin.

“Yes, sir.” Maryland smiled, but it was the humouring smile of a subordinate going along with a superior's joke, not a genuine one, Jack noted. The man obviously had no sense of humour. Even a German would have laughed.

“And with that in mind, has the Alliance made a decision about the fate of this base yet? I'd like to tell my troops whether or not they can plan long-term.”

“Nothing has been decided yet,” Jack replied. The Alliance Council hadn’t even scheduled a meeting to discuss this yet - which they wouldn't until Adora was back, anyway. The colonel knew or should know that as well, so this was probably just a more or less subtle reminder to keep him informed. “We won't forget you out here, Colonel, don't worry. You'll have a Burger King built next to the barracks in no time.”

Another forced laugh. Did anyone really take the rumours of garrisons being forgotten on foreign planets, leaving entire units stranded far away from Earth, seriously? Jack might have to look into this if that was common thinking. “If we're staying here, you can look forward to a Stargate being moved here, Colonel.” A shipyard needed a Stargate connection if only to move troubleshooters in on short notice. And most civilian contractors demanded significant compensation packages if they were employed on planets without the ability to use the Stargate to quickly return home in an emergency or just for a vacation.

Well, that wasn't Jack's problem. He just needed to oversee the base takeover until someone else was put in charge. Maryland seemed competent enough to handle base security, anyway, which was enough until the Alliance either sent someone to get the shipyards running for the Alliance or to dismantle them and move them to another planet that wasn't as close to Ba'al's territory.

“Is there anything else, Colonel?”

“No, sir.”

Jack sighed when the colonel left and checked his tablet. Catra had sent a few pictures of a mass of kneeling Clones. It seemed Adora’s visit to the captured Clones had gone as expected. They still would have to be vetted, but Jack didn't doubt that most of them would be serving in the Alliance, and on their old ships, soon enough.

He felt a bit bad about using Adora like that, but you couldn't be too choosy in war, and anything that turned enemies into allies was a godsend. Adora understood that as well, even if she complained from time to time.

Of course, Jack knew that this could, long-term, result in a mess, he knew from experience how working with religious fanatics was always a risk, but the alternatives were far worse. He'd rather deal with the Church of She-Ra than any other religion when it came to fanatics. At least Adora could be counted on to talk to her flock if there was a problem, and Jack could trust her not to abuse her power. Surely more than he could trust the preachers, priests, popes and whatever back home.

Besides, he had to worry about winning the war, not how to handle the peace afterwards. That was up to politicians, and Jack wasn't a politician.

A notice popped up on his tablet - Carter informing him that the clones, the human ones, were ready to be woken up and Jack would better head over so they could start. Well, she was far more professional about it, but that was the gist of it, so he started walking. It beats paperwork, anyway.

He reached the secure area where they had moved the clone container - Carter had flat-out rejected his suggestion to call it the Human Fridge - a few minutes later. The gang was already all there. Carter, Entrapta and Bow were bent over the consoles and gadgets, talking in tongues, and everyone else was watching and trying not to look lost.

He clapped his hands together. “So, ready for the great thawing?”

“Sir.” Carter frowned at him. “They're not frozen; they're in stasis.”

He grinned. “Sounds the same to me. So, how are you going to defrost them?”

She pressed her lips together, but he could see her lips twitching a little. “The process is automated. We simply have to start it and

the pods will do the rest.”

He looked at the various gadgets on the ground.

“We're closely monitoring the entire process, of course.” She sounded a little defensive, so Jack didn't press further.

“So, let's start? Or are we waiting for someone else?”

“No, sir.”

Carter had been right. It was a simple process. Also, a boring one - push a button and then wait. At least, it didn't take long until the pod opened with a soft hissing sound, which probably meant it was done.

“All vital signs are good,” Carter reported. “Neural activity detected, but we can't tell yet if that's just the basic activity of a newborn clone.”

The man’s eyes snapped open, and he looked around. Jack waved, and Adora stepped closer. “Hello! I'm She-Ra. You must be confused, I guess, but don't worry - we're here to help you.”

The man stared at her for several seconds, looking her over as if he was searching for something. “Do you serve Ba'al?” he finally asked.

“No, we don't serve Ba'al,” Adora told him. “We're…”

Before she could finish, the man snarled and attacked her with his bare fists.

Well, he tried. He tripped getting out of the pod, and Adora stopped his attempted tackle with one hand. “Please! We don't mean any harm!”

But the man wasn't listening. “Glory to Ba'al! Death to his enemies!” he screamed while flailing at her.

“Please stop! We’re not your enemy.”

“Glory to Ba'al! Death to his enemies! “Glory to Ba'al! Death to…””

A shot from a zat stunned him and put an end to the one-sided battle.

Jack sighed. “I guess that answers the question of whether Ba'al could produce loyal clones or not.”

*****

Ba’al’s Machinations Part 1

Earth Orbit, Solar System, May 19th, 2000 (Earth Time)

“We’ll do our best to welcome the lost fleet into our ranks, Your Divine Highness! We will also teach them how to think for themselves and make decisions about their own lives, of course - to prevent them from falling for the lies of the Goa’uld or anyone else.” Priest bowed deeply. “And I offer you the thanks of everyone in the fleet for saving them before it was too late.”

Adora suppressed a grimace. “We were too late and couldn’t save everyone,” she said. Like the clones that the Commander had had grown and mistaken for braindead out of ignorance. And Adora and her friends had personally killed several clones in the attack on Ba’al.

“If you couldn’t have saved them, no one could have, Your Divine Highness.” Priest smiled at her.

Well, that might be true for the Clones, but if Adora had been a bit more cautious, held back a bit, she might have saved the Commander’s guards - though she would have risked them hurting her friends, or worse. She could do better, though, and so she nodded without actually acknowledging the point.

“We’ve also been making some progress with the other fleets we have been reaching out to,” Priest went on. “Incidentally, the ability to create more of us has been a decisive factor for some of them - those who had resigned, thinking they would be the last of us. Knowing our people won’t disappear but have a bright future ahead of us has saved them.”

“That is good to hear, Priest,” Adora told him. She was quite aware that Priest’s people would also work on converting them to their faith, but if the alternative was to see entire fleets simply give up and wait to die… Adora didn’t like being worshipped -

who, except the Goa'uld, did? - but she would hate it if people died when they could have been saved.

"We live to follow your example, Your Divine Highness. Although we still need to find the rest of the Lost Fleet and save them from serving as Baal's unwitting puppets."

"Yes." They had not reacted to FTL-communication requests, and the ships sent to the known positions of the fleet had not found the - they had moved away. Now, there should be confusion after their Commander had been captured along with Ba'al, but Adora would have expected whoever was now in charge of the Lost Fleet to at least answer calls. "We're keeping up our efforts."

"After Ba'al's capture, his command structure should have been disrupted, causing friction or outright chaos in his forces," Priest commented. "Underlings fighting to take over or trying to carve out their own realm with whatever resources they can lay claim to. But we haven't found any evidence of that."

"We don't know the extent of his realm," Adora pointed out. "Only the bases the Commander was aware of." Which had been emptied and often razed to the ground before they arrived.

"We will find them, Your Divine Highness, and we will free all of Ba'al's slaves!"

Adora nodded again. They would indeed. Still, she had a bad feeling about this. Ba'al had been transferred to the Goa'uld holding facility on Earth and interrogation specialists were already talking to him, but the System Lord had, so far, proven completely uncooperative - and quite smug.

Something was up. Adora didn't know what, but she knew this.

And she was pretty sure that they had to find out what was going on, and as soon as possible, or the consequences would be grave. "How are the new trainees doing?"

"Oh, they are very motivated! We might have to slow down the training schedule to keep them from overworking themselves, but…"

Adora nodded as Priest started to detail the state of the new Clones training program. At least that was working as planned.

*****

Alliance Headquarters, Brussels, Belgium, May 19th, 2000

"...so we are in agreement. The Alliance will hold the base taken from Ba'al and keep the shipyards running while using the base to supply operations in the area."

Adora sighed under her breath as everyone sitting at the conference table nodded. It had taken too long for her taste, but the Command Council had finally agreed on a course of action.

"We'll need to move in reinforcements and fortify the base," she said.

"We already have a task force there to guard it," the American Secretary of Defense said.

"That won't be enough," she pointed out. "And the base's current security and fortifications aren't sufficient to protect it against infiltration attempts or large ground-based attacks. We also need a larger garrison and more infrastructure to supply the fleet."

"We can send one of the new units that have been raised to take over the garrison - it will allow them to keep working up while freeing the combat unit currently stationed there for other duties," his British colleague said.

"Two birds with one stone. Although we will need a Stargate that we can move there," the German minister added.

"We've contacted the Tok'ra to see if they know a Stargate that's not known to the Goa'uld so it can be moved there without them

noticing," Adora said. Of course, the Tok'ra also had asked to get some of the ships that would be built there. Which led to another decision they had to make. "Also, we need to decide if we convert the shipyard to build Alliance designs or keep producing Goa'uld ships," she said.

As Catra and Glimmer - and Sha're - had predicted, everyone agreed to convert them to produce alliance designs. But everyone disagreed about which designs should be built there and by whom.

Adora sighed, more audibly now. This would take a long while.

*****

Research base Alpha, First Moon of Enchantment, May 20th, 2000 (Earth Time)

"I have finished the analysis of the sample you brought."

Samantha Carter looked up from her computer screen upon hearing Loki's announcement. That had been faster than she had expected from him. And he wasn't complaining about the analysis having been a waste of time. "Thank you," she told him as she opened the file on her computer.

After a few seconds of skimming the data, she nodded. "So, it was a clone." All their efforts, and it *was* just a body double. Worse, now the real Ba'al would be warned and might change his plans. Unless the clone never knew his actual plans.

"Yes. Whoever did the work tried to hide the signs - they probably did use a sarcophagus in the attempt - but for a scientist like me, it was obvious."

For you when using Alpha's instruments. I'd like to see you do better in the field with only a portable computer, Sam thought with some annoyance. However… "Wouldn't the sarcophagus have rejuvenated the body?"

“In the default setting, yes. But even such a crude tool could be adapted and used more creatively.” Loki cocked his head in what was probably a shrug for the Asgard. “I assume they tampered with the radiation until it reversed some of its effects; the tissue showed signs of degradation that were similar to but incompatible with ageing effects.”

It was just a theory, but it seemed sound. And now Sam had another nightmare-inducing scenario to ponder: the threat of being aged in such a sarcophagus. Granted, compared to being possessed by a symbiont, it would be a mercy, and you could probably use a sarcophagus to undo such an effect, but to feel your body decay like that… She shuddered.

“I also analysed the samples from the human clones,” Loki went on.

“Ah?” Sam looked at him.

“I was looking for signs of what kind of research Ba’al might be doing on the Horde Clones.”

That explained his interest: Loki was hoping to find data he could use for his own project. “What did you find out?”

Loki’s mouth twitched in an Asgard frown. “The genetic code was left unchanged.”

“Ba’al doesn’t have to use genetic engineering on humans to get hosts,” Sam pointed out. Unlike Asgard, humans didn’t reject symbionts.

Loki frowned at her. “I had the hope that Ba’al would have used his test subjects more efficiently. But as was to be expected, the Goa’uld prefer to waste resources.”

Or they didn’t want to have others find out what they were doing by adding more secrets to clones planned to be expendable. But Loki was too focused on his own desires to consider this. “That’s the least of their sins,” Sam commented.

“Waste is one of the worst sins,” Loki, of course, had to disagree. “In any case, I request all the data you can gather from his research sites. It might prove useful for my task.”

“Of course.” Sam rolled her eyes, but Loki had already turned away. The arrogance of that scientist… Well, she had worked with worse on Earth, but it was still very annoying.

“Will we be duplicating this experiment?”

Sam didn’t jerk at Alpha’s sudden question. She wouldn’t give the bot the satisfaction. Instead, she slowly turned to look at the holoprojection. “There are currently no plans to clone humans,” she told them.

“Why not? Using an alien symbiont to implant pre-selected memories into clones is a very original way to make cloning more efficient. If we can duplicate the way memories are passed on, we could avoid having to spend so many resources on training new scientists up to an acceptable level to do more ground-breaking research, freeing up more resources for other projects.”

Sam narrowed her eyes. She knew very well that the only reason Alpha pretended to care about anything not directly related to the research done in this base was that the bot hoped to sway her into allowing her latest thoroughly unethical project. “That violates several fundamental principles of the Alliance.” Not that Alpha cared about that. “And it also would cause a very high single failure point. If the memories passed on were to develop faults - or were faulty to begin with - the consequences would be dire. The Asgard are the best example for a similar result.”

The holoprojection frowned but slowly nodded. “That is an argument I have not yet considered. I will now do so. Thank you.” Alpha faded from view.

“I’m surrounded by single-tracked minds,” Sam muttered under her breath - and made a mental note to check up on Beta’s research. The other First Ones bot running a research base

controlled by the Alliance had similar views on ethics and morality, namely that they were in the way of advancing science. And it fell to Sam to supervise both. Maybe she should…

Entrapta appearing in the door to Sam's office interrupted her thoughts. "Sam! Anise just called! She's coming over with her latest project! Oh, and she also has some data on Ba'al, I think."

That was good news - or so Sam hoped. After receiving confirmation that they had only captured a clone and dealing with both Loki and Alpha, Sam could use something uplifting. And Anise's latest project did sound intriguing.

*****

Bright Moon, Etheria, May 21st, 2000 (Earth Time)

Catra stopped on the way through Bright Moon's market street. Another shop had opened up with products from Earth - or inspired by Earth products; she could tell with a glance that a lot of the merchandise were imitations. Ironically, in some cases because the quality was too good for the mass-produced wares common on Earth.

Acting on impulse, she entered the shop - maybe she'd find a gag gift for Adora or something to annoy Glimmer with. She ignored the display cases with bootlegged TV shows and movies she already knew or didn't want to know and skimmed the board games and other toys. Nothing interesting there, and the clothes seemed rather boring as well. Then again, she was used to the real thing, and once you learned to ignore the advertising that bombarded you everywhere on Earth, you soon stopped caring about most of the products as well.

Or, she added with a glance at the posters and framed pictures of various Earth actors and singers, about most of their stars. Especially those who just didn't get that they couldn't block the Stargates on both Earth and Etheria for hours to ship through a

small train of tour material including their personal mobile home… The Alliance was fighting a war and needed the gates.

Whatever, it didn't look like she'd find anything that caught her fancy here. Maybe she should…

“Look, it's here!”

That voice sounded familiar… Yes, she saw two Clones approaching the shop.

“Are you sure?”

“Yes! Look, there in the back!”

“In the back? That sounds disrespectful!”

Disrespectful? Catra frowned. What were they talking about? Oh! She grinned when she saw the two making a beeline for the toys in the back which prominently featured a local copy of an Earth-made ‘Sword of She-Ra’ toy.

“See? I told you we would find one!”

“Yes! Oh, and look - there's a set of figurines of Her Divine Highness as well!”

“That wasn't here yesterday! What a find!”

Catra watched as the two bought every scrap of She-Ra merchandise for frankly inflated prices, and again when the clerk replaced the stuff with more of the same from the back. The goat-man didn't quite meet her eyes while working, probably worried about her reaction.

She didn't yet know if he had a reason to worry, but she'd find out soon - it was almost time to head back to the Palace for dinner.

*****

Royal Palace, Bright Moon, Etheria, May 21st, 2000 (Earth Time)

"...so things have been going well here in our absence. Mom's helping Dad run the kingdom."

"How is she doing?" Catra asked, cocking her head at Glimmer while she cut into her second serving of fried ice fish. She wasn't quite sure if Angella getting involved too deeply in the kingdom's politics was a good thing or not, but it was certainly important.

"Oh, she's doing…" Glimmer sighed. "...well."

Catra raised her eyebrows, then glanced at Bow, who looked amused instead of concerned. So, it wasn't anything serious but probably embarrassing. Not that he would tell.

"That's good!" Adora, of course, beamed.

"Yes." Glimmer bit a bit too forcefully in her bread roll, practically tearing a bite off with her teeth. Definitely embarrassing. And that was good. The last thing the Alliance needed was a power struggle between the two queens. Well, time to broach another topic.

"Did you know there's a significant market for She-Ra merchandise in the Horde?" Catra asked as casually as she could.

"What?" Adora stared at her.

"I saw two Clones buying every She-Ra toy in the market," Catra explained. "Overpriced or not."

"But I thought we… Oh, right. That's only Earth," Adora said. "We didn't make any agreements for Etheria."

"People are fleecing the Clones with She-Ra toys?" Glimmer asked. "In Bright Moon?"

“And probably elsewhere,” Catra added. “Looked like they have a good supply of the stuff.” She might ask Scorpia if she had any idea - it was one thing if the toys were made by hand, another if someone was using a factory.

“But… those are toys?” Adora shook her head. “Are they playing with them?”

“Many people collect toys,” Bow said. “It's a nice hobby.”

And you're one of them, Catra thought. Though he probably didn't collect She-Ra toys - he was already spending a lot on genuine Earth figurines and ‘simulation games’. “They probably put them up on their shrines,” she said.

And now Adora looked queasy.

“Do you want me to ban the sales?” Glimmer asked. “It's your, ah, likeness they're abusing. And they're exploiting the Clones.”

“No.” Adora shook her head. “No, that would be unfair.”

“You could start up a line of official merchandise,” Catra suggested. “Approved by you and with the profits going to charity or so.” The Clones in her church would probably consider the stuff blessed.

Adora stared at her. “I'm not going to profit from people who worship me! That would be… disgusting!”

“That's why you’d use the profits for charity,” Catra said. “If you don't do it, others will keep the profits for themselves.”

Adora pouted. “It's still wrong! I'd feel dirty doing that. Like ordering people to donate money - donations should be voluntary!”

She had a point, but it still meant others would profit from her followers. Maybe Catra should have a talk with Priest. If he wasn't already aware of it, he would like to know this.

“So… how are relations with the other kingdoms?” Adora asked in a transparent attempt to change the subject.

“Ah, nothing's much changed.” Glimmer shrugged. “Sweet Bee is still trying to get control of the Stargate, but her coalition is too divided to do anything.”

And too weak even if they were united. Especially during the war.

Catra nodded. It looked like things were well enough at home.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, May 22nd, 2000

“...and this, General O'Neill, is our prototype of the Composite Vision Enhancer and Protector System.”

Jack O'Neill could hear the ‘trademarked’ added to the name as the salesman - sure, his official title was ‘something-manager’, but he was here to sell something - gestured at a man dressed in bulkier combat fatigues including gloves and what looked like a standard Kevlar helmet with a diving mask and a gas mask attached. He made a noncommittal noise and circled the man while the salesman prattled on.

“As you can see…” The Salesman gestured to the model, who reached up, fiddled with the edges of the mask, and then pulled it off. “...it's based on modularity. You can detach the BC-protector for missions that do not need it and keep the Vision Enhancer, greatly improving the user's experience. The same goes for the gloves.”

The man stashed the gas mask - Jack wasn't going to call it a ‘BC-Protector’, trademarked - in a familiar-looking pouch at his belt and then pulled off the gloves and stuffed them in the same pouch.

“So, Mr Delgado… you basically added an NBC suit to the fatigues and a seal to the helmet?” Jack raised his eyebrows at the salesman.

The man didn’t even blush. “The suit including the boots and the helmet were designed from the ground up; you can't just add a protector system to the current fatigues or helmet.”

“Actually, you can,” Jack told him. “It's just that it comes as an outer suit you wear over your uniform. Like our old NBC suits.”

“But that would add more weight to a soldier and would take more time to put on in an emergency. With our system, they already wear the suit and sealed boots and can quickly protect themselves against attacks by biological or chemical agents without significantly reducing their effectiveness in the field. Not to mention that the integrated NV-goggles offer superior performance compared to the current technology.”

Jack doubted that - the suit did look a little cumbersome, probably barely any less restrictive than the old NBC suit he was used to. “Still looks like you just moved some parts around and called it a day.”

“We've been developing the system for some time, General. The recent submission request from the Alliance for an advanced combat uniform that included NBC protection was merely a coincidence. Unlike our competitor, we have a finished product.”

That was probably true. Jack doubted even a scummy company could have thrown together such a proposal in that time. Still… it looked a lot like the suits they already had. Since the Cold War, actually. Jack doubted that it offered enough of an upgrade to justify the cost of replacing the current gear. And it made you look like some overweight German soldier from World War I.

But it was the first proposal the Alliance had received, and Jack knew better than to dismiss it without testing it. “So, let's see how my troops do with it!”

“We're ready for a field test, General.” Delgado smiled.

*****

A few hours later, after the sales delegation had left and his soldiers were back at base cleaning up, Jack O'Neill was typing up his preliminary report. The suit had actually performed pretty decently. Better than he had expected. The seals had held up to testing, you could move around better than in the old suits - though you still felt the weight, and it got more than a little hot in the whole getup if you were out through your paces - and his troops had quickly gotten the hang of it, including the night-vision mask and the radio attachment. ‘Usability’, as Delgado had called it, had been improved indeed. The whole system, except for the stupid name, was a solid product that was a distinct improvement over the current NBC gear.

Unfortunately, that was all it was. Anyone could see that it had been developed before the arrival of the Etherians. It didn’t integrate magitech or advanced technology, it wasn't rated for space or low-atmosphere conditions - it wasn't rated for amphibian operations, either - and while it was laced with Kevlar, it didn't offer any better protection than the current vests, and if you added the optional ‘Hard Protector’, which was the new fancy name for a vest with ceramic plates, the weight increased considerably. And Jack had no doubt that if they managed to increase protection to the point the vest could withstand a staff blast, it would weigh even more.

No, in his honest opinion, the thing simply wasn't offering enough of an improvement over the current NBC suits the Alliance used. And compared to the Horde uniforms, it was clearly inferior.

And, while not official, Jack had asked Delgado about production capacity. It would take years to deliver enough of the suits to equip the US forces, much less the entire Alliance. Even just equipping Jack's special forces would take until the end of the year since the factories had yet to gear up for a production run. If they wanted it faster, the Alliance would have to build more

factories and license production. In short, they would be paying a fortune for a suit that would be obsolete when it reached the troops.

Too bad for Mr Delgado, but the Alliance wouldn’t buy his company's product. Jack added his conclusion to the end of the report, checked that the videos and pictures were attached properly, and sent the thing to Alliance Headquarters.

With that done, he could return to trying to figure out how to deal with Ba'al.

*****

Royal Palace, Bright Moon, Etheria, May 23rd, 2000 (Earth Time)

“...and I was shocked, shocked beyond belief when I discovered how my brethren are treated on Earth. Raised to be enslaved and abused their entire lives, then slaughtered to feed dogs when they are too old to work! How can you people allow this crime? Even worse, some humans eat horses! That's cannibalism! I must…”

Adora turned the tablet off and sighed. Swift Wind's interview on Earth had caused quite a few issues. Well, his interview paired with a report about horse slaughterhouses… Who had thought that it was a good idea to allow that?

Right, freedom of the press, she reminded herself. Earth people could be so stupid at times! Well, they had to deal with the mess now. Adora wasn’t going to tell a bunch of mostly girls that eating horses was fine and not cannibalism, or that using horses for anything but riding them wasn't slavery. That was their problem, not hers.

“And if they continue to bother me with their requests, I'm going to give an interview and tell them that it *is* cannibalism and slavery!” she muttered as she lay back on the bed.

“Hm?” Catra stepped out of the bathroom with a towel on her head… and nothing else.

“Adora?”

“What? Sorry!” Adora blurted out, blushing a little. And a bit more at Catra's smirk. “Just venting about the horse issue.”

“You mean the Crusade Against Cannibalism?” Catra sat down on the bed and stretched.

“They're really calling it that?”

“Brown said something about ‘alliteration gone wrong’, but apparently, PETA is known for such stuff and was pretty effective.” Catra shrugged. “He also said that the ‘agro lobby’ was being idiots for trying to counter it with the claim that it isn't cannibalism if it is a different species was making things worse for them instead of better even though it was technically correct.” She snorted.

Adora frowned. “You talked to Mister Brown about that?”

Catra gave her a look. “I had to know how bad it was before the Alliance drags you into this mess.”

Ah. Adora smiled at that. “Thank you.”

“Someone has to shield you from trying to solve every problem,” Catra replied with a snort. “Anyway, it's not our problem. We don't eat horses in Bright Moon. And we don't use them to pull wagons or ploughs either.”

Well, Adora remembered Micah commenting about the costs of sheltering much of Etheria's horse population, but it hadn't seemed to be a real problem either. And it wasn't her problem.

Though without She-Ra, Swift Wind wouldn't exist, she reminded herself. In a way, she had caused all of this… “Ow!” She jerked

and glared at Catra, who was slowly retracting the claw that had been poking Adora's calf.

“You were blaming yourself for this,” Catra told her with a frown.

“I…” Adora sighed, and Catra snorted again.

“It’s not your fault, you idiot.”

Adora sighed. Catra meant well, but… Hm. Maybe this was the time to address it. “You know, you don't have to keep blaming yourself, either.”

Catra tensed. “I'm not blaming myself for things that weren't my fault,” she said, turning her head away.

Adora sighed once more. “Not everything you did was, well…”

“I had a choice!” Catra snapped. “I know what I did. And why.”

“And you changed,” Adora replied.

Catra didn't answer and hugged herself, pulling her knees to her chest.

Adora wanted to reach out and hug her, but… her lover was still too tense. “You changed to do the right thing,” she said instead. Damn, that sounded stupid!

“It doesn't make up for what I did wrong.”

“That's not how it works,” Adora objected.

“You have to right what you did wrong. That's how it works.” Catra turned her head slightly to look at her from the corners of her eye. “And I broke too much to fix it.”

“That's not how it works! It's not some…” Adora shook her head. “If you do something nice for someone, it’s not OK to hurt them afterwards, is it?”

Catra blinked. “That's… what?”

Adora bit her lower lip, feeling her cheeks heat up a little. She hadn't really thought this through. She shouldn't have started this without being prepared. But she couldn’t stop now. “It's not a question of… balancing things. It's about *changing* so you aren't the person who did all this any more.” She stopped herself before she said ‘growing up’.

“That doesn't help the people I hurt.”

“Someone told me we can't help everyone,” Adora said.

“But we should help those we hurt,” Catra shot back.

“We are. We're fighting the Goa'uld to protect everyone,” Adora pointed out. “And we saved everyone when we stopped the Heart of Etheria. We are helping,” she repeated herself.

“It's not the same,” Catra protested.

This time, Adora reached out and pulled Catra into a hug. Her lover squirmed some, still tense, but didn't really resist. And Adora could feel her relax a little once she was in her lap. “You aren't the same either. Not any more.”

Catra sighed deeply - Adora could feel her shiver, could feel her muscles tense and relax again - but didn't object.

Adora counted that as a win.

After a moment, Catra said: “That doesn't mean you can keep blaming yourself for everything.”

Adora snorted softly and hugged her more tightly.

*****

Royal Palace, Dryl, Etheria, May 24th, 2000 (Earth Time)

“So, this is my home. Kinda - I don't really spend that much time here, actually - well, not the majority of my time, if you tally everything. I'm still here a lot of time, relatively. It's just that the Spacelab is more modern, and Alpha has more First Ones technology and that fascinating data bank, and you said we need to keep an eye on Loki, and I can't neglect Darla or she'll think I don't like her any more, and every time I'm here I need to deal with the ruling things… But! The kitchen here makes the best tiny food! And I have all my first bots here! Well, those that survived that tiny little First Ones virus accident.”

Samantha Carter nodded as she looked around. She had been here before, but not very often, though nothing seemed to have changed.

Anise, though, was visiting for the first time. And she seemed a little apprehensive. “Virus accident?”

“Oh, don't worry - it was a computer virus that made all my bots - well, all with First Ones technology, which were all of them - attack me and my friends. Perfectly harmless for people. Except for if you're a First One, I guess, though that was just the one time.”

Anise nodded. She was taking Entrapta's explanation better than Sam had, back when she had first visited. She didn't seem to question the safety of the lab here, what with what looked like two dozen bots in various states of repair lining the walls, and more parts stacked on shelves.

Hordak, on the other hand, had ignored the whole discussion and gone straight to one of the consoles at the wall, next to the fabber.

“So… let's do *science*!” Entrapta beamed.

Sam nodded. The Alliance had to deal with Ba'al before he could create an army of loyal and skilled clones, but there was nothing Sam and her friends could do about that at the moment; they

were waiting for the spy bot network and the interrogation of Ba'al's clone to get results. So, they were free to use their time to pursue other projects. Such as Anise's proposal.

“You brought the prototypes?” Entrapta asked, craning her neck to look at the bag Anise carried with her.

“They're not exactly prototypes. I didn't design them - I found them.”

“But they could be prototypes, just made by someone else!”

Anise blinked, then nodded. “I don’t know enough to disprove that theory.” She reached into the bag and pulled out several devices.

Sam took a closer look while Entrapta reached out with her hair and grabbed one. They were roughly shaped like cylinders, a bit too large to easily fit Sam's palm, with several buttons and a large crystal set into one end. If the General were here, he'd joke about lightsabers. They did look a little bit like… She frowned. They looked familiar.

“We recovered them from a fallen civilisation. We don't know if they were designed as tools or weapons,” Anise explained, “but they allow you to manipulate gravity. Let me demonstrate.”

She grabbed one of the cylinders and pushed a button, causing the crystal to light up. Then she pointed it at one of the bots in a corner and pressed another button. A moment later, the bot began to float. And so did the tools next to it.

“You can reduce or increase gravity in its area of effect. You narrow or widen the area of effect, but that affects the strength of the field,” Anise went on, showing the controls.

“Oh! It's much more compact than our own technology!” Entrapta beamed. “If we can adapt that, we could enhance all our vehicles!”

“We haven't been able to decipher the technology,” Anise said with a frown. “We do know it's powered by magic; the device doesn't work unless it's on a planet where magic has been restored.”

“Oh! It’s a magic device?” Entrapta beamed. “That would explain its size!” Then she frowned. “But that would also mean we can't use it in space… Unless we adapt it to magitech!”

“That was what we were hoping for,” Anise said with a smile.

Sam blinked. She had seen some of those symbols before… “The cube!” she blurted out.

“The cube?” Anise frowned.

“Oh, the cube!” Entrapta gasped. “You're right!”

“The cube?” Anise repeated herself.

“Yes. The design elements do match some of the cube's,” Hordak agreed.

“We found an alien data cube some time ago,” Sam said. “Our attempts to decipher it haven't been successful.”

“Well, we haven't really focused on it - there was so much else to do,” Entrapta added. “But! If you found those devices in the ruins of their makers, we could probably find more clues about their civilisation to help with that!”

Sam nodded. If they had more examples of the unknown aliens’ technology to study, they should be able to crack the encryption.

“I see.” Anise nodded. “Unfortunately, we recovered the devices from a Goa'uld's vault. There were no clues about their origin.”

“And the Goa'uld?” Hordak asked.

“Dead.” Anise sounded slightly sorry.

“Well… maybe we can find out more through analysing the devices,” Entrapta said.

Sam nodded, though she wasn't very hopeful.

“And we can work on that armour project,” Hordak added.

Right. The other reason they visited Entrapta's palace.

*****

Above the Atlantic, Earth, May 25th, 2000

“...and asked to comment on the fact that several Senators have proposed bills to enshrine the use of horses on farms and for other purposes as part of America's cultural heritage, Swift Wind stated that he wouldn't expect anything else from people who celebrated human slavery as their cultural heritage but expressed his hope that the rest of America would have moved past that dark time of their country’s history…”

Sitting in a window seat on the shuttle to Greenland, Catra snorted at the outrage Swift Wind's statement had caused in the United States. “Gotta hand it to him; he did his homework.”

“...although he also rebuked the claim from a PETA spokesperson that animals who could not live in the wild should be euthanised, stating that ‘murdering those who have been forced to depend on you is even worse than forcing them to depend on you in the first place’, and firmly denied that he supported PETA's proposal to cull most livestock animals, so...”

Catra shook her head. Whenever she thought Earth's people couldn't surprise her any more, they went and did something she wouldn't have thought possible.

“Meanwhile, the French Parliament is still debating whether or not horse meat should be considered part of the cultural and gastronomical heritage of France. While some representatives from rural areas supported the notion and planned to add more

controversial food to a proposed law, others denied that horse meat was a traditional French dish and decried it as a stereotype…"

"Do you have to watch that?"

Catra looked up from her tablet and grinned at Adora. "We have to keep informed of Earth's political movements."

"It's not a political movement!" her lover insisted. "It's just a… Jack called it a 'flash in a pan'."

Catra made a sceptical noise. "Have you seen the clips of little girls protesting against the 'enslavement and eating of horses'? How many Earth politicians do you think will jump at the chance to get their support?"

Adora frowned at her. "I got a ton of letters asking me to 'smite the bad horse murderers'."

"You're their champion - you ride Swift Wind." Catra shrugged. "At least it has drowned out the 'Clones have no souls' campaign the religious fanatics launched."

Adora didn't look happy about that. Catra cocked her head to the side and looked at her.

Her lover sighed. "Priest is already looking for a planet to settle 'homeless horses' on, and for bot designs to take care of them. Because that supposedly is 'the least we can do for the sacred steed' of She-Ra."

Catra chuckled at that - until she remembered how many horses were on Earth, and how much such a move would strain the Alliance's logistics. "Let's hope he's waiting with that until after the war."

Adora nodded.

Catra went back to skimming the news on her tablet. They would soon arrive at Thule base.

*****

Thule Air Force Base, Greenland, Earth, May 25th, 2000

"...and all our specialists agree that this Ba'al honestly believes that he is the original Ba'al and not a clone," Major Bradbeck explained.

Catra frowned. "He tried to kill himself." She didn't think Ba'al would do that.

"We think that this was the result of a mental conditioning he was subjected to, to ensure he wouldn't be caught - or to ensure he would not attempt to usurp the original. However, that is mere speculation; even with the new intel from the Tok'ra, we have not been able to confirm that. It would also be possible that Ba'al, the original, given his age, is or was slightly delusional, and that was passed on to his clones," Bradbeck went on.

"Delusional?" Adora asked.

"None of the other Goa'uld prisoners have attempted suicide," Bradbeck replied. "Ba'al's clone might honestly believe that by killing himself, he will return somehow. Or that might be part of the suspected mental conditioning. Even after his poison glands were surgically removed, we had to place him on a suicide watch to keep him from attempting to end his life in his habitat by other means."

Catra pressed her lips together. She was far too familiar with that kind of mental conditioning. She had almost succeeded, too. If not for Adora… She felt a hand close around hers and squeeze, and glanced to her side.

Adora smiled gently at her, Catra nodded, taking a deep breath.

“What can we do about that?” Adora asked. “We can't let him kill himself because he's forced to by Ba'al.”

Bradbeck grimaced for a moment. “We've started therapy for him, but…” He spread his hands as if it was his fault. “...none of our psychologists and psychiatrists has much if any experience with Goa'uld patients.”

“And you've been focusing on gaining actionable intel,” Catra added.

“Yes. Our orders made finding out where Ba'al and his bases are a priority.”

“Did you have any success so far?” Adora asked.

“We think we're making progress, but as I said, so far, we have not gained any confirmed intel. We have several theories based on a few comments of his that need to be investigated, and we hope the Tok’ra’s efforts will bear fruit in that area, but the special conditions under which we operate - the lack of direct contact, the fact he’s an alien and has to use a keyboard to communicate - make it a challenge to gain any intel from the subject.”

Catra was aware of that. And she didn't expect much, anyway. Not at this point. Not until they could break down whatever mind control Ba'al had used on the clone.

“We'll bring in more people to work on this. People familiar with similar cases,” Adora said. “Can we see him now?”

“Ah, yes, of course. But I have to warn you - he's very uncooperative.”

“We know,” Adora said, and Catra chuckled despite the situation. That was putting it mildly.

*****

Ba’al’s Machinations Part 2

Colorado Springs, Colorado, United States of America, Earth, May 27th, 2000

“Come in!” Jack O’Neill yelled when he heard the doorbell ring. “We’re in the backyard.”

“We know,” Sha’re told him as she stepped on the porch. “We saw it on the approach.” She nodded at him, then at Teal’c. “Hello!”

Teal’c nodded back at her and then returned to watching the grill as if he expected it to attack him.

“I figured that was you,” Jack replied. She had passed the test and was now qualified to pilot shuttles, after all - Daniel had told him. In detail.

“Oh?” She frowned. “Did I mess up the landing?”

“Not exactly. But none of the security teams coming in fly over my yard, and Carter always takes the straight approach,” Jack explained as he shifted some of the plates with steaks and sausages around on the table after checking the spices.

“Hi, Teal’c! You did fine, honey,” Daniel said as he joined them. “I dropped the drinks off on the table, and the potato salad is in the fridge.”

“Daniel! You’ve got it backwards!” Jack shook his head with a snort. “The beer goes in the fridge!” He blinked. “Unless you brought it in the new coolers we got.”

“We don’t have one of those coolers,” Daniel said.

“We’re not in the Special Forces,” Sha’re added as she sat in one of the chairs on the lawn. “So we don’t have access to one.”

"And we wouldn't steal military medical equipment to transport beer even if we were." Daniel frowned at both of them.

Jack faked a gasp. "Steal? I'm testing them! Can't trust the lives of my troops to something that might break down in the field, can I?" Besides, if he wanted a portable high-tech cooler for his beer, he'd just ask Entrapta. OK, he'd probably get a fridge-bot that could float or something if he did it, but he'd get it. Carter would frown at him for it, of course, but mostly because she hadn't thought of it.

"Hm." Actually, a floating bot to dispense cool drinks and stuff in the field would be a neat thing. Like one of those Ice Cream Barges the Navy pukes used to have, just sized for a company or platoon. It could double as an emergency stretcher, too. And maybe make it heat up meals as well. On the other hand, all the power needed for the thing would probably make hiding from the enemy a lot harder unless it could use a stealth generator…

"Jack?" Sha're frowned at him.

Daniel sighed. "I don't know what he's thinking, but it can't be good."

"Daniel!" Jack pouted. "I was merely going over a potential addition to the Alliance arsenal in my head."

"Didn't you tell everyone that there wouldn't be any talk about the war this evening? If Sam hears that…"

Jack frowned at him. That was hitting below the belt! "It was just an idle thought," he said. "And don't you dare tell Carter, or she'll be behind her laptop all evening, doing some remote work on Etheria!"

"I think the communication lag makes that inefficient," Teal'c commented.

"I'm sure she can think of something she can do," Jack replied. Carter had mentioned once that it was actually possible to work

remotely across the distance, but frustrating since you had to wait so long for everything, and some fine manipulations were impossible. “But not today! Today is for relaxing. Just us!” SG-1 (and Sha’re, since she was kind of an honourary member by now). He hadn’t invited the Etherians, but they were busy doing princessly or politician-ly things anyway, what with all the talk about horses’ rights. If he didn’t know any better, he’d thought that this was all a ploy to distract the idiots in Congress and in the media from the Clones rights issue. It was working, anyway - the news was full of people screaming about tradition or horse murder, not idiots talking about whether or not Clones had souls or were the devil’s tools or whatever.

“And speaking of… She’s late.” He checked his watch with a frown. Should he call her to check that she hadn’t forgotten the time while working on another alien problem?

“It’s just been five minutes,” Daniel said.

“It’s Carter,” Jack said. “You know how punctual she is. If she…” He trailed off and cocked his head to the side. That sounded like…

“I believe that that is her shuttle,” Teal’c spoke up.

“Yeah.” At least, Jack hoped so.

The shuttle did take the optimal route to the landing pad, set down, and lifted off a minute later — just enough time to drop off a passenger.

And half a minute later, the doorbell rang again.

“Come in, Carter!” Jack yelled, smiling. “We’re about to start! If you have food, drop it off in the kitchen, if you have drinks, drop them in the fridge, if you brought work, in the trash it goes!”

“I didn’t bring any work, sir,” Carter said with a slight frown as she stepped on the lawn a little later. “Hello, Daniel, Sha’re, Teal’c.”

“Sam! How are you doing?” Daniel smiled at her.

"No talk about work!" Jack cut in at once. "I've spent the whole week discussing plans to deal with Ba'al before he builds up a clone army and fleet, I don't want to spend my weekend doing the same!" Not when they all had to wait until their recon ships, spy bots and Tok'ra operatives had still to find Ba'als other hidden bases before they could actually do anything but waste time on hypotheticals."

Carter frowned at him again, but there was something… was she smirking? "Alright, so I won't bore you all with talks about our latest project, new armoured uniforms and exoskeletons for the Alliance."

She was definitely smirking when she grabbed a bottle of beer and took a seat.

And now Jack couldn't ask for the inside information about the new armour Carter and Entrapta were building without looking like a hypocrite! He frowned at her, then at his grinning friends. Even Teal'c was smiling - kind of.

Grumbling, he grabbed the first two steaks to put them on the grill.

*****

Etheria System, May 29th, 2000 (Earth Time)

"...and this is Her Divine Highness, She-Ra, Princess of Power and Supreme Commander of the Alliance against the Goa'uld!"

As Adora forced herself to smile and stepped forward, the Clones assembled in the hangar of the future flagship of the Fourth Fleet cheered loudly.

This isn't as bad as I feared, she thought as she approached the lectern at the edge of the stage. They're just cheering. That's normal.

As if someone had read her thoughts, the first row started to bow, followed by the other rows. It almost felt orchestrated - she couldn't tell who amongst the Clones was a veteran from Third Fleet now serving as cadre in the Fourth Fleet and who was a fresh recruit from the Lost Fleet of (formerly) Ba'al's forces - and she shot a glance at Priest, who had announced her, but the Clone's expression was as polite as ever. Which probably meant he had planned this - hadn't he asked Jack about fan choreographies or something recently?

Well, this wasn't the time to ask further questions. She stifled her sigh and addressed the assembled Clones: "Please, stand."

They straightened at once and changed to parade rest. If Catra were here - her lover had taken a detour to Alpha - she would comment about how sharp the formation looked, followed by some remark about how no unit ready for inspection was ready for combat.

"I am happy to see so many of you here, willing to not only leave your past behind you but to fight for your and everyone's future," she began. "The Alliance doesn't fight to conquer but to liberate. Not to destroy our enemies but to protect those in need. Not for revenge but for justice. Not with malice but with mercy. Those of you who were part of the Lost Fleet, those of you who fought the Alliance, we welcome you in our ranks, and we do not condemn you for your past."

She let her gaze sweep over the ranks, trying to impress on everyone how serious she was.

"All of us here - including me - once fought for Horde Prime." Indirectly, as she had served Hordak and Horde Prime hadn't even known what Hordak was doing on Etheria, and technically, she hadn't actually fought in the Horde war before she deserted, but she had been raised in the Horde, just like the Clones had. "And all of us realised how wrong that was." Some sooner than others, of course. But Adora wouldn't judge. "We realised this despite being manipulated from birth, raised in ignorance of the truth and

indoctrinated to obey blindly and not question orders and rules - and learned to make up excuses for anything that didn't fit and to ignore that for which there were no excuses."

If she were speaking to Alliance soldiers on Etheria or Earth, there would be a reaction by now. For good or ill, people would whisper and shout and make themselves known.

Not the Clones. They stood in silence, at attention, listening intently.

Adora suppressed a wince and raised her chin. "All of us here are willing to fight to save others from the same fate. To free those who are held in slavery, in chains both literal as well as made from ignorance and lies, ruled by and worshipping false gods. This is what the Alliance stands for: The right of every sapient being to be free to decide their own fate. This is what we are fighting for - and this is why we fight the Goa'uld.

"They not only deceive people into worshipping them and brutally oppress everyone they can, they also possess people, dooming their hosts to become prisoners in their own bodies. They remove even the least shred of power, the least shred of dignity their victims have, all in the name of gathering more power and more control over everyone else.

"And they have done so for thousands of years, unchallenged and undefeated, spreading untold pain and misery across the galaxy.

"Until the Alliance. Until we decided to fight them. To save their victims. And to ensure they cannot oppress anyone ever again. That is why we - all of us, you and me - are here. We'll be fighting for everyone, and we will win!"

For a moment, silence reigned after she finished. Then the first Clone started to cheer, and a moment later, the entire hangar full of people was screaming and yelling.

Adora smiled. This was why she was serving as the Supreme Commander of the Alliance - to lead and inspire those who fought

the good fight.

Then the chanting started. “She-Ra! She-Ra! She-Ra!”

That wasn’t too bad, either. The Princess Alliance had chanted her name on occasion as well.

But then the Clones started bowing again.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, May 30th, 2000

“...and this is the Improved Combat Armour Mark III! It is vacuum-rated, which means it also resists chemical and biological weapons, well, most of them - Alpha mentioned some First Ones prototypes of biological weapons that might eat through the armour, though you can argue that those are actually a physical attack just on the nano-scale, so while the effect is similar to acid, which would be a chemical attack, I think we still meet all the requirements the Alliance demanded.”

Samantha Carter nodded when the General looked at her after Entrapta's short speech. “Technically, the nano-plague Alpha mentioned could be seen as a biological attack since the nanites are based on living organisms, yet the attack vector uses physical force, but the side effects include a fog made up from the disassembled material, which is often but not always toxic, especially when inhaled. Albeit if that were to be ruled a chemical attack, then any attack that sets a target on fire would have to be classified in a similar way since burning vehicles often release toxic fumes,” she added.

The General stared at her. “I wasn't concerned with the legalities. I wanted to know if we actually have that stuff.”

“No, sir. The samples were destroyed on the Supreme Commander’s orders,” Sam replied.

“But we could make a new batch if you wanted,” Entrapta unhelpfully added. “We kept all the data in case someone else re-invents it and we need to counter it.”

“That's very reassuring,” the General commented with a grimace.

Entrapta completely missed his sarcasm and nodded with a beaming smile. “I know, right? Imagine deleting all the data!”

Sam cleared her throat and gestured at the soldier wearing the armour. “As you can see, this is just the armoured suit; we are still working on the armoured exoskeleton.” She wasn't going to call it ‘power armour’. Not after a quick internet search.

“It looks like a Horde uniform with the evil symbols filed off,” the General said.

Sam frowned at that. That was factually incorrect in more than one sense. “This is a new design, sir. But as form follows function, similarities to existing designs could not be avoided.”

“And that's a good thing!” Entrapta chimed in. “We think we can retool some of the factories in the Scorpion Kingdom to produce the suits. Or re-retool, in a sense, since those factories used to produce Horde uniforms.”

Sam met the raised eyebrows and slight smirk of the General without flinching and continued: “It's composed of an insulated undersuit on top of which the armour plates and a sealant gel that resists kinetic and thermal energy are added.”

“That sounds like you glued the plates on the suit.”

“In a very simplified manner, that is correct,” Sam said, smiling at the General's surprise. The gel was, after all, the real heart of the design. The undersuit was known technology, just a slightly tweaked version of Entrapta's spacesuit design, and the rigid armour plates were only advanced technology since they used the same material as Horde ships and vehicles. But the sealant was the key. Not only did it hold the plates in place and provided an

additional layer of armour underneath them, reducing spalling and protecting the insulated undersuit, but it also absorbed both kinetic and thermal energy and served as flexible armour over the joints and other moving parts of the suit. “The sealant coating can resist a staff weapon blast, and the plates will repel multiple impacts.”

“What about zats?” the General asked.

“An uncompromised armour will resist two shots from a zat'nik'tel. A third in rapid succession will render the armour non-functional, though the wearer should still survive it.”

“Non-functional?”

“Mostly disintegrated, sir.”

“I see. And how heavy is that stuff?”

“The weight depends on the size, but it is comparable to the full interceptor multi-threat body armour system used by the US Army,” Sam replied.

“That means it's heavier than that stuff,” the General said.

“The weight is better distributed,” Sam pointed out. “And it provides much-improved mobility.”

“Well, let's put that to the test, shall we?” He grinned.

“The helmet is fully sealed, with enhanced vision and a HUD display and offers both an air and liquid filter system and an autonomous air supply with carbon-dioxide scrubbers and an integrated communication system that can be upgraded to include FTL range, though this will require an additional repeater module to be carried by at least one person in the unit,” Sam finished. She had prepared for the presentation, and she wouldn't let the General cut it short.

“And it can link up with other systems and sensors, providing you a complete picture based on all the data we have - everyone will know everything!” Entrapta beamed. “You can see through walls as long as one sensor in the network covers the area behind the wall, but that might cause a bit of disorientation - you need to be careful not to run into the walls if you use it.”

“Alright. Sounds funky. Let’s see how it holds up in the field!”

Sam nodded at the soldier serving as a mannequin, and he walked over to the other test pilots waiting at the edge of the assault course.

The General addressed the soldiers. “It's a live fire exercise. Make sure you're only shooting the bots. We don't want to test the armour the hard way.”

“Oh, unless you're using armour-piercing rounds, the armour should hold up,” Entrapta said. “We extensively tested it against small arms. Though if the rounds hit a non-rigid spot, it might still hurt.”

The General frowned at her, then glared at his soldiers. “That doesn't mean you can get sloppy. I'll be watching the entire run and I'll rate it as an exercise. Don't disappoint me!”

The four soldiers nodded and grabbed their weapons, then started the test. Sam didn't think they were slowed down by the armour, but she wasn't as familiar with the Special Forces as the General, and he was watching in silence.

It wasn't until they finished that he nodded. “Decent time. We'll have to do a few more runs, but it looks like you've got a solid design there.”

“We need more testing,” Sam pointed out - these were prototypes, rushed to get into testing - but she agreed with his assessment. However, it would take some more time to get the design approved for production. Unfortunately, the work on the armoured exoskeleton was not nearly as advanced; they had only

started on that while the armoured suits had been a side project for some time. And the exoskeleton would take much longer to get into production afterwards - if it was approved in the first place.

*****

Alliance Headquarters, Brussels, Belgium, June 5th, 2000

"...and Ba'al's clone has tried twice more to commit suicide in the same manner despite the fact he must have realised that this would not work. Our analysts agree that he is becoming more unstable the longer he cannot obey the - implanted or imprinted - urge to kill himself, leading to a complete mental breakdown. Depending on the results, this might provide an opportunity to gain his cooperation."

Catra winced at the report from the intelligence officer. Not because she felt pity for the cloned snake since she could empathise with his mental state and he wasn't really to blame for it - Ba'al must have cloned him for this fate. No, it was the intel officer's hopeful tone at using that to break the prisoner that made her cringe. That wouldn't go over well with Adora.

"Colonel Lenny!" Adora snapped. "The Alliance does not let prisoners suffer mental breakdowns to interrogate them! We're better than this!"

To his credit, the Colonel didn't falter much under her glare. "Supreme Commander, we're trying all we can to help the prisoner, but the mental conditioning has proven to be too strong for our attempts so far - Ba'al's clone is resisting our efforts. We can only hope that once his mental state degrades further, this will change and allow us to help him."

Catra had heard excuses from soldiers for messing up before, and she wasn't convinced that the Colonel actually gave a damn about the prisoner, but Adora slowly nodded, seemingly mollified. Well, it

wasn't as if they could do anything else - even She-Ra's magic couldn't heal whatever had been done to the clone's mind.

“So, basically, Ba'al's clone hasn't provided us with any actionable intel so far?” General Naird didn't sound like he was asking more than rhetorically.

“That's not entirely correct, sir,” the Colonel replied. “He did boast about his future revenge, and how he will return, and has been getting more detailed in his threats as his attempts to suicide remain unsuccessful. This has resulted in several leads we can pursue with the help of the Tok'ra. We assume, based on some of his rants, that he's not focusing on building Horde frigates and other warships but planning to build shipyards, both mobile Horde fleet train units and planet-based shipyards such as the one we captured, while he perfects his cloning technology so he can then surge his enemies with rapidly expanding numbers of ships and crews.”

Catra pressed her lips together. That meant that they had a shrinking window of opportunity to stop Ba'al without taking huge casualties in the process. She'd have preferred it if Ba'al had taken less of a gamble and gone for more warships from the start.

Naird, though, looked positively surprised. “So, we just have to nip his build-up in the bud before it reaches critical mass?”

“Effectively, yes, sir,” the Colonel replied in a tone that clearly said that things weren’t so simple.

Naird nodded. “Good. All that remains is finding his shipyards then. And taking them from him like we took his first base.”

“We have to find them first, General,” Adora pointed out. “And while the Tok'ra are focusing on this, and we're launching as many recon missions as we can, we have yet to find one of Ba'al's other bases.”

Catra nodded. The bastard had taken a page out of Horde Prime's books and kept his forces compartmentalised. None of the Clones

from the Lost Ships knew where the other parts of Ba'al's forces were. The captured Jaffa, those who had converted, had been a bit more helpful, but they only knew some planets under Ba'al's control, and none of those had any shipyards.

"And we'll have not only to staff the shipyards but also man the ships they produce," Admiral Biggs said. "That will take time."

Admiral Brown-Emerson shook his head. "If the most recently captured base is any indication, then we can expect the majority of the workers to convert to our side thanks to your efforts, Supreme Commander." He smiled at Adora.

And of Priest, Catra mentally added. "We cannot count on that for the future," she said. "We know that Ba'al is already cloning workers who are far more fanatical in following him." The ones they had found in the base had not shown any signs of defecting to the Alliance - or converting to the Church of She-Ra.

"But those clones have yet to observe the Supreme Commander's personal power," the admiral objected. "We know that such displays have shaken the faith of fanatical Jaffa warriors in the past - and of Horde Clones who were imprinted to obey Horde Prime unto death."

Adora shifted on her seat, Catra noticed. "That happened after I removed Horde Prime, not before," her lover said. "We can't count on that."

"And we shouldn't be using a made-up religion to convert the slaves of the Goa'uld," Admiral Biggs added. "They worshipped fake gods all their lives; they deserve better."

Adora blinked before she frowned. "Believe me, I don't like being worshipped, but that's a choice people made and I won't deny them their freedom of religion."

"But it's a made-up religion! Even you agree with that - and you are their idol!" Biggs protested.

“All religions are made up,” Catra cut in, flashing her teeth at the man. “Yours isn't any better.”

“Catra!” Adora hissed.

“I don’t think this is the place for that discussion,” General Steiner said. “Nor should the Alliance judge any religion's worth.”

“Except for the Goa'uld’s,” General Naird added. “They are fake gods fooling their worshippers with lies and tricks.”

“We don't prohibit people from worshipping the Goa'uld either,” Adora said. “Freedom of religion applies to every religion.”

The other members of the Command Council nodded at that, but Catra saw that Biggs and a few others did so rather reluctantly. Though, she suspected, for different reasons.

*****

Alliance Headquarters, Brussels, Belgium, June 6th, 2000

“...and in other news, Senator Smith has proposed a bill that would criminalise the production, importing and consumption of horse meat in the United States. When asked to comment on the fact that in many states, the slaughter of horses for human consumption was already illegal, he stated that this was another reason to ban the practice. Several agricultural experts pointed out that the United States exported significant amounts of horse meat, and that this would affect…”

Jack O'Neill switched channels. It might be un-American, but he was fed up with hearing about horses, flying or not. As if the world didn't have bigger problems! Hell, he'd even had to crack down on a discussion that got a bit out of hand among his soldiers over the damn thing!

“...allegations that the famous singer's relationship with the sorceress was merely an attempt to be able to tour Etheria despite the current restriction on civilian travel through Stargates -

a restriction that has been challenged in court - were denied by her management, though anonymous sources…"

Jack switched channels again. He wasn't in the mood for celebrity gossip, either.

"...the Vatican has denied that the Pope has received the unofficial leader of the Church of She-Ra, the Horde Clone named 'Priest', for a private meeting and its speaker refused to comment on the Holy See's stance toward the rapidly growing new religion, or whether or not this was related to rumours about religious persecution of several religions including both Christian sects and the Church of She-Ra in China, though…"

Jack clenched his teeth and pushed the remote's button again. He definitely didn't want to hear about religious issues; he had to tell off several of his 'colleagues' who wanted to talk about why the people on the liberated planets weren't converting to Christianity instead of 'pagan cults' and what could be done to change that. "Maybe those idiots should consider the fact that bringing a book when the competition brings a miracle-working Princess who personally freed your planet doesn't work out too well?" he muttered. Better not, he thought - they might try to limit Adora's use of her powers or whatever.

"...and the police had to step in and stop several people from assaulting the suspected sorceress, leading to complaints about police brutality being raised in the county. The district's representative in Congress, Mrs Brown, released a communique stating that she would propose a bill to 'strictly regulate magic to ensure it didn't threaten the physical or spiritual well-being of the people' and refused to condemn what she called 'concerned citizens trying to defend themselves when the state refuses to take action', though…"

Jack O'Neill closed his eyes. Lynch mobs and witch hunts! "And here we thought that was a thing of the past. What's next, trying to outlaw D&D again?"

"...the rejuvenation of the Amazon basin continues on schedule according to the Brazilian government, citing new restoration technologies and a crack-down against illegal logging operations as the reason. They did not comment when questioned whether there was any truth to the rumour that several influential businessmen had been found dead in their beds, apparently killed by unknown magic, or why the government had refused to release information about which areas would be the next ones to have the rain forest restored, though they confirmed that Princess Perfuma of the Kingdom of Plumeria wasn't involved…"

If that was 'new technology', Jack would eat his shiny new helmet. And he knew it wasn't any of Perfuma's work - the Princess was tracked whenever she visited after a bunch of politicians finally understood what her control over plants actually meant. No, that stuff was magic, probably one of the old traditions of Earth he had heard about. And he would bet that this was payback for murdering environmental activists and inconvenient tribes. But no matter what it was, someone had to keep an eye on it in case it went any further. Especially if Brazil joined the Alliance, though that was a ways off at best, last he heard.

Well, his break was over now. Time to get back to work.

He sighed, turned the TV off and checked the next piece in his pile of mail. And then he sighed again. Great, some agricultural corporations wanted to develop cloning tanks to produce meat, allegedly so the Alliance could reduce the strain on its logistics by producing meat on the bases. And he was supposed to write a report about how that would affect Alliance Special Operations Command's missions?

He scoffed. His troops weren't deployed in numbers or locations that would make such production feasible. Which anyone trying to push this should know. Just as they should know he'd realise this was a thinly-veiled attempt to make the Alliance finance the research so the corporations then could sell the stuff to civilians.

Jack quickly typed a response that said it would be useless for his command. He didn't know if it would do anything, but he hoped it would. He didn't want to eat cloned meat. Whether in the field or at home.

He filed the report, then eyed the next item. Paperwork. How he hated it. If only the spooks would hurry up and find Ba'al's next base so he could get out of this!

*****

Alliance Headquarters, Brussels, Belgium, June 8th, 2000

"...and while we haven't found one of Ba'al's bases so far, we did manage to acquire the address of one of his ship-mounted Stargates thanks to one of our operatives infiltrating Sokar's forces. If Ba'al keeps his bases off the Stargate network by using ships with Stargates stationed near their systems to allow faster travel, then this would mean one of his bases is near the ship's position."

Adora nodded at Jakar/Mats's report. The Tok'ra had come through, it seemed. Although… "How recent is the ship's address?" she asked.

"It's about two weeks old," Jakar said.

"Do we know how often those ships change their position?" Admiral Brown-Emerson asked. "If Ba'al's is keeping his bases compartmentalised, I doubt he's going to keep his ships at the same spot."

"He is likely moving them around quite a bit, but having his ships change between his bases would defeat his strategy of keeping them compartmentalised," Jakar replied. "So, we expect that this base is still within the same general area."

"If your address was taken when it was on station," Catra said.

“Yes. But since our operative could only secure this address, it is very likely that it is or at least was stationary for some time or there would have been more frequent updates,” Jakar told her.

Adora nodded again. A Stargate mounted on a ship could only be reached if you knew the position of the ship, well, the rough position. So, Alliance policy with the few ship-mounted Stargates they had was that they would regularly update their position in case someone needed to travel to them, either by dialling another Stargate or transmitting their position through the Spy Bot Network if they were in range. Ba'al would be faced with the same limitations. “We'll redirect the spy bots to search the area as soon as possible,” she said.

“We could try dialling the Stargate address we have and launch a boarding operation if it's still active,” General Naird suggested.

“I'm not going to send my troops through a Stargate without any intel about what awaits them,” Jack objected.

“According to your files from Stargate Command, you’ve done that more than once yourself, General O'Neill,” Naird retorted. “That was how you made contact with Etheria for the first time, wasn’t it?”

“In emergencies,” Jack shot back. “When there was no other choice. This isn't the case here.”

“Every day, Ba'al is growing stronger, according to our analysts. At some point, he will outnumber us and have equivalent technology unless we stop him as soon as possible. That seems like an emergency to me,” Naird said.

“Sending in a boarding force blind is too much of a risk,” Adora cut in. “Even if they managed to secure the ship without the crew scuttling it or escorts destroying it, the risk of the Jaffa on station alerting Ba'al before communications are secured is too high.” She wouldn't take such a gamble. They weren't desperate. “Besides, it

will only take a few days at most to search the area with the spy bots, now that we know where to look."

Naird pouted but seemed to accept that.

Catra whispered something about sending Naird first through the Stargate if he kept this up, and Adora had to stifle a chuckle.

"Once you have the position of the base, what will you do?" Jakar asked. "Will you take it over?"

"If there is a base," Naird said, a little snidely. "It's just an assumption so far."

"Taking over the base is a secondary goal. Our first goal is to get more information so we can dismantle his forces," Adora said. "He might keep all of them isolated, but they still have to report to him."

"You're planning a decapitation strike," Jakar said.

Adora nodded. "It seems the most effective way to deal with this threat. Take out the leader and have his forces wither on the vine."

"As long as we can secure his cloning facilities," Catra said.

"Yes," Adora agreed. "We will have to remain undetected until we have acquired the information we need before we strike, whether at the base or at Ba'al himself."

"Let's hope that this mission goes better than your last. Or the one before that," Admiral Biggs spoke up with a scowl. "You don't have the best track record lately."

Adora pressed her lips together. The man was correct, which was annoying since she couldn't contradict him.

"We still got a much better record, even on the latest mission, than your ships have." Catra, of course, didn't care about that.

“How much longer do we have to wait until your ‘frigates’ are operational?”

“The Constitution II is ready for combat operations in the Solar System!” Biggs shot back.

Adora frowned. Why would the ship be ready for deployment, but limited to the Solar System? Was something wrong with its hyperdrive? But that was essential for battles, not merely for travelling. So… Oh. “That would be an emergency,” she said. “But I don't remember the ship being ready for regular operations.”

Biggs glared at her for a moment. “We expect to be ready for regular operations outside the Solar System soon.”

Jack snorted, but neither he nor Catra pressed the point. Not that they had to - the troubles with the Constitution II-class were widely known at this point. Adora expected the press to pick up on it any day now, despite the information being classified - the Alliance couldn't really stop foreign news agencies. Not without becoming the dictatorship that other nations accused them of being.

But this had gone on for long enough. She smiled at Jakar. “Please convey our thanks to the Tok'ra and inform them of our plan of action.”

“I will, Supreme Commander!” Jakar bowed.

And now, they had a mission to plan. Or, to be more precise, adjust the general plans already made to the specific situation. Once they had the information they needed.

*****

Deep Space, Outside PT-9521, June 16th, 2000 (Earth Time)

“Alright! Operation Lamprey is a go!”

Samantha Carter frowned at Entrapta's comment. It wasn't her friend's fault, of course - she hadn't named the operation. That had been the General. And Sam still disagreed with his claim that the Spy Bot Mark XI was a ‘robo-lamprey’. The bot could attach itself to an enemy ship, yes, and unlike the regular space-capable spy bots, it was flatter so the chance something - or someone - would catch on its surface was smaller, but those were the only similarities. The bot used a magitech tool to adhere to a ship's hull, not some suction technology, and it had an advanced stealth generator to hide its presence even up close.

And it was shaped like a flat disc with a slightly rounded topside, not like a fish. But Sam had been outvoted by the others.

Ultimately, it wasn't a big deal. It was one mission, and while writing the reports wouldn't be a little annoying, it would be far worse if the General had managed to nickname the entire line of bots ‘Lampreys’. That could still happen; Sam was aware of how such things worked, but for now, they were merely spy bots.

And they were the core part of the plan to deal with Ba'al. They better worked - Sam and Entrapta had had to delay working on the improved combat suits to do work on the bots, and even so, they were using hand-crafted prototypes for the mission.

“Launching spy bots!” Sam announced as she gave the order.

In the repurposed hangar of the frigate they were in, the half a dozen Mark XIs lifted off and left the ship, stealth fields flicking on as they vanished from view.

Sam switched her attention from the ship’s video feeds to the spy bot network’s data. The six new bots were already integrated, and she could track them through the network until they entered hyperspace, on their way to the Ha'tak Ba'al was using as a gate ship to access this area.

“Look at how eager they are!” Entrapta beamed. “I still think we should have made them smarter. They could do much more.”

Sam knew that the spy bots' capabilities would be significantly enhanced by a sapient control unit instead of a merely advanced decision matrix. It certainly would have increased the missions' odds of success.

But Adora had put her foot down - the Alliance wouldn't create sapient beings whose only purpose was to send on missions that were, if not outright suicide missions, then close enough. Sam was forced to agree; given her experience with sapient bots, she doubted that such spy bots would have been able to refuse such an order since that was what they were built for and identified as.

The General had agreed as well, though he had been concerned about spy bots going rogue, starting up their own network and taking over the galaxy - a very unlikely outcome, in Sam's opinion.

However, it meant the spy bot Mark XIs needed more precise orders and were far more limited in their capabilities. They should be enough for this, though, at least in the first phase - all they needed to do was to sneak up on the target and attach themselves to the ship's hull. In the next phase, they would have to split up once they detected other ships to latch on - as long as the ships were large enough for the spy bots to hide on the hull without triggering sensors due to the mass difference, which limited them to Ha'taks.

The entire mission was a bit of a shot in the dark. Using prototypes on crucial missions, trusting their luck, at least to some degree… It's almost like we're back in Stargate Command, Sam thought with a faint smile.

Sure, this time, they had fleets at their back, but if they failed, the consequences would still be grave. If they couldn't stop Ba'al before he ramped up his production pipelines for both ships and crews, they would have to match him, and that would open a whole can of worms, as the General put it. They could ramp up frigate production, and were already doing this to some degree in anticipation of further casualties, but a huge build-up would

require more crews than the Clones could provide given their current cloning rates. And that meant Earth crews.

At least, Sam thought with a scoff, in that case, the Navy would be forced to drop their boondoggle of a frigate design and switch to using stock Horde frigates, and Sam wouldn't have to waste time trying to fix whatever issue crept up this week.

An alert on her computer told her that the spy bots were about to drop out of hyperspace, and she focused on the screen, counting down.

Four… three… two… One… Zero.

The spy bots linked up with the network at once, and Sam checked their position - not quite on top of the target, as planned.

She followed on the slightly lagged feeds as they approached the Ha'tak. “Those aren't standard cannons,” she said.

“They aren't Horde beam cannons, though,” Entrapta pointed out. “Just upgraded Goa'uld designs. Slightly upgraded, or so it looked. And their sensors weren't upgraded either - they haven't noticed the bots!”

They better not have noticed them, Sam thought. If they had, that would have meant Ba'al had better sensors than the Alliance. And that would have been a catastrophe.

But as things were, the spy bots fanned out, picking locations on the hull to approach and latch onto, without anyone opening fire on them.

Soon, the last of them came to a stop, securely attached to the Ha'tak's hull.

Phase one of the mission was complete. Now they had to start phase two.

*****

Ba’al’s Machinations Part 3

Deep Space, Outside PT-9521-System, June 16th, 2000 (Earth Time)

“The spy bots have successfully attached themselves to the target.”

Watching the ship movements of the task force of First Fleet on its flagship's bridge, Catra grinned as she heard Sam's report. Phase 1 of the operation was complete - time for phase 2. The best way to get the Ha'tak with the Stargate in it to move to another of Ba'al's bases, or at least a rally spot for his fleet, was to remove the reason it was staying in this region of space.

“Begin Phase 2 of Operation Lamprey,” Adora ordered.

“Yes, Supreme Commander! Entering hyperspace in ten… nine… eight…”

Out of habit, Catra checked that all ships of the task force were ready as the countdown continued. No malfunctions were reported.

“...three… two… one…”

The task force entered hyperspace, and the link to the spy bot network was briefly scrambled, reestablishing itself as soon as they were travelling. She noticed no changes amongst the enemy guard ships - four Ha'taks, a dozen Al'kesh, and twice that number of Tel'taks. Even with upgraded systems, like the one Entrapta had reported, that wasn't enough to bother a task force half their size. Even if those ships were upgraded to full Horde technology, the outcome would be set in stone, but the odds of winning without taking significant damage to capital ships would be much lower and the odds of taking casualties higher.

But everyone in the task force knew this. Catra glanced at Adora. Her love was standing at parade rest, face serious and eyes fixed

on the big holoprojection in the centre of the bridge.

Catra was tempted to tease her a bit, but this was the largest planetary invasion the Alliance had launched in this war, and she knew Adora was already tense enough with worry.

So Catra just ran her tail over the back of Adora's leg as she stepped a little closer and watched as the holoprojection showed the task force's formation. The lead frigates were forming a wedge around the flagship, ready to pounce on the Goa'uld forces, and the frigates escorting the Fleet Transports were hanging back, covering their charges. Just as planned.

It didn't take them long to reach their destination. “Dropping out of hyperspace in five… four… three… two… one.”

The enemy ships had noticed their arrival a fraction of a second before the first frigates left hyperspace - not soon enough to react to the sudden attack as the Horde frigates came out firing, thanks to the feed from the spy bot network tracking the Goa'uld guard force. The lead frigates focused on two of the Ha'taks, multiple broadsides of beam cannons ripping through the shields and shredding the hulls of the massive ships.

One of them managed to return fire - a ragged, uneven volley, half the shots missing - before it blew up under the follow-up assault. The other was disabled at once, engine and reactor shredded by pinpoint attacks, and fell out of formation with wrecked sections trailing behind it.

That had given the other two Ha'taks and the supporting ships enough time to react, though, and the two Ha'taks quickly closed formation and started to focus their fire on the closest frigate while the supporting ships dove at the task force's edges.

“Switching to escorts,” the flag captain reported as the frigate's beam weapons started firing on the smaller ships charging them.

The improved beam cannons cut through the Al'kesh like Adora cut through bots. Less than half a dozen got into range of their

weapons, none close enough to drop their bombs, before they were all destroyed. The Tel'taks only survived to start firing on the frigates because they were more numerous and not priority targets.

"Eternal Vigilance, fall back! Lead elements, focus fire on the remaining Ha'taks!"

On the flag captain's command, the frigates turned their attention on the two Ha'taks, quickly shattering their shields with concentrated volleys. As the Ha'tak's hulls were holed in multiple locations, Catra checked the effect of the Tel'tak and Death Gliders strafing the task force.

The lead frigates's shields were slowly but steadily degrading under the fire. The escort elements, though, were quickly clearing the space around them, and the two Fleet Transports, HMS Albion and HMS Bulwark, were barely touched at all - a handful of Death Gliders had made it through the formation and were picked off by the transport's gunners.

The next Ha'tak vanishing in a cloud of gas and vaporised metal drew her attention back to the fight in the front just in time to see the last Ha'tak lose its engines. The ship continued on momentum alone, guns still firing, as the beam cannons' volleys punched into its fragmenting hull.

"Lead elements, Switch targets to Tel'taks and Death Gliders! Escorts, clear the orbitals."

The fire from the Death Gliders and Tel'taks quickly fell off as their pilots started trying to evade withering fire, half of them caught in a crossfire as the escorts and transports changed course for the planet's orbit and passed the lead frigates. A few Tel'taks and Death Gliders managed to form up for a focused attack on the transports - their leader must have realised what they were - but they were too few to seriously threaten either ship even if the escorts hadn't focused on them in a heartbeat.

When the last Ha'tak finally stopped firing, reduced to a floating wreck with all systems and power out, HMS Albion and her sister ship took up positions above the base on the planet below, launching shuttle after shuttle while their cannons silenced the planet's anti-air defences.

"I should be with the others," Adora mumbled.

"No. You can't be everywhere," Catra disagreed in a low voice. "They need to learn how to do this without you." The Alliance couldn't depend on having She-Ra present in every landing operation.

Adora frowned but didn't disagree, and Catra patted her back while the escorting frigates finished clearing the planet's orbit of the surviving Death Gliders.

*****

In Orbit above PT-9521, PT-9521-System, June 16th, 2000 (Earth Time)

Jack O'Neill wouldn't say he had a problem. He knew that while he was a good pilot, others were better pilots. He also knew that as the officer in charge of phase two of Operation Lamprey, the invasion of PT-9521, he couldn't personally fly a shuttle even if he were the best pilot in the Alliance. And he trusted his fellow soldiers. Even the Navy pukes. But he drew the line at waiting safely in orbit - he wouldn't send his troops into danger without coming along! Besides, he knew that if he had to make a call, he wanted to be at the front and get a view of the situation up close and with his own eyes, not through reports and camera feeds.

He still didn't like the feeling of being a passenger sitting in the back of a craft while they dropped on the target and having to trust his life to the pilot at the front. Especially when they were shot at - everyone knew a shuttle was most vulnerable during re-entry. Even stealth shuttles couldn't hide during that part of a drop because of the plasma they produced when they hit the

atmosphere - the improved stealth systems still could only reduce that, not remove it.

And he and his troops from Alliance Special Operations Command were the first to descend on the planet, using stealth shuttles to drop ahead of the two British brigades that made up the main invasion force, so they were facing the brunt of the enemy fire by themselves.

Of course, the two limey Fleet Transports were suppressing the enemy anti-orbital and anti-aircraft fire with constant volleys from their beam cannons while fighters from the escorting frigates did attack runs and pounced on the few surviving Death Gliders left in the planet's atmosphere, so the odds of any of Ba'al's forces on the ground figuring out that the stealth shuttles' plasma trails were not the result of the bombardment or the fighters diving to the surface of the planet were fairly low. Jack still would have preferred it if they could have completely avoided the field of fire of the base defences, but the Alliance Command Council was worried about Ba'al figuring out their stealth technology and wanted more plausible cover for their plasma trails.

Which meant they had to risk getting hit by shots not aimed at them. And Ba'al's Jaffa were certainly trying - Jack could see on the screen mounted in front of his seat that the ground defenders were firing everything they had as fast as they could until their weapon emplacements were taken out.

So he gritted his teeth and tried not to think of the odds when his shuttle entered the atmosphere, directly behind the lead shuttle, and the outside view vanished in a fireball.

The sensors feeding his screen weren't affected, though, and he kept checking his troops while the half-a-dozen shuttles carrying his troops swung around the planet as they slowed down in the atmosphere. None were hit or reported any trouble, and by the time they re-entered the field of fire of the base's defences, they were too slow and too low to generate plasma any more. The Jaffa had no idea they were there.

Or shouldn’t have.

“Alright, folks,” he said into the communicator, “time to get busy! You know your targets, go in and secure them - and make doubly sure that your transponders are working; we don’t want the navy pukes accidentally hitting us!” ‘Danger Close’ was frightening when it came in the form of orbital bombardments.

As he had ordered his soldiers to, he checked his own transponder when the shuttle stopped, hovering above the ground. Campbell and Isa were the first ones out, Isa taking the lead - until they got the new armoured suits, she was the best-protected member of his forces.

Jack was right behind them, his carbine in hand. He dashed forward to the ridge shielding the base form view and quickly took an overview.

Craters, both big and small, lined the perimeter, and the wall had been breached so often, a full company could charge through without having to stop. It still provided the defenders with cover and ambush opportunities.

Or would if they were aware that the invasion had already begun. But with the heavy weapons mostly destroyed - there went another one, struck by a beam - they would hunker down to face the invasion they knew was coming.

Jack pulled out his tablet and flipped the feed from the Fleet Transports above them on. Yeah, the Jaffa were taking shelter and covering the breaches as well as they could. Well, the Limeys could deal with them - they had the tanks and artillery to push through. Jack wasn’t here to show them up; his forces had to find a way past the defenders so they could secure the base’s computers and communications before Ba’al’s Jaffa could destroy both.

He checked that all his troops were ready, then opened a channel to the ships above. “We’re in position, smoke them!”

"Copy."

Half a minute later, missiles struck the base - and released thick clouds of smoke that soon merged, covering the entire base.

Jack switched the thermographic vision mode of his visor on and grinned as he went over the ridge.

"Go Go Go! Move!"

They charged down the ridge. At any moment, Jack expected someone to spot them - parts of the base were not completely covered in smoke - and raise the alert. To see the weapon emplacements left start laying down covering fire or to blindly open fire into pre-selected sectors. But they made it down the ridge and halfway across the open field to the remains to the walls without anyone shooting at them, or even just in their general direction.

If he were in charge of the base defence, he'd have rigged the field with anti-personnel mines, too, but they had scanned for that.

But a few yards before Isa - that woman was fast! Even carrying a heavy machine gun and a missile launcher, she outpaced him! - reached the wall, Jack saw figures move in the smoke, taking up firing positions. "Watch out!" he snapped into the communicator. "We've been made."

Moments later, staff blasts tore through the smoke and into the field, blowing up chunks of dirt and stone. Unaimed fire, he realised at once. But that could kill you as dead as aimed fire if you were unlucky. And the closer they got to the wall, the closer the shots would get to them.

He really wished they had the new armour suits already when he heard a scream, followed by a call for a medic, over the comm.

Isa returned fire with the heavy machine gun, running diagonally across the breach towards the wall. Jack saw a few flashes from

the tracer rounds, and two figures collapsed in the smoke.

That cut down on the fire somewhat, and Jack reached the wall on the other side of the breach ahead of Campbell. "Fire in the hole!" he yelled, drawing a grenade from his pouch. He pulled the pin and threw it around the edge of the wall.

A few seconds later, it went off, and he felt the shock wave in his chest before he jumped up and rounded the corner, leading with his gun.

Two Jaffa down but moving - he put two rounds into the closer, Campbell finishing off the second. On their right side, Isa - no one else was that large - pushed ahead, her machine gun firing in short bursts.

To Jack's left, something moved, and he dropped to the ground. A staff blast passed overhead, and he returned fire, dropping the Jaffa, who had taken up a firing position behind the wreck of a cannon with another burst to the head and neck.

Then Campbell dashed forward, throwing himself into cover behind the cannon. "Fire in the hole!"

The grenade flew over the wreckage, and two Jaffa, one to each side, dashed out from behind it. Jack dropped the left one with four rounds in the chest, Campbell caught the other in the legs, but the Jaffa fired back while falling, and the cannon's twisted barrel next to Campbell blew up.

The man cried out, holding his head, as he sat down, and Jack rushed over. In the smoke, he couldn't check the wounds, and so he called for a medic and left a beacon on the groaning man. Isa turned around - he could see that in the smoke with his thermographic vision - but he waved her on. "Go! We've got our targets!"

She jerked but continued toward their target - the main communication centre - firing a few more bursts upwards while she ran.

Jack followed her, shooting at the Jaffa on the roof as well, but he couldn't tell if he hit anyone or if they had just dropped into cover. He took a position on Isa's left at a corner of the main building, checking for more enemies.

There were still too many Jaffa up and fighting here - he spotted a group running across the street to the side - and if they massed their forces, Jack's troops would be done for.

He checked the tablet for a brief look at the overall situation. A few more minutes until the assault shuttles would hit the ground. And the second group of his force had just reached the main computer centre or whatever the Jaffa called it. Above them, the British brigades were dropping as well now - and their shuttles were visible to sensors. If the Jaffa pulled back from their other positions, they'd be overrun in no time.

However, Jack wasn't sure they knew that. And there were enough Jaffa at the main entrance that charging that with his… three other soldiers, two more had joined him and Isa, would be suicide.

Well, time to make a new entrance then. He moved back, sending Meier to cover the corner, then pulled out the 'wallbuster' charge prepared in advance and slapped it on the wall in the centre. "Take cover!"

A few seconds later, everyone was hugging the ground, and Jack triggered the detonator.

Compared to the grenade, this explosion was much more powerful - Jack was a bit too close, and the shock wave felt like a punch to the stomach - but it did the job, and he was charging toward the hole in the wall before the dust settled.

Isa beat him to the punch, though, and entered with her machine gun firing. Jack followed, going left, Meier, behind him, taking the right side.

A squad of Jaffa rushed around the corner, and Jack dropped to the ground, clenching his teeth as he opened up with a long burst that took three of them down. The fourth got a shot off that came way too close to Jack. He felt the heat from the blast on his cheek before he got him as well with a couple of bullets to the chest.

He did a tactical reload while getting up and checked the rest. Meier was down with a shot leg, but Isa had tied a tourniquet around his thigh, and he'd be fine.

But they couldn't leave him here. "Take him," Jack snapped.

While Isa grabbed Meier - he protested, claiming he could hold the breach - Jack dashed ahead to the stairway in the distance. The main computer would be down below.

He reached the stairs despite a Jaffa firing a zat at him - twice, before Meier or Isa got the bastard - and raced down.

He kicked the door open, ducked back - no shots missed him - and then used a small mirror to check the place.

Rows upon rows of snake computers and FTL communicators, no living soul.

Good. "We've secured the comm centre," he announced. "Need relief as soon as possible."

"Copy."

Jack hoped the Fleet was on the ball here. He didn't want to reenact Market Garden.

*****

PT-9521-System, June 16th, 2000 (Earth Time)

"Base communications and data centre secured, Supreme Commander. Awaiting relief."

Adora nodded at the report. Jack's troops had reached their objectives. But they were a small force and had to hold out until the two British brigades arrived. They had started the landing operations - the first wave's shuttles had just finished re-entry and were about to drop on the assigned landing zone - but it would still take some more time until the base was taken. She bit her lower lip, watching the troop deployments on the holoprojection. If she dropped directly into the base…

"You can divert a company to land directly inside the base," Catra commented. "That would be faster than flying down yourself."

When Adora frowned at her, Catra smirked. "I know what you're thinking."

Adora huffed and checked the status of the landing again. She could divert a company from the reserves in the first wave, but if they needed those units to reinforce a thrust or cover a hole in the formation, that could cause a lot of problems. And get more people killed. "Divert two empty shuttles to serve as close air support."

"Yes, Supreme Commander!"

That would require adjustments to the second wave's deployment, but they had planned with losing shuttles to enemy fire in mind, so it shouldn't be a big problem - they hadn't lost any shuttle outright, but two had taken fire and needed repairs before they could be used again.

"That's not much firepower, though," Catra said. "We should produce some assault shuttles for ground support for those missions. If we can spare the production."

That was a big if. They still lacked enough transport capacity for their available ground formations. Infantry, vehicles, medevac, supplies, ammunition and tankers… everyone wanted transport shuttles. Even on planets with a Stargate, a shuttle was often better to carry supplies to outposts than a ground-based

transport, what with worlds controlled by the Goa'uld often lacking decent roads. Or even decent dirt tracks. While they had designs for an assault shuttle, it wasn't a priority. Horde fighters and orbital fire support were supposed to cover that.

But Adora didn't trust either not to blow up parts of the base they wanted intact if they provided said fire support. Sure, if they had to blow up the base to save people, Adora would do it in a heartbeat, but they shouldn't have to make that choice.

On the holoprojection, two icons representing shuttles changed course and moved over the base. A few icons depicting enemy soldiers blinked out soon afterwards, and the rings of Jaffa surrounding the buildings taken by Jack's forces shifted as a result.

"We've destroyed their anti-air network," Catra said.

That didn't mean the shuttles were safe, though - the Jaffa's staff weapons could, if used in bulk, overwhelm a shuttle's shields. And the shuttles had to slow down to target enemies on the ground, making them vulnerable.

Case in point, Adora could see one of the shuttles suddenly jerk to the side in an obvious evasive action and the other changing course to support it. If it were shot down, that would be on her.

But the first wave was now advancing on a broad front, tanks and IFVs deployed and engaging entrenched enemies. Adora watched as the enemy line crumbled, most Jaffa dying in place - or at least rendered incapable of fighting - while a few tried to retreat under fire.

"There goes the main gate," Catra said. "They've broken into the base."

That meant combat at close range in urban terrain - pretty much the worst kind of combat against inferior forces. But it also meant that the Jaffa attacking Jack were now caught between two forces.

And one of those forces had tanks and IFVs with them. It only took a few positions getting blown up by direct fire for the remaining Jaffa to spread out and try to evade the trap.

Not many did.

"We're not getting many surrenders," Catra said. "Sure, we're assaulting and relieving the special forces, but… Apophis's forces had more Jaffa surrender in similar conditions."

Similar but not the same - Adora had fought personally in past invasions. "Maybe I should have gone in as well," she said as she watched the British soldiers take control of the base, starting with the buildings Jack had secured.

Catra didn't reply, but when Adora glanced at her, she saw that her lover was frowning. So, she probably was thinking the same thing.

Something to bring up during the debriefings. But, more importantly… "Did the gate ship move yet?"

"They received the emergency transmission from the base, but they haven't taken any action so far, Supreme Commander."

"Probably waiting for orders," Catra said. "Wouldn't want to retreat without permission. That gets you executed in some armies."

Adora nodded. Ba'al was supposed to be a fearsome Goa'uld. And the gateship was - or so they would think - safely hiding out of reach.

But a few minutes later, the Ha'tak with the Stargate left their position and entered hyperspace.

"Phase two complete. Primary and secondary objectives achieved, Supreme Commander."

Now, they could only hope that the spy bots would succeed. And that they could repel the counter-attack Adora was sure would be

coming.

*****

Ba’al’s Base, PT-9521, PT-9521-System, June 16th, 2000 (Earth Time)

“Secure the area!”

The ramp fell down, and the soldiers inside the shuttle piled out. Samantha Carter didn’t really pay attention as they fanned out, staying focused on the HUD display on her visor, fed from the upgraded laptop in her armoured backpack.

The base was supposed to be secure, more or less - there were still some suspected holdouts in the sewers, and she was happy she didn’t have to dig them out - but the upper area and main buildings had been searched thoroughly by the General’s troops and the British landing force before Sam’s shuttle had reached planetary orbit from where she had been supervising phase one of the operation.

She still ducked when she got the go-ahead from the soldier at the ramp and ran toward the building’s entrance in front of her, shielded by a Challenger 2 and three Warriors. All of them adequate for fighting the Goa’uld, she noted as she entered the building, though the IFVs would be vulnerable to well-placed staff blasts without the added shield projectors. But compared to Horde technology, they were obsolete. And Ba’al had access to Horde technology.

Not to mention, adding shield projectors to tanks and IFVs was a kludge compared to vehicles designed with advanced technology in mind, such as shuttles.

She pushed the stray thoughts away and focused on the task at hand as she passed through the entrance hall of the building, which had suffered a bit in the fighting - as had the guards; she saw half a dozen dead Jaffa in a corner, covered somewhat with

torn drapes. However, she also saw two wounded soldiers apparently awaiting medevac. Special Forces, not British infantry.

“Ah, Carter!”

And there was the General. “Sir!” she nodded at him.

“We’ve got the comms secured but didn’t touch them, so if anything is broken, it wasn’t us!” He grinned.

“Yes, sir.” She didn’t smile; they were in the middle of an invasion, and she had a job to do. But she felt better.

She followed him down the stairs guarded by two soldiers.

“So, any news from the space part of the invasion?”

She knew which part he meant. Phase one. But that was classified, and they knew better than to talk about it in the field, in a facility they had just taken from the enemy. “We expect an enemy reaction, but we don’t know when it will happen.” No news yet from the bots.

“Ah. Well, that’s up to the Navy pukes, then.”

They reached a door guarded by two more soldiers - Isa and another trooper she didn’t recognise.

“Campbell was wounded, but he’ll make it,” the General said before she could decide to ask.

“Ah.”

“He better make it!” Isa growled. “He owes me lunch!”

Sam chuckled. It was what you did when people joked about such things to cope with stark reminders that every combat mission carried the risk of getting killed.

“Adora will probably wave her magic sword and cure him. He won’t get to laze around in the hospital ship,” the General said.

Then they were inside. The comm room didn't show any battle damage, not even bloodstains. Sam appreciated it, of course - trying to get any useful data out of broken consoles and shattered memory crystals was usually an exercise in frustration and futility but occasionally yielded results, so you had to make an attempt every time.

"We know they managed to get an emergency notice off," the General said, "but not if they managed to delete the memory."

The first thing had been planned - they had to alert the Ha'tak with the Stargate so it would move and lead the bots to another location. The second was a risk they had to take to get the first. She went to the main console and checked the screen. Yes, it was reporting a memory deletion. But.. She crouched down, checking the connectors in the back. The system was usually easier to penetrate through the data lines, especially the transmission caches. And while the caches were supposed to be cleared, they were also supposed to ensure the messages got through, and that often led to some data fragments remaining in the cache until overwritten by the next transmission - which never happened here.

Sam grinned as she started copying the data. If the Goa'uld had more competent IT staff, her job would be much harder. But the System Lords often selected for loyalty first, expertise second. Not without good reason, of course - controlling communications and information made it easier to launch a coup.

She skimmed the data. It was encrypted, but they had already broken that code when they intercepted the transmission on the Ha'tak. And this data contained some markers and headers that weren't sent but could give information about other recipients.

"Done," she announced. "We can move to the base's main computer building."

There would be the real prize.

The General grimaced. “About that…”

Sam pressed her lips together. She already knew she wouldn’t like it.

“The fighting was a bit more intense there, and the Jaffa had a bit more time. So, it’s not as if all computers got broken, but…”

As she had feared, another frustrating task awaited her.

*****

Former Ba’al’s Base, PT-9521, PT-9521-System, June 16th, 2000 (Earth Time)

“We have managed to secure the physical facilities. They were damaged during the fighting but not beyond local capabilities to restore. Unfortunately, despite our best efforts, the defenders managed to inflict significant damage to the memory crystals in the central data centre. We’ve managed to recover extensive records, but key parts were lost. We expect to be able to use the other shipyard we’ve captured to restore the missing data, though this will require careful checks and will delay the recommissioning of the shipyards here.”

Catra nodded as Sam finished her preliminary report - she knew her friend would deliver a much more detailed one, but she only needed the big picture here. The fiddly bits could be left to others. Not for the first time, she compared the Alliance to the Horde. The difference between working with people who were as likely to lie to you, either in an attempt to sabotage you so they could replace you or to hide a mistake they made to escape punishment, and people you could trust to tell you the truth of the situation on the ground was staggering.

“Thank you, Sam,” Adora said, smiling. “Good work.”

Sam winced. “We should have been quicker. If I had been with the special forces…”

“The damage was done before we managed to secure the room,” Jack cut her off. “You being with us wouldn’t have changed that.”

Sam obviously didn’t like it, but she acknowledged it with a nod. “Yes, sir.”

“We did secure the base and the shipyards mostly intact,” Adora said.

“And we did deny it to Ba’al,” Catra added. The base must have cost him significant resources to set up - both material and personnel. They still didn’t know the extent of his resources, but losing two entire shipyards was bound to put a dent in them. And, speaking of personnel… “Resistance was heavier than expected, wasn’t it?”

It was Jack’s turn to grimace. “Yeah. The Jaffa fought harder than the ones we beat before. Even for Jaffa, they were fanatical.”

“They fought as one would expect the chosen personal guard of a false god to fight - to the death,” Teal’c added. “Yet, they lacked such an elevated status and served in common positions.”

“All Jaffa are expected to fight to the death, aren’t they?” Brigadier Hughes asked. This had been his first battle in the war against the Goa’uld, Catra knew.

“They are, but…” Jack shrugged. “Not all of them actually do. There’s always a couple who reconsider the dying for their god part when things get tight.”

Catra nodded. Either because they weren’t quite as fanatical as they claimed to be or because shell shock didn’t spare Jaffa, either. “But we had significantly fewer such surrenders here, right?” That had been in the first reports.

“Yeah.”

“We’re still in the process of determining whether this is due to increased efforts by Ba’al to ensure loyalty unto death or if there

are other factors in play," Major Bellheim, the officer in charge of the intel efforts in the invasion, added. "However, we've also noticed a higher rate of uncooperative civilians than in similar cases."

And that would add even more delays until the shipyard could restart production. Trained staff was much harder to replace, even if you added the cost of retraining them to produce Alliance craft.

"We've preliminarily identified one factor that might be responsible, at least in part, for the increased resistance to our efforts to, ah, convert the prisoners to our side," the Major went on.

Ah. Catra snorted. "There was no She-Ra to awe the Jaffa and slaves into abandoning their god for Her Divine Highness."

"Yes, ma'am."

Next to her, Adora sighed.

"Well, on the positive side, that's one more reason for you to fight at the front in such operations," Jack said,

Catra rolled her eyes when Adora perked up. Of course, she'd like that! "Well, releasing the planet's magic should help with shaking the prisoner's faith in Ba'al," she said.

And Adora sighed again.

Tough, Catra thought. If she wanted to win the war as quickly as possible, her lover better had to get used to this - it was their best way to turn enemies into allies.

And, though Catra wouldn't say that out loud, not here, not on Earth and not on Etheria, the more people followed She-Ra, the better Etheria's position would be after the war.

Something one had to keep in mind as well. It wouldn't do to win the war and lose the peace. She trusted their friends from Earth,

but that world had far too many nutcases, in her opinion.

*****

Base Portsmouth, PT-9521, PT-9521-System, June 18th, 2000 (Earth Time)

Some of the limeys at the meeting were still sneaking glances at the sight outside the base as if they had never seen She-Ra's magic at work. Well, they probably hadn't, Jack O'Neill admitted - both brigades had seen their first battle in this war. It was hard not to grow a bit blasé about world-shaping magic if you encountered it every other day - well, it felt like that, at least.

Of course, his own people were making a point of acting as if turning the entire region into lush fields instead of dry, near-desert plains, supplied with water from changed hills and mountains around it was nothing special at all. Had to show up the new guys.

It was harmless and helped with the esprit de corps. Napoleon had said, the moral was to the physical as three was to one. Jack wasn't quite as sure; there was a reason people also said that providence was always on the side of the big battalions. Even the best morale couldn't won against all odds, as this base assault had proven; Ba'al's soldiers were fanatical, but they hadn't been able to stop, much less defeat the landing force.

They had been able to blood them, though - casualties had been higher than projected, both for Jack's own forces and the two brigades. Not quite as bad as failed landing operations could get, not nearly so, but still worse than they should have been, given their numerical and technological superiority. There was only so much you could do if an enemy was willing to die to hurt you - and was holed up in a building you couldn't just flatten with air support or artillery.

He spotted the last missing officer entering the meeting room, Major Bellheim. The Intel guy looked more like a nerd than James

Bond, and his service file confirmed the impression - not much field experience, but a great analyst.

Time to get this show on the road.

Jack cleared his throat. “Alright. Now that everyone is here, let's have your reports. How are things in our shiny new base?”

His own people chuckled, but most of the limeys looked a little annoyed. Well, Jack was the officer in charge, and if he liked to be less formal, that was his privilege. Besides, they had better get used to it, or they would not survive working under some of the princesses. On the other hand, those people were used to serving a queen, so they probably would get along well with the more royal-minded princesses.

Whatever! He looked at Major Bellheim. “Last in, first out. How's the situation with the prisoners?”

Bellheim didn't miss a beat or react to the slight ribbing about being the last to arrive even though he had still been on time. “As expected, Princess She-Ra's demonstration had a significant effect on the prisoners taken in the assault, aided by the fact that we could prepare for it beforehand and arrange the best conditions for the prisoners to watch. Most of the civilian workers seem to have abandoned their faith in Ba'al and converted to worshipping She-Ra. We can't tell yet what impressed them more; the alterations done to the landscape or the healing, the sheer number of people to process and vet will keep my unit busy for the foreseeable future.” He smiled apologetically. “We decided that a strict process was necessary after the initial resistance proved stronger than expected.”

“This will mean we won't be able to have the workers aid with restoring the damaged parts of the yards,” Captain Baum, a Navy Puke sent here to oversee the shipyards, cut in.

“Yes.” Bellheim nodded and ignored Baum's scowl.

Jack considered reminding Baum that they could ask the workers to help but couldn't really count on that, but decided against it. Odds were, the new converts would help out anyway. “What about the Jaffa?”

Bellheim’s expression didn't change. “Reactions were mixed. Most positive were those from the wounded, though as we have been able to confirm, Ba'al does allow some of his warriors to be treated in a Sarcophagus. Hence, the psychological effect of receiving magical healing was less pronounced than in other incidents. Nevertheless, coupled with the changes to the area outside the base, we estimate that a significant number of the prisoners have changed allegiance or will do so soon, but we keep all of them under close scrutiny and have expedited their transfer to safe holding facilities.”

Jack agreed - most prisoners had surrendered because they had not been willing to die for Ba'al, so they had been halfway to betraying their god already. But the prisoners who had been captured because they had been unconscious or too wounded to keep fighting were another thing.

He waited, and when Bellheim didn’t add anything, he turned to the next officer, Colonel Carson. “Now, what’s the status of our defences?”

“We're replacing the destroyed heavy weapons with our own systems, focusing on anti-aircraft and anti-infantry systems. With the task force in orbit, the need for heavier defences is not quite as pressing. We should have adequate cover against a division-sized attack with dozens of Death Gliders in two to three days - setting up the power supplies for the systems takes longer than estimated in some cases.”

Well, Jack was curious if Carson would say the same once Ba'al's counter-attack started, but the Colonel wasn't wrong that shoring up the defences against a ground attack with air support was the priority right now. “Good. And, speaking of supplies…”

He already knew the gist of everything, but it was always good to have more details. Jack would rather not discover a problem in the middle of an attack if he could help it. Ba'al would create enough issues on his own; Jack was sure of that.

*****

Ba’al’s Machinations Part 4

PT-9521-System, June 20th, 2000 (Earth Time)

“And here you can see how the spy bots detach and fan out to other ships - well, what you see is a depiction of the scene since they are using their stealth generators, but it works out the same, well, to visualise it - the system is, because of lag and the inherent loss of precision by not having constant data feeds of their positions, but regular micro-bursts to avoid detection, so the positions have to be updated with the actual data in regular intervals, which is why the bots seem to jerk a little on the display.”

“Ah.” Adora hadn’t noticed that. And she didn’t think it was very important - they weren’t about to shoot on their own bots. Not that the bots were armed, except for their self-destruct charges.

“I see,” Catra commented. She was probably exaggerating - her eyes were good, but not *that* good.

“I thought you would!” Entrapta beamed at them. “Anyway! Four hours ago, the spy bots detected other ships - plenty of them! So, all but one detached from the first ship and looked for other targets. And they remained undetected!”

“The plan is working, then.” Adora smiled.

“We’ll know once they report back in, which they will do once their new ships move. Or if they get destroyed, but we hope that won’t happen,” Entrapta went on. “Although so far, they haven’t moved. But we’re already moving the regular spy bots into the area so they can begin searching for another base.”

Adora nodded. This was apparently a rally spot - the other ships had arrived in two waves - but those new ships had to have come from somewhere, somewhere close enough to travel from there to this spot in the time since the distress call from this system went

out. That… was still a huge area to search, but odds were, the ships had been guarding something in the area, or the Ha'tak carrying the Stargate would probably have travelled to their original rally spot instead of meeting them in deep space.

"Any chance with hacking the Ha'tak's system?" Catra asked.

Entrapta pouted. "We're trying, but with the lag, the infrequent communication, and the lack of a direct line to the ship's systems, it's not going well."

Adora hadn't expected anything else; it had always been a very long shot.

"Well, the bots are observing and waiting for further movement," Entrapta went on. "And looking for other ships to latch on, though so far there haven't been any new arrivals that were deemed more interesting than the Ha'taks and Al'Keshs there. A transport ship would be best since that would have to go to a base to pick up supplies, but so far, we only saw warships, well, ships that usually were used as warships. So…"

A beep from her tool interrupted her.

"Oh! More data! Let me just check and then push it on the display… There!"

Adora stared. The number of ships had increased again. Significantly. And they weren't just Goa'uld ships - she could see half a dozen Horde frigates amongst the ships displayed on the holoprojection.

Catra cursed. "That's a task force being assembled from several sources. And unless Ba'al has another huge problem to deal with on this side of his realm, those ships are going to hit us."

They didn't know how large Ba'als realm was, so those ships could be meant for another battle. But they hadn't heard about any attack by Sokar from the Tok'ra, and she was sure Ba'al wouldn't open another front after losing two shipyards to the Alliance… Not

unless it was some attempt to set the Alliance against another Goa'uls, of course, but did he know enough about the Alliance to try it?

She didn't think so. And the first base they liberated was further away from the spy bots' position than Base Portsmouth in this system, she reminded herself. "They're coming after us," she said.

"And it looks like they'll come with enough ships to give us trouble," Catra added.

Adora nodded. "We'll have to evacuate the civilians and prisoners of war. And prepare." Reinforcements were on the way, but they would likely not arrive in time unless Ba'al's forces waited a few more days. And the base still lacked anti-orbital weapons, so there wouldn't be any support from the planet.

"This will be tricky," Catra said, flashing her fangs in a familiar toothy grin.

*****

Base Portsmouth, PT-9521, PT-9521-System, June 20th, 2000 (Earth Time)

Samantha Carter was a great scientist. This wasn't a self-aggrandising boast; it was an objective fact. She had the record - and the requests for help from various parts of the military-industrial complex - to prove it. But she couldn't do miracles. And people needed to understand that.

"No, sir, we can't get the shipyard going and produce guns that we then can turn into anti-orbital artillery batteries in two days," she explained to the General. "Yes, it's theoretically possible - we can adapt the fire control system and cobble together a mount so they could engage targets from the ground - but even if the shipyards were fully restored and we managed to reprogram the controls, we still would have to physically adjust an existing line to produce the mounts and train the staff on how to assemble the finished cannon. And that's only if we can do it with existing parts

and supplies." She shook her head. "We can't do it in two days, and even if we managed, we'd only get a couple ready for deployment."

"That would be more than we currently have," the General replied. "We won't get any reinforcements from the Alliance in that time."

Sam was aware of that - she had run the calculations herself. "I think we have a better option to shift the odds in our favour, sir."

"Oh?" He smiled. "Let's hear it, Carter!"

"We could assemble and modify a dozen or more spy bots with charges strong enough to disable or outright destroy smaller ships and damage or cripple Ha'taks, but that would pose a significant risk of revealing our stealth capabilities to the enemy, sir." Sam felt guilty for dashing his hopes, but it had to be said - not that he wouldn't see the problem right away anyway.

His smile faded. "Yeah, I can see the problem. We're relying on our superior sensors and stealth for a lot of operations." He rubbed his chin. "But we risk exposure with every stealth shuttle we drop on an enemy planet. On the other hand, the bots would have to reach a ship first - and unless you managed to modify their engines so much, NASCAR is trying to poach you, I think they would have a bit of trouble with that, smack in the middle of combat. And they would have to get past the enemy shields, right?"

"Yes, sir. Although, since they will be attacking us, it shouldn't be too much of a problem to get them in range - we would effectively lay a minefield," Sam said. "We're already preparing to jump them as soon as they drop out of hyperspace thanks to our advance warning." But even a perfect ambush with their entire force in the system wouldn't be able to destroy enough of the force Ba'al was amassing to be able to finish them off with minimal casualties. Sam had run those calculations as well.

“I’m hearing a lot of ‘ifs’ and ‘shouldn’ts’, Carter.” He looked slightly disappointed.

“I’m sorry, sir, but as far as jury-rigging existing weapon systems to help us in the coming battle is concerned, even the best option leaves much to be desired.” Sam tilted her head slightly.

He nodded, then grinned at Entrapta. “But you look like you can’t hold back much longer. So, I guess you have something else in mind.”

“Yes!” Entrapta nodded rapidly. “We first thought about moving the Dimensional Portal generator here - we could have sent half their ships - I mean, halves of their ships - in another dimension. But we would take too long to disassemble it so it can fit through a Stargate and then reassemble it here. And Beta still has issues with targeting moving targets. But! You know how using the Dimensional Portal Generator shuts down Ring Transporters and other similar devices which rely on multi-dimensional effects, right?”

“I remember that mission, yes,” the General said with a slightly too-teethy smile. He didn’t like it when he felt talked down to - even though this was just Entrapta being Entrapta. She didn’t mean anything by it; she was just checking if people were aware of something she relied on.

“Right!” She beamed at him. “Anyway, so we thought that one of the advantages Ba’al’s task force has is numbers, but numbers require coordination - we had that problem in the Horde, when we sent in waves of bots and people, and they ended up shooting each other by mistake. Or didn’t find the enemy. And if the Alliance managed to focus, they could defeat them in detail. Anyway! So, without coordination, their bigger numbers won’t do much as long as we can coordinate our forces. And to disrupt their coordination, we just need to disrupt their communication and sensors. If they can’t talk to each other and can’t see us, they can’t coordinate.”

"As long as we can talk to each other and see the enemy," the General said.

"Yes!" Entrapta nodded. "That's the main issue. But we're pretty sure we figured a way out to solve that!"

"'Pretty sure'?" He raised his eyebrows at Sam.

She didn't blush. "We cannot give you any guarantees. In theory, it should work, but we cannot test it; there's no time for that - the preparations are quite complex." And quite difficult, but she was certain they could do it.

"Alright, no need to confuse me with tech talk. So… we're betting everything on your idea working on the first try?" He grinned, and before she could tell him her estimates on their chances of success, he nodded. "Fine by me. Let's sell it to Adora and the others!"

Sam nodded, pleased - and slightly embarrassed - by his trust. Though she couldn't help being a bit worried.

She wasn't perfect, after all.

*****

Base Portsmouth, PT-9521, PT-9521-System, June 21st, 2000 (Earth Time)

"Ba'al's task force has entered hyperspace. We're tracking them through the spy bot network - as long as they are in range."

"So much for the hope that they'll delay their attack until we get reinforcements," Catra muttered in response to the report from the task force orbiting the planet.

"Well… we don't know if they are actually going to attack us here," Adora said. "Everything points to it, of course, but they could be attacking another system?" she added with a grimace.

Catra rolled her eyes. “We’re in the only base in the area.”

“That we know of,” Jack said.

“Do you think there is another base in this area of the sector? It would have to be very well hidden,” Entrapta spoke up. “Since we focused our spy bot network’s expansion on this area, so we’ve covered the systems thoroughly. Although I guess that they could have placed a base into deep space, so we would have to rely on long-range sensors, and they don’t cover quite everything - the longer the range, the smaller the area they can cover, actually. It’s physics. But! It would be great if we discover another base like this one! Or a research base.”

“I hope Ba’al doesn’t have any bases in the vicinity that are hidden from our sensors,” Jack said.

Catra agreed with him. If Ba’al had a way to hide entire bases from their sensor network, the whole war changed - hell, even the ability to hide a ship would be a game changer, depending on the range at which it could evade detection.

“It’s unlikely,” Sam said. “He would have used that capability to strike at us and his other enemies before.”

“Unless he saved it for a special occasion - like losing a second shipyard,” Jack countered. “Does anyone feel special?”

Catra snorted. She wouldn’t put it past Ba’al to do such a thing - the clone was pretty messed up and had revealed some really convoluted plans in his attempt to escape - but somehow, she doubted it. “If he is holding such a secret weapon back, he wouldn’t waste it on a single attack - he’d attack along the entire front, with his entire force.” That’s what she would do. Maximise the impact. Keep attacking so the enemy was forced to constantly react and couldn’t easily adapt.

“Unless he thinks he can deal with us without any witnesses escaping,” Jack said.

He was pretty gloomy today, Catra noted. “Anyway,” she said. “What’s their ETA?”

“Roughly two days until they reach the system. We can’t tell yet how many navigational stops, if any, they’ll take or if they abandon standard doctrine and attack directly into the system,” Sam replied.

Catra had hoped for something more precise, but she knew how hyperspace long-range travel worked.

Adora cleared her throat. “What’s the status of the Jammer?”

“Project Jam,” Jack commented.

Sam ignored his remark. “We’re on schedule.”

Meaning, it would be close. If the Goa’uld fleet was faster or more reckless than expected, they would arrive before the jammer was ready. And if they sent the Horde ships with them ahead, that would cause even more disruptions. But it would also cost Ba’al those Horde frigates, so she didn’t think he’d do it. Unless he wanted to get rid of some troublesome Clone, of course. No, he probably needed the ships more than that. Unless he had upgraded Ha’taks around already…

She shook her head. She couldn’t let her imagination drive herself crazy with worry. They’d tackle whatever Ba’al threw at them. “Pulling the ships back to the planet?” They had gone over that but hadn’t finalised it.

Adora nodded. “There’s nothing else in the system that needs protection.”

Catra agreed. That plan also meant they didn’t have a chance to attack the enemy when they dropped out of hyperspace, but that was only a slim chance to begin with. Unless Ba’al dropped his force straight on top of the planet, he could drop out anywhere he pleased in the system and still be safe from an ambush.

She looked at the holographic display. Ba'al's fleet was in formation in hyperspace. That didn't guarantee that they came out in the same formation, but they had decent odds. Horde frigates in the front, Ha'taks behind them. Weird - Catra would have used the frigates as flankers and the Ha'tak's as the centre. Sure, frigates could take more before being destroyed, but they were much harder to replace - or supposed to be.

"I don't like this," she said, pointing at the holoprojection. "We're missing something here."

"It's a straightforward formation," Sam replied. "Effective and appropriate."

"Yes," Catra agreed. "But that's Ba'al. He doesn't strike me as the kind of guy who would do something simple if he could do something complicated and twisted instead.

The others frowned, and Jack sighed. "I think you have a point. Now, let's brainstorm what Ba'al could be planning…"

*****

Base Portsmouth, PT-9521, PT-9521-System, June 23rd, 2000 (Earth Time)

"Enemy arrival imminent."

Jack O'Neill pressed his lips together so he wouldn't snap at the noncom reporting from the sensors console. He could see that for himself - the holographic display they had mounted in the command centre of the base showed the position of Ba'al's task force in hyperspace and he could see how fast they were closing in. Carter might insist that it was merely a display, that the enemy ships were not travelling down that path because hyperspace wasn't exactly part of this dimension, but it worked well enough for government work and tactics.

But the noncom was just doing her job, and Jack was doing his. Which, right now, consisted of doing nothing in his shiny new

base together with the other ground forces while the ships above - and his friends and teammates - prepared to fight a numerically superior force which also might have received upgrades to largely negate the Alliance's technological advantage.

"We should have gone with Operation Boarding," he muttered under his breath.

"Pardon?" The nominal base commander - Jack was in charge of all ground operations - was looking at him.

"Nothing, Brigadier," Jack replied. His proposal to use stealth shuttles to board enemy ships had been rejected. Well, to be honest, the chances of being able to board a ship in combat without taking out its shields and engines beforehand were not good. As in 'Hail Mary suicide mission' not good. And if a ship had lost both engines and shields… Well, then the ship was helpless anyway and another volley from being finished for good.

But it would have let Jack be in space and not stuck on the ground, watching his friends soon fight for their lives - and his - while he couldn't do a thing. The Alliance really needed some anti-orbital artillery. Perhaps a mobile missile launcher with stealth torpedoes… but that would risk exposing their stealth technology.

Damn it. He watched as the Alliance task force moved to envelop the rough area where the enemy fleet was projected to drop from hyperspace. Any moment now.

"Enemy fleet dropping from hyperspace!"

Here they came! But…

"Enemy ships separating from the main body!"

Half a dozen ships continued their trip through hyperspace, flickering around while the computers adjusted their course projections.

“The Horde frigates - they weren’t the vanguard!” Jack muttered as the icons stabilised. “They’re about to hit our rear!”

Just as the Ha’taks of the main body of Ba’al’s fleet dropped out of hyperspace in a close formation, so did the Horde frigates - spread out all around the planet, some far too close to the Alliance units, others far from any target.

In front of Jack, the squadrons of the task force shifted around, reacting to enemies in their rear, repositioning instead of hitting the Ha’taks and their escorts as hard as possible while they were still forming up after leaving hyperspace.

One Ha’tak that had come out a bit too far away from the rest was ganged up by four frigates and blew up before it could return fire, two more got disabled by a squadron darting forward and strafing them, but the main body was moving into a tight formation.

Jack clenched his teeth. Why wasn’t Carter using their super-jammer? Ba’al’s Horde frigates were already starting hit-and-run attacks - one of them was going after the troop transports! And the Goa’uld ships were closing in with each other, Jack almost expected their shields to overlap. They would be able to support each other by the dozens, and that… Oh.

The entire projection flickered for a moment, icons shifting colours to indicate loss of real-time sensor data.

“Jamming field active.”

The ship icons started to flicker around as the magitech sensors started to feed them data - not quite as effective as a full sensor fusion, but effective enough to get the picture.

And it was a better picture now. Jack could see the Goa’uld formation starting to fray as the suddenly blinded ships tried to avoid colliding with each other. One Al’kesh icon blinked and went out after crashing into a Ha’tak. Which had tried to evade at the

last moment and crashed into another Ha'tak, leaving both ships spinning, obviously damaged.

And Ba'al's Horde ships were caught in it as well - Jack saw them veering off. Couldn't continue with an attack run if you were suddenly blinded! The one going after the troop transports was suddenly off-course when the transports moved and it couldn't compensate - and was caught between the transports and the squadron coming for it. Outnumbered six to one, it tried to escape but flew directly into the focused fire of two frigates without any attempt to evade it. "And that's all she wrote," Jack mumbled as the icon disappeared.

The other frigates didn't fare much better - one was retreating, trailing parts and debris, chased by three Alliance ships, two more were flying so evasively, even Jack could see that their fire wouldn't hit anything except through blind luck - and you needed focused fire to take down shields. And two were… entering the planet's atmosphere?

They were coming in at high speed - the thermal bloom from their entry would probably shine brighter than the sun - and the friction alone would strain their shields to the breaking point.

But none of the Alliance ships were in a position to fire at them. And so the frigates could loop around the planet and bleed off their speed and… Jack didn't need the computer projections to know where the two would end up.

Right above the base.

Or right in the base if they crashed.

Fuck.

*****

Orbit Above PT-9521, PT-9521-System, June 23rd, 2000 (Earth Time)

“Supreme Commander, we have a report from the ships engaging the main body of the enemy. The Ha’taks have upgraded weapons. Standard Horde beam cannons.”

Adora had already seen the data. She stared at the holoprojection displaying the battle in the centre of the flagship’s bridge. The Hat’aks were still in disarray, their formation torn up as a result of the jamming and their blind response to the coordinated attacks by the Alliance task force. But they were trying to reform.

“Found another potential flagship,” Catra said next to her, tipping at one icon with her claw. “They’re in the centre of their piece of the fleet.” She marked it as a priority target, and Adora saw a squadron of Horde frigates make a high-speed pass that left the Ha’tak trailing debris as it drifted out of formation.

Adora would have preferred to let the enemy form up so they could identify the flagship and other ships carrying leaders by their comm traffic before jamming the entire system, but the Ba’al’s spoiling attack with his Horde frigates had forced her to suppress sensors and comms right away. Even so, the Alliance’s attacks were not nearly as effective as projected - not with half their forces dealing with the remaining frigates behind their lines. And the Ha’taks were proving to be tougher to crack as well - their shields were still standard Goa’uld ones, but they had improved firepower, which meant the Alliance ships couldn’t just weather their fire while destroying them.

“The battle is far too even for my taste,” Catra mumbled.

Adora was forced to agree. “At least the enemy frigates will be destroyed soon, and then we can shift our entire strength…” She broke off when she noticed two enemy frigates diving into the atmosphere. “What are they doing?”

“Trying to skip off the planet’s atmosphere to get away from pursuit? No, the angle’s all wrong…” Catra cursed. “They’re swinging around the planet to attack the base! Or crash into it!”

Adora gasped. “We have to stop them!”

But their frigates were out of position, having tried to block an escape attempt that never happened, and… “What are the transports doing?” she asked even though she already knew the answer - they were dropping into the atmosphere as well. And they were the only ships close enough to cover the base.

“Fleet transports can’t shoot it out with frigates,” Catra hissed. “Not for long.”

But maybe long enough for the squadrons chasing the enemy frigates to arrive. Which meant Adora couldn’t order the transports to back off.

“Signal from HMS Albion, with Captain Baker’s compliments, Supreme Commander: ‘The Navy must not let the Army down.’”

Adora agreed. She still felt terrible watching the two transports form up to cover the base against the two frigates. They didn’t even have the improved beam cannons most frigates sported.

“Here they come!” Catra said.

The two frigates were finishing their swing around the planet and entering the line of sight - and lines of fire - of HMS Albion and HMS Bulwark. Beam weapons fired a moment later. Or had already fired - the holoprojection lagged a bit because of the jamming field.

Adora checked the rest of the battle - the other frigates had been killed, and the squadrons were rushing towards the main line, where the Goa’uld forces had split into two looser formations; not quite able to cover each other and barely able to cover individual ships, but still more effective than the ragged mass of confused movement they had been before.

Then, she focused on the base battle again. The frigates had broken to the left, trying to get around the transports so they had a free line of fire to the base. Captain Baker was manoeuvring to

block them, though it was costing him - each time the status data was refreshed, it showed more damage on both transports.

But relief was on the way. A squadron was entering the atmosphere. They just had to hold out a little longer…

The icon of HMS Bulwark flashed red, and Adora gasped again.

"It's gonna crash!" Catra spat.

"Signal from HMS Bulwark, Supreme Commander: They have to conduct an emergency landing."

Escape pods would barely launch at this altitude… Still, Adora saw a few appear on the holoprojection as HMS Bulwark dropped further down, barely able to pull the nose up at the last moment so the ship didn't bury itself straight into the ground but ploughed through the fields until it came to a stop. But it didn't explode!

And before the two frigates could focus on HMS Albion - or split up and bombard the base - the frigate squadron arrived, improved beam cannons blazing. The first frigate was caught trying to get around the transport and blew up in the air, pieces scattering across the fields below. The second had been exchanging fire with the transport while dragging it away and suddenly turned towards it - but the attempt came too late, and it too blew up before it could get close.

The base was safe, and Adora sighed with relief.

But the same couldn't be said for the fleet. With their beam cannons, the Ha'tak could keep the frigates somewhat at bay, and there were a lot of Ha'taks compared to Alliance frigates, so the Clones couldn't just trade broadsides and focus on individual Goa'uld ships to quickly take them out. And their fighters were outnumbered by Tel'taks and Death Gliders as well. They had to take risks and try for fly-by attacks, and with the jamming field active, those were not as effective as they could be.

The fight was far from won.

*****

In the frigate carrying their jamming gear, Samantha Carter stared at the holoprojection in front of her. It wasn't as large as the one on the bridge, but it was more than sufficient to follow the battle fought around them. Especially one part of it. The one in the planet's atmosphere.

"Those were the last Horde frigates Ba'al had," she commented, trying not to show her relief when she saw the second of them explode. The General was safe. "That leaves his upgraded Ha'taks."

She checked the jamming field as the holoprojection's focus switched. The field was stable, the adaptive routines that kept it so were still performing according to expectations. It would keep preventing enemy communications, but only to a point - they couldn't keep it up too long, or the same energy fields that served to jam enemy communications and sensors would tear it apart. Compensating manually would only delay that since they were already running it at full power; any more, and it would burn out the emitters. About fifteen, maybe twenty more minutes. Thirty, tops, if she and Entrapta spent the time adjusting the routines and intervals by hand, but ultimately, they would have to turn it off. At least they could still jam communications and sensors with conventional means, but those were even more limited.

"Shouldn't they retreat now?" Entrapta asked.

Sam looked at the battle in progress. If Ba'al wanted to save his fleet, then retreating now was the best option - his frigates had been destroyed, and the frigates which had been dispatched for that were heading back to rejoin the rest of the task force fighting the main part of Ba'al's fleet. Despite the upgrades, the Ha'taks were still no match for Horde ships, and the Al'kesh and Tel'taks hadn't received any upgrades at all, as far as they could tell. Despite their numerical superiority, they could barely hold the line against the current number of Horde frigates fighting them and were steadily losing ships at the edges of their formations.

“Yes, they should,” Sam said. “If Ba’al wants to preserve this fleet.”

Sam watched as a Ha’tak got separated from the rest of the formation, and four frigates darted forward, beam cannons flashing, as soon as the enemy ship left the protective umbrella provided by the massed fire of the other capital ships. With their sensors blinded and their communications disrupted, the ship’s crew must have failed to notice the shifting course of the main formation. And with four frigates focusing on the Ha’tak - even though they were doing so in a high-speed pass that reduced the volume of fire they could bring to bear, especially with their own sensors degraded by the jamming - the enemy shields collapsed, followed by the hull being holed seconds later. The ship blew up as the frigates sped away.

“But without working communications, their commander cannot order them to retreat,” Sam went on. “And if individual ships start to retreat, their entire formation collapses.” And the Alliance frigates - even without the reinforcements joining them now - would make short work of the enemy ships that kept fighting - or were just too slow to retreat as well. As long as the jamming field was active, the fleet couldn’t retreat in a coordinated manner - they could only rout. But staying meant they would be attrited by constant attacks exploiting holes in their formations. “Damned if they do, damned if they don’t,” she whispered. The enemy’s only chance was to outlast the jamming field until communications were restored.

And the Alliance had to make the most of their advantage until then so they could minimise their own casualties.

Two squadrons took off from the battle line and started a flanking manoeuvre. Usually, such a move would be countered at once - but the enemy was still blinded. Two Tel’taks and one Al’kesh spotted them by chance and tried to block them, but against a dozen frigates, they stood no chance. All three were blown up without the two squadrons slowing down on their way to pounce on the anchor of the enemy formation, four Ha’taks flying in close

formation surrounded by a dozen Al'keshs and Tel'taks and countless Death Gliders.

Sam adjusted the routines again, compensating for a modulating interference, while she watched the uneven fight. Outnumbered three to one, the outcome was a foregone conclusion. The smaller craft didn't matter; with their sensors jammed, the Tel'taks were struggling against Horde fighters and the Al'keshs were built to bomb planets and slow capital ships, not fast frigates.

But even so, the enemies sold their lives dearly; Sam saw damage reports light up from one frigate before all four Ha'taks were destroyed. "They must have been able to coordinate their fire," she muttered. "Either standing orders or…" She checked the jamming field again and then their sensor data. "They have managed to switch to short-range radio communications. Their command network will soon be restored." At least partially.

"I'm adjusting the routines again," Entrapta replied. "Done!"

That bought them a bit more time. Three more Ha'taks were destroyed and two left crippled in exchange for another damaged frigate while Sam made more manual adjustments. The Alliance fleet was switching to high-speed passes again as the enemy fire grew more focused. That would slow down the rate of attrition but also reduce the damage taken.

More Ha'taks were destroyed or damaged in the following minutes, but the enemy coordination grew from individual ships and their escorts to small formations, and the alliance ships took more and more damage. By the time the entire enemy fleet had restored their communication network, the Alliance units had drawn back.

But against Sam's expectations, the remaining Goa'uld ships didn't begin to retreat. They formed up into a wedge formation instead - as if they intended to press their attack.

*****

PT-9521-System, June 20th, 2000 (Earth Time)

"They're not retreating. They've lost half their forces, including all their Horde frigates, and they're attacking instead."

Catra nodded at Adora's comment but didn't take her eyes off the holographic display of the battle. Ba'al's forces were indeed pressing the attack, seemingly heedless of the losses they had taken and were still taking. And even though the enemy fleet had restored its communication network, Catra couldn't see any sign of a more complicated attack formation - they had just formed a wedge, well, a cone, the most basic attack formations, and started to move, apparently trying to reach the planet behind the Alliance lines.

"They might have orders to fight until they win or die," she said. It would fit how the Jaffa had behaved when defending the base on the planet - few had surrendered. But those were mostly infantry. Would Ba'al waste capital ships - upgraded capital ships - with trained crews like that? Did he have so many ships available that even wasting this fleet would see him come out ahead as long as they managed to damage the Alliance forces here? But if he had that many ships, why wouldn't he have sent more ships to begin with? That would have reduced his casualties.

And if he was planning to attrite the task force, he needed to do better; the enemy ship's Horde beam cannons hit significantly harder than the standard Goa'uld arsenal, but so far, the Alliance hadn't outright lost many frigates; most of the ships who had taken significant damage had managed to disengage under the cover of the rest of the fleet and withdraw.

Although with the enemy being able to coordinate better, that kind of manoeuvre became harder for the Alliance forces. Especially since the Alliance forces couldn't use high-speed passes to pick out individual targets as easily as before - they couldn't just retreat as far as they wanted until their shields had restored their strengths; they had to block the enemy from reaching the planet or the base would be bombarded from orbit. That drastically

limited their tactical options, which meant more frigates getting damaged.

Or getting destroyed, she added silently when she saw an icon in the blocking force disappearing in an explosion. She checked the data from the forces involved and winced - the frigates were steadily receiving damage despite their manoeuvering, and more and more Alliance ships were forced to rotate back in without having fully restored their shields.

Sure, the Goa'uld ships were paying a heavy toll - they were too slow to rotate in and out of the line, so their numbers were shrinking even more - but they had had more to begin with, and while Catra could already tell that the snakes would lose, the casualties this would cost the force would be severe unless they either abandoned the defence of the planet so they could use their speed to dictate the engagement again or found a way to break the enemy. Taking out their flagship hadn't fazed them; they had just kept pushing.

"Envelop them?" she asked. It would turn the battle into an even bloodier close-quarters fight, something that negated the advantages of the Alliance forces, but it might disrupt the enemy formation enough to break it up. As soon as the Goa'uld fleet lost their cohesion, the Horde frigates could pick them apart piecemeal. But the losses…

"We don't have any squadrons fresh enough to survive plunging into the enemy's rear if they don't break right away," Adora said. "And most of our fighters are busy with the Death Gliders and Al'keshs trying to reach the planet, so we can't send them in first to spoil their response."

"Yeah". Catra clenched her teeth. There had to be something they could do to stop this battle from turning into a meat grinder, but she couldn't think of one. The jamming field wasn't affecting the radio network, and up close, the conventional jamming wouldn't be able to overpower the enemy's radio either.

“We’ve identified another enemy command vessel, Supreme Commander!”

Catra saw the icon on the display change colours. A natural target - but it was in the centre of the enemy formation. Taking it out would cost the Alliance. And it didn’t seem as if the enemy needed new orders - they were just pushing ahead.

“Ignore it,” Adora said. She must have come to the same conclusion. “Focus on the most vulnerable enemy ships.”

“Yes, Supreme Commander.”

But the number of frigates that weren’t combat-ready any more and had to retreat from the battle kept growing - and the Alliance reserves were all damaged by now; if they had to be used in an emergency, they wouldn’t last long.

“The enemy sensors are still affected by the jamming field. If we could mask our damaged frigates, make them look like fresh reinforcements, and send them into the enemy rear, they might mistake them for another task force,” Catra said. “But if the enemy is determined to fight to the last anyway…”

Adora nodded. “It wouldn’t work.”

“Well, then I’ve got a last gamble,” Catra said. “Withdraw the blocking force. Let them regenerate their shields and then hit the enemy right when they are about to hit the base and are distracted.”

“That would risk the base.”

“Yes.” Catra nodded. “But it would save more of our frigates.” And their experienced crews. Hell of a risk, though - if the timing was a little bit off…

“It’s our best bet.” Adora pressed her lips together, then gave the orders. “Warn the base that there might be orbital strikes that get through.”

On the screen, the frigates in the blocking force suddenly sped up, evasive manoeuvres turning into full withdrawals at high speed. The squadrons on the enemy flanks kept their strafing attacks up for a bit longer, to give the centre more cover to retreat before falling back as well so they wouldn't be facing the brunt of the enemy's firepower.

The enemy fleet didn't quite falter, but Catra could see a sort of ripple, individual ships seeming to hesitate before continuing their course toward the planet as the frigates withdrew out of the Goa'uld's reduced sensor ranges. She kept an eye on the data feed from the ships, watching their shield strengths regenerate, comparing it to the shrinking distance between the enemy van and the orbit. "Too damn close." Only a few would have their shields restored fully in time.

"It's our best bet," Adora repeated herself.

That didn't make it a good idea. But this was war - sometimes, you didn't have any good idea.

The distance kept shrinking. Soon, the fighters still keeping the smaller enemy crafts at bay would be in range of the Ha'taks' batteries. And then the base below.

"Jamming field at emergency strength, Supreme Commander."

That meant the enemy sensors would be almost blinded - but it wouldn't last long before the projectors burnt out.

"All units, resume the attack!" Adora ordered.

The frigates, already in position, partially shielded by the planet itself, accelerated and flew against the enemy formation. The timing was almost perfect - they entered conventional sensor range right before the enemy came into range of the base. Half the enemy ships were already focused on getting into positions needed for orbital bombardment, the other half still pushing forward.

Catra smiled when she saw the enemy formation fall apart in the most crucial moment - right before the Alliance squadrons hit them in a coordinated strike.

The enemy command ship was among the first to blow up.

*****

Ba’al’s Machinations Part 5

Base Portsmouth, PT-9521, PT-9521-System, June 23rd, 2000 (Earth Time)

The plan - or desperate gamble - had worked! Jack O’Neill bared his teeth in a grin while he watched the snake fleet get torn up in orbit. Their formation had dissolved into isolated, uncoordinated small groups and even individual ships, and the Alliance frigates were tearing them apart.

A number of Death Gliders and a handful of cloaked Tel’taks had already entered the atmosphere, but they were tangling with Alliance fighters at high altitude, and Jack didn’t give them good odds to get into range of the base, much less damage it. On the contrary, trying to reach the base made them easy prey for the fighters - he saw one Tel’tak get shot down from behind by a pair of fighters as it tried to make a run for their target.

“I guess after this, they must realise that we can see through their cloaks,” he commented. That would affect their strategic situation, but it had been inevitable - they couldn’t actually let cloaked enemy ships do whatever they wanted just to keep their sensor advantage a secret. Of course, some intel-weenie had actually suggested doing that, but the sane members of the Command Council had shot him down. This wasn’t ULTRA, and even if it were, the Etherians would never let attacks on soldiers, much less civilians, go through just to keep a secret.

Jack approved of the stance. What good was an advantage if you didn’t use it? If you wanted to save it for the best time, you probably wouldn’t use it before it was no longer useful one way or the other.

“Sir! The central part of the enemy fleet…”

But Jack had already spotted it. Four Ha’taks had managed to survive two fly-by attack runs and were about to enter the

atmosphere - and not, like almost all other snake ships, by breaking up and scattering themselves as one huge meteor shower, but in close formation.

Very close - three of the ships were shielding the fourth with their hulls. That was crazy! One of them broke up under the attack by a squadron of frigates that had hastily changed targets. Another collided with the central Ha'ak and was thrown off-course, plasma forming a fireball around it as it spun out of control - and then vanished in a brighter fireball.

That left two on a straight course for the base. Someone behind Jack gasped.

Damn. Jack scoffed, loudly. "They already tried that, and it didn't work with frigates. Those are Ha'taks and not nearly as tough!" Not entirely correct, of course - frigates were much smaller, and while they had stronger shields and better armour, but once both were gone, a Ha'tak would be able to absorb more damage before it broke up.

More, but not as much as the Alliance ships were dishing out. Jack grinned again when five frigates focused their fire from behind. The last escorting ship shielding the main ship blew up after a second of focused fire tore through her shields.

And then it was the main ship's turn. Beam cannons flashed, and the Ha'tak's shields broke - and it was still out of range of the base.

And then it blew up. Jack started to sigh with relief under his breath - but then the computer started screaming alerts.

"Atmospheric explosion detected."

"Shockwave detected."

"Thermal bloom at lethal levels."

On the holoprojection, the ship had vanished in a huge fireball - so massive, the pursuing frigates had been touched by it as well, and Jack saw their status displays go red at once, followed by at least one 'abandon ship' notice.

But that wasn't the worst. The worst was seeing the fireball engulf part of the planet's atmosphere - and the shockwave running forward.

And hearing the screams outside - the camera feed from the base's perimeter showed the sky on fire!

Jack pushed the general alert button and yelled: "Everyone, take cover! Shockwave about to hit the base! Take cover! Run to shelter! Duck and cov…!"

The entire base shook as if an earthquake had hit, cutting him off - he almost fell to the floor.

And more alerts sounded. The screens were flashing red with notices. Damage detected, thermal energy dissipation - what the hell was that? Sensors and structural integrity damaged, incoming environmental dangers…

He gripped the edge of the table and stared at the screen showing the base outside. The sky was on fire, winds stronger than the worst hurricane he had ever seen were battering the buildings, ash was raining down, though he had no idea where that came from...

It looked like a sandstorm in Hell.

And would be about as lethal. Jack cursed again and started yelling orders - he had people and a base to save, and no time to do it.

*****

Base Portsmouth, PT-9521, PT-9521-System, June 24th, 2000 (Earth Time)

Adora pointed her sword at her target and focused her power one more time. As before, magic poured out in a beam and washed over the man standing in front of her, healing him of everything that was wrong. Or whatever.

She closed her eyes while the man gasped, patting himself down. That was… She had lost count of how many she had healed. Alliance soldiers, freed slaves, prisoners of war who hadn't been moved yet…

"I am… the pain is gone! Praise to the Goddess!"

Right. "I just healed you," she told him. "It's not… it's just magic."

"As they said! You are the light of the people! The Bringer of Hope!"

Those were new titles. Had Priest expanded his list, or were those names the people here had come up with? She didn't know, and she didn't want to ask.

And now the man was bowing - no, falling to his knees and pushing his forehead against the floor.

Adora suppressed a groan and nodded at the two … nurses or orderlies, she didn't remember what function they had after they had rotated a few times, and the two stepped up and gently guided the praying man out of the room.

"Was that the last?" Adora asked.

"Yes, Supreme Commander."

"Good."

She closed her eyes again and sat down in the chair in the corner. She was so tired!

"You know, you could have saved yourself hours of effort if you had waited until we'd have scanned everyone to check if your

healing was actually needed."

Adora opened her eyes just enough to focus on Catra, who was leaning against the doorframe and replied: "I wasn't about to wait and risk people suffering - or even dying - before we figure out what happened."

"And that's why people worship you." Catra flashed her fangs in a grin, but the effect was lost somewhat when it turned into a yawn.

"And you spent hours sorting out the fleet," Adora shot back, "instead of leaving that to the commanders and captains."

"Hey! It was my plan that caused the mess, so I fixed it as well." Catra shrugged. "Those are the rules."

"Those aren't the rules." Adora shook her head. "The rules actually are that officers should get enough rest whenever possible so they aren't exhausted when they are needed. Tired people make bad decisions!"

"Exactly!"

"Don't… what?" Adora blinked and opened her eyes a bit more. Catra's wide grin showed all her teeth as if she had just won a contest or something.

"Those are the rules, and since you're the Supreme Commander of the Alliance, you need to get rest as soon as possible."

"Oh, you…!" Adora groaned. "Now that people are healed I have to…"

"...go to sleep," Catra finished for her. "Those are your own standing orders."

Which were broken every time it was necessary, but… "Those orders cover you as well!" Adora shot back.

“No.” Catra grinned again. “I’m no Alliance officer. No commission. No salary. No orders.”

Adora scoffed as she got up.

“So, now be a good little Supreme Commander and… Hey!”

Adora grabbed her and threw her over her shoulder.

“Leggo!”

Adora ignored her. “Now, where’s our bed?”

Catra growled, but after a moment, she relented and Adora felt her relax and basically hang over her shoulder like a bag of wet sand.

“Yes?”

“I commandeered the former base commander’s personal quarters,” Catra said.

“And you claim you’re not an officer in the Alliance!” Adora snorted and started walking.

“I’m not!”

“And what about the actual base commander?” Adora asked after they had left the room. “Did you tell him to leave his own room?”

“He never moved into the quarters,” Catra said. “Claimed they were too luxurious.”

“Oh.” Adora almost stopped. “Is it bad?”

“No worse than Bright Moon’s palace, just with gold instead of pastel.”

That was pretty bad, but Adora really was exhausted. And she was sure that Catra needed the rest as well. A few hours wouldn’t hurt, would they? She stifled a yawn. No, they wouldn’t.

They put their masks on - the air was still filled with dust and ash - and left the hospital building. It looked a bit battered - it had been built from pre-fab components carried by the Fleet transports, fortunately, before HMS Bulwark had crash-landed. The sky was still, not glowing, but far more reddish than normal, especially since it was past midnight here, something about dust particles and thermal energy dissipation that Adora hadn't quite understood when Sam had explained.

Whatever. Adora was walking towards the main administrative building when a cloud of sparkles appeared next to her.

"Adora! Have you finish… what are you doing?"

Adora smiled at Glimmer. "We're going to bed."

For some reason, her friend blinked, then blushed. "Really?"

"Catra insisted. And I think we both need this." Adora shrugged, which made Catra gasp in reaction to the movement. "She commandeered the base commander's quarters for us."

"Ah… OK…" Glimmer was still blushing.

But she had been looking for Adora, hadn't she? "Did anything happen? Do you need me?" Adora asked.

"Ah… No, no, I just wanted to check up on you, see if you've finished healing everyone." Glimmer said. "And tell you that Frosta and Perfuma have arrived through the Stargate on the flagship and will work on restoring the planet's ecosystem and atmosphere as soon as possible."

"Good. They can check with Entrapta and Sam about where they should use their powers first." Adora nodded. Their friends had made plans already, but she hadn't paid attention to the details. Something about filtering plants and lots of ice to melt to replace the vaporised water or something - Adora trusted her friends to do this. "No, sorry, but our bed is calling."

“Yeah, sure…”

Glimmer was still flushed, Adora noticed. “Are you sick? I can heal you if you are…”

“No, no, everything’s fine. See you tomorrow! Have fun!” Glimmer disappeared with a slight pop.

Catra started to giggle and, despite Adora asking repeatedly, refused to tell her what was so funny.

*****

Samantha Carter stifled a yawn when she stepped up to the screen in the briefing room. It had been a long day and a short night. But then, everyone had been burning the midnight oil, so she wasn't the only one running on a few hours of sleep and lots of coffee.

Although Adora and Catra looked far more awake than they should be if they had been doing what the rumour mill on base claimed. And Teal'c was… Teal'c. He probably could sleep while standing at attention.

But Sam had a briefing to conduct. And data to show.

She touched the screen, and it lit up with her prepared displays. She glanced at the General, but he didn’t joke about PowerPoint being a war crime, and so she started her briefing. “Based on the analysis we ran on all the sensor data, the explosion was caused by a Naquadah-enhanced warhead. If the bomb had hit the base - which was the intended target based on the course the ship had taken - it would have been completely destroyed.” And all people on it would have died. The small simulation running on the screen next to her showed that.

“Yeah, I think we got that already since it almost destroyed the world.” The General bared his teeth in a shadow of a grin.

He was joking, but not as much as he probably thought he was. “The bomb, or, more precisely, the knock-on effects of its explosion, came close to destroying the planet's ecology,” she told him, noticing how his eyes opened wider at that. She changed the display on the screen, showing the planet and then the explosion. “Without intervention by the Alliance, the various ecosystems of this world would not recover and likely be unable to adjust to the devastation, affecting other areas. The direct and indirect effects of the thermal energy and radiation released into the planet alone would be enough to cause a catastrophic disruption of the life cycles of most of the fauna. The complete collapse of the planet's biosphere would have been unlikely, but only because certain primitive plants would have survived.”

Everyone was staring at her even though that shouldn't have been news to most of them - that was why they had called in Frosta and Perfuma. But even those two looked shocked.

Yes, everyone was still too tired, in Sam's opinion.

“If they had launched that thing from their ships…” Glimmer trailed off.

“Between the sensor jamming, the fighters in the atmosphere and the pursuing frigates, the odds of any missile large enough to carry the enhanced warhead reaching the base would have been low,” Bow said. “That was probably why they tried to force their way to the base, or close enough.”

Sam nodded in agreement. The Ha'tak had been on an end run when the bomb had blown up. Whether that had been due to battle damage or because the ship's commander had realised they wouldn't reach firing range and decided to detonate the bomb anyway, they probably would never know.

“So, your jamming field saved the base,” the General said, smiling at her. “Good work, Carter, Entrapta.”

Sam felt pleased but hid it. She had just done her duty, she reminded herself - as had all the others who had fought in the battle. “Efforts to stabilise the ecosystems and deal with the lingering effects of the explosion are ongoing, but preliminary analysis is positive,” she went on, nodding at Frosta and Perfuma. “However, the process, while self-sustaining, will take months to years to finish.” At which point the filter plants were supposed to die off without the pollution they required. It had worked in the former Fright Zone, but this was the first time they were used on a global scale.

“Good.” Adora smiled for a moment. “But we need better defences - if Ba'al is willing to destroy worlds, we have to be prepared.”

Sam and Entrapta had some ideas about that. Planetary shields. Missile defence systems. Directed sensor jamming fields that didn't disable the FTL communications and targeting sensors on the world they defended. They all would require massive investments, but data and footage from this battle would likely convince the Alliance leaders to adjust their budgets. If the Goa'uld used such bombs against Earth or Etheria… She shuddered at the thought.

“Adora's healing has taken care of the effects of the radiation, and our filters and masks are more than able to deal with the lingering pollution, so there's no long-term danger to the health of the garrison and staff,” Sam continued. “Incidentally, all the wounded who were not evacuated to the hospital ships are back on duty now.”

“Did I miss someone?” Adora spoke up.

“All serious wounds were dealt with,” Glimmer told her.

Sam nodded and took a step to the side, letting Entrapta take over.

“Now, salvage!” Her friend beamed. “We've got lots of ships and ships’ parts to recover! And a lot of ships to repair, so we can use

some parts we salvage for repairs. Not too many, though, since they only had like half a dozen Horde frigates." Data appeared on the screen as her hair moved over the controls. "Fortunately, reinforcements will bring the fleet train with them, so we should have most damaged frigates at least partially repaired in a few weeks. But! Full repairs will take months at the currently projected rate." Entrapta pouted. "We just don't have the repair capacity available in this area to handle everything at once - and sending the ships back to the main logistics hubs would take as long. We should build up more repair capacities, but that would reduce our short-term repair capacities. But it would help in the long run!"

It was a sensible plan - the Alliance needed to massively increase their production capacity to win this war - but they didn't know if Ba'al would let them or if they needed the fleet units here repaired as fast as possible to defend against his next attack - and defeat him. They desperately needed more intel.

"So… almost all the ships we can salvage are in space. Because those who crashed on the planet aren't salvageable any more. Except this one!" Entrapta gestured, and a picture of the crash-landed HMS Bulwark appeared on the screen. It was half-buried in a small hill. More data appeared next to the picture, listing the damages.

Sam winced even though she had seen the data before.

"As you can see, she needs new engines - if her engines had been intact she wouldn't have crashed, though the engines were intact enough to let her crash-landed instead of crashing completely - and a lot of other stuff, but the engines are the main thing. And we can't use the yardships until we get her up to space, though that shouldn't be a problem once we have a squadron to coordinate their tractor beams and made sure that the hull's vacuum-proof again. Which is kind of a problem, but everyone should be wearing a vacuum suit anyway for safety reasons. Like in a lab. And we need to…"

As Entrapta went into the details of salvage, Sam stifled another yawn. She needed more coffee, but the General, who looked like he was just one soft chair away from falling asleep as well, was eyeing her with that familiar look that told her she would be ordered to rest after this.

Well, she did need the sleep, and things were under control. For now, at least.

*****

Base Portsmouth, PT-9521, PT-9521-System, June 25th, 2000 (Earth Time)

"Alright, everyone and everything's clear - lift'er up!"

"Commencing operation."

Catra watched as the massive hull of HMS Bulwark was lit up by six tractor beams and seemed to tremble just a bit.

"Synchronising the beams."

"Beams Synchronised. Variables within tolerances."

"Starting to lift."

As the Clone kept reporting, the transport slowly started to rise from where she had buried herself into half a hill. The vast majority of the earth and rock that had been covering her bow had been removed before this operation, which had delayed the salvage, but even so, streams of dirt and smaller rocks rained down on all sides of the ship, forming streams in some sports, as it slowly rose higher and higher. Catra saw larger rocks and entire boulders tumble through the air, one bouncing off the hull twice before hitting the ground. Well, the hull was holed multiple times anyway.

But the fleet transport kept rising, tethered to the six frigates arrayed above her by tractor beams. Soon, she was far above the

ground, lit up by the sun.

Still, getting the transport off the ground was the easy part, as Catra knew. Getting it into orbit would be tricky. That required far more fine control than merely lifting it up.

"Closing in."

The six frigates slowly approached the transport, closing the distance until they were less than a hundred metres away on all four sides, with two on top.

"If that works out, they should start an air acrobatic team," Jack commented next to her.

"Do you doubt Sam and Entrapta's calculations?" Catra asked without taking her eyes away from the floating ships above them.

"No. But I don't doubt that some piloting mistake could still mess things up."

That was true. But it would have to be a truly huge mistake - or deliberate sabotage - with all the computers controlling things and the close overwatch and coordination from the lead ship of the squadron. Then again, Catra had seen such mistakes in the Horde. And not just from Kyle. "We'll see," she said.

"Initiating second phase."

Catra saw the engines light up before her ears picked up the growing noise from them, and then all seven ships started to accelerate.

"Target velocity reached."

"On Course."

Catra shrugged as the ships shrank until they were just a speck in the sky. "Looks like it worked."

“All that for a proof of concept,” Jack said. “Could have just waited for the yardship to arrive in the system and pick her up.”

They could have. But they had limited numbers of repair ships, and picking up a fleet transport from the ground would have still required the help of a few frigates - yardships were meant to recover ships in space. And it was good to know that they could recover ships with synchronised tractor beams; that kind of capability could come in handy in the war. “I guess the squadron will be nicknamed the Heavy Lifters or something like it,” Catra said.

“Probably. The Clones don't really get that call signs are supposed to be something to rib people about.” Jack frowned in a slightly pouty way.

“It's not a call sign. It's a unit nickname,” Catra corrected him. “Those are supposed to raise morale.”

“The Clones are too serious; a bit of humour would help them more.”

Of course, Jack would think that. “They have a sense of humour. It's just a bit subtle compared to what other people I know think is funny,” Catra shot back.

“Hey!” Jack mock-frowned at her, then sighed. “Well, that's over with. Time to get back to paperwork.”

Catra shrugged again. “Good luck. I'll check out the terra-reforming efforts.”

Before Jack could complain about her skipping paperwork, they saw another frigate appear in the sky. No, not a frigate - that was HMS Albion, the second fleet transport. “That must be the salvaged shield generators,” Catra said. “Someone got lucky up there.” Or unlucky - often, the shield generators didn't survive when a ship went down, but sometimes, a ship was wrecked after the shields were overloaded and shattered, with the shield generators themselves still intact.

“Won't stop a superbomb,” Jack muttered. “The shockwave in the atmosphere makes it too strong.”

“But it will protect the base against a closer miss,” Catra pointed out.

Jack shrugged. “Might probably be more effective if we used the thing on one more ship.”

Catra agreed, but leaving the base entirely unprotected was unacceptable.

“And I can already hear the howling back home on Earth. Everyone will want planetary shields and huge anti-orbital guns and everything else they think will stop such an attack.”

“That's what the fleet is for,” Catra commented. One enhanced warhead, ten normal warheads… if you destroyed the ship carrying them before it could fire them, it wouldn't matter what had been carried.

“Won't make people feel as safe as having a huge shield protecting the world,” Jack said. “We'll spend the money.”

“Do you think that was Ba'al's plan? Make us cut back on building ships in favour of building massive shields?” Catra asked.

“Might have been part of his plan,” Jack said. “But there's probably more to it. The snake's smart.”

But they didn’t know how smart. And, more importantly, they didn't know how much Ba'al knew about the Alliance and how many forces he had at his disposal. Without more information, without solid intelligence, they could only speculate, and you couldn't really plan a war on that.

It was like swinging blindly in a dark room and hoping you took the other guy down before they knocked you out. If you had a staff and they didn't, if you were stronger, tougher, better

protected, than them, you had good chances. If the reverse was true… you better hope you got lucky.

Catra really wanted to know if she had to hope for a lucky punch (or plan a desperate gamble) or if she could be confident that they were likely to win as long as Ba'al didn't get lucky.

*****

Base Portsmouth, PT-9521, PT-9521-System, June 27th, 2000 (Earth Time)

Reinforcements had arrived. Finally. “Better late than never,” Jack O'Neill muttered as he watched the frigates fan out on the holographic display, relieving the various damaged but still serviceable ships on station.

More important was the arrival of Fourth Fleet's fleet train. Several yardships were already moving towards the Lagrange point, where the ships awaiting repairs were gathered, followed by the factory ships, which would supply them with the parts they needed.

And further out, mining ships covered by a couple of escorts were headed to the system's various asteroids to gather raw materials for the factory and refining ships.

HMS Bulwark was first in line for repairs - Jack had insisted on it. If Ba'al sent a bigger fleet and they had to evacuate the planet, they'd need her to get the troops off the planet. Sure, they could stuff the soldiers on the frigates, but that would mean leaving most of their gear, and that would come a bit too close to reenacting Dunkirk, in his opinion. The gear could be replaced - probably with more advanced stuff - but the hit to morale would remain for quite some time.

Besides, the fleet transport wasn't that much bigger than a frigate, and a single frigate wouldn't make much of a difference in a Fleet engagement. Not with the numbers present. To think that just a few years ago, two of Apophis's Ha'taks had been an overwhelming force which would have devastated Earth if not for

some luck and a lot of desperate action! Nowadays, the most concern the Alliance would have over an intrusion by two Ha'taks would be trying to make sense of such a move, whether it was a distraction or a mistake, or something even more convoluted.

Whatever. It seemed the Clones had things in hand in space.

Jack turned away from the display and went back to his desk to fight another battle with paperwork. Hell, once he was back on Earth, he had a few things to say about streamlining procedures for handling the wounded when magical healing was available. Those damned regulations were obviously not written with mass healing by She-Ra in mind! Or with attacks that potentially affected everyone on a planet. Someone must have been really concerned about wounded soldiers not getting their due if they were healed too quickly since, if he handled it by the book, they'd end up with a 100% casualty rate on report. Just because, technically, everyone had been dosed with the radiation from the enhanced snake bomb going off and then healed by Adora before they could find out if they were actually in need of the healing or not! Purple Hearts or whatever the limeys awarded for being wounded for everyone!

He couldn't even dump the whole thing on Adora as the Supreme Commander - Catra would find a way to deal with the paperwork, Jack was sure, if only to ensure her lover had some time free to spend with her for the next month or so - because he'd have to process all the reports anyway for that.

Well, at least he had an excuse to delay filing the paperwork 'until the current situation at the front allowed it'. It was a wonderfully vague term, and as the commander for the entire ground component of the operation, he got to define the situation as he wanted.

And he wanted it to be as dire as needed to bury the damn healing paperwork until he could dump it on the same people back on Earth who made the regulations that caused this mess.

He quickly saved all the medical reports in a special folder marked ‘not urgent, don't touch’ and focused on the reports that actually were critical. Unit readiness was good. Unlike the fleet in orbit, all of his troops were ready for action. Base defences were getting there. The shield generators were coming online - he made a mental note to check on Carter's sleeping schedule. They wouldn't be able to withstand whatever superbomb Ba'al had tried to use, but Death Gliders and Tel'taks would have a very hard time getting through those shields even if they came at it by the dozens. Unfortunately, they still didn't have anti-orbital defences and wouldn't get them in the foreseeable future unless Carter and the other science and technology people here took over a factory ship and built some big honking space guns or torpedos launchers.

Which was actually not that implausible, he realised as he thought about it. If he asked, they would probably do it. But should he ask? They had a lot of other critical tasks, and a factory ship building anti-orbital cannons wouldn't be building parts to repair the damaged ships…

He sighed. As much as he liked to give his soldiers the ability to shoot back at people trying to bomb them - who wouldn't? - having more ships doing that further away from the planet so they couldn't drop a superbomb on another part of the world would be more effective. So, no big honking anti-orbital guns for him.

And, speaking of damaging the entire planet… He checked the reports from the ‘restoration task force’ aka Frosta and Perfuma. He skipped all the magical and sciency details until he got to the summary. So, the dust in the air would remain for a bit longer - the filtering plants were spreading but hadn't reached the tip-off point yet - but the planet wouldn't dry out or flood in the near future.

In other words, the planet wouldn't die, but his troops would have to wear masks for a while longer. They would grumble about it, of course, but soldiers complained about everything. Even if he gave

every one of them a week's leave, they'd complain about not getting two weeks. Or not getting leave wherever they wanted.

He shook his head and started to go over the report from supplies.

*****

Orbit Above PT-9521, PT-9521-System, June 26th, 2000 (Earth Time)

"Your Divine Highness! I mean, Supreme Commander!"

The Clone guard - from Fourth Fleet - had corrected himself, but Adora still narrowed her eyes at him. She was on duty, so she was to be addressed by her rank, not by any… religious title. She still returned the salute, of course, and entered the flag room on Fourth Fleet's flagship, which was now serving as a meeting room for the staff in the system.

"Hi, Adora!"

"Hi!"

"Good morning, Supreme Commander."

"Supreme Commander."

"Supreme Commander!"

She nodded at Glimmer and Bow, then at the other officers in the room, frowned at Jack's overeager greeting and smirk, and took her seat. "Catra's coming," she told them when she saw them eyeing the door. "She just wanted to wait for the results of her analysis."

"Analysis?" Glimmer blinked.

"Of our latest intel," Adora replied.

"Ah." Glimmer nodded. "Well, another opinion can't hurt."

That sounded a bit dismissive, Adora noted. Before she could say anything, though, Catra arrived. She strode inside as if she was on a catwalk - strutting - but Adora could tell from the way her hair was just a little messed and how her tail looked that she had been sprinting through the hallways on all fours to reach the room. But Catra's smirk also told her that she had found something.

"Hey!" Catra waved with one hand, the other holding a tablet, then sat down next to Adora.

Adora cleared her throat and stood. "Welcome, everyone. Now that Fourth Fleet's main force has joined us, we'll have to decide our future strategy. We've all read the status reports, so we know it'll be several weeks until all damaged ships will be ready for service, but we already have enough ships to cover the system and launch offensive operations." She ignored how Jack peered at his tablet; she knew he had read the reports since he had called her about some of the details beforehand and was just trying to annoy the British officers for one reason or another. "Unfortunately, we still haven't discovered a suitable target in the area. The prisoners we took didn't know the coordinates of any system serving as a base for Ba'al."

"We also confirmed that the navigators who knew such coordinates either took their own lives or were killed by Jaffa with special orders," Jack added with a grim expression.

Adora pressed her lips together. How sick did you have to be to give such orders? She took a deep breath. "But several of our spy bots are still out searching, our spy bot network is steadily expanding, and the Tok'ra are focusing on Ba'al's realm, so we expect this to change soon."

Judging by the expressions of the officers from Earth, they weren't very optimistic. The Clones though, both Fourth Fleet's provisional commander, Padre, and the commander of its fleet train, Wrench, were smiling, obviously trusting Adora's judgement completely.

She ignored the guilty feeling that caused inside her and nodded confidently. “So, opinions?”

The Captain of HMS Albion, Captain Baker, spoke up. “We’ve destroyed a major fleet of Ba’al and took few total losses. Even if this wasn’t the main part of his forces, he has to be reeling from the loss. We should capitalise on that and send smaller task forces into his territory to raid targets of opportunity to keep his forces off-balance and reacting to our raids.”

Catra spoke up before Adora could comment. That was a little unusual. “We’ve got an opportunity here. As we already know, Ba’al is running his realm as Horde Prime had been running his Empire - only he knows where everyone is and what their orders are. He deliberately keeps his forces divided and ignorant. That means that even though we are confident that he is reeling from losing a major force and has to be scrambling to replace his losses, his other forces won’t panic since they won’t be aware of this. However, that also means they won’t be able to coordinate their defences. So, we should mass our forces and overwhelm his bases and fleets piecemeal.”

“We don’t know the locations of his bases and fleets.” Captain Baker said. “And depending on how large his territory is, we might not be able to react in time to an opportunity unless we stage forces closer to and inside his territory.”

“If he concentrates his forces, then that gives us an opportunity to force a decisive battle on him,” Padre said. “If we can destroy his main fleet assets, we can raid his bases at our pleasure.”

“Someone has read the IJN’s handbook,” Jack muttered.

Padre nodded. “Indeed. And I believe that in our current situation, it’s an applicable strategy. The sooner we can destroy his forces, and with as much numerical superiority as possible, the better.”

“We still don’t know the extent of his forces,” Captain Baker pointed out.

“We don’t,” Catra said. “But we can’t wait until we do. As long as we can achieve local superiority, we can hurt him without suffering large casualties. And we cannot let him build up his forces.”

“That is why I think a spread-out force of small raiding forces would be best - they can strike at his bases whenever we find them and degrade his logistics and industrial assets.” Captain Baker wasn’t budging.

So, it seemed it was up to Adora to decide on what strategy they would take.

She pushed her chin up a little. “Until the majority of our ships are back in service, we won’t divide our forces and render them vulnerable to another massed attack,” she told them. “We should have more intel by that time, too.”

Captain Baker nodded, apparently accepting her decision. Good.

Now, they had to hope that one of their potential intel sources came through.

*****

PT-9521-System, June 28th, 2000 (Earth Time)

Samantha Carter didn't have to be present at the Lagrange point where most of the ship repairs of Fourth Fleet took place. She wasn't part of the fleet train, nor were routine repairs part of her duties. But between the yardships busy restoring the frigates which had been damaged in the battle and the factory ships churning out replacement shield generators, weapons and other spare parts, what salvage had been gathered from the enemy fleet floated, awaiting disposal. And while it would be easy to simply assign them to be dismantled and recycled, broken down to their components or even base materials and used for repairs and by the factory ships, the Alliance needed every shred of intel they could get - and you could gain a lot of data from a thorough analysis of an enemy ship. She could have supervised that from

her lab module with the frigate carrying it stationed anywhere in the system, but if she was on site, she could personally take a look if needed, and she liked that. Not that it had been needed so far.

“We should have done this sooner,” she commented while she supervised a bot taking samples from what was left of a Ha'tak. But there had been so much else to do.HMS Bulwark had to be salvaged, and none of the Clones had any experience with that kind of operation - the Horde simply wrote off any frigates that crashed on a planet. She had been tasked with designing anti-orbital weapons that could be hastily built and installed (and then ended up not built because priorities had shifted - Sam had had flashbacks to procurement on Earth. At least the General had apologised.) and the spy bots still attached to enemy ships had to be managed and checked on regularly so they didn't miss out on crucial intel, not to mention the mountain of other works piling up - literally, back on Earth, electronically here - on her desk.

“Yes!” Entrapta, of course, didn't disagree. “There's so much data to be had here! The material analysis of the hulls shows where they were built - well, not the coordinates, but we can tell which ships were built in the same yard based on the isotopes in the material.”

It was not a hundred per cent confirmed, of course - but the building techniques used by Ba'al's yards also showed differences that supported their assumptions. Unlike Earth’s new shipyards, Ba'al’s used a lot of customised work where individual labourers took the components delivered to the yard and then adapted them to fit into a particular ship. That had been a common way to get around insufficiently tight tolerances in production back on Earth as well and let them draw conclusions about Ba'al's resources. Well, that and the fact that they had captured one of his shipyards with its trained workforce, but any confirmation was useful.

Though that might change if Ba'al switched to Horde yardships and factory ships for production. He was using them, that was

certain, but was he able to build more of them and expand production? The fleet he had managed to recruit had limited resources, but if they could rely on Ba'al's slaves and mining bases, that would allow them to focus on building new yardships and factory ships, which would significantly speed up his arms programs. At least Sam's projections said so; there was still hope that there would be the usual friction and unforeseen complications delaying his programs.

“Oh! The analysis of all the beam weapons we recovered - and the parts we salvaged is done!” Entrapta announced.

“Ah.” Sam checked that there was no urgent task waiting for her, then joined her friend at the console in their lab module.

“Oh!” Entrapta almost cheered. “They are from the same factory, but we've got at least three different versions!”

Sam quickly checked the data herself. Entrapta was correct, not that Sam had doubted her. The beam cannons showed at least three different variations. “Standard Horde beam cannons, by and large, but there are also small numbers of simplified beam cannons. And here’s an even more reduced version.”

“Those are less powerful than standard beam cannons, though,” Entrapta said. “Did they work up to standard beam cannons?”

Sam switched windows. “All the data we have indicates that the beam cannons were produced by the same factory - or factory ship.”

“Hm.” Entrapta scrunched her nose as she thought. “And those would have had the designs for the standard beam cannon already. Why produce inferior variants, then?”

Sam grimaced. “Because the simpler versions will be able to be produced in greater numbers and with fewer resources. And they might be able to be produced by Ba'al's workers in new or refitted factories and yards.”

“Oh. That would mean he can get more of them to make up for their inferior performance…” Entrapta winced.

Sam nodded. Ba'al was upgrading his entire forces. They had to…

A beep from the main communication console interrupted her thoughts. That was a priority message - the spy bots!

She quickly changed the screens and took a look. A message burst from one spy bot attached to a Ha'tak's hull. Navigational data and pictures - days old, but apparently, the spy bot had just now gotten into range of the network.

She studied the pictures. That was a sizeable fleet - about the same numbers as the one they had defeated. Or even larger. And… “Are they building a space station?” she asked.

“...no.” Entrapta sounded uncharacteristically grimm, and Sam turned to look at her. “I recognise that part. They're building a flagship like the Velvet Glove.”

*****

Ba’al’s Machinations Part 6

Base Portsmouth, PT-9521, PT-9521-System, June 28th, 2000 (Earth Time)

“So, we’ve got a Death Star to destroy before it gets online. Anyone call Luke Skywalker?”

Catra snorted, once, at Jack’s joke. She had expected that joke ever since she had seen the pictures from the spy bot. It wasn’t that funny, though.

“Since the ship is still in the process of being built, this would be more like the second Death Star, and so I believe we should be calling Wedge Antilles and Lando Calrissian,” Teal’c said in a serious voice. Only the way his lips barely twisted upwards showed that he was joking as well.

But he was correct. “Yes, it’s more like the second Death Star. There are a few squadrons of frigates protecting it, together with a lot of Ha’taks and their escorts and a small army of Death Gliders,” Catra said. “And it looks like a trap as well.”

“A trap?” Captain Baker frowned. “What do you base this on?”

Mostly her gut feeling, but she couldn’t say that. Instead, Catra told him: “Ba’al concentrating all his efforts on a huge base ship? Instead of building multiple yardships and factory ships to expand his fleet train, spread out so if he loses one or two, it’s not going to be crippling his forces? That sounds fishy.”

“Are you honestly suggesting that he would spend so many resources to bait a trap?” Captain Baker shook his head.

“If that’s not a fake ship but a real copy of Horde Prime’s flagship, then Ba’al will have more forces protecting it. Not just double the fleet he sent against us,” Catra retorted. “So, whether this is a trap or not, if we attack it expecting to deal with a handful of

Horde frigates and his upgraded Ha'taks, we will be jumped by a lot more ships."

"Indeed." Teal'c nodded. "Ba'al has a reputation as a cunning foe. He would not merely place his guard ships in the open but attempt to hide them so an attacker will underestimate him and be drawn into his trap."

"Well, then we will spring the trap - send in a smaller force, and once he sends in his real force, we jump them!" Jack said.

That sounded like a recipe for a hell of a mess. Four forces trying to entrap each other? And possibly more on the way? Coordinating such a battle would be a nightmare.

"Sounds good." Catra grinned. If Ba'al's forces had one weakness, it was that they were bad at improvising on the spot without orders. Even if Ba'al managed to avoid getting jammed, his ships would be slow to react to any surprise. The more chaotic the battle, the bigger the Alliance's advantage would be.

"But where did he get the plans for Velvet Glove? Not even First Fleet had them; Horde Prime took that data into the grave," Bow said.

"More like into a space plant," Jack commented.

"Yes!" Entrapta nodded several times. "Horde Prime didn't share that data with anyone. So… how did Ba'al get it?"

"Did he get it? He could just be trying to copy the appearance of Velvet Glove," Adora said. "If this is a trap, then it wouldn't matter if he had the real plans or not."

"Redesigning such a huge ship from scratch based on its appearance would be a challenge," Sam pointed out. She would know, having had to redesign the pieces of junk the Americans were building several times over. "You cannot simply scale up a smaller design - not with such a huge size difference. Just building engines able to move the ship at combat speed would be a

massive undertaking. I sincerely doubt that Ba'al would have managed that in the time since Horde Prime was defeated."

"What if he started before Horde Prime was killed?" Daniel asked.

"How?" Glimmer shook her head. "Horde Prime didn't even tell his clones about his plans; how would Ba'al have managed to get such data?"

Catra nodded. That was a good point. And to nip the next question in the bud, she said: "And if Horde Prime were still alive somehow, or Ba'al had enough information to fake his survival, he'd have taken over the Lost Fleet much more easily - and likely a lot more Clones."

Daniel raised a finger and opened his mouth but closed it again without saying anything.

"Preliminary analysis of the data we have would indicate that Ba'al is focusing on the parts of the original design that served as yards and factories for the Horde," Sam said. "He might be planning to get those functional and working, and install engines at a later date. Or treat the ship as a semi-mobile space station and move it with tractor beams or smaller engines if it needs to be moved, though he would still need a hyperdrive capable of opening a hyperspace window of this size."

"Still makes no sense, though," Jack complained. "Why build a station as if it were a ship if you can't build such a ship in the first place?"

"It might be the psychological effect," Daniel cut in. "By rebuilding Horde Prime's flagship, or building a space station in its image, Ba'al could claim to be his successor. That would likely increase the loyalty of the Clones serving him."

"All that effort just to make a statement?" Captain Baker sounded doubtful.

"It would impress a significant number of our sadly still lost brothers," Padre said.

"And the Goa'uld love to make such gestures to impress their rivals - and their own people," Daniel added. "Horde Prime was not merely a System Lord - his Empire was a peer of the Goa'uld Empire, at least. By claiming Horde Prime's mantle, Ba'al is elevating himself above all his rivals."

That certainly was true. But Catra didn't think Ba'al would go to such lengths just to make an impression. Still… "Also, if he can make them think he actually has a second Velvet Glove - or Horde Prime's flagship, the other Goa'uld might not know yet that it was destroyed - a number of them might think twice about attacking him. Especially if his forces use Horde technology. He might scare some potential enemies into joining him."

Adora nodded. "So, this ship is a symbol that will help him recruit more people for his armies and it will be producing large numbers of Horde frigates and other materials soon, but it can't move or be moved yet. That means we need to destroy it before it can move and we lose track of it - and preferably before it starts production."

*****

"Yep," Jack O'Neill said, "we'll have to destroy the massive space thingie before the evil space dictator turns it on and controls the Galaxy. And we'll have to deal with his entire fleet as we do so. All we need now is a commando raid to take out the thing's shields so we can destroy it, and George Lucas can sue us."

No one laughed. Carter even frowned at him, and Daniel rolled his eyes.

"You already made the Star Wars joke, Jack," Catra said.

Well, yes, he had - but a little humour never hurt anyone. Well, almost never. Some guys tended to react very badly to some jokes. Especially if they were about them.

“I have doubts that a commando raid would be useful for what seems to be a fleet engagement against a nonfunctional stationary spaceship of unusual size,” Captain Baker said. “What are the odds that they have a shield generator ready to cover the thing?”

“Nothing we have seen so far shows a shield generator or preparations for one,” Carter said. “Although the size of the ship means they could easily add multiple frigate-sized shield generators to cover it.”

“Those generally cannot withstand the focused fire of a squadron of frigates, much less a fleet,” Captain Baker said.

“Well… they would be harder to crack since they don’t cover an entire ship, just a part of it, and so they could focus their entire strength on a single side.” Entrapta scrunched her nose. “It would take four to six squadrons coordinating their fire to have the same effect on the shield, more or less - it depends on the exact shape of the shield and its size. If they spread it out so the surface area of the force shield remains the same as the surface area of a frigate’s shield, then the overall strength, and the firepower necessary to crack it, wouldn’t change compared to a frigate. Although the sheer size compared to a frigate means we’d need more firepower to actually disable and destroy it after the shields shattered.”

“That’s still a fleet target,” Captain Baker said.

“Yep,” Jack said. “But we also need as much intel as we can get - and that means boots on the ground. As soon as we know which ground to put them on, of course.”

“We already know the target’s location and that it currently cannot move - we have a spy bot observing the target providing us with almost real-time information,” the limey protested. For the captain of a fleet transport, he seemed very fixated on not getting to drop troops somewhere. “What more intel do we need? We already

know that their fleets are gathering at rally spots in deep space, not near a planet."

Jack shook his head. "We don't know enough about Ba'al's forces - not nearly enough. We've been stumbling into this half-blind, mostly reacting to his moves and rushing as soon as we get something. Now, we can watch that thing be built and take our time - the ship won't be ready any time soon, so we don't need to rush in before we get a bigger picture of Ba'al's realm."

"The longer we wait, the more ships he can build," Glimmer said with a frown.

"We're building ships as fast as we can as well," Jack retorted.

Catra nodded. "But we need intel to know if we're outbuilding him or not."

"The amount of resources going into this construction has to affect his other projects," Carter said. "This would be a massive drain for the Alliance."

"And what if he has the resources to spare? He's been at this for a thousand or more years," Bow said, "or so we heard."

"But he hasn't had access to Horde technology for more than a few years, tops," Catra pointed out.

"So we think," Glimmer shot back.

"Any way you cut it, we need more intel," Jack said. "And that means we need spies and scouts everywhere - including on that thing if we can manage that."

"The same spaceship we're about to destroy as soon as we get the orders to do it?" Captain Baker asked.

"Yep." Jack bared his teeth in a cocky grin. "Because one thing is certain: A snake as paranoid as Ba'al isn't going to let anyone else

control that project. Sooner or later, he'll visit. And I don't know about you, but I think we should make sure to nab him this time."

"Unless he sends another clone of himself," Catra said.

That was a distinct possibility. But Jack somehow doubted that Ba'al trusted even his own clones. "In any case, we need more spy bots and more scouting missions in every system in the area here - and on that ship." That would also keep his troops busy and sharp.

"But we can't wait too long - sooner or later, the ship will be functional," Glimmer said. "At least partially."

Catra shrugged. "We'll prepare a plan to destroy it with a raiding force. Shouldn't be that hard if we can get an enhanced Naquadah bomb inside it."

"We need to ensure first that there are no slaves trapped on the spaceship," Adora said. "We're not going to blow up the ship with hundreds or thousands of innocents in it."

Jack suppressed a wince. That would be tricky. "We'll have to drop a team directly on the spaceship, then. That will be a challenge even with a stealth shuttle."

Adora nodded. "I know, but we have to do it."

Well, Jack had asked for that.

*****

Base Portsmouth, PT-9521, PT-9521-System, June 28th, 2000 (Earth Time)

"...and based on the most recent data, we can extrapolate that parts of the ship's factory section will be activated in a few weeks provided that they do not step up their efforts. While not conclusive, the workers seem to focus on those modules instead of weapons and shields - or propulsion, though since they are

using modular construction, that is not definitive; they could be adding weapon and shield modules quickly, as long as they construct them in the factory ships - they have the frames for the modules installed, and we, unfortunately, cannot tell from the data we have what exactly each factory ship is producing."

Adora nodded at Sam's report. That was what she had expected - a spy bot latched onto a ship guarding the construction could only do so much. It couldn't see into enemy hulls and any attempt to remotely hack the systems was impossible over such a distance even if they managed to get a connection to the Ha'tak's systems.

"So, it's about what we guessed - Ba'al is focusing on production. He wants a factory star, not a death star," Bow said.

Glimmer rolled her eyes, probably at his reference to Star Wars, but she nodded in agreement. "That supports the assumption that he is trying to build up his production capacity for Horde technology and is using his less advanced ships to keep us too busy to interfere."

"We don't have any hard evidence for that, though," Catra objected. "He launched one attack at this system; if he is trying to keep us too busy reacting to attack him to spoil his buildup, he would need to launch more attacks, both at this base and at others."

"Those attacks might still be happening; he might have sent out other fleets to strike at us - or he hasn't found more of our systems to strike at yet," Adora said. At least, with the spy bot network covering all of the Alliance systems and their surrounding areas, they would have some warning. Still, they couldn't cover every part with enough ships to repel a Goa'uld fleet with Horde technology, so they had to strike at the enemy's capacity to make war.

"As we keep saying, we need more intel about his plans," Jack said. "Old Ba'al is pretty frustrating that way."

“That's why we're going to sneak into his superfactoryship,” Catra said.

Adora nodded again. They needed solid intel about Ba'als plans, the forces at his disposal, and the extent of his territory. They couldn't defeat him if he could hide and build up his forces after every lost battle. She looked at Sam again, pointing at the holographic projection of the ship under construction and the factory ships and guard ships surrounding it. “So, can we sneak in there with a stealth shuttle?”

Sam straightened just a little bit. “The fact that they haven't dealt with our spy bots yet would indicate that our stealth generators are still beyond the enemy's ability to detect. Although we cannot exclude the possibility that Ba'al's forces are aware of the spy bots and using them to feed us carefully curated information in an attempt to manipulate us.”

“And how likely is that?” Glimmer asked.

“That is hard to say,” Sam replied. “We lack the intel about Ba'al's plans to determine that.”

Catra made an annoyed noise. “If Ba'al noticed the spy bots, he would be aware that his project's security is compromised and that we know about the ship being built, so he wouldn't have anything to lose by letting the spy bot keep operating and using the entire site as bait for a trap.”

“Nothing except for all the resources that keep being poured into building the ship,” Bow pointed out. “If this is a trap, he's risking losing it all.”

“He might consider that a price worth paying if he can take out our fleet,” Daniel said.

“But he doesn't know how many ships we have,” Adora said. “He couldn't be sure if he did enough damage to us to make it worth losing those resources.”

“Same as we don't know if he can afford to use this as bait or not,” Jack said. “I say we risk it. The longer we wait, the less time we have to react if we discover something bad.”

“Yes,” Catra agreed. “We can't just keep attacking blindly.”

“Given Ba'al's standard doctrine of compartmentalising his forces and keeping his commanders ignorant of his overall plans, even successfully infiltrating this factory complex might not reveal much more useful intel to us,” Sam said.

“But it will give us more information about his ability to produce Horde ships and weapons,” Jack said. “And we're bound to get a lucky break,” he added with a grin.

Catra snorted. “That's not how it works.”

Jack shrugged. “What else can we do? It's better than doing nothing.”

“Only if we don't get caught,” Catra shot back.

“We'll prepare a raid by the fleet as well,” Jack said. “That way, we have the cavalry waiting in case we need a rescue.”

“Yes,” Adora said. They needed the intel. “But we need to check out the ship in construction, the factory ships and the command ship of the forces there. So, we either split up, launch multiple teams or prepare for a longer mission so we can infiltrate one target after the other.”

“Never split the party,” Jack said.

“Between Bow, Entrapta and Sam, we can cover all three parts at once,” Glimmer objected immediately.

Jack shook his head. “Only if everything goes according to plan. It never does.”

Splitting up or sending more teams meant Adora couldn't protect everyone in case something went wrong. A longer mission was more complicated and also increased the chances that something would eventually go wrong, but they would be together.

"We'll hit them one after another," Adora said. "We might get lucky and find what we need on the first attempt."

Catra raised her eyebrows - she probably wasn't fooled about Adora's real reason - but the others agreed, if a bit reluctantly, in Glimmer's case.

Adora nodded firmly. "So, let's start planning our infiltration."

*****

Near Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

Samantha Carter resisted the urge to personally check, once again, if the (slightly) improved stealth generator was working as intended. The readouts on her computer showed it was. And the improvements were nothing groundbreaking - just incremental improvements, increasing its power efficiency, dampening the already shielded emissions further and streamlining the routines that adjusted the stealth fields. Things they had done and tested on the way to the target while on board the flagship of this task force.

But a small part of her kept insisting that they needed more tests to be certain it worked, that they couldn't trust their current data, that the generator would fail in the worst possible moment.

The spy bot was still hiding, she told herself. The enemy sensors hadn't detected it, nor its transmissions. Of course, the spy bot was shielded by the bulk of the ship it was attached to - any stray emissions would either be absorbed by the Ha'tak's hull or attributed to the ship itself. That wouldn't be the case for the stealth shuttle here. And the stealth shuttle was significantly bigger than the spy bot, meaning its stealth field was bigger and

had a significantly higher power demand, which in turn meant more emissions had to be shielded, which was why she had spent the days in transit working on improving the shuttle, together with Entrapta and Bow.

All their data, including the analysis of the most recent examples of enemy sensor technology captured at the last battle, showed that the stealth field should work even at close distances - up to touching an enemy hull. Unless, of course, someone or something flew directly into it. No stealth field could hide a kinetic impact. But the odds of that were… well, not as low as Sam would like. They would be higher if they were to dock with an airlock on an enemy ship instead of going EVA and opening a lock manually, but even so, the shuttle's size was a disadvantage.

"It'll work, Carter."

She turned to narrow her eyes at the General. "I wasn't worried," she lied.

He clearly didn't believe her but nodded anyway.

"If it doesn't work, we'll throw Adora at them and hightail it out of there while the task force moves in to wreck the ship." Of course, Catra had overheard them and had to comment.

"Hey!"

Catra rolled her eyes. "As if you weren't planning to nobly hold them back while we escape!"

"Well…" Adora pouted, and Catra smirked.

And Sam felt better.

"So… let's do this!" The General clapped his hands together. "Everyone's in place, and things won't get any better if we wait any longer.

Sam was, out of principle, tempted to argue that, technically, that was incorrect - she could think of several ways where the odds of the mission's success significantly went up if they waited, such as if Ba'al was on the way for an inspection, but she could also imagine several ways where things would get worse if they waited, so she didn't say anything and focused on her computer. The enemy sensors didn't have the range to detect them out here, but you never knew.

"Yes," Adora said. "Let's start the mission."

The General moved to the cockpit, and Sam heard him ask for permission to launch half a minute later.

Permission was granted, and the shuttle lifted off - Sam could only tell thanks to the camera and sensor feeds; the inertial dampener worked perfectly. They left the hangar and quickly accelerated.

Then, the stealth generator was activated, and the ship's sensors switched to passive. Sam felt as if she had gone blind and deaf for a moment as the data feeds on her computer cut out, but all systems were working as expected, and the feeds were replaced with real-time data from the spy bot network a moment later.

"No change at the target," she reported. Construction continued at the already observed pace - she could see the icons of various transports shuttling materials back and forth between the 'Ba'al's Glove' and the factory ships surrounding it. There was no change in the guard force, either.

Everything was going according to plan so far. But that didn't mean anything - they were still too far out for anyone to detect them even if they didn't use the stealth generator. And they would take a while to reach Point Velvet since they wouldn't be using the hyperdrive for the last leg.

"I miss the fireworks," the General commented suddenly.

"What? Do you want us to be detected, Jack?" Daniel sounded aghast.

“No, I mean the fireworks back home. It's the Fourth of July.”

Sam didn’t need to see the General to know he was grinning widely.

“Oh, ah…” And Daniel would be pouting, having realised that he had been had.

But the small joke had lifted some of the tension inside the shuttle - she could hear snorts and chuckling - and Sam felt better as well.

Smiling, she went back to checking the data on her screen. She still had a job to do.

*****

Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

There it was: Ba'al's Glove. Catra liked the code name - it fit. Like a glove, Jack would say. And it removed some of the dread she couldn't help feeling when she saw it loom ahead. It looked too much like the original, well, like the original's lower-mid section. Same colour, same structure. At least from this far out. Up close, there were differences, as they knew from the spy bot's sensor coverage.

But they were approaching it, not yet close enough to make out such details, even with Catra's eyes, yet close enough so the missing parts didn't affect the impression it made as much any more.

She remembered her time on the original. Enough, at least, to feel sick. The days she spent afraid, trying to impress Horde Prime enough to be deemed useful, watching him play his sadistic games, his cruelness hidden behind false politeness and civility, until she couldn't take it - and her own guilt - any more and broke out Glimmer. And tried to die fighting the Clones, only to get captured and…

She shuddered at the fortunately vague memories of having the chip implanted in her neck, and her mind, maybe her soul, being changed - turned into a loyal drone of Horde Prime. The one thing she remembered most clearly from that moment was when her hair had been cut. She had done it herself, on his command. Let it fall to the floor.

And she remembered Horde Prime's frown at seeing the strands flutter around, spread across the room when she moved to kneel. The bastard must have hated it, but it had been his orders, so he couldn't complain. As far as payback went, it was very little, petty, but it was something.

And then he had sent her to fight Adora… Catra rubbed her upper arms with her hands when she remembered that. To fight her love - not that she had really realised, no, not that she had accepted that back then - all on the order of a sadistic megalomaniac…

She felt arms close around her shoulders. Familiar arms. Adora.

Her love didn't say anything, just held her. And Catra took a deep breath, closing her eyes for a moment. She was free. This wasn't Horde Prime's flagship. It was just a cheap copy still under construction - barely a space station yet, and not yet operational. And she wasn't alone; Adora was here. Her love.

She leaned into Adora's side and whispered: “Thanks.”

She didn’t see but felt Adora nod in return, even through her spacesuit.

Good.

And Melog was there as well, warmth filling her. She reached out and patted their head.

She was amongst friends. They would not let her down. And she wouldn’t let them down.

“Alright.” Jack's voice broke the silence in the shuttle. “There's our destination - a nice little maintenance hatch. Get ready to disembark while we close in.”

They had reached the ship while Catra had been… distracted. And the stealth generator was fooling the enemy sensors as expected - there was no reaction from all the guard ships and Death Gliders surrounding the Glove. None that they could see, at least. Ba'al might still be preparing a trap for them; he was the kind of enemy who would love such a ploy.

And they would turn it against him if he did. With a quip from Jack about George Lucas suing Ba'al, probably.

She smirked as she walked to the back of the shuttle, to the airlock.

Behind her, she heard Jack rise from his seat. “You've got the shuttle, Sha’re.”

“I've got the shuttle.” Sha're sounded a bit resentful - she didn't like staying back while everyone else entered the ship, and she had made that clear beforehand. But they needed someone qualified to stay on the shuttle, in case something went wrong. Or if it needed to move in case someone else used that hatch to do some maintenance or construction on the hull.

Or if they had to drop Emily on the hull somewhere so she could shoot her way into the ship - the bot hadn't liked staying back either, but she was too big and too loud to sneak through an enemy ship. At least until Entrapta managed to fit a stealth generator into her frame.

Catra stood next to Adora and didn't listen to Daniel whisper to Sha’re, nor to the sounds of them kissing, before he joined them at the airlock.

“Alright. Everybody is ready!” Jack announced. He talked a bit more quietly than usual - they didn't have to whisper; the vacuum outside wouldn't transmit sound even without the stealth field, but

you just didn't talk loudly when you were about to sneak into an enemy base or ship.

“Let’s go!”

The airlock on this shuttle had been modified to fit Emily, which had cut the cargo capacity down some but meant all of them would fit into the airlock without the bot. And that could be decisive in an emergency.

Catra felt the change in pressure as the air was pumped out, and a moment later, the outer door opened, and she was facing the maintenance hatch surrounded by the docking clamps surrounding it - non-magnetic since that apparently could be detected according to Entrapta.

“The section behind the hatch and airlock is clear according to our sensors,” Sam announced.

So, no Jaffa waiting in ambush right behind this door. Good.

“Keep scanning for suspicious gatherings of guards,” Jack ordered. “Don't want to walk into an ambush once we start exploring.”

“Yes, sir.”

Bow was already working on the door controls, and a minute later, the hatch slid open, and they entered the enemy ship.

Catra bared her fangs when she set foot in it.

*****

Ba’al’s Glove, Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

As bizarre as it was, Jack O’Neill’s first thought when entering the ship was that Ba’al had kept the Horde colour scheme. “It looks like Ba’al can’t afford gold-plating his new toy,” he said as the group moved through the empty hallway.

“It would clash with the theme,” Glimmer commented.

Catra, already ahead of him, snickered, but Jack had to glance at Glimmer to check if she was serious or not - she sounded a bit off. Oh. She had been kept prisoner on the original Velvet Glove. Of course, she would be a bit stressed walking in the same corridors.

“Well, if he is planning to symbolically, and maybe literally, take up Horde Prime’s mantle, he probably can’t change the aesthetics of the flagship much, if at all,” Daniel said. “I don’t think we can deduce that Ba’al’s suffering for resources from this.”

Way to miss the point, Jack thought.

“Constructing such a huge ship would be a drain on anyone’s resources,” Carter cut in as they reached an intersection. “Just the construction crew we discovered so far will require huge efforts to train, house and supply.”

That was good to know. And bad as well. Good because it meant blowing this ship up would harm Ba’al significantly. Bad because blowing up this ship would kill a lot of people whose only fault was having been born into slavery under the snakes. And Ba’al had proven that he would rather see his people die than flee or surrender.

Jack frowned. Maybe they could steal the ship with all the working crews on it? “So, the computer core you want should be in the central section, right?” He checked the map on his helmet’s HUD display. Yep, down in the centre of the ship as it was built so far.

“Yes, sir.” Carter nodded without looking up from her handscanner.

“I don’t suppose it’s the local nighttime, and we can just walk inside?” Jack grinned. He could see workers appear as the scanner updated their position.

“No, sir. They seem to be working around the clock. In two shifts.”

“Ah.” No eight-hour work days for Ba’al’s slaves. Of course, even twelve-hour work days were more generous than Jack had expected, but maybe Ba’al had learnt that having tired workers build his ships was a recipe for faulty craftsmanship. Which would be bad, of course, for the Alliance, but good for his slaves, in the short term.

“There’s a patrol of Jaffa headed our way!” Carter suddenly announced.

A moment later, the HUD display updated. Yeah, standard four-Jaffa squad on patrol. “Let’s hide,” Jack said, looking for a dead end… there! He marked the spot on the HUD and started walking. “Come on!”

The others followed. Carter slowed down a bit when she tried to operate her computer and hustle at the same time, but Entrapta picked her up with two hair tendrils, and they quickly caught up.

“Melog’s hiding us,” Catra announced.

Jack nodded. As he had hoped. The cat might be smug, but they were invaluable for such missions.

“They’re coming!” Catra whispered.

Jack held his breath when he heard the Jaffa’s footsteps. Here they came! And the leader looked straight down the dead end - if Melog weren’t hiding them, his eyes would have met Jack’s. And Jack would have shot him.

But as things were, the Jaffa patrol kept walking past, vanishing around the corner.

Jack glanced at Catra, who cocked her head to the side - would that help since she was wearing a spacesuit including a helmet? - before nodding. “They’ve crossed into the next section.”

They returned to the door, Bow hacking it while Carter and Entrapta kept an eye on the scanners, updating their HUDs.

As useful as it was to have a fully modelled three-dimensional map at his disposal that showed the positions of everyone, including the enemy, in almost real-time, for a moment, Jack couldn’t help feeling as if this was a video game. Between their sensors and Melog’s illusions, they could just walk to the computer core room, get all the data they wanted, and be back with the fleet for dinner.

Almost takes the fun out of risking your life on sneaky commando missions, he thought as they let a bunch of workers with a sled full of components pass, once again hidden by Melog.

Still, they had to bypass a checkpoint by going through the ventilation ducts - Entrapta took the lead there - since not even Melog’s illusions could make them pass through hatches watched by attentive guards.

Ba’al wasn’t using second-rate troops here. Another hint that this was the real deal and not some bait - although a trap would be more effective if your best troops were already present when it was sprung…

Jack clenched his teeth and checked his carbine once more when they reached the computer room for this section, and probably for the entire ship. This was going a bit too smoothly for his taste.

*****

“The computer room is not clear. Four people are using the consoles.”

Adora nodded at Sam's report. She could see it on her HUD as well - and she really needed such a thing when she wasn't wearing a spacesuit. But would that work with She-Ra's armour? Something to ask Bow later.

Now, she had to focus on the task at hand: Getting access to the computers without being detected. “Can you reach a console from the air duct vents?” she asked Entrapta.

“Hm…” Her friend cocked her head and peered at her tool, then slid her visor down and tilted her head back and forth - she must be using the HUD inside to study the room. “Maybe? It's a bit of a stretch. I might have to get into the room if it is too far to the closest port.”

“Melog says they can cover her in that case,” Catra said.

They had done that before, but Adora didn’t like letting Entrapta alone in a room with four enemies. Even though they were humans not Jaffa, and so they were workers, probably slaves, and not warriors. Ba'al's slaves were usually as fanatical as his warriors, and those were really bad.

“But they can't cover us in an illusion at the same time,” Catra added.

That was… not good. There weren't many good spots to hide in the ship here - Horde Prime had had much cleaner designs than the Goa'uld generally used, and it showed - but they would have to manage. Adora didn't see any other way around the problem, and having everyone stuck in the air ducts would probably be worse if they were detected. “Do it. We'll hide nearby.”

“OK!” Entrapta perked up - though Adora could only tell from her posture and voice; she was still wearing her visor down - and headed to the closest air duct, Melog padding after her - followed by Catra.

Adora bit her lower lip. Of course, someone had to go with them, just in case, and Catra was the obvious choice. Still… She didn't like it. “Let's look for a spot to hide!”

“There's a storage room relatively close,” Sam told her.

Adora checked the marked area on her HUD. ‘Relatively close’ was stretching it a bit. They wouldn't be able to provide immediate support should anything go wrong in the computer room. But if Adora went all-out, she'd be able to reach them quickly anyway. Hopefully. And it was the closest hiding spot. “Good.”

She watched Entrapta, Melog and Catra scramble up and disappear into the ventilation ducts, then moved to the storage room. They had to take a longer route this time since they couldn't hide behind illusions from the patrol, but they still made good time, and the storage room had plenty of crates to hide behind. Even Kyle would have managed to avoid detection from a casual glance here. Jack went as far as to claim he would take a nap in a corner since it was supposedly such a good spot, but everyone could see he wasn't serious.

"Alright! Here we are! I just need… Just a bit more… Ngh… Aw!"

"Entrapta's going in."

"Yes. It's just a tiny little bit too far. Even if I go half-in, which I did! Thanks for holding my legs, by the way!"

Adora closed her eyes and tried not to imagine how Catra and Entrapta must have looked right now.

"OK, here we go!"

Adora checked the HUD - no patrols nearby, and no workers coming their way, or toward the computer room. It shouldn't take Entrapta too long to hack the computers, so…

"And that's a good port! Download everything!

Not everything, Adora wanted to say, just the important data - but she knew that they couldn't tell what was important and what wasn't right away. So she had to wait and worry while Entrapta copied the database of what was a fleet base under construction.

"Almost done!"

Good. That meant...

"Fuck!" Catra's curse interrupted her thoughts.

"What?"

"What?"

"Entrapta, check the neck of the worker - check the necks of all the workers in here." Catra sounded very tense. But why?

"OK! We have to wait any… Oh!"

"What is wrong?" Adora hissed.

Catra replied in a flat voice: "The workers have Horde mind control chips."

Adora gasped and felt as if her stomach was dropping to the floor.

*****

Ba’al’s Machinations Part 7

Ba’al’s Glove, Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

“Ba’al is using mind control chips like Horde Prime did?” Samantha Carter hadn’t expected this. “This changes everything,” she said.

“Yes!” Glimmer hissed. “We can’t let him do this to anyone! We have to stop him!”

“We will!” Adora agreed.

“I agree, but that’s not what I meant,” Sam told them. “This was a part of Horde Prime’s technology that he kept from everyone. The Clones didn’t have access to that technology - they could use them, but they were built by automated fabbers, which the Clones could operate but not build themselves. Ba’al can’t have gotten this technology from the Clones he recruited.”

“Yeah.” The General nodded. “That means that this ship probably is the real deal, too.”

Right. If Ba’al had access to Horde Prime’s mind control chips, he probably had access to the Velvet Glove’s blueprints. And if he had that… “He must have had significantly more time to build up his production lines for Horde technology than we thought. We have to revise our estimates - and probably adjust our worst-case projections.” Worst case until now had meant that Ba’al would have gained access to Horde technology shortly after Horde Prime’s defeat three years ago. Now, it should be an even earlier access. “Although there is some good news as well,” she said.

“Yes?” The General looked at her. “Don’t tease us like that, Carter. Out with it - we really could use a bit of good news right now.”

Sam nodded. “If Ba’al has had access to this technology for years and still hasn’t been able to finish this ship - or finish upgrading

his older ships - then he can't have too many factories and resources, sir."

"Right." Glimmer grinned.

"Or he's been so stuck in keeping all his underlings isolated, he's been building up some of his fleets and neglected the rest entirely," the General pointed out.

Sam pressed her lips together. That was an alternative explanation that also made sense.

"And you say you're not a pessimist, Jack!" Daniel shook his head.

"Let's focus on getting off this ship - or station - now," the General said. "We can think about how to spoil Ba'al's plans once we're done here. And once we know them, of course. Which we hopefully will once all that data we just got is analysed." He grinned at Daniel. "See? I'm an optimist!"

Sam smiled almost against her will as she focused on her scanner. Catra, Entrapta and Melog were on their way back to them, but currently hiding in another room from a patrol. Which, Sam noted, would be crossing the corridor in front of their hideout as well.

"Now, let's be very quiet!" the General whispered before she could point it out. "We don't want to tip off Ba'al's Jaffa that we're here."

The automated data transfer from her sensor to the team's HUDs was working as intended, then. This should improve the performance of the Alliance forces in the field. If they could tap into an entire network, together with sensor fusion… Another reason to push the new armoured suits into production as soon as possible.

But she could write a memo about that later. The patrol was passing… no, they had stopped. Sam held her breath as the door was opened and then watched the Jaffa on her sensor enter and look around. If they discovered them… She glanced at the others. The General had drawn a zat'nik'tel, as had Teal'c - of course,

those were almost silent. Still, even if they could take out the entire patrol without alerting anyone else, a squad going missing would be noticed sooner or later, and Ba'al would know that someone had infiltrated his ship-building project.

She heard them coming closer - Ba'al evidently didn't alter the usual Jaffa armour, so their steps were quite noticeable - and drew her own zat'nik'tel. There were only four, so…

But shortly before they reached the crates behind which the team was hiding, they stopped, then turned and quickly left. Why would…? The others!

Sam checked her sensors. The three were clear but moving quickly.

"Catra! What happened?" Adora asked through their communicator.

"That's my line! We saw that you were about to be discovered, and Melog created a quick distraction."

Ah. Sam checked the sensor data again. "An accident at the production module?"

"Yes."

That would have been easy to arrange with Melog's illusions. Sam hoped that none of the workers had been hurt as a result.

But she knew that even if the affected workers avoided injuries, they would likely be punished by their superiors. That was how the Goa'uld worked.

But they had no choice in the matter - sometimes, innocents got hurt in war. They could only do their best to minimise collateral damage like that and to shorten the war.

And for that, they needed to get off this spaceship and check the other targets - but only after they ensured that those chips were

not being produced in this ship.

And for that, she needed more data about the chips so she could set the scanner for a deep sweep.

She focused on one of the workers in the computer room and set the details to the highest level. That should get more data about those chips.

*****

Catra suppressed another shudder when she approached Adora and the others. She was better than this. She had survived this. She could handle it. She didn't have a chip in her neck. She was free. Not under anyone's control. Not forced to fight her love at a madman's command. She was…

…rubbing the back of her neck to check. And Adora had noticed!

Catra whipped her hand down. She didn't need pity. She had gone through *that* already. "So, did you get more data on the chips? We need to hack them and free everyone!" she hissed when she reached the group.

"We've just finished a detailed scan and are still analysing the results," Sam replied.

Catra clenched her teeth. That was too slow! This shouldn't take any time! But she nodded. Rushing wouldn't help. Probably.

Adora moved over to her. She didn't say anything, just took her hand. Catra took a deep, shuddering breath and squeezed her fingers. "We can't let Ba'al use those chips."

"We've got protocols to keep him from turning our people," Jack said. "We already check for Goa'uld possession; chips are just one more check. He won't be able to infiltrate our troops like he did on Etheria."

“That’s not the point!” Catra retorted. “With those chips, he can control anyone as if he were possessing them.”

“There will be no surrenders - no honest surrenders - with those chips controlling Ba’al’s slaves and warriors,” Teal’c said. “He can force anyone to fight us until death.”

That was a more pragmatic argument, and a quite obvious one, but Catra could tell the others just didn’t understand the sheer evilness of it.

She saw Sam stiffen. She would get it - she had been possessed once before. Sha’re would understand as well.

“We can’t let people suffer like this,” Adora said. “This is the worst form of slavery. It’s evil! We need to stop this!”

“We’re working on it,” Sam said in a clipped tone.

“Let’s talk on the shuttle,” Jack said. “Not in the middle of the enemy ship.”

“Right.”

They made their way to the airlock, where Sha’re was waiting with the shuttle. Catra couldn’t help feeling guilty when she entered the shuttle. Leaving felt like fleeing. Like leaving the others to their fate.

“So, what do we know?” she asked as soon as everyone was gathered in the main area of the shuttle.

“They use FTL-communications,” Entrapta said. “Same as Horde Prime’s.”

“They are built exactly like the ones we have on file. Direct copies,” Sam added.

Catra clenched her teeth again.

“Tha’s a good thing, though - we know how to deal with them!” Entrapta announced with a wide smile. “We can hack the network with some effort. Although Ba’al will likely make changes after the first time.”

“Then we better get the whole network at once,” Adora said.

“That only works if he keeps it permanently connected. I somehow doubt he’s doing that,” Catra pointed out. Not when he was too paranoid to let his commanders know what the others of their rank were doing and how many others served Ba’al. So, waiting, and letting others suffer for longer, would be pointless.

“Yeah, can’t see him letting all his chipped slaves connect to each other,” Jack agreed.

“Yes.” Sam nodded. “We haven’t found any nodes outside this area - the network is limited to this task force.”

“And it is either something that Baal reserves for the most important locations or it’s very new. Otherwise, we’d have encountered the chips before,” Catra said. The shipyards they had taken had been very important, after all. “So, let’s crash the network here - no, take it over and use it to communicate with the slaves so we can get them out when we attack!” They would probably sabotage Ba’al’s fleet as well once they were free.

“That’s dangerous. Not the hacking, but letting them know about us? Some might be true believers and inform their god,” Jack said.

Catra shook her head. “Even if they were true believers, after being reduced to… after being chipped, they won’t be any more.”

Sha’re nodded. “Unless Ba’al would not have activated the chips yet, or has used a very light touch - which would be out of character for him - those people will have gone through hell, trapped in their bodies.”

Catra nodded. Sha’re got it.

“Ba’al’s been using a light touch with the Clones. We can’t assume he’s abusing everyone,” Jack disagreed. “And it won’t change much anyway if we just crash the network and then broadcast how to surrender, those who are freed will be able to act as they want.”

Catra didn’t like it, but he had a point. Underestimating Ba’al would be a mistake - this snake was very smart. “Any sign where those chips are made?”

“They aren’t manufactured here,” Sam said. “We could track the shipments using the sealed data we acquired.”

“Ba’al probably has a research base somewhere where he had his best workers develop and probably build the chips and other tools,” Catra said. “We need to find it and destroy it.”

She looked at Sam and Entrapta, but both were focused on working. They didn’t have a trace so far, then.

Damn.

*****

Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

“So, we have two more targets to infiltrate,” Jack O'Neill said. He had to get the team back on track - they were here to gather intel and hit targets of opportunity, and, so far, they hadn't found any of the latter. As bad as the mind-control chips were, they couldn't just drop the mission. “Next stop: Factory ship.”

He could see that Catra was about to argue - the catwoman had taken their find quite badly, which was understandable but not helpful right now - but Adora nodded. “Yes. Let's go. We have to keep searching for more intel.”

Jack nodded and went to the cockpit. Sha're was a decent pilot, but he would take the con to approach the enemy ship. “Do we

have any intel on which we should pick?" he asked as he checked the passive sensors.

"There's no formal command ship for the factory units," Carter replied. "At least not based on their communication pattern. But I've marked the one producing the most advanced components. They will also require the most diverse resources, so we should have a decent chance to uncover more hints of the enemy supply routes. I've marked it."

"Sounds good," Jack agreed. Carter knew what she was doing.

He plotted a course toward the marked ship and started his approach. It wouldn't take long - all factory ships were very close to the Glove. He would have spread them out further in Ba'al's place. Harder to defend, but it would not concentrate all targets in a single spot. On the other hand, maybe the factory ships could serve as a sort of armour for the Glove, shielding it with their hulls - Ba'al's forces had used that tactic in their last-ditch attack on Base Portsmouth.

Still a bad idea; factory ships were primary targets. But Jack wouldn't complain. At this distance, they could probably crash a factory ship into the Glove before anyone could react and intercept it.

Not that they would do that, he reminded himself, since that would kill a whole boatload of people who were forced to work on either ship - some of them by mind control chips. Adora would never condone that.

And there was the target. Jack avoided the main hangars and docking ports - there was too much traffic there - and headed for another maintenance hatch, bringing the shuttle to a gentle stop just a yard off the factory ship's hull. "Alright, Sha're, you've got the shuttle."

"I've got the shuttle."

A last glance at the radar display - fed by passive sensors - to check there was no Death Glider patrol headed their way and then Jack was headed to the back of the craft, where the others were already lining up.

Carter and Entrapta were focused on their scanners, and Bow hacked the airlock easily enough, letting them enter.

The inside looked… Jack wouldn't say dirty or dingy, but compared to the Glove, the ship looked and felt older. Slightly worn. Like one of the older Navy ships back on Earth - he had been dropped off by the Navy on some missions, before Stargate Command. “Well, at least this ship's not new,” he commented as he looked around. “Too worn for that.”

“We'll have to verify that, sir.” Of course, Carter would say that. She always did. And she was correct.

But Jack would trust his gut feelings here. This ship wasn't new but had seen a lot of use, and even good maintenance couldn’t hide that. “So… is the backup we need to hit where it's supposed to be?” The main computer was on the ship's bridge, and Jack didn't think reaching it and stealing the data without anyone noticing would be easy, but the backup system was another thing.

“Yes, sir. This is a standard Horde design, same as we use.”

“Old Ba'al might have upgraded his ships,” Jack pointed out. He didn't really think so - why change what was working? The factory ship already used advanced technology - but you couldn't be sure until you had checked. Which they did.

The ship was actually busier than the Glove - at least the main corridors that the bots ferrying around material and components used; they looked like an anthill or termite nest on the model on Jack's HUD. But there were plenty of smaller, out-of-the-way corridors that were only used for maintenance, so it wasn’t too difficult to reach the backup storage room. They had only to

dodge one single patrol of Jaffa, which Melog easily handled, and then they reached their goal.

“Looks like they didn't need the backup yet,” Jack said as he looked around. “No empty pizza boxes around.”

Carter snorted and rolled her eyes at his joke, then explained it to Entrapta while they linked their computers to the main databanks here.

Jack checked the HUD while they worked. Nothing weird was going on. Just workers busy turning out components for Ba'al's Death Star, and minimal guards to keep them working.

That could mean Ba'al's forces were stretched thin - or that he trusted his mind-control chips to keep the crews in check. Though they hadn't been rolled out to everyone, yet - their scanner was marking the chipped workers, and those were only a handful in this ship, unlike on the Glove.

So, old Ba'al had only a limited number of the chips available - or a limited number of bots and surgeons to implant them. Either limit wouldn't last forever, though.

But Jack was sure they'd do something about the whole thing before that.

“Download complete, sir.”

“Then let's head back,” Adora said. “And then to the enemy flagship.”

Jack nodded. The sooner they were done, the sooner they could start preparing to wreck this entire operation.

*****

“There's the flagship of the task force guarding the site.”

Adora nodded at Sam and studied the display. It was a regular Horde frigate. As with all the other frigates they had encountered in Ba'al's service, there were no signs of any modifications - externally. Internally, they couldn't be certain, but the analysis of the wrecks and intel from prisoners and deserters had not shown any hints of modifications, either. It seemed Ba'al was more focused on upgrading his old designs to Horde specs than experimenting with his new ships. Unless that was done somewhere else with a wholly different force. Trying to guess what Ba'al was doing had quickly become a very frustrating activity.

Still, they knew very well how a Horde frigate was laid out internally, so they should know what to expect when docking at this ship. “Alright,” she said, “take us in.”

The frigate shouldn't have better sensors than the factory ships, either, so this should be pretty safe. A bit more challenging to find a hatch to hack and use, a frigate was significantly smaller than a factory ship, but not impossible either.

Jack was already closing with the flagship, using a sweeping approach that would see them docking to the underside of it, where an escape hatch was installed. Horde Prime hadn't been big on his clones abandoning ships while they could still fight but he had liked the idea of wasting them even less. Probably because he considered them parts of him or something similarly narcissistic, Adora thought.

Whatever the reason, they had a way in that led to a supposedly - and now that they were in range of their scanners, confirmed - deserted storage room. Once again, the stealth generator worked - they were parked right between the aft part of the underside beam cannon batteries - and Bow could easily hack the airlock's door and security system.

Adjusting to the fact that the direction of the artificial gravity generator of the ship and the shuttle were not aligned so that they had to sort of walk-climb into the frigate was actually the

biggest challenge here - Adora carried Daniel inside to speed things up.

But the storage room was full of rather un-Horde things.

“Looks like we got lost in some snake's attic,” Jack commented.

And indeed, the room had a few very ornate crates inside, and jars and bags, all in the Goa'uld style. They looked very weird inside a Horde-style room.

Daniel checked the hieroglyphs on the crates. “Not a Goa’uld, Jack. These seem to be the personal belongings of Mal'ak - First Prime of Ba'al.” He pointed at a plaque on the largest chest.

“Really?” Jack peered at them. “And he stores them here, way out of the way?”

“A Jaffa serving their false god is not supposed to revel in luxury,” Teal'c said. “He might pretend to live frugally, or as Earth would say, in spartan quarters, as a show of loyalty.”

“While hiding his loot and ill-gotten gains here? That doesn't sound very honourable.” Jack grinned.

“There is no honour in serving the false gods,” Teal’c replied. “And once a Jaffa realises that, they have to consider how to react. Some decide to retain their honour despite the price they have to pay. Others decide to let go of their honour altogether and imitate their oppressors’ desire for power and wealth.”

“It's too bad that we're on a covert mission - I'd love to rob this guy,” Jack said.

“Well, let's see what we're missing at least,” Catra said, flashing her fangs in a wide grin as she approached the largest chest.

“Catra!” Adora snapped.

“It's intel!” her lover replied - though she kept grinning. “We might find out which planet he fought and served on by analysing his loot.”

“Sounds legit to me.” Of course, Jack agreed.

Adora shook her head. “Check for traps.”

“Of course.” Catra looked at Bow.

Bow sighed. “Let's see…”

“The scanners don't detect any traps,” Entrapta said. “At least no traps we could detect.”

Adora could have done without hearing that qualifier.

“Good enough for me!” Catra fiddled with the lock and then popped it open and raised the lid. “Oh!”

“A lot of different pots and jugs,” Entrapta said.

“Which you saw on the scanner already,” Catra told her.

“I didn't want to ruin the surprise!”

Sam was focused on the rest of the ship, Adora saw. To warn them of any guards approaching.

“Those are very diverse designs and styles!” Daniel sounded very excited and almost pushed Jack and Catra away from the chest. No, not almost - he did elbow Jack out of the way without noticing when he reached into the chest and pulled out a pot. “Minoean! But I don’t recognise the patterns! And Phoenician, though that was to be expected given Ba'al's history on Earth. But confirmation is always good.”

“Forget the pots. Look at that!” Catra reached inside and pulled out another object.

Adora blinked. It looked like it was broken. And it wasn’t a pot or jug, but a cube - maybe a cubic pot? Those existed. And she had seen this before…

“It's the same design as the alien data cube!” Entrapta sounded even more excited than Daniel now.

Adora wasn’t sure if that was a good thing.

*****

Flagship of the Guard Force, Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

That was an alien data cube - the remains of an alien data cube, Samantha Carter corrected herself. Why was this amongst what looked like the loot from one of Ba'al's more trusted commanders? It was just part of the cube's shell, so maybe it was a curiosity in a collection, looted from one of Ba'al's enemies - or victims. But if Ba'al had found a base or a planet settled by this civilisation, maybe gained access to their technology… “We need to find out where the owner of this chest acquired this,” she said.

“Yes!” Entrapta agreed enthusiastically. “If we find out where they got it, we could find more clues to decrypt our own cube!”

Which, Sam reminded herself, they should have done long ago. Obviously, they should have treated the artefact not as some curiosity but as a priority. More important than, say, dealing with the design faults of the latest abomination from procurement.

“Well, for that, we'll need to find the owner of the chest.” the General said.

“That would probably be the commander of this site,” Daniel said. “As we mentioned before.”

“‘Probably’.” The General shook his head. “But we've been a bit unlucky lately by making guesses. Wouldn't want to nab the wrong guy.”

“Then let's take the entire ship!” Catra bared her fangs in a grin. “That way, we got everyone on board - as long as we can keep them from suiciding.”

“Taking the ship kind of ruins the secrecy part of our plans,” the General pointed out - but Sam could see that he liked the idea. It was his kind of plan, daring and decisive if it worked. And a spur-of-the-moment decision.

“And if we take out their command ship, the rest of the guard fleet will be easier to deal with by our task force,” Glimmer said.

“But we can't attack before we have a plan to save the workers,” Adora said. “If Ba'al is willing to sacrifice them rather than let us rescue them…”

Sam pressed her lips together. With the mind-control chips, no one would refuse Ba'al's orders, and he only needed a few key people chipped to ensure the factory ship and the Glove would be destroyed. With the size of this operation, the death toll would be horrible.

“If we take over the ship before the rest of the guard fleet realise it, we can fake orders to split up - or claim we were called away,” Catra said. “Have the guards rally in an ambush location, or just send them on a trip to attack a system at the other end of the galaxy.”

The last suggestion was probably not meant seriously, but if they could take over the flagship of this force, then taking the entire site over with minimal casualties would be a realistic objective for this mission. Ba'al was fond of compartmentalising his forces, but the individual forces’ command structures were very hierarchical, as expected from a tyrant.

“Can we take over the ship without alerting the rest of the guard ships?” Daniel asked. “We could head back to our task force and gather more people.”

Sam pondered the challenge. If they managed to manipulate the life support system… They had no gas with them to render the crew unconscious, but if they changed the settings, they could alter the ship's atmosphere gradually and reduce the oxygen until the crew was out. But the risk of killing anyone with this was great. Maybe…

"We need the bridge, engineering and the hangar," Catra said. "To control the ship and ensure that they can't alert anyone else or sabotage it." She looked around. "If we leverage the element of surprise and She-Ra, that's doable, but we need to be quick to get everything and everyone moving afterwards before things start going wrong. "If we take over the bridge and then have the rest of the crew gather in the hangar for an inspection, we could take them out all at once."

That was… Sam looked at the General.

He was grinning broadly. "Good idea! But we need to make sure they aren't locked up with anything they can use to get free - or shoot a hole in the hull to alert the rest of Ba'al's guards.

"We can lock them in with She-Ra," Catra said. "That will keep them from ruining the plan."

Adora nodded. "Yes. I can deal with the frigate's crew. But we need to secure the bridge and then imitate the commander."

"We can do that by taking records of their voice and then using our computer to turn the samples into orders," Entrapta suggested. "Though that might take a while."

"Let's hope he isn't the silent type," the General joked.

"We should be able to get voice samples from the ship's databanks," Sam said. "Communication is generally recorded."

"Yes!" Entrapta nodded. "And we need access to the central computer anyway, for the rest of the data!"

“And the bridge offers access to the computers,” the General added. “So, let's go and take it over.”

“After we check that the commander is on the bridge,” Bow said. “We can’t imitate his orders if he can countermand them.”

“Right.” Adora looked at Sam and Entrapta. “And we need to find out who the commander is. Scan the entire ship and look for anyone who could be it. And scan for mind-control chips. If you don't find anyone who could be it, we need to get access to the backup databanks so we can identify the commander.”

“Yes!” Entrapta nodded with a smile, and she and Sam started working.

*****

“We’ve detected six mind-control chips currently active on this ship. One of them is a Jaffa, the others are Clones.”

Catra felt relieved at Sam’s report. If the flagship of Ba’al’s guard force didn’t have more mind-controlled crew members, then that probably meant that he didn’t have too many chips available. That was… reassuring.

“So… Those could be three shifts of two people, like the captain and the first officer, the chief engineer and his number two, and the Commander of the entire force and his second-in-command,” Jack said. “The commander would be Mal’ak.”

“Mal’ak might here as an envoy or to inspect the site, not as its commander,” Glimmer said.

“Not nominally, but as Ba’al’s First Prime, he’d be in charge anyway,” Sha’re said.

“We don’t know if Ba’al would use those chips on his commanders,” Daniel said. “That could drive them to rebel or even desert, as long as they realise what is happening in time to react.

He might use them on guards to keep an eye on his commanders."

"His commanders are likely the most faithful of his followers," Glimmer objected. "They would probably agree to the chips to show their loyalty."

"But would he trust them even if that were the case?" Adora asked. "The Jaffa is probably Mal'ak - we know that two of Apophis's First Prime defected, and Ba'al likely knows that as well."

"With how shoddy Apophis's counter-intel work is, half the Galaxy knows this," Catra said with a snort. "But for a mind-controlled guy, that's a lot of loot." She gestured at the chests. "Why would Ba'al let him keep it after mind-controlling him?" She wouldn't call it 'chipping'. That would make light of its horror. She also wanted to tell the others that, but she didn't want their pity. And this wasn't the time for that, anyway. They had to focus on the mission.

She saw Melog glow a little and hoped that the others missed it - she didn't want anyone to know how she felt.

Okay.

She felt Melog's confidence and trust and relaxed a little.

"Ba'al might use the chips as a fail-safe in case his followers betray him," Teal'c said. "His First Prime might not even be aware of what the chips actually do - the false gods always lie to their followers. Further, Ba'al has a reputation for being untrustworthy even for a Goa'uld."

"Yeah," Jack said. "Not telling even his Prime what the chips are and do seems a thing Ba'al would do. The guy seems too paranoid to tell even his highest-ranking followers more than the absolute minimum. Anyway, those are our main targets. Take them out, and their command structure should be in shambles."

“Let’s hope so,” Adora said, then looked at Catra.

Catra nodded. “Our priorities are the bridge and engineering, but we cannot let anyone with a mind-control chip walk around - they would sacrifice themselves without hesitation to get us or just to deny the ship to Ba’al’s enemies - and we absolutely need to control all communications.”

“We can hit the scuttling charges first and disable them so they can’t just blow the ship - and us - up,” Entrapta said. “And we can hack the communication systems.”

“That would still leave individual FTL-communicators,” Catra said. “We need to jam those as well.”

“That would affect our communication with the other ships,” Sam pointed out. “They might realise something is wrong.”

“Better they suspect than have someone alert them - we can’t fight the guard force in this ship,” Catra said. “So… Where are the mind-controlled people?”

“We’re tracking them. Two, including the Jaffa, are on the bridge, one in engineering, one in the main hangar and two in the crew quarters,” Sam replied.

“Are they in the officer’s quarters?” Daniel asked. “I mean, I know the Horde frigates didn’t have special quarters for their officers since all Clones were replaceable for Horde Prime, but if Ba’al is integrating the Clones into his forces, this might have changed.”

That was a good point, but probably not relevant.

“The quarters look the same as on a regular frigate, except for the commander’s. That was remodelled. Potentially to better serve as a flagship and accommodate a Jaffa commander,” Sam said.

Catra nodded and studied the holoprojection for a moment, checking the targets. “So… Adora and Entrapta to the bridge. Bow and Glimmer to Engineering. “Melog and I take out the one in the

hangar. Jack, Sam and Teal’c take out the two in their quarters. And Daniel and Sha’re stay in the shuttle and act as our network hub.” She looked at the others.

Yes, Melog thought.

“Yes,” Adora said. “Keep the maps updated. We have to travel carefully without Melog covering all of us.”

Sorry.

“Don’t be,” Catra told him. “We need you in the hangar since that’s a wide space, and we can’t take out everyone there before they raise the alert, so we need to be sneaky there.”

Yes.

Good. Catra checked her HUD and saw the tracked figures multiply, covering all crew. A moment late, routes appeared on the display, most of them going through air ducts and vents. Entrapta was adapting the data, then.

Catra grinned. “Let’s go!”

“Yes.” Adora nodded with a firm expression. “Let’s go.”

They split up. Without Melog's power, the other groups would have to carefully pick their way to their targets, as often through the vents as not. Catra didn't have to bother with that. Melog could hide them from plain sight - in the middle of a corridor, if needed. They didn't go quite that far - that would have been an unnecessary risk; one slip and a Clone might stumble into them in the narrower corridors - but the temptation was there. Especially when they were waiting in an alcove for a group to walk past. At least Goa’uld ships were crewed by Jaffa, and they usually marched at a brisk pace; the Clones walked more leisurely. Horde Prime probably thought having his ‘brothers’ walking faster would have made it seem as if they were rushed and that might make him look as if he weren't on top of things at every moment.

Still, even with those delays and despite the larger distance, they reached the main hangar before everyone else reached their targets. And their target was obvious - even if the HUD feed from Sam and Entrapta's scanners wouldn't have marked him for Catra, he would have stood out; the Clone stood on a small pedestal in the back of the hangar, watching everything, and Clones regularly came to him for something or the other while maintaining the Horde fighters and their bot pilots lined up in the hangar.

That was a new setup compared to the Horde standard layouts, she noted. The pedestal, not the fighters; those were standard issue. But in the Horde, all the Clones had been supposedly equal before Horde Prime (and beneath him), and such overt signs of their higher positions had been absent. That had changed in the Alliance, but mostly for functionality - they had a dedicated control room for the hangar master, not some platform to look down on the rest.

But it made taking the man out without alerting everyone a bit tricky. Not too much, though. She looked the situation over, studying the patterns of the Clones at work - fewer than in an Alliance frigate for the same tasks; had Ba'al some manpower problem? - and the doors leading out from the hangar.

A quick check with the ship's layout on her HUD later, she had her plan.“Can you copy him walking out of the hangar?”

Positive.

Good. “Then cover us as we head over behind the guy.”

Yes.

They moved carefully along the walls, quickly passing in front of the two doors on the way so they wouldn't run into some Clones coming and going, until they were standing behind the hangar master's pedestal.

“Hangar group ready,” she reported over the communicator.

"Copy. Bridge group still en route."

"Crew Quarters en route."

"Engineering en route."

More waiting, then. She suppressed a sigh - Melog couldn't hide sound - and watched their target.

He was rather brusque with his underlings, Catra noted in the next few minutes. Quite different from what she was used to from the other Clones she knew. Even Horde Prime had played the affable, gentle leader towards his 'brothers'. She pressed her lips together when she looked at the Clone's neck where the mind control chip would be located, hidden by his clothes. How much of his attitude was his own and how much resulted from being mind-controlled by a Goa'uld? Well, if things went according to plan, they would find out.

"Bridge group in position."

Adora and Entrapta were ready. Good.

"Engineering group in position."

So were Glimmer and Bow.

About a minute later, Jack reported as well.

"Crew Quarters group ready."

"Go!"

At Adora's command, Catra nodded at Melog. A moment later, she caught the faintest flicker as their illusion settled over the hangar master.

Go.

She dashed forward, drawing her zat, and shot the Clone from the back, catching him as he collapsed and dragged him back to the

wall.

There, she quickly checked his clothes for weapons, relieved him of a zat, slung him over her shoulders and then made her way out of the hangar while Melog made it look as if the Clone had received a call on his communicator and then left by himself.

A minute later, they were outside, hidden in a side corridor.

“Hangar group, done.”

*****

Ba’al’s Machinations Part 8

Flagship of the Guard Force, Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

“Go!”

As soon as Adora’s order came over the communicator, Jack O’Neill rose, zat in hand, aimed at the door in front of him. A moment later, it slid open - Carter had hacked the controls. He rushed inside, already turning to aim at the figure he had marked on his HUD.

The Clone was sitting up on his bed. “Oh, what…”

Jack shot him. Once.

The Clone collapsed, stunned, and Jack rushed to secure him with zip ties - advanced restraining devices with much higher tensile strength than steel, according to Carter, but he knew zip ties when he saw them. He searched the Clone for any weapons and devices, tossing out a Horde-style gun, then flipped him over and secured his hands and feet. Better safe than sorry.

Then he lifted the guy on his shoulder and moved to the door.

“Hangar Group done.” Catra sounded smug. Well, anyone could kidnap a guy quickly if they had an illusion-casting cat with them.

The corridor was clear according to the HUD, but Jack O’Neill still peeked around the corner to check before moving out of the room. He trusted Carter with his life, but even she or her technology weren’t perfect. And this would be a hell of a time to discover that the magic sensor glitched and overlooked a patrolling squad of Jaffa or Clones because they were wearing funny hats or something.

Carter and Teal’c were ahead of him, in the second target’s quarters. He closed the door behind him - no clones moving

nearby, according to the HUD - and quickly made his way to them. "Carter? Teal'c?" he asked as he entered. "You've got two?"

"This is the target." Teal'c pointed at a Clone who had a chip port in the back of his neck. "We have not yet identified the other."

"Well, they look alike. Maybe his twin?"

Carter rolled her eyes. Teal'c didn't react at all, and Jack sighed. "So… any chance he's someone important?"

"I would need access to the ship's system to identify him. Or check a restricted door's controls for access privileges, sir," Carter replied.

"Let's leave him here, then, and lock the door behind us. We're on a tight schedule," Jack said.

"Indeed." Teal'c grabbed both their guy and Jack's.

"Let's go!" Jack turned to the door to check the corridor and used his communicator. "Crew Quarters group, done."

"Engine Room group, done."

Good. That only left the bridge. Where Adora and Entrapta were.

*****

"Crew Quarters group, done."

"Engine Group, done!"

Adora took a deep breath as the last Clone on the bridge slid down the wall into which she had kicked him. Maybe a bit too hard - he didn't move. But she had knocked him down earlier, yet he had recovered and had been about to shoot at Entrapta. So… his own fault.

She looked around. Half a dozen bridge crew, four guards, the captain and Mal'ak - probably; he had a mind-control chip and

was the only Jaffa on the bridge - were knocked out.

“Bridge group, done,” she said into her communicator.

“Not yet!” Entrapta called out. “I’m still trying to hack into the system here. Well, systems - we need the data banks, backups and the security system, but also communications. And weapons, or they could shoot at someone to alert them. Or trigger them to fire back. So…”

Well, they had control of the bridge, at least. The rest would come in time. Adora touched the button on the earring Entrapta had made for her, and a HUD appeared in front of her eyes. She could see the others. Glimmer and Bow were holding the engineering section, and Catra’s group was moving toward Jack’s group so they could merge and join Adora on the bridge. Good. By the time they reached the bridge, Entrapta would have…

Something moved to her right! Adora spun around. Mal’ak was getting up - and he was aiming a zat’nik’tel! At Entrapta! Adora threw herself between the two, but Mal’ak was faster - his shot hit Entrapta in the back, and she collapsed. His second shot hit Adora’s shield, though.

She bared her teeth as she rolled and rose, facing him. He shot a third time, and she caught it on her shield again as she rushed him.

She hit him, shield first, and he flew several yards back, crashing into and over a console, flipping head over heels, before slamming into the wall.

She drew a sharp breath when she saw the red smear he left on the wall. Had she killed him? She glanced at Entrapta; her friend was breathing. She had only been hit once, so she was simply stunned.

Adora rushed to the downed Jaffa. He, too, was still breathing but bleeding massively from his head. That was…

He suddenly rolled away from her, reaching for his dropped zat.

Adora stepped on the zat, crushing it, and shook her head. "Surrender!"

He looked at her with an empty expression, then grabbed her lower leg and…

…tried to pull her down. As if!

She kicked him again, not too hard, and he flew back into the wall - but got up again and came at her.

A bash with her shield set him flying once again. Adora heard bones break this time.

Yet, he got up - or tried to. Adora grimaced when she saw his leg give in and the broken bone push through his skin. That…

She blinked. He wasn't showing any reaction - his expression looked almost bored!

Oh, no - the chip must be controlling him!

"What the…?"

"They woke up!"

"Watch out!"

All the chips had been activated.

*****

"What the…?"

Samantha Carter whirled to the side as soon as she heard the General, drawing her zat'nik'tel. Both the Clone Catra was carrying, as well as the two Teal'c had slung over his shoulders, were jerking wildly, trying to get free - no, trying to *bite* them.

Catra slammed her clone into the ground, hard enough, Sam heard bones crack. Yet the Clone didn't stop - didn't even cry out. No reaction at all!

Teal'c had dropped his two, kicked one away and pinned the other with his staff. But they wriggled on the floor - and were pulling against the restraining devices with enough force to make their wrists bleed!

Sam shot one with her zat'nik'tel before he managed to wound himself even worse.

It didn't stop them.

Sam almost shot the prisoner again before she could stop herself. A second shot so close to the first would kill him.

And probably not stop him, either. "The chips are controlling them!"

The general cursed and used his communicator. "Change of plans - we've been made! Signal the task force to attack and get this ship out of here!"

"Entrapta's stunned. I've healed her, but…"

"Oh… what happened?"

"You were stunned."

"Oh."

"Jam the communications! Crash their comms if you can!" Catra snapped.

"Oh, right."

But Entrapta sounded still a bit out of it - Sam could tell. Even though Adora had healed her.

Another crack made her glance at Teal'c. Her friend had just broken more bones of their prisoners. Pragmatic yet brutal.

Sam winced and focused on her computer. She had to link up with Entrapta's tool and, through it, to the main computer. They had to take over the ship! But first, the task force.

It took several seconds for the computers to link up - Entrapta was not quite as quick, yet, as she usually was - but Sam managed to send the signal to the fleet.

"They've alerted the crew!" the General said. "We need to get to the bridge. And hold engineering."

Sam quickly shut down all doors she could access. That would hopefully trap some of the Clones. But not all - and they were cutting through the blast doors in the corridors.

"We've sealed the door, but they're shooting at it."

Glimmer sounded… controlled. Not openly worried. Not yet.

"Working on the hyperspace window!" Entrapta reported. Sam could see that on the screen of her computer.

"And someone needs to reinforce Engineering Group," Catra said. "I'll go - you go with the rest to the Bridge. Yes, go with them. I'll be fine."

She was arguing with Melog, Sam realised, then pushed the stray thought away as she started to adjust the comms.

The enemy fleet had been alerted - the chips must have been tapped into the comm network and registered when their carriers were stunned. Or attacked. Obvious, in hindsight. Sam did what she could to throw them into disarray, sending out conflicting orders and flooding the network with data and requests for more data. Fortunately, they were on the enemy flagship - and their signals and orders were prioritised by default.

But the enemy was adapting - a squadron had just gone off the network. They would move against the flagship.

"The door's glowing."

"I'm almost there!"

Shots rang out around the corner. Carbine, M4. The General. Then blasts - Teal'c.

"We need to move! They're coming!"

"I'm almost done!" Sam protested. "I need to crash their network. If that squadron managed a coordinated attack… She tagged them as hostile and sent orders to the rest of the fleet to destroy them.

A third of the ships started moving to intercept the squadron. A few more started towards the flagship.

Sam modified the orders again. This time, they looked as if they came from the ships that had dropped off the network. The confusion wouldn't last long, but…

"Alright, we're opening the hyperspace window as soon as we're moving!"

"I've cleared the door to the engine room but it's too hot to open. Bow, what's the engine doing?"

"Uh… It's starting up."

"It's supposed to do that! We're about to enter hyperspace!"

And they were about to get shot by half the enemy fleet. Sam's efforts had delayed a coordinated response, but there was only so much you could do if the enemy had a secure network through their chips…

But before the first ship could do more than diminish their shields, they entered hyperspace, and Sam relaxed. They were safe, for the moment. At least the ship was - the General and Teal’c were shooting again. And Sam could see Melog next to her, probably shielding her with illusions.

“I’m coming back to you. Glimmer and Bow are safely sealed up!”

“Hey!”

“She’s right, Glimmer - if we can’t get out, they can’t get in.”

But the chipped prisoners were still trying to attack Sam - she saw one of them trying to roll toward her with broken bones sticking out of their limbs. This was horrifying!

A quick check of her display showed that most of the still-moving crew members were trying to storm the bridge.

Sam pressed her lips together. Charging Adora in a corridor? She knew how that would end. And she could also see that Catra was almost back with Sam’s group.

Good. They just needed to hold until they reached the end of their trip and the Alliance marines could board the ship.

*****

Catra checked on her HUD one last time as she rushed down the corridor on all fours. All the enemies were facing Jack and Teal'c, holed up with Melog and Sam in a dead end a bit ahead.

Good.

She rounded the last corner and pounced on the Clone at the back of the enemy formation, landing on his shoulders and smashing his forehead into the floor while she jumped at the next one.

Her claws slashed through his weapon and fingers as she rammed him into the wall, leaving him stunned and bleeding as she pivoted and darted forward again.

The others were starting to react, turning around and crying out in alarm, but she was in the middle of them before they could form a line and dropped to the floor between the two closed, slicing their ankles before they could bring their weapons to bear, then finished them off with a quick series of kicks to the head.

That left three more, caught between her and the others. One tried to shoot her, but she darted to the side, making him miss, then rushed forward, dodging under his aim, to grab his arm. A quick twist broke his arm, making him drop the weapon, and she turned, throwing him into the next one before he could shoot, sending both to the floor, sprawling.

Jack moved up and shot the last one, then stunned the two others before they could recover. “We need to get to the bridge.”

She checked her HUD. There were still quite a number of the crew moving around, though they didn't seem too organised any more. And yet… if the crowd in the hangar hit engineering, Bow and Glimmer could be in trouble. “Go. I'll run interference to keep them from getting their act together.”

He nodded. “We have three prisoners we can't stun.”

“They have been rendered unable to attack us,” Teal'c said. Behind him, one of the bound and gagged Clones on the floor tried to hit his ankle with his forehead, and he moved to the side. “Mostly.”

They had all limbs broken but didn't stop trying to fight, Catra noticed with a wince. If Horde Prime had used his chips like that… “We need to hack the chips to free them.”

“We need to get out of hyperspace and have the ship secured first,” Jack said. “We're still trying to take over a ship with just us against the entire crew.”

Catra clenched her teeth. “As long as those chips are working, the enemy ships won’t stop fighting.”

He nodded and glanced over at Sam. “Carter?”

“Entrapta is handling the ship's controls and keeping us on course. Sir, I am blocking communications and weapon systems so they cannot fire on our allies or call for help. But if they track the mind-control chips, they will locate us anyway.”

“Right. Hack the chips first.”

“Yes, sir.”

Good. Catra nodded and left them. She had a ship to roam and crew to take out. At least the regular Clones were easy to disable and not some mind-controlled zombie warriors. But she really didn't want to face a horde of Jaffa controlled by such chips. You'd have to kill them all to stop them, and she wouldn't put it past those evil things to keep a dead body fighting for a while.

Up ahead, three Clones were trying to bypass the locks Sam had put on the beam cannon battery there. She tore through them in seconds, leaving them bleeding and knocked out. The hangar was ahead. It looked like the remaining clones there - half of the hangar crew had been attacking engineering, and Catra had dealt with them already - were trying to get a fighter ready.

That wouldn't do. Catra took a shortcut through the air ducts, scrambling through the narrow space with her claws digging into the material, then slashed the grill and dropped into the hangar, right on top of a Clone dismantling the door controls.

She left him with his head stuck in the controls and rushed the next group. They tried to form a firing line as if this were a field battle but were too slow - and too unused to ground battles; two shot each other when Catra dived between them to sweep their feet, and a third seemed caught between moving to a spot from where he wouldn't hit anyone else but Catra and holding his position.

She took him out with a blow to the head when he decided to charge her instead, then used him as a shield to catch the blast from the last one. A quick charge smashed the smoking corpse into the shooter, and both into the console behind them.

Catra jumped over them, landing behind the console, moments before a volley of blasts hit both Clones and the console.

The rest of the hangar crew had noticed and formed up, including a few bots. Those had no trouble with ground combat and were advancing on her, as her HUD showed.

She grinned as she looked at the enemy formation. It was almost perfectly aligned - Horde Prime would have been proud.

But it was also almost perfectly lined up in front of the closest Horde fighter.

She jumped out of cover - it was disintegrating under the blasts anyway - and ran on all fours across the hangar. The Clones were slow to adjust their fire, the bots barely better, and she reached the fighter ahead of their shots.

A slice with her claws cut the forward landing strut, and the fighter tipped forward, nose hitting the floor. While the Clones shot the cockpit to pieces, she dug her claws into the right side, cutting off a part as tall as herself and twice as wide.

Makeshift shield ready, she rushed the line, catching the blasts until she was in the middle of their formation.

Then she cut loose.

*****

Never split the party, Jack O'Neill reminded himself as he rounded the next corner, leading with his carbine. “Clear!” he called out. The HUD had shown him no one was there before he had reached the corner, but old habits died hard.

And you couldn't blindly trust technology, anyway. Certainly not when fighting someone like Ba'al. Those chips… He glanced back to where Teal'c was literally dragging the bound, gagged and mutilated prisoners and grimaced. Technically, it wasn't a war crime to subdue prisoners who were attacking you, and they hadn't killed them, and they could be healed by Adora - would be healed; it was Adora, after all - but he still felt bad about it.

And speaking of Adora, they were close to the bridge section now. On the HUD, He could see a group of Clones gathered at a junction ahead of them, blocking the access corridor to and from the bridge in this part of the frigate.

Or trying to. Jack scoffed and used his communicator. "Bridge Team? We're almost there. But we could use a little help clearing the way.

"Coming, Crew Quarters!"

Adora must have been tracking them on her own HUD - she charged straight out of the bridge, at the blocking force. Jack heard shots from ahead of him and through the communicator, followed by screams and then the sound of people hitting walls.

By the time his team reached the junction, it was already over. Adora stood in the centre, surrounded by the bodies of the Clones she had just laid out.

Two were groaning, and Jack stunned them with his zat. Better safe than sorry. "We've got the prisoners, but they're in bad shape," he told her with a grimace.

She nodded curtly. "They don't stop fighting. Get on the bridge and cover Entrapta. I'll finish the rest."

Meaning, she wanted to head to Catra, who had taken on the entire hangar section according to the HUD feed. But Jack didn't comment - he understood the feeling, and it made sense for Adora to go and finish the take-over of the ship before they dropped out of hyperspace.

“Alright,” he replied.

Adora nodded once, then ran off while Jack led his team onto the bridge.

“Hi, Jack!” Entrapta waved from the corner. She was sitting, surrounded - and almost hidden - by panels Adora must have ripped off the walls and slammed into the floor to form a barricade. “We're almost at our destination!”

Carter joined her at once, crouching next to Entrapta, and put her computer down.

Jack glanced at the consoles, half of them broken, one with a Clone still stuck in it. That was a bit more damage than he had expected.

“Oh, don't worry - I’m running the ship through my multitool!”

Now Jack was worrying. But Carter didn't seem to mind the setup, so it probably was safe.

“How much longer do we have?” he asked.

“Two minutes, sir.”

Long enough for things to go wrong. He checked the prisoners on the bridge. All but the chipped ones were stunned and wouldn't be a problem. But the chipped ones… the two on the bridge were wrapped in wall panels and still trying to get out - they were tearing themselves bloody in the process. The three Teal'c just set down next to them were worse off, though. “We really need to hack the chips,” he muttered. “Keep an eye on them, Teal'c,” he added.

His friend nodded, and Jack went to the main door to the bridge to stand guard.

The corridor was clear, and he didn't see any Clones moving towards him on the HUD. Not many were moving at all in the ship

- Adora had gone through two gathered groups and was now about to reach the hangar.

“Oh, look - they're trying to manually remove the locks from the main batteries!”

“That won't help them when we cut the power supply.”

“But we can't shut down the reactor.”

“We can manually mark the power lines as under maintenance, that will make the system cut them off.”

“They could bypass it manually. But they would have to move to the engine room for that. Unless they try to siphon power from the life support systems in the section.”

“That won't be enough to power even one beam cannon.”

“But they could charge it in advance - it would give them one shot, at least.”

“We'll be out of hyperspace and being boarded by then.”

“Oh, yes - never mind then. So, this should be safe. Let's start on hacking the mind-control network, then!”

Jack felt a bit better. It sounded as if things were on track. At least on the bridge. They might still pull off this - taking an entire ship with just two teams. Jack would have to make sure that the idiots back on Earth wouldn't try to use that to implement boarding as a standard tactic for fleet engagements. The crayon-eaters would jump at the idea, and some of the Navy pukes might support them even though they should know better.

“Leaving hyperspace in five… four… three…”

Jack tensed.

“...two… one…”

The ship lurched.

*****

Near Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

"...one…"

Adora was just about to hit the hangar when the ship dropped out of hyperspace - and not as smoothly as she expected - she did stumble at the unexpected movement. But no alarms were going off, and she didn't hear anything breaking, so she continued, using her sword to cut a way into the hangar, where Catra was…

…apparently just finishing off the last resistance, she realised when she came to a stop. "Catra!"

"Hey, Adora!" Her love turned toward her with that sly smile on her face that never failed to make Adora feel that little bit special. Though the fact that Catra's spacesuit was splattered with blood - and her hands and feet were practically covered with it - was a bit distracting.

Catra must have noticed and shrugged. "Most aren't dead, and they weren't able to send out any fighters - or use them to blow the ship up from inside."

Adora took a look at the bodies around Catra. They looked as bloody as Catra did, though she could see most of them breathing and heard them groaning. They needed first aid as well - they were now prisoners of war, with all that entailed. "Good," she said after a moment, then checked the most urgent-looking wounded to heal them.

Catra flexed her hands, extending and retracting her claws several times. Cleaning them using the sealing mechanism Entrapta had built into her suit.

Adora frowned a little. At least, Catra wasn't trying to lick them.

"We've hailed the task force left behind here. Marines are on the way," Jack reported over the communicator.

"Better late than never," Catra commented.

"We were supposed to go on a recon mission," Adora defended them. "We decided to board and take over the enemy flagship without telling them."

"I'm still going to rub it in if they try to act as if they're saving us," Catra said.

"I doubt anyone will claim they saved us if they see this," Adora replied with a nod and a grimace at the pile of bodies.

Catra shrugged. "Marines will."

"Those are Royal Marines," Adora pointed out. "Not US Marines."

"They probably still eat crayons, just the yellow ones." Catra smirked.

Adora shook her head. Her love and Jack got on a bit too well. "Let's clear the space for their shuttles."

"*I* can't throw fighters around."

"You can drag the bodies out of the way!"

Catra snorted but didn't complain any further, and Adora started pushing the fighters into a corner. Assault shuttles needed more room to land under combat conditions.

Catra had just set down the last Clone and was tying up some bandages around the still-bleeding wrist she had sliced when the first shuttle arrived.

Adora used her sword to guide them inside, and as soon as the shuttle touched down, the ramp dropped, and the marines poured out.

“We need to secure the engineering section and the bridge and relieve our teams there before you sweep the ship,” Adora told the commander. “And our prisoners need to be treated and prepared for transport. But check them for chips implanted at the neck. If you find any, call us - those chips can force them to fight with broken limbs and even unconscious.”

“Yes, Supreme Commander!” The captain in charge looked grim as he nodded and started sending out his troops.

“Medics over here!” Catra yelled, and a few soldiers hurried over towards her.

The second assault shuttle touched down as the first soldiers left the hangar, and Adora and Catra left with them to return to the bridge. She tried to ignore the cursing of the medics and other soldiers attending the wounded and frowned at Catra when she heard her snickering at some of the ‘murder-blender’ comments.

Sometimes, Catra's sense of humour was a bit too dark.

*****

Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

The battle was still going on when they reached Point Velvet on board the Horde frigate they had commandeered. Adora stared at the holoprojection on the bridge and frowned. Between the jamming fields - although as happened before, the enemy was compensating by using local direct radio transmission to form a comm network - and the numerical superiority, Ba’al's guard force should not be putting up such resistance. They were losing, that much was obvious, but they were fighting much harder than before. And the task force was taking casualties as a result. So far, they hadn’t lost many ships, but they could only shift the ships around, replacing damaged ones with ships still fit to fight for only so long before they had to send in damaged ones to relieve even more damaged ones, and then the losses would be mounting quickly.

“We need to crash the chips,” Catra said, sounding as grim as Adora felt.

“Yes.”

“We're working on it!” Entrapta called out from where Sam and she had put up their computers. “But it's tricky. Ba'al's been meddling with the software.”

“And he's using non-standard encryption,” Sam added. “It’s not based on any known Goa'uld systems.”

That was not good. If Ba'al was using unknown technology… “Is it related to the datacube's technology?” Adora asked.

“Possibly. We can't tell yet. There are similarities, but we need more data to tell if those are just the result of using the same base principles or actual derivative technology,” Sam replied.

“Just do your best,” Adora told them while she watched another frigate from the task force fall out of formation, the icon lighting up with red alert messages. They were pushing the enemy back - the first factory ships had been disabled - but the Glove was still holding in the centre of the enemy formation.

They needed those chips disabled.

*****

Samantha Carter tried to ignore the space battle raging nearby and focus on the chip network - which must be piggy-backing on the short-range radio network the enemy was using to counter the subspace-jamming attack of the Alliance forces - but each time a chip went offline, she was reminded that that meant, most likely, a destroyed enemy ship. Worse, though, was the effect it had on Entrapta and her efforts to hack the chips.

“The network adapted again!” Entrapta commented. “The distribution changed - and the codes changed.”

The network wasn't using the same architecture as the Alliance networks, based on the Internet. When a member dropped out, data traffic didn't automatically reroute through existing lines and connections to compensate, such as the enemy fleet did - the whole chip network was reorganised, with key nodes changing and even protocols switching.

“This is completely different from the way Horde Prime used them!” her friend went on. “The hardware is the same, but the software… it's totally unlike the software used in the Horde. But! It's not… it's like…” Entrapta shook her head while her hair tendrils kept using two keyboards at once. “The mind-control chips didn't network like that - couldn't network like that.”

“Yes,” Sam agreed. “The way the protocols change, data traffic spikes. Whole new sets of protocols must be transferred each time. We need to decrypt them so we can hack into that.” Once they were inside, they would get the new protocols each time the network shifted.

But the encryption was proving to be frustratingly hard to crack. Sam had no hard proof, but she was certain that it was based on that alien cube's encryption. If only they had cracked that cube earlier…

“Oh, look at that!” Entrapta highlighted a change in data traffic on the holoprojection between them.

Sam narrowed her eyes. The way the shift happened… She couldn't read the data, but the volume… “It's not just temporary spikes when the network shifts - it's forming a new central node each time they shift and they shift all the time.”

“Yes. Even though distributing data through direct connections would be more efficient, that's how the normal communication of the fleet works; they send everything through that node - which keeps shifting around even without a chip dropping off the network. But why does it do that?” Entrapta asked. “It’s

inefficient. It's putting a strain on the network in the middle of all this!”

Sam agreed. It made no sense. It was taking over a lot of the capacity of the enemy fleet's local communication network, and that impacted their performance. She blinked. Performance! “Can the chips actually handle that sort of strain?”

Entrapta gasped and several holographic screens popped up, data scrolling over all of them. Construction materials, internal architecture, everything about the chips. “A regular mind-control chip can't handle that much data - not for long! Not without burning out!”

“They have to keep shifting the central node around to avoid burning out the chips it controls!” Sam shook her head. “If we can stop the transfer…”

“Or if we overload it!” Entrapta nodded. “But how?”

“We can't jam the radio network,” Sam said. The enemy ships were too close and putting out too much power; Alliance ships would have to be far too close to stop that. And jamming drones or bots lacked the sheer power needed for that.

“And we're already jamming the subspace communications,” Entrapta added. “Too bad we can't lure the node into our captured chips and…” She blinked.

Sam drew a sharp breath. They had the chips - and they were set up to receive such data. If they tapped the captured chips into the radio network, waited until a node formed in one of them - the data traffic pattern would show it - and then cut the network before the node could move on… “If the chips don't have backup control nodes, that might do it.”

“If they had such nodes, they wouldn't need to shift around like that and probably could use external cores to run the nodes!” Entrapta nodded eagerly.

But the prisoners with the chips were not here - they had stayed with the captured flagship.

“We need a stealth shuttle and the chipped prisoners!” Sam yelled. “Hurry!”

*****

Their plan had an unexpected drawback, Samantha Carter realised a bit later, in the hangar, waiting for the prisoner transport to arrive. In order to tap into the enemy radio network, they had to get into the enemy formation in a stealth shuttle.

And that required a pilot. Or a crew.

“I'm going, and you're not, and that's final.”

“Jack!”

“Sha're! Listen to him!”

“Why, Daniel? You never do it if you think you're right! He needs a copilot!”

“No, I don't. I can handle a short flight alone. I just need someone to keep an eye on the prisoners. No one else.”

Sam cleared her throat. “I'll have to come as well,” she told the General. “We can't risk the lag from remote operations. Not with subspace still jammed. And if we stop the jamming, the plan will fail.”

He glared at her but had no answer to that and finally, reluctantly and with ill grace nodded.

Good. Sam knew the risk this plan entailed, and she wouldn't send anyone off if she wasn't going as well.

“I should come as well!”

Of course, just because Sam was going didn't mean Entrapta had to go as well. Quite the contrary. It might be hypocritical of her, but she wouldn't let her friend risk her life when it wasn’t necessary for both of them to go.

No matter how much Entrapta pouted.

It had been hard enough to keep Adora from coming along. Sam suspected that she was still trying to find a good argument to go on the mission.

That prisoner transport couldn't come fast enough!

*****

“Pearl Jam en route.”

Samantha Carter ran a last check on the computers she’d set up inside the shuttle, next to the hastily placed prisoner pods - a fancy designation for coffins with life support and medical sensors. But it was necessary to keep the prisoners from trying to attack everyone else - and harming themselves in the process. Even now, with the shuttle's engines accelerating at max power, she could hear some of the chipped Clones bang against the inside of their prisons, and she thought she heard Mal'ak trying to chew through his gag.

It made her feel sick. They needed a quick way to remove such chips, and they needed it yesterday - they couldn't hold enemies with such chips as prisoners without violating the laws of war and every civilised country.

She glanced at the holoprojection to her left, which showed an overview of the battle. The numbers of engaged ships on both sides had shrunk, but not decisively. The task force didn't have the numerical superiority to force a close-quarters engagement, not without taking crippling losses, so they were forced to attempt the now familiar high-speed attacks to create and exploit any weaknesses in the enemy's formation. But since that tactic relied on crippling the enemy's ability to react to sudden changes to be

most effective, and the best they could manage now was to slow Ba'al's fleet down, it was going slowly, and while each individual exchange left the enemy more damaged than the Alliance ships, it still took a steady toll.

But the enemy was hanging by a thread, and Sam and her friends were about to cut that thread - if their plan succeeded.

She pressed her lips together as she watched the shuttle's course on the holoprojection, swinging around the most recent attack by an ad-hoc squadron on the enemy formation to avoid stray beam cannon volleys. A single hit would destroy the shuttle at once.

She forced the thought away and checked her setup again. The radio connections were ready, the routines to cut the connection the moment the data had spiked as well, and the power supply was holding steady.

“How are the prisoners doing?” the General asked.

“Their status remains unchanged, O'Neill,” Teal'c replied in the same tone he used when talking about the weather. Unflappable and dependable - and deadly, as usual.

“And the tech stuff, Carter?”

“Everything's ready, sir.” She sounded a bit clipped, she realised, but he didn't comment on it.

“Alright, we're going in. I've picked out a nice frigate in the back. Keep those radio receivers peeled so we don't have to bump into the enemy hull to get a reception!”

She snorted at the weak joke as she checked the holoprojection again - they were headed straight for a frigate in the rear part - but since the enemy was surrounded, that meant they had to pass through the enemy line.

“Starting evasive flying,” the General announced a moment later, and the shuttle began to juke and weave - on the holoprojection;

Sam didn't feel any movement through the ship's inertial compensator.

To their side, another ad-hoc squadron was launching a fly-by attack, and a few seconds later, the enemy shifted in response. That opened a hole for the shuttle - and the enemy fire would be aimed away from them.

But now they were in radio range, and Sam connected the setup to the receivers. “Trap active,” she reported.

They passed so close to an enemy frigate, badly damaged but still flying, that Sam could see it through the cockpit's windows - and its guns firing - but there was no data spike. The control side might not want to switch to a frontline ship, she thought.

Then they were through the enemy line and headed to the enemy rear - or centre, depending on your view. The radio traffic was heavier here, and she saw another data spike on the chip network - yet not to the trap. Could they locate the chips through the radio network? If they could, they would be able to find the shuttle despite the stealth field, but it should be impossible in such a dense formation while using high-powered short-range radio signals in the middle of massive jamming. And the chips were not connected to the regular communications, as far as they knew, so they couldn't use that to feed targeting data to the beam cannons. But Ba'al had surprised them before…

But no ship turned their weapons on them even as the prisoners’ chips connected to the network. Maybe Entrapta's theory was correct and the chips could only enforce loyalty and a berserker mode and lacked the capacity to take over a body like a Goa'uld could? Or was that what the control node could do?

They wouldn't be able to tell until they had the time to analyse them properly.

“We're flying around their flagship. Anyone biting?”

“Not yet, sir. There are many chips for the control node to switch to, and if it's random then this could take a bit,” Sam told the General. He knew that already - she had briefed everyone on the risks. But flying so closely to the enemy - the shuttle's icon almost disappeared under the enemy icon on the holoprojection - would stress anyone.

She glanced at the prisoner pods again, No change. What if she had miscalculated? What if the chips were blocked from rejoining the network if they went offline? No, that would have crashed the entire network when the jammers started, but there could be security protocols that delayed…

The computer alert went off - data spike! A moment later, the second alert went off. “Data spike! Trap offline!” she reported. “Checking reaction!”

The logs showed the data spike - into Mal'ak. And the connection was cut before any other data spike could be registered. The control node had been severed!

She smiled, showing her teeth, as she sent the confirmation to Entrapta and started hacking the chips’ network. Without the control node refreshing and changing the protocols every few seconds, they could finally finish this!

Then Mal'ak's medical sensors started to scream alerts - his chip was literally burning out!

*****

Ba’al’s Machinations Part 9

Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

Mal’ak’s chip’s burning out. It’s affecting his brain.

Catra drew a sharp breath when she received Sam’s report - passed as a message through the Alliance network to bypass the area-jamming focused on the enemy fleet. Her own chip had burnt out as well, but she hadn’t been hurt like that. What was going on? What had Ba’al done with the chips? The hardware was supposed to be the same as Horde Prime’s chips!

“Oh, no!” Adora exclaimed.

Catra checked the shuttle’s position. It was still inside the enemy formation, close to the centre. If they made a run for it without another attack by Alliance forces opening a hole to slip through, they’d risk getting caught by a stray volley - from either side. “They can’t escape until they’ve hacked the chips.”

“Almost done!” Entrapta yelled from her corner of the bridge. “Without the control node switching things around every few seconds, it’s just a modified version of Horde Prime’s programs, and I know those, well, I knew them - they’ve adapted some, but they’re not really adaptive, so it’s not a mutating system, but… Here we go! Crashing the chips!”

For the first few seconds, nothing happened. Part of that was signal lag - they had to go through the enemy radio network - but part of that was that even if you took out the captain of an enemy ship, the crew would keep going.

But as Catra watched, she saw the first signs of the enemy formation falling apart - slowly but surely, the coordination that had kept the ships together faded, and the formation became frayed, tattered at the edges. Replacing captains in the middle of a fight was never a smooth operation, and if the replacements

lacked the mind control chips, they wouldn't really be able to keep up as before.

Here, a ship was a bit too slow to react to an Alliance squadron's fly-by attack, getting caught outside the cover provided by the rest of the ships nearby. There, a frigate retreated a bit too far from another probing attack, escaping any harm but opening a hole in the defence that exposed two more to withering fire from another squadron. And two ships suddenly turned and tried to flee.

Tried. One was shot down by another frigate as it passed, and the other veered off course, weaving back and forth and alternating speed - directly into the Alliance right wing. "Must have been mutineers," she whispered as the ship was disabled - almost broken in two - when their engines were destroyed by massed fire.

And Jack must have seen an opportunity - or just grown desperate - since the shuttle was hightailing it out of the enemy formation now. Catra held her breath as it flew straight at a defensive formation of enemy frigates, but it took a sharp turn before entering their area and flew underneath them, transponder flaring, towards the Alliance line.

She released her breath when the shuttle was safely behind their frontline and turned to Adora. "We have to push now. When they are at their most vulnerable. Before they restore the chain of command. If we can break them now, the battle's over." But if they didn't, they'd take losses they wouldn't take if they just kept whittling down the enemy numbers.

Adora knew that as well. She pressed her lips together for a moment, then nodded. "Captain, signal the task force to press the attack."

"Yes, Supreme Commander!"

On the holographic projection, the Alliance forces shifted, more reserves called forth as the more damaged ships were left behind, and the lightly damaged ones took point. Catra could see the enemy's formation trying to adapt to the attack they knew was coming, but their chain of command would still be dealing with losing all commanders at the same time, and even for the Clones, that was a huge blow.

Instead of an all-out attack, the Alliance fleet attacked by sections. One section, composed of all the ships in the best state, smashed straight into the enemy formation. And when the enemy centre fell back, the outer parts found themselves enveloping the section but also exposed to the next attacks, which cut through them before they could decimate the first wave.

Four, five enemy ships - half of them not even engaged - turned at that moment. One was shot down by their own group, the others ended up charging straight at another Alliance formation.

Three were wrecked in short order, the last one turned so hard, it flew through another squadron of Ba'al's frigates, almost ramming one as it thoroughly dissolved their formation.

The Alliance forces pounced on the ships left in disarray, and as they quickly died, isolated and without coordination and cover, a hole opened in the enemy formation through which two, three Alliance squadrons pushed.

"It's over," Catra said. The enemy formation was falling apart in front of her eyes. Ships fought by themselves, all coordination lost, as the Alliance frigates quickly focused their fire on one enemy after the other. And with every enemy frigate destroyed, the Alliance's advantage in numbers grew.

A few minutes later, the last handful of enemy frigates were drifting in space trailed by debris or turned into expanding clouds of plasma.

And Jack's shuttle landed on their ship.

*****

Jack O'Neill was very grateful that the life support system of the stealth shuttle was rated for heavy duty; thanks to the filters in the ventilation system, he had barely caught a whiff of the stench of burning skin and flesh from the shuttle's cargo area.

He had heard the noise Ba'al's First Prime had made, even through his gag, when the chip had started burning. It was a good thing that the Alliance navy wasn't a dry navy - at least not the Clone ships - since Jack really needed a drink right now. Unfortunately, he would have to wait until he had landed the shuttle and dealt with the entire mess.

At least, they were ready for them; he saw a medical team waiting with a floating gurney as he guided the shuttle into the frigate's hangar, and as soon as he touched down, the four Clones were rushing to the back of the shuttle.

Jack lowered the ramp and got up. "We've arrived, folks." He almost added: 'Thank you for flying O'Neill Air', but Carter looked too grim to appreciate the joke. "How's the prisoner doing?"

"He's alive," Carter replied as she got up and let the medics grab Mal'ak. "But I can't tell yet what neural damage he suffered."

Jack winced. "I didn't think the chips were supposed to do that - didn't Catra mention that her own had burnt out as well?"

"They aren't supposed to do that," Carter replied in a clipped tone. "And the hardware is the same. Ba'al must have managed to alter the software in a way that allows it to overheat the chip to the point of burning the flesh it's attached to."

"The pain from burning skin should not have caused such a reaction," Teal'c spoke up. "If he could not take molten gold poured into Ba'al's symbol carved into his forehead without flinching, he would not have become Ba'al's First Prime."

Yeah, Jack wasn't about to comment on that. Or glance at the golden symbol on Teal'c's forehead.

"Yes," Carter said. "That's why I suspect that the chip did something to his brain."

"Something more painful than burning." Jack pressed his lips together. "Cooking the brain?"

Carter frowned. "That is not physically possible with the chip, sir."

Learned a new thing.

The Clones had finished loading the trembling - and bound - Jaffa on the gurney and were taking him out of the shuttle. He was no longer Jack's responsibility. Not officially, at least. But Jack had been in charge of the mission - he had carried a prisoner of war into battle to use them against the enemy. Even if Mal'ak hadn't been hurt, that would've been sketchy. Now? Jack was sure there would be an investigation. And 'I was following orders' wouldn't cut it. Not that he'd use that excuse - he had known what he was doing when he had taken command.

*****

"What? A war crime?"

Jack nodded. "Yes. Prisoners of war aren't supposed to be sent into danger like that."

"But…" Adora blinked. "Oh, no! I didn't think of that!"

"It was my plan, sir," Carter spoke up. "My responsibility."

"I was in charge of the mission, Major" Jack retorted. If anyone had to take the fall for this, it would be him.

"I'm the Supreme Commander of the Alliance, and I approved of this. If anyone is to blame, it's me." Adora glared at both of them.

“Who’s going to prosecute you? You’re She-Ra, Princess of Power,” Glimmer said. “And the Supreme Commander of the Alliance.”

Adora’s glare switched targets. “I’m not going to hide behind that!”

Ah… Jack winced. That wasn’t going how he thought it would be going.

“You’re a Princess; you have diplomatic immunity,” Glimmer shot back. “Besides, what do you think will happen if some idiot tries to punish you for this? Priest will nod along?”

“I’ll tell him that I was wrong.”

“You weren’t wrong,” Catra spoke up. “The chips were already hurting the prisoners - they almost killed themselves. This was the only way we saw to hack them and stop them.” She flashed her fangs. “Call it emergency medical aid.”

That was… certainly creative. Jack didn’t think too many prosecutors would agree, though that would likely not matter - it might be a good enough excuse to sweep this under the rug.

“But…” Adora tried to defend herself - or the opposite.

Catra shook her head. “We had no choice. If we wanted to save the chipped people, we had to hack those chips. And Mal’ak was Ba’al’s First Prime - hardly an innocent victim.”

Jack glanced at Teal’c. His friend had been Apophis’s First Prime and had deserted. But Teal’c didn’t say anything nor showed any expression.

And Carter looked torn.

“Still, we’re not supposed to treat prisoners like that!” Adora said.

Catra shrugged. “Not even to save them?” She scoffed. “Those chips had to be hacked. We couldn’t let them be mind-controlled.

And that was the only way.”

At least, they hadn’t been able to think of a better way at the moment, Jack amended the statement in his head. But it was better to get on with the program. “So… we tried to save them, and the only way that seemed to offer any hope was dangerous but worked - in the end.” Well, he had done worse in the past, and it had been buried.

But as everyone nodded, more or less reluctantly, Jack couldn’t help feeling as if he were a spook. Or a politician.

*****

Ba’al’s Glove, Point Velvet, Deep Space, July 4th, 2000 (Earth Time)

Adora watched on the HUD as the royal marines went through another section of the ship. They had already scanned for ambushes and bombs - Adora herself had taken down a squad of Jaffa trying to hold a chokepoint - but the soldiers still proceeded cautiously through the corridors.

“They're fine,” Catra commented behind her.

Adora knew that. But she still worried. They were acting on her orders - and as she had just been pointed out to her, she wasn't perfect. To think she had broken the laws of war!

“We've collected all the chipped people already,” Catra went on. “This is just standard procedure.”

Adora glanced at her. “What about the prisoners?”

“None of them show any symptoms like Mal'ak does,” Catra replied. “Sam and Entrapta are removing the chips as fast as they can.”

That was good. Adora felt guilty already for subjecting Mal'ak to this ordeal. They should have considered the risk and taken the

chip out before heading in. But the chip wouldn't have linked up with the network if it hadn't been implanted, and… She clenched her teeth. It wasn't an excuse.

"We did what we could and had to," Catra said. "We couldn't let this go on."

Adora pressed her lips together. The excuse rang hollow. They shouldn't have used a prisoner like that. But they shouldn't have let the chipped people suffer longer either… There was no good answer. They just had to do better - much better - next time. "What are their reactions?"

Catra made a scoffing noise. "What do you think? They are traumatised by the experience."

Like Catra had been. Like any host of a Goa'uld had been.

Adora still had to ask. No two people were alike, not even Clones. Some might fool themselves into thinking they deserved to be controlled like that. And some might even consider it an honour. They didn't know what Mal'ak thought about it - the former First Prime of Ba'al still wasn't able to be interrogated.

"They're getting treatment," Catra went on. "We're doing what we can. But we need to find the chip factory and destroy it."

Adora nodded. That, at least, was clear and obvious. "We need to decide what we do about this site," she said. "Ba'al could already be massing ships to attack us."

"He can't just keep counter-attacking - we've defeated every force of his we've met so far," Catra said. "At some point, he has to start worrying about his remaining assets."

"We don't know how many forces he has left," Adora pointed out. It was unlikely that Ba'al could have enough Horde forces to match the Alliance, but not technically impossible.

Catra scoffed again. “If he had enough advanced forces to match us, he'd have done so straight away. He wouldn't have sent half a dozen frigates with a fleet of barely-upgraded Ha'taks after us. And he would have reinforced this site with more ships.”

Adora nodded. It was likely that they had destroyed the bulk of the Horde forces that had joined Ba'al. But they couldn't be sure until they knew what forces Ba'al had left. “We need more intel.”

“No shit!” Catra growled under her breath. “But the only one who seems to know everything is Ba'al himself. Either we take him out, or we have to wait until our spy bot network is covering the entire sector.”

And even then, they couldn't be sure Ba'al wouldn't have some hidden base or yard in another part of the galaxy. This site wasn't in a system, after all - they would have missed it if they had simply mapped all systems in the area. “We still have half the spy bots tracking their ships,” Adora said. “But we need to decide whether we hold this site or move everything back to the Alliance.”

“Whether we abandon the Glove or not, you mean,” Catra replied.

“Yes.” They could evacuate everything else, but the unfinished flagship didn't have any engines yet. And while it was far from being finished, it was already too big to be moved by anything the task force had access to.

“We don't need it,” Catra said. “It would take far too long to finish it, and even if we did finish it, we don't need a ship that big. Not to mention that it would send a pretty bad message to half of Etheria and any survivors of Horde Prime's campaigns.”

She was correct, of course - Adora didn't think anyone who had fought Horde Prime would want to see his flagship again. The Velvet Glove had been responsible for so much destruction in the galaxy. “Some people will be angry,” she said. Some people would

love to have the biggest ship in the sector. And access to the factories planned to be built into it.

"Let them." Cara shrugged. "It would be a bad idea to focus so much into one ship, anyway. As Ba'al just found out."

Adora agreed with that. Not just because they couldn't afford to lose such a ship but also because whoever controlled the ship would control a lot of the Alliance's fleet strength. And that would influence Alliance politics. Still… "Let's discuss it with the others."

Catra shrugged. "I don't think Glimmer will disagree."

Adora didn't think so either. Jack was a wild card, though.

*****

Point Velvet, Deep Space, July 5th, 2000 (Earth Time)

Samantha Carter suppressed a yawn as she stared at the latest data points from the analysis. The central control node code had to have protocols to link up with a higher authority - anything else wouldn't let Ba'al update the standing orders. And there would have to be checks and tests to validate such orders - data the Alliance could use against Ba'al, even if it wouldn't deliver them the coordinates of another of Ba'al's bases.

Unfortunately, after trapping the control node in Mal'ak's chip - Sam's lips formed a thin line when she remembered the consequences of that decision - it had started to burn out, and so they had barely managed to recover fragments of the code before the chip had died and almost taken Mal'ak with it. All that crucial data lost…

"Alright. I think I've finished restoring that piece of code," Entrapta said. "The advanced control routines would work according to the simulation, though we haven't tested that yet so it's not yet confirmed by empirical data."

“Uh, which won't happen because the Alliance doesn't mind-control people,” Bow pointed out.

“Right! Of course!” Entrapta nodded.

Sam focused on the new data. The subroutines to control the carriers were the same as Horde Prime's - they had confirmed that with data from all the chips that they had captured - but anything about the actual advanced control node's directives and decision trees were assumptions. Assumptions based on the data from those chips which had hosted the control node during the battle detailing the orders and changes in behaviour it had left.

And wasn't that a nice, clinical way to talk and think about a chip warping a person's innermost thoughts and desires?

“At least we've managed to streamline the removal of the chips,” Bow said after a few moments.

That hadn't taken much beyond Entrapta and Bow remembering how they had dealt with Horde Prime's chips and checking if the basic methods worked. Sam still nodded since it meant all of the chips’ victims were now free. Traumatised and in need of help but no longer trapped in their own bodies - or, worse, mentally manipulated to become fanatical followers of Ba'al.

But it had netted them a lot of chips to analyse, which they had been doing for hours. Every little detail, every data point, could add up and allow them to crack Ba'al’s defences.

Sam would be more optimistic if she couldn't think of half a dozen ways to avoid any potential weakness she came up with. No one is perfect, certainly not someone as egoistical as Ba'al, she told herself. He has to have made a mistake; we just need to find it.

The key was the floating control node's code. All of Ba'al's orders had run through that; updating the network chip after chip as it jumped around. All the protocols and data would have been concentrated there - and gone when the last host chip had burnt out. Something Ba'al had likely intended.

But it was also an obvious failure point and a weakness. Take out the control node, as Sam and her friends had done, and the whole network collapsed. Any chip that survived wouldn't have any way to safely link up with another network. No protocols to validate sources and update orders.

Ba'al did like to compartmentalise his forces. Maybe he preferred to write off a network if it lost the central node? Fighting to the death was certainly standard operation procedure for his followers.

But Sam didn't think that Ba'al would go as far as to permanently split up his forces from the start. And even so, he couldn't expect to keep all chips in a network together forever - ships were sent out on scouting missions all the time, task forces split up according to the needs of any given mission, courier work was fairly common and would require the kind of loyalty mind-control chips enforced. So, every chip had to have a way to rejoin a network. Anything else wouldn't make any sense, not even for a paranoid Goa'uld. Protocols to establish contact. Validate signals. Accept new directives. Everything you needed to become part of the network - or infiltrate it.

Sam and her friends just had to find those protocols in the core software of the chips. But they had been sifting the entire code for any trace of such protocols and had only found the routines that handled the technical parts. Not the ones that actually authorised such link-ups. Where had Ba'al hidden them?

Even simulating a network connection didn't reveal them - the chips linked up, but nothing past signal testing data was exchanged. No actual data; it was like the higher functions were missing…

Sam blinked. "Oh, of course!"

Ba'al was a Goa'uld. Goa'uld were parasites, sapient, but they depended on the brains of their hosts to achieve their full intellectual potential. And what use would a chip without a carrier

be for any network? It would feel natural for him to link - to outsource - core network functions to a chip carrier's brain, wouldn't it?

“Can we fool a chip into believing that they are hooked up to a brain?” she asked, then groaned at the realisation that she was starting to anthropomise chips.

“We could, I think, but why?” Bow said.

Sam explained.

*****

“...and so we confirmed that the chips use part of the carrier's brain to store data, presumably crucial parts such as network protocols and valuation codes.”

Catra felt the fur at the back of her neck bristle at Sam's briefing. Those damned chips not only took over your body - forcing it to keep fighting even when you were unconscious or dead - but they used your brain for data storage? She'd personally kill whoever came up with this.

“That's…” Even Jack didn't seem to have a joke ready.

“That's horrible!” Glimmer spat.

“Can we fix that?” Adora's expression sent a cold shiver down Catra's spine. She hadn't seen her love looking grim like that very often. “Give people back their… brains?”

Sam winced. “We're still examining the victims. So far, we have not yet been able to access the data stored in their brains, though we’re working on identifying and duplicating the protocols in the chips. Once we can assess the scope of the changes to the brain, it should be possible to ascertain what was done to them.”

In other words, they didn't know and were not optimistic. “So… We can't exclude the possibility that those parts of their brain

contain some ways to mind-control the victims?” Catra asked.

“Shit!” Jack cursed. “Sleeper agent protocols?”

“We can't exclude that possibility at this point,” Sam confirmed.

“I can try healing them,” Adora said. “This… I should be able to restore someone’s brain to their control.”

Catra wasn't so certain, but she didn't think it would hurt to try. Though if it took She-Ra to deal with this, that would be another burden on her love.

“We'll have to examine the victims more thoroughly first, to establish a baseline,” Sam said.

“Yeah! Or we might not be able to tell what your magic is doing to people's brains,” Entrapta added. “We don't know yet what the chip did to brains - not in detail.”

“It's a very complicated interface,” Bow cut in. “We first thought it was merely an, ah, alternate way to safely store data, protect it from access through conventional means, but the chips' protocols are too complex for that. It doesn’t help that we can't use the chips directly to access the data.”

Catra glanced around, half-expecting someone to ask why they couldn't put a mind-control chip back into a victim to check their brain, but to her relief, no one was that stupid.

“Alright.” Adora nodded. “Keep working on that - it takes priority. We need all the information about those chips we can get to stop Ba'al. Now, next item: The state of this site and our task force.”

That was her cue. Sort of. Catra sat straighter and pulled her tablet out. “We're still recovering from the battle, but we've used the captured facilities here to repair our ships. A third of the task force's frigates have been restored to full combat readiness, and another third, while still showing damaged secondary systems, have had their shields, engines and main batteries repaired. The

last third, though, will require lengthier stays in docks, either here or in facilities behind our lines."

"We lost a third of our task force, then." Jack didn't sound happy.

"Temporarily," Glimmer said. "They will be repaired."

"That still will cost us resources that could go into building new ships," Catra pointed out. Glimmer frowned at her, but she shrugged. "Opportunity costs are still costs. At least the casualties were light." Trained and especially experienced crew was much harder to replace than ships, after all.

"We were lucky there," Adora said. "If the battle had continued a bit longer, we would have been forced to field even more damaged ships, and losses and casualties would have rapidly grown."

Yeah. As long as you could shift ships around to spread the damage taken by the enemy, you could avoid heavy losses, but once you ran out of undamaged ships to rotate into the frontlines, damage would accumulate fast. Catra had seen it happen in the Horde war with ground units. Once a unit had taken so many casualties that it started to break, you could write it off.

"So… we're basically at half effectiveness," Jack summed up.

"Yes. Which means we cannot repel a counter-attack by a force the same size as the force we took down," Adora said. "We need to evacuate the site."

"That would mean leaving the unfinished Glove," Glimmer said.

"No big loss," Catra said. "It's just a chunk of hull at this point. No engine, reactor, shield or weapons of any note. Not even the factories have been completed yet." She shrugged. "Less than a quarter of the entire ship, too."

"What a waste of resources," Jack commented.

“We didn't spend it,” Glimmer said. “Ba’al did.”

“And finishing the ship would require too much time, too many resources, and too many forces to guard this site,” Adora said. “We can't afford it.”

“So, we'll loot it of everything we can take and blow up the rest. Or Have Adora turn it into a space plant,” Catra said, flashing her fangs.

“I can't actually use magic on that scale out here,” Adora said. “I would need a world's restored magic to do that.”

”So, we can't leave a message for Ba’al using flower language. Too bad.” Jack grinned. “I guess some explosives will have to do.”

“And we'll have to pack up the factory ships - and the ships forming their supply lines,” Catra said. “They're slower than frigates, so we better get a move on.” Digesting everything back home would also require an effort. But overall, this should help with Alliance war production capacities.

Once they figured out who got what, of course. Catra had a feeling that this would cause some issues with Earth.

*****

Alliance Headquarters, Brussels, Belgium, July 15th, 2000

“...and surely, General, you agree that moving the, ah, liberated production assets of Ba’al to Etheria is a blatant attempt to present the Alliance with a fait accompli that flies in the face of the treaty that formed the Alliance.”

Jack O’Neill resisted the urge to roll his eyes; the Secretary of Defense was, after all, his superior. Sort of - Jack was part of the forces the United States had assigned to the Alliance, and he answered to Adora, but he had not left the Air Force. “Etheria was the closest system under secure Alliance control,” he said. “Moving the captured factory and mining ships anywhere else would have

both required significant forces to guard them and taken far longer. That would have significantly reduced the Alliance's offensive and defensive capabilities in the war." Something the man should have been aware of!

"Yes, yes, I've read the reports." The other man shook his head almost dismissively. "But we can't just look at this from a military point of view, General - we have to take the bigger picture into account. Those factory and yard ships are the most advanced we have; they are geared to produce Horde-style frigates and supporting craft. To place them under the direct control of the Princess Alliance in Etheria when Etheria already controls the factory ships of the Horde fleets in the Alliance seems like an obvious attempt to cement their monopoly on advanced ship production."

Oh for…! Jack shook his head. "The different Clone fleets control their own fleet trains, sir. The Princess Alliance doesn't have control over them."

"Two of the fleets worship She-Ra as their goddess, and the other two are commanded by Princess Entrapta's consort and a very close friend, respectively; I think we can dispense with the polite fiction that the Princess Alliance doesn't control the Horde ships, General."

Jack stared. "Have you met Princess Entrapta?" Did the man honestly believe that Entrapta was some… seductress controlling the Clones through Hordak and WrongHordak?

The man frowned. "Despite her eccentricities, Princess Entrapta is a ruling princess - and one of the oldest members of the Princess Alliance's leadership council, General."

"Entrapta doesn't care about politics; she just cares about technology and her friends," Jack shot back.

"That might be so, but that means she will listen to her friends - and the majority of her friends are members of the Princess

Alliance, General. How often did the Horde leaders oppose any proposal from them?" Before Jack could answer, the man went on: "And even if we would assume that your view was correct, you have to consider the optics, General."

"The optics?" Jack frowned again.

"It's an election year, General. How do you think the American people think about the fact that we still seem to be playing second fiddle to the rest of the Alliance?"

Oh. "I think they're more concerned about the body-snatching evil alien parasites trying to enslave us all, sir."

"You would think so, but that's not what the polls say. People are concerned about being beholden to aliens, period. They haven't forgotten how America was forced to bend to the demands of the Princess Alliance. The American people expect us to be the leading nation of Earth, not the junior partner of an Alliance led by aliens." The Secretary of Defense shook his head. "We're lucky that they arrived two years ago, and the reports from the invasions we launched did help, but the public isn't stupid - they see all those alien ships in the news, they see the British ships in combat - and they don't care that those were glorified feighters - and they ask where the American ships are in this war."

"Well, if they want a strong fleet, maybe the Navy shouldn't be building lemons," Jack retorted. The US frigates were still not rated for combat outside the solar system.

That earned him a glare. "All new designs have teething issues. I am sure those will be soon ironed out - Major Carter is supposed to work hard on them, isn't she? - but we need more production capacity under American control if we want to regain our position."

"And win the election," Jack said in the flattest tone he could manage.

“You don’t change the team in the middle of the game, General. Besides, how do you think the Etherians will react if the US Government is replaced by people who think the gay should go back in the closet?”

Jack hadn’t exactly paid a lot of attention to the election campaigns, but he would have noticed any such demand - hell, the Etherians would have asked him about it! “I don’t believe that the next president, whoever it will be, will change those policies, sir.”

“Of course not! It’s in the constitution now! But the press, especially the foreign press, will dig up everything they said about gays and lesbians in the past in an attempt to cut us off at the knees. We can’t afford that kind of trouble.” The man narrowed his eyes again. “We need to get control of those factory ships before the election, General, so we can show the public that America isn’t weak any more and on the way to regain our place as the leader of the free world.”

“That seems to be a political challenge, sir,” Jack said with all the diplomatic restraint he could muster. “Not a military problem.”

“On this level, that’s the same thing, General.”

“But I’m a military officer, sir.” Not a politician.

“And you’re an American - the highest American officer in the Alliance. A close friend of the core leaders of the Princess Alliance. Your country needs you, General.”

It sounded more as if Jack’s government needed him. “And you want me to… talk to the princesses?”

“I want you to give them your honest appraisal of the danger for the Alliance if the production capacities remain as unbalanced as they currently are, General.”

Fuck.

*****

Royal Palace, Bright Moon, Etheria, Etheria System, July 16th, 2000 (Earth Time)

"What? They want us to move the entire production line to the Solar System?" Adora shook her head. "That makes no sense - that would take months, not including setting up the mining operations to supply the factory ships and yard ships! We've just finished setting up in the Etheria system, and we already had mining infrastructure here!" Moving an entire space-based shipyard complex took a lot of time and effort!

"Against opposition from our resident isolationists," Glimmer added with a scowl. "They claimed to be worried about the effects asteroid mining had on Etheria's magic!"

Jack shrugged with a slight grimace. "The US government is concerned about the upcoming election."

"They're worried that the opposition party might be exploiting the lingering resentment amongst part of the American population that the United States isn't the uncontested superpower on Earth any more," Daniel said. "At least, the polls I've looked into seem to show that this is a view shared by a not insignificant part of the population."

Glimmer muttered something brief and not very complimentary about democracy that Adora chose to ignore. America, and pretty much every Earth country in the Alliance, was a democracy. That wouldn't change. But… "I thought that blatantly using your power as the government to ensure you stayed in power was considered an abuse of power in a democracy."

"Ah…" Daniel grimaced as well. "It's complicated."

"I sense some hypocrisy coming," Catra commented.

"Well, a democratic government is supposed to implement policies to improve the lives of their people, which, in turn, will, if they are

successful, and seen as being successful, gain the voter's support in the next election," Daniel said. "That includes caring about the concerns of the population."

"*Appearing* to care about them, you mean," Catra cut in.

Adora frowned at her. Catra's cynical views of democracy weren't really helpful right now.

Daniel, though, nodded. "Yes. In politics, perception often is more important than reality."

Glimmer muttered something about democracy again.

Adora focused on the actual issue. "And the US government doesn't want to look weak to their voters, which is why they want us to move the Horde fleet train we captured to Earth and hand it over to them."

Jack shrugged again. "More or less. They were a bit cagey about the whole thing."

"We already could tell because they went through you, Jack, and not through official channels," Daniel said.

"The other countries would protest about such a blatant power grab." Glimmer shook her head. "How do they think this would work, anyway? Those yard ships produce Horde frigates. The Americans chose to build their own designs. Do they want to retool the entire line?"

Catra scoffed. "For their crappy designs? Might as well blow the entire line up and save us the waste of resources and crews!"

"That's a bit harsh, I think," Bow said.

"No, it's not. Just listen to Sam rant about them," Catra shot back.

Adora nodded. The many, many problems with the American ships were well-known. "Leaving that aside, would a change of

government really be that bad?”

“Well, if they campaign on more nationalist rhetoric and win, then the new government would likely push for more influence in the Alliance,” Daniel said.

“You mean, they'd ask for the same things the current government does?” Catra snorted again.

“Well…” Daniel spread his hands. “In a way, yes.”

“I don't think we should get involved in that,” Glimmer said. “That feels like meddling in a succession issue in another kingdom.”

“Historically, most succession issues on Etheria involved other kingdoms as well,” Bow pointed out.

“That doesn't mean meddling is a good idea,” Glimmer shot back.

Adora agreed. “Yes. We shouldn't let the internal policies of one country shape the way we conduct this war. Our focus has to be on winning the war against the Goa'uld, not elections.” She was sure the rest of the Council would agree - none of the other NATO countries had struck her as particularly happy with the American leadership.

*****

Spacelab, Earth Orbit, Solar System, July 17th, 2000 (Earth Time)

“OK! That should work! Now let's test it!”

Samantha Carter nodded at Entrapta's comment. The latest version of their brain scanner looked promising. Well, it was more of a brain interface, to be precise. Their scanners were already able to scan brains, but they hadn't been able yet to connect them to Ba'al's chips. Whoever had written the software for those abominations must have been both a genius and utterly deranged.

“Connecting the interface,” she said as she checked once more that the outside connections were cut before powering up the link between the air-gapped scanner and the isolated chip.

“Protocols… engaging,” Entrapta said. “Oh, look - data exchange started.”

That was promising, but they had such successes before. If the chip's protocols were not satisfied, it would… The indicators changed. “Successful connection.”

“It's looking into the data from the scans!”

Yes, the chip was treating the data as if it were live readings from a brain. Or so Sam hoped. If they could fool the chip, they could get at the reading/writing routines, and then they could access the altered parts of the brains of the chipped victims and find out what data was stored there.

That could be the key to cracking the entire network.

Sam leaned forward as the chip's routines started exchanging great amounts of data with their simulated brain.

“Oh, look at that, Sam! It’s trying to alter the brain chemistry! As we theorised!”

Sam nodded. Another piece of the puzzle had been solved. Sooner or later, the whole thing would be open to them.

And then, they could start on tracking down such networks.

*****

Ba’al’s Machinations Part 10

Alliance Headquarters, Brussels, Belgium, July 18th, 2000

“...and we cannot close our eyes to the fact that we’ve been at this war for years - almost during the entire time the current administration was in power - and yet, America’s position hasn’t improved. We depend on alien protection and alien technology for everything! Should the Alliance break apart, America would be left helpless. This has to change! We cannot depend on others any more!”

“Those were very strong statements. And it’s still two weeks until the national convention - can we expect even stronger statements then, James?”

“I believe so, Julia! The war against the Goa’uld is dominating this election, and the polls all agree that it is a very divisive issue for America. And while Americans are generally loath to change governments in the middle of a war, with the term limits applied, the effect of that sentiment is naturally not as strong as it could be, and many of us remember how quickly the last war was won under President Bush, so…”

Sitting in the meeting room that she usually occupied in the Alliance HQ, Catra rolled her eyes and switched channels. The Gulf War had been fought with tanks and planes, not spaceships, and with overwhelming material superiority. If anyone thought you could wage war the same way in space, they needed a reality check.

“...and this is not merely a question about how to conduct the war against those aliens, but a question that touches the very soul of our nation: Should America become one nation amongst many, or should we continue to be the shining city on the hill, the ideal other nations aspire to become? After the fall of the Soviet Union, America has been the world's uncontested leader. Where we went, others followed. We were the first to step on the moon - and we

were the first to reach out to the stars and strike a blow against the Goa'uld! This is a proud history and a responsibility we cannot discharge as easily as the current government wants us to! America is not one country amongst many, but a promise! So…"

"...and I can only repeat what our government already stated: America cannot stand alone and it should not stand alone. From the beginning, we have been looking for allies against the Goa'uls. We will not reject our friends - we will stand by their side, united against the Goa'uld. America is a strong part of the Alliance, and we will only grow stronger as we adapt the advanced technology shared with us and develop our own. It would be the height of foolishness to…"

Catra turned the TV off.

"That's why democracy is such a stupid system: It's not even been two years since we made the Alliance treaty, and yet, those people want to change it!" Glimmer complained. "How can you trust such a country? Even the worst princesses back home know that you can't just dissolve a treaty like that!"

"Ah, I don't think they want to dissolve the treaty," Bow said. "They just want to, ah, change how Alliance procurement works."

"They want to take control of the shipyards because they can't stand that they aren't the most powerful member of the Alliance!" Glimmer shot back. "Jack told us that - and they're saying it in public!"

Catra nodded in agreement.

"Well, they are going to become the most powerful member of the Alliance once they adapt to advanced technology - they are the biggest country with the strongest economy," Bow pointed out.

"Yes! But that makes this even worse - they don't even have the patience to wait a few years!" Glimmer scoffed. "Don't they know about long-term planning?"

“That won’t win them the next election,” Catra said.

“Short-sighted fools!” Glimmer bared her teeth and crossed her arms with a huff.

“At least the other countries aren’t like that,” Bow tried to smile encouragingly. “And they’re democracies as well.”

Glimmer huffed again. “They would probably act the same if they were as big as the United States.”

“Probably. Except for the Germans,” Catra said.

“Well, yes. But they’re weird about it.” Glimmer shrugged, then sighed. “I just wish they’d focus on beating the snakes instead of each other.”

“It’s not that bad,” Bow objected. “They just… are still adjusting.”

“Then they should adjust more quickly!”

Catra snorted.

“Well, as long as we can keep them from messing up Alliance strategy and production, it won’t matter much who’s in charge of the United States, right?” Bow asked.

“They both want the same anyway,” Glimmer grumbled.

“That’s consistent, at least,” Catra said with a grin. “It’s almost as if America had a princess.”

Glimmer scowled at her, and Bow chuckled politely.

“How much longer until Adora’s back from her meeting?” Glimmer asked after a moment.

Catra shrugged. “It depends on what Priest’s been doing while we were fighting Ba’al. If he’s been good, it shouldn’t take too long.”

“Great. We’ll be here all day then.”

She might not be wrong, in Catra's opinion. Priest should have been busy handling the new Clones and the new Prisoners of War, but the wily Clone was perfectly able to do that and meddle in other things. In fact… She used the remote again. "Let's see if there's anything in the news about him."

"There better not be!"

*****

"...and if we modify the spy bot's search pattern to take the range of the chip's FTL comms into account, we can cover the suspected area under Ba'al's control much faster than anticipated, although at the price of potentially missing forces and bases without any chipped victims."

Jack O'Neill nodded at Carter's report. She - and Entrapta - had come through again. "Will that allow us to find his chip factory and shut it down?" It was best to get confirmation before he made any assumptions that turned out to be wrong.

"If Ba'al is using those chips on staff working there and if that facility is within the area we're searching, yes, sir."

Those were two significant 'ifs'. So, if Ba'al was even more paranoid and kept the chipped slaves from the chip factory, they wouldn't find it like that - unless they stumbled on it. On the other hand, would Ba'al really trust such a key part of his realm to people without mind-control chips? "So, we have to hope he hasn't used a clone of his there - or if he does, he still uses chips."

"If he's chipping his First Prime, I don't think he's shying away from doing it to a clone," Catra said. "The question is: Can he control another Goa'uld with the chips? If they can take over a stunned victim to make the body keep fighting…"

Carter nodded. "While we could not test it, based on the experiments we could run, we believe that the chips could override even a Goa'uld's control of their host."

Jack whistled. “Now, if the other snakes knew about that…”

“You think we should leak that intel to the enemy?” Catra looked at him. “Ba’al’s already fighting a couple of snakes and us; if more get involved, they’ll discover us sooner rather than later.”

She was right, but Jack didn’t think they would be able to hide for much longer. Between the deception with Apophis and now the campaign against Ba’al, when Adora had revealed herself, he had a feeling that the Goa’uld would discover the extent of the Alliance soon anyway. “We shouldn’t underestimate the snakes. They will add two and two together as soon as they can compare information from Apophis and Ba’al.”

“Ba’al has organised his forces in a way that makes it exceedingly difficult for spies to infiltrate his court,” Teal’c said. “And the more mind-control chips he uses, the harder it becomes for a spy to remain effective.”

That was true as well. And frustrating since it also meant the Tok’ra were not nearly as effective as they should be. But… “Yeah, but everything adds up.”

“And you think that we should turn the other Goa’uld against Ba’al before they realise how powerful the Alliance is,” Adora said.

“Yep.” Jack nodded.

“And hope Ba’al doesn’t spill the secret to avoid getting ganged up on,” Catra said.

“That’s a danger,” Jack said. “But can you see Ba’al doing that? He keeps everything compartmentalised.”

“We shouldn’t underestimate him,” Glimmer replied. “We know he is one of the smartest Goa’uld we’ve been fighting.”

“And one of the most cruel,” Adora added. She shook her head. “I think it’s a bit too dangerous to leak the information - it would also show Ba’al how much we know. And I think the Goa’uld

already fighting Ba'al are enough; I don't think we want the other System Lords to move more forces into the theatre - it would make defeating them in detail harder."

Jack slowly nodded. That made sense. And they were right that Ba'al was already one of the System Lords most hated by the rest of the snakes. "So, could those chips protect against being taken over by a snake?" Everyone stared at him, and he shrugged. "Just thinking out loud."

"The chips work by taking control of the central nervous system, sir. I don't think this would result in the victim retaining control of their body, sir," Carter said. "It would just be a puppet for the chip."

And that wouldn't be any better than being a host for a snake. Even if you were fighting for your own side. Jack shuddered.

"Well, unless the chip was programmed to just… reinforce the brain. Kinda," Entrapta said. "But you'd have to have all the brain data for that, and the chip can't really hold that much data. So… not really. But in theory, with much more advanced chips, it could be done - but we'd be copying a brain onto a chip for that, which I think we could if we used the Asgard's transfer technology, but we'd still need better chips."

Everyone was staring at her. Jack included. Had she just proposed a way to copy people's brains into chips and then have the copy take over the original body?

"Uh…" Adora grimaced. "Let's not try to copy people."

Everyone agreed with that.

*****

North of Las Vegas, Nevada, United States of America, Earth, July 19th, 2000

“...and this, Your Divine Highness, is the latest congregation of your faithful!”

Standing next to the shuttle they had taken here, Adora stared. She had seen the pictures, of course - any officer knew how to check the maps before deploying, and while this trip wasn't an actual mission, it sure felt like one - but pictures didn't quite capture the real thing. “It's a giant sword.”

“We considered building it in the shape of a shield, to symbolise Your Divine Protection of those in need, but we felt that emphasising the fight to defeat evil was more appropriate. Also, the building permits were easier to acquire for this design.” Priest beamed.

“You mean, you found a giant cross that was permitted, and so they couldn't deny your sword,” Catra commented.

“The authorities could not deny us what they granted to others already.”

“That explains the giant sword,” Adora said. A tall building in the shape of a sword, point buried in the earth. “But what about the fortress around it?” Those were Horde-style - Hordak's Horde, not Horde Prime's Horde - prefab walls complete with turrets and weapon emplacements - though they looked empty, fortunately.

“We received threats from various extremist elements, and the building permits included fences around the property, Your Divine Highness.”

Adora didn't think anyone would consider walls thick enough to stop a charging hovertank ‘fences’, but she wasn't a building inspector. It wasn't as concerning as the first part of the statement, anyway. “Someone threatened you?” she asked, narrowing her eyes.

“Religious extremists, Your Divine Highness. They take exception to our faith spreading amongst the people of Earth and resort to threats of violence when their propaganda cannot stop Your Word

from reaching those in need." Priest shook his head. "But do not be concerned - their pitiful attempts to scare us will not shake our devotion to Your Divine Truth! As You show us every day by example, we will persevere in the face of any adversity!"

Catra clapped, and Adora glared at her, which only made her lover grin, before she turned to address Priest again: "So, were there any attacks?"

"None so far, no doubt owing to our faithful guards, Your Divine Highness. Although the local fanatics have taken to, ah, 'picket' the building on the days of our celebrations and harass our faithful. Unfortunately, the authorities emphasised that they are allowed to do that by the laws of the land."

"Freedom of speech and blah blah," Catra said, peering through binoculars. "I think I can see them setting up - there's a sign denouncing you as a satanic temptress. And one calling you the whore of Babylon. And a few about 'Hell' awaiting those who follow you."

"We told them that the local satanic temple denied any connection between Your Divine Highness and their own faith, but it did not deter the protesters," Priest added. "Also, unlike Your Divine Name, 'satanic' is not a protected trademark, so the temple could not use legal means to stop this, either."

"My name is a trademark?" Adora hadn't known that.

"We took the steps to prevent people abusing your name and likeness to hurt others, in accordance with your values, Your Divine Highness."

She narrowed her eyes slightly - Priest sounded too smug - and ignored Catra's chuckling. "And to prevent others from selling merchandise, right?"

"Indeed, Your Divine Highness!" Priest nodded. "Your faithful will not be exploited for profit as long as we stand watchful!" He smiled. "Of course, we will limit ourselves to legal means, as Your

Divine Example commands us, and not use the magic You graciously restored to Earth to put curses on those who would attempt to defraud Your faithful.”

That was an oddly specific claim. Adora made a mental note to check with the sorceresses amongst her faithful - those using Earth's magic, at least - to ensure that they were not abusing magic.

“Or your ships to blow up enemies of the faith from orbit,” Catra added.

“Of course not! Orbital bombardment is only allowed on Your Divine Highness's direct order!”

“Oh, look! There's another group protesting!” Catra peered through her binoculars again. “They demand… to ‘Liberate Gaia's Chosen Vessel from Alien Bondage’?”

“It's a very small group of people who labour under the mistaken assumption that Her Divine Highness is actually their native goddess and has been coopted by us like the Goa'uld took over other religious figures,” Priest explained.

“They think I'm a Goa'uld?” Adora clenched her teeth.

“They have not made that claim yet, but given how they seem to grow more radical every time they show up, it might merely be a question of time until they do, Your Divine Highness.”

That… This was slander! “Is that covered by religious freedom?” she asked.

“We are looking forward to the ruling in that case, once we file a suit, Your Divine Highness.” Priest nodded.

“Good.” Adora nodded. “Then let's go visit the congregation.”

Priest bowed deeply at her, and Catra smirked, but Adora ignored both. She hadn't really wanted to visit this church, temple,

whatever, but if such hateful people were gathering outside, spreading such lies, and harassing visitors, then she wouldn't let that stand without making it clear what she thought about them.

*****

Portsmouth Naval Shipyard, Maine, United States of America, Earth, July 20th, 2000

"...and the religious riots that broke out in Nevada following a visit by Princess She-Ra have finally ended according to the state police. While the governor has not yet commented on the incident, stating that the police were still investigating how exactly the riots started, several local politicians have already protested what they consider a 'blatant infringement of religious freedom' and demand the release of anyone arrested during the riot. Meanwhile, sources in Washington D.C. have confirmed that while the US government declined to comment on the incident, there are growing concerns about the involvement of Princess She-Ra in what is considered an internal matter for the American people."

"Thank you, Julie. This incident happening less than two weeks before the first national convention may also influence the election. Amongst growing concerns about America's role in the Alliance, fears of foreign influence are spreading in key demographics. Matthew, you've been talking to people on the ground, so to speak?"

"Yes, Keith. I have been talking to several local residents, and they all agree that the riot was the result of provocative actions taken by the Church of She-Ra."

Samantha Carter frowned at the screen in the corner of the waiting room - sorry, meeting room - in the Navy shipyards, where she was supposed to work on the latest issue that the Constitution II-Class frigate had managed to develop. Why were they interviewing Texans about an incident in Nevada? The two states didn't even share a border!

"...and just ask yourself: What would Jesus do? Why, he would chase them out just as he drove out the money-lenders from the temple!"

"They built a mockery of a church there, to make fun of our faith!"

"I don't have anything against aliens, but they shouldn't force their religion in our face like that."

"It's not a real religion, it's just a scam to get money. Why would they build such a huge building, anyway?"

"Las Vegas is a den of sin."

She didn't see any remote around, so she stood and went over to manually change channels. That particular station didn't deserve to be called news; it was blatant propaganda.

She had to switch channels three more times before she found a news source that was covering the riot in Nevada without engaging in sensationalist rhetoric or speculating whether or not the Church of She-Ra was at fault.

Of course, Sam wouldn't put it past Priest to engineer such an incident, but she didn't think he'd bother; as the news showed, there was considerable support for the attack on the church in the more radical circles of the religious conservatives. Various political and religious leaders might condemn the violence but they also more or less openly blamed the Church of She-Ra for it.

"...and this wouldn't have happened if America were still strong! Our Founding Fathers stood up to the most powerful Empires of their time! They would be ashamed to see how far their country has fallen. These people are lashing out because they don't feel safe anymore. When they look up, they see alien ships in the sky above their heads, not American ones! When they listen to the news about the war against the Goa'uld, they hear about foreign armies and fleets, not American ones! And they wonder where our soldiers and sailors are - and why they can't protect America! This needs to change!"

And that was a leading member of the electoral campaign of the future presidential candidate? Sam shook her head and turned the TV off. It seemed that American politics were taking a turn for the worse. She could only hope that saner heads would prevail.

She turned when she heard the door open behind her and saluted when she saw Admiral Baker enter. “Sir.”

He returned the salute. “At ease, Major Carter. Please excuse the delay; our meeting ran a bit longer than expected; you know how it goes.”

“I am familiar with meetings, sir.” Sam smiled politely and added ‘such as this one’ in her head.

“Good, good. Now, we've called you because we've made a few more changes to the next block of the Constitution II-class, and we need you to figure out how to upgrade the existing ships.” He pushed a button, and a holographic display appeared over the table showing the blueprints of the frigate.

“Yes, sir.” Sam managed not to scowl. More changes?

She looked at the display, quickly going over the highlighted changes. “Expanded magazines?”

“The recent deployments have shown that a frigate needs to be able to operate independently for longer than we have previously anticipated.”

There had been talk about long-range exploration and recon ships, to expand and complement the Spy bot network and conduct exploration, but the Alliance had not yet decided whether it was worth the effort. “The Constitution II-class frigates were designed as ships of the line, sir,” she told him. Badly designed, and arguably useless at that role, but those had been the design parameters. “They're meant to operate in task forces supplied by a fleet train.”

“Yes, but as hybrid ships that offer both carrier and gunship capability, they are perfect for long-range missions where sending an entire task force would not be economical. With just a few changes, we can extend their operational range for that.”

A few changes that would see crew compartments reduced to a point, even submarine crews would consider the ship too cramped. And this was supposed to be a long-range exploration vessel? Not that the extended magazines would actually add enough supplies to handle such missions. And the whole plan ignored that the entire class was still not rated for interstellar deployment outside an emergency!

Sam wanted to scream. This would have never happened if the Air Force had taken the lead for the US space forces!

*****

Alliance Headquarters, Brussels, Belgium, July 21st, 2000

“Well, as you are already aware, the actions of a tiny minority do not reflect the attitude of the vast majority of the American people.”

Catra cocked her head and raised her eyebrows at Daniel's comment, then pointedly looked at the TV in the background showing burning cars in a parking lot in the desert.

He cleared his throat and pushed his glasses up with a finger. “I know how it looks, with every media covering the riots, and how several seem to carefully select the, ah, most sensational statements, but if you look at the actual data, the vast majority of Americans condemn the attack on your church. Religious freedom is one of the basic rights in the country.”

“They claim that we violate their religious freedom,” Adora said.

“Which is obviously false,” Daniel said. “The law is clear about that.”

Catra scoffed. “The law might be clear, but the media aren't.” She knew the difference between how they covered the actions of the Goa'uld and those of those fanatics who had tried to storm the church.

“The media do seem to show a lot more understanding for the motives behind this attack than one would expect if this were a tiny extremist minority,” Priest added.

“It's an election year, and the religious conservatives are an important voting block,” Daniel said. “But all the important churches have condemned the attack as well.”

“They also condemned Her Divine Highness's intervention to save her church,” Priest said. “Even though no one died or was seriously hurt. By any measure, making the ground shake so people fall down is a rather restrained reaction to an attack on the faithful for a divine intervention. Their holy books have much more brutal examples for much less serious offences.”

Catra snorted. “They hate that Adora showed up their own god.”

“I didn't show up anyone!” Adora protested. “I just stopped the attack before they could hurt anyone. Anyone in my position would have done that!”

Catra wasn’t so certain. Sure, the police had arrested all the rioters, but they had been noticeably slow to arrive.

“Indeed, Your Divine Highness.” Priest beamed at Adora. “It is not your fault that the absence of such interventions by other gods might cause some of their faithful to develop doubts about them.”

On the other hand, Catra also had some doubts that Priest was as surprised about the attack as he had claimed. Sure, the protesters had been gathering for days without attacking anyone, but it was pretty convenient that the day they actually attacked was the day Adora was visiting. You'd have to be a complete idiot to try anything with her present. Of course, those people were complete idiots…

“That is an important point, actually,” Daniel said. “While the Church of She-Ra is amongst the smallest religious organisations in the United States, it is growing much faster than any other church. This has been a source of concern for some congregations.”

Catra snorted again. “As I said, they fear the competition.”

“It's not a competition!” Adora objected.

“Indeed, Your Divine Highness!” Priest nodded slowly. “Faith is a personal choice for every individual, not a competition, much less a business. Everyone has to decide for themselves what faith suits them. Anything else would violate their religious freedom. That some religious leaders seem to have a problem with that should raise concerns about them and their faith.”

“Of course,” Daniel agreed. “I'm just pointing out why some religious leaders have concerns.”

“Well, they should take their concerns up with their gods,” Priest replied. “If they were more present in their followers’ lives, I am sure they wouldn't have a reason to be concerned about Her Divine Highness's flock of faithful.”

“I think if their god were present in their lives, they would have a lot more and more serious problems than the competition from Adora,” Catra said with a smirk.

“Well, religious practices and doctrines are a delicate subject,” Daniel said. “Opinions about which rules of a religion should be followed, and how, vary a lot within most faiths.”

Priest shrugged. “That is between the faithful and their gods. If a god decides to remain silent about such disagreements, then they obviously don't care enough about the matter to intervene.”

Adora frowned at him for that. “Or they might not be listening.”

Priest nodded as if he had not noticed the implied criticism. “That is possible, though I think the deities being worshipped on Earth would be able to make themselves heard by their faithful. The stories about them certainly imply such.”

“If they exist in the first place,” Sha're said. “It's hard to believe a real god would have tolerated the Goa’uld usurping their name and faith.”

Priest tilted his head slightly. “That so many people do not doubt their religion despite the lack of a divine presence in their lives is a testament to the power of their faith.”

Despite the honest tone of his statement, Catra was sure that Priest didn't intend it to be a compliment. And she didn't think anyone else thought so.

*****

Alliance Headquarters, Brussels, Belgium, July 22nd, 2000

“The Etherians have refused to share the factory ships, General.” The Secretary of Defense was back, and he wasn’t happy. Both about that fact and about Jack O’Neill.

Jack wasn’t happy either. He wasn’t a politician. “I mentioned the ‘optics’, but the Command Council decided that military reasons took priority.”

“You mean the Supreme Commander decided to keep the shipyards for her personal cult, General!”

Jack really shouldn’t have come to Brussels today. Or shouldn’t have decloaked his stealth shuttle. “I think it’s a bit problematic to call an established religion a ‘cult’, sir.”

“It’s a cult!” the Secretary snapped. “Or do you think Princess She-Ra is an actual goddess?”

Jack forced himself to smile widely. “I don’t judge other religions. You never know which might turn out to be the right one.” Alright, that was a bit too snarky, but really - the idiot shouldn’t be blaming Jack for his own failures. He was the politician; Jack was just a soldier.

“This is no joking matter, General! We’re in the middle of an election, and the polls show that this is a key issue for a significant part of the voters!”

“Are you talking about the failed designs being built in our shipyards or the failed religious oppression?” Jack asked. “Just so there’s no misunderstanding.”

“There is no religious oppression in the United States!”

“But ‘key segments of the voters’ seem to think there should be, according to the news,” Jack pointed out.

“There are concerns about new religions aggressively recruiting members, especially amongst teenagers who lack enough life experience to make an informed decision. A valid concern, based on past experiences.”

“I’d be more concerned about religious fanatics trying to burn down churches.” Jack shrugged. “Or our ships being flying coffins.” The Secretary of Defense was responsible for that fiasco; it was his job to ensure that such screwups didn’t happen, especially not in the middle of a war.

“The problems with the Constitution II-class are vastly overblown. None of the ships have suffered a serious accident.”

“None of them have been in a real battle either,” Jack pointed out. “But they haven’t exactly covered themselves with glory in exercises either.”

“Teething problems that will work themselves out. And it ties into the reason I am here, General. I am here because we need those factory ships! Have you seen the latest opinion pieces? They call

us weak! Have you seen the cartoons? They show the United States as a little child hiding behind the skirts of the aliens!"

Jack chuckled. Catra had shown him the cartoon, and Adora had complained that she had never worn such a long skirt.

"It's not funny, General. We can't appear weak. What do you think will happen if we lose the election?"

"We get another government?" Jack shrugged again. That was how democracy worked.

"A government made of people who campaigned on the promise to take a tougher stance against aliens! Do you think that pissing off our allies will help win the war?" The Secretary shook his head. "They'll ruin whatever goodwill we've recovered in the time since First Contact. Do you think the other members of NATO have forgotten that we kept the Stargate a secret from them?"

That hadn't been his fault. Jack hadn't made that decision. "Sir, I've passed on your concerns. But the Etherians - and the other members of the Alliance - don't think that we should hand over the factory ships to the United States. The Europeans also mentioned concerns about crippling their shipbuilding industry by relying on alien factories that would outcompete them."

The Secretary sighed. "I've pointed this out as well, but the public doesn't care about long-term economic policies. They want a fleet of spaceships flying the Star-spangled Banner. The fact that the British ships were seen in action, saving a base, has people asking where our ships are."

"Those transports are altered copies of Horde designs. The British-designed corvettes haven't seen action either so far," Jack pointed out. Though they had performed very well in exercises.

"I know. But the public doesn't care! And the other party is making a big deal about this. We need something to show the American people that we're still a key part of the Alliance - that

we’re not hiding behind anyone! We need a victory from *you*, General.”

Jack had a sinking feeling in his stomach. “I command the Alliance Special Forces - a mixed unit, sir.”

“Yes, but you are the face of our special forces. You and the others from SG-1. Everyone knows that you lead from the front, so we need to use that. It works for princesses, after all.”

That was… Jack wanted to protest that he wasn’t a princess, but that would make him sound like a whiner. And he couldn’t actually argue against leading from the front, could he?

*****

Alliance Headquarters, Brussels, Belgium, July 28th, 2000

“...and I can only say it again: America deserves better! We have fought the Goa'uld alone for years! Stargate Command killed Ra, the Goa'uld's supreme leader, without any help from anyone! We struggled and fought and saved the entire Earth! And yet, the current administration has squandered all that. Instead of leading the Alliance with our experience, Stargate Command has been put under the command of the United Nations and turned into a travel agency! Our best soldiers are doing gatekeeper duty! What has gone wrong here?”

“That's a very biased take on our past, Jim. Stargate Command has fought the Goa'uld and eliminated Ra, but there was a lot of luck involved. You can't compare those missions with the war we're waging now. Stargate Command never had any spaceships, much less fleets of them. And I believe that most Americans would agree that fighting aliens without telling anyone, not even our closest allies, was a mistake.”

“A mistake the current administration has made, Heith! Another reason why it should be replaced!”

"A mistake from which the current administration has learned. Unlike your party, which seems determined to repeat the same mistake of making unilateral decisions about the war - and ignoring the reality of the situation."

"We're not talking about taking over the Alliance…"

"Yes, you are. Your candidate spoke at length about the need for 'American leadership' in this war!"

"...we are talking about not letting two dozen foreign countries and aliens decide American policies."

"You have been very vague about which policies you want to change, Jim. Would you care to be more specific? Which policies do you feel were forced on the American people? And how was that done? Did someone bypass Congress?"

"That's sophistry! You are well aware that we didn't have any choice but to change our laws - and the constitution! - with a fleet of spaceships flying above our heads! Do you think gunboat diplomacy is acceptable?"

"Are you insinuating that the Alliance fleet would have attacked the United States if we had chosen not to join the Alliance?"

"They certainly intervened in Iran, didn't they?"

"They intervened to stop crimes against humanity - something the United States has done as well, with your support, as I recall."

"You cannot compare the United States to Iran!"

"I didn't have to - you did it! And do I really have to remind you that the Etherians did not force any country to change their policies even when they disagreed with them? The changes to our laws and the amendment to the constitution were the decisions of the American people and their representatives on the federal and state levels. As it should be."

"What would have been the alternative? To be relegated to a third-world country stuck on Earth while everyone else built spaceships to colonise the stars? That was no choice at all! America deserves better!"

Adora shut off the TV. "That's going to be their motto, right? 'America deserves better'?"

"It seems so. It's a catchy slogan," Daniel said. "And it's hard to disagree with the idea that America should improve. It's just that people differ on how exactly America should improve."

That was a bit of an understatement, in Adora's opinion. She wasn't an expert on Earth politics, but some things were very hard to miss. "It seems to me that at least one party feels that in order to improve America, they need to beat others."

"And they don't mean the Goa'uld," Glimmer added. "They mean the rest of the Alliance. And all those complaints about being forced to change their policies? They want to be able to discriminate against people like us again!"

"I don't believe anyone seriously expects to be able to turn back the clock. Changing the constitution is very difficult - by design - and the latest amendment has far too much support from key states to be repelled again," Daniel pointed out.

"But they're playing up the fact that this was a condition to join the Alliance to create and build up fear that the Alliance will force more changes on the United States," Glimmer retorted. "And they are targeting the same people who opposed the changes in the first place because they want their support. That's not a good sign."

"Not at all," Adora agreed. What could you expect from a government that came into power through such means? Nothing good.

"And they can do a lot without changing the constitution," Catra added. "Just picking what laws they enforce will cause changes."

It was the same in the Horde - if you didn't crack down on corruption, every quartermaster stole as much as possible from their magazines.

“I think that's a bit too harsh. A new government is still bound by the constitution and the treaties we've made,” Daniel said. “The President isn't a monarch. They do not have absolute power - there are checks and balances for a reason.” He smiled. “The current administration might be playing up the amount of changes that could be enacted in order to gain concessions from the Alliance.”

Adora sighed. “I've noticed that. Now that they couldn't get the factory ships we captured, they want some great victory so they can show the American public that they're strong.”

“Well…” Daniel shrugged. “A great victory over the Goa'uld wouldn't be a bad thing, would it?”

He was right, of course, but…

“If you need a victory to keep your position and power, you tend to take risks and gambles that you normally wouldn't,” Catra voiced Adora's thoughts. “And that tends to end badly.”

Adora nodded. “We won't rush into a battle just to save the American government.” They wouldn't sacrifice soldiers for political gains. Not on her watch.

Glimmer nodded. “If they don't want to be voted out they shouldn't have made their country a democracy.”

Daniel frowned at her. “On Earth, the less democratic nations are generally far more conservative. All the members of the Alliance are democracies.”

“Well, Earth is weird,” Glimmer shot back, flushing a little. “That wouldn't happen if you had proper princesses.”

Bow cleared his throat. “Etheria has numerous examples of similarly unfit leaders, both in the past and in the present.”

That earned him a frown from Glimmer, but he wasn't wrong, in Adora's opinion. Politics were far too often far too frustrating. War was worse, of course, but at least you could hit your enemy on the battlefield. And…

Her tablet beeped. Priority message? She checked it. And then she smiled. “It's from Entrapta and Sam. The bots have found a mind-control network!”

*****

The Election Campaign Part 1

Deep Space, Ba'al's Realm, July 31st, 2000 (Earth Time)

"We should have worked on improving the stealth generator design so it can hide a frigate," Samantha Carter said as she stared at the screen displaying the data from the spy bot network in the area. It could barely be called a network, actually - it was more like a thin cloud of bots spread out to cover as much space as possible and check for mind-control chip signals.

Although she had already changed the deployment order for the spy bots to create a real network - if they wanted to operate in the area, they would need as close a coverage of the space as possible. Unfortunately, with the way the bots were spreading out, even with priorities altered, it would take some time for the next wave of spy bots to fill in the gaps - the spy bots could only move so fast and so far in the time allotted, and too many were already set to push the general search pattern forward.

"Why?" Entrapta asked from Sam's side. "I mean, it would have a huge advantage in combat, although the Goa'uld will realise how good our stealth technology is if we start fielding it openly in battles, but it would require a lot of effort to manage that, and the costs involved would mean we couldn't really build that many frigates."

"It would be safer for recon missions than a stealth shuttle," Sam said.

"If we can scale up the generator to cover a frigate, we would likely also be able to improve the field, so a shuttle would still be better hidden," Entrapta pointed out.

"That's likely but not certain," Sam said. "But we have a better chance to escape an enemy if we use a frigate since the shields would be much stronger, and it would also be faster."

“But we would be easier to detect and to hit.” Entrapta shrugged. “But we can work on it and see if we can find a solution to the threshold problem.”

“Yes.” Although that would likely require an entirely new approach - the current technology’s drain on power grew exponentially the more space it needed to cover and the more emissions it had to hide. They could likely cover a frigate, but it would end up having to fly at a snail’s pace and have almost no power left for propulsion, shields and weapons - although the weapons could be compensated for by using missiles, those didn’t require a lot of power to launch. It would have to operate like a submarine, though, relying on ambushes and then stealth to get away - and that would likely be easier to achieve by using stealth shuttles to deliver missiles or bombs, operating from a carrier…

She snorted softly at herself getting lost on a tangent. Her good humour vanished, though, when she realised that the US Navy would likely jump on either design and treat them as space versions of submarines and carriers. And they had already proven that they couldn’t be trusted with adapting warships to space.

“Alright! I’ve filtered more data in our analysis!” Entrapta’s cheerful voice interrupted Sam’s thoughts. “We should now be able to pinpoint the sources of the chip signals.”

That would be a breakthrough - and the reason they were out here, in a stealth shuttle, a bit too far from the Alliance task force covering the area for Sam’s taste. “Let me check,” Sam said, already switching the feeds on her screen.

Yes, the signals had been filtered - and with the adjusted and increased coverage of the area, at the expense of other parts of this sector, they now had identified multiple individual chips. “They’re using the same base codes,” Sam said.

“Yes! But they also use a floating control node,” Entrapta said. “So, we can’t hack it before we isolate that node.”

And that would alert the Goa'uld forces that someone was attacking them. "We can scout the area and gather information without hacking the network," Sam said. "But we'll need more spy bots for that before we send in stealth shuttles." They needed to know how extensive - and how powerful - the enemy sensor coverage was before risking people.

"Yes!" Entrapta nodded. "We can close the gaps and check the entire area around the signals."

Unlike Point Velvet, this site was set in a star system. That lowered the chances that this was the chip production site they were seeking since systems tended to draw more attention and visitors than empty spots in deep space. On the other hand, trying to second-guess the enemy without sufficient information was a fool's errand, so Sam didn't say that out loud.

Instead, she sifted through the growing amounts of data that they received from the spy bots. They couldn't hack the chips, and the ever-changing patterns from the floating control node also made breaking the encryption even harder than it already was, but they could analyse the traffic - and soon, they would be able to compare it to regular data from other sources in the area.

Whatever Ba'al's forces were up to here, the Alliance would soon know.

*****

Alliance Headquarters, Brussels, Belgium, July 31st, 2000

"...and we have gathered here not just to choose the next President of the United States, but to choose the path for America and the world! The current administration has shown what future they want for our beloved country: A future where we will be beholden, dependent on others - other countries, aliens. Following their rules, their customs, even their gods! A future where America is weak! Too weak to protect itself. Too weak to stand for

ourselves. Too weak to chart our own course. Is this the future you want?"

Catra rolled her eyes, her ears twitching at the TV's speaker as the assembled crowd visible on the screen loudly yelled: *"No!"*

"No, we don't want that future! America deserves better! We want a future where America is strong! Strong enough not to need anyone's help! Strong enough to protect our people and our culture! Strong enough to lead the rest of the world as we did before - to once again be the shining city on the hill everyone else aspires to!"

"America deserves better!"

"They say the world changed, and we need to adapt! We say: We need to take a stand and tell the world that we won't bend! America deserves better!"

"America deserves better!"

"Turn it off, Catra! We have an important meeting!" Glimmer complained.

Catra scoffed. "It's not starting yet."

"I don't want to see this."

"Tough. We need to keep an eye on this." If the people gathered at this 'National Convention' managed to win the next election, things would get difficult in the Alliance. The United States weren't the most agreeable member of the alliance to begin with, but at least the current president realised that they couldn't just act as if they were the most powerful member of the Alliance. Those people on the screen yelling about deserving better? Catra wasn't sure she had been more out of touch with reality in her worst moment in the Horde.

"Why? Mr Brown and Julie have already explained that we can't really do anything without starting complaints about election

interference and making things worse since that would push more people to support those idiots." Glimmer frowned.

"It's still better to know what's coming instead of remaining ignorant," Catra said. "We need to be ready to adapt."

"We are. If the Americans choose to be stupid, we'll rely on the rest of NATO." Glimmer shrugged again. "It'll make things a bit more difficult, but they have more ground forces than the United States, and Earth still hasn't much of a fleet."

Catra knew that. Though she also knew that that would change. "Worst case, the Americans leave the Alliance and build up their forces while we fight the war."

"They won't do that," Glimmer said. She nodded at the screen. "Those people are too hyped up about fighting the Goa'uld. They probably charge straight at the next System Lord with their deathtraps."

"Yeah," Catra agreed. "That's why I said worst case. If they were smart, they'd let us bleed while they build up their forces, and then take over when we're all weak. They already did that after their last World War." Which was probably why some of the other Alliance members from Earth seemed to hope the Americans would change governments. Earth people kept their grudges forever. If the Horde had tried to conquer Earth, Catra would be in prison for life - if she was lucky.

And maybe I would deserve it.

She pushed the thought away. "So, Adora's still stuck in the procurement meeting." Which was also known as the pork piggy bank session, according to Jack, but she knew better than to trust him even though the few times she had taken part in it, it had been exactly that.

"Yes." Glimmer frowned, staring at her tablet. "Entrapta and Sam are still gathering data from the spy bots."

Catra knew that. They didn't have the intel they needed to plan the next operation yet. "And we're going to discuss how to bring journalists along on a mission without getting them killed or leaking classified information so the United States government can show their voters that they are an important member of the Alliance."

"Things would be so much easier if they had a proper princess," Glimmer muttered.

Catra wasn't quite sure - an American princess would probably be as difficult to work with as Princess Sweet Bee. At least if you looked at their news.

"...and we should… what's that?"

"Oh my God!"

"Security!"

Catra whipped her head around and stared at the screen. The speaker had collapsed on the podium and was… vomiting blood? Yes, blood was coming out of his mouth, nose, ears and eyes. And he was thrashing around as if he were being tased. But there was no attacker visible.

Magic. Had to be magic. Probably one of those Earth magic curses.

Shit.

*****

Alliance Base Lübtheen, Mecklenburg-Vorpommern, Germany, August 1st, 2000

"...and while the investigation has just started - the FBI's specialists have taken over only hours before - the party's leadership has already released a statement blaming 'witches' and 'eco terrorists' for the magical attack on Mr James Delan in the

middle of his speech at the first day of the National Convention, and…"

"...Mr Delan remains in critical condition at the Thomas Jefferson University Hospital. His family refused magical healing from Princess She-Ra on the grounds of not wishing to endanger his immortal soul and asked people to pray for him, but…"

Jack O'Neill scoffed. "Fat load of good prayers will do for him." If that worked, Jack would have a few more friends left. "Wanna bet that his family's already dividing up his estate?" he asked, turning to the two people in his office.

"No bet," Special Agent Wilkinson (on detached duty) said. "In any murder, you look first to the relatives of the victim."

"It's not yet a murder, Wilkinson," Special Agent Paris said. She shook her head. "We can't tell yet if he will succumb to whatever curse has been placed on him or not."

"Are we even sure that it is a curse?" Jack said.

Paris nodded. "I've checked with a colleague - they've identified magic influence. The current theory is sympathetic magic."

"Doesn't look very sympathetic to me," Wilkinson commented.

"It means magic cast on the target using a sympathetic link," Paris explained. After a moment, she added: "Voodoo."

Ah! Jack nodded. "So, did they already check his hairdresser?" he joked.

"Matter of fact, yes," Paris, serious as ever, replied.

"Well, will the FBI ask for you back?" Jack asked. "Looks like they'll need all the sorceresses they can get for this case."

"Thaumaturgists, General." Paris pressed her lips together for a moment. "I was told I shouldn't expect such a request. Officially

since I am needed in the war. Unofficially, the bureau doesn't want to deal with accusations of biased investigators."

Wilkinson snorted. "Good luck with that. Did you hear the statements? I'll bet they'll call to replace all Thaumaturgists with witch hunters next."

Jack chuckled even though he was pretty sure that this would actually happen.

Paris, though, looked even more pissed-off. "You cannot solve such a case without magic."

"Maybe they'll find a priest who has a talent for magic but thinks it comes from God?" Wilkinson shrugged. "Could be a profitable niche. Exorcist, witch hunter… I bet a lot of states would hire them."

And Jack lost all humor at that thought. The absolute last thing America needed was another Salem. "Let's hope it doesn't come to that. We really don't need an intervention by the Alliance on US soil."

That seemed to shock both (nominal) special agents. "Would the Alliance really intervene in the US?" Wilkinson asked. "Of course, they would," he answered his own question a moment later. "Shit."

"Yeah." Jack nodded. "That's one of the lines the Etherians won't let anyone cross." It was one thing for a mob to gather in a country in the Middle East and murder a few poor victims, it was another for a state to not only condone that but officially engage in such witch hunts. Even the Saudis had stopped that stuff by now - no one wanted another intervention like in Iran.

"If the number of criminal magic users grows, and I believe it will, more police forces with magical talents will be needed," Paris said. "I don't think the Alliance will oppose that. None of the Etherian mages have ever had a problem with me."

“It's the witch hunter part,” Jack explained. “That has certain implications that trigger our friends. Especially after those fanatics tried to burn down that church of She-Ra in Nevada.”

“They'll think we're no better than Iran. Shit,” Wilkinson cursed again.

Jack looked at the TV again.

“...and this wouldn't have happened if we hadn't lost our way. America deserves better! It's one Nation under God - or it should be! Not one nation under alien heathens and their witch friends! It's only by the grace of God my dear friend and colleague is still alive, and it's with God's help that we will save our nation's soul!”

“Well, it is kinda hard to see the difference right now,” Jack said.

“If they don't put a lid on that, we'll have witch hunts in America,” Wilkinson said.

“We already had several murders where the culprits thought the victim was a witch,” Paris pointed out.

“Murders, yes. But if things get worse, we'll see lynchings,” Wilkinson said.

And if they went after followers of the Church of She-Ra… Jack winced. Priest might hold back from intervening, the Clone seemed to prefer a soft approach, but if the police in certain states followed their old playbooks and politicians encouraged them to look away if a mob gathered, that would change.

He looked at the TV again.

“...and following this heinous attack on a good, god-fearing man, father and husband, it's clear that we need to regulate and control magic. We cannot let terrorists and witches attack innocent people with curses - the government needs to stop this! Once we retake our nation's helm, we will implement strict measures to ensure

that magic will be brought under control and our people will be safe! Magic is too dangerous to let just anyone practice it!"

"I wonder if he'd say the same about gun control," Paris said.

Jack tensed at the familiar pain and guilt that brought up. If he hadn't kept a loaded gun at home… He forced the thought away. He had a lot of problems to focus on and couldn't dwell on that. Not if he wanted to prevent more tragedies.

Even though he doubted he could do much about that.

*****

Alliance Headquarters, Brussels, Belgium, August 2nd, 2000

Adora knew she couldn't go to the national convention. She was needed here in the Alliance Headquarters to prepare the next operation - as soon as Entrapta and Sam finished their recon of whatever Ba'al was hiding in that system and they had enough intel to properly plan the mission. They were already moving a task force into position, but without definite intel, they had to prepare for the reinforcements as well, and even with fleet trains, supply lines had to be prepared, just in case they had to occupy the system on a permanent basis. Ground forces, especially Earth forces, also had a much larger logistical footprint than Clones who were primarily spaceship crew and used bots for far more roles.

And she also knew that if she went to Philadelphia, it wouldn't help anyone. The family of the victim had refused her help already, and all the speakers were blaming the attack on her for releasing Earth's magic in the first place. Some even went further and implied that she had ordered the attack. With the number of worked-up people attending the convention, she'd cause another riot if she went there.

But she wanted to go anyway. Being unable to do anything while everything went wrong was torture! She could heal a dying man,

show that magic wasn't the problem, show those people that she wasn't their enemy, if they would only let them!

But they wouldn't. As Glimmer had said, they were ‘milking this’ for all that it was worth. If she turned the TV on, she would see snippet after snippet of people blaming magic, Etheria and herself for everything that went wrong in their lives. And, as Catra had said, probably for stuff that they only imagined going wrong.

She shook her head and focused on the holoprojection in front of her. The latest troop movements on the Goa'uld front - well, the intel from the realms of Apophis, Sokar and Heru'ur, in this case. They were still in a three-way conflict, but it had slowed down compared to last year. Apophis was trying to consolidate and rebuild his forces and was mostly sticking to counter-attacks - according to the Tok'ra, he was concerned with showing weakness or he'd limit his operations even more. Heru'ur had been distracted from attacking Apophis on a broad front by Sokar's flanking attack and had moved the bulk of his forces to face them. And Sokar was both maintaining a credible defence against Apophis to deter serious attacks and trying to overwhelm Heru'ur’s forces with numerical superiority, but - so the intel claimed - was finding out that terrorising your own troops into loyalty unto death wasn't as effective as inspiring your forces by fighting at their side on the frontlines and sharing the danger. Heru'ur’s Jaffa genuinely loved their master, and even the Tok'ra agreed that the sentiment was returned by the System Lord. They were holding back Sokar's forces but were not yet able to go on the offensive.

Still, as stable as it seemed for now, sooner or later, Apophis would try to take back what he had lost to the Alliance, and then things would get even more complicated. They had to defeat Ba'al as soon as possible, not just to end the threat his advanced technology and machinations posed, but also to free up more troops.

And for that, they needed more intel. She changed the projection to show the suspected space of Ba'al's realm, with the spreading

spy bot network overlaid. Their coverage was growing, but it wasn't as dense as it should be for dependable surveillance. The holes in coverage were just too great, and the increased focus on the latest target area meant the holes would stay - even the rate at which the spy bots were spreading had gone down with more diverted to the system Entrapta and Sam were investigating. They needed that - if they wanted to operate a task force there, they had to have the best advance warning possible in case there were reinforcements coming - but Adora didn't like it anyway. Those gaps in the network worried her. Ba'al was a cunning enemy, and he had surprised the Alliance too often already.

"Brooding over the spy bot network?" Catra asked from where she was going over logistics reports. Adora frowned at her - she wasn't brooding! - and her love snorted. "Ba'al isn't aware of our bots. He'd need a lot of luck to send a fleet through the gaps of our network without being detected."

"We think he doesn't know about our network," Adora corrected her.

"Even if he were aware of them, he'd still need a way to detect them."

"He could be hacking them - and taking over our own network to use against us."

Catra shrugged. "He'd have to beat Entrapta and Sam for that. I know on whom I'd bet. If Ba'al were a better hacker, his chips and his command networks would be much better."

That was correct - and Adora had told herself that before - but she couldn't help worrying. It was her duty to worry about things like that, after all, as Supreme Commander of the Alliance. She was supposed to think of potential threats before they manifested. Or, at least, have people anticipate and prepare for such threats.

She glanced at the holoprojection again. If they placed recon units in the worst gaps, they would have additional coverage - and have

units ready to reinforce the task force for the next operation, if they were needed. Or to penetrate deeper into Ba'al's realm. That would reduce the operational reserve in the theatre, but… Adora nodded. The reserve wouldn't be as useful as it should be if they were too late to react because they missed an attack.

She started writing the orders.

*****

Deep Space, Ba'al's Realm, August 2nd, 2000 (Earth Time)

The data analysis was done, and Samantha Carter was looking at the results. "This isn't an isolated system containing his chip factory. This system has more forces than Point Velvet had."

Even adjusting for the discrepancy in power between a Ha'tak and a Horde frigate, the system had double the protection of the other site. The relative power was even greater if those Ha'taks had been upgraded with Horde technology - and Sam was sure they had been; she merely didn't know how many ships and, more importantly, by how much. The upgraded Ha'taks they had encountered so far had been outfitted with beam cannons but otherwise been kept to Goa'uld standards. If those ships had Horde-level shield generators and engines, they would be the equal of a Horde frigate - not quite as fast and agile, but better protected. Alliance tactics would have to be adjusted to fight them.

"Yes! And they patrol the outskirts much more heavily than expected, too!" Entrapta agreed. "The number of Death Gliders is huge - if those are all stationed on Ha'taks, that would mean our preliminary estimate has to be adjusted again. But I don't think they would operate so many fighters without a matching increase in communication traffic."

That would mean the majority of the Death Gliders were stationed on one of the worlds - or one of their moons. "That would have to be the main world, then," Sam said. "None of the other worlds

have enough communication traffic to handle so many Death Gliders."

"And it's the only world where you don't need protective gear to operate outside sealed environments," Entrapta added.

"On the other hand, those ships here show significantly increased communication traffic compared to the other ships." Sam pointed at the data detailing the intercepted traffic.

"Those are too numerous for communication hubs," Entrapta said. "They don't need that many for that number of ships. Did Ba'al change his policy of keeping his forces divided and has switched to centralised detailed controls?"

That was a possibility, but Sam didn't think so - none of the intel from other areas within Ba'al's suspected realm showed a matching increase in communications. And the communication traffic seemed more… contained might not be the correct term. It was… What was that? She quickly ran a few comparisons and a detailed, if limited analysis. Yes. "I think they are coordinating the Death Gliders," she said. "There are pattern shifts that line up with communication traffic."

"Oh, yes!" Entrapta nodded, her hair weaving and bopping. "That does match. So, are those ships carriers? Ha'taks can't carry as many Death Gliders as the signals indicate they control. Or did they subordinate the fighters to those ships?"

That seemed contrary to the general dogma of Ba'al's forces, which was based on compartmentalisation. "Until we can identify the different ships, we can't tell." The spy bots were keeping their distance so far; they didn't know how good the sensors were in those ships. And the Alliance wanted to wait until they had a task force able to take on their worst estimates before finding out, to give the enemy no warning before an attack.

Sam didn't fully agree with that plan; they would have to rely on estimates based on potentially insufficient data to judge the

necessary size of the task force. If they were too wrong, they would have to abort the entire operation and leave Ba'al aware that they had discovered what Sam was increasingly confident was the heart of his realm.

But the orders were clear, and Sam didn't think even the General would exceed or ignore them at this point, were he in her place. They didn't have enough data and intel for such a decision. They hadn't observed the system long enough for solid deductions in key areas, either. They were reasonably certain that the system contained repair facilities based on the signals from ships that appeared for the first time without matching hyperspace windows, but they couldn’t determine if those were repaired ships or freshly built - and they hadn't been able to observe the system long enough to tell any production rates for the latter.

“Hm. That is odd.”

“What is odd?” Sam looked at her friend.

“Check the differences in their patrol patterns on the micro-level,” Entrapta said.

Sam frowned and did so. Her friend was correct - she could see a noticeable difference in the performance curves of the Death Gliders. The vast majority of the fighters all performed very similarly in all parameters - holding formation, matching speed, course changes - while about a tenth of them diverged more or less significantly, although all were within the margins expected of competent Jaffa pilots.

Her eyes widened. No, the vast majority of the Death Gliders were performing manoeuvres with almost perfect precision. Quite superior to the average Jaffa pilot based on past observations. Either Ba'al had an elite training academy for pilots here - no, even such academies wouldn't produce such a homogenous corps of pilots. “There are only two possible explanations for this,” she said.

“Bots or mind-copied clones.” Entrapta nodded.

Sam wasn’t sure what would be worse for the Alliance.

*****

Alliance Headquarters, Brussels, Belgium, August 3rd, 2000

“...and while the police have yet to release a statement, anonymous sources claim that there has been an arrest in the investigation of the magical attack on James Delan at the national convention in Philadelphia that has shocked the nation. People have gathered outside the Thomas Jefferson University Hospital to show their support for the politician who is still in critical condition, with Minister Smith from Mr Delan's church leading them in prayer. Meanwhile, the demands for strict regulation of magic are growing despite several voices decrying this as hasty. Mr Delan's family hasn't declined to comment on the issue.”

Catra frowned, muted the TV and turned to Jack. “Do we know who they arrested?”

“I'm Air Force, not police,” he replied.

Catra raised her eyebrows.

He snorted. “The FBI is playing this very close to their chest. Neither Wilkinson nor Paris have found out anything.”

“Ah. Too bad.” Catra shook her head. The whole affair was extremely annoying. Delan wasn't the first victim of Earth magic, not by far, but he was the first to have been attacked on live TV in the USA - and the first American politician to be attacked like this. Of course, that would spook all his colleagues. “We'll have to consider the effect on our recruitment of sorceresses,” she said.

“If they crack down on magic, many American sorceresses might join the Alliance - or ask for asylum in Etheria,” Glimmer said. “We

already had several such requests from other countries where sorceresses are persecuted."

"Americans fleeing to other countries?" Jack muttered a curse under his breath. "It feels like Vietnam all over again."

"Well, many Americans, especially in subcultures or members of minorities, know what 'strictly regulating magic' means," Daniel said. "Especially if it's coming from the same people who opposed the civil rights movement. You can't blame them for not wanting to end up burned at the stake by a lynch mob or 'shot while resisting arrest'."

"Joy. We might lose the 101st from our forces because they need to revisit Arkansas," Jack muttered.

"What do you mean?" Glimmer asked.

"In 1957, the 101st division was ordered to move to Little Rock in Arkansas to protect the first nine students of colour attending the formerly all-white high school there," Daniel explained.

"You had to use the army to protect *students*?" Adora sounded shocked.

"It was almost fifty years ago," Jack replied. "But yes."

"Living memory, Jack," Daniel said. "And history might repeat itself."

"Unless, of course, those bigots win the election," Catra commented.

"We should release a statement," Adora said.

"That would be seen as foreign interference," Daniel said. "It might have the opposite effect and push more people to support such policies out of spite."

“Idiots,” Catra muttered - but she could understand that kind of thinking. She'd been such an idiot herself, if not a bigot.

“Then we should step up the PR efforts of the Alliance,” Glimmer said. “Emphasise that magic is not evil but can help a lot of people.”

“I could heal people,” Adora said.

Catra rolled her eyes. “Then they will expect you to do that all the time and grow angry if you don't spend all your time healing people. We already settled that.” She glared at her lover - she wouldn't let Adora do that to herself.

“Yes. Besides, we should show what good things Earth sorceresses do,” Glimmer said. “This is about Earth’s magical traditions, not Etheria's.”

“I don't think the zealots blaming magic are making that distinction,” Jack snorted. “Some are blaming Dungeons and Dragons for this.”

“Seriously?” Catra leaned forward. That was the miniature game Bow had mentioned before. “They think that game can teach you magic?”

Daniel nodded. “Yes.”

Catra shook her head. “Anyway, so you want to send our few Earth sorceresses on a PR tour?”

“No.” Glimmer shook her head. “But since we are about to let journalists tag along with our soldiers thanks to the demands from the American government, we can let them see Earth sorceresses fight the Goa'uld.”

Catra wasn't sure if seeing sorceresses using magic against their enemies would help a lot. But it was probably better than nothing.

“And we need to ensure that our sorceresses don't get poached,” Jack said.

“Poached?” Adora asked.

“A lot of rich and powerful people just saw one of their own get cursed on TV. They'll want to hire sorceresses as bodyguards,” Jack said.

Right. Catra could see that. “And some of them will be the same people who want to crack down on magic, I guess.”

“Exactly,” Jack said with a wry grin.

“Hypocrites.” Catra was about to add something else when she caught the banner scrolling over the TV screen at the wall. Breaking news? She unmuted the TV.

“...and according to the FBI, the suspect, a family member of the victim, has confessed to cursing Mr Delan with magic but claims that she was sexually abused by him since her childhood. The FBI has stated that they are investigating the accusations based on material found in Mr Delan's home. His family has refused to comment.”

“Shit.”

Catra nodded. That was… well, if it was true it would change things.

*****

Child abuse? Jack O'Neill clenched his teeth. That put a different spin on things.

“Isn't it unusual for the FBI to release such information at such an early stage of the investigation?” Daniel asked.

“Either they release it or it gets leaked,” Jack said. “That way, they might have a bit more control over what is released.” Might. The

way the media was focusing on this story, the way it was plastered all over the country - and the world - there would be countless reporters and journalists trying to dig up anything even tangentially related to the case. And, of course, spooks, both foreign and domestic.

Hell! Jack tensed at the thought - what if that was NID's doing? Kinsey and his pals would not blink at manufacturing and planting evidence of child abuse to deal with a 'problem'; he was pretty sure not all of the conservative politicians and church leaders who had been exposed and arrested in the lead-up to the constitutional amendment had been as guilty of the various crimes as the evidence found might have proven.

On the other hand, thanks to his past, Jack knew better than most that a cover-up on that scale, faced with a priority investigation by the FBI and the eyes of the entire country on them, needed more preparation time than a few days to hold up under that kind of scrutiny. And the FBI wouldn't risk revealing such information if they weren't dead sure that the evidence was legit - they knew how the game was played as well.

No, the whole thing was probably legit. Damn. What a mess.

"Well, that should discredit the whole thing," Glimmer said. "It's now self-defence." She sounded a bit too smug for Jack's taste.

"I doubt that cursing someone from afar would actually qualify as self-defence," Daniel said. "You would need an imminent threat to life and limb for that. It would have been expected of you to call the police instead."

Jack had mixed feelings about that. Delan came from a rural district. The local police were quite a bit 'understanding' when it came to bigwigs like him in such areas. Especially if it involved accusations of rape. And from Delan's own family? "That might not have worked out too well, Daniel," he said.

“I am aware of that, Jack.” Daniel grimaced. “And I don’t approve, of course, of the attitude. But my point about this not counting as self-defence still stands. I'm afraid, but while this will put off some of the people who were calling for strict regulation of magic, more will still press on.”

Some of them might be even more motivated now, Jack thought, because they’re afraid their own victims might use magic to strike back.

“That's stupid!” Glimmer blurted out.

“I don't disagree about that either,” Daniel said with a rueful smile. “But a significant part of the American people oppose magic on religious grounds. They will support any attempt to control magic.”

Catra scoffed. “And a huge part of them also hate people like us.”

Jack wasn’t about to disagree with her - he had seen the clips from the convention himself. Sure, the politicians were too smart to say it out loud and limited themselves to veiled references about concerns, especially for children - and wasn't that painfully ironic right now? - but their base had less self-control.

“Well, yes.” Daniel nodded. “They were used to being the most powerful country on Earth. Losing that position shook them up.”

“Those people oppose change,” Sha're said with a scowl. “Especially if it means granting others more rights or power. In that, they are very much like the Goa'uld.”

Daniel would call that an ‘inflammatory statement’. Jack would call it fighting words. But they were true nonetheless. He had met enough of his so-called peers in the officer corps to know that. It was one of the reasons Stargate Command had had to screen their recruits so thoroughly; you really didn’t want such people to step through a gate and meet alien cultures. Earth had enough enemies already.

“Well, at least this will be a setback for the opposition party.” Adora smiled, though it looked a bit forced. “That should take some pressure off the American government.”

“Hopefully, they will stop their demands as well,” Glimmer muttered.

Jack shook his head. “I doubt that. They don't want to sling mud at the opposing party. That never ends well. They want good news that they can tout as their work.”

“They have factories producing advanced technology opening up at a steady pace,” Daniel said. “Some analysts have said that this might reverse the trend to de-industrialise America. And the war is going well.”

That was true - though Jack was a bit sceptical about the latter; money talked as always - but it wouldn't be enough. More factories were old news. And the people needed more and bigger victories. “Well, let's work on delivering the next victory, then,” he said. “Carter and Entrapta’s latest intel looks quite promising.” And also dangerous. He didn't like the thought of having them venture so close to so many enemy forces. Especially with him on Earth, unable to do anything should something go wrong.

“Yes, we should…” Adora started to say.

“Shh! Look at that!” Catra interrupted her, pointing at the screen and reaching for the remote.

“...and in a sudden, almost stunning twist, Minister Smith, the leader of the church Mr Delan and his family attend, has been arrested as well. While the police have not released any information about the charges levelled against him, rumours claim that he was involved in the sexual abuse allegedly committed by Mr Delan. Stay tuned for more information as the situation unfolds!”

Well, Jack couldn't claim he was surprised by this.

I can’t wait to get back to the front.

*****

The Election Campaign Part 2

Alliance Headquarters, Brussels, Belgium, August 3rd, 2000

"Alright. This is what we know about the target system."

Adora pushed a button, and the holoprojector built into the table lit up, showing a star system with several planets and all the spaceships the spy bots had observed so far.

"That's a massive fleet," Jack commented with a whistle. "Even if you discount the Death Gliders, we'll need more ships to take them on. Especially if they're upgraded Ha'taks."

Adora nodded. "Worst estimate is that all the Ha'taks have been upgraded with Horde weapons, shields and engines. That would mean they are on par or even a bit more powerful than our own upgraded Horde frigates. They would be slower because they are much larger, but they would be tougher even if we take the improved beam cannons we use into account." And while you could leverage better speed and manoeuvrability into winning against a slower but tougher foe, all other things equal, you couldn't do so without taking a considerable risk - at least, unless you were so much faster and more agile, they couldn't hit you at all without blind luck - and you were likely getting hurt in the process. That went for close quarters combat as well as for space battles.

"Then we need numerical superiority," Admiral Brown-Emerson said. "Otherwise, the risk of taking unsustainable losses is too great - especially if we have to deal with Death Gliders making suicide attacks. That number would quickly overwhelm our defences."

Adora nodded and was about to agree when Admiral Biggs scoffed: "When the Japanese tried their Kamikaze bombers, we dealt with them easily enough. We've beaten Ba'al's fleets

whenever we faced them. This will be a little tougher, but we'll take them."

"That's easy to say since if it won't be your ships doing the fighting, Admiral," Jack said with a scowl.

"That should be '*our* ships', General. Or do you not consider yourself a member of the United States Armed Forces any more?" Biggs retorted with a sneer before turning to look at Adora. "Even if we take the worst estimates of the enemy forces' power, all projections agree that the ships assembled for this operation are sufficient to take the objective."

"As Admiral Brown-Emerson said, with our current task force, we'll risk taking heavy losses," Glimmer interjected.

"We can replace those losses. This must be Ba'al's core system and the heart of his Empire. Take it out, and he's done for. Then we can rebuild. But the longer we wait, the tougher this will be - he's building ships as we speak," Biggs countered.

"We don't know yet if the 'new' ships we've detected joining the force in the system are new builds or repaired or upgraded ships," Adora pointed out. "Nor do we know if that's the last significant production site he has left - in fact, our analysts are sure that he has more production facilities hidden in his sphere of influence since he is so fond of compartmentalised force structures."

Biggs shook his head. "But they also agree that if Ba'al has such hidden facilities, they must be much smaller ones or we would have already faced much larger forces."

"Or they are in the process of being built up," Catra cut in. "Either way, we can't afford to lose the majority of our task force - it would cripple our offensive capability in the entire area."

"Only temporarily," Biggs disagreed. "I've seen the numbers; you'll have more ships built at the end of the year than all the ships of this task force put together, and you're also raising the crews for them."

“That doesn’t mean we’ll risk the task force to save time. People aren’t replaceable!” Adora snapped. The Admiral seemed awfully eager to risk huge numbers of Clones.

“We need to keep our optempo up,” Biggs said with a glare. “You can’t wage war if you want to keep our soldiers safe from any danger! That’s a sure way to lose the war! Soldiers die in war; that’s a fact.”

“We know better than you that soldiers die in war!” Glimmer scowled at him. “We’ve been fighting a war for decades.”

“We won’t sacrifice soldiers so some people can score points in politics,” Catra added.

“What are you insinuating?” Biggs snapped. “This is a purely military decision! We need to take out Ba’al as fast as possible, no matter the cost, or he’ll build up an even stronger force! Delaying our attack will only make the fight even harder once we launch the operation!”

That was a danger, Adora knew. She had written part of that analysis, after all. But that had been before Entrapta and Sam had discovered this system. “That would only be true if Ba’al’s could build up more forces in the time we need to reinforce the task force. And, so far, the data doesn’t show that.” She pointed at the system. “The output of those yards is not large enough to change the equations. And we haven’t discovered any hidden reinforcements in the vicinity either.”

“They could easily be hiding outside your sensor range!”

“Yes, but he doesn’t know our sensor range,” Adora said. “And he’s usually keeping his forces split up.”

“If this is his core system, he’ll call in everything once we attack,” Biggs argued.

“Which is why we need more ships for this,” Jack said. “I don’t want to see my people cut off on the ground because the fleet got

driven off."

"We can't wait and let him build up more ships."

"That's your opinion, and it's noted," Adora said. "But my decision is that we'll wait until the assigned reinforcements have arrived before we strike. We will need numerical superiority to overwhelm the defenders without sustaining too many losses. And we need a bit more time to prepare for their Death Glider swarms as well."

From the way Biggs blinked, he probably hadn't considered that.

Adora couldn't help thinking that maybe the Admiral should study the intel they had more than he should talk to his government - or their election managers.

*****

Deep Space, Ba'al's Realm, August 4th, 2000 (Earth Time)

"...and those unsettling - and unconfirmed - accusations, as tragic as they might be, do not change the fact that witchcraft was used against an American politician. If we do not take steps against this menace, every elected politician will be faced with the threat of being cursed like that. How can you trust a representative to follow his conscience when he has to fear for his very life anytime his decision might displease a terrorist? A democracy cannot work if we cannot trust our government to act without being influenced by outside powers like that!"

"So, Senator, does that mean you will vote for the proposed anti-corruption bill?"

"You cannot compare those two things! Witchcraft presents a clear and deadly danger to everyone, especially to public figures! This bill is far too radical - we don't need more laws and regulations; the existing ones are more than enough to keep corruption at bay!"

"What about guns? Guns are a lethal danger for everyone in the United States - especially for public figures. Do you support stricter regulations for guns as well?"

"Again, stop comparing apples and oranges! Guns are not the problem, people misusing them are the problem! We have millions of responsible, law-abiding gun owners. Compared to that number, the numbers of gun crimes are negligible! Witchcraft, on the other hand, is not nearly as common, yet has produced hundreds of victims already - and that only in this year!"

"Where do you get those numbers, Senator?

"I am privy to the latest FBI report about magical crimes."

"Oh? As it happens, I have received the same report. The vast majority of the incidents you mention have not been confirmed. In fact, the FBI's preliminary investigations in some of the cases strongly hint that most of those were attempts to hide a mundane crime or accident - or delusions by people caught in a second satanic panic. So I don't…"

"How dare you dismiss the pain and fear of the victims of witchcraft as delusions! Would you do the same if they were victims of sexual abuse?"

"Sexual abuse like the charges levelled against Mr Delan and Minister Smith, Senator?"

"None of those accusations have been proven in a court of law!"

"That's because the investigation has just been started. But I agree, maybe we shouldn't use accusations that were not proven in a court of law to persecute sorceresses in the USA."

"That's not the same! The danger to our country - our immortal souls - is far too great to hesitate here! We need to…"

Samantha Carter stopped the recording. To think she had been looking forward to catch up on the news from Earth after their last

foray into the heart of Ba'al's territory!

"I don't get it. This senator makes no sense," Entrapta said, shaking her head.

"He's a politician who was very invested in using the attack on Mr Delan to push his anti-magic policy and now has trouble adjusting to the revelations about the first victim's own crimes," Sam explained.

"No, no, I understand that. I think. We've had situations like that at the Princess Prom - I've read the paper George, Bow's dad, wrote about that even though I didn't see anything like it myself, though I only attended one prom so far." Entrapta shook her head. "Well, they weren't about such tragedies, but the ruler of the Scorpion Kingdom at the time was accusing the Princess of Plumeria of cheating while trading, and then the Princess of Salineas revealed that it was a corrupt sailor who was responsible, and everyone was too embarrassed to admit their mistakes. But, no, I meant the comment about the danger to their souls."

Sam grimaced for a moment. "That's a religious view, and religion is a very touchy and very personal subject for many people. It has been the cause of a lot of death and violence in the past, so we prefer not to argue over religion when we can avoid it." And she was very tired of trying to explain some of the more questionable arguments people had come up with in defence of their religion.

"Oh." Sam half-expected Entrapta to push on anyway and ask about another logical fallacy or hypocritical practice related to religion, but her friend nodded. "Alright. I'll ask Daniel when he arrives. He likes talking about that stuff."

Sam knew that already.

"And Sha're has a lot of insight into how similar your religions are to the ones controlled by the Goa'uld when you get past cosmetic differences. It's fascinating, actually, if you compare your churches and theirs. The parallels are so surprising!"

Sam hadn’t known that. And she was sure that a very high number of people on Earth would take exception to that. Possibly violently in some cases.

“Maybe we should ask Priest as well. He has studied Earth religions extensively so he can avoid their mistakes.”

And Sam knew that involving Priest in any such debate was not a good idea at all. Not if you wanted to avoid a conflict.

At least with the upcoming operation, they wouldn’t have time for such discussions for the next few weeks.

*****

Stargate Command, CFB Goose Bay, Newfoundland, Canada, August 5th, 2000

“...and we are here, in front of the Stargate, about to step through a wormhole to travel from Earth to a location thousands of lightyears away - a distance so long, human imagination cannot comprehend it. There, we will embark upon an Alliance warship and travel to the frontlines of the war against the Goa'uld. For the first time, journalists will not be reporting from planets that have been pacified, but directly from the front as it is being established. Stay tuned for a close-up view of how war is being conducted in space! This is Mark Bayley for CNN!”

Catra rolled her eyes at the reporter's fake excitement as he finished his recording and stepped away from the Stargate's ramp to make room for the next reporter. At least this one was from BBC - one of the non-American news companies that had sent reporters as well - and wasn't as sensationalist.

Of course, for civilians, stepping through a Stargate was a big deal, and they hadn't been told the actual distance or where they were going since that was classified information, but still, journalists had been covering the war before, and it wasn’t as if they'd let the the reporter drop on planets with the first wave. Jack had put his foot down when the Americans had wanted his

people to ‘play babysitter for the newshounds’, as he put it. And it wasn't as if the Stargate was currently active.

Oh, here came Bayley walking over. “Commander Catra? Do you mind a question?”

“Just Catra. I have no military rank,” she corrected him. His cameraman wasn't covering them, and he wasn't holding his microphone, so he wasn't trying to break the rules against recording without explicit permission and limitations.

“Ah.” He nodded, though she was sure he had known that in advance. At least he should have if he had properly prepared for this. “But you're effectively an officer in the Alliance, aren't you?”

She shrugged. “I help my friends when needed.”

“Both in staff positions and at the frontline, or so I've heard.”

She rolled her eyes. “As I said, I help my friends where and when needed.”

“Then, as someone not formally a member of the Alliance Command Council, what are your thoughts about this operation? According to our briefing, we'll be striking directly at the capital of Ba'al and the heart of his military-industrial complex.”

So, Bayley had paid attention to the briefing. Well, he'd be a bad journalist if he weren’t able to listen to others, and the Alliance had screened the reporters allowed on this trip quite thoroughly - Catra would know since she had vetoed two of them herself; they didn't need people spreading lies from bigots at the frontlines. Or anywhere else, in her opinion. “We’re attacking one of Ba'al's bases,” she replied. “Anything further is classified information.” Technically, that they were attacking Ba'al was classified as well, but the reporters had been read in so they knew what kind of Goa'uld they were facing and what kind of conditions they could expect in his territory.

“Yes, that's the official line and I am not going to use this in my reports. But is it true that we're invading the capital of his realm? The first time Alliance forces will be hitting a core planet of the enemy?”

So, that was the US government’s angle here to get as much good PR out of this: Hype up the target as much as possible. As if this was a race to Berlin. Well, it was a race, but that was even more classified. “We don't have a map of Ba'al's territory with all his bases,” she replied and flashed her fangs.

“Ah.” Bayley nodded with a smile as if she had actually revealed anything. He probably thought she had confirmed his question without doing so overtly. Well, his fault. “So, have you already decided how you will be ‘helping your friends’ on this operation?

By talking to annoying reporters so they didn't annoy Adora or Glimmer, she thought. That's why she was keeping an eye on this. “Wherever I am needed.”

“But will you be fighting with SG-1 again, as you’ve had in the past?”

“SG-1 was dissolved when the team members left Stargate Command,” she corrected him.

“Of course. But ‘the team formerly known as SG-1’ is a bit of a mouthful, isn’t it?” The way he smiled was probably the reason he had been chosen for this - naive girls and boys would likely fall for it.

Catra wasn’t naive or interested in men. She sighed. “Mr Bayley, you cannot predict anything like that in war. It's far too fluid for that. I might stay back on a frigate and simply watch the battles munching some fish sticks,” she lied. She’d only do that if Adora stayed back on the flagship as well, and everyone knew Adora wouldn't do that. Certainly not when there was a chance that Ba'al himself was present in the system.

“But do you expect to fight with the Alliance Special Forces led by General O'Neill on the ground?”

She rolled her eyes. “As I said, I don't expect anything. We can't predict anything yet. And if we could, I couldn't tell you. Not without having you locked up afterwards to maintain operational security.” She flashed her fangs again.

This time, he seemed to get the message and nodded as his smile slipped slightly. “I see. Thank you for the talk, Catra.”

Of course, the other reporters - an even dozen - hadn't missed this and were now descending on her.

Great. Catra fixed her smile and prepared to repeat her lines until the idiots got the message as well.

*****

Deep Space, Ba'al's Realm, August 6th, 2000 (Earth Time)

“General O'Neill! Mark Bayley, CNN. A word?”

Jack O'Neill almost made an about face and headed back into his cabin when he heard the reporter call out - reporters, he corrected himself when he saw that Bayley was followed by two more of them. But he had been told by the President himself to be nice to the journalists - to go out of his way, in fact, to ‘accommodate’ them as long as it didn't hinder the operation.

Of course, being late for breakfast could hinder the operation if that meant Jack might be missing a critical problem in planning… Naw. That would be too obvious. Even the dumbest reporter amongst the bunch would see through it, and Jack didn't doubt that at least some would take offence and develop a grudge against him and his friends.

And his friends didn't deserve that. Daniel had suffered through a smear campaign already, back when his - ultimately proven - theory had been laughed at, and Jack knew that some Navy

pukes were just waiting for the chance to use Carter as a scapegoat for their own failures in the Constitution II-class mess. And Teal'c was an obvious target as the former First Prime of Apophis.

So he smiled - if a bit toothily- and nodded. “Sure. I'm heading to the mess, so feel free to tag along.” If he could field their questions during breakfast, he wouldn’t lose too much time. And if he needed to think about a question, taking a bite or a sip would help.

“Great!” Bayley beamed at him. “So, how does it feel to be the highest-ranking ground commander in the operation? Some experts have criticised your habit of leading from the front.”

Jack grinned. He had expected that question. “Well, they're used to a different war than we're fighting here. I can't make the big decisions if I don't have the necessary information. Sometimes, that means I can't stay back on a ship in orbit but need to be on the spot.”

“One would expect that with modern, advanced technology, you didn't need to be on the spot,” another reporter - he had a southern drawl - commented. “Chris Evans, NBC.”

“Even then, there'll be delays and limited information,” Jack replied. And jamming, though that was classified information. “You never get the full picture unless you're there.”

“But as the general in charge, don’t you need to see the full picture of the entire front, not just a single part of it? There have been concerns that you're in the habit of acting like a squad leader instead of a general, a habit carried over from your time at Stargate Command,” Bayley asked.

Jack kept smiling despite his growing annoyance - he really needed his coffee and breakfast. Weren't those journalists supposed to produce a puff piece for the election campaign? “At Stargate Command, we were not fighting nearly as often as

people think. Most of the time, we were exploring. If you're making First Contact with an alien civilisation, you really don't want that to be handled by a second lieutenant fresh out of West Point and a bunch of privates."

"But you're fighting a war now," the third journalist pointed out. "Cyril Foster, ABC."

"Yes, but as I said, it depends on the situation. Sometimes, you can handle everything from your command centre back in orbit," Jack replied. "The British-built fleet transports have great command and control facilities, by the way." Take that, Navy pukes! "But sometimes, you need to be in front to do your job."

"Like the princesses?" Southern Drawl Evans looked at him.

"The princesses are on the frontlines because that's usually where they can use their powers to best effect," Jack said. Ah, there was the door to the mess! Coffee, here we come!

Two Clones stepped to the side when he entered, the journalists in tow. He spotted Daniel, Sha're, Teal'c and Carter at a table - they had left a spot free for him! Unfortunately, there wasn't enough room for the reporters. Damn.

"But what about the criticism that they are neglecting their other duties as commanders?" Bayley asked.

That was aimed at him, Jack knew. He grinned widely at the man. "They do their duty while fighting at the front. That's how it works in the Princess Alliance. That's how they beat the Horde and Horde Prime. You could say their way has been tested in combat."

The smell of coffee hit his nose and Jack barely resisted the urge to get a cup, down it, and refill it before grabbing food. But he managed to limit himself to a sip before loading up on bacon, eggs and hash browns.

Fortunately for them, none of the reporters criticised his food choices by citing some nutritional experts or whatever. That would

have been too much for his temper. He needed his calories to stomach those questions.

Besides, after being zapped by She-Ra's magic healing beam, Jack was as healthy as a twenty-year-old, he could handle all the cholesterol.

Not that he'd tell the journalists that - if it got out that She-Ra could do that, things would get even more complicated back on Earth.

*****

Adora double-checked if there were any journalists in the room before starting the planning meeting. There shouldn't be any, of course - this was the flag room of the frigate, a restricted area - but with the way some reporters had been following people around, it was better to be sure. If only to avoid giving Catra - or Glimmer - an excuse to mistake a journalist for a spy.

Seeing no one - Catra wasn't looking as if she was about to pounce someone either - she nodded and addressed the room: "Alright! We've got the latest intel and we now have a comprehensive picture of the target system's defenses. Though we still don't know the exact composition and technology the enemies use."

She pointed at the holoprojection above the centre of the table. "Even if the Ha'taks had only been upgraded with beam cannons, like the ones we've fought before, they would present a formidable force against a frontal assault when working with the lighter ships and the swarm of Death Gliders with clone or bot pilots. Depending on the tactics they use, they could inflict significant losses." And if they had learnt anything from their past battles against Ba'al, it was that Ba'al was a cunning foe whose forces adapted various tactics.

"And if they have upgraded the Ha'taks further? Or the lighter ships?" Captain Baker asked.

“Heavy casualties. We don't have sufficient defences against suicide attacks by Death Gliders carrying enhanced ordnance,” Adora told him. “Adapting our ship's anti-fighter defences to compensate would take too long for this operation.” And would strain their fleet train. “So, we're working on an alternative solution that can be done with our current supplies and in time.” She looked at Entrapta and Sam.

Entrapta nodded. “Yes! We've got some ideas, but we need a bit more data - or, rather, we need more contingencies in case we're wrong. We've been probing their networks, but we didn't crash or hack anyone yet so we don't alert the enemy to our presence.”

“We are confident that we have a decisive advantage in the field of electronic warfare,” Sam added. “But as past experiences prove, we can only leverage that for a limited time before the enemy adapts. And we have to assume that they expect us to jam their communications as we did before.”

“Which is why we will have to maximise the impact when we crash their networks,” Adora said. They would have to use jamming tactics anyway, but they couldn't depend on it. “We did manage to confirm that they have ship yards producing ships in the system, though most of them seemed to be working on Death Gliders and a new type.”

The system was replaced by a projection of a Death Glider and a Ha'tak.

Sam stood and started explaining. “Observation revealed that the Ha'taks being built here are what we have dubbed ‘carrier variants’, sacrificing most of their firepower for the capacity to carry significantly higher numbers of Death Gliders.”

“That means they plan to use Death Gliders as their main force in the battle,” Jack commented.

Sam nodded. “Yes, sir. Analysis came to the same conclusion. The fleet being gathered here will rely on swarm attacks by massed

Death Gliders. That means the threat of suicide attacks is high, given Ba'al's willingness to sacrifice his own forces."

Adora clenched her teeth. Ba'al was a monster! But he was a skilled enemy.

"Does that mean he's using bots in his fighters? Even with clones, he would have a hard time replacing losses, wouldn't he?" Baker asked.

"We haven't been able to confirm either hypothesis yet," Sam replied.

"Bots would need less supplies, but they are more vulnerable to jamming," Entrapta said. "They rely on sensors. Clones would be able to pick their targets even without any working sensors, as long as they are close enough for visual contact. But! Whether Ba'al uses bots or clones, setting up a pipeline for either would have taken more time than he should have had since we first used the hyperspace jammer on his forces. So, even if he picked clones, it doesn't have to be a reaction to our jamming technology - he just could have been lucky."

"Since he has heavily invested in cloning technology for a variety of reasons, we are leaning toward him using clones as pilots," Sam added with a slight grimace.

Adora nodded. No matter how they dealt with the swarm, they would probably be killing a lot of people - people who didn't know any better since they were made and raised to serve Ba'al as pilots. Looking at the others and their grim expressions, she knew they shared her feelings. It was a horrible situation, but they didn't have any alternative - they had to defeat Ba'al to put a stop to this or even more people would suffer and die for the Goa'uld.

The holoprojection changed back to the system and zoomed in on a world.

"The space-based defences are centred on this planet. The ships are augmented by a few orbital satellites, but those are a

negligible force compared to Ba'al's fleet," Sam went on. "However, the surface of the planet itself - the main world of the system - has also been fortified, with ample anti-orbital and anti-air defences. And they are centred on this:"

The holoprojection changed again.

"That looks like a palace," Jack said.

"Yes." Daniel pushed his glasses up. "It's not a classic Goa'uld style, but the basic concepts and layout are still the same. It might be a recent construction incorporating Horde technology from the ground up. Coupled with the symbols, we think there's a high probability that this is Ba'al's main palace - his headquarters."

"I doubt he would waste so many defences on a palace if it weren't to protect him," Jack said. "He seems more pragmatic and would probably protect his shipyards instead."

"Unless this is a double-bluff and this is a distraction to protect the shipyards," Sha're suggested.

"That would still leave the shipyards' defences weaker than they could be - and open to attacks by equally pragmatic enemies," Jack said.

"And sacrificing what looks to be his main palace would still cause a loss of face if it was known by his rivals," Daniel said.

"If it was known," Sha're repeated. "Ba'al has been able to keep a lot of secrets from everyone, even us."

Adora nodded. "We'll be ready for a trap or any other surprise. But we won't let that stop us." They couldn't. "Now, for the ground assault…"

*****

Deep Space, Ba'al's Realm, August 7th, 2000 (Earth Time)

“Major Carter! Mark Bayley, CNN. A word, if you please?”

Samantha Carter stopped and rolled her eyes, grimacing, before she pasted a polite smile on her face and turned to the journalist - Mark Bayley. “I am sorry, but I am in the middle of a crucial project.”

“For this operation? Or for procurement? According to my sources, you’ve been crucial for the much-maligned Constitution II-class design.”

Sam tensed. Sam didn’t see any recording device, but that didn’t preclude a hidden microphone. And she knew she should just tell the journalist that she was busy and leave him standing, but… She wasn’t about to get portrayed as responsible for that abomination of a ship design! “I’ve been called in to deal with some of its flaws, but I have not been involved in its design otherwise.” And it wouldn’t be some unholy attempt to mate a carrier and a gunship.

“Oh? I was told that you were working on all its key systems - engines, shields and weapons.”

“I was called in to work on some of the flaws that were detected in the ships during testing,” Sam told him. She had already said that.

“There were flaws in all three key systems?” Bayley seemed surprised. So, he didn’t have internal sources - he would be aware of how bad the design was otherwise.

“No new design is perfect,” Sam replied. As much as she wanted, she couldn’t reveal just how many flaws the Constitution II-class had - or how bad the design had been from the start.

“But the problems of this class are much more serious - and numerous - than others. The British Flower II-class, for example, is already in active service. I’ve been on one during a patrol in the Solar System.”

Between Third Fleet and the spy bot network, there was no need for the corvettes to patrol the system. But it was a good way to train up the crews. "Yes, but that's a corvette, a smaller and simpler design than a frigate."

"Yes, so I've heard - though one of the criticisms aimed at the frigate is that the design is too complicated to be practical and that it would better serve as a testbed for future projects instead of a ship of the line."

"I cannot comment on that decision; I am a physicist and scientist, I am not responsible for procuring our ships," Sam said.

"But you build them - or you fix them. You've been spotted several times in the Norfolk yards."

Sam really shouldn't have stopped to talk to the press, orders to cooperate within reason be damned! On the other hand, if the Navy was trying to use her as a scapegoat for their own failures, this was her chance to set the public record straight. "Yes, I have been called in to deal with problems, and as long as my work for the Alliance is not affected too much, I have lent a hand." That was the third time she had told him the same thing!

"Your work for the Alliance… you've been working for Stargate Command as one of their most capable scientists. Yet you regularly saw combat. Do you feel that sending our best scientists out to fight in the field, so to speak, is a good policy?"

Not that again! "Sometimes - quite often, actually - you need a scientist in the field to deal with problems you encounter," she replied. "Without Princess Entrapta's personal contribution, Horde Prime might not have been defeated."

"Does that mean you expect Ba'al to be as dangerous as Horde Prime?"

"It is never a good idea to underestimate your enemy." She tilted her head slightly to the side. "Anything else is classified."

“But…”

“Good day!”

She turned and walked away, her strides just a bit longer than normal. Entrapta was waiting for her.

They had to figure out how to deal with Ba’al’s Death Glider swarm, and the longer they took, the more dangerous it would become.

Fortunately, they had a few ideas already.

Unfortunately, they still had to figure out if they were practical - and if so, how to implement them.

*****

Deep Space, Ba'al's Realm, August 8th, 2000 (Earth Time)

Catra rotated the holoprojection above the table and looked at the units on the other side of the target planet again. It wasn't a real-time feed, but it was close enough. The capital ships stuck close to the planet while the lighter units formed a screen around them, not around the planet. Standard formations, too, with the Tel'tak's forming the outer perimeter and the Al'keshs the inner, ready to form attack squadrons to pounce on enemy capital ships.

The Death Gliders, on the other hand, were split. Part of them - the smaller part - were circling the formations on regular combat air patrol routes. The vast majority of them, though, were basically covering the entire system like a Goa'uld miniature version of the spy bot network. Dense patterns in the inner system, where the planet with Ba'al's palace was located, and thinner patterns in the outer system, past a gas giant. But still dense enough that slipping any force through some gaps without getting pounced by a swarm of them was impossible.

Sure, you could feint with part of your forces, draw them in, but that would be hard on the probing force - and they had a lot of

fighters so it wouldn't actually strip the rest of the system bare. Not if Ba'al's commanders were semi-competent - and Catra knew better than to assume the enemy was incompetent.

The sheer numbers of fighters also made a surprise attack by dropping out of hyperspace right next to the capital ships of the enemy too dangerous. With the sensor data from the spy bot network, the Alliance forces had managed to pull off such manoeuvres successfully, but against upgraded Ha'taks and possibly upgraded Tel'taks and Al'keshs? Supported by swarms of Death Gliders on suicide attacks? Entrapta and Sam had already confirmed with a few scans when patrols came too close to a spy bot that the Death Gliders were carrying bombs - inside the crafts, not on pylons, and they hadn’t been modified with bomb bays.

They had replaced the weapon officer’s seat with the bomb.

It would be a brutal brawl straight out of the gate, so to speak, and the Alliance task force would take heavy losses even if they arrived in perfect formations ready to repel waves of suicide attackers. Which they wouldn't. Travelling through hyperspace would disrupt their formations - not too much, but it would tell in such a situation - and they would have to launch fighters under fire, unlike the enemy. They could still win if they managed to fend off the Death Gliders, but Catra was sure the task force would need to be rebuilt afterwards.

“No matter how you look at it, it doesn't look good,” Adora commented next to her.

“No, it doesn't,” Catra agreed. In the Horde, she would have ordered a frontal assault anyway. The Horde had outnumbered the Princess Alliance and could replace their losses more easily. Especially if she used bots to breach the enemy lines and bear the brunt of their fire. And then use the rest of the bots to blunt the enemy counterattack.

But she wasn't in the Horde any more. She wasn't like that any more. She wouldn't send people to their death like that.

“They still cycle the Death Gliders through,” she stated the obvious to help herself focus on the situation at hand instead of her past. “None of them stay in space so long, only bots could pilot them.” Entrapta and Sam had observed that straight away.

“Yes.”

That didn't mean that the fighter pilots were cloned people. Ba'al could simply want to keep the Death Gliders refueled so they were always ready for combat and wouldn’t be caught with their tanks half-empty. Or he wanted any spies to assume the Death Gliders had cloned pilots - the bastard was tricky like that.

But Catra was betting that Ba'al used cloned pilots. They would be able to handle extensive jamming better than bots - even indoctrinated clones were better at adapting to changing circumstances in a battle than bots, if they were cut off from orders. And, she added with clenched teeth, Ba'al probably preferred living pilots for suicide attacks. It would impress his enemies more than bots blowing themselves up. His Goa'uld rivals would see how devoted his followers were, and the Alliance would be horrified by it. Catra didn’t think it would keep any Alliance crew from doing their best to shoot the Death Gliders down in the middle of combat, but the knowledge that you were killing brainwashed people who hadn't been alive longer than a few months wouldn't be good for long-term morale.

Not that the plans Sam and Entrapta had come up with would be any better. They suggested infiltrating the enemy system and inserting a virus into the carrier-Ha’taks and letting it spread to the Death Gliders so they could disable the fighters when they attacked. That would prevent suicide attacks. But the bombs would have a manual trigger - Ba'al was the type to insist on that - and they already knew he didn't want his followers to let themselves get captured, and so the pilots would still blow themselves up. Probably when the Alliance was trying to recover them. Alternatively, they could hijack the Death Glider command and control network to send the swarms against Ba'al's own ships - like every Goa'uld System Lord, he would have plans to deal with

rebels and traitors in his own ranks, so that wouldn't be questioned - but sending so many brainwashed people to their deaths… Adora would blame herself for it, and Catra couldn't let her do that.

“I don't see any alternative,” Adora said. “Everything I think of leads to more deaths on our side and still kills all of them.” She sounded resigned.

Catra knew that. But she wasn't about to let Adora give such an order. She couldn't - it would hurt her love too much. If only she could just snap her fingers and… Her eyes widened.

“I've got an idea!” A stupid, dangerous idea, but one that might not see Adora ordering the death of thousands of brainwashed followers of Ba'al.

*****

The Election Campaign Part 3

Deep Space, Ba'al's Realm, August 8th, 2000 (Earth Time)

"...and as the authorities confirmed that James Delan has succumbed to what has been identified as a magical curse, the recently confirmed presidential candidate of Mr Delan's party has called on everyone to pray for Mr Delan's family and to abstain from trying to weaponise the tragedy for political purposes. Darryl Miller, NBC."

"Thank you Darryl! Now, of course, a presidential candidate would say that when one of his most important supporters has been implicated in such a scandal. But it feels more than a bit hypocritical when his own party has been weaponising the magical attack on Mr Delan for their own goals practically from the point when he was loaded into an ambulance, wouldn't you agree?"

"I certainly would, Keith. I think we all remember how much certain circles tried to use this tragedy to get magic regulated in the US. In fact, Mr Delan's family is apparently considering a lawsuit because they claim if not for being influenced by the constant calls against magic, they would have consented to letting a sorceress treat Mr Delan since the doctors in charge of his treatment recommended that course of action."

"That's very surprising if we consider their own statements following the attack, Darryl."

"Indeed, Keith. In other news from Philadelphia, the suspect for the magical attack is still being detained and her lawyers have filed a complaint that her treatment is inhumane - apparently, she has been kept sedated for the whole time she has been detained so far, out of fear she might be using magic against the guards to escape. The ACLU has already stated that they are supporting a lawsuit to end this policy."

"As you can see, folks, the attack on Mr Delan is still causing consequences that reach far beyond Pennsylvania. We're looking forward to seeing when the Supreme Court will weigh in on this matter, and…"

Jack O'Neill pushed a button and closed the window on his computer. "I just wanted to catch up on the sports results," he muttered. "And all I get is this affair."

"Well, Jack, it's only expected. One of the most important supporters of a presidential candidate was not only attacked - fatally, now - with magic but also revealed to be a child abuser, and that just when the election campaign is ramping up. Every news organisation will focus on this." Daniel shrugged. "And as we just heard, the ramifications of this event keep growing in importance. This could be a leading case for handling magical murder and detaining suspects with magic power - and that, of course, would influence the political consequences of the attack."

"I thought lawsuits took a long time to be decided," Bow said. "Wouldn't the political consequences manifest before that?"

"Unless the religious fanatics somehow get a majority in congress to support their bills, it'll be a long time before any bill aimed at regulating magic will be voted on. There are many steps bills have to pass before a vote happens," Daniel explained. "And yes, the delay is the point - it's generally not a good idea to enact laws in the heat of the moment," he added when Glimmer opened her mouth.

The princess closed her mouth with a scowl, and Jack sniggered. One rant against democracy cut down before it could get going. Nice work, Daniel!

"Sometimes you can't wait for months or years, though - you have to act immediately to fix something," Adora cut in.

"That's generally the purview of the executive - the President, in America," Daniel told her.

Glimmer snorted. “Your elected princess, you mean.”

“It’s not quite the same. There are a lot of checks and balances that prevent the President from becoming a monarch,” Daniel said.

“I know,” Glimmer replied. “But effectively, you still need someone to take charge in a crisis. And if you trust them to do so in a crisis, why not trust them when things are going well? If you didn’t trust them, you wouldn’t have voted for them, right?”

“The idea is that no single person or faction can have too much power,” Daniel explained.

“Yes, we know that. But what do you do if you can’t get anything done because everyone keeps blocking everyone else?” Glimmer shook her head again.

“What do you do if you get a bad princess?” Jack shot back. “A bad president can be voted out of office. How do you get rid of a bad monarch without launching a coup?”

“Sooner or later, a bad ruler is ousted because their neighbours get involved,” Glimmer said.

“So, it’s not a bloody revolution but a bloody invasion?” Jack asked.

“Yes, like you did in Germany and Japan,” Glimmer smiled far too sweetly.

“Which weren’t democracies at the time,” Daniel pointed out.

But at least Germany had been a democracy for a decade or so before, Jack knew. Not that he would mention that. Glimmer and the other princesses already had a bad opinion of democracy, and the latest events back home hadn’t done anything to improve them. “So,” he spoke up instead. “What’s that new and possible stupid plan you’ve mentioned?”

Glimmer exchanged glances with Adora and Catra.

“It’s not a stupid plan,” Adora said.

“It is,” Catra cut in.

“It’s your idea!” Glimmer blurted out.

“So I’d know. It’s stupid. And dangerous. But I don’t see anyone with a better idea.” Catra shrugged. “Anyway, the idea is to send a covert strike team down to the planet, infiltrate the palace, nab Ba’al…”

“I’m liking this plan already!” Jack said with a grin.

“...and replace him with a body double - or a doppelgänger,” Catra finished.

Jack frowned. “Are you planning to let a Tok’ra take over the clone we captured?” That would run counter to pretty much every Alliance principle. The princesses had insisted that clones were people and had to be treated as such. “Or… doppelgänger?” Hadn’t they mentioned some shapeshifter everyone was afraid would escape Etheria if the gate weren’t strictly controlled? What was their name again? Something with ‘double’...

“Double Trouble,” Glimmer confirmed his suspicion.

*****

The Enchanted Grotto, Etheria, August 10th, 2000 (Earth Time)

“Ah! The Enchanted Grotto! The place for every successful and famous rogue to mingle with their peers! You’ll never find a greater collection of the most cunning scoundrels in all of Etheria!”

“Ugh. You sound as if you’re proud of being a regular here!”

“My love! Such fame and prestige is merely the result of my love for ADVENTURE! But what kind of man would I be, what kind of sailor, if I did not accept the fame my deeds earned me?”

“The humble and honest kind?”

“Ack! You wound me, my love!”

“Don’t tempt me!”

While Sea Hawk and Mermista either flirted or quarrelled - maybe a bit of both - Adora looked around. The underwater club did look impressive with its huge windows granting everyone an excellent view of the underwater landscape? Seascape? Though the guests didn’t look as impressive as Sea Hawk had made them sound - most were eyeing Adora and her friends warily.

“Guess they haven’t forgotten that you trashed the place last time you visited,” Catra said. She sounded nonchalant, but Adora could see how being underwater made her nervous - her tail was swishing back and forth much faster than usual, and she was flexing her claws unconsciously. And her fur was bristling a little, as Adora felt on the arm she had hooked into her love’s elbow.

“That was an unfortunate accident,” Sea Hawk said as he walked straight towards the bar. “If we had intended to wreck the place, we would have set it on fire! Bartender! My good woman, an ale for me, and a pina colada for my love, Princess Mermista, the Mistress of the sea!”

The bartender didn’t smile and seemed to pay more attention to Adora and Mermista than to Sea Hawk for a few seconds before she gruffly asked: “What’s a pina colada?”

Sea Hawk beamed at her. “Oh, you don’t know? It’s one of the most famous drinks from Earth! It’s easy to make, you just need…”

Adora tuned the recipe out as she looked around again. “I don’t see them,” she whispered. Double rouble could be anyone

amongst the gathered smugglers and pirates. Maybe they should have asked Prince Peekablue to come with them instead of merely pointing out where they could find he shapeshifter…

Catra smirked. “They can change their form but they can’t change their mind.” She looked around for a moment, scanning the room. Then she cocked her head, staring at a goatman in a very flashy suit.

“And there they are!” Catra beamed and walked up to the man, Melog - the one who had actually spotted the shapeshifter - trailing behind her. “Hey, Double Trouble! Just the criminal we’re looking for!”

“*You* brought the princesses here?” the woman Double Trouble had been talking to spat. “Are you daft?”

The man gasped and laid a hand on his heart. “Why, I have no idea why they are here - or why they mistake me for someone else!”

“Save it, Double Trouble, we know it’s you. Really? Returning to the Grotto? Where’s your creativity?” Catra reached out and grabbed the man at the scruff of their neck. Adora saw that her claws were peaking out again - and pricking the throat’s skin. “Let’s have a private talk!”

The goatman froze for a moment, looking frightened, then suddenly relaxed and pouted. “Must you ruin my performance? I had them eating out of my hand!”

“Why you!” The woman raised her hand to slap or hit them, but Adora stepped between the two.

“Please don’t hit them.”

The woman paled and took a quick step back. “I’m sorry, Princess! Please excuse me.” She hurried away - towards the exit.

And she wasn't the only one, Adora noted - the Grotto was emptying. Half the guests had already left, or so it seemed.

Her friends must have left a really bad impression the last time they had visited.

"...and then you decorate it with a slice of pineapple!"

And they weren't making a good impression today either - the bartender was glaring at Sea Hawk. "I don't have a 'malibu' either - no, don't tell me the recipe!"

"It's coconut flavoured rum!"

"I said don't tell me!"

"But how can you mix the drink for my love if you don't know the recipe?"

"We don't serve princesses!"

"But… that's discrimination!"

"Sea Hawk! Mermista!" Adora called out. "We're leaving!"

"Finally!"

"But we didn't get our drinks yet!" Sea Hawk complained.

Mermista scoffed. "We can have drinks when we have our private talk with Double Trouble, Sea Hawk. We'll probably need them."

"I didn't agree to a private talk!" Double Trouble protested.

"No one asked you to." Catra flashed her fangs but didn't release her grip on their neck.

"I'm not saying anything without a lawyer!"

Catra snorted. "We're not on Earth. And it's not that kind of talk."

“I think you’re enjoying this far too much, Kitty!”

Adora thought so too. Especially looking at Melog’s colour. Not that she would say that, of course.

And, if she was honest, she also enjoyed unnerving Double Trouble. At least a little. They had caused a lot of trouble, after all, and she didn’t think playing nice would send the right message to them.

Adora and her friends wanted their help, but they wouldn’t let them run wild in exchange.

*****

Royal Palace, Bright Moon, Etheria, August 10th, 2000 (Earth Time)

“You went to all that trouble just to have me sit through a presentation in the palace? You could have just asked! Or… did you call me in because you need some advice about style and panache? Because those are truly dreadful clothes, girlfriend!”

Samantha Carter was a career officer and scientist. How she looked, especially in uniform, did not define her. And Double Trouble may have acted confidently, but it was clear that they were here against their will - Catra had dragged them into the room at clawpoint, and the door was not only guarded but locked.

And yet, the blatant disparaging of her uniform annoyed her. It was a slight against every member of the Alliance forces. Against everyone was willing to risk their lives to defeat the Goa'uld.

So, she didn't ignore the barb. “Clearly, our standards differ.”

“You have standards? Could have fooled me! How can you wear such drab clothes? Even Kitty Cat and Princess Sword, who still wear their old uniforms, have more style than that - at least their uniforms don't look like the good old ‘one size doesn't fit anyone’ style. No wonder you guard the gate so tightly, Earth's people

must be desperate to visit our tailors!” Double Trouble shook her head and flashed her a very toothy grin.

“Yeah, as if we believe you haven't devoured every last scrap of information about Earth's culture you could get.” Glimmer scoffed.

“You've been following me? A royal fan! I am honoured, Queen Glimmer!” Double Trouble bowed, then sat down in a pointedly casual manner on her seat. “So, what kind of presentation is this?”

Catra rolled her eyes and stood behind her, lightly touching her back with one claw. “The kind you pay attention to.”

“Oh, stuff it. You want me bad enough to personally travel underwater, you won't hurt me for being me, Kitty Cat.” Double Trouble grinned again, and Sam was reminded of the Unas they had met.

“Oh, we have alternatives,” she told them. Loki actually had had a proposal ready to clone a body double and use a synthetic symbiote and the right amount of Naquadah traces to pass for a Ba’al. Sam hadn't liked to tell him that the Alliance didn't *create people* for a task that needed doing. And that was before she had realised that he had planned to use Asgard technology to move a trained infiltrator's consciousness into it. Clearly, he needed more oversight again. And the Alliance needed better operational security - Loki hadn't been cleared for that knowledge in the first place.

“None as good as the original, girlfriend!”

Sam smiled. She was familiar with that kind of act - she had met her share of blenders in the force and, of course, in academics. “That remains to be seen.”

“Yeah,” Glimmer said. “Don't kid yourself - it would be nice if you helped us, but we don't *need* you.”

“But you want me so badly, you go to all this trouble for little old Double Trouble!” They leaned forward, and suddenly, they were no longer looking like a humanoid lizard, but like Sam. “Because I'm the best,” Sam heard herself say as the double's body language shifted as well - it was like looking at a recording of herself.

“Your help could save thousands of people,” Adora told them.

“Wow, you are desperate then!”

Sam never grinned like that, though.

“Thousands of enemies,” Catra corrected them.

Double Trouble shrugged - did Sam really look like that when she did it, or had the shapeshifter added a bit more to it? She would have to check that with a mirror. “That's the same thing for you folks. You want to save everyone.”

“You say that like it's a bad thing,” Glimmer shot back. Then she bared her teeth, “It's not. Imagine if we didn't.”

“Well, you would…” Catra's claws closed lightly around their neck - Sam couldn't help wondering if the shapeshifter could counter an attempt to strangle them by changing shape - and Double Trouble grimaced. “You consider little old me an enemy?”

“That remains to be seen. We know you've been trying to get through the gate,” Glimmer said.

“Everyone on Etheria has. It's the one big thing - the gateway to the stars! Can you blame me for wanting to see new worlds? Imagine the performances they could inspire!”

Glimmer snorted. “That's what we're afraid of.”

Adora cleared her throat. “Listen to the presentation. Then you can decide if you want to help us or not.”

Double Trouble made a point of looking around while rubbing their neck - Sam wished they would change back and stop using her appearance - and coughed. “The same way I could decide whether I’d attend this meeting or not?”

“That was just to show that we can find you wherever you are and whatever form you use.”

Sam also didn't pout like that. It made her look far too… unprofessional. “I shouldn't have used Peekablue's form. No sense of humour, that guy. He should be flattered that I helped his reputation,” Double Trouble said.

“Prince Peakblue wasn't very amused to hear that he's supposedly singing in a bar catering to pirates and other criminals,” Glimmer said. “Or so I heard.”

“You'd be surprised how many princesses frequent the place, Sparkles. Why, I alone have met half a dozen of them when I was there!”

“Ha ha.” Glimmer snorted again, but Sam wasn't quite sure Double Trouble was kidding - royalty going slumming wasn't unheard of on earth. “Let's get on with the briefing.”

“Oh, now it's a briefing? That takes me back to the war! Did you work for the Horde before?”

Sam didn't roll her eyes. She was an officer, and above that. But she *really* wished Double Trouble would stop copying her - it was unnerving. At least the General wasn’t here; the twin jokes he'd make…

*****

“...and that's the situation.”

Catra had watched Double Trouble during Sam's briefing. They had kept Sam's form and exaggerated their reactions as expected, and she was sure that they had faked a number of their tells -

Double Trouble wasn't so dangerous because they could shapeshift, but because they were the best actor she had seen, at least in person. But Catra also knew Double Trouble better than most who had the bad luck of meeting them. And she thought they were intrigued. Though that might be her being biased - it was Catra's plan, after a..

“So…” Double Trouble leaned back, stretching and pushing their chest out in a way that Sam would never do. “...you want me to sneak into an alien warlord's palace, on another world, and impersonate them so I can order their army to surrender?” Their grin also was far too toothy for Sam.

“Yes.” Adora nodded.

Catra was sure that the offer to impersonate an alien ruler was almost irresistible to Double Trouble. They craved drama and attention, but most of all, they had an ego that rivaled Horde Prime. The only questions were what they would demand in return. Because no matter what Double Trouble might claim, they were as much a mercenary - or a fraud - as they were a performer.

“And you think I can imitate them convincingly based on the few recordings you have, and the clone you captured a while ago.” Double Trouble cocked their head to the side.

“You're the best, aren't you?” Glimmer said.

“Of course, Sparkles!” Double Trouble snorted. “You won't find anyone else who's even near my league. That's why you went to all that trouble to grab little Double Trouble.” She flashed her teeth again. “You are desperate.”

“You are the most convenient solution,” Catra spoke up behind them and grinned when she saw them twitch. “We have alternatives.”

But they remained as smug as ever. “None as good as I am, or you'd not be talking to me.”

“None as convenient as you - as long as you play ball,” Catra corrected them.

“Sure, sure. You only need to convince his clone to help you. His clone who thinks he’s the real Ba’al and hates you. And you would have to provide them with the cloned host to pull this off.” Double Trouble scoffed. “Next, you'll be telling me you're planning to blow up the planet.”

They sounded far too smug. It didn't take that much to come to that conclusion - Sam's briefing had been thorough, and with soldiers going on home leave after missions, people knew what the Goa'uld were like. And Double Trouble was familiar with the Princess Alliance.

“We don't think that the situation requires the deployment of weapons of mass destruction on a planetary scale,” Sam said, in a tone as if she were talking about the weather.

Once more, Double Trouble twitched just a tiny bit.

“We don't need you to win this battle,” Glimmer said. “We need you to win this battle without killing thousands of brainwashed clones and indoctrinated Jaffa.”

“How considerate of you,” Double Trouble shrugged. “Whatever your reasons, you need me. So, let's talk about compensation!” They leaned forward again, putting their hands on the table. “You cost me a nice payout when you wrecked my performance. And you want me to risk my life against a sadist alien prince who will take over my body if he catches me.”

“He won't catch you. You're the best, aren't you?” Glimmer retorted.

“Anyone can get lucky. Even you guys managed to find me. Who knows what those aliens can do?”

“We'll take out Ba'al first,” Adora said. “You just have to come along and then impersonate him when we have him.”

“We've got experience with that kind of mission,” Catra added. “No matter where he is, we can find him and take him out.”

Double Trouble scowled. “Peekablue didn't rat me out because I used his appearance, huh? He threw in with you for good, but you're keeping it a secret so people won't expect him. I'd say you're smarter than I thought, princess. But that's your doing, Kitty Cat, hm?” They looked over her shoulder at Catra.

Catra flashed her fangs in response. They weren't as smart as they thought they were. Peekablue hadn't joined them - and if he had, the Alliance would never let him get close to any planet under a Goa'uld's control, much less one ruled by Ba'al; the guy wouldn't be able to handle the horrors he would see.

Double Trouble scoffed and turned back to Adora. “I want a spaceship and the promise that you won't track me down again.”

“Forget it!” “Not in your dreams!” Glimmer and Catra spoke in unison.

“We won't let you lose on the galaxy,” Adora said.

“Come on! What's a bit of fun down the line compared to all those poor people being killed?”

“Playing with people's lives isn't fun,” Glimmer told her.

“Oh, but it is. Have you ever tried it?” Double Trouble grinned. “Princesses do it all the time but call it ruling!”

Glimmer scowled. “That's not the same! We do the best we can for our people and kingdoms! We don't abuse our power for our amusement!”

“Perhaps not you - you're far too straight-laced - but others?” Double Trouble snorted. “I've travelled a lot and I know better.”

“Are you really trying to give us a ‘you and I are the same’ speech?” Catra snorted.

Double Trouble narrowed their eyes - still Sam's eyes - at her for a moment, then grinned. “Worth a try. So, that's a no on the spaceship? I'm not working for free. I've got bills to pay.”

“More like bribes and fines, I bet,” Glimmer muttered.

“It's all the same. So… You want me to risk my life - my freedom, my body - for the Alliance. And if I do it, I'll be saving countless lives. That should be worth a pretty penny, in my opinion! Just think of all the money you'll be saving for repairs!”

Glimmer snorted. “You'll be impersonating an infamous System Lord. Don't tell me you wouldn't pay for that chance.”

“I never pay for things I can get for free, darling! It's bad business!”

And didn’t that sum up Double Trouble perfectly? Catra shook her head as the negotiations continued. It was all just a matter of money now.

Not that Double Trouble had fooled her, of course - Catra knew they would try to slip away on a ship or through the gate as soon as they saw their chance.

But Catra and Melog would not allow that.

*****

Deep Space, Ba'al's Realm, August 10th, 2000 (Earth Time)

“The code checks out - it's the Supreme Commander,” the Clone at the terminal reported. “Opening the Iris.”

A moment later, the Iris retracted, and Jack O'Neill looked at the stabilised wormhole in the flagship's gate room.

“Sending the all-clear. Sent.”

“Hi, Jack!” Adora was the first through, followed by Glimmer and Bow. Adora's smile looked a bit forced, and Glimmer wasn't even hiding her scowl while Bow looked a bit concerned.

Then Carter arrived with a wide grin on her face, and Jack's eyes narrowed. He had never seen that expression on her face. It looked off - almost deranged.

And then another Carter arrived, with a familiar expression - lips pressed together, a slight front on her face as she tried to look professional and polite, yeah, that was Carter pissed off.

“Jack, this is Double Trouble. Double Trouble, General Jack O'Neill,” Adora confirmed Jack's suspicion.

“Ohh! You're the famous Jack!” The Doppelgänger gasped and clasped her hands over her - their - chest. “I’ve heard so much about you!”

Jack swallowed his reflexive ‘Only good things, I hope?’ response and looked at Carter.

“They've insisted on staying in this form for reasons unknown, sir,” Carter replied to his unsaid question.

“They like needling people,” Catra, who had brought up the rear with Melog, added.

“What? Little old me? Perish the thought!” Double Trouble’s laugh was much too loud for Carter and filled the entire room. “I just want to look my best when making a first impression, and Major Carter was the most attractive!”

“The only one who won't hurt you for copying them, you mean,” Catra said, flashing her fangs.

Judging by Carter's expression, she was reconsidering that stance. Well, Jack had told her before that there were times and places where professionalism was overrated - not lately, though.

Double Trouble laughed again. “As I said, she is the most attractive among you bunch - but she's also new; I've met the rest of you before. Consider this a demonstration of my skill.”

Jack snorted. “Consider me unimpressed, then. Looks aren't everything.”

Suddenly, the Doppelgänger’s entire stance and expression changed, all the exuberance vanishing in an instant as they straightened. “I concur, sir. For a perfect imitation, one has to copy not just the target's appearance, but everything about them - but most importantly, one has to understand them on a fundamental level. That requires thorough observation, preferably at different occasions so one can study how they react to various situations and stressors.”

Jack suppressed a shudder. That was… Carter. He couldn’t help but glance at the real Carter, just to check that she hadn't been switched with the copy. Nope, still there - and looking as unnerved as he felt.

He was almost glad when the fake Carter dropped the act again and looked around with open curiosity. “So… nice digs you have here. Or they would be if they didn't give me flashbacks to the war.”

Catra snorted again. “Spare us the theatrics. You never were on a Horde ship before.”

“How would you know?” Double Trouble shot back.

“You were hiding in the Enchanted Grotto until we exposed you,” Glimmer replied. “And we weren't missing a frigate after the war.”

Double Trouble laughed again in that un-Carter-like way of theirs. “Good point! But I did fight the very Clones who crew the ship. No hard feelings, I hope?”

“So did we,” Glimmer muttered.

The Clone in charge of the gateroom looked at them with a neutral expression. “The Supreme Commander has cleared you.”

“And that's all you need, right? Wow, you really haven’t changed, have you?” Double Trouble giggled - Carter never giggled - and then clapped her hands together. “So, let me take a look at the material you have on that ‘Ba'al’. If you don't let me visit the clone, I'll need every scrap of data you have on the target. Chop chop!”

Jack was reconsidering his stance on not allowing them access to the Fishtank. If they were sent to the Goa'uld holding area, they would be out of his hair for a while. Carter looked as if she was planning an accident for the Doppelgänger. Not that he couldn't understand her - if someone were wearing his face and body like that, he'd probably feel similarly.

Adora nodded. “Catra will lead you to the briefing room we prepared.”

“Oh, just give me directions! I'm sure I can find my w…ack!”

Catra had grabbed them by the neck, and Jack could see the tips of her claws just touching her skin. “You're not going anywhere alone.”

“It's as if you don't trust me! Aren't we supposed to work together?”

“We trust you - to be as annoying as possible,” Glimmer said.

“Now, let's go! Chop chop!” Catra all but marched Double Trouble out of the room, and the last Jack heard was a faint Wow! Are we really in space?” right before the doors closed.

He turned to look at Carter, who sighed. “Everything OK, Carter?”

She straightened at once. “Yes, sir. They're annoying, but I've worked with worse.”

Jack nodded. “Well, they're out of your hair for now. You can go back to dealing with Goa'uld networks,” he told her with a smile. “We'll handle them.”

“Yes, sir.” She nodded, but she didn't seem to be as relieved as he expected if the frown she aimed at the door was anything to go by.

*****

Adora had to admit that for all their *very* annoying attitude - she had no doubt that if anything happened to Double Trouble, almost everyone who had met them would cheer, even, or especially, Sam, and Jack might already be planning something - they were very good at what they did, and professional about it. Double Trouble had spent the last several hours reviewing every recording they had of Ba'al or his clones. And they had, finally, stopped using Sam's form and had started using Ba'al's preferred host's form.

Unfortunately, that hadn't helped with making them less annoying.

“Bow before your god! It is I, Ba'al, who has come to rule you! You shall rue the day you dared defy me! Resistance is useless! You cannot defeat a god! You may have defeated some of my supposed rivals, but they were weak - now you are facing Ba'al!”

They were obviously enjoying this, too.

“Looks like someone's read a few too many Fantastic Four comics. If this were public, Marvel would sue,” Jack commented.

“Oh, all those dictators sound somewhat alike. It's the common language of overblown egos,” Double Trouble said - with a smirk aimed at Catra.

“Then you don't even have to make any effort, just being yourself will be enough,” Catra shot back with a toothy, too toothy, smile.

“Oh, Kitty's got claws now!” Double Trouble chuckled, and, for a moment, Adora feared that they would push the issue and remind Catra of their shared past. And that wouldn't do anyone any good. But they shrugged and went on: “So, I've gotten through all you have on the man, snake, whatever.”

“Reptile would be an alternative.” Apparently, Sam could be a bit catty as well.

Adora was starting to wonder if hiring Double Trouble had been a good idea. Even Catra had said it was a stupid idea. But the alternatives were all… so bloody. Ba'al's organisation all but ensured that his forces wouldn't simply surrender should he be taken out. According to the analysts, even records of his defeat would not be enough to convince everyone of his commanders that he was genuinely defeated.

To be fair, the Alliance would have to do extensive scanning and testing to check if they caught the real Ba'al as well - and even so, one of his clones might be able to take over, perhaps without realising they were a clone.

Double Trouble grinned - and shifted into Sam's form. “Oh, are you mad I changed forms? Don't worry, your form is still my favourite. You’re the most attractive person among your bunch, after all. Right, General sir?” Their pose had changed as well; they were no longer sitting straight but draped over their chair in an almost lazy - or sensual - manner that more than a bit reminded Adora of Catra at her best - or worst, depending on the occasion.

If glares could kill, Double Trouble would be dead twice over. Maybe more.

Of course, that only encouraged them. “Oh, do you disagree, General? Or should I say Jack?”

Enough. “Stop it!” Adora spoke up. “We're here to prepare to deal with Ba'al. Riling up people doesn't help with that.”

“If you can't handle little old me, how do you think you can handle Ba'al? The guy's not dumb; he'll do much worse to rile you up so you will make mistakes.” Double Trouble shook their head with a wide grin. “Consider it training.”

“Ba'al wouldn't be so petty,” Catra cut in. “He would start killing or torturing prisoners to make us angry, not trying to start some relationship drama. This is no *cheap soap opera*.”

Double Trouble scowled in return. “There's nothing cheap about interpersonal drama! The tension! The emotions! You should know best how that can influence wars.”

Adora drew a sharp breath. They had gone there. She glanced at Catra.

Catra scoffed. “And if we were trying to work with Ba'al or trusted him, and he were like you, you might have a point. But we aren't and he isn't.” She leaned forward. “You should know best how devastating it can be when you suddenly discover in the middle of a battle that your allies don’t have your back.”

Double Trouble recoiled but recovered. “You're the Princess Alliance! We have a deal!”

“Yes, we do. So stop trying to make us break it or we will,” Glimmer said.

“Would you really be so petty as to abandon the best hope of saving all those people over some teasing?” Double Trouble looked around with a tight smile.

Catra shrugged pointedly. “If you can't control yourself you can't be trusted to pull this off anyway.”

Adora caught Double Trouble glancing at her and nodded.

Double Trouble's scowl deepened, but they slouched in their chair and crossed their arms over their chest. “You all need to loosen up!”

Adora took that as agreement to stop the petty needling and started the briefing.

*****

Deep Space, Ba'al's Realm, August 11th, 2000 (Earth Time)

As she had expected, Samantha Carter found the General doing the pre-flight check of the stealth shuttle the team would be taking for the infiltration mission. “Sir.”

“Carter!” He straightened from where he had been bent down to inspect the undercarriage. “You're early.”

She was aware of that - she had planned on it. “Just making sure everything is ready,” she lied. “This is an important mission.”

“Yes.” He nodded, then looked towards the hangar entrance. “I hope our latest volunteer won't be too difficult.”

Sam nodded. That they would be difficult was clear as day; the only question was how much trouble they would cause.

“And I hope they will pick another form. Having two of you around gets confusing,” he added after a moment, cocking his head to look at her.

She nodded a bit too firmly. “The last thing we need on a mission is confusion.”

“Right.” He nodded curtly.

For a moment, it looked like he was about to say something else, but he didn't.

Sam wasn't quite sure if she was relieved or disappointed. But they had an understanding. “I'll go set up, sir,” she said, and entered the shuttle. She needed to be prepared for their insertion - the target system had a lot more potential threats than any

system they had infiltrated before. Sure, none of the Death Gliders' sensors could detect an Alliance stealth shuttle - they had not detected the spy bots surrounding them either - but there was always blind luck.

And Sam wasn't in the habit of leaving things to luck. Not when she could help it.

*****

"So, that's the stealth shuttle!" Double Trouble had not changed forms, Sam noticed while she tried not to scowl. "Able to fly up right to an enemy flagship and dock with them being none the wiser! A ship after my taste!"

Sam pressed her lips together to avoid blurting out her first thought.

"You won't get one," Glimmer said it out loud. "They are reserved for Alliance special operations."

Sam expected the General to add: "And for my commute!", but he merely nodded with a tight-lipped expression.

"Aw! But they are made for me! Can they change shape as well? Or just transponders?" Double Trouble mock-whined in a way that Sam would never.

"We're going onto a dangerous mission," the General spoke up. "The danger of friendly fire is always present in such situations, and we can't afford any potential confusion. So, pick another shape to wear, Double Trouble. One we can't mistake for one of our own:"

"Really? You of all people think you would confuse me and Sam-Darling here?" Double Trouble laughed and stepped next to Sam before she could react. They tried to wrap an arm around Sam's shoulders, but she blocked them.

“See?” Double Trouble grinned and stepped in front of the General. “She's the grumpy, unapproachable one. I'm the friendly one!”

Sam imagined a little friendly fire right now. Using a taser. The General looked like he was imagining a little friendly fire with a flamethrower.

“Double Trouble!” Adora snapped. “Stop it!”

“Change into your usual form,” Catra said. “We wouldn't want to mistake you for someone else that Ba'al cloned. After all, his forces have met all of us before, and we don't know what he's been up to.”

Double Trouble narrowed her eyes and scowled - Sam made a note to check if she ever looked like that - before snorting. “And you'd shoot first and ask questions later, huh?”

Catra shrugged and bared her teeth in a wide grin. “With a zat, we can just stun people and wake them up later.”

“It might be less trouble for the team if we would stun the shapeshifter before departure and wake them up once we have secured Ba'al, Supreme Commander. I could carry them without much trouble,” Teal'c commented with such a perfectly bland expression, Sam would not have realised he wasn't serious, at least not entirely so, if she hadn't known him as well as she did.

“What?” Double Trouble gasped at him, then looked at the others.

Adora blinked, Catra’s grin grew even wider - Sam didn't have to look at Melog to confirm she was amused - and Glimmer looked smug. Even Bow seemed to struggle not to smile.

Sam caught herself grinning as well.

Double Trouble muttered a curse under their breath and shifted into their lizard-like form. “I wonder how you think you can win

this war when you can't even handle a little chaos in your schedule.”

“Wouldn't you like to know?” the General asked with a satisfied grin as everyone boarded the shuttle.

*****

The Election Campaign Part 4

PB-1763 System, Ba'al's Realm, August 11th, 2000 (Earth Time)

"We've entered the target system and switched to passive sensors."

Catra nodded at Jack's announcement and checked their position on the holoprojection. They were flying on a slightly curved route that would take them around some of the known concentrations of enemy craft and avoid flying too close to the staging points of Ba'al's fleet in the system - at least on the approach; couldn't do anything about having to close in with them when they had to land on the planet.

"Do we have to whisper? Your stealth system is so good, we could hitch a ride on the next enemy ship, couldn't we?"

And Double Trouble was still fishing for information. So, they must have heard something about Alliance stealth ships. Probably some sailor with loose lips - another reason not to let Double Trouble out of their sight on this mission; they already knew far too much about the Alliance.

"It's traditional not to yell when you're sneaking," Jack said.

"Traditional? I thought Earth was all about efficiency!"

"We're traditionally efficient," he shot back.

"I'm suddenly not so confident that this will work," Double Trouble went on - but in a joking tone.

Catra shrugged. "The sensors aren't a problem out here - the real issue is to get down on the planet without the plasma from re-entry marking our position for every ship with a line of sight to us."

“What?” Double Trouble didn’t sound amused any more. “I was told this is a routine mission for you!”

“We routinely risk our lives on such missions, yes,” Glimmer commented. Catra didn’t have to turn her head to know she was grinning.

“We have done this before,” Bow, ever the spoilsport, cut in. “Though usually, we didn’t have to deal with quite so many ships guarding the planet.”

“Really? I’m not an expert - though I could be, in an instant!”

“Don’t copy Sam or anyone else here!” Adora interrupted them.

Double Trouble rolled her eyes. “Anyway, how can you avoid being detected when they have ships covering the entire planet?”

“By being very sneaky,” Jack replied. “We’ve got a plan.”

“Yes! With a very good chance to work and not kill us all!” Entrapta chimed in, beaming at them. “We got it ready in time for this mission!”

Catra suppressed a wince. Entrapta was as honest as ever, but ‘a very good chance to work and not kill us all’ were not the kind of odds Catra liked.

That Double Trouble liked them even less helped keep her grin on her face, of course. Anything to rile up them.

“Now be quiet! We’re closing in on the first Death Glider network.”

“I thought they couldn’t hear us in space.”

“They can’t. But I can, and I need to focus on flying this ship,” Jack said.

“Yes,” Sha’re, the co-pilot added. “This requires our concentration.”

Catra could tell how much it cost Double Trouble - their expressions were almost comically clear - but they did fall silent while the Stealth Shuttle continued its approach.

*****

PB-1763 Orbit, PB-1763 System, Ba'al's Realm, August 11th, 2000 (Earth Time)

"That's your plan? Dropping us from orbit? In *caskets*?"

Catra smirked at Double Trouble's outburst.

"Those aren't caskets." Entrapta shook her head. "Those are drop pods - stealth drop pods. With a bot navigation system. They are small enough and manoeuvrable enough so they can make atmospheric re-entry without creating a bigger thermic trace than a bunch of micrometeorites. So! Unless Ba'al's sensor net is calibrated for tracking micrometeorites, we should be perfectly fine in them! And even if something goes wrong, they wouldn't be caskets!" She frowned. "Mostly because they would be destroyed with the passenger, of course. Although that could be called a sort of cremation if it happens in the higher atmosphere, and they do use caskets for that - even though it's such a waste, burning perfectly fine wood! - so… They could be caskets, I guess."

"You guess?"

"Get into your pod, Double Trouble," Adora spoke up.

"We can always zat them and stuff them into the pod to collect them on the ground," Glimmer added.

"That's… That wasn't the deal!"

"It was. You just didn't care about the details," Catra said.

"Is this your revenge for me teaching you a much-needed lesson?"

Catra shook her head. “This is just for being an asshole.”

Double Trouble was about to respond, but Sam stepped in front of her. “We’re on a timer. Everyone needs to get in their pods.”

Catra checked her helmet seal - not that her suit would help her if the pod malfunctioned during re-entry, but they were going into space - and climbed into her pod. The lid closed with a slight hissing sound, and the inside lit up with a holographic projection that let her see the outside.

“Drop Pod One, ready.”

“Drop Pod Three, ready.”

“Drop Pod Five, ready.”

“Drop Pod Four, ready.”

“Drop Pod Seven, ready.”

“Drop Pod Six, ready.”

Catra listened to the bot voices reporting from the different pods, counting off.

“All pods ready.”

“Release!” Sha’re, now the pilot in charge, ordered.

Then the bottom seemed to fall out from underneath Catra, and her tail swung wildly as she instinctively tried to stabilise her fall before the pod’s inertial compensators kicked in, and she felt gravity again.

Her stomach still protested since, according to her eyes, she was falling forward - head first - toward the planet.

Then she hit the atmosphere, and everything lit up.

*****

Jack O'Neill clenched his teeth as the picture projected on the 'lid' of his drop pod switched to a good attempt at how the sun must look inside, and the entire pod started to shake almost violently. He had gone through many re-entries before, but those had been with his shuttle - protected by armour, shielding and inertial compensators that turned the process into a smooth ride with a nice light show.

Strapped into a small pod, feeling every vibration even with the rudimentary inertial compensators installed, and hoping that Carter, Entrapta and Bow hadn't missed a small but fatal mistake when they had thrown those things together was a very different experience. Of course, he trusted Carter with his life without hesitation, but… it was a bit easier to trust her with his life when he wasn't currently surrounded by plasma and hoping no Death Glider pilot decided to use the apparent micrometeor for a spontaneous target practice session. Damn, he wished this wouldn't take so long - even if the risk of getting detected was higher the faster they were, waiting inside this pod - which the soldiers were going to call 'coffins', Jack knew - was almost torture.

Finally, the picture changed again, now showing the planet below and space above them - they were through the worst part. His holographic display also showed that they hadn't lost any pod on the way - all of them lit up green, and he let out a relieved breath.

Then the turbulences started, and he cursed again. He had flown through turbulences before, and he knew better than most that even modern planes could be wrecked by them. This falling coffin had advanced technology, but just enough to make taking it down to the ground not outright suicide.

His pod started to veer and roll around - he saw it on the display with the artificial horizon, but the way he was pulled into the harness holding him safe would have been clue enough. It was a pilot's worst nightmare - all his instincts were screaming that he was in a flat spin and he was about to crash if he didn't do something.

“Trust Carter; she said that this was normal and planned for,” he muttered to himself through clenched teeth as the ground grew closer and closer. “This thing is on autopilot.” Had to be - you couldn’t really teach ground forces to steer what was a one-way miniature spaceship. Not without turning them into pilots.

But as the pod kept falling, it kept spinning. Was it defective? No! Jack gasped when he realised that the pod was adjusting their course towards the rally spot. And it was slowing down! If only it stopped spinning…

It did stop spinning about a second before it hit the ground, straightening and rightening itself just in time to plant its bottom into the ground - though not deep enough to keep standing; Jack sighed when the pod toppled over, rolling as it fell so it would land on its back.

“Climbing out of a coffin isn’t how you’re supposed to invade a planet,” he muttered as he hit the quick release of his harness and opened the lid. “Then again, you also aren’t supposed to jump out of a perfectly working plane, but here we are.”

He looked around, rifle ready. Half a dozen pods had landed almost on top of him, all but one - Drop Pod Two - opening. A few were a bit further away.

Catra slid out of hers, crouching on all fours as she looked around, quickly joined by Melog.

Adora all but jumped out, sword out and in full She-Ra regalia.

Glimmer appeared in a cloud of sparkles, grinning wildly. “Hah! This world didn’t have a Stargate, so the First Ones couldn’t steal its magic!”

Oh. That was good since it meant Glimmer could teleport. But it was also bad since it meant Adora didn’t have the ‘unleash the world’s magic and turn all enemies into turnips’ ace up her sleeve. Still, good to have confirmation - with the way some snakes were

moving Stargates around, and the data banks being less than reliable, they hadn't been sure.

And there came Carter and Entrapta! Safe and sound! Jack smiled.

"See? The spins served to slow down our fall as planned! And it was a nice ride, too!" Entrapta beamed.

Jack stopped smiling. So, that had been deliberate.

Carter must have caught his mood since she said: "The spinning also serves to throw off an enemy gunner's aim, should they detect the pods, sir."

Yeah, and it probably saved some power, too - but Jack had a feeling they had picked that system because Entrapta thought it was fun.

Well, there would be time enough to talk about briefing your test subjects more thoroughly even if time was precious once they were done here. He looked around. Everyone was accounted for except the still closed pod.

"They're pounding against the lid. I think we need to let them out now," Catra said.

"Oh, yes!" Entrpata nodded and pointed her multitool at it.

A moment later, the lid opened, and they heard Double Trouble's voice: "...open, you piece of crap! I'm not going to end up as a snake egg incubator because of… Oh."

"Seems like your pod had a malfunction," Jack told them. "Carter, make a note to look into that afterwards. We can't have our troops be caught in their coffins."

"Yes, sir!"

“Really?” Double Trouble narrowed their eyes at him. “That’s your story?”

Jack nodded. That was his story, and he would be sticking to it. “Alright, grab the gear from the pods, then hit the self-destruct and let’s be on our way. We’ve got a way to hike before we reach our objective.”

“We’re going to *walk*?” Double trouble gasped as if they hadn’t known that from the briefing.

Jack ignored them and grabbed his rucksack from his pod, then started the process that would turn the pod into dust in a process that Carter said totally wasn’t burning it to ashes… He sighed. There really was no way the troops wouldn’t be making coffin and ashes to ashes, dust to dust jokes once they got their hands on the production models.

*****

Wilderness, PB-1763, Ba'al's Realm, August 11th, 2000 (Earth Time)

“This is undignified!”

Adora ignored Double Trouble's complaints. If they didn't want to be carried ‘like a bag of potatoes’, they should have kept walking.

“You're literally carried by a princess, and you think it's undignified?” Glimmer sounded amused.

“It is! This isn't a princess carry - she's slung me over her shoulder!”

Well, Adora needed at least one hand free if they were attacked, and she already had a pack with a spy bot in it on her back, so that left her shoulders.

“Adora could always just drag you.” Catra, on the other hand, wasn't amused, as her snidish tone illustrated whenever she

wasn't scouting ahead.

But that couldn't be helped - they had to cover quite the distance, and if Double Trouble was being dramatic - their feet were never in danger of 'literally falling off' - then carrying them was the obvious solution. It kept the group on schedule and also made it harder for Double Trouble to run off.

Running off on a planet held by Ba'al, and which would soon be facing a massive attack by the Alliance forces if this mission failed, wouldn't be very smart, but Double Trouble had done more stupid things - they weren't as smart as they claimed to be, in Adora's opinion. Then again, few people who claimed they were smart were that smart, in her experience.

They were moving through a dense forest - they had adapted their planned route as they approached the planet since they had gotten their best scan of the surface - and making decent time. They would be making better time if they were walking through more open terrain, but that would expose them, and Ba'al had too many Death Gliders up in the airspace for that. Even if many of those were test flights and not patrols, the risk was still too high.

"Hey! Watch where you walk - you almost smashed my face into the trunk here!"

Adora rolled her eyes. She hadn't even come close!

"It's a pity she didn't succeed!" Catra mumbled as she passed them.

"Hey!"

"I wish we'd have the time to build a drop pod for Emily," Entrapta said behind her. "And a stealth module for her, or, at least, a better shielding for her engines so she can better hide from sensors. Then she could carry us through this!"

Adora doubted that - the forest was a bit too dense for a bot the size of Emily to walk through without having to literally cut a path

for herself; they had seen that often enough in the war against the Horde, where they had used that to track and ambush the bot forces. And unlike in the Whispering Woods, this forest wouldn't grow over such tracks in a day or two.

Well, she hoped they wouldn't.

“I still don't know why I couldn't have waited back in a safe and comfortable spot for you to reach the palace and then have Glimmer fetch me by teleport!” Double Trouble was pouting behind Adora's back; she didn't have to look over her shoulder to know that.

“Because you'd have been gone the moment we were out of sight,” Glimmer replied.

“Don't you trust me?”

“No.”

“You could have left someone else with me. Like Daniel - he doesn't look that happy to walk all over this planet himself! I'd change into his wife's form so he doesn't have to worry too much about her being left alone in orbit in a single shuttle!”

Adora clenched her teeth. That was a low blow, even if Double Trouble didn't know about Daniel and Sha're's tragic past.

“Jack?”

“Yes, Daniel?”

“Remember what I said about treating our latest ally with more respect?”

“Yes?”

“I take it back!”

“No one here has a sense of humour! Or a taste for the performing arts!”

“We do. That's why we know how bad you are,” Glimmer shot back.

“Well, we don't actually know - we’ve never seen them on stage,” Entrapta commented while her hair tendrils wrapped around a tree branch and lifted her over a tangle of thick roots. “I think, at least - it's not as if we'd be able to tell, would we?”

“Oh, I am sure you have seen me perform in one of my many forms. I captured the hearts of audiences all over Etheria! Some of the best actresses can thank me for their fame!”

“You just made that up when Entrapta gave you the idea,” Glimmer said with a scoff.

“How would you be able to tell?” Adora heard and felt Double Trouble chuckle. “In the future, you won't ever be sure if that great performance was me or someone else!”

That was… well, a worrying possibility. Or would be if not for Melog, Adora thought.

“Stop it with the inane drivel!” Catra hissed as she dropped to the ground from the tree ahead of them. “I've found traces of an old campsite ahead.”

Oh. They shouldn't be near the outer perimeter of Ba'al's palace yet. Did he have patrols range that far? On foot?

“Let's take a look,” Jack said in a lower voice than before.

Catra led them through the woods, past a really dense patch of underbrush - a former clearing about to be grown over if Adora remembered Bow's comments about the woods correctly - and to a huge tree.

And she was correct - there were the remains of a fireplace there and other traces of a camp.

Bow knelt down and ran a finger along a dent in the ground, then looked at the ashes scattered over the ground. “About a few days old, I think. Any longer, and it would have been gone already.”

“If we're stopping here, then you can let me down now, you know?”

Adora ignored them again and looked around. If it had only been a few days, then whoever had done this might still be in the area…

*****

“What do you make of it?” the General asked. “Some long-range patrol? Or fugitives?”

“Probably fugitives,” Bow replied. “The campsite is not ideal - there are better spots nearby - but it's very well hidden from aerial observation. A patrol wouldn't have had any need to hide and would have picked a better spot for a camp.”

Samantha Carter agreed with the logic, though she had to take Bow's words for the reasons - she wasn't enough of an expert on such things to tell.

“If there are fugitives, then there will be hunters,” Catra said. “The question is, will they use ground forces to hunt down fugitives - or will they stick to Death Gliders?”

“They have a ton of Death Gliders. Ba'al might think bombing fugitives is good training.” The General shrugged. “But they seem to know how to hide.”

Or they were dead already, Sam thought. The distance to the palace - the closest inhabited area from here - meant they would have managed to reach this spot if they had fled at dusk and walked as quickly as Sam and her friends were going. If this was

a few days old, then Ba'al's forces would have had enough time to hunt them down.

Daniel was going through the ashes. “There's nothing here - no trash, no broken tool, no leftovers from anything they might have crafted or repaired. A nomadic culture setting up a camp would likely perform such activities and leave corresponding traces.”

“And what does that mean in non-Archaeologist, Daniel?”

“It means I don't think this was a camp set by indigenous travellers. It would fit a group of fugitives who didn't have the opportunity to make or repair tools,” Daniel replied.

“You mean they weren't prepared?” Glimmer asked.

“That is difficult to say. They could have no need yet to repair or craft anything since they set out well-prepared,” Daniel said. “Or they had to flee in a hurry and couldn't take anything with them that would require repairs.”

“Oh! We can give them what they need - or make it for them!” Entrapta chimed in.

Sam glanced at Adora and saw she was wincing.

“We can't spend the time tracking down a group of fugitives trying to hide,” Adora said. “The best thing we can do to help them is to take out Ba'al and take over the planet.”

“I wouldn't mind a detour,” Double Trouble, still slung over Adora's shoulder, spoke up. “This is not very comfortable. Your shoulders are very bony.”

Sam couldn’t care less about the shapeshifter's discomfort.

“Shift to a more padded form, then,” Glimmer told them.

A moment later, Double Trouble had shifted into a double of Glimmer. “You're right; this helps. You must have spoken from

experience.”

To Sam's surprise, Glimmer didn’t seem annoyed but snorted, apparently amused. “Let's go now. The sooner we reach Ba'al's palace, the sooner we can stop whatever suffering the people here endure.”

“Yeah,” the General agreed.

Adora still looked guilty but nodded as well.

*****

Near Ba'al's Palace, PB-1763, Ba'al's Realm, August 12th, 2000 (Earth Time)

It had taken them several hours, but shortly after midnight, they had reached their target - or, at least, the vicinity of their target. Usually, a Goa'uld base would be in the middle of a flat, wide area, cleared to remove all cover and concealment. Ba'al's palace differed. The forest had been cleared, the trees cut down, in the entire area, but instead of a featureless plain where hiding would be impossible without advanced technology - and difficult even with such technology, given its limitations - it was surrounded by fields and irrigation canals fed from a lake.

Between the lake and a village - a small town, actually - that housed the slaves working the fields lay the palace. Hidden in the underbrush at the tree line at the outward edge of the fields, Samantha Carter studied the buildings through her binoculars, using the night vision mode, although enhanced to show true colours.

“Interesting,” Daniel commented in a low voice. “I would have expected less Egyptian architecture given Ba'al's history, more Phoenician, probably Punic, but the palace shows few such influences - a few ornaments, possibly furniture, but the general layout and building style is almost exclusively Egyptian. This may signal Ba'al's intention to take over as Ra's successor, but why would he go that far on a secret world?”

“He probably doesn't intend to keep it secret once he is the new Emperor,” the General replied.

“Oh. Right. That would be possible. Still, it could also indicate a true cultural shift on Ba'al's side. Perhaps it’s an attempt to improve his reputation and downplay his past actions so the other System Lords will more likely accept his rule?”

Sam doubted that it would work, genuine or not - in her opinion, the only thing that would make the System Lords accept an emperor was naked strength and power. And even then, they would secretly plot to topple them as soon as they thought they could get away with it. Still, it would be like Ba'al to do something like that in order to gain a small advantage. And, of course, the advantage might not be so small when it concerned the slaves and Jaffa, who would have suffered the most from his past crimes.

Sam hoped it wouldn't ultimately matter - they were here to end Ba'al's reign, after all. And those irrigation canals provided a great opportunity to sneak to the palace - and likely into it, since the palace probably drew water from the lake as well.

She looked the palace over again. Several defensive gun emplacements lined the walls. Dual-purpose, able to engage aerial threats as well as ground targets - and three covered the village. Patrols on the walls and at the base of the walls, probably on both sides of them, and in the fields. Those were pretty standard defences. Ba'al almost assuredly had some nastier surprises hidden in the palace and a few escape routes prepared, but Sam was confident they could deal with that; between Entrapta, Bow and herself, and their experience with Ba'al's systems, they should be able to take over the security systems and sensors easily enough.

“Alright. It looks like we've got a window of opportunity to reach the walls through the canal there as soon as that patrol has passed us,” Adora said in a low voice over the communicator. “Be ready.”

Sam was ready.

*****

Ba'al's Palace, PB-1763, Ba'al's Realm, August 12th, 2000 (Earth Time)

Passing underwater through the irrigation canals to the palace walls had been slightly uncomfortable but easily handled. The new uniforms and their sealed helmet option helped a lot. If her fur had gotten all wet… Catra shuddered at the thought. There had been a lot of gunk in the murky water, and she didn't give a damn whether that stuff would be good fertiliser for the fields or not, and that the wastewater from the palace had to go somewhere, as Daniel and Sam had explained - they didn't have fur all over their body that would take ages to clean if that filth got on it.

But now they had to enter the palace proper, and that meant diving deeper into the lake here - according to Entrapta and Sam's scans, the pipe that led into the palace grounds was pretty far down there. Something about varying levels of water or whatever. But unlike the spot where the palace's wastewater line fed into the main canal, this spot wasn't guarded by a squad of Jaffa.

It still meant that they had to dive a bit too deep for her taste. Fortunately, the uniforms were rated for space, so they didn't have to worry about pressure effects and things. They only had to deal with security systems, sensors and traps.

"Alright, the sensors covering the lake are currently blind to us," Entrapta reported over the communicator.

"Let's dive and rally at the target," Adora ordered.

Catra was first into the water. No 'cats and water' jokes today for her. She didn't jump, of course - that would have caused a splash guards could hear - but slid into the water and then dived down, the HUD in her helmet showing her where she needed to go. If they had had such a thing in the Horde, a number of exercises

and operations would have gone differently. Well, some of the officers would have still managed to get lost, she was sure of that.

Forcing the stupid stray thoughts away, she pressed on, quickly reaching the large pipe that took water from the lake into the palace. There was a massive grate on it, but that wouldn't stop her. Once the others caught up - she made sure that Double Trouble hadn't gotten ‘lost’ on the way - and Sam checked that the sensors were off, Catra quickly sliced through the metal, and Adora pulled the grate away.

Entrapta sent the spy bot they had brought along ahead, and Catra closely followed its track on her HUD as it entered the pipe. Between the data data from the hacked security system and the stealthed bot, she got a decent picture of the pipe's interior as she looked for traps and other obstacles. It would be just like Ba'al to have some undocumented surprises in such places to catch those who thought that they just had to deal with the computers to get in. Though any trap would have to operate under some limitations, what with the need to let water in, so the trigger couldn't be too simple, and that meant sensors as well.

Ah! She grinned inside her helmet when she spotted a sensor on the feed from the bot that wasn't already marked by the HUD. “There's a trap ahead,” she said.

“Got it!” Entrapta's voice answered. “Good bot! Now let's see what… Oh! That's a shaped charge, aimed down the pipe - the pressure probably would… no, the pipe's reinforced, so it wouldn't burst but funnel the pressure wave forward. Quite nasty.”

Catra kept smiling even though she couldn't help imagining what would happen to anyone inside the pipe if the trap was triggered. They'd be pulped.

But her friends were already working on it, directing the bot to close in, and then started to disarm it - after the group had cleared the pipe entrance. Just in case.

But the charge didn't go off, and the bot moved on. They detected another trap, a stunning device built into the pipe where it bent to head straight up, but that was easily dealt with by hacking its sensor, and after cutting through a few more grates and filters, the bot reached the main water reservoir of the palace and surfaced in it.

“Jackpot,” Jack muttered as the feeds showed rails lining the basin and ladders leading up.

“Multiple sensors that track the water quality,” Sam reported. “We have to hack them so they won't report the effects of the bot cutting through the filters.”

More delays - but necessary ones. Waiting underwater was getting a bit stressful. Fortunately, it didn't take too long until Sam announced that it was safe now, and Catra was the first into the pipe.

She quickly swam forward, resisting the urge to use her claws to pull herself along the pipe even if it would have been a bit faster, then up once she reached the bend.

Then she hit the surface inside the reservoir and looked around. No guards, no obvious traps.

They had it made inside the palace. Now came the fun part.

*****

Sneaking around in a snake palace never got old! Jack O’Neill bared his teeth in a grin while he peered around the corner ahead - he might be covered by Melog’s illusion, but better safe than sorry; nothing was perfect. Certainly not magic.

But the corridor ahead was clear. No surprise there - they were just above the cistern, and it was pretty damp here; Ba’al’s contractors must have pulled a fast one on him - according to Carter and Entrapta’s scans, the entire level here was useless for

pretty much anything that couldn't handle lots of humidity. No provisions, delicate electronics or archives would survive here.

Of course, Ba'al being Ba'al, he still found a use for it - the cold humidity was perfect for some good old-fashioned dungeon, as long as you don't mind that your prisoners died from pneumonia or inhaling poisonous mould or whatever. And Jack hadn't yet met a snake who would mind that. In fact, knowing Ba'al, he might have micro-managed construction to ensure he got mouldy cells in his dungeon…

Of course, anyone with a symbiont wouldn't die from a bit of mould and cold. And the prisoner they had detected with their scans had a symbiont inside them. The only question was whether they were a Jaffa or a snake.

As he moved down the corridor, to the cell tracts projected on his HUD, Jack hoped they were a Jaffa; you couldn't trust the snakes.

He reached the door barring the way into the dungeon proper and stepped to the side, letting his carbine drop, caught by the sling, to draw his zat while Carter and Bow dealt with the lock. There shouldn't be any guards inside. Entrapta was monitoring the hacked security system and hadn't spotted anyone behind the door who wasn't in a cell. And the magic scanner hadn't detected any symbionts outside the one in a cell, either.

But it wouldn't hurt to be ready to stun someone before they could raise the alarm.

"Oh! That's interesting…" Entrapta muttered.

He glanced at her, then at Carter. Carter would be able to tell if whatever Entrapta was talking about was important enough to share with the class, right?

"Entrapta?" Carter asked.

Or not.

“Oh, it’s just the camera layout. It’s quite complex - you know that already - but there are some blind spots that are cleverly hidden!”

Oh? “Maybe Ba’al’s IT guy isn’t as good as he should be,” Jack said.

“No, no, that seems deliberate - there’s a subroutine that alters the coverage angle without reporting it to the controls. Hm…”

“So, someone infiltrated this system before us? I guess the Tok’ra will feel even more embarrassed,” Jack commented. Would serve them right, actually.

“But who could have done this? A rival? Sokar, maybe? Or a third faction we don’t know yet?” Daniel speculated.

“Or someone planning a coup,” Catra said.

“Well, I’m looking into this!” Entrapta announced - her face was almost completely hidden behind all the displays in her helmet, Jack noted. It didn’t seem like she could see through it.

But before he could say anything, Bow spoke up. “Finally! That was harder than we expected! But we managed it!”

It has taken longer than I expected, Jack thought as he turned around and aimed his zat at the door. A moment later, it slid to the side, revealing an empty room - empty of people, that was. There were lots of torture devices. Some of them wouldn’t have looked out of place in a fantasy movie, and some looked like someone misused a dentist’s tools.

“Guess our pal Ba’al is a torture connoisseur. No one-size-fits-all torture device for him; he wants variety and all the classics,” Jack joked and managed not to wince at what he recognised as a flensing knife thanks to one of Daniel’s bloodier lectures.

“Oh. You think that’s Ba’al’s personal torture chamber?” Double Trouble bent over a rack. “How interesting!”

They sounded far too happy about this.

“This is so inspiring!” they went on.

Jack wasn’t the only one narrowing his eyes at them, and Double Trouble looked annoyed when they noticed. “To better play his role, of course! This gives crucial insight into his character! Really, what do you think I meant?”

“That you like to torment people,” Catra replied.

“Really! How long will you carry a grudge? It was good for you!”

“I can think of a few things that would be good for you too.” Catra flashed her fangs.

“According to the security records, there is currently no cell occupied, sir,” Carter interrupted the brewing clash from the closest console. “Our scans confirm that one is occupied, though.”

“But the cell’s not under surveillance,” Bow added.

“And no guards are supposed to be here.”

“And there are no guards. So… this is either the planet’s most harmless prisoners… or someone no one is supposed to know about,” Catra said.

Adora nodded. “Let’s find out.”

Jack went in first, just in case. Adoa could fix him if anything happened. But he couldn’t fix her if Ba’al had cooked up something nasty enough to harm She-Ra.

He reached the cell marked on his HUD easily. There was no window in the door to peer inside either. More sloppy design?

Carter and Bow went to work on the lock of the door while the rest secured the area. Once again, it took them longer than

expected - Carter seemed both annoyed and impressed, Jack noted.

But they managed to unlock the cell. Jack aimed his zat with one hand and opened the door with the other, revealing…

… Ba’al?

*****

“Colonel O'Neill… and She-Ra, Princess of Power, Protector of Etheria. I have to say that it is a surprise to see you two together, but I really should have seen this. The clues were all there.”

Adora stared at the smirking man. Ba'al? In his own prison cell? That made no…

Catra's laugh interrupted her thoughts. “So, are you the original Ba'al who fell victim to a coup or a clone who failed to coup the original?”

Ah! That would explain it - of course, Catra would think of this, given her past.

Ba'al, who was wearing pretty plain clothes, not a glimpse of jewellery visible, shrugged. “Does it matter? What matters is that I am an enemy of your enemy, as my current circumstances clearly prove.” He smiled at them, his eyes seeking out Adora's. “We are natural allies.”

“If you say: ‘join me, and together we can rule the galaxy’, I'll have to shoot you,” Jack said.

“Indeed.” Teal'c was glaring at the Goa'uld.

Ba'al, still smirking, tilted his head slightly as he looked at Jack. “I would not make such an offer, Colonel O'Neill, since you aren't a fool, and neither am I.”

“It's General these days,” Jack replied. “Just for the record. Wouldn't want to confuse people.”

Right. This Ba'al knew about She-Ra, which meant he had had access to the intel the Commander must have shared with Ba'al back in May this year. So, his imprisonment would have been a relatively recent event.

“General O'Neill.” Ba'al nodded with what looked like genuine respect, even if he was still smirking. “Of course, your people would promote you, given your many victories over the Goa'uld.”

Jack shrugged. “I just do what is needed. You know, pest control.”

Ba'al nodded again and looked at Adora. “But none of those victories were as impressive as defeating Horde Prime and taking his realm for yourself.”

That… wasn't exactly what had happened. Not like that. And shouldn't he know that? He had recruited the Commander and his fleet, after all. Adora narrowed her eyes. Was he fishing for information?

“Flattery won't get you anything,” Catra spoke up.

“My experience would contradict that,” Ba'al said.

“Of course it would - your people always flattered you, didn't they?” Glimmer cut in. “And the only peers you met were other System Lords - or yourself.”

“You make a good point, Miss…? Or should that be Princess?”

That was a good guess. But no one had ever called Ba'al stupid.

“It's Queen these days,” Glimmer said.

“Ah.” Ba'al looked from her to Adora and back before smirking at Jack. “You keep interesting company, General. It seems you've become a bit more tolerant of other forms of government. Unless

this is merely a temporary alliance and you intend to settle your ideological differences once you have taken care of your common enemies.”

“We’re not like you!” Glimer spat.

“So it may seem.” Ba'al laughed. “But trust me on this - you won't have the measure of someone until and unless they are in a position to betray you and either do it or don't.”

Was that a subtle claim that he was the original? Well, every clone thought they were the real Ba'al, didn't they?

“Well, we found out who's in this cell, and I think you'll keep. We can continue this talk once we've stopped kicking your other version's ass,” Jack said.

“I wouldn't be so hasty, General,” Ba'al said - a bit too quickly for his confident tone. “You've managed to sneak into my palace, but you are undoubtedly aware of how many forces I have amassed here - and how their weapons have been upgraded. My help would allow you to take this system without suffering huge casualties. Or causing them,” he added with a smile while looking straight at Adora. “I think you are familiar with my standing orders for my forces - this will be a bloodbath even if you had overwhelming numbers, and the fact that you are currently here, in a covert and likely desperate attempt to decapitate my forces, tells me that you would prefer to avoid an all-out battle. I can help you there - and all I am asking for is a temporary alliance where you'd be holding all the cards.”

He was good, Adora had to admit. Even a bit charming. But he was right - they were holding all the cards. And he was Ba'al.

She turned to Double Trouble. “Do you think that's enough?”

They smiled and nodded - and turned into Ba'al.

The expression on Ba'al's face when he saw this almost made Adora laugh out loud.

Jack and Catra didn't show such restraint.
